

TABLE OF CONTENTS

TABLE OF CONTENTS i

EXECUTIVE SUMMARY ES-1

I. DEFENDANTS ESTABLISHED AN ENTERPRISE 1

 A. Introduction 1

 B. The Tobacco Industry Research Committee/Council for Tobacco
 Research 3

 (1) The Link Between Smoking and Lung Cancer Was
 Scientifically Established By the Early 1950s 3

 (2) The Enterprise Begins 12

 (3) Defendants' Selection and Approval of TIRC
 Scientific Advisory Board Members and the
 Scientific Director 29

 (4) Defendants' Other Involvement in TIRC and CTR 38

 (5) Defendants' Many Uses of TIRC/CTR 40

 (a) TIRC/CTR and Research 41

 (i) The Nature of CTR Funded Grant Research 41

 (ii) CTR and Contract Research 46

 (b) TIRC/CTR and Public Relations 48

 (i) TIRC/CTR Newsletters and Annual Reports 53

 (ii) TIRC/CTR Public Statements 61

 (c) TIRC/CTR and Litigation Support 63

 (d) TIRC/CTR and Spokespersons at
 Congressional and Other Hearings 64

C.	The Tobacco Institute	69
	(1) Formation of The Tobacco Institute	69
	(2) Cooperation Between the Tobacco Institute and TIRC/CTR	83
	(3) Tobacco Institute Committees	88
	(a) Committee of Counsel and Outside Counsel	88
	(b) The Tobacco Institute Executive Committee	101
	(c) The Tobacco Institute Communications Committee	105
	(4) Defendants' Many Uses of the Tobacco Institute	108
	(a) Tobacco Institute Public Statements, Advertisements, Press Releases, and Publications	108
	(b) Methods of Communication	118
	(c) Tobacco Institute College of Tobacco Knowledge	121
	(d) Defeating Threats to the Enterprise's Viability - ASSIST	132
	(e) Disingenuously Promoting the Enterprise	138
	(f) Tobacco Institute Testing Laboratory	141
D.	Joint Research Activity through CTR and the Tobacco Institute	146
	(1) Special Research Projects and Witness Development	146
	(2) CTR Special Projects	161
	(a) Nature of CTR Special Projects	161
	(b) Reporting CTR Special Projects to the Committee of Counsel	169
	(c) Lawyer's Recommendations for CTR	

	Special Project Approval	170
(d)	Defendants' Approval of CTR Special Project Funding	179
	(i) American Tobacco	180
	(ii) Brown & Williamson	181
	(iii) Lorillard	182
	(iv) R.J. Reynolds	186
	(v) Liggett	188
	(vi) Philip Morris	189
	(vii) Philip Morris Companies	189
(e)	Administration of CTR Special Projects	190
(f)	Defendants Continued to Fund Special Projects After They Stopped Using CTR to Fund Special Projects	197
(g)	Scientists Funded Through CTR Special Projects	200
(3)	Lawyers Special Projects	201
	(a) Special Account No. 3	203
	(b) Special Account No. 4	203
	(i) Nature of Special Account No. 4	203
	(ii) Reporting Lawyers Special Projects to the Committee of Counsel	210
	(iii) Lawyers' Recommendations for Special Account No. 4	211
	(iv) Lawyers' Approval of Special Account No. 4 Funding	213

	a.	American Tobacco	213
	b.	Brown & Williamson	214
	c.	Lorillard	214
	d.	R.J. Reynolds	215
	e.	Liggett	216
	f.	Philip Morris	216
	(v)	Individuals and Organizations Funded Through Special Account No. 4	217
	(vi)	Defendants Would Often Fund the Same Scientist Through Multiple Sources	220
	(c)	Special Account No. 5	221
(4)		Institutional Grants	225
	(a)	Washington University	227
	(b)	Harvard University	228
	(c)	UCLA	230
(5)		Special Projects at the Tobacco Institute	231
E.		Committees	233
	(1)	Research Review Committee, Research Liaison Committee, and Industry Research Committee	233
	(2)	Industry Technical Committee	244
	(3)	Tobacco Working Group	254
	(a)	Defendants' Participation in the Tobacco Working Group	254
	(b)	Defendants Received Access Information Through	

	the Tobacco Working Group	263
	(c) Defendants' Interference With the Work of the Tobacco Working Group	265
	(d) Defendants Never Intended to Make Any Affirmative Contributions To the Work of the Tobacco Working Group	278
	(e) Defendants Benefitted From Their Involvement with the Tobacco Working Group	282
F.	Coordinated Smoking and Health Literature Collection and Retrieval	283
G.	Center for Indoor Air Research (CIAR)	296
	(1) Formation	296
	(2) CIAR Special Projects	306
H.	International Organizations, Committees, and Groups	307
	(1) TMSC - Tobacco Manufacturers' Standing Committee	308
	(2) TRC - Tobacco Research Council	315
	(3) TAC - Tobacco Advisory Council	320
	(4) ICOSI - International Committee on Smoking Issues	325
	(5) INFOTAB - International Tobacco Information Center	336
	(6) TDC - Tobacco Documentation Centre	346
	(7) CORESTA - Centre for Cooperation in Scientific Research Relative to Tobacco	350
	(8) Tobacco Institute Interaction with Overseas and International Groups	354
	(9) Other Global Coordination/Cooperation	370

I.	Dissolution of CTR, the Tobacco Institute, and CIAR	374
	(1) CTR	375
	(2) The Tobacco Institute	378
	(3) CIAR	380
J.	Gentlemen's Agreement	381
K.	Suppression and Concealment of Documents and Information	382
II.	THE ENTERPRISE IS ENGAGED IN AND AFFECTS INTERSTATE AND FOREIGN COMMERCE	388
A.	Philip Morris Companies Inc. / Altria Group	388
B.	Philip Morris Incorporated / Philip Morris USA Inc.	393
C.	R.J. Reynolds Tobacco Company	398
D.	Liggett Group, Inc.	403
E.	Lorillard Tobacco Company	410
F.	British American Tobacco (Investments) Limited	414
G.	Brown & Williamson Tobacco Corporation	418
H.	American Tobacco Company	423
I.	The Tobacco Institute	425
J.	The Council for Tobacco Research – U.S.A., Inc.	431
III.	EACH DEFENDANT IS DISTINCT FROM THE ENTERPRISE, IS ASSOCIATED WITH THE ENTERPRISE, AND HAS PARTICIPATED IN THE CONDUCT OF THE AFFAIRS OF THE ENTERPRISE	435
IV.	DEFENDANTS DEvised AND EXECUTED A SCHEME TO DEFRAUD CONSUMERS AND POTENTIAL CONSUMERS OF CIGARETTES	442
A.	Adverse Health Effects	443

(1)	Cigarette Smoking, Including Exposure to Secondhand Smoke, Causes Disease and Death	443
(2)	The Scientific Evidence Establishing Smoking as a Cause of Lung Cancer Led to Concerted Action by the Cigarette Company Defendants	448
(a)	Upon Formation of the Enterprise, Defendants' Decades- Long Campaign of Misinformation Began with False Statements about the Health Risks of Smoking in the 1950s	454
(b)	Defendants Knew Their Public Statements Were False and Engaged in Their Campaign of Public Misinformation Pursuant to Their Agreed-Upon Strategy with Reckless Disregard for Its Truth or Falsity	462
(c)	Continuing Research by Mainstream Scientists in the Late 1950s and Early 1960s Confirmed the Accuracy of Earlier Scientific Investigation	474
(d)	The Enterprise Responded to this Scientific Investigation in the Public Health Community by Intensifying Their Fraudulent Campaign in the Late 1950s and Early 1960s	482
(e)	In 1964, the Surgeon General Released the First Surgeon General's Advisory Committee Report on Smoking and Health	485
(f)	Defendants Further Intensified Their Fraudulent Public Relations Campaign in Anticipation of and Immediately Following the Release of the 1964 Report	494
(g)	Following Publication of the 1964 Report, the Scientific Community Continued to Document the Link Between Smoking and an Extraordinary Number of Serious Health Consequences	501
(h)	Defendants Responded to the Scientific Consensus with a Determined Fraudulent Campaign Throughout the Late 1960s and Early 1970s	503
(i)	Defendants' Internal Documents and Research from the	

	1960s, 1970s, and Beyond Show Their Continued Recognition of the Health Effects of Cigarette Smoking	522
	(j) Despite Their Internal Knowledge, Defendants Continued Their Public Campaign of Denial from 1975 Onward	546
(3)	Continuing the Pattern and Practice That Began in the 1950's, Philip Morris Suppressed Research and Failed to Warn Consumers about the Excess Fire Danger Posed by Its Banded Paper Cigarettes, Which Were First Marketed in 2000	568
B.	To Support Their Public Relations Position Denying the Health Effects of Smoking, Defendants Agreed Not to Compete on Health Issues and Not To Perform Certain Biological Research	578
(1)	Defendants Made Public Statements That Linked Development & Marketing of a Potentially Less Hazardous Cigarette to Their "Open Question" Position Denying the Adverse Health Effects of Smoking	579
(2)	Defendants Internally Long Have Acknowledged the Competitive and Economic Advantages from Marketing a Potentially Less Hazardous Cigarette	581
(3)	Defendants Agreed Not To Compete on Health Issues in the Marketing of Potentially Less Hazardous Cigarettes	585
(4)	Defendants Adhered to the Agreement Not To Compete on Health Issues in the Marketing of Potentially Less Hazardous Cigarettes	587
(a)	The 1960s	588
(i)	Philip Morris: Saratoga Cigarette	588
(ii)	R.J. Reynolds: Multijet Filter	589
(b)	The 1970s	589
(i)	Brown & Williamson: FACT cigarette	589

	(ii)	Liggett: Project XA	591
(c)		The 1980s	595
	(i)	R.J. Reynolds: Premier cigarette	595
(d)		The 1990s	600
	(i)	R.J. Reynolds: Eclipse Cigarette	600
	(ii)	R.J. Reynolds: Winston EW/Select cigarette	601
	(iii)	Philip Morris: Accord	608
(e)		The 2000s: Brown & Williamson: Advance	610
(5)		Defendants Agreed Not To Perform Certain In-House Biological Research That Would Confirm or Acknowledge That Smoking Cigarettes Causes Disease	613
	(a)	R.J. Reynolds	614
	(b)	BATCo	616
	(c)	Philip Morris	618
	(d)	Brown & Williamson	627
	(e)	American Tobacco	629
(6)		Defendants Have Developed Products To Use Defensively If Another Company Violated the Agreement Not to Compete	630
	(a)	Philip Morris	631
	(b)	BATCo	634
	(c)	R.J. Reynolds	636
	(d)	Brown & Williamson	639
(7)		There is Substantial Evidence That Defendants Chose Not to Incorporate Feasible Designs or Product Features Found	

to Potentially Reduce the Exposure to or Harm from Cigarette Smoke	640
(a) Altering or Preventing Cigarette Combustion and Nicotine Aerosols	641
(i) Philip Morris	641
(ii) Liggett	644
(iii) Lorillard	645
(b) Technologies to Reduce Delivery of Carcinogenic Tobacco-Specific Toxins	647
(i) Philip Morris	648
(ii) R.J. Reynolds	655
(c) Charcoal Filters	656
C. Adverse Health Effects of Exposure to Environmental Tobacco Smoke	664
(1) Exposure to Secondhand Smoke Causes Disease and Death	664
(2) Echoing Promises Made in the Frank Statement, Defendants Told the Public They Would Seek Answers to the Harms Associated with Exposure to Secondhand Smoke	676
(3) Internally, Defendants Recognized the Connection Between Passive Exposure and Disease	678
(4) Defendants Viewed the Evidence of the Health Effects of Exposure to Secondhand Smoke as a Threat to the Social Acceptability of Smoking	680
(a) Defendants Responded to the Perceived Threat with Concerted Activity Coordinated by their Attorneys	685

(b)	Defendants Responded to the Threat Posed by Evidence of the Harmful Effects of Exposure to Secondhand Smoke with Coordinated International Activity	692
(5)	Defendants' Response Ultimately Led to the Formation of Jointly Controlled Organizations to Carry Out Their Concerted Activity	702
(a)	CIAR	702
(b)	Project Downunder	708
(c)	The ETS Consultancy Program	722
(i)	Creating and Sustaining an ETS "Controversy"	728
(ii)	Hiding the "Fingerprints": Masking Industry-Favorable and Law Firm-Controlled Consultants Behind a False Veil of Scientific "Independence"	735
(iii)	Despite Industry Public Promises to Find the Truth as to the Health Risks of Passive Smoking, Defendants Used the ETS Consultancy Program to Deny, Distort, and Dispute All Adverse ETS Research	761
(d)	ACVA/Healthy Buildings International	773
(e)	CORESTA	785
(f)	Association for Research on Indoor Air	785
(6)	Defendants Used Their Jointly Controlled Organizations to Promote Their Agenda Through Symposia, Publications and a Roster of Long-time Paid Scientists	787
(a)	Symposia	787
(i)	The Geneva Workshop	787
(ii)	The Vienna Symposium	791
(iii)	The McGill Symposium	794
(iv)	Essen Symposium	801

(b)	Long-time Paid Scientists	803
(i)	Ragnar Rylander	803
(ii)	Theodor Sterling	814
(iii)	James Enstrom	821
(7)	Defendants Fraudulently Relied on the Research and Symposia They Had Sponsored as “Independent” to Advance Their Public Relations and Commercial Agenda	830
(8)	Defendants Made – and Continue to Make – Numerous False Public Statements as Part of Their Effort to Deny and Distort Fraudulently the Health Effects of Exposure to Secondhand Smoke	838
(9)	Defendants' Fraudulent Activity Continues to the Present Day	871
D.	The Myth of Independent Research	878
(1)	The Promise: We, the Cigarette Company Defendants, Will Conduct Independent Research to Find the Truth About Smoking and Disease	879
(a)	The Gentlemen's Agreement and the Frank Statement	879
(b)	Continuing Parallel False Promises from Members of the Enterprise, Including the Tobacco Institute	881
(2)	The Reality: CTR Was a Front That Failed to Deliver on the Industry's Promise to Conduct Independent Disinterested Research	893
(a)	Throughout TIRC/CTR's Existence, It Did Not Seek to Fulfill the Defendants' Promise to Conduct and Disclose Independent Research	893
(b)	CTR Used Its Scientific Advisory Board as a Smokescreen	900
(c)	In Reality, CTR Was Controlled by Industry Executives and Lawyers for Their Own Purposes	914

(i)	General Control of CTR	914
(ii)	CTR Special Projects	922
(iii)	CTR Was More Concerned About Public Relations Than Science	931
(iv)	The Recognition: SAB Members, CTR Employees, and Defendants' Representatives All Recognized that CTR's True Purpose Was Public Relations, Not Science	938
(3)	The Reality: Defendants Closely Controlled Research on Environmental Tobacco Smoke to Reach Findings Favorable to Their Litigation Strategies	942
(4)	The Reality: The Cigarette Company Defendants Actively Concealed Adverse Scientific Findings, Entered into Agreements Not to Conduct Research, and Used Lawyers to Control Research so that it Would Serve the Purposes of Litigation and Public Relations	946
(a)	Defendants Concealed Scientific Documents, Opinions, and Findings Adverse to Their Interest	947
(b)	Defendants Entered into Agreements That Limited Scientific Research and Actively Policed Those Agreements	961
(c)	To Prevent Adverse Scientific Findings and to Ensure That Research Focused on Litigation and Public Relations, Lawyers and Business Executives Controlled the Minimal Research Conducted by the Cigarette Company Defendants	969
(i)	Lawyer Control of Science within the Cigarette Company Defendants	970
a.	Brown & Williamson and BATCo	970
b.	Lorillard	976
c.	Liggett	976

	d.	Philip Morris	977
	e.	R.J. Reynolds	979
	(ii)	"Independent" Scientists and Suppression of Nicotine Research	980
	(iii)	Admissions and Internal Complaints Regarding Lawyer Control and Manipulation of Science	983
	(iv)	Decisions Regarding Research and Publication Were Based upon Litigation Concerns and Desires to Enhance Public Relations, Not Scientific Judgment	985
E.		The Addictive Properties of Nicotine	990
	(1)	Nicotine and Addiction	990
	(a)	Cigarette Smoking is Addictive and Nicotine is the Primary Component of the Addiction	991
	(b)	Within the Tobacco Industry and Among These Defendants, Internal Documents and Statements by Defendants Establish That Each Defendant Well Knew That Smoking and Nicotine Are Addictive	1003
	(i)	Philip Morris	1007
	(ii)	R.J. Reynolds	1034
	(iii)	BATCo	1051
	(iv)	Brown & Williamson	1099
	(v)	Lorillard	1117
	(vi)	American Tobacco Company	1125
	(vii)	Liggett	1128
	(viii)	CTR	1129

	(ix)	Tobacco Institute	1133
(c)		Defendants Publicly Disseminated False, Deceptive and Fraudulent Statements Denying Nicotine Dependence and Addiction	1134
	(i)	Philip Morris	1135
	(ii)	R.J. Reynolds	1139
	(iii)	BATCo	1145
	(iv)	American Tobacco Company	1148
	(v)	Brown & Williamson	1149
	(vi)	Lorillard	1151
	(vii)	Liggett	1154
	(viii)	Tobacco Institute	1155
	(ix)	CTR	1165
(d)		Defendants' Misrepresentations and Attempts to Confuse the Public as to the Facts of Cigarette and Nicotine Addiction Continue Today, Even Following the MSA	1166
(e)		Internal Documents and Statements Reveal That Defendants Concealed and Suppressed Research and Other Evidence Consistent With Nicotine Addiction	1170
	(i)	Philip Morris	1173
	(ii)	R.J. Reynolds	1189
	(iii)	BATCo	1190
	(iv)	Brown & Williamson	1192
	(v)	American Tobacco Company	1203

(vi)	Lorillard	1203
(vii)	Tobacco Institute	1204
(viii)	CTR and Other Defendant Funded Research Groups	1204
(f)	Conclusions Concerning Defendants' Nicotine-Related Misconduct	1213
(2)	Nicotine Manipulation	1218
(a)	Defendants Have Fraudulently Denied That They Manipulate the Level of Nicotine Delivered to Smokers to Ensure Smokers Can Obtain Sufficient Nicotine to Create and Sustain Addiction	1218
(b)	Defendants Have Made False and Misleading Public Statements Regarding Their Control of the Nicotine Content and Delivery of Their Products and Their Efforts to Control or Optimize the Amount of Nicotine Delivered to Smokers	1220
(i)	The Waxman Hearings	1221
(ii)	Other False and Misleading Public Statements	1235
(iii)	Testimony Consistent with Fraudulent Public Statements	1240
(iv)	Actions Consistent with Fraudulent Public Statements	1242
(c)	Product Goals - Defendants Have Manipulated Cigarette Ingredients to Ensure Delivery of Nicotine at Levels that Would Create and Sustain Addiction, Attract Smokers to Their Brands, and Keep Smokers Smoking	1245
(i)	Defendants Recognized the Necessity of Delivering a Minimum and Optimum Amount of Nicotine that Would Maintain Consumers' Smoking Addiction	1245
a.	Philip Morris	1248

	b.	R.J. Reynolds	1251
	c.	BATCo/B&W	1255
	d.	Lorillard	1258
	e.	Liggett	1261
(ii)		The Defendants' Efforts to Deliver Optimum Levels of Nicotine Reflected Their Understanding of the Correlation Between Nicotine Delivery and Cigarette Sales	1261
	a.	Philip Morris	1262
	b.	R.J. Reynolds	1264
	c.	BATCo/B&W	1267
	d.	Lorillard	1271
(d)		Product Design – Defendants Undertook Various Designs and Methods of Nicotine Manipulation to Ensure in All Commercial Cigarettes Nicotine Delivery Adequate to Create and Sustain Addiction	1272
	(i)	Defendants Modified the Tar to Nicotine Ratio of Their Products to Ensure Adequate Nicotine Delivery in All Cigarettes, Including Those Marketed as "Low Tar/Low Nicotine" Products	1277
	a.	Philip Morris	1278
	b.	R.J. Reynolds	1286
	c.	BATCo/B&W/American Tobacco Company	1301
	d.	Lorillard	1311
	e.	Liggett	1318
(ii)		Smoke pH and Ammonia	1319

a.	Philip Morris	1324
b.	R.J. Reynolds	1330
c.	BATCo/B&W/American Tobacco Company	1338
d.	Lorillard	1352
e.	Liggett	1355
(iii)	Manipulating Nicotine Content of Leaf Blend and Filler	1359
(iv)	Other Product Design Techniques and Additives Affecting Nicotine Delivery	1376
a.	Filter Design	1376
b.	Paper Selection, Perforation, and Ventilation Holes	1383
c.	Other Additives	1385
d.	Other Research Efforts	1394
(e)	Conclusions	1398
F.	Defendants' Fraud Regarding Filtered and "Low Tar/Nicotine" Cigarettes ...	1406
(1)	Defendants Communicated To the Public That Their Low Tar Cigarettes Were Less Harmful than Regular Cigarettes	1409
(a)	Defendants Made Express and Implied Statements of Reduced Harm and Used Deceptive Brand Descriptors	1409
(i)	TIRC/CTR	1417
(ii)	Philip Morris	1418
(iii)	R.J. Reynolds	1463

(iv)	Brown & Williamson	1484
(v)	BATCo	1505
(vi)	American Tobacco	1519
(vii)	Lorillard	1530
(viii)	Liggett	1558
(b)	Defendants Made False and Misleading Statements Regarding Their Low Tar Cigarette Marketing	1559
(i)	Tobacco Institute	1568
(ii)	Philip Morris	1568
(iii)	RJ Reynolds	1573
(iv)	Brown & Williamson	1573
(v)	BATCo	1576
(vi)	American Tobacco	1577
(vii)	Lorillard	1577
(2)	Defendants' Low Tar Cigarette Marketing Was Intended to Keep People Smoking	1578
(a)	Defendants Marketed Low Tar Cigarettes to Discourage Smokers from Quitting	1578
(i)	Tobacco Institute	1582
(ii)	Philip Morris	1583
(iii)	RJ Reynolds	1590
(iv)	Brown & Williamson	1596
(v)	BATCo	1600

	(vi)	American Tobacco	1605
	(vii)	Lorillard	1606
	(viii)	Liggett	1607
(b)		Defendants Knew that Instead of Quitting, Smokers Switched to Low Tar Cigarettes for a Perceived Health Benefit <i>Despite</i> their Poor Taste	1608
	(i)	Philip Morris	1610
	(ii)	RJ Reynolds	1620
	(iii)	Brown & Williamson	1625
	(iv)	BATCo	1629
	(v)	American Tobacco	1631
	(vi)	Lorillard	1633
	(vii)	Liggett	1636
(3)		Defendants Knew What They Told the Public About Low Tar Cigarettes Was False and Misleading	1636
	(a)	Defendants Knew That Low Tar Cigarettes Were Not Less Harmful than Regular Cigarettes	1637
	(i)	Philip Morris	1642
	(ii)	RJ Reynolds	1649
	(iii)	Brown & Williamson	1652
	(iv)	BATCo	1656
	(v)	American	1657
	(vi)	Lorillard	1658
	(vii)	Liggett	1658

(b)	Defendants Had Extensive Knowledge of Smoker Compensation	1659
(i)	Tobacco Institute	1667
(ii)	Philip Morris	1669
(iii)	RJ Reynolds	1677
(iv)	Brown & Williamson	1682
(v)	BATCo	1686
(vi)	American	1695
(vii)	Lorillard	1696
(viii)	Liggett	1699
(c)	Defendants Have Deceptively Designed Their Low Tar Cigarettes to Facilitate Compensation	1700
(i)	Defendants' Deception Regarding Barclay	1701
(ii)	Philip Morris	1713
(iii)	RJ Reynolds	1717
(iv)	Brown & Williamson	1719
(v)	BATCo	1721
(vi)	American Tobacco	1730
(vii)	Lorillard	1731
(viii)	Liggett.....	1732
(d)	Defendants Continue to Make Misleading Statements Regarding Compensation and the FTC Method	1732
(i)	Tobacco Institute	1740

	(ii)	Philip Morris	1741
	(iii)	RJ Reynolds	1744
	(iv)	Brown & Williamson	1746
	(v)	BATCo	1750
	(vi)	American	1750
	(vii)	Lorillard	1751
(4)		Defendants' Fraudulent Marketing of Low Tar Cigarettes Increased Their Profits	1751
	(a)	Philip Morris	1759
	(b)	RJ Reynolds	1762
	(c)	Brown & Williamson	1763
	(d)	BATCo	1765
	(e)	American Tobacco	1768
	(f)	Lorillard	1769
	(g)	Liggett	1772
G.		Defendants Intentionally Market to Youth	1778
(1)		Introduction	1778
(2)		Defendants Make False and Misleading Public Statements Denying That They Market To Youth and Asserting That Their Marketing Has No Effect On Youth Smoking Behavior	1786
	(a)	False and Misleading Statements of The Tobacco Institute	1786
	(b)	False and Misleading Statements of Philip Morris	1802
	(i)	False and Misleading Public Statements	1802

(ii)	False and Misleading Testimony	1810
(c)	False and Misleading Statements of Liggett	1811
(d)	False and Misleading Statements of Lorillard	1812
(i)	False and Misleading Public Statements	1812
(ii)	False and Misleading Testimony	1816
(e)	False and Misleading Statements of American Tobacco, BATCo and Brown & Williamson	1817
(i)	False and Misleading Public Statements	1817
(ii)	False and Misleading Testimony	1824
(f)	False and Misleading Statements of R.J. Reynolds	1826
(i)	False and Misleading Public Statements	1826
(ii)	False and Misleading Testimony	1833
(3)	Defendants Do Not Follow Their Advertising Code That They Claim Prevents Them From Marketing To Youth	1834
(a)	Defendants' Adoption of An Advertising Code	1834
(b)	Defendants Do Not Follow Their Advertising Code	1840
(4)	Defendants Knew That Their Public Statements Were False and Misleading	1850
(a)	Introduction	1850
(i)	Defendants' Marketing is a Substantial Contributing Factor to Youth Smoking Initiation and Continued Consumption	1852
(ii)	Defendants Place Their Marketing To Reach the Maximum Number of Young People	1857
(iii)	The Surgeon General Has Concluded That Cigarette	

	Marketing Encourages Youth Smoking	1863
(b)	Defendants Use Euphemisms To Refer To The Youth Market	1869
(c)	Philip Morris Knew That Its Public Statements Were False and Misleading	1876
(d)	Liggett Knew That Its Public Statements Were False and Misleading	1947
(e)	Lorillard Knew That Its Public Statements Were False and Misleading	1950
(f)	American Tobacco, BATCo and Brown & Williamson Knew That Their Public Statements Were False and Misleading	1972
(g)	R.J. Reynolds Knew That Its Public Statements Were False and Misleading	2019
	(i) R.J. Reynolds's Joe Camel Campaign	2043
	(ii) Other R.J. Reynolds Campaigns	2066
	(iii) R.J. Reynolds's Repositioning of Salem and Winston Towards The Youth Market	2088
(5)	Defendants Exploit Young People's Desires to Smoke "Popular" Brands Their Peers Smoke	2092
	(a) Philip Morris	2094
	(b) Lorillard	2100
	(c) Brown & Williamson	2103
	(d) R.J. Reynolds	2104
(6)	Defendants Exploit Young People's Price Sensitivity	2106
	(a) Philip Morris	2108

(b)	Liggett	2114
(c)	Lorillard	2115
(d)	Brown & Williamson	2116
(e)	R.J. Reynolds	2117
(7)	Defendants' Conduct Continues Today	2119
(a)	Defendants' Marketing Expenditures Have Dramatically Increased	2120

CONCLUSION

EXECUTIVE SUMMARY

The Final Proposed Findings of Fact submitted by the United States establish facts that support the allegations set forth in Counts 3 and 4 of the United States' First Amended Complaint. Both counts are brought under the Racketeer Influenced and Corrupt Organizations Act ("RICO"), 18 U.S.C. § 1961-1968. These facts establish entitlement to equitable relief, including the disgorgement of Defendants' ill-gotten gains and non-monetary injunctive measures. As set forth in these Final Proposed Findings of Fact, substantial evidence establishes that Defendants have engaged in and executed – and continue to engage in and execute – a massive 50-year scheme to defraud the public, including consumers of cigarettes, in violation of RICO. Moreover, Defendants' past and ongoing conduct indicates a reasonable likelihood of future violations.

Cigarette Smoking, Disease and Death

Cigarette smoking and exposure to secondhand smoke kills nearly 440,000 Americans every year. The annual number of deaths due to cigarette smoking is substantially greater than the annual number of deaths due to illegal drug use, alcohol consumption, automobile accidents, fires, homicides, suicides and AIDS combined. Approximately one out of every five deaths that occur in the United States is caused by cigarette smoking. Smoking causes lung cancer, atherosclerosis, bladder cancer, cerebrovascular disease, chronic obstructive pulmonary disease, cardiovascular disease, including myocardial infarction and coronary heart disease, esophageal cancer, kidney cancer, laryngeal cancer, oral cancer, peptic ulcer disease, and respiratory morbidity. Smoking also causes cancers of the stomach, uterine cervix, pancreas, and kidney;

EXECUTIVE SUMMARY

acute myeloid leukemia; pneumonia; abdominal aortic aneurysm; cataract; and periodontitis. On May 27, 2004, the U.S. Surgeon General announced causal conclusions in connection with a substantial number of additional diseases and further acknowledges that smoking generally diminishes the health of smokers.

By the middle of the twentieth century, physicians and public health officials in the United States had widely noted an alarming increase in numbers of cases of lung cancer. Virtually unknown as a cause of death in 1900, by 1935 there were an estimated 4,000 deaths annually. A decade later, the annual death toll from lung cancer had nearly tripled. The meteoric rise in lung cancers followed the dramatic increase in cigarette consumption that had begun early in the twentieth century. Annual per capita consumption of cigarettes in 1900 stood at approximately forty-nine cigarettes; by 1930, annual per capita consumption was over 1,300; by 1950, it was over 3,000. Population studies showed that the increases in lung cancer cases and deaths, though they lagged in time behind this increase in cigarette use, closely tracked the spike in cigarette smoking. This apparent association led to considerable speculation about the relationship between cigarette smoking and ill health. The initial speculation was confirmed by scientific study.

By late 1953, there had been at least five published epidemiologic investigations, as well as others identifying and examining carcinogenic components in tobacco smoke and their effects. The researchers conducting these studies had come to a categorical understanding of the link between smoking and lung cancer. This understanding was both broader and deeper than that obtained from the case studies and preliminary statistical findings earlier in the century. While

EXECUTIVE SUMMARY

some of the epidemiological methods were innovative, the scientists using them were careful to approach them in a thorough manner; these methods were completely consistent with established scientific procedure and process. Epidemiology was not just based on statistics, but also was an interdisciplinary, applied field. The studies substantially transformed the scientific knowledge base concerning the harms of cigarette use. Unlike earlier anecdotal and clinical assessments, these studies offered new and pathbreaking approaches to investigating and resolving causal relationships.

The Formation of the Enterprise

In response to this growing body of evidence that smoking caused lung cancer, Defendants and their agents joined together and launched their coordinated scheme in the early 1950s. Defendants developed and implemented a unified strategy that sought to reassure the public that there was no evidence that smoking causes disease. At the end of 1953, the chief executives of the five major cigarette manufacturers in the United States at the time – Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, and American – met at the Plaza Hotel in New York City with representatives of the public relations firm Hill & Knowlton and agreed to jointly conduct a long term public relations campaign to counter the growing evidence linking smoking as a cause of serious diseases. The meeting spawned an association-in-fact enterprise (“Enterprise”) to execute a fraudulent scheme in furtherance of their overriding common objective – to preserve and enhance the tobacco industry’s profits by maximizing the numbers of smokers and number of cigarettes smoked and to avoid adverse liability judgments and adverse publicity. The fraudulent scheme would continue for the next five decades.

EXECUTIVE SUMMARY

As a result of the Plaza Hotel meetings, the companies launched their long term public relations campaign by issuing the “Frank Statement to Cigarette Smokers,” a full page announcement published in 448 newspapers across the United States. The Frank Statement included two representations that would lie at the heart of Defendants' fraudulent scheme – first, that there was insufficient scientific and medical evidence that smoking was a cause of any disease; and second, that the industry would jointly sponsor and disclose the results of “independent” research designed to uncover the health effects of smoking through the new industry-funded Tobacco Industry Research Committee (“TIRC”), later renamed the Council for Tobacco Research (“CTR”). At the same time that Defendants announced in their 1954 "Frank Statement to Cigarette Smokers" that "we accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business," they established a sophisticated public relations apparatus in the form of TIRC – based on the "cover" of conducting research – to deny the harms of smoking and to reassure the public. Once they had organized and set in motion the essential strategy of generating “controversy” surrounding the scientific findings linking smoking to disease, Defendants stuck to this approach, without wavering, for the next half-century.

Over time, other entities joined and actively participated in the affairs of the ongoing Enterprise and conspiracy, including Defendants Liggett and BATCo, Brown & Williamson's affiliate. In 1958, the members of TIRC formed Defendant The Tobacco Institute, Inc., to assume many of TIRC's public relations functions. In 1985, Philip Morris Companies joined the Enterprise, becoming a direct parent to Philip Morris as well as Philip Morris International,

EXECUTIVE SUMMARY

which had previously been a division of Philip Morris.¹ The Enterprise operated through both formal structures, including jointly funded and directed entities such as TIRC/CTR and the Tobacco Institute, and other less formal means, including scientific and legal committees, to communicate, advance, and maintain a united front, and to ensure lockstep adherence to achieve their shared aims. Defendants developed and used this extensive and interlocking web because they recognized that any departure from the industry-wide approach to the content of public statements made anywhere in the world, or the nature of research would have severe adverse consequences for the entire industry. To coordinate and further their fraudulent scheme, Defendants made and caused to be made and received innumerable mail and electronic transmissions from the 1950s through present.

The Role of TIRC/CTR and the Tobacco Institute in Defendants' Decades-Long Campaign to Deny and Distort the Health Effects of Smoking

From the outset, the dual functions of TIRC/CTR, public relations and scientific research, were intertwined. Rather than carefully and critically assessing the emerging scientific data concerning the harms of smoking, TIRC/CTR focused its energies and resources in two areas. First, in its public relations capacity, it repeatedly attacked scientific studies that demonstrated the harms of cigarette smoke and worked to reassure smokers about cigarettes. Second, it developed and funded a research program that concentrated on basic processes of disease and

¹ In January 2003, Defendant Philip Morris Inc. changed its name to Philip Morris USA Inc., and Defendant Philip Morris Companies Inc. changed its name to Altria Group, Inc. These Final Proposed Findings of Fact refer to Philip Morris USA as “Philip Morris” and “Philip Morris USA” interchangeably, and refer to Altria as “Philip Morris Companies” and “Altria” interchangeably.

EXECUTIVE SUMMARY

that was distant from, if not completely irrelevant to, evaluating the immediate and fundamental questions of the risks and harms associated with smoking.

Similarly, the Tobacco Institute actively designed and wrote issue statements, advertisements, pamphlets, and testimony that advanced Defendants' jointly formulated positions on smoking and health issues, including denying that smoking cigarettes was addictive and caused diseases, and supporting the false claim that the link between smoking cigarettes (and exposure to secondhand smoke) and adverse health effects remained a legitimate "open question." In this way, the functions (public relations and research) of these two entities were integrally related; both were fully committed to Defendants' goals of denying and discrediting the substantial scientific evidence of smoking's harms and convincing the public (especially smokers and potential smokers) that smoking was not harmful to health.

Defendants repeatedly represented to the public that they sponsored independent research aimed at discovering the health effects of smoking. Indeed, Defendants claimed that they created TIRC/CTR to administer this effort. These statements were misleading and deceptive half-truths, because the Cigarette Company Defendants² used TIRC/CTR to serve as a "front" organization to advance their public relations and litigation defense objectives. Through CTR, the Cigarette Company Defendants funded "Special Projects" – research projects conceived and directed by committees of industry representatives, including lawyers, to support scientists who had shown a

²As used here and throughout these Final Proposed Findings of Fact and Conclusions of Law, "Cigarette Company Defendants" refers to Defendants American Tobacco, British American Tobacco (Investments) Limited, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds.

EXECUTIVE SUMMARY

willingness and ability to generate information and provide testimony that could bolster the industry's litigation defenses before courts and governmental bodies and cast doubt on the scientific evidence that smoking caused cancer and other diseases. Similarly, Defendants also sponsored jointly funded research through lawyer-administered "Special Accounts" – to recruit and support industry-friendly researchers to serve as expert witnesses in litigation and to represent the industry's scientific position in legislative and regulatory proceedings.

Within the individual Cigarette Company Defendants, high-ranking corporate employees and lawyers, as well as outside lawyers representing the companies, acknowledged that if they conducted research internally that confirmed that cigarettes cause disease and are addictive, such research, if disclosed, would jeopardize their unified public relations and legal positions, would threaten industry profits, and would expose not just individual companies, but the entire industry, to legal liability and product regulation. Of course, the Cigarette Company Defendants did, in fact, acknowledge internally that cigarettes caused lung cancer and other diseases: they recognized the legitimacy of the scientific consensus, and the limited amount of internal research that their scientists did perform was wholly consistent with the results of mainstream scientific study.

The public statements issued through organizations like TIRC/CTR, the Tobacco Institute, and by Cigarette Company Defendants themselves, were flatly inconsistent with Defendants' actual understanding of the causal link between smoking and disease. At the same time that Defendants assured the public through their "Frank Statement" that "there is no proof that cigarette smoking is one of the causes [of cancer]," internally they documented a large

number of known human carcinogens in their products and replicated mainstream scientific research showing the health effects of smoking. Defendants' internal documents acknowledge that their public denial that smoking cigarettes causes disease both was contrary to the overwhelming medical and scientific consensus – established through extensive epidemiological and other scientific investigation by the early 1950s – and was intended to convince smokers and potential smokers that there remained genuine scientific “controversy” about whether smoking caused disease.

**The Agreement Not to Compete on Health Claims
or to Perform Certain Biological Research**

Defendants' joint commitment to publicly denying that cigarettes were a proven cause of disease had profound effects on all aspects of their business, including their marketing and research activities. For example, extensive documentary evidence proves that Defendants recognized that there was a substantial market for a cigarette that could be marketed as potentially less hazardous, but that they collectively agreed not to do anything in the marketing and development of cigarettes that would jeopardize the public relations position at the core of the scheme to defraud: the denial that any commercially sold cigarettes were a proven cause of disease.

Defendants made public statements proclaiming their commitment – and ability – to develop potentially less hazardous cigarettes, but indicated that such actions were unnecessary unless and until cigarettes were proven to cause disease:

- In March 1954, George Weissman, a Philip Morris Vice President, publicly reaffirmed the industry's commitment to protect the health of its customers, claiming that the cigarette industry would “stop business tomorrow” if it “had any

EXECUTIVE SUMMARY

thought or knowledge that in any way we were selling a product harmful to consumers.”

- In 1964, Bowman Gray, Chairman of the Board of R.J. Reynolds, stated publicly on behalf of R.J. Reynolds, Philip Morris, Brown & Williamson, Lorillard, Liggett, and American, that “[i]f it is proven that cigarettes are harmful, we want to do something about it regardless of what somebody else tells us to do. And we would do our level best. This is just being human.”
- In 1971, Philip Morris chief executive officer Joseph Cullman III explained in a “Face the Nation” TV interview that “this industry can face the future with confidence because when, as, and if any ingredient in cigarette smoke is identified as being injurious to human health, we are confident that we can eliminate that ingredient.”
- In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris Senior Vice President James Bowling declared that “[i]f our product is harmful . . . we’ll stop making it. We now know enough that we can take anything out of our product, but we don’t know what ingredients to take out.” Bowling further stated that “[w]e don’t know if smoking is harmful to health, and we think somebody ought to find out.”

Moreover, Defendants repeatedly recognized the potential economic boon to selling a cigarette that could be truthfully marketed as potentially less hazardous. For example, in a June 1966 report, a key Philip Morris researcher told research executives that “If we could develop a . . . ‘healthy’ cigarette that tasted exactly like a Marlboro, delivered the nicotine of a Marlboro, and was called Marlboro, it would probably become the best selling brand.” However, Defendants agreed not to compete on smoking and health issues in the marketing of cigarettes. Accordingly, when a Defendant designed a cigarette – or developed a cigarette component – intended to potentially reduce the delivery of harmful smoke constituents to the smoker, the Defendant limited the types of information that it provided to consumers in marketing such products.

EXECUTIVE SUMMARY

Evidence shows that Defendants failed to provide information – even if they believed it to be truthful scientific information – that certain brands or types of cigarettes were likely to be less harmful than others, because such information carried the obvious implication that cigarettes were harmful. In one of the most notable of such instances, after Defendant Liggett spent twelve years and \$15 million developing a cigarette – the XA – that its research showed to be significantly less carcinogenic than its conventional cigarettes, it killed the entire project before marketing the cigarette to consumers after Defendant Brown & Williamson threatened Liggett's "very existence" if it marketed the cigarette. Brown & Williamson also threatened to freeze Liggett out of joint defense agreements and exclude Liggett from the Tobacco Institute. Delivered through Brown & Williamson's representative on the Tobacco Institute's Committee of Counsel, the threat was based on Brown & Williamson's fear that selling XA would be an admission against the interest of all Cigarette Company Defendants. Later, in the late 1980s, R.J. Reynolds told the FDA that it would not make health-related marketing claims about its Premier cigarette because the tobacco industry maintained that “conventional cigarettes are not unsafe, and that it would never reverse this position.” Promoting one cigarette as “safer” than others “would be an indictment of the tobacco industry and its long standing position that conventional cigarettes are not unsafe.”

Similarly, documents show that Defendants limited the types of research they conducted, because they did not want to generate internal evidence to suggest that the companies believed there was any need to examine whether a causative link existed between smoking and disease, let alone create scientific information that demonstrated such a link. Accordingly, Defendants

EXECUTIVE SUMMARY

jointly agreed not to perform certain types of biological tests using commercially sold cigarette brands in their domestic research facilities. Further, there is substantial evidence that during the past five decades Defendants have decided not to incorporate design features or processes that Defendants' own research concluded were likely to reduce the hazards of smoking, were technically feasible, and were acceptable to smokers. In short, Defendants' conduct in this area is powerful evidence of Defendants' well documented agreement not to compete on smoking and health issues.

Environmental Tobacco Smoke

In their efforts to prevent restrictions on where and when people could smoke, in the face of growing evidence since the 1970s of the adverse health effects of secondhand smoke, Defendants engaged in similar conduct and misleading public statements concerning the health effects of secondhand smoke. Environmental tobacco smoke ("ETS"), also called secondhand smoke, is a mixture of mostly sidestream smoke given off by the smoldering cigarette and some exhaled mainstream smoke, which is the smoke an active smoker exhales. Conclusions about the causal relationship between ETS exposure and health outcomes are based not only on epidemiological evidence, but also on the extensive evidence derived from epidemiological and toxicological investigation of active smoking. Additionally, studies using biomarkers of exposure and dose, including the nicotine metabolite cotinine and white cell adducts, document the absorption of ETS by exposed nonsmokers, adding confirmatory evidence to the observed associations of ETS with adverse effects.

EXECUTIVE SUMMARY

In adults, ETS exposure causes lung cancer and ischemic heart disease. In 1986, the Surgeon General and the National Research Council of the National Academy of Sciences concluded that passive smoking causally increases the risk of lung cancer in nonsmokers, accounting for two to three percent of all lung cancer cases. ETS exposure of infants and children has adverse effects on respiratory health, including increased risk for severe lower respiratory infections, middle ear disease (otitis media), chronic respiratory symptoms and asthma, as well as a reduction in the rate of lung function growth during childhood, and is associated with sudden infant death syndrome and cognitive and behavioral disorders.

Defendants approached the issue of the health effects of exposure to secondhand smoke with a sense of urgency, based on their concern as expressed in internal documents, that in the United States, the ETS issue would have a devastating effect on sales. Defendants specifically saw concerns about the health effects of ETS as a threat to the "number of smokers & number of cigarettes they smoke." Publicly, Defendants promised to "seek answers," assuring the public that they would fund and support "independent" and "arms length" research into the health effects of exposure to secondhand smoke. These public promises, however, were false and fraudulent and were intended to deceive the public. Defendants' true goal with respect to passive smoking was not to support independent and valid research in order to answer questions about the link between ETS and disease, but rather the goal was simply "to keep the controversy alive," just as they had done with active smoking. Defendants designed a sophisticated public relations and research strategy to attempt to "alter public perception that ETS is damaging," but did so despite their specific, internal acknowledgment that there was a "[l]ack of objective science" to support

EXECUTIVE SUMMARY

their public relations campaign. This lack of objective science did not stand in Defendants' way.

They asked: "Is \$100 million campaign worth an x increase in sales?" The answer: "Yes."

Pursuant to Defendants' carefully designed and coordinated strategy, the Center for Indoor Air Research (CIAR) was officially created in 1988 to take over the research responsibilities of the a committee that had previously operated under the direction of Defendants' law firms Shook, Hardy & Bacon and Covington & Burling – that is, to act as a coordinating organization for Defendants' efforts to fraudulently mislead the American public about the health effects of ETS exposure. CIAR was created by Philip Morris, Lorillard, and R.J. Reynolds. Brown & Williamson joined CIAR as a voting board member in 1995. While Liggett was never officially a member of CIAR, it attended meetings of the organization and participated in ETS seminars and meetings organized by Covington & Burling and was fully cognizant of, and in fact assented to, the activities of the organization. BATCo, while not a member of CIAR, provided funding to CIAR to hide BATCo and Philip Morris's involvement in at least one CIAR "sponsored" study.

CIAR's stated mission was to serve as a hub that would sponsor and foster quality, objective research in indoor air issues with emphasis on ETS and effectively communicate pertinent research findings to the broad scientific community. But while Philip Morris, Lorillard, and R.J. Reynolds publicly represented that CIAR was independent, its by-laws revealed otherwise. The by-laws required that charter members be tobacco companies; dictated that only charter members have the power to choose CIAR's officers; and, significantly, gave charter members the exclusive power to decide what research the organization would fund. CIAR was intended to allow Defendants to perpetuate a "scientific controversy" surrounding the health

EXECUTIVE SUMMARY

effects of ETS exposure. As Covington & Burling attorney John Rupp explained in March 1993: "In sum, while one might wish it otherwise, the value of CIAR depends on the industry's playing an active role (1) in identifying research projects likely to be of value and (2) working to make sure that the findings of funded research are brought to the attention of decision makers in an appropriate and timely manner." According to a former CIAR board member, "ETS was a litigation issue and a PR issue."

Defendants engaged in a global effort to fraudulently deny and distort the harms associated with exposure to secondhand smoke. The international ETS Consultancy Program was an extension and amplification of multifaceted domestic initiatives by industry counsel to counter ever-mounting evidence implicating secondhand smoke as a cause of disease and other health problems; however, Defendants acted on a global scale. Through this program, Defendants worked to identify, "educate," and financially reward scientists in every world market to generate research results, present papers, pen letters to scientific journals, plan and attend conferences, and publicly speak on behalf of the cigarette companies. The overarching goal was to "keep the controversy alive" and forestall legislation and any restrictions on public or workplace smoking. Defendants issued numerous false and deceptive statements denying and distorting the health risks of involuntary exposure in connection with this massive, coordinated effort to maintain cigarette sales efforts in the face of what they recognized internally as legitimate scientific evidence of the dangers associated with secondhand smoke.

Addiction and the Manipulation of Nicotine Levels in Cigarettes

EXECUTIVE SUMMARY

Cigarette smoking is an addictive behavior, a dependency characterized by drug craving, compulsive use, tolerance, withdrawal symptoms, and relapse after withdrawal. Underlying the smoking behavior and its remarkable intractability to cessation is the drug nicotine. Nicotine is the primary component of cigarettes that creates and sustains addiction to cigarettes.

Defendants have studied nicotine and its effects since the 1950s, and the documents describing their examination and knowledge of nicotine's pharmacological effects on smokers – whether they characterized that effect as "addictive," "dependence" producing or "habituating," – demonstrate unequivocally that defendants understood the central role nicotine plays in keeping smokers smoking, and thus its critical importance to the success of their industry. Additional internal records demonstrate that Defendants knew that cigarette smoking was the vehicle for delivering nicotine, which was the critical component in maintaining the addiction necessary to sustain and enhance their profits. Indeed, Defendants purposefully designed and sold products that delivered a pharmacologically effective dose of nicotine in order to create and sustain nicotine addiction in smokers. Indeed, an internal document drafted by Philip Morris scientist Helmut Wakeham in 1969, for example, recognized:

We share the conviction with others that it is the pharmacological effect of inhaled smoke which mediates the smoking habit. . . .

We have then as our first premise, that the primary motivation for smoking is to obtain the pharmacological effect of nicotine.

In the past we at R & D have said that we're not in the cigarette business, we're in the smoke business. It might be more pointed to observe that the cigarette is the vehicle of smoke, smoke is the vehicle of nicotine, and nicotine is the agent of a pleasurable body response.

EXECUTIVE SUMMARY

This primary incentive to smoking gets obscured by the overlay secondary incentives, which have been superimposed upon the habit. Psychoanalysts have speculated about the importance of the sucking behavior, describing it as oral regression. Psychologists have proposed that the smoker is projecting and ego-image with puffing and his halo of smoke. One frequently hears "I have to have something to do with my hands" as a reason. All are perhaps operative motives, but we hold that none are adequate to sustain the habit in the absence of nicotine.

We are not suggesting that the effect of nicotine is responsible for the initiation of the habit. To the contrary. The first cigarette is a noxious experience to the novice. To account for the fact that the beginning smoker will tolerate the unpleasantness, we must invoke a psychosocial motive. Smoking for the beginner is a symbolic act. The smoker is telling the world, "This is the kind of person I am. . . ."

As the force from the psychosocial symbolism subsides, the pharmacological effect takes over to sustain the habit

Similarly, R. J. Reynolds researcher Claude Teague acknowledged in an internal 1972 report, "Thus a tobacco product is, in essence, a vehicle for delivery of nicotine, designed to deliver the nicotine in a generally acceptable and attractive form. Our industry is then based upon design, manufacture and sale of attractive dosage forms of nicotine."

Nevertheless, just as Defendants long denied, contrary to fact, that smoking causes disease, Defendants consistently and publicly denied that smoking is addictive. Defendants intentionally maintained and coordinated their fraudulent position on addiction and nicotine as an important part of their overall efforts to influence public opinion and persuade people that smoking was not dangerous. In this way, Defendants' have kept more smokers smoking, recruited more new smokers, and maintained or increased profits. Additionally, defendants have sought to discredit proof of addiction in order to preserve their "smoking is a free choice"

EXECUTIVE SUMMARY

arguments in smoking and health litigation. As with Defendants' statements designed to undermine the scientific evidence of smoking's harms, the statements denying addiction were knowingly false and misleading when made, and intended to avoid product regulation, to bolster the industry's defenses in smoking and health litigation, and to minimize consumers' concerns about smoking.

Defendants' awareness of the critical importance of nicotine to the cigarette smoker, and thus to the continued profits of the industry, was such that the Defendants dedicated extraordinary resources to the study of nicotine and its effects on the smoker. The evidence shows that Defendants have long had the ability to modify and manipulate the amount of nicotine that their products deliver, and have studied extensively how every characteristic of every component of cigarettes – including the tobacco blend, the paper, the filter, and the manufacturing process – impacts nicotine delivery. Indeed, Defendants' internal documents indicate that, in light of Defendants' recognition that “no one has ever become a cigarette smoker by smoking cigarettes without nicotine,” Cigarette Company Defendants have designed their cigarettes with a central overriding objective – to ensure that smokers can obtain enough nicotine to create and sustain addiction. Notwithstanding the substantial evidence that Defendants designed their products to deliver doses of nicotine sufficient to create and sustain addiction, Defendants have publicly and fraudulently denied that they manipulate nicotine. Defendants have sought to mislead the public about their manipulation of nicotine by publicly and fraudulently maintaining that the level of nicotine in a cigarette is inextricably linked to the cigarette's tar level and that nicotine delivery levels follow tar delivery levels in cigarette smoke.

EXECUTIVE SUMMARY

Through these and other false statements, Defendants have furthered their common efforts to deceive the public regarding their use and manipulation of nicotine.

Light and Low Tar Cigarettes

The understanding of nicotine's primary role in keeping people smoking and Cigarette Company Defendants' desire to capitalize on smokers' growing desire for a less hazardous cigarette in the face of growing evidence of the health effects of smoking, underlie another central component of the scheme to defraud – the design and marketing of so-called “low tar/low nicotine” cigarettes. As awareness and concern about the adverse health risks associated with smoking began to grow in the early 1950s, Defendants began developing cigarettes they internally referred to as "health reassurance" brands in an effort to keep smokers in the market. Initially, Defendants explicitly marketed and promoted these brands as safer as the result of an added filter which purportedly protected smokers from the harmful tar in cigarette smoke. Having established the link in the minds of consumers between low tar/filtration and reduced harm through use of explicit health claims, Defendants' later advertisements contained implied health claims that built on their earlier advertisements in an effort to avoid suggesting to consumers that any cigarettes were harmful. For several decades, Defendants have marketed and promoted their so-called "low tar/nicotine" cigarettes using brand descriptors like "Light," "Ultralight," "Mild" and "Medium" and claims of "low tar and nicotine" to suggest to consumers that these products are safer than regular, full flavor cigarettes.

EXECUTIVE SUMMARY

Defendants made, and continue to make, health benefit claims regarding filtered and low tar cigarettes when they either lacked evidence to substantiate the claims or knew that they were false. Internal industry research documents show that Defendants never had adequate support for their claims of reduced health risk from low tar cigarettes, but rather confirm Defendants' awareness by the late 1960s – early 1970s that low tar cigarettes were unlikely to provide any health benefit to smokers compared to full flavor cigarettes. In fact, the public health and scientific communities now recognize what Defendants have long known internally: there is no meaningful reduction in disease risk in smoking low tar cigarettes as opposed to smoking regular cigarettes.

In addition, Defendants have known for decades that their low tar cigarettes, as designed, do not actually deliver the low reported and advertised levels of tar and nicotine – which are derived from a standardized machine test originally developed by Defendants and adopted by the Federal Trade Commission in 1967 (“FTC Method”) – to human smokers. Defendants have long known that to obtain an amount of nicotine sufficient to satisfy their addiction, smokers of low tar cigarettes modify their smoking behavior, or “compensate,” for the reduced yields by inhaling smoke more deeply, holding smoke in their lungs longer, covering cigarette ventilation holes with fingers or lips, and/or smoking more cigarettes. As a result of this nicotine-driven smoker behavior, smokers of light cigarettes concurrently boost their intake of tar, thus negating what Defendants have long promoted as a primary health-related benefit of light cigarettes: lower tar intake.

EXECUTIVE SUMMARY

For decades, Defendants have affirmatively exploited their understanding of compensation by deliberately designing low tar cigarettes that register low tar yields on the standardized FTC Method, but that also facilitate a smoker's ability to compensate to ensure adequate delivery of nicotine to create and sustain addiction. Even as they designed low tar cigarettes to facilitate compensation, and despite having evidence that low tar cigarettes provide no health benefits and may in fact deter people from quitting, Defendants have withheld and suppressed such evidence from public dissemination. Extensive evidence shows that Defendants used terms such as "Light" and "Low Tar" intentionally to convey their false "health reassurance" message rather than just a "taste" message, because their research showed that people smoked low tar products despite, not because of, the taste. Accordingly, Defendants' marketing themes repeatedly tried to convince smokers that their brands could provide the main claimed benefit of light cigarettes – increased safety – without sacrificing "taste." Further, Defendants used both verbal and non-verbal communications to convey their health reassurance message, employing colors and imagery that their research indicated people associated with healthier products.

Defendants' campaign of deception has impacted Americans' decisions to smoke. The availability of low yield cigarettes and the messages conveyed by Defendants' advertising, marketing, and public statements regarding low tar cigarettes, has caused many smokers to perceive them as an acceptable alternative to quitting smoking. As a result of Defendants' conduct, health concerned smokers have switched from regular cigarettes to those with lower reported tar yields rather than quitting smoking altogether. Smokers of "light" and "ultra light" cigarettes are less likely to quit smoking than are smokers of regular cigarettes. Additionally, as

EXECUTIVE SUMMARY

a result of Defendants' fraudulent marketing and deceptive design of "light" and "ultra light" cigarettes, many smokers of these cigarettes consume more cigarettes than do smokers of regular cigarettes. Defendants' conduct relating to low tar cigarettes furthers the aims of the Enterprise and the scheme to defraud by providing a false sense of reassurance to smokers that weakens their resolve to quit smoking, and serves to draw ex-smokers back into the market. In short, Defendants' concerted campaign of deception regarding low tar cigarettes has been a calculated – and extremely successful – scheme to increase their profits at the expense of the health of the American public.

Youth Marketing

Cigarette smoking, particularly that begun by young people, continues to be the leading cause of preventable disease and premature mortality in the United States. Of children and adolescents who are regular smokers, one out of three will die of smoking-related disease. As part of the scheme to defraud, Defendants have intentionally marketed cigarettes to youth under the legal smoking age while falsely denying that they have done and continue to do so. As is evident from Defendants' own documents, Defendants have long recognized that the continued profitability of the industry depends upon new smokers entering the "franchise" as current smokers die from smoking-related diseases or quit. Defendants have similarly known that an overwhelming majority of regular smokers begin smoking before age eighteen. In 1966, Defendants, in the face of threatened federal advertising restrictions, adopted a voluntary advertising code in which they pledged to refrain from marketing activity likely to attract youth. Thereafter, Defendants continued unabated their efforts to capture as much of the youth market

EXECUTIVE SUMMARY

as possible, effectively ignoring the voluntary advertising code and designing advertising themes, marketing campaigns, and promotional activities known to resonate with adolescents.

Defendants' internal documents indicate their awareness that the majority of smokers began smoking as youths and develop brand loyalty as youths, that youths were highly susceptible to advertising, and that persons who began smoking when they were teenagers were very likely to remain lifetime smokers. For example:

A March 31, 1981 report conducted by the Philip Morris Research Center entitled "Young Smokers Prevalence, Trends, Implications, and Related Demographic Trends" stated that "Today's teenager is tomorrow's potential regular customer, and the overwhelming majority of smokers first begin to smoke while still in their teens . . . it is during the teenage years that the initial brand choice is made."

A September 22, 1989 report prepared for Philip Morris by its main advertising agency, Leo Burnett U.S.A., described Philip Morris's marketing's target audience as a "moving target in transition from adolescence to young adulthood."

An August 30, 1978 Lorillard memorandum stated: "The success of NEWPORT has been fantastic during the past few years. . . . [T]he base of our business is the high school student. Newport in the 1970s is turning into the Marlboro of the 1960s and 1970s."

A July 9, 1984 report circulated to the heads of B&W's Marketing and Research Development departments stated "[o]ur future business depends on the size of [the] starter population."

In a November 26, 1974 memorandum entitled "R.J. Reynolds Tobacco Company Domestic Operating Goals, R.J. Reynolds stated its "[p]rimary goal in 1975 and ensuing years is to reestablish R.J. Reynolds's share of growth in the domestic cigarette industry," by targeting the "14-24 age group" who, "[a]s they mature, will account for key share of cigarette volume for next 25 years. Winston has 14% of this franchise, while Marlboro has 33%. - SALEM has 9%--Kool has 17%." The memorandum indicated that R.J. Reynolds "will direct advertising appeal to this young adult group without alienating the brand's current franchise."

A September 27, 1982 memorandum written by Diane Burrows, R.J. Reynolds Market Research Department, and circulated to L.W. Hall, Jr. Vice President of

EXECUTIVE SUMMARY

R.J. Reynolds Marketing Department, stated: "The loss of younger adult males and teenagers is more important to the long term, drying up the supply of new smokers to replace the old. This is not a fixed loss to the industry: its importance increases with time. In ten years, increased rate per day would have been expected to raise this group's consumption by more than 50%."

Defendants targeted young people with their marketing efforts, their selection of which marketing activities to pursue and to shape the themes and images of those activities, and allocated substantial resources researching the habits and preferences of the youth market, including these research efforts. For instance:

An October 7, 1953 letter from George Weissman, Vice President of Philip Morris, discussed an August 1953 Elmo Roper report on a study of young smokers commissioned by Philip Morris, stating that "industry figures indicate that 47% of the population, 15 years and older, smokes cigarettes" and that "we have our greatest strength in the 15-24 age group."

The "1969 Survey of Cigarette Smoking Behavior and Attitudes" performed by Eastman Chemical Products for Philip Morris contained detailed analysis of beginning smokers, including interviews with 12-14 year olds.

A 1976 Brown & Williamson document containing information drawn from a study of smokers stated that "[t]he 16-25 age group has consistently accounted for the highest level of starters."

In 1958 and 1959, R.J. Reynolds commissioned a series of studies of high school and college students, interviewing in sum almost 20,000 students as young as high school freshmen regarding their smoking habits and brand preferences.

In 1980, the R.J. Reynolds Marketing Development Department issued a series of internal reports entitled "Teenage Smokers (14-17) and New Adult Smokers and Quitters" which surveyed the smoking habits of fourteen to seventeen year olds.

Knowing that advertising and promotion stimulated the demand for cigarettes, the Cigarette Company Defendants used their knowledge of young people's vulnerabilities gained in this research in order to create marketing campaigns (including advertising, promotion, and

EXECUTIVE SUMMARY

couponing) that would and did appeal to youth, in order to foster youth smoking initiation and ensure that young smokers would choose their brands. These campaigns have intentionally exploited adolescents' vulnerability to imagery utilizing themes that are, to this day, the same as they have been for decades: independence, liberation, attractiveness, adventurousness, sophistication, glamour, athleticism, social inclusion, sexual attractiveness, thinness, popularity, rebelliousness and being "cool."

The Cigarette Company Defendants continue to advertise in youth-oriented publications; employ imagery and messages that they know are appealing to teenagers; increasingly concentrate their marketing in places where they know youths will frequent such as convenience stores; engage in strategic pricing to attract youths; increase their marketing at point-of-sale locations with promotions, self-service displays, and other materials; sponsor sporting and entertainment events, many of which are televised or otherwise broadcast and draw large youth audiences; and engage in a host of other activities which are designed to attract youths to begin and continue smoking. And yet, to this day, in the face of evidence of their explicit recognition of the importance of the youth market, research into the best ways to obtain the youth market, and development of advertising campaigns designed to capture it that have remained largely unchanged for more than thirty years, the Defendants publicly deny their efforts to appeal to the youth.

Independent scientific studies published in reputable scientific journals and in official government reports, have confirmed Defendants' knowledge, as set out in their internal documents, that their marketing contributes to the primary demand for and continuing use of

EXECUTIVE SUMMARY

cigarettes. Over the past ten years, there have been a number of comprehensive reviews of the scientific evidence concerning the effects of cigarette marketing, including advertising and promotion, on smoking decisions by young people. From these reviews it is clear that the weight of all available evidence, including survey data, scientific studies and experiments, behavioral studies and econometric studies, supports the conclusion that cigarette marketing is a substantial contributing factor in the smoking behavior of young people, including the decision to begin smoking and the decision to continue smoking.

Concealment and Suppression of Information

From at least 1954 to the present, Defendants engaged in parallel efforts to destroy and conceal documents and information in furtherance of the Enterprise's goals of (1) preventing the public from learning the truth about smoking's adverse impact on health; (2) preventing the public from learning the truth about the addictiveness of nicotine; (3) avoiding or, at a minimum, limiting liability for smoking and health related claims in litigation; and (4) avoiding statutory and regulatory limitations on the cigarette industry, including limitations on advertising. These activities occurred despite the promises of Defendants that (a) they did not conceal, suppress or destroy evidence, and that (b) they shared with the American people all pertinent information regarding the true health effects of smoking, including research findings related to smoking and health. Indeed, as recently as 1996, Martin Broughton, Chief Executive of BAT Industries, the then ultimate parent company of BATCo and Brown & Williamson, made a statement to the *Wall Street Journal* denying that BAT Industries and its subsidiaries had concealed research linking smoking and disease. Broughton stated: "We haven't concealed, we do not conceal and

EXECUTIVE SUMMARY

we will never conceal. We have no internal research which proves that smoking causes lung cancer or other diseases or, indeed, that smoking is addictive."

* * * * *

In short, Defendants' scheme to defraud permeated and influenced all facets of Defendants' conduct – research, product development, advertising, marketing, legal, public relations, and communications – in a manner that has resulted in extraordinary profits for the past half-century, but has had devastating consequences for the public's health. The purpose of Defendants' overarching scheme was to defraud consumers of the purchase price of cigarettes to sustain and expand the market for cigarettes and to maximize their individual profits. Defendants executed this scheme in different but interrelated ways, including by enticing consumers to begin and to continue smoking, falsely denying the addictiveness and adverse health effects of smoking, and misrepresenting that such matters were “an open question.” Thus, Defendants undertook activities specifically intended to obfuscate the public's understanding of the actual dangers posed by smoking at the same time that they were engaging in marketing efforts designed to attract them, all with the intention to sell more cigarettes and make more money.

As the Final Proposed Findings of Fact demonstrate, the United States is entitled to the equitable relief sought under RICO, including disgorgement of proceeds at least in the amount of \$280 billion. The United States has produced substantial evidence that the Defendants' scheme to defraud had damaging and wide-ranging implications, including influence on initiation and continued smoking for people of all ages. All of Defendants' sales of cigarettes to all consumers

EXECUTIVE SUMMARY

from 1954 to 2001 were inextricably intertwined with this massive scheme to defraud the public. As a result, the United States would be justified in seeking disgorgement of the proceeds from all sales to people of all ages from 1954 into the future. The United States has, however, limited its request for disgorgement to proceeds from the sale of cigarettes only to the Youth Addicted Population (those youth who smoked daily when under the age of 21 and those adults who were smoking more than five cigarettes a day when they turned 21 years old), and only from the date of passage of the RICO statute in 1971.

I**DEFENDANTS ESTABLISHED AN ENTERPRISE****A. Introduction**

1. The United States has established by a preponderance of the evidence the existence of an "enterprise" as defined in 18 U.S.C. § 1961(4) and as alleged in the First Amended Complaint, that is: Philip Morris USA Inc. ("Philip Morris"), R.J. Reynolds Tobacco Company ("R.J. Reynolds"), Brown & Williamson Tobacco Corporation ("Brown & Williamson" or "B&W"), Lorillard Tobacco Company, Inc. ("Lorillard"), Liggett Group, Inc. ("Liggett"), American Tobacco Company ("American"), Altria Group, Inc. f/k/a Philip Morris Companies Inc. ("Philip Morris Companies"), British American Tobacco (Investments) Ltd. ("BATCo"), Council for Tobacco Research -- U.S.A., Inc. ("CTR"), the Tobacco Institute, Inc., and their agents and employees along with other entities and individuals constitute a group of entities and individuals associated in fact that functioned as a continuing unit for almost fifty years to achieve shared goals, including to preserve and enhance the Cigarette Company Defendants' profits and to avoid adverse liability verdicts in litigation in the face of the growing body of scientific and medical evidence about the health effects and addictiveness of smoking.

2. In furtherance of this primary objective, the Enterprise has developed and executed a scheme to defraud the public in the following manner, among other means: (1) to conceal the adverse health effects caused by smoking cigarettes and exposure to cigarette smoke, by maintaining that there was an "open question" as to whether smoking cigarettes causes disease and other adverse effects, despite the fact that Defendants knew otherwise, and by ensuring that

SECTION I.

their research, development, and marketing of cigarettes (including potentially less hazardous products) remained consistent with these core public relations positions; (2) to deceive consumers into starting and continuing to smoke cigarettes by undertaking an obligation to take actions, including funding independent research, in order to determine if smoking cigarettes causes cancer or other diseases, while pre-selecting researchers and directing funds to irrelevant research and research that supported Defendants' positions on smoking and health issues; (3) to deceive consumers into becoming or staying addicted to cigarettes by maintaining that nicotine is not addictive, despite the fact that Defendants knew that nicotine is addictive; (4) to deceive consumers into becoming or staying addicted to cigarettes by manipulating nicotine levels in cigarettes, the design of cigarettes, and the delivery of nicotine to smokers, while at the same time denying that they engaged in such manipulation; and (5) to deceive consumers, including youth, by claiming that they did not market to youth, while engaging in marketing with the intent of addicting youth into becoming lifetime smokers; and (6) to deceive consumers through deceptive marketing to exploit smokers' desire for less hazardous and "low tar" cigarettes.

3. At all relevant times, as set forth more fully infra, the Enterprise has existed separate and apart from Defendants' racketeering acts and their conspiracy to commit such acts. The Enterprise has an ascertainable structure and purposes beyond the scope and commission of Defendants' predicate racketeering acts. The Enterprise has a consensual decision making structure that, among other things, is used to coordinate strategy, manipulate scientific data, suppress the truth about the consequences of smoking, and otherwise further the goals of the Enterprise and Defendants' scheme to defraud which is described more fully in U.S. FPF § IV,

infra.

B. The Tobacco Industry Research Committee/Council for Tobacco Research

(1) The Link Between Smoking and Lung Cancer Was Scientifically Established By the Early 1950s

4. By the middle of the twentieth century, physicians and public health officials in the United States had widely noted an alarming increase in numbers of cases of lung cancer. Virtually unknown as a cause of death in 1900, by 1935 there were an estimated 4,000 deaths annually. A decade later, the estimate of deaths had nearly tripled. Surgeon General's Advisory Committee on Smoking and Health, "Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service," Washington, D.C.: U.S. Department of Health, Education, and Welfare, Public Health Service, p. 135 (1964) (U.S. Ex. 66,239); E. Cuyler Hammond, "The Effects of Smoking," *Scientific American*, July, 1962, at 40-41 (U.S. Ex. 63,591); Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

5. The rise in lung cancers had followed the dramatic increase in cigarette consumption beginning early in the twentieth century. Annual per capita consumption of cigarettes in 1900 stood at approximately forty-nine cigarettes; by 1930, annual per capita consumption was over 1,300; by 1950, it was over 3,000. Even though the increases in lung cancer cases and deaths substantially lagged this increase in cigarette use, the apparent association led to considerable speculation about this relationship. Surgeon General's Advisory Committee on Smoking and Health, "Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service," Washington, D.C.: U.S. Department of

SECTION I.

Health, Education, and Welfare, Public Health Service, p. 45 (1964) (U.S. Ex. 66,239).

6. The dangers of smoking, including its connection to lung cancer, began to attract more concerted attention of scientists in the 1920s, when researchers began to focus on the specific health consequences of smoking. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

7. As early as 1928, researchers conducting a large field study associated heavy smoking with cancer. Lombard, Herbert L. and Carl R. Doering, "Cancer Studies in Massachusetts: Habits, Characteristics and Environment of Individuals With and Without Cancer," *New England Journal of Medicine* 196.10: 481-487 (1928) (U.S. Ex. 21,086).

8. Thereafter, in 1931, Frederick L. Hoffman, a well-known statistician for the Prudential Insurance Company, tied smoking to cancer. Hoffman assessed the basic methodological questions of such research: issues of representativeness, sample size, and the construction of control groups. These questions presented researchers with a series of complex problems, of which they were aware and then began to find ways to resolve them. Hoffman, Frederick L., "Cancer and Smoking Habits," *Annals of Surgery* 93: 50-67 (1931) (U.S. Ex. 20,661).

9. In peer reviewed scientific and medical publications in the 1930s, investigators were already concerned enough to warn of the potential dangers of smoking. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

10. Early research efforts led to publication of the first case control study that showed the connection between smoking and lung cancer in Germany in 1939. Hoffman, Frederick L.,

SECTION I.

"Cancer and Smoking Habits," *Annals of Surgery* 93:67 (1931) (U.S. Ex. 20,661); Pearl, Raymond, "Tobacco Smoking and Longevity," *Science*, March 4, 1938, at 216-217 (U.S. Ex. 20,714); F. H. Muller, "Abuse of Tobacco and Carcinoma of the Lungs," *Journal of the American Medical Association* (translation of the original from *Zeitschrift fur Krebsforschung*, Berlin), September 30, 1939, at 1372 (U.S. Ex. 63,595).

11. Beginning in the 1940s, researchers began to devise studies that would directly address and resolve the persistent and increasingly important questions concerning the harms of cigarette smoking. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

12. At the end of 1940s, more evidence linking smoking to disease began to appear. Beginning in 1948, under the auspices of the Medical Research Council, a unit of the recently created National Health Service in the United Kingdom, Bradford Hill and Sir Richard Doll conducted a study to investigate the rising incidence of lung cancer. They realized that questions concerning the causality of systemic chronic diseases would not readily succumb to experimental laboratory investigation. Nonetheless, the timeliness and public health significance of these questions demanded immediate attention and the development of new knowledge. Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (September 1950) at 739, 747 (U.S. Ex. 76,102) (U.S. Ex. 77,054) (U.S. Ex. 62,855).

13. Following World War I, Hill had become one of the most distinguished medical statisticians in Great Britain. Doll, a physician, also possessed sophisticated training in statistics

and epidemiologic methods. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

14. From their data from lung cancer patients and a control group in late 1948 and early 1949, it became clear to Doll and Hill that cigarettes were the crucial factor in the rise of lung cancer. With data on almost 650 lung cancer patients, they concluded that they had in fact found cause and effect. The findings were impressive: among the 647 lung cancer patients entered into Doll and Hill's study, all 647 were smokers. They waited to publicize their results, however, until they had data on 1400 lung cancer patients, further strengthening their conclusions. Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (September 1950) at 739, 747 (U.S. Ex. 76,102) (U.S. Ex. 77,054) (U.S. Ex. 62,855).

15. In the early 1950s, Doll and Hill understood that some critics might dismiss findings linking smoking to disease (as Defendants did) as "merely" statistical. As a result, they meticulously described the specific criteria that they required before an "association" could be identified as a genuine causal relationship. First, they worked to eliminate the possibility of bias in the selection of patients and controls, as well as in reporting and recording their histories. Second, they emphasized the significance of a clear temporal relationship between exposure and subsequent development of disease. Finally, they sought to rule out any other factors that might distinguish controls from patients with disease. This explicit search for possible "confounders" and their elimination marked a critical aspect of their arrival at a causal conclusion. They insisted on carefully addressing all possible criticisms and all alternative explanations for their

findings. In this respect, Doll and Hill and the other epidemiologic investigators expressed a strong commitment to inductive science, hypothesis-testing, and scientific method:

Consideration has been given to the possibility that the results could have been produced by the selection of an unsuitable group of control patients, by patients with respiratory disease exaggerating their smoking habits, or by bias on the part of the interviewers. Reasons are given for excluding all these possibilities, and it is concluded that smoking is an important factor in the cause of carcinoma of the lung.

Doll, Richard, and A. Bradford Hill, "Smoking and Carcinoma of the Lung: Preliminary Report," *British Medical Journal* (September 1950) at 739, 747 (U.S. Ex. 76,102) (U.S. Ex. 77,054) (U.S. Ex. 62,855).

16. Noted historian Charles Webster observed of the first Doll and Hill paper, published in 1950: "This modest paper is now regarded as a classic. From these findings emerged the realization that smoking has been responsible for as many deaths per annum as were claimed by the great cholera epidemics of the nineteenth century. Smoking was thus established as a major cause of preventable disease." Webster, Charles, "Tobacco Smoking Addiction: A Challenge to the National Health Service," *British Journal of Addiction* 79:7 (1984) (U.S. Ex. 63,589).

17. Two years later, in a 1952 follow-up report, Doll and Hill offered additional evidence for sustaining their conclusion, again fully considering alternative explanations:

We have now extended the investigation to other parts of the country and have made more detailed inquiries into smoking habits. The present analysis of nearly 1,500 cases, or more than double the number dealt with in our preliminary report, supports the conclusion then reached and has revealed no alternative explanation – for example, in the use of petrol lighters. It has been

suggested that subjects with a particular physical constitution may be prone to develop (a) the habit of smoking and (b) carcinoma of the lung, and that the association might therefore be indirect rather than causal (Parnell, 1951). We know of no evidence of such a physical constitution characteristic of patients with lung carcinoma. If it does exist we should still have to find some environmental factor to account for the increased incidence of the disease in recent years.

Doll, Richard, and A. Bradford Hill, "A study of the aetiology of carcinoma of the lung," *British Medical Journal* 2: 1271, 1283 (1952) (U.S. Ex. 20,185) (U.S. Ex. 76,115).

18. Other researchers studied the connection between smoking and lung cancer during the same time period. In 1949, Evarts Graham, a leading surgeon at Barnes Hospital in St. Louis, and Ernst Wynder, a medical student at Washington University, designed and implemented a study to address and resolve directly the persistent and increasingly important questions concerning the possible harms of cigarette smoking. Graham, a nationally known surgeon who had performed the first pneumonectomy, was a heavy smoker himself and skeptical of the cigarette-lung cancer hypothesis. He initially had speculated that, if smoking was a cause of lung cancer, it would occur more bilaterally (rather than in a single lobe). Wynder and Graham collected extensive data on a group of 684 patients with lung cancer located in hospitals throughout the United States. These patients were extensively interviewed about their smoking levels and histories. Histological exams confirmed the diagnosis in all cases. This group was then compared to a "control group" of non-smokers, similar in age and other demographic characteristics. Wynder and Graham explained, "The temptation is strong to incriminate excessive smoking, and in particular cigarette smoking over a long period as at least one important factor in the striking increase of bronchogenic carcinoma." They offered four reasons

to support this conclusion. First, it was very unusual to find lung cancers among non-smokers. Second, among patients with lung cancer, cigarette use tended to be high. Third, the distribution of lung cancer among men and women matched the ratio of smoking patterns by gender. And finally, "the enormous increase in the sale of cigarettes in this country approximately parallels the increase in bronchogenic carcinoma." These results were reported in the *Journal of the American Medical Association ("JAMA")*, a prestigious, peer reviewed journal, on May 27, 1950. Wynder, Ernst L., and Everts A. Graham, "Tobacco smoking as a possible etiologic factor in bronchiogenic carcinoma: a study of 684 proved cases," *JAMA* 143.4:336 (1950) (U.S. Ex. 76,103).

19. Also included in that 1950 issue of the *Journal of the American Medical Association* was another investigation reaching similar conclusions by Morton Levin and others. In his commentary on research into the connection between cigarettes and lung cancer, Levin compared the current epidemiological research on cigarette smoking to research on the smoking/lung cancer connection done in the preceding twenty years, arguing that the past work was "inconclusive because of lack of adequate samples, lack of random selection, lack of proper controls or failure to age-standardize the data." In the case of the data gathered for his study, careful attention to "excluding bias" had been central: "[I]n a hospital population, cancer of the lung occurs more than twice as frequently among those who have smoked cigarets for twenty-five years than among other smokers or nonsmokers of comparable age." Levin, Morton L., Hyman Goldstein, and Paul R. Gerhardt, "Cancer and Tobacco Smoking; A Preliminary Report," *JAMA* 143.4:336, 337 (1950) (U.S. Ex. 63,606).

20. By the 1950s, animal research was also pointing to the carcinogenicity of cigarettes. Wynder and Graham turned their attention to the question of the "biological plausibility" of their epidemiological findings. In conducting animal investigations, Wynder reasoned that if tumors could be produced in animals, it would be an important step in confirming the early epidemiologic findings. Noting that smoke condensates, also known as tars, contained benzopyrenes, arsenic and other known carcinogens, he painted the backs of mice to evaluate their effects. Fifty-eight percent of the mice developed cancerous tumors. Wynder concluded that "the suspected human carcinogen has thus been proven to be a carcinogen for a laboratory animal." These findings were reported in *Cancer Research* in December 1953.

Wynder, Ernst L., Everts A. Graham, and Adele B. Croninger, "Experimental Production of Carcinoma with Cigarette Tar," *Cancer Research* 13.12: 855-864 (1953) (U.S. Ex. 50,567).

21. By late 1953, there had been at least five published epidemiologic investigations, as well as others pursuing carcinogenic components in tobacco smoke and its impacts. These researchers had come to a categorical understanding of the link between smoking and lung cancer. This understanding was markedly more certain than the case studies and preliminary statistical findings earlier in the century. While some of the epidemiological methods were innovative, the scientists using them were careful to approach them in a thorough manner; these methods were completely consistent with established scientific procedure and process. Epidemiology was not just based on statistics, but also was an interdisciplinary, applied field. The studies had substantially transformed the scientific knowledge base concerning the harms of cigarette use. Unlike earlier anecdotal and clinical assessments, these studies offered new and

pathbreaking approaches to investigating and resolving causal relationships. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

22. Medical historians would come to view these studies as among the most important contributions to public health and medicine in the twentieth century. They offered a sophisticated scientific methodology for resolving central questions of causality. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

23. In addition, surgeons and pathologists published clinical reports associating cancer in their patients with their smoking habits. In 1957, Oscar Auerbach and colleagues first reported in the *New England Journal of Medicine* on "Changes in the Bronchial Epithelium in Relation to Smoking and Cancer of the Lung." Auerbach's study evaluated patients with confirmed smoking histories who died and were autopsied. Microscopists were kept ignorant of the smoking histories in the 30,000 examinations that they made to assure against potential bias. Auerbach and his co-authors concluded: "These findings are fully consistent with the hypothesis that inhalants of one sort or another are important factors in the causation of bronchogenic carcinoma. The findings are also consistent with the theory that cigarette smoking is an important factor in the causation of bronchogenic carcinoma." Auerbach presented additional confirmatory findings in 1961 and 1979. Auerbach, Oscar, et al., "Changes in the Bronchial Epithelium in Relation to Smoking and Cancer of the Lung: A Report of Progress," *New England Journal of Medicine* 256.3:104 (1957) (U.S. Ex. 54,185); Auerbach, Oscar, et al., "Changes in the Bronchial Epithelium in Relation to Cigarette Smoking and in Relation to Lung Cancer," *New England Journal of Medicine* 265.6: 253-267 (1961) (U.S. Ex. 63,539); Ochsner, Alton,

"My first recognition of the relationship of smoking and lung cancer," *Preventive Medicine* 2:611-14 (1973) (U.S. Ex. 63,590); Auerbach, Oscar, E. Cuyler Hammond, and Lawrence Garfinkel, "Changes in the Bronchial Epithelium in Relation to Cigarette Smoking, 1955-1960 vs. 1970-1977," *New England Journal of Medicine* 300.8:381-386 (1979) (U.S. Ex. 63,538).

24. Such studies underscored and strengthened the epidemiological findings. To say that the evidence demonstrating a causal relationship between smoking and lung cancer was based exclusively on statistical data – as Defendants claimed for over forty years – was to fundamentally misrepresent the emerging scientific knowledge. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002).

(2) The Enterprise Begins

25. The Enterprise came into being not later than December 1953 when, to respond to this growing body of evidence that smoking caused lung cancer, Defendants and their agents developed and implemented a unified strategy that sought to reassure the public that there was no evidence that smoking causes disease.

26. In December 1953, Paul M. Hahn, President of the American Tobacco Company, sent telegrams to the presidents of the seven other major tobacco companies and one tobacco growers organization, inviting them to meet and develop an industry response to counter the negative publicity generated by the studies linking cigarette smoking and lung cancer. The telegrams were sent to: Edward A. Darr, President of Defendant R.J. Reynolds; Benjamin F. Few, President of Defendant Liggett; William J. Halley, President of Defendant Lorillard; Timothy V. Hartnett, President of Defendant Brown & Williamson; O. Parker McComas,

SECTION I.

President of Defendant Philip Morris; Joseph F. Cullman, Jr., President of Benson & Hedges; J.B. Hutson, President of Tobacco Associates, Inc.; and J. Whitney Peterson, President of United States Tobacco Co. 508775416-5416 (U.S. Ex. 20,817); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); CTRBYL000001-0014 (U.S. Ex. 21,138).

27. Executives from every tobacco company listed above, with the exception of Liggett, met in New York City at the Plaza Hotel on December 14, 1953. The meetings were also attended by representatives from Hill & Knowlton, the public relations advisors retained by the Enterprise. HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); CTRBYL000001-0014 (U.S. Ex. 21,138); 680262226-2228 (U.S. Ex. 88,165).

28. At another meeting the following day, the participants, Paul Hahn of Defendant American, O. Parker McComas of Defendant Philip Morris, Joseph Cullman, Jr. of Benson & Hedges, and J. Whitney Peterson of United States Tobacco, viewed the "problem [posed by the scientific studies] as being extremely serious and worthy of drastic action." The industry executives agreed to go along with the public relations program on the health issue developed by Hill & Knowlton. JH000502-0506 (U.S. Ex. 20,191); TLT0901541-1545 (U.S. Ex. 87,225); TLT0902283-2291 (U.S. Ex. 88,199).

29. In an early internal planning memoranda, Hill & Knowlton assessed their tobacco clients' problems in the following manner:

There is only one problem -- confidence, and how to establish it; public assurance, and how to create it -- in a perhaps long interim when scientific doubts must remain. And, most important, how to free millions of Americans from the guilty fear that is going to arise deep in their biological depths -- regardless of any pooh-poohing logic -- every time they light a cigarette. No resort

SECTION I.

to mere logic ever cured panic yet, whether on Madison Avenue, Main Street, or in a psychologist's office. And no mere recitation of arguments pro, or ignoring of arguments con, or careful balancing of the two together, is going to deal with such fear now. That, gentlemen, is the nature of the unexampled challenge to this office.

JH000493-0501 (U.S. Ex. 21,179) (U.S. Ex. 21,408); TLT0901532-1540 at 1534 (U.S. Ex. 87,224).

30. At these December 1953 meetings, Hill & Knowlton also expressed their concern about the "health" claims being made in the Defendants' advertising: "[I]t is impossible to overlook the fact that some of the industry's advertising has come in for serious public criticism because of emphasis on health aspects of smoking . . . it must be recognized that some of the advertising may have created a degree of skepticism in the public mind which at the start at least could affect the believability of any public relations effort." In fact, one of the questions posed by Hill & Knowlton to the Defendants was "whether the companies considere[d] that their own advertising and competitive practices have been a principal factor in creating a health problem? The companies voluntarily admitted this to be the case even before the question was asked. They have informally talked over the problem and will try to do something about it." TLT0900422-0430 at 0423 (U.S. Ex. 88,169); TLT0901564-1572 at 1565 (U.S. Ex. 88,194); TLT0901541-1545 at 1543 (U.S. Ex. 87,225); TLT0901553-1557 at 1555 (U.S. Ex. 88,193); 680262226-2228, (U.S. Ex. 88,165).

31. At the December 14, 1953 meeting of the executives, Paul Hahn of American and Timothy Hartnett of Brown & Williamson told the other company presidents that "they had taken definite steps to remove the health themes from the advertising programs on Pall Mall and

SECTION I.

Viceroy. Darr [of R.J. Reynolds] made the point that he could not concur in sponsoring an industry paid advertising campaign (if this is the course recommended by the Public Relations Counsel) as long as the health theme continued to be featured by any one of the companies represented on the committee." J. Whitney Peterson of United States Tobacco and Hartnett "expressed their agreement with Mr. Darr's views in this matter." Hill & Knowlton wanted to develop some understanding with the Defendants that "none is going to seek a competitive advantage by inferring to its public that its product is less risky than others. No claims that special filters or toasting, or expert selection of tobacco, or extra length in the butt, of anything else, makes a given brand less likely to cause you-know-what. No 'Play-Safe-with-Luckies'" or "more doctors use Camels than any other cigarette." TLT0900422-0430 at 0423 (U.S. Ex. 88,169); TLT0901564-1572 at 1565 (U.S. Ex. 88,194); TLT0901541-1545 at 1543 (U.S. Ex. 87,225); TLT0901553-1557 at 1555 (U.S. Ex. 88,193); 680262226-2228, (U.S. Ex. 88,165); TLT0901532-1540 at 1539-1540 (U.S. Ex. 87,224); JH000493-0501 at 0500-0501 (U.S. Ex. 21,179); TLT0902281-2282 (U.S. Ex. 88,198).

32. Ten days later, on December 24, 1953, Hill & Knowlton submitted a proposal regarding the tobacco industry's public relations campaign, recommending that the companies form a joint industry research committee that would sponsor independent scientific research on the health effects of smoking and announce the formation of the research committee nationwide as news and in advertisements.01138856-8864 (U.S. Ex. 20,036); TLT0900422-0430 (U.S. Ex. 88,169); TLT0901564-1572 (U.S. Ex. 88,194); see also TLT0901546-1549 (U.S. Ex. 65,587); TLT0901552 (U.S. Ex. 88,192); TLT0902256-2256 (U.S. Ex. 88,197).

SECTION I.

33. Four days later, on December 28, 1953, another meeting was held at the Plaza Hotel and was attended by Paul Hahn of American; Edward Darr of R.J. Reynolds; Herbert A. Kent, Chairman of Lorillard; Timothy Hartnett of Brown & Williamson; O. Parker McComas of Philip Morris; Joseph Cullman of Benson & Hedges; J.B. Hutson, President of Tobacco Associates, Inc.; J. Whitney Peterson of United States Tobacco; and three people from the public relations firm of Hill & Knowlton, John Hill, Bert Goss, and Richard Darrow. The attendees agreed on Tobacco Industry Research Committee ("TIRC") as the official name of the research committee; chose Paul Hahn as temporary chairman of the committee; agreed that the search should begin immediately for a qualified director who, together with the companies' research directors, would recommend members for the research advisory board; and reviewed and accepted the Hill & Knowlton proposal regarding the tobacco industry's public relations campaign. SHSW001300-1303 (U.S. Ex. 21,236); 01138856-8864 (U.S. Ex.20,036).

34. Defendant Liggett did not participate in the December meetings because the company felt that "the proper procedure is to ignore the whole controversy." JH000502-0506 at 0502 (U.S. Ex. 20,191); TLT0901541-1545 at 1541 (U.S. Ex. 87,225).

35. Following Hill & Knowlton's advice, the formation and purpose of TIRC was announced on January 4, 1954, in a full-page advertisement called "A Frank Statement to Cigarette Smokers" published in 448 newspapers throughout the United States. Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 23, 2002, 112:14-114:13; 11309817-9817 (U.S. Ex. 20,277); Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Requests for Admission to All Defendants, United States v.

SECTION I.

Philip Morris, et al. (served April 18, 2002), at Request/Response No. 88 (U.S. Ex. 87,507); TLT0900463-0463 (U.S. Ex. 88,170); TLT0900465-0465 (U.S. Ex. 88,171); TLT0900466-0466 (U.S. Ex. 88,172); TLT0900468-0468 (U.S. Ex. 88,173); TLT0900469-0469 (U.S. Ex. 88,174); TLT0900470-0470 (U.S. Ex. 88,175); TLT0900472-0473 (U.S. Ex. 88,176); TLT0900041-0041 (U.S. Ex. 88,439); see also TLT0900478-0480 (U.S. Ex. 88,440); TLT0900481-0483 (U.S. Ex. 88,441).

36. The Frank Statement was subscribed to by the following domestic cigarette and tobacco product manufacturers, organizations of leaf tobacco growers, and tobacco warehouse associations that made up TIRC: Defendant American by Paul Hahn, President; Defendant Brown & Williamson by Timothy Hartnett, President; Defendant Lorillard by Herbert Kent, Chairman; Defendant Philip Morris by O. Parker McComas, President; Defendant R.J. Reynolds by Edward A. Darr, President; Benson & Hedges by Joseph Cullman, Jr., President; Bright Belt Warehouse Association by F.S. Royster, President; Burley Auction Warehouse Association by Albert Clay, President; Burley Tobacco Growers Cooperative Association by John Jones, President; Larus & Brother Company, Inc. by W.T. Reed, Jr., President; Maryland Tobacco Growers Association by Samuel Linton, General Manager; Stephano Brothers, Inc. by C.S. Stephano, Director of Research; Tobacco Associates, Inc. by J.B. Hutson, President; and United States Tobacco by J. Whitney Peterson, President. HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex.54,357); CTRBYL000001-0014 (U.S. Ex. 21,138).

37. The Frank Statement set forth the industry's "open question" position that it would maintain for more than forty years: that cigarette smoking was not a proven cause of lung cancer;

that cigarettes were not injurious to health; and that more research on smoking and health issues was needed. In the Frank Statement, the participating companies accepted "an interest in people's health as a basic responsibility, paramount to every other consideration in our business" and pledged "aid and assistance to the research effort into all phases of tobacco use and health." The companies promised that they would fulfill the obligations they had undertaken in the Frank Statement by funding independent research through TIRC, free from any industry influence. 11309817-9817 (U.S. Ex. 20,277).

38. The "Frank Statement" in its entirety stated as follows:

RECENT REPORTS on experiments with mice have given wide publicity to a theory that cigarette smoking is in some way linked with lung cancer in human beings.

Although conducted by doctors of professional standing, these experiments are not regarded as conclusive in the field of cancer research. However, we do not believe that any serious medical research, even though its results are inconclusive should be disregarded or lightly dismissed.

At the same time, we feel it is in the public interest to call attention to the fact that eminent doctors and research scientists have publicly questioned the claimed significance of these experiments.

Distinguished authorities point out:

1. That medical research of recent years indicates many possible causes of lung cancer.
2. That there is no agreement among the authorities regarding what the cause is.
3. That there is no proof that cigarette smoking is one of the causes.

4. That statistics purporting to link cigarette smoking with the disease could apply with equal force to any one of many other aspects of modern life. Indeed the validity of the statistics themselves is questioned by numerous scientists.

We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business.

We believe the products we make are not injurious to health.

We always have and always will cooperate closely with those whose task it is to safeguard the public health.

For more than 300 years tobacco has given solace, relaxation, and enjoyment to mankind. At one time or another during these years critics have held it responsible for practically every disease of the human body. One by one these charges have been abandoned for lack of evidence.

Regardless of the record of the past, the fact that cigarette smoking today should even be suspected as a cause of disease is a matter of deep concern to us.

Many people have asked us what are we going to do to meet the public's concern aroused by the recent reports. Here is the answer:

1. We are pledging aid and assistance to the research effort into all phases of tobacco use and health. This joint financial aid will of course be in addition to what is already being contributed by individual companies.

2. For this purpose we are establishing a joint industry group consisting initially of the undersigned. This group will be known as TOBACCO INDUSTRY RESEARCH COMMITTEE.

3. In charge of the research activities of the Committee will be a scientist of unimpeachable integrity and national repute. In addition there will be an Advisory Board of scientists disinterested in the cigarette industry. A group of distinguished men from

SECTION I.

medicine, science, and education will be invited to serve on this Board. These scientists will advise the Committee on its research activities.

This statement is being issued because we believe the people are entitled to know where we stand on this matter and what we intend to do about it.

11309817-9817 (U.S. Ex. 20,277); TLT0901611-1611 (U.S. Ex. 88,196).

39. The issuance of the "Frank Statement to Cigarette Smokers" was an effective preemptive strategy that was intended to allay concerns about smoking and health and provided an effective rationale for continuing to smoke. JH000493-0501 (U.S. Ex. 21,179) (U.S. Ex. 21,408); TLT0901532-1540 at 1534 (U.S. Ex. 87,224); Expert Report of Paul Slovic, United States v. Philip Morris, et al. (R. 661; filed November 15, 2001).

40. Stanley Barnes, Assistant Attorney General, United States Department of Justice, "read with interest the statement of the Tobacco Industry Research Committee which appeared in the newspapers on January 4, 1954, regarding the Committee's pledge of aid and assistance to the research effort into all phases use and health" and sent a letter to TIRC on January 21, 1954, requesting "as many details on the Committee's plans as you may care to disclose at this time." In response, TIRC Chairman Paul Hahn sent a letter to Barnes dated January 26, 1954, enclosing a statement of the origin, purpose, and proposed functions of TIRC. MD000289-0296 (U.S. Ex. 21,218); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); CTRBYL000001-0014 (U.S. Ex. 21,138); 508775393-5396 (U.S. Ex. 85,985); TLT0900082-0082 (U.S. Ex. 88,168).

41. The statement of origin and purpose was signed in the name of TIRC by Chairman Paul Hahn, was ratified and adopted by TIRC, and attached as Exhibit A to the Bylaws of the

SECTION I.

Tobacco Industry Research Committee. CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); TLT0901026-1035 (U.S. Ex. 88,181).

42. The TIRC bylaws (subscribed and adopted by the signatory members effective January 1, 1954) stated that the "purposes and objectives of the Committee are to aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject." All of the bylaws could be altered and repealed by a majority vote of TIRC's corporate members, except "Article I. Purposes and Objectives" that could only be altered with the unanimous consent of all the corporate members. CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); TLT0901573-1580 (U.S. Ex. 88,195).

43. The statement of origin and purpose stated that TIRC had engaged the public relations firm of Hill & Knowlton to assist TIRC in effectuating its purpose. CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); TLT0901026-1035 (U.S. Ex. 88,181); see also TLT0900723-0728 (U.S. Ex. 88,179).

44. The TIRC bylaws stated that each corporate member of the TIRC "shall from time to time appoint an individual to serve as the personal member of the Committee representing such corporate member" and that a majority of the personal members of TIRC would select such officers, agents, and employees as they deemed necessary, including a Chairman to serve for a term of one year and until his successor is elected and qualified. CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357).

45. The first officers selected by TIRC members were: Paul Hahn of Defendant

SECTION I.

American as temporary Chairman; J. Whitney Peterson of United States Tobacco as Vice Chairman; Joseph Cullman of Benson & Hedges as Treasurer; and Wilson Thomas ("W.T.") Hoyt of Hill & Knowlton as Secretary. SHSW001300-1303 (U.S. Ex. 21,236); CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357).

46. TIRC bylaws described the method of funding TIRC as follows: "Each of the cigarette manufacturing corporate members has pledged to the Committee for payment before or during 1954 an amount equal to 1/4 of a cent for each one thousand of tax-paid cigarettes produced by such company in 1953 as estimated by Harry M. Wootten and published under the date of January 15, 1954, and has pledged to the Committee for payment during 1954 an additional amount equal to one-half of the amount originally pledged." CTRBYL000001-0014 (U.S. Ex. 21,138); HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357).

47. At their January 29, 1964 meeting, the TIRC Executive Committee agreed to change the name of the organization to the Council for Tobacco Research-U.S.A. ("CTR"). The organization bylaws were amended February 1, 1964, to reflect the name change. In the amended bylaws, the purposes and objectives of CTR continued to be "to aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject." Timothy Hartnett announced the organization name change in a March 1964 press release. 93218985-8986 (U.S. Ex. 21,116); 682631364-1368 (U.S. Ex. 21,024); 1003041486-1488 (U.S. Ex. 20,146).

SECTION I.

48. Robert Heimann, Chairman and Chief Executive Officer of Defendant American, commented upon the TIRC's name change in a December 6, 1977 letter to Addison Yeaman, CTR's Chairman and President and formerly the General Counsel of Brown & Williamson: "[W]e decided some years ago to rename T.I.R.C. 'The Council for Tobacco Research' because 'Tobacco Industry Research Committee' sounded too much like industry-directed, as distinct from independent, research." 2022200158-0160 at 0160 (U.S. Ex. 87,532).

49. In 1971, CTR changed from an unincorporated association to a corporation pursuant to the laws of the State of New York. CTR's Certificate of Incorporation was filed with the Department of State of the State of New York on January 8, 1971. The bylaws of the newly-formed corporation were adopted at the first meeting of CTR's Board of Directors on January 13, 1971. CTRMIN-BD000001-0009 (U.S. Ex. 21,141); CTRINC000015-0019 (U.S. Ex. 32,562).

50. Following incorporation, CTR was divided into two classes of members, Class A and Class B. Class A members were: (i) designated by the Board of Directors; (ii) domestic persons who sold cigarettes in the United States; and (iii) manufacturers of their own brand of cigarettes. Class A members included American Tobacco, Brown & Williamson, Lorillard, Philip Morris, R.J. Reynolds, and United States Tobacco. Class B members were: (i) designated by the Board of Directors; and (ii) a person, corporation, association, or partnership not eligible for Class A membership but involved in the production, manufacturing, and distribution of cigarettes. Class B members included Bright Belt Warehouse Association, Burley Auction Warehouse Association, Burley Tobacco Growers, Imperial Tobacco, Tobacco Associates, and United States Tobacco. CTRBYL000070-0090 (U.S. Ex. 32,552); HT0020153-0155 (U.S. Ex.

SECTION I.

33,052) (U.S. Ex. 33,053) (U.S. Ex. 33,054); HT0020034-0034 (U.S. Ex. 33,051); 512678857-8863 (U.S. Ex. 30,046).

51. Liggett was a member of CTR from 1964 to 1969, and even when it was not a member, Liggett made contributions to CTR's Special Projects fund from 1966 through 1975 and to CTR's Literature Retrieval Division from 1971 through 1983.

Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927); 044227839-7842 (U.S. Ex. 20,066); LWDOJ9055586-5587 (U.S. Ex. 26,007) (Confidential).

52. In 1963, Clarence Cook Little and W.T. Hoyt invited Liggett to join TIRC in order to secure complete industry cooperation in dealing with the 1963 Surgeon General's Advisory Committee. Liggett declined the invitation but, in its response, assured its cooperation: "[T]he aims of all of us are the same and the path that we [Liggett] have followed has been similar to that of the Committee in many respects." LIMN000001325-1536 at 1470-1471 (U.S. Ex. 85,987).

53. Representatives of Liggett attended CTR meetings at which CTR Class A members, CTR Class B members, CTR officers, CTR public relations counsel, tobacco industry attorneys, and other representatives of cigarette manufacturers and the Tobacco Institute were present. CTRMIN-MOM000001-0015 (U.S. Ex. 21,145); CTRMIN-MOM000053-0069 (U.S. Ex. 32,617).

54. Defendants met frequently to discuss issues facing the Enterprise. Beginning in 1954 and until 1970, representatives of member companies met regularly with CTR staff. After

SECTION I.

CTR's incorporation, in 1971 and until 1999, the Enterprise met annually at the CTR's Meeting of Members. At these meetings, representatives of the Enterprise discussed activities of CTR which furthered their goals such as Special Projects, the Literature Retrieval Division, contract research, public relations, the TIRC/CTR Scientific Advisory Board, and scientific conferences. CTR-

SECTION I.

(U.S. Ex. 32,607); CTRMIN-BD000261-0262 (U.S. Ex. 32,608); CTRMIN-BD000263-0267 (U.S. Ex. 32,609); CTRMIN-BD000268-0270 (U.S. Ex. 32,610); CTRMIN-BD000271-0275 (U.S. Ex. 32,611); CTRMIN-BD000276-0277 (U.S. Ex. 32,612); CTRMIN-BD000278-0283 (U.S. Ex. 32,613); CTRMIN-BD000284-0285 (U.S. Ex. 32,614); CTRMIN-BD000286-0291 (U.S. Ex. 32,615); 70000636-0638 (U.S. Ex. 31084); 70000275-0279 (U.S. Ex. 31,080); 70001297-1298 (U.S. Ex. 31,095); 70005382-5387 (U.S. Ex. 31,103); 70005409-5416 (U.S. Ex. 31,106); Third Amended Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's Second Set of Individual Interrogatories, United States v. Philip Morris, et al. (served March 29, 2004), at Interrogatory/Response No. 5 (U.S. Ex. 87,695).

56. From 1954 through October 31, 1999, payments to CTR's General Fund from Defendants totaled \$473,369,512.22: \$31,928,239.26 from American; \$67,666,080.25 from Brown & Williamson; \$40,747,457.89 from Lorillard; \$189,506,678.86 from Philip Morris; \$141,890,169.04 from R.J. Reynolds; and \$721,868.85 from Liggett. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927). From 1985, Philip Morris Companies controlled Philip Morris's payments to CTR. 2015001979-1981 (U.S. Ex. 87,508); 2015001982-1982 (U.S. Ex. 88,412); 2015001989-1990 (U.S. Ex. 87,509); Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Requests for Admission to All Defendants, United States v. Philip Morris, et al. (served April 18, 2002), at Request/Response No. 94 (U.S. Ex. 87,510).

57. From 1966 through October 31, 1990, payments to CTR's Special Projects fund

SECTION I.

from the Cigarette Company Defendants totaled \$18,270,623.65, which included: \$29,665.00 from American; \$2,571,345.40 from Brown & Williamson; \$144,254.75 from Liggett; \$1,638,490.68 from Lorillard; \$5,837,923.49 from Philip Morris; and \$6,029,255.33 from R.J. Reynolds. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927). Starting in 1985, Philip Morris Companies controlled Philip Morris's payments to CTR. 2015002092-2094 (U.S. Ex. 87,511).

58. From 1971 through April 15, 1983, payments to CTR's Literature Retrieval Division from the Cigarette Company Defendants totaled \$16,870,480.00, which included: \$2,214,135.00 from American; \$2,681,358.00 from Brown & Williamson; \$606,043.50 from Liggett; \$811,840.50 from Lorillard; \$4,813,415.50 from Philip Morris; and \$5,743,687.50 from R.J. Reynolds. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927).

(3) Defendants' Selection and Approval of TIRC Scientific Advisory Board Members and the Scientific Director

59. The first formal meeting of TIRC was held on January 18, 1954. At this first formal meeting, a budget of \$1,200,000 was approved; an agreement between TIRC and Hill & Knowlton was approved; the research program, calling for a Scientific Director and a Scientific Advisory Board ("SAB") was approved; a Law Committee was appointed; and the research

SECTION I.

directors of member companies were designated as the Industry Technical Committee.

TM0020071-0101 (U.S. Ex. 21,373); 514804083-4086 (U.S. Ex. 20,859); TLT0901400-1410 (U.S. Ex. 88,187); JH000395-0400 (U.S. Ex. 21,178); TLT0900107-0108 (U.S. Ex. 87,512).

60. The Law Committee was composed of George Whiteside of Chadbourne, Parke, Whiteside, Wolf & Brophy (Law Committee Chairman); John Vance Hewitt of Conboy, Hewitt, O'Brien & Boardman; Leighton Coleman of Davis, Polk, Wardwell, Sunderland & Kiendl; F.R. Wadlinger of Foulk, Porter & Wadlinger; and Freeman Daniels of Perkins, Daniels & Perkins. This committee drafted the TIRC bylaws. 514804083-4086 (U.S. Ex. 20,859); TLT0901056-1056 (U.S. Ex. 88,183); TLT0901008-1008 (U.S. Ex. 88,180).

61. The research directors of TIRC's tobacco company members, also known as the Industry Technical Committee ("ITC") (discussed further at U.S. FPPF § I.E(2), infra), had held an informal meeting on January 7, 1954, at which they discussed qualifications for a Scientific Research Director for TIRC and their efforts to find and retain a suitable scientist. The research directors were H.R. Hanmer of Defendant American; Irwin W. Tucker of Defendant Brown & Williamson; H.B. Parmele of Defendant Lorillard; Robert N. DuPuis of Defendant Philip Morris; Grant Clarke of Defendant R.J. Reynolds; Hugh Cullman of Benson & Hedges; Clinton Baber of Larus & Brother; C.S. Stephano of Stephano Brothers; and Ward B. Bennett of United States Tobacco. TM0020071-0101 (U.S. Ex. 21, 373); JH000395-0400 (U.S. Ex. 21,178); TLT0901400-1410 (U.S. Ex. 88,187); 514804083-4086 (U.S. Ex. 20,859); CTRMIN-ITC 000003-0004 (U.S. Ex. 21,142); TLT0901037-1038 (U.S. Ex. 88,182).

62. A subcommittee of the ITC, headed by Grant Clarke, Research Director for

SECTION I.

Defendant R.J. Reynolds, felt that the SAB "should be composed only of scientific people actively engaged in specific fields having a bearing on the problem at hand" and that the appointments to the SAB "should be based upon recommendations from the Scientific Research Director and subject to the approval of the ITC, with final approval of the TIRC." The subcommittee sought out a scientist who would fill the job, but encountered reluctance on the part of scientists to become affiliated with TIRC. TM0020071-0101 (U.S. Ex. 21,373); 689103383-3437 (U.S. Ex. 54,275); CTRMIN-ITC000005-0006 (U.S. Ex. 21,143); CTRMIN-ITC000003-0004 (U.S. Ex. 21,142); JH000395-0400 (U.S. Ex. 21,178); TLT0901400-1410 (U.S. Ex. 88,187) ; TLT0900155-0155 (U.S. Ex. 87,513); TLT0902330-2330 (U.S. Ex. 87,514); TLT0900037-0037 (U.S. Ex. 88,166); TLT0900133-0134 (U.S. Ex. 87,515); TLT0900163-0163 (U.S. Ex. 87,516); TLT0903092-3092 (U.S. Ex. 88,454).

63. As time passed, TIRC decided to reverse the order and proceed, first, with enlisting members for its SAB first – hoping that the scientists would feel more comfortable as members of a group – and, second, having the SAB select the Scientific Research Director. 689103383-3437 (U.S. Ex. 54,275); TM0020071-0101 (U.S. Ex. 21,373); TLT0902041-2064 (U.S. Ex. 88,360).

64. The ITC, public relations counsel Hill & Knowlton, and TIRC's Law Committee played active roles in the selection of the scientists appointed to TIRC's SAB. John Hill of Hill & Knowlton was actively involved in searching for, interviewing, and selecting the first SAB members. Hill told prospective candidates that "the Scientific Director would have a complete freedom of decision in respect of publication of scientific results, with the single provision that

SECTION I.

the publication of results which were not in and of themselves scientifically conclusive should not be permitted by the Director." The ITC screened those candidates being considered for membership on the SAB. The TIRC Law Committee was involved in clearing prospective members for the SAB. 689103383-3437 (U.S. Ex. 54,275); 681879254-9715 (U.S. Ex. 21,020); 689103383-3437 (U.S. Ex. 54,275); TLT0900089-0091 (U.S. Ex. 88,361); TLT0900165-0165 (U.S. Ex. 87,517); TLT0900168-0169 (U.S. Ex. 87,518); TLT0900175-0175 (U.S. Ex. 87,519); TLT0902041-2064 (U.S. Ex. 88,362); TLT0903093-3094 (U.S. Ex. 88,363).

65. On March 26, 1954, O. Parker McComas, chairman elect of TIRC, sent a letter to Clarence Cook Little inviting him to join the TIRC SAB. The letter promised that the SAB and Scientific Director would have "complete scientific freedom" in their work and that "no industry restrictions of any description will be attached to money grants made for research project." 10022895-2896 at 2896 (U.S. Ex. 26,127).

66. However, in a November 27, 1963 memorandum, Clarence Cook Little, the first Chairman of the SAB, described the Enterprise's strategy in selecting the SAB members. Little wrote:

In the selection of a Scientific Advisory Board and in the acceptance of the nomination by that Board of a Scientific Director, it was clearly shown that the attitude of the TIRC was to pick scientists interested broadly in the origin and nature of disease implicated and in the evaluation of smoking as a possible factor, not as a proven one.

70003601-3602 at 2601 (U.S. Ex. 85,993).

67. Letters were sent to nine scientists inviting them to be members of the SAB and acceptances were obtained from seven; the two who did not accept were scientists connected

SECTION I.

with the National Cancer Institute. 86017433-7454 (U.S. Ex. 21,088); HT0128002-8023 (U.S. Ex. 21,176); TLT0903076 (U.S. Ex. 87,520).

68. The first meeting of the SAB was held on April 26, 1954. Clarence Cook Little was chosen by the SAB members as their Chairman. At the second meeting of the SAB, Little was selected as Scientific Director on a part-time basis with an assistant who would serve on a full-time basis. In November 1954, Robert Hockett filled the assistant post as Associate Scientific Director. Following Little, the Scientific Directors were William Gardner (1973-1981), Sheldon Sommers (1981-1987), James Glenn (1988-1990), and Harmon McAllister (1991-1999). 86017433-7454 (U.S. Ex. 21,088); TLT0902041-2064 (U.S. Ex. 88,364); 11310050-0053 (U.S. Ex. 23,330); 10022899-2899 (U.S. Ex. 85,994); TLT0903099-3099 (U.S. Ex. 88,564); TLT0903100-3103 (U.S. Ex. 88,365); TLT0903105-3108 at 3105 (U.S. Ex. 88,366); Third Amended Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's Second Set of Individual Interrogatories, United States v. Philip Morris, et al. (served March 29, 2004), at Interrogatory/Response No. 12 (U.S. Ex. 87,695).

69. In addition to Little, the first members of the SAB were McKeen Cattell, Professor and Head of the Department of Pharmacology, Cornell University Medical College; Leon Jacobson, Professor of Medicine, University of Chicago, and Director of the Argonne Cancer Research Hospital; Paul Kotin, Assistant Professor of Pathology, University of Southern California Medical School; Kenneth Merrill Lynch, President, Dean of Faculty and Professor of Pathology, Medical College of South Carolina; Stanley Reimann, Scientific Director of the Institute for Cancer Research and Director of Lankenau Hospital Research Institute; and William

SECTION I.

F. Reinhoff, Associate Professor of Surgery, Johns Hopkins School of Medicine.

CTRMN004928-4929 (U.S. Ex. 85,995).

70. The Scientific Advisory Board met regularly from 1954 until at least 1997 to review, approve, and renew grant applications and contracts. In addition to SAB members, the Chairman of the Industry Technical Committee, members of CTR/TIRC staff, CTR/TIRC's public relations counsel, and (at times) Defendants' attorneys and scientific guests attended the SAB meetings. CTRMN004320-4323 (U.S. Ex. 21,148); CTRMN004539-4544 (U.S. Ex. 21,151); CTRMIN048368-8369 (U.S. Ex. 85,996); ZN7912-7921 (U.S. Ex. 64,789); SM0120005-0009 (U.S. Ex. 65,442); 955011516-1520 (U.S. Ex. 32,362); CTMNSAB000001-1061 (U.S. Ex. 21,146); TLT0903247-3251 (U.S. Ex. 87,521); TLT0903189-3193 (U.S. Ex. 87,522); TLT0903145-3148 (U.S. Ex. 87,523); TLT0903132-3135 (U.S. Ex. 87,524); TLT0903116-3117 (U.S. Ex. 87,525); TLT0903181-3185 (U.S. Ex. 87,526); TLT0903177-3180 (U.S. Ex. 87,527); TLT0903166-3169 (U.S. Ex. 87,528); TLT0903208-3211 (U.S. Ex. 88,367); TLT0903202-3207 (U.S. Ex. 88,368); TLT0903197-3201 (U.S. Ex. 88,369).

71. Many meetings of the SAB had no written record. According to a confidential report on the December 9, 1981 meeting of the SAB, the following policy regarding meetings was reaffirmed: "to conduct informal 'in house' conferences on specific subjects 'off the record' held without minutes or publication, but not to sponsor open meetings with a resultant publication." This policy was in effect at least ten years prior to the 1981 meeting and continued into the late 1990s. CTRMIN-SAB 000611-0612 (U.S. Ex. 80,480); Deposition of Vincent Lisanti, Richardson v. Philip Morris, December 8, 1998 112:16-21, 114:1-116:18.

SECTION I.

72. When Little resigned from TIRC, Helmut Wakeham of Philip Morris complained to David Felton, a BATCo scientist, at a meeting in London on September 10, 1970 that finding a Scientific Director to succeed Little "was in the hands of the lawyers committee" and the Tobacco Institute without consultation with CTR or company scientists. 10315968-5971 (U.S. Ex. 26,378) (U.S. Ex. 26,379) (U.S. Ex. 63,573); LG200173-0175 (U.S. Ex. 85,997).

73. Gil Heubner, Medical Director at the Tobacco Institute, also objected to lawyers' involvement in the selection of staff for CTR. In a July 1971 meeting that he had with J.V. Blalock of Brown & Williamson, Heubner advised Blalock that (a) he disapproved of the practice that all applicants for Scientific Director were interviewed by lawyers and decisions were made without medical advice, and (b) "lawyers make bad scientists and should not be the final judge of scientists." Blalock told Addison Yeaman, Brown & Williamson Vice President and General Counsel, about Heubner's observations. 680241709-1712 at 1711 (U.S. Ex. 30,849).

74. Contrary to Defendants' assertions that the members of the SAB were disinterested parties who received no monetary compensation from the tobacco companies or from TIRC/CTR, members of the SAB awarded themselves over \$5 million in grants-in-aid funding between 1954 and 1991. 682632255-2261 (U.S. Ex. 22,258); Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 23, 2002, 250:15-253:11.

75. Defendants, through the CTR's Board of Directors (discussed at U.S. FPPF ¶ 55, supra), exercised control over the CTR research grant program throughout its existence by approving the amount of funding for the grant program and, after the first few years, by selecting the CTR Scientific Directors and their staff. CTRMN003816-3835 (U.S. Ex. 21,147);

SECTION I.

Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 23, 2002, 56:22-57:18.

76. Many of Defendants' documents expose the process by which members of CTR's Board of Directors approved or disapproved funding for research proposals over the years. 507875993-5993 (U.S. Ex. 22,692), ATX300010994-0995 (U.S. Ex. 22,694) (Richard Hickey); 521031101-1101 (U.S. Ex. 22,695), 521031106-1107 (U.S. Ex. 22,696) (Eleanor Macdonald); 503655086-5088 (U.S. Ex. 20,720); 503655086-5088 (U.S. Ex. 75,190) (Franklin Institute); 01336194-6195 (U.S. Ex. 22,697) (Duncan Hutcheon and Domingo Aviado); 521030802-0802 (U.S. Ex. 22,698) (Joe Janis); 01338089-8089 (U.S. Ex.22,701), 86023647-3648 (U.S. Ex.22,702) (Carl Seltzer); LG2000678-0679 (U.S. Ex. 22,703) (Charles Puglia and Jay Roberts); LG2000682-0683 (U.S. Ex. 34074) (John Salvaggio); LG2000705-0705 (U.S. Ex. 22,705) (Theodor Sterling and Harold Perry); 503655236-5237 (U.S. Ex. 22,706) (Duncan Hutcheon and Peter Regna).

77. The Enterprise, through CTR, sought out certain researchers and/or areas of research and solicited grant applications. One of the reasons that Paul Kotin decided to resign from the CTR Scientific Advisory Board was that he was disturbed by "the going out and requesting the submission of grants, of applications for grants. And I felt this circumvented the original foundation for the SAB, at least for my membership in the SAB." Deposition of Paul Kotin, Falise v. American Tobacco, July 6, 2000, 67:10-69:24. Another possible reason for Kotin's resignation was reported by visitors from the United Kingdom's Tobacco Research Council in October 1964: "The recent [CTR] Annual Report by Dr. Little was severely criticised

SECTION I.

by the U.S. Surgeon General at a Washington press conference. Dr. Kotin was also highly critical of it and talks privately of resigning from the S.A.B. if another report of the same nature is going to be published next year." 512678484-8499 (U.S. Ex. 51,653); 1003119099-9135 (U.S. Ex. 20,152) (U.S. Ex. 35,649); 105407261-7329 (U.S. Ex. 34,739).

78. Clarence Cook Little admitted that, when CTR saw a line of work that showed promise, CTR approached the researchers and "brought them in and asked them for advice as to whether the idea . . . was foolish or did they think it could be done and after the conference in which they agreed that it might be done, then we asked them, 'are any of you willing to try this if we provide your institution with money and you with help?'" Deposition of Clarence Cook Little, Lartigue v. R.J. Reynolds, October 6, 1960, 2800:12-25; Deposition of Vincent Lisanti, Small v. Lorillard, March 31, 1998 477:11-480:25; see also TLT0900214-0216 at 0215 (U.S. Ex. 88,370).

79. Sheldon Sommers, Scientific Director for CTR, testified that CTR frequently initiated research. When asked if CTR suggested particular research for which it would make available grants, Sommers responded, "Yes. I go out all the time looking for opportunities and new ideas and investigators in various fields of biomedicine." Deposition of Sheldon Sommers, Rogers v. R.J. Reynolds, December 17, 1985, 50:19-53:18; Deposition of Sheldon Sommers, Cipollone v. Liggett Group, Inc., October 3, 1986 180:15-183:18; Deposition of Sheldon Sommers, Hoskins v. R.J. Reynolds, October 8, 1997, 176:18-177:11; 85760397-0397 (U.S. Ex. 85,998).

80. According to the January 31, 1975 minutes of CTR's annual meeting of the

members, after this meeting, the CTR staff was given more control over the grant and contract application process: "The Chairman stated that in the continued effort to bring maximum information to the Scientific Advisory Board preliminary investigation is being made by the Council's staff. . . . Following this, the proposals are then submitted for study by a subcommittee of the Board [SAB]. . . ." CTRMIN-MOM000070-0087 at 0071 (U.S. Ex. 32,618).

(4) Defendants' Other Involvement in TIRC and CTR

81. Throughout the existence TIRC CTR, representatives of the member companies of TIRC/CTR and their attorneys were influential in the activities and research undertaken by TIRC/CTR. A December 9, 1966 letter from William Bates, Director of the Research Department at Liggett, to Frederick Haas, Liggett General Counsel, critiqued a research proposal submitted by Pacific Northwest Laboratories. Bates noted: "Due to the nature of the program and the critical value of establishing sites and quantities of exposure . . . it seems to me that this is the kind of program which should be funded in the normal C.T.R. manner rather than for special project funds or Ad Hoc funds." LG2002645-2646 (U.S. Ex. 34,083).

82. Beginning in November 1971, CTR staff met semiannually with representatives of the member companies, usually the research directors and general counsel. The all-day meetings were designed to keep members of the Enterprise aware of the status of research sponsored by CTR. CTRMIN-MOM000016-0034 at 0018, 0022 (U.S. Ex. 21,170).

83. A March 28, 1973 handwritten note from Helmut Wakeham of Philip Morris to Robert Hockett, Vice President of CTR, clearly illustrates attorney involvement in CTR's grant

SECTION I.

process. In the note, Wakeham rated the projects discussed at a recent SAB meeting according to industry relevance, meaning those which had the greatest benefit to the industry. Wakeham advised Hockett to "use them for what you think they might be worth and throw the paper away." 1000255259-5260 (U.S. Ex. 35,189).

84. Contacts and communication between high level smoking and health research scientists at BATCo and scientists at CTR were frequent and direct. BATCo scientists David G. Felton and Lionel C. F. Blackman visited TIRC/CTR in at least 1958, 1971, 1976, 1979, and 1984. 11220411-0412 (U.S. Ex. 86,871); 60025041-5043 (U.S. Ex. 86,872); 517002090-2091(U.S. Ex. 66,527); 11297897-7897 (U.S. Ex. 67,378); 11297878-7878 (U.S. Ex. 86,888); TINY0003106-3116 (U.S. Ex. 21,369); 105408490-8499 (U.S. Ex. 21,135) (U.S. Ex. 76,169); 501941283-1284 (U.S. Ex. 20,691).

85. In October 1979, David G. Felton of BATCo went on a month-long "fact-finding mission to a number of laboratories engaged on research relating to smoking and health" in the United States. Felton was accompanied by two lawyers for most of his visits, either Patrick Sirridge of Shook, Hardy & Bacon or Timothy Finnegan of Jacob & Medinger. During the trip, Felton met with Carol Henry, Richard Kouri and Roger Curren of Microbiological Associates, which had a contract with CTR for three projects. Felton foreshadowed industry concerns about the projects and noted: "I sensed that there was a potential political problem to be faced by CTR about this project, particularly over some of the findings." See U.S. FPPF § I.B.(5), infra, for discussion of CTR contracts. Near the end of the trip, Felton also met with CTR staff including Addison Yeaman, CTR President; William Gardner, CTR Scientific Director; W.T. Hoyt, CTR

SECTION I.

Executive Vice President; Robert Hockett, CTR Research Director; Vincent Lisanti, CTR Associate Research Director; and David Stone and Donald Ford, members of CTR's scientific staff. Discussion included Felton's visit to Microbiological Associates, nitrosamines, smoking and stress, the Cold Spring Harbour Symposium, and nicotine research. One of the reasons given why CTR was not doing nicotine research was that "[t]here is a general nervousness in the US industry (apart from Philip Morris), in working on the effects of nicotine, because of the risk of demonstrating nicotine dependence or addiction. There are fears that this would result in the Industry coming under the control of the Food and Drug Administration." During his visit, Felton also met with Tobacco Institute representatives Horace Kornegay, President, and Marvin Kastenbaum, Director of Statistics. 109879229-9295 (U.S. Ex. 34,923); 109879296-9308 (U.S. Ex. 86,063).

(5) Defendants' Many Uses of TIRC/CTR

86. Despite Defendants' assertions that CTR was solely an organization that funded independent research for the purpose of finding answers to smoking and health questions, CTR served many useful roles for the Enterprise in addition to the research conducted under the auspices of CTR. It was a public relations tool; it provided insulation from product liability; it was a conduit of information between the various members of the Enterprise; its employees provided litigation support by giving advice and technical information to members of the Enterprise; and it provided spokespersons for the Enterprise at Congressional hearings. As described by Ernest Pepples in an internal Brown & Williamson letter to Joseph E. Edens, Charles I. McCarty, I.W. Hughes and DeBaun Bryant dated April 4, 1978:

Originally, CTR was organized as a public relation effort. The industry told the world CTR would look at the diseases which were being associated with smoking. There was even a suggestion by our political spokesmen that if a harmful element turned up the industry would try to root it out. The research of CTR also discharged a legal responsibility. The manufacturer has a duty to know its product. The Scientific Advisory Board composed of highly reputable independent scientists constitute a place where the present state of the art is constantly being updated. Theoretically SAB is showing us the way in a highly complex field. There is another political need for research. Recently it has been suggested that CTR or industry research should enable us to give quick responses to new developments in the propaganda of the avid anti-smoking groups. For example, CTR or someone should be able to rebut the suggestion that smokers suffer from a peculiar disease, as widely alleged in the press some few months ago. A properly designed research effort should encompass the need for instant response on subjects of public interest in the smoking and health controversy. Finally the industry research effort has included special projects designed to find scientists and medical doctors who might serve as industry witnesses in lawsuits or in a legislative forum. All of these matters and more should be considered in asking what kind of research the industry should do.

680212421-2423 at 2422 (U.S. Ex. 54,024); 682338651-8653 (U.S. Ex. 22,899).

(a) TIRC/CTR and Research

87. TIRC/CTR funded research through a variety of mechanisms: grants, contracts, CTR Special Staff Services, and CTR Special Projects (discussed further at U.S. FPF § I.D(2), infra). Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Response No. 10 (U.S. Ex. 87,529).

(i) The Nature of CTR Funded Grant Research

SECTION I.

88. TIRC focused its energies and resources in two areas. First, it served as a public relations unit for Defendants, especially in relation to growing public concern about the risks of smoking, by repeatedly attacking scientific studies that demonstrated the harms of cigarette smoke and working to reassure smokers about cigarettes. See U.S. FFFF § IV.A., infra. Second, it developed a research program that focused on basic processes of disease and that was distant from, if not completely irrelevant to, evaluating the immediate and fundamental questions of the health effects associated with smoking – the very subject that the industry had pledged to pursue through CTR. Expert Report of Allan Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002), at 21-25.

89. TIRC/CTR sent its "Statement of Policy" to medical and scientific publications, medical and graduate schools, science writers, medical writers, and others interested in grant applications. The statement read, "The Council for Tobacco Research - U.S.A., Inc. (The Council) is dedicated to supporting the investigation of fundamental matters relating to a connection between tobacco use and human health." CTRMN000269-0270 (U.S. Ex. 87,531); TLT0903213-3212 (U.S. Ex. 88,371); TLT0903214-3214 (U.S. Ex. 88,372); TLT0903194-3196 (U.S. Ex. 88,373); TLT0901359-1359 (U.S. Ex. 88,374); TLT0902780-2781 at 2780 (U.S. Ex. 88,375).

90. However, TIRC did not pursue direct research on cigarettes and disease. Instead, TIRC directed most of its resources to alternative theories of the origins of cancer, centering on genetic factors and environmental risks. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002), at 34-39.

SECTION I.

91. Harmon McAllister, Vice President of CTR, described the type of research funded: "Our research is basic medical research on the etiology of diseases that have been epidemiologically linked to smoking. That's our global - that's the way we operate. Those are the sorts of applications we entertain." Deposition of Harmon McAllister, Broin v. Philip Morris, December 6, 1993, 46:2-16.

92. Under Clarence Cook Little's leadership, TIRC never wavered from its essential mission of insisting that a genuine scientific controversy existed regarding the causal link between smoking cigarettes and adverse health effects. In 1958, three British scientists, D.G.I. (David) Felton of BATCo, H.R. (Herbert) Bentley of Imperial Tobacco, and W.W. Reid of BATCo visited the United States for four weeks and met with representatives of Defendant American, Defendant Liggett, Defendant Philip Morris, Defendant TIRC/CTR, the SAB of TIRC/CTR, the Industry Technical Committee, and others. The scientists reported that "Liggett & Meyers stayed out of TIRC originally because they doubted the sincerity of TIRC's motives and believed that the organization was too unwieldy to work efficiently. They remain convinced that their misgivings were justified. In their opinion TIRC has done little if anything constructive, the constantly reiterated 'not proven' statements in the face of mounting contrary evidence has thoroughly discredited TIRC, and the SAB of TIRC is supporting almost without exception projects which are not related directly to smoking and lung cancer." TINY0003106-3116 (U.S. Ex. 21,369); 105408490-8499 (U.S. Ex. 21,135) (U.S. Ex. 76,169); 501941283-1284 (U.S. Ex. 20,691).

93. After another visit to the United States in the fall of 1964, two British scientists

SECTION I.

wrote in their report: "As we know, CTR supports only fundamental research of little relevance to present day problems." 1003119099-9135 (U.S. Ex. 20,152) (U.S. Ex. 35,649).

94. In a January 12, 1968 memorandum, Addison Yeaman, Brown & Williamson Vice President and General Counsel, wrote, "Review of SAB's current grants indicates that a very sizable number of them are for projects in what might be called 'basic research' without specific orientation to the problem of the relationship of the use of tobacco to human health." 00552837-2839 at 2837 (U.S. Ex. 22,968); see also 321668053-8055 at 8054 (U.S. Ex. 20,591).

95. At a January 18, 1968 meeting with Cy Hetsko, Vice President and General Counsel for American Tobacco, and Addison Yeaman, Vice President and General Counsel for Brown & Williamson, Janet Brown, outside counsel for American Tobacco, explained CTR's strategy in undertaking only basic research of disease, as opposed to researching questions directly related to tobacco and health. The reason was that this type of basic research kept alive the Enterprises' open question argument on causation. Yeaman summarized Brown's position as:

First, we maintain the position that the existing evidence of a relationship between the use of tobacco and health is inadequate to justify research more closely related to tobacco, and
Secondly, that the study of the disease keeps constantly alive the argument that, until basic knowledge of the disease itself is further advanced, it is scientifically inappropriate to devote the major effort to tobacco.

LG2023842-3843 at 3842 (U.S. Ex. 21,211).

96. Under the leadership of Clarence Cook Little, the major thrust of TIRC was to emphasize that human cancers were complex processes, difficult to study and difficult to understand. Virtually none of the research funded by TIRC/CTR centered on immediate

SECTION I.

questions relating to epidemiology or the carcinogenesis of smoke. In an October 14, 1969 memorandum written to Ross R. Millhiser of Philip Morris, Helmut Wakeham, Vice President and Director of Research for Philip Morris, admitted that he would agree with the opinion that "the efforts of the tobacco industry through CTR and the American Medical Association have failed to involve the best investigators. At the beginning of our support of smoking and health research, this failure may have been connected with our consistent denial of the statistics and our continued assertion that there is nothing to the cigarette causation hypothesis." Wakeham also lamented the fact that "the scientific expertise of the industry, because of the liability suit situation, has not been permitted to make a contribution to the problem, a contribution which I believe was and is vital." 1001609594-9595 (U.S. Ex. 21,437) (U.S. Ex.76,162).

97. In a memorandum dated December 8, 1970, and addressed to Joseph Cullman, Chairman of Philip Morris and Chairman of the Executive Committee of the Tobacco Institute, Helmut Wakeham admitted that CTR had not freely pursued the health impact of tobacco: "It has been stated that CTR is a program to find out the 'truth about smoking and health.' What is truth to one is false to another. CTR and the Industry have publicly and frequently denied what others find as 'truth.' Let's face it. We are interested in evidence which we believe denies the allegation that cigarette smoking causes cancer." 1000255938-5940 (U.S. Ex. 20,085); 2015062594-2596 (U.S. Ex. 20,334).

98. A memorandum prepared by Clarence Cook Little and Robert Hockett, and forwarded to Cyril Hetsko, Addison Yeaman, William Smith, Henry Ramm, and Mr. Grant, described CTR's areas of research. At the end of the memorandum, the authors emphasized that

the following two viewpoints apply to all the work of the Council:

1. The complexity of origin of all the diseases statistically associated with tobacco use, and the inadequacy of the single factor method of approach to this whole problem.
2. The basic importance of the so-called Host Factor. This means the innate or genetic differences between human individuals which continue to develop and operate throughout their lifetime and which results in distinct and individual differences in susceptibility or unsusceptibility to the various environmental challenges which their life experience presents.

The memorandum further instructed that these two factors be kept in mind and to "conduct the various specific pieces of research which we support in such a way as to add to the increasing body of experimental evidence which justifies this attitude." HT135160-5164 (U.S. Ex. 21,174).

99. In 1970, Helmut Wakeham expressed his opinion of the CTR research program in a letter addressed to Earle Clements, President of the Tobacco Institute: "[M]uch of the grant work [under CTR] has little or no relevance to smoking and health, in my opinion."

1001817276-7277 (U.S. Ex. 85,999).

100. After another visit to the United States in 1973, during which he met with Defendants' representatives, attorneys, and scientists, Geoffrey F. Todd, Executive Director of the Tobacco Research Council, an organization in the United Kingdom equivalent to CTR, wrote: "It was difficult to avoid the sad conclusion that C.T.R. has become a backwater of little significance in the world of smoking and health." 100226995-7033 (U.S. Ex. 21,134).

(ii) CTR and Contract Research

101. The Enterprise also funded contract research through CTR as a means to engage in self-serving research that was strictly controlled by the Enterprise under the guise of

SECTION I.

independent research (discussed further at U.S. FPF § IV.D., infra). 1003718457-8457 (U.S. Ex. 86,000). These contracts were proposed by CTR's Scientific Director and submitted to the SAB for approval. Deposition of Vincent F. Lisanti, Arch v. American Tobacco Co., June 10, 1997, 61:20-65:21.

102. On December 6, 1977, Robert Heimann, Chairman and Chief Executive Officer of Defendant American, wrote a letter to Addison Yeaman, CTR's Chairman and President and formerly the General Counsel of Brown & Williamson, strongly condemning CTR's new focus on directed or contract research as "a violation of our advertised pledges to the public." Heimann also wrote, "For many years after the T.I.R.C. was established in 1954 we were able to say that 'all grants are made upon recommendation of an advisory board of independent doctors, scientists, and educators. Recipients of grants are assured complete scientific freedom in conducting their investigations.' Indeed, this point was made part of our pledge to the public in [the Frank Statement] This we can no longer say since what is called 'directed' or 'contract' research has been brought into the picture. As I remarked at the September 1976 meeting, the original concept of T.I.R.C. did not embrace the idea of contract research but envisioned industry support of research on a pro bono publico, arm's length basis." Heimann's denunciation of CTR's lack of independence was copied to: V.B. Lougee, III, President and CEO of American Tobacco; Janet Brown, outside counsel for American Tobacco; Richard Stinnette, Assistant to Chairman of American Tobacco; Joseph Cullman, III, Chairman of Philip Morris; Joseph Edens, President of Brown & Williamson; Clifford Goldsmith, President of Philip Morris; William Hobbs, President of R.J. Reynolds; Curtis Judge, President of Lorillard; and Collin Stokes, Chairman of the Board

of R.J. Reynolds. 2022200158-0160 at 0158 (U.S. Ex. 87,532).

(b) TIRC/CTR and Public Relations

103. From the outset, the dual functions of TIRC – public relations and scientific research – were intertwined. In December 1953, Timothy Hartnett, President of Brown & Williamson, summarized the crisis of the industry in the following terms: "But cancer research, while certainly getting our support, can be only half an answer. . . . **The other side of the coin is public relations . . . [which] is basically a selling tool and the most astute selling may well be needed to get the industry out of this hole.** . . . It isn't exaggeration that no public relations expert has ever been handed so real and yet so delicate a multi-million dollar problem. . . . Finally, one of the roughest hurdles which must be anticipated is how to handle significantly negative research results, if, as, and when they develop." 1005039779-9783 (U.S. Ex. 20,190) (emphasis added).

104. One name initially proposed for TIRC/CTR, the "Tobacco Industry Committee for Public Information," reflected its public relations purpose. However, John Hill of the public relations firm Hill & Knowlton suggested that it would be better if the word "research" appeared in the title of the committee. Hill & Knowlton's December 1953 preliminary recommendations for cigarette manufactures explained, "[t]he word 'research' should be included in the name of the Committee to establish the fact that the group will carry on or sponsor fundamental scientific research and will not be solely an information agency." FPL0012310-2134 (U.S. Ex. 86,615); TLT0900422-0430 at 0424 (U.S. Ex. 88,376); TLT0901541-1545 at 1542 (U.S. Ex. 87,225); TLT0901553-1557 at 1554 (U.S. Ex. 88,377).

SECTION I.

105. A white paper entitled "A Scientific Perspective on the Cigarette Controversy" was one of the first projects undertaken by Hill & Knowlton on behalf of its new client, TIRC. Defendants perceived an urgent need for the white paper project to help soothe the public's fears. John Hill of Hill & Knowlton described the booklet as "excerpts from important scientific articles published in this country and abroad which present a balanced view of the situation and particularly which present the other side of the controversy, as distinguished from the view promoted by Doctors Graham, Ochsner and Wynder, who have contended that cigarette smoking caused cancer." The white paper was one of the earliest attempts by Defendants to offer reassuring "science" to smokers. In fact, many of the contributors to the white paper had close ties to the industry. 689103383-3437 (U.S. Ex. 54, 275); TLT0902326-2327 (U.S. Ex. 87,533); TLT0900062-0062 (U.S. Ex. 87,534); TLT0900145-0146 (U.S. Ex. 88,378); TLT0901009-1010 (U.S. Ex. 88,379); TLT0901011-1011 (U.S. Ex. 88380); TLT0920009-0009 (U.S. Ex. 88381); TLT0902324-2325 (U.S. Ex. 88,382); TLT0900127-0130 (U.S. Ex. 88,383); TLT0900136-0137 (U.S. Ex. 88,384); 93219023-9024 (U.S. Ex. 88,385).

106. "A Scientific Perspective on the Cigarette Controversy" was released April 14, 1954, with 205,000 copies being printed. Since the white paper might have been perceived as commercial in character and designed to promote the smoking of tobacco, distribution was limited. The booklet was sent to 176,800 doctors, as well as to deans of medical and dental colleges. The booklet with a press release went to a press distribution of 15,000, including: editors of daily and weekly newspapers, consumer magazines, veterans magazines, and medical and dental journals; news syndicate managers; business editors; editorial and science writers;

SECTION I.

radio and television commentators; news columnists; and Members of Congress. The press release was also sent to some 1,400 radio stations. The white paper reaffirmed the promise of the Frank Statement – that Defendants accepted an interest in people's health as a basic responsibility and paramount to every other consideration in their business. It also went on to set forth findings that indicated that the scientific evidence was not conclusive. 2023335303-5304 (U.S. Ex. 20,388); 1005039987-40008 (U.S. Ex. 20,192); TLT0901688-1707 (U.S. Ex. 88,386); TLT0902951-2951 (U.S. Ex. 87,535); TLT0900051-0052 (U.S. Ex. 87,536); TLT0900055-0056 (U.S. Ex. 87,537); TLT0900059-0059 (U.S. Ex. 87,538); TLT0900063-0064 (U.S. Ex. 87,539); TLT0900065-0065 (U.S. Ex. 87,540); TLT0900066-0066 (U.S. Ex. 87,541); TLT0900067-0067 (U.S. Ex. 87,542); TLT0900068-0069 (U.S. Ex. 87,543); TLT0902918-2921 (U.S. Ex. 88,387) TLT0902954-2955 (U.S. Ex. 88,388).

107. John Hill of Hill & Knowlton offered some "aggressive moves" to be taken by TIRC to counter "recent tricky anti-tobacco blasts." The suggestions, including, "forceful" statements by Clarence Little, Chairman of the SAB, in interviews, press releases and press conferences, were thereafter carried out. TLT0902432-2433 (U.S. Ex. 88,389); TLT0901177-1178 (U.S. Ex. 88,390); TLT0901099-1099 (U.S. Ex. 88,391); TLT0900110-0111 (U.S. Ex. 88,392); TLT0903237-3238 (U.S. Ex. 88,393).

108. In the June 1954 "Public Relations Report and Recommendations for Tobacco Industry Research Committee," Hill & Knowlton boasted about the success of its public relations efforts for TIRC: "Committee headquarters is steadily gaining recognition as a source of authoritative information on the subject of tobacco and health. The result is that news and

SECTION I.

magazine writers, columnists and commentators are turning to the Committee and its public relations counsel for more and more information." SHSW001328-1333 at 1329 (U.S. Ex. 86,001); TLT0901558-1563 at 1559 (U.S. Ex. 88,394); see also TLT0902082-2087 (U.S. Ex. 88,395); TLT0900291-0294 (U.S. Ex. 88,396); TLT0903164-3165 (U.S. Ex. 88,397).

109. Timothy Hartnett became the full-time chairman of TIRC on July 1, 1954, the day after his retirement as President of Brown & Williamson. According to the press release announcing his appointment, Hartnett stated that the

tobacco industry is determined to find the answers to the public's questions about smoking and health. The appointment of a full-time chairman completes an organization dedicated to carrying on comprehensive and objective scientific and statistical research to establish the facts and report them to the public. . . . It is an obligation of the Tobacco Industry Research Committee at this time to remind the public of [some] essential points: (1) There is no conclusive scientific proof of a link between smoking and cancer; (2) Medical research points to many possible causes of cancer; . . . (5) The millions of people who derive pleasure and satisfaction from smoking can be reassured that every scientific means will be used to get all the facts as soon as possible.

2023335303-5304 (U.S. Ex. 20388); 01138996-8997 (U.S. Ex. 20,037); TLT0901831-1832 (U.S. Ex. 88,398).

110. In his 1955 administrative reports to TIRC, Wilson Hoyt, TIRC Executive Secretary and Hill & Knowlton executive, wrote about the relationship of public relations and research in TIRC's program. In his April 1955 Statement, he explained: "Essentially, the major purposes of the TIRC are Research and Public Relations. Our job is to maintain a balance between the two, and to continue to build soundly so that at all times Research and Public Relations complement each other. In that way we intend to assume the mantle of leadership and,

SECTION I.

ultimately, to create a condition where the public will look to the TIRC for answers rather than to others." In his January 1955 Statement, he wrote, "Within this framework we have furthered and coordinated the two major purposes for which the Committee was organized namely, the public relations phase and the research program." CTRMN003816-3835 at 3826 (U.S. Ex. 21,147); TM0020071-0101 at 0076 (U.S. Ex. 21,373); see also TLT0901479-1483 (U.S. Ex. 88,399).

111. United States Surgeon General Leroy E. Burney's assessment of the scientific evidence linking cigarettes to lung cancer was published in the November 28, 1959 issue of the *Journal of the American Medical Association*. Hill & Knowlton, having anticipated the appearance of the Burney article and learned of its contents in advance of publication, provided the press with statements made by TIRC Scientific Director Clarence Cook Little countering the Surgeon General's statement. Burney, Leroy E., "Smoking and Lung Cancer: A Statement of the Public Health Service," *JAMA* 71: 1835 (November 1959) (U.S. Ex. 63,608); HT0145148-5150 (U.S. Ex. 21,177); 503283464-3467 (U.S. Ex. 22,981).

112. In a July 17, 1963 memorandum, Addison Yeaman, General Counsel for Brown & Williamson, acknowledged that TIRC principally acted as a public relations unit: "The TIRC cannot, in my opinion, provide the vehicle for such research. It was conceived as a public relations gesture and (however undefiled the Scientific Advisory Board and its grants may be) it has functioned as a public relations operation." 689033412-3416 (U.S. Ex. 22,034); 2046754905-4909 (U.S. Ex. 20,477).

113. Industry news releases selectively used "CTR research results to challenge some of the anticigarette charges." 966000976-0977 (U.S. Ex. 86,084); 966056987-6988 (U.S. Ex.

86,002); 70100997-1001 (U.S. Ex. 86,003); BWX0011014-1015 (U.S. Ex. 36,245).

114. A document detailing discussions held among CTR executives between November 10 and 15, 1971, noted the likelihood that CTR would continue public relations activities,

[T]here was confidence that CTR would not be primarily a public relations tool, tacitly admitting that this was what it had been previously. On the other hand, there was equal confidence in future CTR research would be steered clear of any embarrassing connection with smoking as a cause of disease. The second objective seems more likely to be achieved than the first.

100249579-9627 at 9589 (U.S. Ex. 34,628).

115. TIRC's research program never escaped its public relations origins. As Alexander Spears, Lorillard's Director of Research, explained in 1974:

Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for various purposes such as public relations, political relations, position for litigation, etc. Thus, it seems obvious that reviews of such programs for scientific relevance and merit in the smoking and health field are not likely to produce high ratings. In general, these programs have provided some buffer to the public and political attack of the industry, as well as background for litigious strategy.

01421596-1600 (U.S. Ex. 20,049).

116. In a 1975 speech to CTR members, Addison Yeaman gave his observations on the Council, among them he noted, "It is my sober judgement that CTR, as it now operates is the greatest public relations asset you have in the problem of tobacco and health." 11303014-3020 at 3017 (U.S. Ex. 86,005).

(i) TIRC/CTR Newsletters and Annual Reports

SECTION I.

117. In late 1957, the Tobacco Information Committee, a subcommittee of TIRC, was formed from what was previously known as the Public Relations Committee. The committee was comprised of public relations employees from the companies and public relations counsel representing the companies. The Tobacco Information Committee published the first two issues of the *Tobacco and Health* newsletter on behalf of the industry. The *Tobacco and Health* newsletter contained articles that disputed the relationship between smoking and disease, criticized research supporting such a relationship, and emphasized that differing opinions existed regarding tobacco use and health. After its creation in 1958, the Tobacco Institute (discussed further at U.S. FPF § I.C., *infra*) assumed responsibility for publishing the *Tobacco and Health* newsletter on behalf of Defendants. 70123540-3540 (U.S. Ex. 31,483); HT0128002-8023 (U.S. Ex. 21,176); TIMN123324-3327 (U.S. Ex. 21,282); TIMN0130834-0837 (U.S. Ex. 86,006); TIKU 000006665-6668 (U.S. Ex. 86,007); 511018410-8413 (U.S. Ex. 22,459); TIMN123314-3317 (U.S. Ex. 21,345); 70123530-3530 (U.S. Ex. 31,474); 70123531-3531 (U.S. Ex. 31,475); 70123532-3532 (U.S. Ex. 31,476); 70123533-3533 (U.S. Ex. 31,477); 70123534-3534 (U.S. Ex. 31,478); 70123535-3535 (U.S. Ex. 31,479); 70123536-3536 (U.S. Ex. 31,480); 70123537-3537 (U.S. Ex. 31,481); 70123538-3539 (U.S. Ex. 31,482); 70123540-3541 (U.S. Ex. 31,483); 70123542-3543 (U.S. Ex. 31,484); TLT0902120-2120 (U.S. Ex. 88,400).

118. Initially, *Tobacco and Health* was to be published by the SAB and TIRC. This provoked a strong reaction from members of the Scientific Advisory Board who received advance copies of the first issue. In a letter from SAB member, McKeen Cattell to SAB Chairman, Clarence Little, Cattell classified the new publication as "obviously propaganda

SECTION I.

material" and expressed serious concern about the effect it would have on the SAB's program.

Julius Comroe, another SAB member, advised that the SAB and TIRC not be identified with the *Tobacco and Health* publication. In response to these concerns, the publication was issued under the name of the Tobacco Information Committee. 701235030-5030 (U.S. Ex. 31,474); 70123533-3533 (U.S. Ex. 31,477); 70123534-3534 (U.S. Ex. 31,478).

119. From October 1957 to at least 1968, first TIRC and then the Tobacco Institute published the newsletter under various names, such as *Tobacco and Health*, *Research Reports on Tobacco and Health*, and *Reports on Tobacco and Health Research*. The newsletter was published two or three times a year. In 1962, circulation of the newsletter reached 520,000, with about 315,000 copies going to doctors, dentists, and medical schools, and the rest going to writers and editors, public opinion leaders, all members of Congress, brokerage houses, tobacco groups, farm and supplier groups, industry groups, and member companies. Publication of research results helped make news and was coordinated with other publicity efforts.

TIMN0000697-0700 (U.S. Ex. 86,008); TIMN0000709-0712 (U.S. Ex. 86,009); TIMN0000713-07141 (U.S. Ex. 21,264); TIMN0000715-0718 (U.S. Ex. 86,010); TIMN0000719-0722 (U.S. Ex. 86,011); TIMN0000723-0726 (U.S. Ex. 86,012); TIMN0000727-0728 (U.S. Ex. 86,013); TIMN0000729-0732 (U.S. Ex. 86,053); TIMN0000733-0734 (U.S. Ex. 86,014); TIMN0000736-0738 (U.S. Ex. 86,015); TIMN0000739-0744 (U.S. Ex. 86,016); TIMN0000745-0747 (U.S. Ex. 86,017); TIMN0000748-0750 (U.S. Ex. 86,045); TIMN0000751-0756 (U.S. Ex. 86,018); TIMN0000757-0762 (U.S. Ex. 86,019); TIMN0000763-0774 (U.S. Ex. 86,020); TIMN0000775-0780 (U.S. Ex. 86,021); TIMN0000781-0784 (U.S. Ex. 86,022); TIMN0000785-0788 (U.S. Ex.

0732 (U.S. Ex. 86,053); TIMN0123232-3235 (U.S. Ex. 86,054); ATC0541909-1914 (U.S. Ex.

SECTION I.

86,055); ATC2445612-5615 (U.S. Ex.86,056); ATC2467590-7590 (U.S. Ex. 86,057); TIMN0070640-0656 (U.S. Ex. 21,299); TIMN0070657-0674 (U.S. Ex. 22,983); 1005037571-7571 (U.S. Ex. 26,174).

120. According to Hill & Knowlton, the primary purpose of the *Tobacco and Health* newsletter was to present directly to the medical and scientific communities research material related to tobacco and health – material that frequently did not deal with tobacco but suggested other causes of cancer, such as viruses, air pollution, and previous chest ailments. A secondary purpose was to attract the attention of the lay press to studies that challenged the validity of research linking cancer to cigarette use. In order to combat the effects of the *Tobacco and Health* newsletter, four non-governmental health agencies began issuing a *Medical Bulletin on Tobacco* in 1962. TIMN0081441-1457 (U.S. Ex. 21,482).

121. In a procedural memorandum, Hill & Knowlton delineated specific criteria for selecting reports to be included in "Tobacco and Health." The memorandum stated that research did not have to always deal specifically with tobacco; for example, research which suggested that other factors may cause diseases associated with smoking should be included; "[t]he most important type of story is that which casts doubt on the cause and effect theory of smoking and disease." TIMN00721488-1491 (U.S. Ex. 86,058); CTRPUBLICSTMT001270-1281 (U.S. Ex. 32,646).

122. In the *Tobacco and Health* newsletters, the Enterprise often issued public statements reaffirming promises it had made about TIRC: "[TIRC's] purpose is solely to obtain new information and to advance human knowledge in every possible phase of the tobacco and

SECTION I.

health relationship." MNAT00515648-5651 (U.S. Ex. 21,227); 511018410-8413 (U.S. Ex. 22,459).

123. TIRC/CTR issued Annual Reports from 1956 through 1997. The TIRC/CTR Annual Reports routinely included, in varying formats: abstracts of articles published by researchers funded by TIRC/CTR grants; brief statements regarding organization and policy; lists of SAB members and their affiliations; lists of grantees; lists of ongoing and completed projects; and research summaries, commentaries, rationales, and observations. 85865669-5692 (U.S. Ex. 22,954); 2058185000-5317 (U.S. Ex. 20,499); 515709297-9340 (U.S. Ex. 20,866); MNAT00515749-5762 (U.S. Ex. 86,059).

124. TIRC/CTR Annual Reports were sent to medical editors at newspapers, medical editors for television programs, deans of colleges and universities in the United States, libraries at colleges and universities, college and university grant offices, the CTR Board of Directors, members of the CTR SAB, the CTR grantees, CTR class A and B members, and the Tobacco Institute. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 64:11-75:17, 120:4-10; Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 24, 2002, 62:8-67:2; 10023197-3197 (U.S. Ex. 26,128).

125. After a visit to the United States in October 1964, Sir Philip J. Rogers, TRC Chairman, and Geoffrey F. Todd, TRC Director, wrote in their report that the lawyers on the Ad Hoc Committee were involved with "clearing papers (e.g. Dr. Little's annual report)." 1003119099-9135 (U.S. Ex. 20,152) (U.S. Ex. 35,649).

126. The commentary in the Annual Reports uniformly challenged the hypothesis that

smoking was linked to lung cancer and emphasized that data regarding smoking and health were controversial, contradictory, and inconclusive:

- 1957 Report of the Scientific Director ("sound medical and experimental knowledge of tobacco use is relatively limited, at times contradictory, and often conjectural rather than factual. . . . There is not known today any simple or quick way to answer the question of whether any one factor has a role in causing human lung cancer . . . no one has established that cigarette smoke, or any one of its known constituents, is cancer causing to man. . . . Members of the [TIRC SAB] Board take the general position that definitive conclusions or predictions of individual risks are unwarranted by the present imperfect state of knowledge in the complex field of lung cancer causation," and describing cancer as "this so-called constitutional disease");
- 1958 Report of the Scientific Director ("a problem may well be obscured, and its solution delayed, by the soothing acceptance of an oversimplified and immature [tobacco theory] hypothesis. . . . The proponents of the tobacco theory have generated increasingly intensive and extensive propaganda. . . . As a result, a non-scientific atmosphere, conducive to prematurity, unbalance, and inadequacy of public judgement, has pervaded the whole field. . . . The prohibition concept discounts or ignores all considerations of smoking benefits in terms of pleasure, relaxation, relief of tension or other functions.");
- 1961 Report of the Scientific Director ("[T]hose who most actively promote this [smoking-lung cancer] hypothesis have consistently ignored or, at best, have minimized the fact that numerous directly relevant experiments either have failed to support the hypothesis or have provided only weak or uncertain data.");
- 1963-64 Report of the Scientific Director ("After 10 years the fact remains that knowledge is insufficient either to provide adequate proof of any hypothesis or to define the basic mechanisms of health and disease with which we are concerned.");
- 1964-65 Report of the Scientific Director ("[E]vidence to support the thesis that cigarettes exercise a direct carcinogenic effect on man has not been forthcoming.");
- 1978 Report of the Council for Tobacco Research-U.S.A., Inc. ("[T]he complex etiology of these constitutional diseases [cancer, heart disease, chronic pulmonary ailments] remains unraveled. These diseases have been associated statistically with smoking, but such associations are not proof of cause and effect.").

SECTION I.

515709297-9340 (U.S. Ex. 20,866); 85865693-5741 (U.S. Ex. 22,237); 515709297-9340 (U.S. Ex. 20,866); 85865742-5804 (U.S. Ex. 21,082); 1005100667-0670 (U.S. Ex. 86,060); 01141473-1541 (U.S. Ex. 20,039); 1002315484-5561 (U.S. Ex. 20,126); 1002316572-6677 (U.S. Ex. 20,131).

127. For more than two decades, the Annual Reports continued to discount the conclusions reached by the public health community and the Surgeon General linking smoking and disease and presented a view parroting the "open question" position of the tobacco industry.

515709297-9340 (U.S. Ex. 20,866); 85865669-5692 (U.S. Ex. 22,954); 85865693-5741 (U.S. Ex. 22,237); 85865742-5804 (U.S. Ex. 21,082); 85865805-5873 (U.S. Ex. 21,083); 85865874-5946 (U.S. Ex. 21,084); 01141473-1541 (U.S. Ex. 20,039); 85866020-6080 (U.S. Ex. 21,085); 1002315412-5483 (U.S. Ex. 20,125); 1002315484-5561 (U.S. Ex. 20,126); 1002315562-5640 (U.S. Ex. 20,010); 1002315641-5722 (U.S. Ex. 20,011); 1002315723-5834 (U.S. Ex. 20,127); 1002315835-5920 (U.S. Ex. 21,800); 1005082487-2584 (U.S. Ex. 20,202); 1005082585-2690 (U.S. Ex. 20,203); 1005082691-2788 (U.S. Ex. 20,012); 2028556086-6177 (U.S. Ex. 20,428); 1002316312-6397 (U.S. Ex. 20,128); 1002316398-6485 (U.S. Ex. 20,129); 1002316486-6571 (U.S. Ex. 20,130); 1002316572-6677 (U.S. Ex. 20,131); 1002316678-6780 (U.S. Ex. 20,132).

128. A June 20, 1984 memorandum from Wendell Stone, attorney at Shook, Hardy & Bacon, during the Cipollone litigation, acknowledged the bias of CTR/TIRC's annual reports. Stone commented that the reports, especially the early ones, "contained lengthy commentary . . . which read much like industry position papers." Stone also concluded:

The TIRC/CTR commentary on research did not always seem to conform fully to the positions taken or implied in the abstract. For

example, with respect to the Leuchtenberger inhalation research, the abstracts in the annual reports tend to give the impression that these researchers did in fact have a good animal model of lung cancer production by smoke inhalation. However, commentary on this research in the front material to the reports tended to argue away the relevance of the results.

515709297-515709340 (U.S. Ex. 20,866).

(ii) TIRC/CTR Public Statements

129. The Enterprise directed public attention to TIRC/CTR's research and based public statements and press releases upon it in order to have the public believe that the tobacco industry was objectively researching the relationship between smoking and disease and to perpetuate the industry's open controversy position. See U.S. FPF §§ IV.A. and IV.D., infra.

130. Hill & Knowlton's 1959 Public Relations Report to TIRC explained that:

Comment from TIRC for the press remains an effective way to meet anti-tobacco publicity efforts and emphasizes the multiple factors that should be considered. This, of course, is complemented with a continuing program of supplying information to give editors and writers a balanced perspective on questions of tobacco and health.

HT0145148-5150 (U.S. Ex. 21,177).

131. The relationship between TIRC/CTR and Hill & Knowlton remained close for many years. Because TIRC had no headquarters and no staff when it started up, Hill & Knowlton provided a working staff and temporary office space and assigned one of its experienced executives, Wilson T. Hoyt, to serve as Executive Secretary for the TIRC. In early 1956, the TIRC Executive Committee approved the removal of TIRC's offices to the building

SECTION I.

where Hill & Knowlton's offices were located. At their January 29, 1964 meeting, the TIRC Executive Committee agreed to immediately transfer seven Hill & Knowlton employees, including Hoyt, to TIRC. TLT0902041-2064 (U.S. Ex. 88,401); CTRMN003816-3835 at 3825 (U.S. Ex. 21,147); 93218985-8986 (U.S. Ex. 21,116); TLT0900114-0115 (U.S. Ex. 88,402); TLT0900284-0284 (U.S. Ex. 88,403); TLT0900138-0142 (U.S. Ex. 88,404).

132. Even after the Tobacco Institute (discussed further at U.S. FPF § I.C., infra) was created, CTR continued its public relations functions; it retained public relations advisor Hill & Knowlton until 1969, and retained Leonard Zahn, one of Hill & Knowlton's former employees, until 1994. 93218985-8986 (U.S. Ex. 21,116); 70057072-7073 (U.S. Ex. 21,983); 512678484-8499 (U.S. Ex. 51,653); 689103383-3437 (U.S. Ex. 54,275).

133. Leonard Zahn & Associates served as CTR's public relations counsel from 1969-1994. During his tenure Zahn attended SAB meetings, organized press conferences, prepared articles, and drafted press releases, public statements and the annual reports for CTR. Zahn also served as a liaison between CTR and the Tobacco Institute. Deposition of Leonard Zahn, Richardson v. Philip Morris, December 16, 1998, 308:7-14; Deposition of Leonard Zahn, Richardson v. Philip Morris, January 13, 1999, 837:6-837:21; 70124410-4414 (U.S. Ex. 31,512); 70124415-4415 (U.S. Ex. 31,513); 70124416-4416 (U.S. Ex. 31,514) 70124368-4372 (U.S. Ex. 31,486); CTR98CONG00032-0032 (U.S. Ex.86,061); CTR98CONG00070-0070 (U.S. Ex. 25,897); 682631398-1405 at 1400 (U.S. Ex. 30,983); CTRMN015360-5360 (U.S. Ex. 79,868); CTRMN015361-5361 (U.S. Ex. 79,869); CTRMN015362-5365 (U.S. Ex. 79,870); CTRMN015370-5371 (U.S. Ex. 79,873); CTRMN015380-5381 (U. S. Ex. 79, 877).

(c) TIRC/CTR and Litigation Support

134. In a November 17, 1978 Philip Morris memorandum, statements by Shook, Hardy & Bacon partner William Shinn confirmed CTR's assistance to the industry in litigation matters. "CTR began as an organization called Tobacco Industry Research Council [sic] (TIRC). It was set up as an industry 'shield' in 1954. . . . CTR has helped our legal counsel by giving advice and technical information, which was needed at court trials." 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

135. In October 2003, Steven Klugman, counsel for CTR, submitted a declaration that stated: "Documents in CTR's files show that lawyers who defended the tobacco companies in products liability cases consulted with Dr. Hockett [TIRC's Associate Scientific Director in 1960] from time to time about the scientific issues in those cases." Declaration of Steven Klugman, United States v. Philip Morris, et al., October 1, 2003, at ¶ 33 (U.S. Ex. 87,586) (U.S. Ex. 86,811). In addition, Klugman's declaration confirmed that, "when defendants called Dr. Little [TIRC's Scientific Director] as an expert witness in disease causation [in Lartigue v. R.J. Reynolds Tobacco Company, E.D.La. 1960], he was cross-examined by plaintiff's counsel, Melvin Belli, about the activities of TIRC, during which Mr. Belli characterized him as the cigarette company defendants' 'research guy.'" Declaration of Steven Klugman, United States v. Philip Morris, et al., October 1, 2003, at ¶ 34 (U.S. Ex. 87,586) (U.S. Ex. 86,811) (citing Lartigue Tr. at 2757, 2761, 2796).

136. Hockett also provided assistance to the Enterprise in a variety of ways. In a document dated March 5, 1964, Hockett analyzed the 1964 Surgeon General's report and

SECTION I.

suggested ways in which Defendants could attack the report. He recommended that CTR not make direct public criticisms of the Report. However, he commented that "public commentaries by experts in the field who are unconnected with The Council, published over their own signatures will have value." Specifically, he advised that Joseph Berkson (who received funding from Defendants through Special Account No. 3) was publishing a commentary; Alan Donnahue had published such a commentary and that CTR was furnishing him with information; CTR was arranging a meeting with Theodor Sterling, who he hoped would also write a commentary (Sterling went on to receive more funding through CTR Special Projects than any other scientist). 1005154551-4557 (U.S. Ex. 26,202); 11327172-7172 (U.S. Ex. 88,405); 11327173-7173 (U.S. Ex. 88,406); 50061435-1436 (U.S. Ex. 29,472); 11327126-7128 (U.S. Ex. 26,435); XBW0010893-0896 (U.S. Ex. 26,456).

137. Over the years Defendants continued to use the CTR scientific staff to aid their defense in litigation. Sheldon C. Sommers, Scientific Director of CTR, served as an expert witness on behalf of Cigarette Company Defendants in Galbraith v. R.J. Reynolds in 1985 and in Cipollone v. Liggett in 1986. Deposition of Sheldon Sommers, Galbraith v. R.J. Reynolds, September 04, 1985, 3:15-20; Deposition of Sheldon Sommers, Cipollone v. Liggett, October 2, 1986, 13:14-21.

138. For many years, the Literature Retrieval Division of CTR provided litigation support to industry members. See U.S. FPPF § I.F., infra, for a discussion of CTR's Literature Retrieval Division.

(d) TIRC/CTR and Spokespersons at Congressional and Other Hearings

SECTION I.

139. A November 17, 1978 Philip Morris memorandum containing statements by Shook, Hardy & Bacon partner William Shinn also confirmed CTR's assistance to the industry in providing speakers to Congress and other hearings: "CTR has supplied spokesmen for the industry at Congressional hearings. The monies spent at CTR provides a base for introduction of witnesses." 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

140. In 1962, Surgeon General Luther Terry, announced that the United States Public Health Service ("USPHS") would conduct a review on smoking and health. The group chosen to perform the review was later known as the Surgeon General's Advisory Committee on Smoking and Health. On July 24, 1962, Terry held a meeting to discuss the formation of the study group. Attendees included representatives from the Surgeon General's Office, the National Cancer Institute, American Cancer Society, American Heart Association, the Federal Trade Commission, and the Food & Drug Administration, among others. George Allen, President of the Tobacco Institute, and Clarence Cook Little, Scientific Director of TIRC, were present at the meeting to represent the Enterprise. At the meeting, Terry provided a list of proposed names for members of the Advisory Committee, with the request that each representative strike the names of any person to whom they objected. Little also provided a supplemental list of proposed individuals for the Committee, which was distributed. 2015069381-9383 (U.S. Ex. 86,064).

141. The Tobacco Institute and TIRC worked together with attorneys to research and object to certain individuals proposed to serve on the Surgeon General's Advisory Committee. According to a September 28, 1962 internal TIRC memorandum, Assistant Surgeon General

SECTION I.

Peter Hamill contacted Robert Hockett, Associate Scientific Director of TIRC, to determine if TIRC would object to specific individuals. The names were "immediately checked" with Stanley Temko, counsel for the Tobacco Institute, and then cleared through Edwin Jacob, counsel for TIRC. Jointly, Little, Jacob and Allen decided on the objections that were raised. 11308689-8690 (U.S. Ex. 86,065).

142. In a July 25, 1962 memorandum to Timothy Hartnett, TIRC Chairman, Clarence Little described his impressions of the meeting with Terry on the formation of Surgeon General's Advisory Committee. Little strongly suggested that individual companies clear with TIRC any communications to be made with USPHS:

I should like, at this time to urge as strongly as possible, that individual companies clear through TIRC before they decide to approach the USPSH directly. Direct individual approach without such consultation and clearance is fraught with the most serious and dangerous possibilities. It can be considered as:

- (a) A lack of coordination and cooperation within the industry
- (b) An expression of lack of confidence in the designated representatives and, indeed, in the TIRC as a whole.
- (c) Pressure of a non-scientific nature forced on the USPHS before the scientific phase of its study is complete.
- (d) Opening the door to conflicts in attitudes, statements, and interpretations within the industry and to contradictions and misunderstandings between the efforts of the representatives of TIRC and individual companies.
- (e) It is in conflict with the well-established policies of administrative efficiency to have a number of independent contacts and representations in existence when a coordinating body is available.

1002609781-9784 (U.S. Ex. 86,066).

SECTION I.

143. At a December 20, 1962 meeting, Little convinced Hamill that TIRC should serve as the "main channel of industry information" between the Surgeon General Advisory Committee and Defendants, as opposed to contacting the individual tobacco companies which, according to Little, could incur "legal and company competitive problems. " 85867910-7912 (U.S. Ex. 86,067).

144. A September 26, 1962 memorandum from Timothy Harnett, Chairman of TIRC, to members of the TIRC Executive Committee (Joseph Cullman of Philip Morris; William Cutchins of Brown & Williamson; Bowman Gray of R.J. Reynolds); Lewis Gruber of Lorillard; and Paul Hahn of American Tobacco) discussed the direction of TIRC's research program in response to the ultimate findings of the Surgeon General's Advisory Committee. Harnett wrote:

In any case Dr. Little feels that the industry will need to widen and deepen its support of research into the various effects of tobacco use in relationship to health. This assumption is based upon the expectation that the findings of the 'Expert Advisory Committee' of the Surgeon General will be either:

- (a) Condemnatory to tobacco use. (This will require research as necessary for defense and maintenance of existence.)
- (b) Inconclusive, expressing a hazard by statistical inference even though lacking in clinical and laboratory proof. (A strong research program will be needed to prove the sincerity and determination of the industry to find out the whole truth on its own.)
- (c) Uncertain or relatively favorable, indicating much more needs to be known about the subject. . . .

70123542-3543 (U.S. Ex. 31,484).

145. On March 14, 1963, George Allen, President of the Tobacco Institute, forwarded a

SECTION I.

letter from Hamill to the members of the Board of Directors, requesting any scientific information that might be of value to the Advisory Committee. Allen reminded the members that responses should be submitted through the Tobacco Institute or TIRC. Defendants, including R.J. Reynolds and Brown & Williamson, responded to the letter through the Tobacco Institute and referred Hamill to TIRC for scientific information. 2015064984-4985 (U.S. Ex. 86,068); 1005102314-2315 (U.S. Ex. 86,069); 11309803-9803 (U.S. Ex. 86,070); 680249780-9781 (U.S. Ex. 85,390).

146. During a June 26, 1963 telephone conversation between W.T. Hoyt, TIRC Executive Director, and Geoffrey F. Todd, Director of Britain's Tobacco Research Council, Hoyt stated that TIRC was "trying to keep their approach to S.G.A.C. on the highest scientific plane and are leaning over backwards to avoid any appearance of presenting propaganda on behalf of manufacturers." Nevertheless, he asserted that, even if TIRC "should feel it was desirable that the reports [by Battelle on the effects of nicotine] should be submitted to the Surgeon General's Advisory Committee, TIRC would not do that themselves. The reports would have to be presented through Brown & Williamson or some other channel." It had always been contemplated by British American Tobacco, sponsor of the Battelle nicotine research, that "if the reports stood up scientifically, it might be desirable to get them submitted to the U.S. Surgeon General's Committee." Less than a week after the Hoyt/Todd conversation, Brown & Williamson had determined that submission of the Battelle "developments" to the Surgeon General was "undesirable," and Hoyt had agreed to withhold disclosure of the three Battelle reports to the members of the TIRC Scientific Advisory Board until further notice from Addison

Yeaman, Brown & Williamson's General Counsel. 105636833-6834 (U.S. Ex. 75,518); 689033429-3429 (U.S. Ex. 54,274); 689033420-3420 (U.S. Ex. 54,272); 689033421-3421 (U.S. Ex. 31,045); 689033422-3422 (U.S. Ex. 22,734); 689033423-3423 (U.S. Ex. 31,046); 689033428-3428 (U.S. Ex. 54,273); 689636015-6015 (U.S. Ex. 86,072).

C. The Tobacco Institute

(1) Formation of The Tobacco Institute

147. In October 1954, George Whiteside, attorney for Defendant American Tobacco, explained to Paul Hahn, President of American Tobacco, that he was seriously concerned about the recent trend "in the field of anti-tobacco agitation . . . and feels the urgent need for reappraisal and the adoption of what we have called an 'affirmative' approach." Hahn passed on to Timothy Hartnett, TIRC Chairman, Whiteside's recommendation that the Cigarette Company Defendants "should seriously consider the setting up of a separate entity operating in the field of public information, with a name other than 'Tobacco Industry Research Committee' under which such activity would be conducted; since such activity would not involve the name of the Tobacco Industry Research Committee, the issuance of its statements, etc., would not present any problem of embarrassment to the members of the Scientific Advisory Board." TLT0900231-0231 (U.S. Ex. 88,407). No separate entity was set up for four years.

148. During the next four years, however, TIRC's public relations function caused a growing resentment on several fronts. Some Scientific Advisory Board ("SAB") members had

SECTION I.

always wanted a more distinct separation between the SAB and TIRC. One reason advanced was that it did not appear appropriate for TIRC to be making "partisan" arguments on behalf of the industry while at the same time sponsoring research that was supposed to be objective. Members of the TIRC SAB considered it inadvisable and "downright unacceptable" for the SAB or its members to be quoted in TIRC press releases and public statements concerning the smoking and health controversy. As emphasized in the minutes of the October 17-18, 1954 TIRC SAB meeting, the SAB "recognized the need for a more affirmative informational approach by the TIRC, and expressed the feeling that it would be in order for the Committee [TIRC] to take more positive action on its own through Mr. Hartnett as chairman without, at the same time, drawing the Advisory Board or the research program into such utterances." ATX110005290-5303 (U.S. Ex. 21,774); Deposition of Paul Kotin, Falise v. American Tobacco, October 31, 2000, 348:25-352:14; CTRMN004227-4232 at 4230 (U.S. Ex. 86,073); TLT0900231-0231 (U.S. Ex. 88,407); TLT0900241-0241 (U.S. Ex. 88,408); TLT0900713-0716 at 0715 (U.S. Ex. 88,409).

149. At the very beginning of his chairmanship, Clarence Cook Little believed that care should be taken by the SAB members in approving and signing onto public statements authored by the TIRC because "it is very easy for the public to confuse a statement made by the Tobacco Industry Research Committee with a statement made by the Scientific Advisory Board." A public statement by TIRC was "capable of being interpreted as a joint [Scientific] Advisory Board and Tobacco Industry Research Committee action," and that confusion could put the public's positive attitude toward the SAB in jeopardy. Nevertheless, John Hill of Hill & Knowlton attempted to, and did indeed, convince Little of "the need to let the public know that

SECTION I.

the case has not been proven and closed, but that there are 'two sides.'" TLT0902016-2016 (U.S. Ex. 88,410) TLT0903072-3073 (U.S. Ex. 88,411); TLT0900186-0186 (U.S. Ex. 88,202); TLT0900185-0185 (U.S. Ex. 88,203); TLT0901152-1152 (U.S. Ex. 88,204); TLT0901197-1198 (U.S. Ex. 88,205); TLT0920063-0066 at 0065 (U.S. Ex. 88,206); 501941582-1585 at 1583-1584 (U.S. Ex. 29,541).

150. By 1957, some members of the Enterprise were also concerned with the legal implications of Little's public statements. Lawyers for the Enterprise saw Little as a potential witness in litigation and worried that his public statements could compromise his usefulness in court. PP10003-2-0980-0993 at 0983 (U.S. Ex. 86,074).

151. Moreover, some members of the Enterprise wanted an organization that would take a much more aggressive public relations stance to counter arguments linking smoking and disease and to oppose proposed labeling legislation facing the industry. 70123537-3537 (U.S. Ex. 31,481); TIOK0034101-4102 (U.S. Ex. 63,011); HK16-HK16 (U.S. Ex. 87,545); SHSW314-W314 (U.S. Ex. 87,547); TIMS0012012-2013 (U.S. Ex. 77,099); 2074164618-4618 (U.S. Ex. 86,905); 2078348038-8038 (U.S. Ex. 86,906); TLT0920042-0043 (U.S. Ex. 88,207); <http://energycommerce.house.gov/tobacco/docs/bw/0012691297.tif> (U.S. Ex. 86,774).

152. This disquiet substantially contributed to the formation of a nonprofit corporation, the Tobacco Institute, which assumed many of the public relations functions of TIRC/CTR. 501941580-1581 (U.S. Ex. 20,004); 2010007711-7711 (U.S. Ex. 20,014); 2010007677-7677 (U.S. Ex. 20,013); 2010007701-7702 (U.S. Ex. 26,647); 2010007690-7691 (U.S. Ex. 22,252); 93481139-1140 (U.S. Ex. 21,117); TLT0900382-0382 (U.S. Ex. 88,208); TLT0900385-0389

SECTION I.

(U.S. Ex. 88,209); TLT0900390-0391 (U.S. Ex. 88,210); TLT0900392-0392 (U.S. Ex. 88,211); TLT0900393-0393 (U.S. Ex. 88,212); TLT0900394-0394 (U.S. Ex. 88,213); TLT0900395-0395 (U.S. Ex. 88,214); TLT0900396-0396 (U.S. Ex. 88,215); TLT0900397-0397 (U.S. Ex. 88,216); TLT0900398-0398 (U.S. Ex. 88,217); TLT0900399-0399 (U.S. Ex. 88,218); TLT0900400-0400 (U.S. Ex. 88,219); TLT0900401-0401 (U.S. Ex. 88,220); TLT0900402-0402 (U.S. Ex. 88,221); TLT0900403-0403 (U.S. Ex. 88,222); TLT0900404-0404 (U.S. Ex. 88,223); TLT0900405-0405 (U.S. Ex. 88,224); TLT0900407-0407 (U.S. Ex. 88,225); TLT0900418-0418 (U.S. Ex. 88,226); TLT0920025-0025 (U.S. Ex. 88,227); TLT0920037-0037 (U.S. Ex. 88,228); TLT0920038-0038 (U.S. Ex. 88,229).

153. In a 1957 letter to Paul Hahn, President of American Tobacco, Edward Darr, President of R.J. Reynolds, congratulated Hahn on the formation of TIRC: "There is no question in my mind that if this Committee had not been formed, the cigarette industry by now would have been in a deplorable position. . . . In other words, the TIRC has been a successful defensive operation." Darr also recommended that the Enterprise form a prototype for what became the Tobacco Institute: "[T]he tobacco industry should go on the offensive in bringing the truth about cigarette smoking to the public. . . . I am convinced that an organization of tobacco manufactures formed for the narrow and well defined purpose of presenting facts and information helpful to the industry can and should be formed . . ." TIOK0034101-4102 at 4101 (U.S. Ex. 63,011).

154. At the November 8, 1957 meeting of the full membership of TIRC, the 1958 budget was submitted, but approval was withheld until a later date. The reason for this "was not

SECTION I.

disclosed in the general meeting, but it was later explained to Mr. Hartnett that possibly some of the functions now being carried on by the Tobacco Information Bureau [a TIRC subcommittee] would become part of the activities of the Cigarette Institute if and when formed." 501941580-1581 (U.S. Ex. 20,004).

155. On December 6, 1957, letters were sent out by R.J. Reynolds and its outside counsel to representatives of the Cigarette Company Defendants scheduling a "meeting of the presidents or head men of the cigarette companies" for December 12, 1957 in the TIRC offices to discuss the organization of "The Cigarette Institute, Inc.," a trade organization for the industry. 2010007711-7711 (U.S. Ex. 20,014); 2010007696-7696 (U.S. Ex. 86,075).

156. A February 4, 1958 Hill & Knowlton memorandum reveals that R.J. Reynolds's Bowman Gray had told Hill & Knowlton President John Hill that, "although certain activities are under way, the efforts to oppose this [labeling] legislation were not being properly coordinated and directed, due to the fact that the Institute which had been formed to do this job was not yet ready to function." TLT0900376-0380 (U.S. Ex. 88,230); TIMS0012012-2013 (U.S. Ex. 77,099); TIOK0034101-4102 (U.S. Ex. 63,011); <http://energycommerce.house.gov/tobacco/docs/bw/0012691297.tif> (U.S. Ex. 86,774).

157. In January 1958, twelve manufacturers of cigarettes, smoking and chewing tobacco, and snuff jointly announced the formation of the Tobacco Institute. The companies forming the Tobacco Institute included Defendants American, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds. 93481139-1140 (U.S. Ex. 21,117); TLT0920038-0041 (U.S. Ex. 88,231).

SECTION I.

158. The Tobacco Institute was incorporated in New York State. According to the Certificate of Incorporation, New York City and the District of Columbia were the corporation's territory of operations; its principal office was in New York City; the number of the Tobacco Institute Board of Directors was to be not less than three nor more than twenty-five.

TIMN0010606-0609 (U.S. Ex. 21,291).

159. Prior to the formation of the Tobacco Institute, Hill & Knowlton served the tobacco industry on an advisory basis. In 1958, when the Tobacco Institute was created, Hill & Knowlton was employed on a full time basis to serve as public relations counsel to the tobacco industry. TIMN0070539-0571 (U.S. Ex. 21,268); TLT0900374-0375 (U.S. Ex. 88,232); HK003024-3054 (U.S. Ex. 86,076); TLT0920052-0053 (U.S. Ex. 88,233); HK002964-2977 (U.S. Ex. 86,077).

160. The Tobacco Institute had a Board of Directors "composed in a fashion similar to that of the Council for Tobacco Research" and an Executive Committee consisting of the chief executive officers of the major tobacco companies, but was "run by a committee of [] lawyers, one from each of the major member tobacco companies." 044227839-7844 (U.S. Ex. 20,066).

161. Members of the Enterprise also convened regularly between 1958 and 1998 at the Tobacco Institute's Board of Directors meetings. At these meetings, representatives from the Enterprise discussed and passed resolutions regarding the Tobacco Institute's budget, programs and projects of the various divisions, election of officers, payment of dues, and amendments to the bylaws. TIMN0012720-2729 (U.S. Ex. 88,234); TIMN0005742-5754 (U.S. Ex. 88,235); TIMN0005777-5787 (U.S. Ex. 88,236); TIMN005798-5803 (U.S. Ex. 88,237); TIMN0012795-

SECTION I.

2805 (U.S. Ex. 88,315); TIMN0005848-5856 (U.S. Ex. 88,316); TIMN0012837-2845 (U.S. Ex. 88,238); TIMN0012846-2851 (U.S. Ex. 88,239); TIMN0012865-2870 (U.S. Ex. 88,317); TIMN0005940-5946 (U.S. Ex. 88,240); TIMN0012893-2900 (U.S. Ex. 88,241); TIMN0012901-2911 (U.S. Ex. 88,242); TIMN0006140-6146 (U.S. Ex. 88,243); TIMN0012951-2955 (U.S. Ex. 88,244); TIMN0012956-2962 (U.S. Ex. 88,318); TIMN0012963-2973 (U.S. Ex. 88,321); TIMN0012974-2980 (U.S. Ex. 88,245); TIMN0012995-3000 (U.S. Ex. 88,246); TIMN0013001-3010 (U.S. Ex. 88,247); TIMN0006405-6411 (U.S. Ex. 88,248); TIMN0013203-3213 (U.S. Ex. 88,249); TIMN0014400-4410 (U.S. Ex. 88,250).

162. The first meeting of the Tobacco Institute Board of Directors was held on January 30, 1958. Former Congressman James Richards of South Carolina was elected President and Executive Director; Joseph F. Cullman, III, President of Defendant Philip Morris, was elected Treasurer; and Chandler Kibbe, Vice President of Defendant Philip Morris, was elected Assistant Treasurer. An Executive Committee was set up, and appointed as members were Cullman; Benjamin Few, President of Liggett; Bowman Gray, Chairman of R.J. Reynolds; Lewis Gruber, President and Chairman of Lorillard; and J. Whitney Peterson, President of United States Tobacco. Covington & Burling was appointed legal counsel to the Tobacco Institute, and Hill & Knowlton was appointed public relations counsel. TIMN0005705-5712 (U.S. Ex. 21,290); see also TLT0900333-0335 (U.S. Ex. 88,251); 2010007677-7677 (U.S. Ex. 20,013).

163. At the first meeting of the Tobacco Institute's Board of Directors, the bylaws were amended to read in Article III, Section 1, that "Each member elected pursuant to Article II shall pay annual dues (a) in the amount of \$100 or (b) at the rate of (i) one twentieth of a cent for every

SECTION I.

thousand tax-paid cigarettes plus (ii) 5 cents for every thousand pounds of manufactured tobacco produced by it during the preceding calendar year, which of (a) or (b) shall be larger."

TIMN0005705-5712 (U.S. Ex.21,290); 1005136918-6933 (U.S. Ex. 20,223).

164. Although the membership fluctuated during the existence of the Tobacco Institute (1958 to the present), all Defendants (except BATCo, CTR, and the Tobacco Institute itself) created, agreed to fund, and/or did jointly fund the Tobacco Institute over the years. From 1958 through 1999, payments to the Tobacco Institute from Defendants amounted to more than \$618,432,000, including: \$19,146,216 from American; \$15,933,769 from Brown & Williamson; \$1,848,530 from Liggett; \$29,195,668 from Lorillard; \$161,505,876 from Philip Morris; and \$110,298,387 from R.J. Reynolds. Responses of Individual Defendants to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al., at Interrogatory/Response No. 25, (U.S. Ex. 77,407) (American), (U.S. Ex. 75,693) (Brown & Williamson), (U.S. Ex. 75,925) (Liggett), (U.S. Ex.61,444) (Lorillard), (U.S. Ex. 75,555) (Philip Morris), (U.S. Ex. 61,446) (R.J. Reynolds); TFAL0000001-0010 at 0009 (U.S. Ex. 21,892); 2023390612-0616 at 0614 (U.S. Ex. 21,895); 81616559-6562 at 6561 (U.S. Ex. 21,897); 81616516-6520 at 6518 (U.S. Ex. 21,896); 89694214-4220 at 4216 (U.S. Ex. 21,898); 89693636-3641 at 3638 (U.S. Ex. 21,899); 89696116-6124 at 6118 (U.S. Ex. 21,900); 89693336-3342 at 3338 (U.S. Ex. 22,989); 89693376-3384 at 3378 (U.S. Ex. 21,901); TIOK0000243-0249 at 0245 (U.S. Ex. 21,902); TIOK0000250-0256 at 0252 (U.S. Ex. 21,907); TIOK0000257-0265 at 0259 (U.S. Ex. 21,911); TIOK0000266-0273 at 0268 (U.S. Ex. 21,912); TIOK0000274-0281 at 0276 (U.S. Ex. 21,914); TIOK0000282-0289 at 0284 (U.S. Ex. 21,919); TIOK0000290-0297 at 0292 (U.S. Ex. 21,920);

SECTION I.

TICT0009911-9918 at 9913 (U.S. Ex. 86,078); TIOK0000298-0304 at 0300 (U.S. Ex. 22,687); TICT0009919-9925 at 9921 (U.S. Ex. 21,962); TIOK000305-0312 at 0307 (U.S. Ex. 21,963); TICT0009888-9895 at 9890 (U.S. Ex.86,079); TIOK000313-0320 at 0315 (U.S. Ex. 22,685) (U.S. Ex. 21,967); TICT0009896-9903 at 9898 (U.S. Ex. 85,965); TIOK000321-0327 at 0323 (U.S. Ex. 22,684) (U.S. Ex. 21,968); TICT0009904-9910 at 9906 (U.S. Ex. 86,080); TI16352199-2372 at 2202-2211, 2271-2282, 2290-2294, 2309-2313, 2339-2341, 2368-2368, 2393-2395 (U.S. Ex. 22,183); TI16351836-1838 (U.S. Ex. 21,972); TICT0009885-9887 (U.S. Ex. 62,581) (U.S. Ex. 21,974); TICT0009871-9874 (U.S. Ex. 21,976); TICT0009863-9866 (U.S. Ex. 21,977); TICT0009867-9870 (U.S. Ex. 21,978) (U.S. Ex. 75,539); TI14940101-0103 (U.S. Ex. 87,548); Table, "Defendants' Dues Paid And/Or Contributions To The Tobacco Institute," attached as Appendix at APP-13-APP-15 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The Rico Claims And Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840108-0110 (U.S. Ex. 88,677).

165. Lorillard was not a member of the Tobacco Institute from 1967 to 1970. However, even when Lorillard was not a member of the Tobacco Institute, it continued to "receive the releases and other information issued by the Institute," attended meetings of the lawyers of all the major companies at the Institute's offices, and was "kept apprised of the Institute's activities." 044227839-7844 (U.S. Ex. 20,066); Statement By Defendants The Council

SECTION I.

For Tobacco Research – U.S.A., Inc. and The Tobacco Institute, Inc., Pursuant To Local Civil Rules 7.1(h) and 56.1, In Support Of Their Joint Motion For Summary Judgment, United States v. Philip Morris, et al. (R. 2397; filed August 1, 2003), at ¶ 92.

166. Defendant Philip Morris and Defendant Philip Morris Companies were both members of the Tobacco Institute. A handwritten note on an October 1985 Philip Morris document explained that the effect of Section 2 of Article III of the Tobacco Institute bylaws "is to permit Philip Morris Companies as a non-voting member while Pm Inc. [sic] continues as the voting member." Both Defendants had Class A directors on the Tobacco Institute Board of Directors. 2021266018-6018 (U.S. Ex. 26,735); 2021266019-6028 (U.S. Ex. 26,736); TIMN0017710-7711 (U.S. Ex. 87,550); TIMN0010629-0629 (U.S. Ex. 88,252); Deposition of William Adams, Connor v. Philip Morris, May 15, 1997, 19:10-20:5.

167. In an August 24, 1981 internal memorandum to I.W. (Ivor Wallace) Hughes, CEO of Brown & Williamson, Robert Sachs, Assistant General Counsel for Brown & Williamson, discussed the pros and cons of Tobacco Institute membership. Among his points, Sachs reasoned that "[o]ne of the clearest disadvantages to withdrawal [from the Tobacco Institute] would be the message it would send to the anti-smoking forces both inside and out. It would be the first obvious chink in the industry's armor . . . it would not seem like a good time for the industry to show anything but a united front." Sachs also noted the restrictions that Tobacco Institute membership imposed on individual company expression: "Not being a T.I. member, we would obviously feel freer to express our opinions both to the media and the government officials. There have been times when the need for consensus has resulted in a watered down industry

SECTION I.

position[.]” Nevertheless, Sachs concluded that it was in Brown & Williamson's interest to remain a member of the Tobacco Institute in order to foster industry unity, enhance the effectiveness of tobacco industry lobbying, and maintain a buffer between individual companies and the media or government. 517004011-4012 at 4011 (U.S. Ex. 86,088).

168. At a special meeting of the membership in March 1973, the Tobacco Institute amended its bylaws to create two classes of membership. Class A members were the cigarette manufacturers (those members who as of the date of any election of directors would be subject to additional dues assessment per Article III, Section 1 of the bylaws). Class A members would be entitled to elect twice the number of directors as there were Class A members. Members not subject to such assessment would be entitled to elect the same number of directors as there were Class B members. At that meeting, five additional directors were elected to the Tobacco Institute Board of Directors for a total of thirteen directors: Joseph E. Edens, President of Brown & Williamson; Curtis H. Judge, President of Lorillard; Ross R. Millhiser, Vice Chairman of Philip Morris; Raymond Mulligan, President of Liggett; and William S. Smith, Chairman of R.J. Reynolds. In addition, the members determined that the chief executive of each member company would be designated to serve on the Tobacco Institute Executive Committee. William Smith was elected Tobacco Institute Executive Committee Chairman and Curtis H. Judge was elected Tobacco Institute Executive Committee Vice Chairman. LG20000457-0461 (U.S. Ex. 86,081); 536484137-4274 (U.S. Ex. 20,929); TIMN451429-1435 (U.S. Ex. 87,551).

169. According to its 1958 Certificate of Incorporation, the Tobacco Institute was formed were "to promote a better understanding by the public of the tobacco industry and its

SECTION I.

place in the national economy; to cooperate with governmental agencies and public officials with reference to the tobacco industry; to collect and disseminate information relating to the use of tobacco; to collect and disseminate scientific and medical material relating to tobacco; to collect and disseminate information relating to the tobacco industry published or released by any governmental agency, federal or state, or derived from other sources independent of the industry; to collect and disseminate information relating to legislative and administrative developments, federal or state, affecting the tobacco industry; to promote public good will."

TIMN0010606-0609 (U.S. Ex. 21,291).

170. Despite these publicly stated purposes, the privately articulated primary functions of the Tobacco Institute included: advancing – through press releases, advertisements, publications, and other public statements – the Enterprise's primary position that there were scientific and medical doubts concerning the relationship between smoking and disease; disputing statements from health organizations about smoking and disease, and later about second hand smoke and disease; making certain that Defendants' positions on issues related to the connection between smoking and disease and second hand smoke and disease were kept constantly before the public, the medical community, the press, and the government and were consistent with each other's; selectively using the results of TIRC/CTR research projects and other industry-sponsored research projects to question the charges against smoking, to emphasize the complexities of those diseases with which smoking has been statistically associated, and to reassure the public that the industry was actively investigating the issues; denying that cigarette smoking was addictive; minimizing the difficulties of quitting smoking; and denying that the

industry marketed to youth.

171. According to Horace Kornegay, President of the Tobacco Institute, the public relations purpose of the Tobacco Institute was "to have a full, free and frank discussion by the public of the smoking and health controversy . . . [whereby] an informed public will come to a proper conclusion." Deposition of Horace Kornegay, Nickloff v. Liggett, April 16, 1973, 38:12-19.

172. In a January 10, 1968 memorandum to Earle Clements, President of the Tobacco Institute, William Kloepfer, Tobacco Institute Vice President for Public Affairs, set forth the public relations policy for the Tobacco Institute, which was "to attempt to increase substantially public awareness of the cigarette controversy; putting it another way, to make a greater portion of the public aware that widespread indictment of cigarettes as a cause of poor health does not amount to conviction." TIMN0016964-0016982 at 6964 (U.S. Ex. 21,564).

173. In an April 15, 1968 memorandum to Earle Clements, President of the Tobacco Institute, William Kloepfer, Vice President of the Tobacco Institute, observed the danger of promulgating the Institute's fraudulent position on smoking and health. He wrote, "**[o]ur basic position in the cigarette controversy is subject to the charge, and maybe subject to a finding, that we are making false and misleading statements to promote the sale of cigarettes.**" TIMN252389-2391 (emphasis added) (U.S. Ex.62,726) (U.S. Ex. 75,449) (U.S. Ex. 77,080).

174. In a 1970 memorandum, William Kloepfer, Vice President of the Tobacco Institute, listed the strategic objectives of the Tobacco Institute:

SECTION I.

- To inform the public that there still exists a scientific controversy about smoking and health.
- To convince the public that the only way to resolve this continuing controversy is through scientific research.
- To inform the public of this industry's research commitment, the results growing out of it, and our interest in fostering research.
- To provide cigarette consumers with the other side of the controversy in order to offset their exposure to unbalanced mass media presentations.

TIMN0004004-4007 at 4006 (U.S. Ex. 87,552).

175. Beginning in 1975, the Tobacco Institute produced the "Smoking & Health Quotes Book" for members of the Enterprise. The book contained quotes from scientists regarding smoking and health that were "helpful in articulating our position in the controversy. " One Tobacco Institute executive lauded the production of the book as "the kind of industry cooperation we can be proud of." TIMN0250735-0737 at 0736 (U.S. Ex. 86,087).

176. A May 18, 1982 letter from William Shinn, Shook, Hardy & Bacon, directed to Robert Sachs, Counsel for Brown & Williamson, and Arthur Stevens, General Counsel for Lorillard, described in detail Shook, Hardy & Bacon's relationship with the Tobacco Institute. Shinn divided the law firm's activities into four categories: Tobacco Institute Clearance Procedures, Tobacco Institute Committees, Science and Research, and General. Clearance procedures were defined as a number of standard operating procedures in examining Tobacco Institute materials with potential smoking and health overtones. Shinn described the active involvement of lawyers as going beyond just the review of Tobacco Institute materials: "We often spend a great deal of time working back and forth with T.I. to get a satisfactory document, and sometimes find ourselves in the position of preparing the final version." Tobacco Institute

SECTION I.

committee work involved attending Committee of Counsel, Communications Committee, and Executive Committee meetings. See U.S. FPF § I.E., infra, for discussion of Tobacco Institute Committees. Science and Research work primarily concerned the development of Special Projects and industry witnesses. General work was a catchall category with activities ranging from literature review for the purposes of isolating possible expert witnesses to appearances at the Tobacco Institute's College of Tobacco Knowledge. See U.S. FPF § I.C(4)(c), infra, for discussion of College of Tobacco Knowledge. 2015035387-5391 (U.S. Ex. 36,651); 2015028028-8032 (U.S. Ex. 36,638); 521043046-3050 (U.S. Ex. 20,891).

177. Gil Heubner, Medical Director at the Tobacco Institute, expressed his frustrations with lawyers' involvement in the Tobacco Institute in a July 8, 1971 meeting with John Blalock, a member of the Tobacco Institute's Communications Committee. According to Heubner the "Kansas City Group" (Shook, Hardy & Bacon's headquarters were in Kansas City) exercised "far too much control over certain policies and practices." According to Blalock, Heubner's specific concerns were:

(1) their control of extraordinary funds of The Institute that are made available in the medical area; (2) their disregard for his review and recommendations; (3) their power to give or withhold final approval for almost all decision in the communications area and for Institute actions; and (4) their seeming failure to understand basic public attitudes.

680241709-1712 at 1710 (U.S. Ex. 30,849).

(2) Cooperation Between the Tobacco Institute and TIRC/CTR

178. The Tobacco Institute and CTR had various interactions with each other, shared Defendant-members, and worked in tandem to carry out the fraudulent purposes of the

SECTION I.

Enterprise. In furtherance of the scheme to defraud, the Tobacco Institute publicized selective CTR-funded studies and passed off CTR-funded Special Projects as well as lawyers' special projects to the public as independent research. TIMN0125189-5189 (U.S. Ex. 77,065); TLT0920037-0037 (U.S. Ex. 88,253).

179. In a February 5, 1958 letter to John W. Hill of Hill & Knowlton, public relations counsel for both TIRC and the Tobacco Institute, Paul Hahn, President of American Tobacco shared his expectations of the coordinated position of the Tobacco Institute and TIRC/CTR on the effects of smoking and health. He wrote, "In the present state of evidence, the position of the Institute should be compatible with that of TIRC and SAB. . . ." Hahn then summarized the position of the SAB: "Science does not yet know the answer to the question regarding whether tobacco is a health hazard; further research is needed." TLT0900385-0389 at 0387 (U.S. Ex. 88,254); JH000207-0211 at 0209 (U.S. Ex. 86,082); TIMN252389-252391 (U.S. Ex. 62,726) (U.S. Ex. 75,449) (U.S. Ex. 77,080).

180. On April 14, 1958, John W. Hill of Hill & Knowlton wrote to James Richards, Tobacco Institute President and Executive Director, that "Mr. Hartnett [TIRC Chairman] has asked us to see to it that all TIRC publications and reports are promptly brought to your attention. He has also asked that we take any other steps we can to insure adequate mutual information and coordination between TIRC and the Institute on public relations matters affecting the industry." TLT0920052-0053 (U.S. Ex. 87,211).

181. In October 1962, the Tobacco Institute and the Executive Committee of TIRC held a joint meeting to discuss industry advertising. It was suggested at the meeting that the

SECTION I.

industry should use paid advertising to state its position "that the charges against cigarettes as a health hazard do not constitute a 'closed case' against smoking." TIOK0033722-3724 at 3722 (U.S. Ex. 63,008); see also Response of Defendant The Tobacco Institute to Plaintiff's First Set of Requests for Admission Amended Pursuant to Order #119, United States v. Philip Morris, et al. (served April 19, 2002), at Request/Response No. 154 (U.S. Ex.87,227).

182. A 1966 document entitled "The 'Mission' of the President of the Tobacco Institute" explained that, to meet the Enterprise's objectives, "the full resources of the Institute must be directed toward a consistent and positive program to gain public exposure to research results and scientific opinions that question the charges against smoking and that point up the complexities of those diseases with which smoking has been statistically associated." 502645038S-5038Z (U.S. Ex. 23,053).

183. One of several joint publications by TIRC and the Tobacco Institute led with the headline: "The subject of smoking and health continues to make news. Charges against tobacco have been widely publicized, but less attention is given to the views of those who do not accept these charges." TIMN0081632-1632 (U.S. Ex. 86,083); 2015066285-6285 (U.S. Ex. 26,711).

184. On April 20, 1970, Jim Bowling, Philip Morris employee, briefed and updated Robert Heimann, President of American Tobacco, "on industry public relations in the field of smoking and health." Bowling reported that the Tobacco Institute planned to hold a press conference on April 30, 1970, to discredit the Auerbach-Hammond beagle study, and that the spokesmen for the industry would be CTR's Arthur Furst and Sheldon Sommers who would "take a stand against the ACS [American Cancer Society] propaganda approach to 'science.'"

SECTION I.

966000976-0977 (U.S. Ex. 86,084); 966056987-6988 (U.S. Ex. 86,085); BWX0011014-1015 (U.S. Ex. 36,245).

185. In a June 5, 1970 memorandum to Horace Kornegay, President of the Tobacco Institute, William Kloepfer and Fred Panzer, Vice Presidents of the Tobacco Institute, proposed specific guide lines to assist Henry Ramm, Chairman of CTR, in selecting a new Scientific Director. Kloepfer and Panzer provided a timetable with dates by which the new Scientific Director should have been selected and performed specific public relations activities on behalf of the CTR. Kloepfer and Panzer also provided a suggested candidate for the position of Scientific Director. TIMN0004138-4141 (U.S. Ex. 87,588).

186. As directed by the Tobacco Institute Executive Committee, Horace Kornegay met in 1973 with Henry Ramm, CTR Chairman, to discuss "closer cooperation between the Institute and the Council for Tobacco Research." Kornegay reported, at the April 2, 1973 meeting of the Tobacco Institute membership and Board of Directors, that "CTR did desire closer cooperation with the Institute and that the scientific personnel of the Institute would be invited to attend the May 15, 1973 CTR meeting in New York." LG2000457-0461 (U.S. Ex. 21,876).

187. In 1974, William Kloepfer, Tobacco Institute Vice President for Public Affairs, conducted filmed interviews with several CTR-affiliated persons on issues related to smoking and health. The opinions of the CTR-affiliated persons were unanimously supportive of the Enterprise's positions on smoking and health issues. Sheldon Sommers, CTR's Associate Scientific Director, stated that "there is no sound evidence that smoking is harmful to the health of the nonsmoker." Domingo Aviado, CTR Special Project funding recipient, stated that "on the

SECTION I.

basis of existing scientific evidence, tobacco smoke, I think, constitutes no health hazard to normal nonsmokers in public places." Robert Hockett, CTR's Scientific Director, stated that "it just seems to me that there is no justification for any general laws with respect to the protecting of nonsmokers from smoke." William Shinn of Shook, Hardy & Bacon, a law firm with substantial influence over CTR's Special Project funding, opined on why regulation of smoking was unnecessary. TITX0001450-1455 (U.S. Ex. 77,110).

188. After four months as CTR President, Addison Yeaman chaired his first meeting of the CTR membership on December 10, 1975. Speaking to the members for the first time as president, Yeaman told them that "all the resources [of CTR], all the knowledge [of CTR], all the help that CTR can give, should be available to the lawyers, to the Tobacco Institute, and to any other of the troops in the field," and that CTR should be independent but "independent within the policies set down by the membership." 11303014-3020 (U.S. Ex. 86,005); 682631405-1421 (U.S. Ex. 21,025).

189. While the purpose of the Ad Hoc Committee, which was made up of representatives of legal, public relations, and research executives of various companies in the Enterprise, was to "consider policy questions in general and particularly grants, contracts, the fate of CTR, etc.," Ernest Pepples, Brown & Williamson Vice President and General Counsel, insisted in 1978 that "in the deliberations of the ad hoc committee, the needs of TI have to be met." 2045752106-2110 (U.S. Ex. 20,467); 1003718428-8432 (U.S. Ex. 35,902).

190. On November 9, 1984, CTR released a report to the media on the results of a mouse cigarette smoke inhalation research project favorable to the industry because it found no

lung cancer, and provided the Tobacco Institute with several hundred copies for public relations use. TI05120121-0121 (U.S. Ex. 62,209); TI05120129-0129 (U.S. Ex. 86,086).

(3) Tobacco Institute Committees

191. The Tobacco Institute was run by a variety of committees, which were made up of representatives and agents from Defendants Philip Morris, Lorillard, Liggett, R.J. Reynolds, and Brown & Williamson, and employees from Defendant Tobacco Institute. The most influential and powerful Tobacco Institute committees were the Tobacco Institute Committee of Counsel, the Tobacco Institute Executive Committee, and the Tobacco Institute Communications Committee.

(a) Committee of Counsel and Outside Counsel

192. The Tobacco Institute Committee of Counsel was comprised of the general counsels of the sponsoring companies of the Tobacco Institute – Philip Morris, R.J. Reynolds, Lorillard, Liggett, and Brown & Williamson – as well as counsel for American. 85686131-6131 (U.S. Ex. 87,589) (Lorillard); 1005147807-7807 (U.S. Ex. 36,119) (Philip Morris); 03654362-4362 (U.S. Ex. 29,296) (R.J. Reynolds); LG2000172-0172 (U.S. Ex.34,056) (Brown & Williamson); LG2014927-4931 (U.S. Ex. 86,090) (Liggett); 681725305-5307 (U.S. Ex. 75,407) (U.S. Ex. 21,019) (American). Representatives from Philip Morris Companies also were members of the Committee of Counsel, and some Committee of Counsel meetings were held at Philip Morris Companies headquarters in New York. 2023033745-3745 (U.S. Ex. 87,590) ; 2023033795-3795 (U.S. Ex. 87,591) .

193. The purpose of the Committee of Counsel was "[t]o provide legal advice on any

matter that we would bring before it or they as member companies would bring before it."

Deposition of Samuel Chilcote, State of Minnesota v. Blue Cross, Blue Shield, September 18, 1997, 14:17-16:19.

194. The importance of the Committee of Counsel was described in an October 1964 trip report written by visitors from Britain's Tobacco Research Council:

The leadership in the U.S. smoking and health situation therefore lies with the powerful Policy Committee of senior lawyers advising the industry, and their policy, very understandably, in effect, is "don't take any chances." It is a situation that does not encourage constructive or bold approaches to smoking and health problems, and it also means that the Policy Committee of lawyers exercise close control over all aspects of the problems.

1003119099-9135 (U.S. Ex. 20,152) (U.S. Ex. 35,649).

195. Over the years, members of the Committee of Counsel included counsel from Defendant Philip Morris – Thomas Ahrensfeld (1971-1980); Martin Barrington (1998); John Vance Hewitt (1961-1965); Alexander Holtzman (1980-1988); Denise Keane (1995-1997); Fredric Newman (1988-1989); Paul Smith (1961-1965); counsel from Defendant American – Eugene Anderson (1961-1965); Cyril Hetsko (1961-1965); Horace Hitchcock (1961-1965); Gilbert Klemann (1991); counsel from Defendant R.J. Reynolds – Paul Randour (1987-1990); Charles Blixt (1995-1998); James Chapin (1976-1994); Wayne Juchatz (1985-1994); H. Henry Ramm (1961-1965); Henry C. Roemer (1971-1976); Samuel Witt (1981-1984); counsel from Defendant Liggett – DeBaun Bryant (1972-1976); Joseph Greer (1976-1983); Frederick P. Haas (1971-1975); Francis H. Horan (1961-1965); Josiah S. Murray (1983-1992); J. Bowen Ross (1984); counsel from Defendant Brown & Williamson – F. Anthony Burke (1994-1998); Ernest

SECTION I.

Pepples (1976-1987); James Ravlin (1961-1965); Addison Yeaman (1961-1965); counsel from Defendant Lorillard – Freeman (Matt) Daniels (1961-1965); Arthur Stevens (1971-1998); attorneys from Covington & Burling – Richard Verheij (1994-1998); Thomas Austern (1961-1965, 1971-1983); Clausen Ely (1995-1998); Burke Marshall (1961); John Rupp (1984-1995); Stanley Temko (1978-1998); attorneys from Jacob, Medinger & Finnegan – Max Crohn (1976-1980); Edwin Jacob (1961-1965); attorneys from Shook, Hardy & Bacon – David K. Hardy (1993-1996); David R. Hardy (1971-1976); Donald Hoel (1985-1989); Robert Northrip (1989-1991); Steven Parrish (1990-1994); William Shinn (1976-1984); an attorney from Davis and Polk, Leighton Coleman (1961-1965); an attorney from Forsyth, Decker & Murray, A.S. Forsyth (1961-1965); and counsel from United States Tobacco. Response of Defendant The Tobacco Institute to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Interrogatory/Answer 13 (U.S. Ex.64,758); Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 71:17-22; Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 173:2-7; Deposition of Arthur Stevens, United States v. Philip Morris, et al., June 18, 2002, 20:17-22:11; Deposition of J. Kendrick Wells, United States v. Philip Morris, et al., July 1, 2002, 180:1-194:11 (Confidential); Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 100:21-103:4; 521043046-3050 (U.S. Ex. 20,891); 680038350-8352 (U.S. Ex. 20,980).

196. The Tobacco Institute Committee of Counsel had a rotating chairmanship that was coordinated with chairmanship of the Tobacco Institute Executive Committee. If, for example, the R.J. Reynolds representative on the Tobacco Institute Executive Committee was Chairman of

SECTION I.

the Executive Committee, then the R.J. Reynolds representative on the Tobacco Institute Committee of Counsel was the Chairman of the Committee of Counsel. Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 100:21-103:4.

197. The primary function of the Committee of Counsel within the Enterprise was described in a document prepared by Ernest Pepples, General Counsel for Brown & Williamson: "[T]he primary function of this Committee of Counsel has been to circle the wagons, to coordinate not only the defense of active cases, but also to coordinate the advice which the General Counsels give to ongoing operations of their companies pertaining to products liability risks." 517004087-4090 (U.S. Ex. 20,874).

198. The Committee of Counsel met frequently and the agenda of the Committee of Counsel meetings covered a wide range of topics that were of concern to the Defendants. 03654134-4134 (U.S. Ex. 29,291); 85686132-6132 (U.S. Ex. 87,592); 85686235-6236 (U.S. Ex. 87,593); 85685497-5497 (U.S. Ex. 32,030); 03654220-4220 (U.S. Ex. 29,293); 03654179-4180 (U.S. Ex. 87,594); 507733680-3680 (U.S. Ex. 86,092); 503762768-2768 (U.S. Ex. 86,093); 03654341-4342 (U.S. Ex. 29,295); 03654327-4328 (U.S. Ex. 29,294); 85685745-5745 (U.S. Ex. 86,094); 503689705-9705 (U.S. Ex. 86,095); 85682380-2381 (U.S. Ex. 32,023); 1005085870-5870 (U.S. Ex. 35,994); LG2005471-5473 (U.S. Ex. 88,096); 03654160-4160 (U.S. Ex. 86,097).

199. For example, after a meeting on May 7, 1963, a member of the Committee circulated a memorandum proposing to sponsor a consumer survey to look for awareness of smoking and health issues, noting that, if the survey came out favorably, "it is possible that this information could be of significance to the industry both for its Congressional presentation and

SECTION I.

for other purposes. If, for example, we are able to establish that the American consumer overestimates the risks of habitual smoking, the case for warning or labeling would be weakened." The memorandum continued to discuss how to "skew" the results by eliminating questions that "might upset an otherwise favorable return." Most importantly, the document stated:

the question has been raised of possible adverse use of a survey. Specifically, M. Austern has suggested that should the results of the survey prove unfavorable, they may be subpoenaed or otherwise may fall into the hands of the FTC, a congressional Committee, or a plaintiff in pending cancer litigation. There is no question that some risk exists. We have been assured by both Elrich & Lavidge and by Professor Steiner that they would transmit to us every interview and every copy of the analysis. Thus, when it is completed, there will be nothing in the records of Elrich & Lavidge or Professor Steiner to subpoena. The danger of a successful subpoena would be reduced (though not entirely eliminated) if the survey were in an attorney's files. **In any event, if the returns were unfavorable they could be destroyed and there would be no record in any office of the nature of the returns.**

LG2006318-6330 (U.S. Ex. 21,203) (U.S. Ex. 36,274) (emphasis added).

200. A May 23, 1964 memorandum prepared by Abe Krash, a partner with Arnold, Fortas & Porter, discussed a May 7, 1964 meeting of Henry Ramm, General Counsel for R.J. Reynolds; Cyril Hetsko, General Counsel for American; Frederick Haas, General Counsel for Liggett; John Russell, Counsel for Lorillard; Paul Smith, Associate General Counsel for Philip Morris; Addison Yeaman, General Counsel of Brown & Williamson; H. Thomas Austern, attorney with Covington & Burling; and Robert Wald, attorney with Wald, Harkreder & Rockefeller. Krash described the decision to proceed, on a preliminary basis, with a public

SECTION I.

opinion survey on the public awareness of the health issues involving cigarette smoking, which might be used as a basis for testimony at congressional hearings to support the position that labels and warnings in advertisements were not necessary. LG2006318-6330 (U.S. Ex. 21,203) (U.S. Ex. 36,274).

201. On April 3, 1968, members of the Committee of Counsel met with Clarence Cook Little of CTR in the morning and then with Little and Robert Hockett in the afternoon. In the morning session, Little advocated that "closer liason [sic] should be established and more frequent meetings held between the industry (represented by General Counsel) and both the SAB and CTR staff." BWX0003853-3866 at 3854 (U.S. Ex. 36,213). In the afternoon session, CTR Special Projects were discussed. It was noted by Hockett, "that one of [CTR Special Project funding recipient] Ensein's great assets to the staff is his ability to pass in and out of the 'camp of the enemy' (as it were) at will, learning useful things." BWX0003868-3883 at 3882 (U.S. Ex. 36,214).

202. The Committee of Counsel was involved in many areas of the Enterprise's activities. According to minutes of a January 8, 1978 Committee of Counsel meeting, industry attorneys made recommendations on industry witness development, Special Projects, Special Accounts and institutional research. In attendance were Horace Kornegay, Jack Mills, Bill Kloepfer, Anne Duffin, Fred Panzer, Earle Clements, and Marvin Kastenbaum of the Tobacco Institute; Dave Hardy and William Shinn of Shook, Hardy & Bacon; Edwin Jacob of Jacob, Medinger & Finnegan; Tom Ahrensfield, Alexander Holtzman, Abe Krash, and Jerome Chapman of Philip Morris; Jack Roemer of R.J. Reynolds; Arthur Stevens of Lorillard; Fred Haas and

SECTION I.

Joseph Greer of Liggett; and Debaun Byrant of Brown & Williamson. 680239427-9429 (U.S. Ex. 30,835).

203. Members of the Committee of Counsel communicated and collaborated with other industry committees. For example, according to notes from an August 4, 1977 meeting written by Janet Brown, outside counsel to American, the Committee of Counsel worked with the Tobacco Institute Communications Committee on advertising matters. MNATPRIV00011771-1782 (U.S. Ex. 59,824).

204. According to a November 1977 document that was authored by attorney Janet Brown in April 1975, Arthur Stevens of Lorillard was the Chairman of the Committee of Counsel. Thomas Ahrensfeld of Philip Morris, Debaun Bryant of Brown & Williamson, Frederick Haas of Liggett, and Henry Roemer of R.J. Reynolds were members of the Committee of Counsel. It was proposed that the Committee of Counsel discuss a genetic project to be undertaken at the University of Colorado and the University of Hawaii that was being addressed by the Research Liaison Committee (further discussion at FPF § I.E(1), infra). <http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif>. (U.S. Ex. 86,832).

205. A December 9, 1977 memorandum from Max Crohn, Assistant General Counsel of R.J. Reynolds, to the Committee of Counsel discussed the Committee's December 8, 1977 meeting and his appointment as chair of a subcommittee "that will begin assembling witnesses and witness statements to be used in an appropriate forum where the effects of smoke on the nonsmoker is at issue." Crohn had requested the assistance of, among others, William Shinn and Donald Hoel of Shook, Hardy & Bacon; Edwin Jacob and Timothy Finnegan of Jacob, Medinger

& Finnegan; and Stanley Temko of Covington & Burling.

<http://energycommerce.house.gov/tobacco/docs/bw/0012685027.tif> (U.S. Ex. 86,815).

206. An October 13, 1980 letter from Thomas Ahrensfeld, General Counsel of Philip Morris, to H. Thomas Austern, attorney with Covington & Burling; James Chapin, General Counsel of United States Tobacco; Max Crohn, General Counsel of R.J. Reynolds; Joseph Greer, General Counsel of Liggett; Arnold Henson, General Counsel of American; Ernest Pepples, General Counsel of Brown & Williamson; William Shinn, Shook, Hardy & Bacon; Arthur Stevens, General Counsel of Lorillard; and Stanley Temko, Covington & Burling, described the agenda for the next Committee of Counsel meeting to take place on October 29, 1980. Enterprise matters to be discussed included: "1. Report on meeting with UFAC; 2. Model product liability legislation; 3. Litigation; 4. Use of medical and scientific witnesses in legislative hearings; 5. Suggested procedures for handling of sensitive documents by Tobacco Institute; 6. Legal coverage of trade meetings; 7. Lawsuits concerning smoking in work places; 8. Current legal and administrative developments; 9. Smoking and health; 10. Other business." LG2008241-8242 (U.S. Ex. 21,206).

207. The September 10, 1981 Committee of Counsel meeting was held at the offices of Chadbourne, Parke, Whiteside & Wolff in New York. In attendance were Robert Sachs of Brown & Williamson; Samuel Witt of R.J. Reynolds; Frederic Newman of Philip Morris; Arthur Stevens and James Cherry of Lorillard; William Shinn, Robert Northrip, and Patrick Sirridge of Shook, Hardy & Bacon; Francis Decker of Webster & Sheffield; Edwin Jacob and Timothy Finnegan of Jacob, Medinger & Finnegan; and Janet Brown and Thomas Bezanson of

SECTION I.

Chadbourne Parke. Issues discussed included CTR Special Projects and the CTR Literature Retrieval Division. 03746184-6185 (U.S. Ex. 20,600); 03746187-6190 (U.S. Ex. 86,098); 2024671248-1255 (U.S. Ex. 21,584); 1005121522-1526 (U.S. Ex. 23,046); LDOJ2607427-7434 (U.S. Ex. 86,099). See U.S. FPPF § I.D(2), infra, for discussion of CTR Special Projects; see U.S. FPPF § I.R, infra, for discussion of CTR Literature Retrieval Division.

208. During a May 26, 1982 Committee of Counsel meeting, attendees included William Shinn and Donald Hoel, Shook, Hardy & Bacon; Edwin Jacob and Tim Finnegan, Jacob, Medinger & Finnegan; Stanley Temko and John Rupp, Covington & Burling; Alexander Holtzman and Frederic Newman, Philip Morris; Ernest Pepples and Robert Sachs, Brown & Williamson; Samuel Witt, R.J. Reynolds; Joseph Greer, Liggett; Arthur Stevens, Lorillard; Samuel Chilcote, Tobacco Institute; and Gilbert Klemann and Thomas Bezanson, Chadbourne, Parke, Whiteside & Wolf. Committee members Witt, Shinn, and Chilcote established that all proposed Tobacco Institute ads would be reviewed by the Committee on behalf of the Enterprise. BWX0004268-4274 (U.S. Ex. 36,225); XBW0011383-1396 (U.S. Ex. 86,100).

209. On April 19, 1983, in response to the passage of the Alcohol and Drug Abuse Amendments of 1983, H.R. 1696, 98th Congress (1993), which called for the Secretary of Health and Human Services to report to Congress on the "current findings of the health effects of marijuana and the addictive property of tobacco," Arthur Stevens wrote in a memorandum to Lorillard executives Curtis Judge, Robert Ave, and Alexander Spears, "Chilcote and I will review with the Committee of Counsel how we might gear up some research to assist in responding to future attacks in the area of addiction which may arise as a result of this legislation." 03601381-

SECTION I.

1387 at 1382 (U.S. Ex. 86,101); 03601453-1453 (U.S. Ex. 86,102); 01333625-3625 (U.S. Ex. 26,468).

210. Present at the November 14, 1983 Committee of Counsel meeting were Arthur Stevens, General Counsel of Lorillard; Stanley Temko, attorney at Covington & Burling; Josiah Murray, Liggett General Counsel; Horace Kornegay, Samuel Chilcote, and Howard Liebengood of the Tobacco Institute; Janet Brown, counsel for American; William Shinn and Donald Hoel attorneys at Shook, Hardy & Bacon; Thomas Ahrensfeld, Frederic Newman, Alexander Holtzman, and Michael Damita of Philip Morris; and Samuel Witt, Wayne Juchatz, and Gene Ainsworth of R.J. Reynolds. Enterprise topics discussed included pending legislation on self-extinguishing cigarettes and warning notice legislation, Special Projects, and product liability legislation. 03654139-4147 (U.S. Ex. 86,103); XBW0011405-1416 (U.S. Ex. 86,104).

211. Present at the June 11, 1985 Committee of Counsel meeting were Thomas Ahrensfeld, Frederic Newman, Alexander Holtzman and Michael Damita of Philip Morris; Murray Bring, attorney at Arnold and Porter; Samuel Witt and Harold Henderson, counsel at R.J. Reynolds; Donald Hoel and David Hardy, attorneys at Shook, Hardy & Bacon; Samuel Chilcote and Robert Lewis of the Tobacco Institute; Robert Sachs, Assistant General Counsel of Brown & Williamson; Josiah Murray and Jim O'Hara of Liggett; Arnold Henson, General Counsel of American; and Thomas Bezanson, attorney at Chadbourne, Parke, Whiteside & Wolf. The Committee discussed action on an ingredients list, funding projects under Special Account No. 4, and federal product liability litigation. BWX0004264-4267 (U.S. Ex. 36,224); 680542504-2505 (U.S. Ex. 86,105).

SECTION I.

212. An August 23, 1989 Tobacco Institute document lists the members of the Committee of Counsel as Wayne Juchatz, Chairman, R.J. Reynolds; James Chapin, United States Tobacco; William Gary, Pinkerton Tobacco; Donald Hoel, Shook, Hardy & Bacon; Josiah Murray, III, Liggett; Frederic Newman, Philip Morris; Paul Randour, American; John Rupp, Covington & Burling; Arthur Stevens, Lorillard; Stanley Temko, Covington & Burling; A. Ross Wollen, Culbro/General Cigar, and states that duplicates should be sent to Raymond Pritchard, Brown & Williamson. TIFL0407411-7411 (U.S. Ex. 22,044).

213. A December 13, 1990 Tobacco Institute document lists the members of the Committee of Counsel as Paul Randour, Chairman, American; James Chapin, United States Tobacco; Wayne Juchatz, R.J. Reynolds; William McClure, III, Pinkerton Tobacco; Josiah Murray, III, Liggett; Robert Northrip, Shook, Hardy & Bacon; Steven Parrish, Philip Morris; John Rupp, Covington & Burling; Arthur Stevens, Lorillard; Stanley Temko, Covington & Burling; and A. Ross Wollen, Culbro/General Cigar. TIFL0407410-7410 (U.S. Ex. 22,041).

214. Present at the June 10, 1992 Committee of Counsel meeting were Arthur Stevens, General Counsel of Lorillard; Wayne Juchatz, General Counsel of R.J. Reynolds; Lisa Stiles, Jim Chaplin, Richard Verheij, John Rupp, Stanley Temko, and Keith Teel of Covington & Burling; Debra Christie, Liggett Corporate Counsel; Bob Lewis, Vice President of the Tobacco Institute; Kurt Malmgren, Vice President of the Tobacco Institute; Gil Klemann, General Counsel of American; Tom Bezanson, attorney at Chadbourne & Parke; David Kentoff, attorney at Arnold & Porter; Gary Long, attorney at Shook, Hardy & Bacon; John Strauch, attorney at Jones, Day, Reavis & Pogue; Chuck Wall and Steve Parrish of Philip Morris; Dan Donahue, Vice President

SECTION I.

at R.J. Reynolds; Sam Chilcote, President of the Tobacco Institute; and Donald Hoel, attorney at Shook, Hardy & Bacon. Enterprise matters discussed included pending litigation, "fire safe" cigarettes, Environmental Protection Agency/Occupational Safety and Health Administration developments, ETS case monitoring, Congressional and other federal developments, tort law reform, and state activities. 681000290-0293 (U.S. Ex. 21,015).

215. Even upon Liggett's decision to cease participation in the Tobacco Institute as a Class A member, it confirmed its commitment to the Tobacco Institute's goals. In a September 21, 1993 letter from Liggett's in-house counsel Josiah Murray to the Tobacco Institute's President and Counsel, Liggett sought to reduce its payments to the Tobacco Institute, but at the same time sought Tobacco Institute approval for Liggett to continue participating in the Tobacco Institute's Committee of Counsel, and for Liggett to have continued access to Tobacco Institute information and data, including reports and memoranda from Covington & Burling to the Committee of Counsel. In seeking these materials, Murray assured the letter's recipients that Liggett would continue to conform its conduct in accordance with the Enterprise's strategies, writing:

It is not the intent of Liggett to conduct its business in a manner adverse to the interest of the industry as a whole with respect to those legal and political issues as to which, by applicable law, the several competitor companies have a right to act in concert and in collaboration one with another, and attaining this objective is enhanced, of course by [Liggett] being adequately informed.

LWDOJ00023390-00023392 (U.S. Ex. 25,910)

216. The Committee of Counsel was assisted by outside counsel, including the law firms of Shook, Hardy & Bacon; Jacob, Medinger & Finnegan; and Covington & Burling. <http://energycommerce.house.gov/tobacco/docs/bw/0012685027.tif> (U.S. Ex. 86,815).

SECTION I.

217. Covington & Burling was counsel for the Tobacco Institute and also described as counsel for the "industry." 682150942-0942 (U.S. Ex. 86,491). Charles Blixt, General Counsel for R.J. Reynolds, testified that an attorney from Covington & Burling attended every meeting of the Committee of Counsel. Agenda proposals for the Committee of Counsel meetings were first reviewed by Covington & Burling attorneys before they were sent to member companies.

Deposition of Charles Blixt, United States v. Philip Morris, et al., October 31, 2002 159:20-161:13, 169:13-170:1.

218. Shook, Hardy & Bacon was counsel for Defendants Tobacco Institute, Philip Morris, Philip Morris Companies, Lorillard, R.J. Reynolds, and Brown & Williamson. 521043046-3050 (U.S. Ex. 20,891); 2046733674 (U.S. Ex. 38,547); 2046729440-9441 (U.S. Ex. 88,045).

219. In a May 18, 1982 memorandum addressed to Robert Sachs, Assistant General Counsel for Brown & Williamson, and Arthur Stevens, Senior Vice President and General Counsel for Lorillard, and copied to Thomas Ahrensfield, Senior Vice President and General Counsel for Philip Morris; Alexander Holtzman, Assistant General Counsel for Philip Morris; Ernest Pepples, General Counsel for Brown & Williamson; and Samuel Witt, General Counsel for R.J. Reynolds, William Shinn of Shook, Hardy & Bacon, described Shook, Hardy & Bacon's activities related to the Tobacco Institute. Shook, Hardy & Bacon examined "most material emanating from the Tobacco Institute which has potential smoking and health overtones." This review involved a great deal of give and take and sometimes Shook, Hardy & Bacon "prepar[ed] the final version" of the product. Shook, Hardy & Bacon also assisted the Tobacco Institute in

SECTION I.

setting strategy, preparing witnesses on smoking and health issues, briefings, reviewing press releases, advertisements, and other public statements, and orchestrating follow-up activities.

Shinn remarked: "While we are asked occasionally to do something that we believe T.I. should do itself, we have always reserved the right to decline unless directed by the Committee of Counsel." 521043046-3050 (U.S. Ex. 20,891).

220. Shook, Hardy & Bacon's role was further explained in a June 28, 1988 memorandum from Donald Hoel of Shook, Hardy & Bacon to Todd Sollis, Associate General Counsel for Philip Morris Management Corporation. Hoel explained that "[b]ecause SHB represents several of those [cigarette] manufacturers and enjoys a close association with the TI, the firm is able to move freely among industry members, facilitating cooperation and open communication. In this way, SHB helps eliminate potential difficulties within the tobacco industry that could reduce PM's ability to address effectively smoking and health issues and impair its defense of lawsuits." 2015007199-7207 (U.S. Ex. 20,311).

221. Jacob, Medinger & Finnegan was counsel for R.J. Reynolds, Brown & Williamson, and CTR. Edwin Jacob attended and gave presentations at Committee of Counsel meetings; he was also involved in the administration of CTR Special Projects (discussed further at U.S. FPF § I.D(2), infra). 680038350-8352 (U.S. Ex. 20,980); 1005121522-1526 (U.S. Ex. 23,046).

(b) The Tobacco Institute Executive Committee

222. The Tobacco Institute Executive Committee had the "final voice on TI matters" and Tobacco Institute statements; included two representatives of each of the cigarette

SECTION I.

manufacturer member companies of the Tobacco Institute; and had a rotating chairmanship.

680546825-6829 (U.S. Ex. 21,002); Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 92:21-97:2.

223. The Tobacco Institute Executive Committee met frequently to keep abreast of issues of common concern within the Enterprise. TIMN0013334-3339 (U.S. Ex. 88,256); TIMN0000013422-3424 (U.S. Ex. 88,257); TIMN0013425-3428 (U.S. Ex. 88,258); TIMN0013471-3476 (U.S. Ex. 88,259); TIMN0013411-3413 (U.S. Ex. 88,260); TIMN0013429-3431 (U.S. Ex. 88,261); TIMN0013432-3435 (U.S. Ex. 88,262); TIMN0013436-3440 (U.S. Ex. 88,263); TIMN0013460-3464 (U.S. Ex. 88,264); TIMN0013471-3476 (U.S. Ex. 88,265); TIMN0013508-3513 (U.S. Ex. 88,266); TIMN0013514-3517 (U.S. Ex. 88,267); TIMN0013518-3251 (U.S. Ex. 88,268); TIMN0013526-13530 (U.S. Ex. 88,269); TIMN0013554-3557 (U.S. Ex. 88,270); TIMN0013232-3235 (U.S. Ex. 88,271); TIMN0013236-3241 (U.S. Ex. 88,272); TIMN0013340-3344 (U.S. Ex. 88,273); TIMN0013348-3349 (U.S. Ex. 88,274); TIMN0013418-3421 (U.S. Ex. 88,275); TIMN13450-3454 (U.S. Ex. 88,276); TIMN0013261-3269 (U.S. Ex. 88,277); TIOK0013285-3290 (U.S. Ex. 88,278); TIMN0013290-3293 (U.S. Ex. 88,279); 1002908968-8967 (U.S. Ex. 88,280); 4209471-9472 (U.S. Ex. 88,281); 4209412-9418 (U.S. Ex. 88,282); TIMN0013276-3284 (U.S. Ex. 88,283); TIMN0013298-3304 (U.S. Ex. 88,284); TIMN013350-3351 (U.S. Ex. 88,285); TIMN0013361-3362 (U.S. Ex. 88,286); TIMN0013395-3396 (U.S. Ex. 88,287); TIMN0013414-3417 (U.S. Ex. 88,288); TIMN0013441-3445 (U.S. Ex. 88,289); TIMN0013446-3449 (U.S. Ex. 88,290); TIMN0013455-3456 (U.S. Ex. 88,291); TIMN0013465-3470 (U.S. Ex. 88,292); TIMN0013477-3484 (U.S. Ex. 88,293); TIMN0013485-

SECTION I.

3489 (U.S. Ex. 88,294); TIMN0013490-3495 (U.S. Ex. 88,295); TIMN0013496-3499 (U.S. Ex. 88,296); TIMN0013500-3507 (U.S. Ex. 88,297); TIMN0013550-3553 (U.S. Ex. 88,298); TIMN0013558-3563 (U.S. Ex. 88,299); TIMN0013583-3589 (U.S. Ex. 88,300); TIMN0013628-3632 (U.S. Ex. 88,301); TIMN0013651-3655 (U.S. Ex. 88,302); TIMN0013656-3659 (U.S. Ex. 88,303); TIMN0014418-4425 (U.S. Ex. 88,304); TIMN0017720-7722 (U.S. Ex. 88,305); TIMN0017725-7729 (U.S. Ex. 88,306); TIMN0017731-7736 (U.S. Ex. 88,307); TIMN0018436-8439 (U.S. Ex. 88,308); TIMN0018451-8455 (U.S. Ex. 88,309); TIMN0018462-8466 (U.S. Ex. 88,310); TIMN0018590-8593 (U.S. Ex. 88,311); TIMN0019234-9239 (U.S. Ex. 88,312).

224. For example, the Tobacco Institute Executive Committee met on January 12, 1964, where the implications of the 1964 Surgeon General's Report on Smoking and Health were discussed. Agreement was reached that it was "considered to be of prime importance that the industry maintain a united front and that if one or more companies were to conduct themselves as a matter of self interest, particularly in advertising, obvious vulnerability would be the result." 680546825-6829 (U.S. Ex. 21,002); LG2008203-8210 (U.S. Ex. 22,682).

225. A 1974 Tobacco Institute report entitled "Defending Tobacco" stated that the Tobacco Institute Board of Governors' adoption, in January 1971, of the Guidelines for Authority and Responsibility of the Tobacco Institute had greatly improved its overall efficiency by setting out authority and responsibility of the Tobacco Institute's staff and committees, placing more authority in its President, and establishing more frequent meetings of the Executive Committee to establish and review Tobacco Institute policies, programs and objectives within the Enterprise. The Guidelines eliminated much undue delay occasioned in the past in obtaining approval and

SECTION I.

authority from the Tobacco Institute Executive Committee or its Board members for Tobacco Institute action. TIFL0529869-9880 (U.S. Ex. 21,263); TIMN217628-7639 (U.S. Ex. 21,263).

226. In 1978, the Tobacco Institute Executive Committee was comprised of Chairman Ross Millhiser, Vice Chairman of Philip Morris; Clifford Goldsmith, President of Philip Morris; Kinsley R. Dey, Jr., President of Liggett; Robert Seidensticker, Vice President of Liggett; Joseph Edens, President of Brown & Williamson; Charles McCarty, Chairman of Brown & Williamson; William Hobbs, President of R.J. Reynolds; J. Paul Stricht, President of R.J. Reynolds; Curtis Judge, President of Lorillard; Arthur Stevens, Vice President and General Counsel of Lorillard; W. Brooks George, attorney for Larus & Brother; and Stuart Bloch of General Cigar. LG0237151-7159 at 7154 (U.S. Ex. 21,194).

227. At the June 13, 1979 meeting of the Tobacco Institute Executive Committee, the Industry Research Committee (consisting of James Bowling, Alexander Spears, Ernest Pepples, Irwin Tucker, Arnold Henson, Ed Jacob, William Shinn, and Janet Brown) and its function within the Enterprise was discussed. See U.S. PPF § I.E(1), infra., for discussion of Industry Research Committee. CTR and joint industry research on smoking and health was the main topic. It was noted that "regs/litigation is the overarching reason for Joint Ind [sic] research. . . . Can't put all our eggs in 1 basket." 03677101-7103 (U.S. Ex. 29,313).

228. Through the Executive Committee, Cigarette Company Defendants maintained strict control over the activities of the Tobacco Institute. For instance, according to an internal memorandum on the Institute's advertising clearance process, William Kloepfer wrote that "[t]he next step is scrutiny by the Executive Committee. No advertising can be paid for without its

approval." TIMN262974-2974 (U.S. Ex. 21,350) (U.S. Ex. 62,893).

(c) The Tobacco Institute Communications Committee

229. The Tobacco Institute Communications Committee reviewed and approved Tobacco Institute advertisements, media plans, and public relations campaigns carried out by the Tobacco Institute on behalf of the Enterprise. Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 263:5-14.

230. Each Tobacco Institute member company designated its public relations people to attend meetings of the Communication Committee and to inform their respective companies about the activities of the Committee. Deposition of Anne Duffin, Barnes v. American Tobacco, October 6, 1997, 118:4-121:2.

231. Membership of the Communication Committee in 1970 consisted of Charles Wade, R.J. Reynolds Senior Vice President; John Blalock, Brown & Williamson public relations director; James Bowling, Philip Morris Senior Vice President; John Bresnahan, Lorillard; David Hardy, Shook, Hardy & Bacon; and Daniel Provost, Liggett. Nonmembers attending the October 13, 1970 meeting of the Tobacco Institute Communications Committee were Leonard Zahn, CTR public relations counsel; Frank Saunders and Alexander Holtzman of Philip Morris; William Ruder, Philip Morris public relations; William Shinn of Shook, Hardy & Bacon; Stanley Temko of Covington & Burling; Richard Lewis, Brown & Williamson; and Tobacco Institute employees William Kloepfer, Anne Duffin, Horace Kornegay, Earle Clements, Frederick Panzer, Marvin Kastenbaum, Gil Huebner, and Albert Barr. 794003131-3132 (U.S. Ex. 86,107); TIMN0081843-1864 (U.S. Ex. 86,108); 680241688-1688 (U.S. Ex. 30,843); 680241689-1689 (U.S. Ex. 30,844);

SECTION I.

03678709-8711 (U.S. Ex. 88,313); CW00950411-0411 (U.S. Ex. 88,314); 517007543-7543 (U.S. Ex. 86,109); 521043547-3550 (U.S. Ex. 86,110); TIMN166219-6220 (U.S. Ex. 62,654); 680241704-1705 (U.S. Ex. 54,034); TIMN262974-2975 (U.S. Ex. 62,893) (U.S. Ex. 21,350); ZN21992-1995 (U.S. Ex. 21,375); 690014846-4848 (U.S. Ex. 86,111); 980125936-5937 (U.S. Ex. 32,455).

232. Members of the Communication Committee considered CTR a public relations benefit for the Enterprise. According to minutes from the September 17, 1971 Communication Committee meeting, William Kloepfer, Vice President of the Tobacco Institute, briefed the committee on the status of industry financed research, including that funded by CTR. Kloepfer called this research, "the best basis for affirmative public relations." TIMN0003978-3980 (U.S. Ex. 87,595).

233. Membership of the Communications Committee in 1974 consisted of Chairman Charles Wade, R.J. Reynolds Senior Vice President; J. Robert Ave, Lorillard Advertising and Brand Management; James Bowling, Philip Morris Senior Vice President; Thomas Pickett, United States Tobacco Vice President; H. Copland Robinson, Liggett Director of Brand Management; William Kloepfer, Tobacco Institute Senior Vice President; and David Hardy, Shook, Hardy & Bacon. Nonmembers attending the May 21, 1974 meeting of the Tobacco Institute Communications Committee were James Dowdell, R.J. Reynolds public relations executive; Ralph Rossi of United States Tobacco; Cyril Hetsko, Vice President and General Counsel of American Tobacco; Donald Hoel, Shook, Hardy & Bacon; Leonard Zahn, CTR public relations counsel; William Anderson, Tobacco Growers Information Committee; Burns

SECTION I.

Roper of the Roper Organization; and Horace Kornegay, Albert Barr, and Ann Duffin of the Tobacco Institute. TIMN0124674-4674 (U.S. Ex. 88,323); 10395932-5932 (U.S. Ex. 88,324).

234. A 1974 Tobacco Institute report entitled "Defending Tobacco" stated that, prior to 1967, much of the communications between member companies was through the Tobacco Institute Committee of Counsel, or by informational memoranda. In 1969, one change that greatly facilitated the internal information flow within the Enterprise was the creation of the Communications Committee, which was made up of representatives of each major company and of the Tobacco Institute's legal counsel and who met frequently to advise on the Tobacco Institute's public relations strategy. TIFL0529869-9880 (U.S. Ex. 21,263); TIMN217628-7639 (U.S. Ex. 21,263).

235. Membership of the Communications Committee in 1985 consisted of Chairman Thomas Humber, Brown & Williamson; Sara Ridgway, Lorillard Vice President of Public Relations; David Fishel, R.J. Reynolds Vice President of Public Relations; Hugh Foley, United States Tobacco; William Kloepfer, Tobacco Institute Senior Vice President; Ernest Quinby, Philip Morris scientist; William Ruder, Philip Morris public relations; John Rupp, Covington & Burling; Lee Stanford, Shook, Hardy & Bacon; George Walters, Liggett; Harold Grant, Liggett's Vice President of Sales and Marketing; and Herb Osmon, R.J. Reynolds Director of Public Issues. TIMN0124717-4718 (U.S. Ex. 86,113); 680570007-0008 (U.S. Ex. 86,114).

236. During the 1980s, the priority issues facing the Tobacco Institute Communications Committee were Youth Smoking, Environmental Smoke, Smoking in the Workplace, and Taxation. 503744434-4436 (U.S. Ex. 86,115); 502123452-3453 (U.S. Ex. 86,116).

SECTION I.

237. Membership of the Communications Committee in 1991 consisted of Chairman Thomas Griscom, R.J. Reynolds Vice President of External Relations; Robert Barrett, United States Tobacco; Donald Hoel, Shook, Hardy & Bacon; Tom Jones, Lorillard; Thomas Ogburn, Jr., R.J. Reynolds Vice President of Public Issues; John Rupp, Covington & Burling; Susan Stuntz, Tobacco Institute Public Relations Vice President; Daniel Conforti, American Tobacco Investor Relations Director; John Nelson, Philip Morris Senior Vice President; Carol Jova, Liggett Personnel Manager Company Communications; Robert Rukeyser; and Paul Hicks. 87716615-6618 (U.S. Ex. 86,117).

238. Through these Tobacco Institute committees, the Defendants, through their executives, employees, agents, and attorneys, controlled the Tobacco Institute and set its policy, including approving and authorizing the misleading and fraudulent statements about material matters made by Tobacco Institute. Over time, this structure changed somewhat, but Defendants always maintained control over the Tobacco Institute's activities. Thus, the Tobacco Institute's many committees carried out the objectives of the Enterprise.

(4) Defendants' Many Uses of the Tobacco Institute

(a) Tobacco Institute Public Statements, Advertisements, Press Releases, and Publications

239. The Tobacco Institute was the leading joint public voice of the Cigarette Company Defendants. To further the Enterprise's goals, the Tobacco Institute created and issued press releases, public statements, advertisements, and publications on behalf of Defendants and the tobacco industry on the following topics, among others: (1) denying the link between smoking and disease; (2) discrediting scientists and public health officials; (3) making the public aware of

SECTION I.

the scientific efforts of the tobacco industry; (4) denying that cigarette smoking was addictive; and (5) denying that the industry marketed to youth. For detailed discussion of these topics, see U.S. FPPF § IV, infra. TIMN0120725-0726 (U.S. Ex. 87,596); TIMN0120727-0728 (U.S. Ex. 87,597); TIMN0120729-0730 (U.S. Ex. 65625); TIMN0120731-0732 (U.S. Ex. 87,598); TIMN0120733-0734 (U.S. Ex. 87,599); TIMN0120735-0736 (U.S. Ex. 87,600); TIMN0120737-0738 (U.S. Ex. 87,601); TIMN01200739-0741 (U.S. Ex. 87,602); TIMN0120742-0742 (U.S. Ex. 87,603); TIMN0120743-0743 (U.S. Ex. 87,604); TIMN0120744-0744 (U.S. Ex. 87,605); TIMN0120745-0745 (U.S. Ex. 87,606); TIMN012046-0746 (U.S. Ex. 87,607); TIMN0120747-0747 (U.S. Ex. 87,608); TIMN0120748-0748 (U.S. Ex. 87,609); TIMN0120750-0750 (U.S. Ex. 87,610); TIMN0120751-0751 (U.S. Ex. 87,611); TIMN0120752-0752 (U.S. Ex. 87,612); TIMN0120753-0753 (U.S. Ex. 87,613); TIMN0120754-0754 (U.S. Ex. 87,614); TIMN0120755-0755 (U.S. Ex. 87,615); TIMN0120756-0757 (U.S. Ex. 87,616); TIMN0120758-0759 (U.S. Ex. 87,617); TIMN0120760-0760 (U.S. Ex. 87,618); TIMN0120761-0761 (U.S. Ex. 87,619); TIMN0120762-0762 (U.S. Ex. 87,620); TIMN0120763-0764 (U.S. Ex. 87,621); TIMN0120765-0767 (U.S. Ex. 87,622); TIMN0120768-0769 (U.S. Ex. 87,623); TIMN0120770-0771 (U.S. Ex. 87,624); TIMN0120772-0773 (U.S. Ex. 87,625); TIMN0131860-1861 (U.S. Ex. 21744); TIMN0131854-1854 (U.S. Ex. 87,626); TIMN0131855-1857 (U.S. Ex. 87,627); TIMN0131858-1859 (U.S. Ex. 87,628); TIMN0081712-1713 (U.S. Ex. 87,629); TIMN0081714-1714 (U.S. Ex. 87,630); TIMN0000471-0495 (U.S. Ex. 87,631); TIMN0133954-3960 (U.S. Ex. 62,653); TIMN0134016-4020 (U.S. Ex. 87,633); TIMN0133707-3711 (U.S. Ex. 87,634); TIMN0076952-6961 (U.S. Ex. 87,635); TIMN0123212-3215 (U.S. Ex. 87,636); TIMN0122571-2573 (U.S. Ex.

SECTION I.

87,637); TIMN0122574-2576 (U.S. Ex. 87,638); TIMN0122577-2578 (U.S. Ex. 87,639);
TIMN0120706-0708 (U.S. Ex. 87,640); TIMN0131847-1847(U.S. Ex. 87,641); TIMN0120619-
0619 (U.S. Ex. 87,642); TIMN0120618-0618 (U.S. Ex. 87,643); TIMN0109576-9576 (U.S. Ex.
87,644); TIMN0133717-3717 (U.S. Ex. 87,645); TIMN0004099-4099 (U.S. Ex. 87,646);
TIMN0081695-1696 (U.S. Ex. 21,308); TIMN0081948-1948 (U.S. Ex. 87,647); TIMN0133713-
3713 (U.S. Ex. 87,648); T28062-8062 (U.S. Ex. 87,649); MNAT00535792-5792 (U.S. Ex.
87,650); MNAT00535793-5793 (U.S. Ex. 87,651); MNAT00535794-5794 (U.S. Ex. 87,652);

MNAT00275488-5498 (U.S. Ex. 87,667); TIMN0120792-0793 (U.S. Ex. 87,668).

240. The function of the Public Relations Division of the Tobacco Institute was "to represent our member companies with the press, general public, anyone who had a question about tobacco, specifically the smoking and health issue, but also economics, history. We represented all the companies, so that no one of them had to answer questions from a press person or stock analyst." Deposition of Anne Duffin, Munn v. Philip Morris, January 7, 1987, 93:21-94:5.

SECTION I.

241. A May 1, 1972 memorandum from Fred Panzer, a public relations specialist with the Tobacco Institute, to Tobacco Institute President Horace Kornegay began by describing past industry action: "For nearly twenty years, this industry has employed a single strategy to defend itself . . . it has always been a holding strategy, consisting of creating doubt about the health charge without actually denying it, advocating the public's right to smoke without actually urging them to take up the practice . . . encouraging objective scientific research as the only way to resolve the question of health hazard." Panzer went on to discuss a proposed public relations campaign – The Roper Proposal – designed to persuade the public that "cigarette smoking may not be the health hazard that the anti-smoking people say it is because other alternatives are at least as probable" (emphasis omitted). The proposed campaign would suggest two such possible alternatives: (1) the constitutional hypothesis, i.e., smokers differ importantly from nonsmokers in terms of heredity, constitutional makeup, lifestyle, and stress; and (2) the multi-factorial hypothesis, i.e., other factors such as air pollution, viruses, food additives, and occupational hazards contribute to diseases for which smoking is considered a cause. TIMN0077551-7554 (U.S. Ex. 21,269); 2074677056-7061 (U.S. Ex. 87,669); TIMN254468-4471 (U.S. Ex. 87,670); CTRMN028487-8490 (U.S. Ex. 87,671); TIOK0034152-4155 (U.S. Ex. 63,015); TINY0001914-1917 (U.S. Ex. 87,672); Deposition of Frederick Panzer, Small v. Lorillard, October 27, 1997, 206:16-207:20; Deposition of Frederick Panzer, Iron Workers v. Philip Morris, December 18, 1998, 18:22-21:12; 680911592-1595 (U.S. Ex. 87,673).

242. In order to issue public statements regarding smoking and health, the Tobacco Institute contracted numerous scientists to conduct research on related issues. Such consultants

SECTION I.

included Salvatore DiNardi, Gio Gori, Larry Holcomb, Alan Katzentein, Peter Lee, Maurice LeVois, Mark Reasor, Sorell Schwartz, Murray Senkus, David Weeks, Lawrence Wexler, Philip Witorsch, and Ray Witorsch. Response of Defendant The Tobacco Institute to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Interrogatory/Answer No. 8 (U.S. Ex. 64,758).

243. Over the years, the Tobacco Institute attempted to discredit many of the Surgeon General's Reports. A "personal and confidential" Lorillard memorandum dated January 8, 1979 from Curtis H. Judge to J. Robert Ave and Arthur J. Stevens related a January 5, 1979 conversation that Judge had with Alexander Spears of Lorillard and another conversation with Bill Kloepfer of the Tobacco Institute: "Dr. Spears surmises that this carbon monoxide information may be the new 'bombshell' part of the Surgeon General's report and the part of the report which is new and likely to attract the media. At 4:30 on Friday afternoon I talked with Bill Kloepfer at the Tobacco Institute and he had just learned of this information a few hours ago (about the same time we did) on what he described as an 'intercept.' He agrees with our conclusions as to how it will be used in the Surgeon General's report and the Institute will work on counteracting it. I promised that we would get the information to him should we receive it before he does." 85158126-8127 at 8126-8127 (U.S. Ex. 56,009).

244. The Enterprise's concern over the 1983 Surgeon General's Report pervaded the Tobacco Institute's documents for months before the report was ever published. An August 11, 1982 Tobacco Institute memorandum from George E. Schafer to Samuel D. Chilcote, Jr. detailed the plan and schedule for scientific activities. From the outset, the memorandum noted plans to

SECTION I.

"[d]evelop a paper on relative risk and its significance to the smoking and health controversy."

The memorandum further mentioned plans to "[d]evelop smoking and cardiovascular disease papers in anticipation of the 1983 Report of the Surgeon General." TI03961854-1855 at 1854 (U.S. Ex. 62,155).

245. On October 12, 1982, William Kloepfer, detailed those plans to "meet" the 1983 Surgeon General's Report. Before the Surgeon General's Report was even made public, "Sam Chilcote . . . asked that [the Tobacco Institute] take certain steps to blunt the impact of the 1983 Surgeon General's report on the ground that, as in the past, it will lack objectivity. We expect the subject to be smoking and heart diseases." Specifically, the plans directed the Scientific Division "to prepare a relatively brief logical paper covering selected areas of inadequate knowledge and contradictions in the case for smoking as a cause of or risk factor in heart diseases." The true nature of the clearance process was also detailed in the memorandum: "Shook, Hardy will provide clearance of the paper and of its final format which will be developed by the Public Relations Division. At the same time the PR staff and PR counsel will prepare a list of media people who may be expected to cover the Surgeon General's Report." Even more explicitly, the following directive was issued by Kloepfer: "When the Surgeon General's Report is issued, the PR staff will stick to the TI position rather than commenting directly on the report."

TI03961860-1861 (U.S. Ex. 62,156).

246. A document dated October 18, 1982, entitled "Memorandum for the Record - Subject: Planning TI's Response or Planning to Meet the 1983 Surgeon General's Report" detailed the entire chronology of this Tobacco Institute effort. As early as July 1, 1982, "the

SECTION I.

Scientific Affairs Division was in the process of devising strategies to counter the 1983 Surgeon General's Report." TI0396-1863-1866 at 1863 (U.S. Ex. 62,157).

247. At the December 9, 1982 Tobacco Institute Board of Directors meeting, Samuel D. Chilcote, Jr., discussed the Tobacco Institute's approach to the upcoming 1983 Surgeon General's Report. The Tobacco Institute's plans included personally passing out summaries of its document on "Smoking and Cardiovascular Disease" to several dozen reporters; having George Schafer on hand to answer the reporters' questions and lend credibility; holding its "own press conference challenging the contention that smoking causes cardiovascular disease" a day or so before the Surgeon General's press conference, with Shook, Hardy & Bacon providing assistance; and attempting to "encourage a non-tobacco state congressman to launch an investigation into MRFIT [Multiple Risk Factor Intervention Trials] shortly before the Surgeon General's conference," alleging that it was a waste of \$115 million tax payers' dollars, "thereby putting the Surgeon General on the defensive." TIMN0017276-7303 (U.S. Ex. 86,118).

248. A January 11, 1983 memorandum detailing the monthly overview of the Tobacco Institute's Scientific Affairs Division listed as its first "key" item the "[p]reparation and refinement of Institute's response to the 1983 Surgeon General's forthcoming report on heart disease." TI03962431-2432 at 2431 (U.S. Ex. 62,160).

249. Similarly, the Tobacco Institute was very active in planning a response for the Enterprise regarding the release of the 1987 Surgeon General's Report which discussed the addictive nature of smoking. Suggested strategies for the Tobacco Institute response and the public's potential reaction were carefully considered. TIMN34639-9639 (U.S. Ex. 62,752);

SECTION I.

TIMN349632-9633 (U.S. Ex.62,751). Tobacco Institute President Samuel Chilcote authored informational memoranda about the Surgeon General's Reports for distribution to the Tobacco Institute Executive Committee. See, e.g., TIMN399307-9309 (U.S. Ex. 62,875) (1992 Surgeon General's Report).

250. Attorneys representing the industry closely collaborated with members of the Enterprise in their efforts to mislead and defraud the public. Attorneys meticulously edited and rewrote drafts of Tobacco Institute advertisements, articles, and public statements. Lawyers additionally recommended ideas for articles and provided materials to the Tobacco Institute for consideration. 1005134430-4432 (U.S. Ex. 36,107); 508089329-9329 (U.S. Ex. 86,089); TIMN359150-9150 (U.S. Ex. 62,755).

251. In a July 6, 1977 memorandum to William Kloepfer of the Tobacco Institute, attorney Donald Hoel of Shook, Hardy & Bacon significantly changed the draft of an article entitled "Why the Case Against Smoking is Not Closed" and recommended a "major rewriting effort." Hoel also expressed dissatisfaction that attorneys had not previously had the chance to review the article. He wrote that "it would be beneficial and time-saving if the content of such material as the proposed article could be first 'cleared' with the appropriate persons at the Tobacco Institute before an 'approved' draft is sent here for legal clearance." Hoel went on to recommend that the lawyers be given advance notice of such articles so they could "make suggestions and provide materials for consideration." TIMN262629-2629 (U.S. Ex. 62,734) (U.S. Ex. 65,578).

252. The Tobacco Institute also worked with its public relations counsel and its

SECTION I.

member companies to anonymously disseminate deceptive and misleading public statements, such as the *True* magazine article, to promote the sale of cigarettes. See also U.S. FPPF § V., infra. Joseph Fields, a public relations agent for Brown & Williamson, arranged for Stanley Frank to write a smoking and health article, and, in January 1968, Frank's article entitled "To Smoke or Not to Smoke - That Is Still The Question" appeared in *True* magazine. In the article, Frank stated that he had reviewed the evidence and found it contradictory and inconclusive; he concluded that the hazards of cigarette smoking were not so real as the public had been led to believe. Frank did not disclose that he had been paid \$500 by the Defendants for his time and expenses in writing the article and had been guaranteed another \$1250 in the event that it was not published; that tobacco industry representatives including Ed Jacob of Jacob & Medinger, attorneys for TIRC, had reviewed the article prior to publication; or that he worked for Hill & Knowlton. 2022886165-6165 (U.S. Ex. 88,325); 690012993-2993 (U.S. Ex. 88,326); TIMN0071383-1383 (U.S. Ex. 88,327); TIMN0071384-1384 (U.S. Ex. 88,328); TIMN0071385-1385 (U.S. Ex. 88,329); TIMN0071386-1386 (U.S. Ex. 88,330); TIMN462375-2380 (U.S. Ex. 21,660).

253. Furthermore, one of the Tobacco Institute's public relations agencies, The Tiderock Corp., had arranged to run a one-half-page advertisement promoting the *True* article entitled "Are Cigarettes Really Harmful to Your Health?" The advertisement ran in the top seventy-two markets in the United States at an estimated cost of \$69,000 paid for by Defendants Philip Morris, R.J. Reynolds, Brown & Williamson, American, and Lorillard. The Defendants did "not expect people to read the ad, and rush out and buy a copy of *True*," rather the impact of

SECTION I.

the advertisement came "from the fact that the advertisement quotes some very pertinent and direct comments on our side." In addition, Tiderock arranged for reprints of the article as an eight-page booklet with a transmittal note on the first page that read: "The Editors . . . We thought that you, as a leader in your profession and community, might be interested in reading this story from the January issue of *True* about one of today's most controversial issues."

According to a January 17, 1968 letter from Tiderock to William Kloepfer, Tobacco Institute Vice President of Public Relations, Defendants had "ordered reprints in the following quantities: Lorillard 43,500; Brown & Williamson 10,000; Philip Morris 10,000; Reynolds 30,000. It's hard to see how very many literate Americans will not have read the *True* piece a few weeks hence." Member companies of the Tobacco Institute distributed 600,000 copies of the *True* article to physicians, the media, and business and political leaders without revealing the Defendants' role in generating and disseminating the article or the financial relationship between Stanley Frank and the Defendants. Not until this information was revealed in a series of investigations by the *Wall Street Journal*, *Consumer Reports*, and Senator Warren Magnuson did the public become aware of the deception. After the *True* article incident, Hill & Knowlton severed its relationship with the Tobacco Institute, letting its contract run out on December 31, 1968. 2022886165-6165 (U.S. Ex. 88,325); 690012993-2993 (U.S. Ex. 88,326); TIMN0071383-1383 (U.S. Ex. 88,327); TIMN0071384-1384 (U.S. Ex. 88,328); TIMN0071385-1385 (U.S. Ex. 88,329); TIMN0071386-1386 (U.S. Ex. 88,330); TIMN462375-2380 (U.S. Ex. 21,660); TIMN462646-2646 (U.S. Ex. 22,977); TIMN0123336-3336 (U.S. Ex. 21,628); TITX0000182-0182 (U.S. Ex. 88,452); TITX0000183-0183 (U.S. Ex. 21,623);

SECTION I.

TIMN462462-2469 (U.S. Ex. 88,442); 85872287-2294 (U.S. Ex. 88,443); 0002400103-0103 (U.S. Ex. 88,432); TITX0000179-0180 (U.S. Ex. 88,426); TIMN0070311-0311 (U.S. Ex. 88,427); TIMN0123339-3339 (U.S. Ex. 88,428); TIMN0070286-0286 (U.S. Ex. 88,429); 690012803-2805 (U.S. Ex. 88,433); 690012801-2801 (U.S. Ex. 88,434); 690012802-2802 (U.S. Ex. 88,435); TIMN0071397-1397 (U.S. Ex. 88,430); 690012777-2777 (U.S. Ex. 88,453); 690012570-2629 at 2621-2624 (U.S. Ex. 88,444); TIMN0071492-1492 (U.S. Ex. 88,431).

(b) Methods of Communication

254. In addition to press releases and public statements, the Tobacco Institute regularly published newsletters to further publicize its fraudulent messages on behalf of the Enterprise. In May 1976, the Tobacco Institute published its first issue of *The Tobacco Observer*. The public purpose of the newsletter, as stated in the first issue, was to "enable 'thousands' whose livelihoods are associated with tobacco 'to be well informed about the problems facing tobacco.'" *The Tobacco Observer* was published bi-monthly from 1976 until December 1988, under the supervision of the Tobacco Institute's Special Projects. 690018786-8786 (U.S. Ex. 86,119); TIOK0015372-5378 at 5373 (U.S. Ex. 86,126); TIMN366674-6895 at 6864 (U.S. Ex. 86,120).

255. The Tobacco Institute circulated *The Tobacco Observer* free of charge to company employees, broadcasters, newspapers, and individuals. At the early stages of publication, the Tobacco Institute requested and received lists of names and addresses of potential subscribers from the tobacco companies. In 1978, the Tobacco Institute calculated circulation to have reached 80,000 and by 1988 circulation had almost doubled to 145,000. Most subscriptions, however, were unsolicited. According to a June 1, 1987 memorandum from Anne Duffin to

SECTION I.

Peter Sparber, "TTO [*The Tobacco Observer*] subscribers, some dating back 11 years, have never been asked if they want copies. Most were added to the subscription list by Institute staff through personal contact or tobacco group rosters[.]" 670059500-9506 at 9503 (U.S. Ex. 86,121); 690019767-9767 (U.S. Ex.86,122); 680549177-9182 at 9179 (U.S. Ex. 86,123); TIOK0015372-5378 at 5372 (U.S. Ex. 86,126).

256. Articles in *The Tobacco Observer* perpetuated the Enterprise's denials of causation and harm. Headlines announced, "Smoke not harmful to average non-smoker" (October 1978). In the May 1976 issue, one headline read "No Simple Answers; Research Disputes UPI;" this article followed another that stated, "no cause and effect relationship between cigarette smoking and pulmonary emphysema has been established." In a June 1, 1987 memorandum, Anne Duffin wrote candidly about *The Tobacco Observer*, "Historically TTO [*The Tobacco Observer*] has related good news only, presenting the bad only in its most optimistic context . . . TTO's purpose was to inform, to cast favorable light upon tobacco's many controversies." 03048388-8399 at 8388 (U.S. Ex. 86,124); TIMN0127465-7475 at 7467 (U.S. Ex. 86,125); TIOK0015372-5378 at 5373 (U.S. Ex. 86,126).

257. In 1986, as part of a "targeted mass-mailing outreach campaign," the Tobacco Institute began circulating *Tobacco Update*, a one sheet, double-sided summary of Tobacco Institute positions, and sending copies of *Tobacco Update* to op-ed page managers, columnists, and business editors of every daily newspaper with a circulation of 10,000 or more. TIMN339121-9128 at 9121 (U.S. Ex.86,127).

258. In a December 1986 memorandum to William Kloepfer, Tobacco Institute

SECTION I.

employee Steve Stapf lauded the achievements of the *Tobacco Update*. Stapf wrote, "[w]e [the Tobacco Institute] know that background mailings will be accepted and used by media outlets. The success of our 'FYI' and 'Tobacco Update' mailings have exceeded even my highest expectations." TIDN0012135-2137 at 2136 (U.S. Ex. 86,128).

259. The *Tobacco Update* mailings helped to further the Enterprise's goals, particularly those associated with ETS and youth marketing. A *Tobacco Update* from 1992 condemned the EPA's ETS Risk Assessment, stating, "EPA science is of uneven quality, and the Agency's policies and regulations are frequently perceived as lacking strong scientific foundation." A *Tobacco Update* issued soon after dismissed the risks associated with ETS: "In real-life situations, ETS does not significantly affect the levels of most chemicals in the air." 93139192-9194 at 9192, 9194 (U.S. Ex. 86,129); 947089976-9979 (U.S. Ex.32,332).

260. During the early 1990s, the Tobacco Institute issued a series of *Tobacco Updates* focusing on cigarette marketing and youth smoking. The mailings touted the ineffective efforts and initiatives taken by the Enterprise to reduce youth smoking and falsely stated that Defendants did not market to youth. The updates also falsely denied that cigarette marketing influenced youth smoking incidence and behavior, alleging that "it is not tobacco advertising that plays a key role in juvenile smoking initiation and incidence." TIMN0046998-6999 (U.S. Ex. 86,130); TIMN0159359-9360 (U.S. Ex. 86,131); TIMN0125632-5633 (U.S. Ex. 86,132); TIMN183102-3103 (U.S. Ex. 86,133); TIMN183031-3032 (U.S. Ex.86,134); 2044418064-8065 (U.S. Ex. 86,135); TIMN0047000-7001 (U.S. Ex. 86,136); TIMN0046996-6997 (U.S. Ex. 86,137); TIMN0046994 -6995 at 6995 (U.S. Ex. 86,138); TIFL0524116-4117 at 4116 (U.S. Ex. 62,635).

SECTION I.

261. The Tobacco Institute also published the newsletter *Tobacco and Health Research* (also known as *Tobacco and Health*), which was initially produced by TIRC. See U.S. FPPF § I.B(5)(b), supra. Even when published by the Tobacco Institute, the newsletters' copy primarily came from CTR research. A 1968 *Tobacco and Health Research* procedural memorandum from Hill & Knowlton to William Kloepfer, Tobacco Institute Vice President, stated: "Most papers used in TH&R come from the Council for Tobacco Research Library through advance distribution of Ken Austin of CTR." T13890-3893 at 3890 (U.S. Ex. 21,614).

262. A July 13, 1960 Hill & Knowlton memorandum to the Robert Heimann, President of American and Chairman of the Tobacco Institute's Communication Committee, totaled the distribution of *Tobacco and Health* at 536,742. Mailings of the newsletter included publishers and editors of United States daily newspapers, radio and television commentators, United States Senators and Representatives, and magazine editors. TIMN271864-1870 (U.S. Ex. 87,674).

(c) Tobacco Institute College of Tobacco Knowledge

263. Coordination of information and careful instruction on how information should be presented to the public was a central theme of the Enterprise. Following the party line so as not to leave any member vulnerable to attack in litigation or to subject the industry to further regulation was considered vital. One extremely useful method employed by the Enterprise to ensure that industry representatives understood and were able to publicly transmit consistent statements regarding smoking and health and other issues important to the Defendants was the operation of training seminars through the Tobacco Institute's College of Tobacco Knowledge, which began in 1975. TI16740638-0642 (U.S. Ex. 86,139); 2025864882-4895 (U.S. Ex.86,140).

SECTION I.

264. The College of Tobacco Knowledge "was something that the Tobacco Institute did for member companies to bring them up to speed on tobacco issues." Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 122:9-12. It "was a tobacco knowledge program for tobacco employees, for people who came into the industry to give them a sense of the history of tobacco, the economics of tobacco, contributions that tobacco would make, to give them a familiarity with some of the public issues that – some of the unanswered questions, things that they would be reading about, a better understanding. . . . We did this as a courtesy to our members for a number of years." Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 259:8-261:10.

265. The College of Tobacco Knowledge was a "seminar that gave attendees an overview of a number of issues that the tobacco industry faces or faced at the time." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 147:16-148:2. The College of Tobacco Knowledge was operated and funded by the Tobacco Institute. Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 122:17-20; Deposition of Leonard Zahn, Massachusetts v. Philip Morris, May 28, 1998, 147:14-18. The Tobacco Institute staff "taught the sessions of the Tobacco College of Knowledge." Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 123:7-9; Deposition of Samuel Chilcote, Richardson v. Philip Morris, September 21, 1998, 261:11-15.

266. Walker Merryman, Tobacco Institute Vice President and Director of Communications, noted that the Tobacco Institute had run seminars for people new to the Tobacco Institute or to public affairs in the Tobacco Institute's member companies "to give them

SECTION I.

general briefings on some of the major issues." Deposition of Walker Merryman, Richardson v. Philip Morris, April 9, 1998, 87:4-88:2. Students who attended the College sessions were "people from the tobacco industry;" people whose responsibilities included public affairs, public relations, government relations; "[p]eople from all facets of the industry from seed bed to sales counter;" and industry lobbyists. Deposition of Walker Merryman, Florida v. American, July 25, 1997, 148:17-149:8.

267. After approval of the curriculum by Tobacco Institute executives Merryman, Kloepfer, and Chilcote, the Tobacco Institute mailed announcements to its Communications Committee, INFOTAB, its senior staff, and other interested parties. TIFL0071011-1012 (U.S. Ex.86,141); TIFL0071174-1174 (U.S. Ex. 86,142). In preparing for a College session, the Tobacco Institute would make its "senior vice presidents aware of the fact that one of these seminars was scheduled. And if they had new employees that they wanted to have invited or if they thought there was a contract lobbyist who might benefit, they could invite that individual. We also would let our member companies know that another seminar was scheduled, and if they had people in mind whom they thought would benefit from such a seminar, they could be invited." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 149:9-150:3; 85701033-1033 (U.S. Ex. 86,143), 85701041-1042 (U.S. Ex. 86,144); TIFL0069155-9155 (U.S. Ex. 86,145); TIFL0069161-9161 (U.S. Ex. 86,146); 85700915-0923 (U.S. Ex. 86,147). The Tobacco Institute would also "send a letter with a synopsis of sort of a summary of the issues to be covered in the two days with perhaps some suggested reading material such as Tobacco Institute publications." Deposition of Walker Merryman, Florida v. American, July 25, 1997,

150:4-10.

268. During his presentations, Walker Merryman would "roam the room with a microphone and ask people questions [about what they had heard and learned over the two days] and see how they answered them." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 151:12-152:18. For example, he might ask a student if he believed that there was a relationship between smoking and disease, and suggest that the better response was that "there is a statistical relationship between smoking and disease" rather than that "smoking causes disease." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 153:16-156:10. Merryman noted that he was referred to as the "Dean of the Tobacco College of Knowledge" for his role in running such briefings. Deposition of Walker Merryman, Richardson v. Philip Morris, April 9, 1998, 88:3-88:7. T116740590-0593 (U.S. Ex. 86,148).

269. A number of speakers generally spoke on a "half dozen or more different issues." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 157:24-158:2. Speakers at the College sessions included Tobacco Institute employees whose specialities might be communications; public relations; federal and state regulation; medical consultants; state senators or representatives; economists; and statisticians. Deposition of Walker Merryman, Florida v. American, July 25, 1997, 158:5-159:5. No one spoke who believed that smoking caused disease because the Tobacco Institute assumed "that virtually everyone had heard that message." Deposition of Walker Merryman, Florida v. American, July 25, 1997, 159:13-160:4.

270. The College of Tobacco Knowledge was "a getting together, perhaps annually . . . of various personnel from various tobacco companies, and even perhaps tobacco associations . . .

SECTION I.

in Washington at the Tobacco Institute" and elsewhere, where the participants "would listen to speakers on various aspects involving the industry." Deposition of Leonard Zahn, Massachusetts v. Philip Morris, May 28, 1998, 144:22-145:13. During his appearances at College sessions, Leonard Zahn would describe the activities of the Council for Tobacco Research and its research program "so that all the mid and perhaps slightly above mid-level employees from the various companies would have an idea, more exact knowledge, of what the Council was and how it worked." Deposition of Leonard Zahn, Massachusetts v. Philip Morris, May 28, 1998, 145:17-146:11, 149:25-150:10. Zahn passed out, or made available, Council for Tobacco Research materials including the Annual Report. Deposition of Leonard Zahn, Massachusetts v. Philip Morris, May 28, 1998, 148:8-20.

271. The syllabus for the College of Tobacco Knowledge that was held in Washington, D.C., from January 30 through February 3, 1978, described it as "a one-week educational program for selected member companies, allied interest and Institute personnel." 1000019640-9647 (U.S. Ex. 86,149). Attendees included representatives from Lorillard, Liggett Group, R.J. Reynolds Tobacco Co., R.J. Reynolds Industries, Brown & Williamson, Philip Morris, Philip Morris International, Philip Morris Inc., Philip Morris Europe, the Tobacco Institute, the Council for Tobacco Research, Rothmans International, Benson & Hedges, Canadian Tobacco Manufacturers Council, Shook, Hardy & Bacon, and Covington & Burling. 1000019649-9651 (U.S. Ex. 86,150). On the second day of the 1978 session, Charles Waite, the Tobacco Institute's Medical Director, and Marvin Kastenbaum, the Tobacco Institute's Director of Statistics, set forth the Enterprise's position on Smoking and Health, described in the syllabus as follows:

The industry position on the asserted health effects of tobacco use is that smoking may be hazardous, it may not be, no one knows for sure. How and why that position is taken will be explored from several perspectives. Subject areas will include: Why a correlation can fall short of causation; False data and research dishonesty; Allergies, twin studies and orangutans; Enzyme inhibitors; Geographic anomalies.

1000019640-9647 (U.S. Ex. 86,149).

272. Addison Yeaman, CTR Chairman and President, spoke on the topic of Sponsoring Science, described in the syllabus as follows: "For 25 years, tobacco manufacturers, growers and warehouse operators have funded independent scientific research into tobacco use and health. How it is done and what is being learned." 1000019640-9647 (U.S. Ex. 86,149). Also discussed on the second day was the industry's position on Public Smoking: "[T]he emergence of the tobacco industry's most current controversy . . . regulations by states and localities; whether smoke is a hazard to nonsmokers; is smoker segregation discriminatory; can or will the police enforce smoking laws; around what bend lies tobacco Prohibition." 1000019640-9647 (U.S. Ex. 86,149). The lecture on "Winning" was described in the syllabus as: "With appropriate gathering of affected [sic] interests and a hard-hitting presentation of facts to blunt the anti-smokers' emotion, state and local legislatures have been convinced that the fist of government does not belong in the glove of courtesy." 1000019640-9647 (U.S. Ex. 86,149).

273. In July 1978, the Tobacco Institute prepared a ten-page listing of "smoke/ smoker/ smoking adversary groups" and distributed it with a cover letter from Tobacco Institute Vice President Anne Duffin to the "students" who had attended the 1978 College session.

1000019624-9635 (U.S. Ex. 86,151).

SECTION I.

274. In 1979, the Tobacco Institute held its College of Tobacco Knowledge for Tobacco Institute employees and five to eight employees from each member company from February 5-8, 1979. 85701065-1066 (U.S. Ex. 86,152). The 1979 College included a three-hour panel discussion on "Smoking in the Presence of Others." 1005147206-7206 (U.S. Ex. 86,153).

275. In 1980, the Tobacco Institute put together two sessions of the College of Tobacco Knowledge, one in February and one in September. TIFL0068940-8940 (U.S. Ex. 86,154); TI16740664-0665 (U.S. Ex.86,155). ICOSI sent its newly hired librarian to the February 1980 session of the College. 2501290388-0396 (U.S. Ex.86,156). Arthur Stevens, Lorillard, sent comments from the Lorillard attendees at the February college to the Tobacco Institute. 03022004-2008 (U.S. Ex 86,157); 85676573-6577 (U.S. Ex. 86,158). One employee wrote, "The information presented gave me a better view of the defensive position in which our industry finds itself." 03022004-2008 (U.S. Ex. 86,157); 85676573-6577 (U.S. Ex. 86,158).

276. The "Public Smoking Issue" was again a significant topic on the agenda for the "Tobacco Institute Sixth College of Tobacco Knowledge" held in Washington, D.C., on September 16-18, 1980. TIFL0068913-8926 (U.S. Ex. 86,159). In his opening remarks at the September 1980 session, Tobacco Institute Vice President Daniel Milway stated: "It is the role of the Institute to encourage public awareness and understanding of the controversy about public smoking and smoking and health." TIFL0067999-8004 (U.S. Ex. 86,160). Speaker John Kelly, the Tobacco Institute's Senior Vice President for State Activities, traced the rise of the public smoking issue in the 1970s, the growth of legislative intervention, the defeat of ballot initiatives in 1978 and 1979, the industry's plans to deal with more ballot initiatives in 1980, the Tobacco

SECTION I.

Institute's representations to state and local legislatures, and anecdotal reference to wins and losses for smokers. TIFL0068913-8926 (U.S. Ex. 86,159). Speaker John Rupp, Covington & Burling attorney, discussed lawsuits against public authorities, public places, and employers restricting smoking, and the judicial views of the where and when of smoking. TIFL0068913-8926 (U.S. Ex. 86,159). William Kloepfer, Vice President of the Tobacco Institute's Public Affairs Division, was asked to anchor the public relations presentation on "Communicating on the Issues." TIFL0068939-8939 (U.S. Ex. 86,161).

277. In feedback after the September 1980 session regarding whether or not the College of Tobacco Knowledge was worthwhile, one Lorillard attendee wrote: "Definitely - The opportunity to meet with the pros, who fight in the trenches, was an experience which expanded my knowledge and commitment to **our mutual goals.**" 85700954-0955 (U.S. Ex. 86,162) (emphasis added).

278. The Tobacco Institute Seventh College of Tobacco Knowledge was held on February 17-18, 1981. TIFL0068950-8955 (U.S. Ex. 86,163). In the session on "The Scientific Controversy," the Tobacco Institute's Medical Consultant George Schafer reviewed the history of the health controversy, commented on the Surgeon General's reports, and summarized the industry's views and its research support. TIFL0068950-8955 (U.S. Ex. 86,163). Comments by Lorillard attendees on the Seventh College included: "[A]fter the program was completed, I definitely have a better understanding of the **industries [sic] position** in certain areas . . . past attendees should be updated whenever the **industries [sic] stand** on a position changes or new information is available, especially in the overall smoking and health controversy." 85180845-

0846 (U.S. Ex.86,164); 85700890-0891 (U.S. Ex. 86,165) (emphasis added). Another comment was: "I also learned some important 'do's and 'don't's' to observe when discussing the smoking and health issue." 85700895-0895 (U.S. Ex. 86,166).

279. The Eighth College of Tobacco Knowledge was held in Washington, D.C. on November 16-17, 1981. It trained a wide range of tobacco industry representatives, including David E. Ferrers, BATCo's Public Affairs Advisor, and five INFOTAB employees from Brussels. Two CTR executives, Robert Gertenbach, CTR Executive Vice President, and W.T. Hoyt, CTR President, two Liggett employees, and three Shook, Hardy & Bacon employees also attended the College. TI04962304-2306 (U.S. Ex. 62,199); TI16740660-0663 (U.S. Ex. 72,403); 503908538-8538 (U.S. Ex. 29,737). On the first day of the November 1981 College, speakers included Leonard Zahn, CTR Public Relations Advisor, and Mary Covington, Secretary General of INFOTAB. TI04962331-2334 (U.S. Ex. 86,167). Zahn discussed the role played by CTR in smoking and health research. TI04962389-2389 (U.S. Ex. 62,201); TI04962390-2398 (U.S. Ex. 62,202); TIFL0068387-8387 (U.S. Ex. 77,028). As INFOTAB's Secretary General, Covington presented an "international perspective of smoking issues and related activities of the tobacco industry." 2501029891-9901 (U.S. Ex. 20,557). Covington explained that the Tobacco Institute's College of Tobacco Knowledge "seminars offer an opportunity to learn a lot about smoking issues and industry programs in a very short time. . . . Without a concerted effort by the tobacco industry, [initiatives to eliminate smoking in public places] will make gradual headway in changing attitudes towards smoking as a socially acceptable custom." 2501029891-9901 (U.S. Ex. 20,557).

SECTION I.

280. For over a decade, the College of Tobacco Knowledge provided another opportunity for the Tobacco Institute and the Council for Tobacco Research to coordinate Enterprise activities. In a letter dated October 27, 1981, William Hobbs, CTR Chairman, wrote that CTR representatives "Tom Hoyt and Bob Gertenbach will attend T.I.'s College of Tobacco Knowledge November 16 and 17" providing an opportunity for the Tobacco Institute's Horace Kornegay to brief the CTR President and Executive Vice President on "T.I.'s advertising and research plans" because "it might be beneficial to CTR management." 503908538-8538 (U.S. Ex. 29,737).

281. Two sessions of the Tobacco Institute's College of Tobacco Knowledge were held in 1982, one in April and one in October. Of the forty-nine students registered for the October session, seventeen students were from foreign countries, including Brian Gapes, Director of the Tobacco Institute of Australia; Jerome Mostyn, BATCo Public Affairs Advisor; and Anthony St. Aubyn, Assistant Director of the Tobacco Advisory Council, the United Kingdom equivalent of CTR. See U.S. FPPF § 1.H(3), infra. TI04962210-2211 (U.S. Ex. 67,250); TI16740652-0659 (U.S. Ex.86,168).

282. Two sessions of the Tobacco Institute's College of Tobacco Knowledge were held in 1983 – the Eleventh College on March 31 and April 1 and the Twelfth College on September 27-28. TI16740741-0749 (U.S. Ex.86,169); TI04962337-2341 (U.S. Ex.86,170); TI16740734-0740 (U.S. Ex.86,171). At both 1983 sessions, William Kloepfer spoke to the students on public relations issues. In addressing the issue of the "effectiveness and unity" of the tobacco industry, Kloepfer contended that because "**what affects one affects all**," the Tobacco Institute used many

SECTION I.

strategies "**to keep us together, to keep us all aware**" (emphasis added). According to Kloepfer, the Tobacco Institute Public Relations Division was primarily responsible for four strategies: the Tobacco Institute *Tobacco Observer* newspaper reaching 150,000 readers six times a year; advertising in tobacco trade publications; appearing as speakers before trade and industry groups; and the Tobacco Institute Tobacco College of Knowledge that has helped "educate" and "orient hundreds of key family members . . . **a united industry is our most potent public relations and legislative tool.**" (emphasis added). TI04962436-2454 (U.S. Ex. 86,172); TIFL0526112-6125 (U.S. Ex. 62,625). In addressing the issue of public smoking restrictions, Kloepfer maintained that "through our spokesmen, our literature, and our advertising, we broadcast two messages: (1) ambient smoke has not been proven dangerous to non-smokers, and (2) smoking restrictions cause unnecessary expense, inconvenience, and discrimination." TI04962436-2454 (U.S. Ex. 86,172); TIFL0526112-6125 (U.S. Ex. 62,625). In addressing "our oldest, most frustrating issue," Kloepfer noted, "We call it the primary issue. It is the smoking and health controversy. We think of it as controversy . . . a subject far from decided . . . and through our spokesmen and literature we make that point." TI04962436-2454 (U.S. Ex. 86,172); TIFL0526112-6125 (U.S. Ex. 62,625).

283. The Thirteenth College of Tobacco Knowledge was held in July 1984. 85700776-0776 (U.S. Ex. 86,173); TI16740727-0733 (U.S. Ex. 86,174); TI10570168-0168 (U.S. Ex. 86,175). In June 1986, the Tobacco Institute sponsored the Fourteenth College of Tobacco Knowledge which focused on three major issues: public smoking, excise taxes, and advertising restrictions. TIFL0071151-1151 (U.S. Ex. 86,176); TIFL0071174-1174 (U.S. Ex. 86,142).

SECTION I.

Industry ETS consultants Nancy Balter and John Graham "Gray" Robertson spoke about public smoking restrictions. TIFL0071152-1154 (U.S. Ex. 86,177); TIFL0071200-1202 (U.S. Ex. 86,178); TIFL0067813-7819 (U.S. Ex. 86,179).

284. In September 1987, the Tobacco Institute sponsored the Fifteenth College of Tobacco Knowledge. TIFL0072275-2277 (U.S. Ex.86,180). According to Walker Merryman's opening remarks, the Fifteenth College was "the largest we have ever entertained." TI16740614-0616 (U.S. Ex. 86,181). Following the format inaugurated in 1986, the Tobacco Institute's Public Affairs Division Issues Team coordinated sessions that highlighted the Tobacco Institute's most effective arguments, experts, allies, and other resources. TI11961414-1414 (U.S. Ex. 86,182). Students at the Fifteenth College included four employees of Defendant Philip Morris Companies. TIFL0072290-2303 (U.S. Ex. 86,183).

285. The Tobacco Institute offered its Sixteenth, and last, College of Tobacco Knowledge on September 15 and 16, 1988 with a welcoming reception the evening of September 14. 87645518-5522 (U.S. Ex. 86,184); TIFL0068394-8402 (U.S. Ex. 86,185); TI11961377-1377 (U.S. Ex.86,186); Deposition of Walker Merryman, Florida v. American Tobacco Co., July 25, 1997, 148:9-13.

286. Some time between November 1988 and June 1989, the decision was made to eliminate the Tobacco Institute College of Tobacco Knowledge ostensibly because of budgetary concerns. TI01361955-1955 (U.S. Ex. 86,187); TIFL0070810-0810 (U.S. Ex. 86,188).

(d) Defeating Threats to the Enterprise's Viability - ASSIST

287. Defendants, through the Tobacco Institute, often mounted coordinated attacks on

any perceived threats to the viability of their Enterprise, the preservation and enhancement of their profits, or the expansion of the market for their cigarettes. A prime example of such an attack is the Tobacco Institute's attack on ASSIST (American Stop Smoking Intervention Study).

288. ASSIST began with an announcement by Louis W. Sullivan, Secretary of Health and Human Services, on Friday, October 4, 1991. Sullivan announced that the National Cancer Institute ("NCI") and the American Cancer Society ("ACS") were jointly launching an eight-year program (the ASSIST program) to encourage cessation and prevent tobacco use; and that seventeen state health departments had won such ASSIST contract awards following a national competition. ASSIST's emphasis on the development of community-based coalitions throughout the states set it apart from other government smoking control programs. Its aims were to help more than 4.4 million adults stop smoking; to prevent 2 million young people from starting smoking; and to reduce smoking prevalence from 28% of American adults to less than 15%. TIMN0019101-9106 (U.S. Ex. 86,189); TIFL0505851-5856 (U.S. Ex. 86,190); TIMN377496-7497 (U.S. Ex. 86,191).

289. During ASSIST's Phase I, running from 1991 to 1993, the funded state health departments were to identify and develop local community-based tobacco control coalitions, work with them to plan specific smoking control programs, identify high-risk smoking population groups, and determine the best approaches for reaching these targeted groups. In Phase II, from 1993 to 1998, the community-based coalitions were to implement selected smoking control activities through five channels, namely, work sites, schools, health care facilities, community organizations, and community environment or mass media.

SECTION I.

TIMN0019116-9120 (U.S. Ex. 87,675); TI13851378-1378 (U.S. Ex. 65,516); TI13851379-1381 (U.S. Ex. 65,517); TI13851813-1818 (U.S. Ex. 65,520).

290. Because of ASSIST's potential to decrease Defendants' profits, the Tobacco Institute, the Tobacco Institute Executive Committee, and Defendants immediately began developing multiple strategies "to counter potential state and local legislative action resulting from the NCI/ACS grants to these 17 states." TI13851378-1378 (U.S. Ex. 65,516); TI13851379-1381 (U.S. Ex. 65,517).

291. Within three days of Sullivan's announcement, Tobacco Institute President Samuel Chilcote had alerted the Tobacco Institute Executive Committee that Institute spokesmen had responded to media inquiries by noting the "questionable use of taxpayers' dollars while other major public programs are suffering from inadequate funding" and that, "while Sullivan insists that the funds will not be used for lobbying, the press release statement that monies will be used to 'educate . . . public officials about the benefits . . . of public health policies in combating smoking' appears to suggest lobbying activity." By Monday, October 7, 1991, Tobacco Institute staff had also contacted selected congressional offices concerning the announcement and raised concerns about the manner in which these funds were being spent, and Cathey Yoe, the Tobacco Institute's Director of Legislative Information, had sent a list of proposed actions to counter the potential legislative impact of the ASSIST grants to the other Tobacco Institute employees in the State Activities Division. TIMN00190099-9100 (U.S. Ex. 86,192); TIFL0505849-5850 (U.S. Ex. 86,193); TI13851393-1394 (U.S. Ex. 65,519); TI13850151-0152 (U.S. Ex. 65,496); TI13851417-1418 (U.S. Ex. 86,194).

SECTION I.

292. By the following day, October 8, 1991, the Tobacco Institute's Roger Mazingo, had prepared an action plan "to deal with the ASSIST situation." According to the plan, "[p]otential courses of action being studied to manage the situation" included: (i) restricting or limiting how the ASSIST funds were used through the state appropriations process and contacts with state executive branch officials; (ii) working with Congressional delegations in tobacco states to eliminate ASSIST funds in future appropriation bills, or, at least, to restrict how the funds could be used; and (iii) in states where legislatures were considering the use of state funds to reduce tobacco consumption or such initiatives were proposed, telling officials and voters that ASSIST and other federal funds were already being used in their states for these purposes. TI13851382-1382 (U.S. Ex. 65,518).

293. By October 9, 1991, the Tobacco Institute had developed a plan that Walter Woodson, a director in the Tobacco Institute's State Activities Division, called "the TI plan of attack on the ASSIST program." The Tobacco Institute carried out the "plan of attack" by coordinating its efforts with Defendants' state government relations departments, lawyers, lobbyists, consultants, and other tobacco industry allies. To stem the potential damage to their profits, Defendants filed demanding and time-consuming FOIA requests; protested to Congress and the Administration the use of federal taxpayer dollars for ASSIST in an era of mounting deficits; included language in appropriation or other bills that would prohibit use of NCI funds for influencing state or local legislation; ensured that those applying for ASSIST grants meet stringent state guidelines and face regular and rigorous state auditing processes; limited state health departments' authority to fund community coalitions which advocate tobacco control

SECTION I.

legislation or regulation; requested hearings and investigations and filed complaints and lawsuits regarding "illegal lobbying," a term used by Defendants to describe ASSIST policy advocacy activities; redirected tobacco control education monies to other programs in states which faced severe state budget shortfalls; identified local business groups and apprised them of the ASSIST grant program so that they might join a community-based coalition and apply for ASSIST grants; expanded monitoring of coalition groups in the seventeen ASSIST states and publicized any missteps to state leaders and the public; and promoted existing publications that called into question the motives and operating techniques of certain voluntary health organizations.

TI13851378-1378 (U.S. Ex. 65,516); TI13851379-1381 (U.S. Ex. 65,517); 522524692-4716 (U.S. Ex. 87,676); TI13850202-0202 (U.S. Ex. 65,499); TI13850203-0206 (U.S. Ex. 65,500); TI13851357-1357 (U.S. Ex. 87,677).

294. The tobacco industry considered ASSIST a major threat because of its scope, its emphasis on public and private policy change, and its fostering of local tobacco control coalitions and infrastructures. At the June 11, 1992 Tobacco Institute Executive Committee meeting, Susan Stuntz declared that the tobacco industry's biggest challenge "has been the creation of an anti-smoking infrastructure right down to the local level. . . . ASSIST will hit us in our most vulnerable areas, in the localities and in the private workplace. It has the potential to peel away from the industry many of its historic allies. For example, major employers . . . , chambers of commerce, labor unions, and groups like the Urban League and NAACP." TI13851818-1818 (U.S. Ex. 65,520).

295. Similar tactics aimed at disrupting, weakening, or destroying ASSIST were used

SECTION I.

by Defendants throughout the eight years of the program. For example, a December 15, 1994 Tobacco Institute memorandum concluded that "the best way to use the new lobbying prohibition may be to bring a complaint to the Inspector General of the Department of Health and Human Services . . . we could coordinate a grassroots effort that would send dozens of complaints to the Inspector General's office, forcing the Inspector General to address the problem . . . if the Inspector General dismisses the complaints . . . his actions will be of interest to the appropriate congressional oversight committees." TI13850309-0314 (U.S. Ex. 65,503).

296. In a January 26, 1995 report, "Analysis and Recommendations Concerning Selected States ASSIST Projects," prepared by Hays, Hays & Wilson for the Tobacco Institute, one of the potential objectives was to "[e]xpose the ASSIST Project as a government-sponsored lobbying effort and instrument of the left designed to destroy a legal industry." TI13850258-0300 (U.S. Ex. 65,502).

297. In a June 17, 1996 memorandum to the Tobacco Institute's Bob McAdam and Rob Walker, a Tobacco Institute consultant Thomas Briant praised the benefits of the exhaustive FOIA document requests in Minnesota. The documents produced were "like a road map because they indicate what cities are being targeted for ordinances, when the ASSIST groups will attempt to pass the ordinance, and what kind of restrictions will be proposed to the city council of the target locality." The Tobacco Institute tracked ASSIST activities by surveying the targeted cities; the survey results showed "a reduction in the number of cities actually being contacted by the ASSIST groups even though the grants require the ASSIST groups to attempt to pass a local ordinance in the targeted cities. While there may be several reasons for this apparent decline in

local activity, one reason for the reduction may be the **chilling effect the document requests** have had." T114200701-0702 (U.S. Ex. 65,524) (emphasis added).

298. In spite of Defendants' ploys, in the seventeen states that took part in ASSIST, the prevalence of smoking dropped nearly a percentage point faster than in the rest of the country. Frances A. Stillman, Anne M. Hartman, Barry I. Graubard, Elizabeth A. Gilpin, David M. Murray, and James T. Gibson, "Evaluation of the American Stop Smoking Intervention Study (ASSIST): A Report of Outcomes," 95 *J. Nat'l Cancer Inst.* 1681 (2003) (U.S. Ex. 86,820).

299. When asked about a November 2003 article indicating that the prevalence of smoking in ASSIST states dropped nearly a percentage point faster than in the rest of the country, Jennifer Golisch, a spokeswoman for Philip Morris, would not comment on the study. "Study Praises U.S. Anti-Smoking Program," Associated Press, November 19, 2003 (U.S. Ex. 86,817).

(e) Disingenuously Promoting the Enterprise

300. In addition to working covertly to undermine smoking cessation programs aimed at reducing youth smoking such as ASSIST, Defendants continually marketed to youth; however, the Enterprise wanted to convey to the public that the tobacco industry was responsible and did not do so. The Cigarette Company Defendants used the Tobacco Institute as a means to convey its false and misleading message that they did not market to youth.

301. Despite public claims that they were not marketing to youth, the Tobacco Institute mailed to schools and libraries, posters highlighting the importance of tobacco in 1971. The Institute received an overwhelmingly negative response from teachers and librarians calling the mailing an obvious attempt to influence school children. 680241709-1712 (U.S. Ex. 30,849).

SECTION I.

302. A September 21, 1984 Tobacco Institute memorandum from Ann Duffin, Vice President of Public Relations, to Tobacco Institute employee P.R. Pink, and copied to Walker Merryman, Vice President of the Tobacco Institute, regarding "wording on TI youth position" actually contradicted Defendants' argument that it backed anti-youth smoking campaigns:

Because of litigation, SHB [Shook Hardy & Bacon] prefers that we not talk about precisely how long it has been an industry policy that youth should not smoke. We can say 'for many years.' We can use 'for more than two decades' or some such only if in the context that's how long it has been clear that the industry doesn't want kids to smoke, wording Stanford said he had recently cleared. This sounds like splitting hairs, but I can see the wisdom under present New Jersey circumstances of not further pinpointing exactly when the industry announced it would avoid advertising/promoting cigarettes to youth.

TIMN201581-1581 (U.S. Ex. 23,016).

303. In a December 11, 1990 statement announcing new initiatives to discourage youth smoking, Brennan Dawson, Vice President of the Tobacco Institute, emphasized the "industry's long standing commitment and history of positive actions against youth smoking."

TIMN187578-7584 at 7579 (U.S. Ex. 86,199) (emphasis in original).

304. In 1990, the Tobacco Institute circulated an advertisement entitled "What's the Tobacco Industry Doing to Discourage Youth Smoking? A Lot." The advertisement listed initiatives such as supporting state laws prohibiting the sale of cigarettes to those under eighteen and limiting the distribution of product samples. TIMN334944-4944 (U.S. Ex. 86,200); 2501511471-1471 (U.S. Ex. 86,201).

305. On December 14, 1990, Brennan Dawson, Vice President of the Tobacco Institute, appeared on the television program "Industry Report" to talk about the tobacco

SECTION I.

industry's "campaign to curb youth smoking." Dawson stated, "The tobacco industry has a long record of trying to keep its products out of the hands of young people. We're now broadening that effort considerably and undertaking five new major programs that will continue to demonstrate our commitment that tobacco products are for adults, not for kids." TIMN389731-9733 (U.S. Ex. 86,204).

306. In February 1992, the Tobacco Institute joined with the Family C.O.U.R.S.E. Consortium in launching a series of ads with the theme "Smoking Should Not Be A Part of Growing Up" to promote the "Tobacco: Helping Youth Say No" booklet. In a statement, announcing the release of the ads, Brennan Dawson reiterated the Enterprises' public stance on youth smoking, "We have long been against youth smoking. We have long taken steps to demonstrate that commitment." TIFL0010106-0110 at 0107 (U.S. Ex. 86,205).

307. In July 1995, the National Institute of Drug Abuse released data reporting that the rate of daily smoking among teenagers had increased from 1993 to 1994. The Tobacco Institute issued a press release on July 19, 1995, a day before the new data was released, reporting the results of the study but also emphasizing the increase in illegal drug use among teenagers. The release concluded, "The Institute has long supported efforts to discourage youth smoking via a range of programs and initiatives. We will continue these efforts and encourage others to work with us in pursuit of our shared goal to keep cigarettes away from young people." TIFL0524268-4269 at 4268 (U.S. Ex. 86,206); 511409174-9175 at 9174 (U.S. Ex. 86,207); 522878939-8940 at 8939 (U.S. Ex. 86,208); 522626180-6181 at 6180 (U.S. Ex. 86,209).

308. In a January 2, 1996 Tobacco Institute press release, the Enterprise stressed its

SECTION I.

support of youth prevention programs, stating, "Members of tobacco, retail and wholesale industries have joined together to aggressively support efforts to combat the problem of youth access to tobacco products." A January 18, 1996 release stated, "The tobacco industry supports the goal of eliminating tobacco sales to minors . . . will continue to support all reasonable measures to keep youngsters from smoking." TICT0005655-5658 at 5656 (U.S. Ex. 65,547); TIMN328489-8490 at 8489 (U.S. Ex. 86,210); 520813139-3140 at 3139 (U.S. Ex. 86,211); 517225259-5260 at 5259 (U.S. Ex. 86,212); 517154601-4602 at 4601 (U.S. Ex. 86,213); 515324315-4316 at 4315 (U.S. Ex. 86,214); 515323014-3015 at 3014 (U.S. Ex. 86,215); 515243982-3983 at 3982 (U.S. Ex. 86,216); 518232198-2199 at 2198 (U.S. Ex. 86,217); see also TICT005792-5793 (U.S. Ex. 87,678).

309. A January 24, 1996 Tobacco Institute press release entitled, "Tobacco Industry Shares Goal of Eliminating Underage Smoking" touted the Enterprises' longstanding "commitment" to reduce youth smoking. The release stated, "The tobacco industry agrees that kids should not smoke. . . . The tobacco industry has – and will continue – to support reasonable efforts to fulfill that goal." TIFL0524270-4271 at 4270 (U.S. Ex. 62,636); TNJB0007705-7706 at 7705 (U.S. Ex. 86,220); TICT0005642-5643 at 5642 (U.S. Ex. 86,221).

(f) Tobacco Institute Testing Laboratory

310. In June 1966, the Federal Trade Commission ("FTC") announced that it was establishing a laboratory to measure by machine the tar and nicotine content of cigarette smoke. That same year, the tobacco industry decided to establish its own laboratory, the Tobacco Institute Testing Laboratory ("TITL"), which would be a separate division of the Tobacco

SECTION I.

Institute. The TITL was established so that Defendants could conduct tests to determine the accuracy and reliability of the FTC laboratory's tests. The TITL was also used by the tobacco industry for different testing purposes. TITL0003128-3130 (U.S. Ex. 21,372); 515805538-5538 (U.S. Ex. 20,870); 680239934-9935 (U.S. Ex. 20,992); TIMN267146-7146 (U.S. Ex. 21,354).

311. A meeting was held on September 30, 1966, at which William Bates, Research Director for Liggett; Robert Griffith, Director of Research and Development for Brown & Williamson; Edward Harlow, Plant Manager for American; Murray Senkus, Director of Research for R.J. Reynolds; Everett Cogbill of American; and Frank Resnik, Vice President of Philip Morris, were in attendance to plan the operation of TITL. TITL0003363-3374 (U.S. Ex. 21,931); TITL0003375-3375 (U.S. Ex. 21,932).

312. The Tobacco Institute also worked out arrangements with its members whereby Defendants' technicians worked with the FTC laboratory in measuring tar and nicotine and in the procurement of testing machines. TITL0003108-3111 (U.S. Ex. 21,597).

313. TITL operations were supervised by a committee consisting of one scientifically qualified representative from each company that participated in funding the laboratory. TITL initially employed three laboratory technicians and operations were under the day-to-day supervision of Laboratory Director William Steele. TITL0003115-3117 (U.S. Ex. 63,025).

314. At a February 14-16, 1968 meeting of the Research Directors for Defendants Liggett, Brown & Williamson, American, R.J. Reynolds, Lorillard, and Philip Morris (also attended by an attorney from Covington & Burling), it was acknowledged that TITL was a "Mechanism for Mutual Cooperation." 500500320-0323 (U.S. Ex. 20,633).

SECTION I.

315. In a presentation to the Lorillard Executive Committee on May 15, 1968, Alexander W. Spears, Director of Research and Development, noted that the scope of TITL had "been broadened to include a contract research program on human smoking patterns and measurement of smoke withdrawn from the end of the cigarette by the smoker." 01246525-6537 (U.S. Ex. 34,516).

316. At a March 11, 1969 Tobacco Institute news conference, William Kloepfer of the Tobacco Institute and Frank Resnik of Philip Morris expressed "regret . . . that given the wide degree of suspicion about our industry's product, there seems to be such a corresponding suspicion about the validity of what we say." Resnik explained the purpose of a "standard or monitor cigarette" used by FTC and TITL in their "smoking machine as a means of gauging whether the machine is functioning properly on any given test." LG0162781-2785 (U.S. Ex. 21,191).

317. The industry clearly used TITL for its own commercial purposes. For example, the industry collectively used TITL in its testing of the chemical Chemosol in the late 1960s and early 1970s. American Chemosol Corporation claimed in documents filed with the application for a Canadian patent and German patent that the benzopyrene in tobacco smoke and the "cancer producing tendencies of cigarette smoke" were reduced when the tobacco was sprayed with Chemosol. 500500320-0323 (U.S. Ex. 20,633); TIMN267142-7143 (U.S. Ex. 21,353).

318. Representatives from Defendants American, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds, along with Larus & Brother, Stephano Brothers, and United States Tobacco, offered to engage in a testing project with American Chemosol in 1967.

SECTION I.

<http://energycommerce.house.gov/tobacco/docs/bw/0012695326.tif> (U.S. Ex. 87,221);

TIMN267210-7212 (U.S. Ex. 21,360).

319. It was acknowledged that this offer represented industry cooperation on the issue. For example, at the February 14-16, 1968 meeting of the Research Directors, there was a discussion about the need for a cooperative effort with respect to controlling the composition of smoke and the need for "an industry-wide consideration of some of the additives and filtering devices . . . as in the case of Chemosol." 500500320-0323 (U.S. Ex. 20,633).

320. American Chemosol Corporation responded to the offer from Defendants American, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds, along with Larus & Brother, Stephano Brothers, and United States Tobacco in 1969, by contacting H. Thomas Austern, an attorney from Covington & Burling, who advised the Committee of Counsel on the negotiations and received guidance from them on the Cigarette Company Defendants' position. It was agreed that Hazleton Laboratories would conduct the testing based upon a protocol developed by the Research Directors of each of the nine participants, and that the companies would be billed by the Tobacco Institute. TIMN267210-7212 (U.S. Ex. 21,360); TIMN267203-7204 (U.S. Ex. 21,359); TIMN267188-7189 (U.S. Ex. 21,358); TIMN267184-7186 (U.S. Ex. 21,682); TIMN267181-7182 (U.S. Ex. 21,357) TIMN267181-7182 (U.S. Ex. 77,085).

321. A protocol was developed whereby Hazleton would prepare smoke condensate from two groups of cigarettes that were furnished by the industry, one group was treated with Chemosol and one was untreated, and then skin-painting experiments were conducted on groups

SECTION I.

of mice. Hazleton would test for levels of nicotine, moisture, and the amount of benzo(a)pyrene in the condensate, and the industry would use TITL to perform control testing of samples of the batches, which it did in 1970. TIMN267169-7173 (U.S. Ex. 21,356); TIMN267158-7159 (U.S. Ex. 21,355); TIMN267146-7146 (U.S. Ex. 21,354).

322. At a September 10, 1969 meeting of the Industrial Technical Committee held at the offices of CTR, there was a presentation about Chemosol at which James Gargus of Hazleton Laboratories was present. The Committee agreed, based upon questions from industry counsel, that "the group preferred to keep the test to just 85 mm. cigarettes **to protect against the possibility of one or more lengths appearing to be a 'safer' design.**" 100186855-6859 at 6859 (U.S. Ex. 20,119) (emphasis added).

323. By February 1971, when the Canadian and German patents and their supporting applications were disclosed, the industry grew concerned because its scientists had concluded, based upon the description of the treatment, that Chemosol could not produce the claimed results. The industry, however, had undertaken to sponsor the Chemosol tests "without knowing what the treatment involved." The industry received interim reports of the testing from representatives of Hazleton. TIMN267142-7143 (U.S. Ex. 21,353); TIMN267122-7126 (U.S. Ex. 21,352); TIMN267120-7121 (U.S. Ex. 21,351).

324. The industry continued to monitor Chemosol until as late as 1973. Chemosol was discussed at a meeting of the Committee of Counsel on September 6, 1973. 680215434-5435 (U.S. Ex. 22,279).

325. TITL was used to verify the accuracy of the FTC's labs results until the FTC

decided to close its own laboratory in 1987. John Rupp of Covington & Burling then prepared guidelines regarding: (i) the operation of TITL; and (ii) the use of TITL test results for tar and nicotine contents in cigarette advertising. TIMN203171-3171 (U.S. Ex. 21,347).

326. By the 1990s, there was an agreement with the FTC that each company had to use tar and nicotine and carbon monoxide values obtained by TITL in their advertisements. 2022970464-0466 (U.S. Ex. 20,369).

327. Pursuant to the 1998 Master Settlement Agreement, it was agreed that the Tobacco Institute would be dissolved, but TITL was permitted to continue in operation. The laboratory, however, was renamed Tobacco Industry Testing Laboratory and was incorporated on February 2, 1999. The Tobacco Industry Testing Laboratory continues to do product testing for the industry. TI31112636-2639 (U.S. Ex.21,259); TI31112641-2648 (U.S. Ex. 62,539); Deposition of William Adams, United States v. Philip Morris, et al., June 18, 2002, 17:16-17:20.

D. Joint Research Activity through CTR and the Tobacco Institute

(1) Special Research Projects and Witness Development

328. Defendants Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, American, CTR, and the Tobacco Institute orchestrated a variety of research projects that they dubbed Special Projects. These projects took numerous forms, including CTR Special Projects, Lawyers Special Projects (projects paid through Lawyers Special Accounts), and special projects conducted through the Tobacco Institute. These projects were all exclusively funded by these Defendants and the main purpose of the lawyer-directed and orchestrated research was the procurement and development of witnesses favorable to Defendants for

SECTION I.

testimony before Congress, other regulatory bodies, in litigation, and for support of industry public statements.

329. Special Projects were overseen by the main members of the Committee of Counsel, that is the General Counsels of each of the six Cigarette Company Defendants – Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American. 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902); 01124376-4421 (U.S. Ex. 26,394); 01124445-4445 (U.S. Ex. 26,400).

330. Defendants' General Counsels received frequent updates on joint industry research that was funded through CTR Special Projects and Special Accounts. 507875845-5848 (U.S. Ex. 29,921); 1005134354-4354 (U.S. Ex. 36,104); 100513455-4362 (U.S. Ex. 36,105); 507877630-7632 (U.S. Ex. 86,222); 1005048375-8378 (U.S. Ex. 35,940); 1005048379-8379 (U.S. Ex. 35,941); LG2002618-2526 (U.S. Ex. 21,200); 507875764-5764 (U.S. Ex. 29,919); 507875765-5768 (U.S. Ex. 29,920); 1005061626-1626 (U.S. Ex. 35,960); 1005061615-1615 (U.S. Ex. 35,958); 1005061616-6125 (U.S. Ex. 35,959); 1005061626-1626 (U.S. Ex. 35,960); 1005061627-1635 (U.S. Ex. 35,961); 503653901-3909 (U.S. Ex. 86,224); 680305856-5858 (U.S. Ex. 30,887); 680305849-5850 (U.S. Ex. 30,886); BWX0003838-3842 (U.S. Ex. 79,952); 2501190758-0759 (U.S. Ex. 20,562).

331. Special Projects were managed by the Ad Hoc Committee, a group consisting of in-house counsel, litigating lawyers, and other agents such as public relations representatives of Defendants, and organized to do long range policy planning with respect to research and witness development. 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex.

SECTION I.

35,902); 536300352-0365 (U.S. Ex. 20,927).

332. At times, members of the Ad Hoc Committee and the Committee of Counsel held joint meetings to keep everyone informed as to the status of matters related to the Enterprise.

BWX0000007-0007 (U.S. Ex. 59,828).

333. Ad Hoc Committee members also met often with the staff of CTR. For example, on February 10, 1966, Edwin Jacob, Ed Cooke, and Alexander Holtzman, Ad Hoc Committee members met with the CTR staff. Holtzman circulated a memorandum detailing the meeting to Janet Brown, Edward Cooke, Francis Decker, David Hardy, Edwin Jacob, William Shinn, and Butler. Specific CTR Special Projects were discussed, and new CTR staff members.

2015033263-3271 (U.S. Ex. 88,638).

334. As an example, in January 1967, the Ad Hoc Committee was comprised of: (1) Janet C. Brown, Chadbourne & Parke, counsel to American and CTR; (2) Kevin L. Carroll, White & Case, counsel to Brown & Williamson; (3) Donald J. Cohen, Webster, Sheffield, Fleischmann, Hitchcock & Chrystie, counsel to Liggett; (4) Edward J. Cooke, Jr., Davis, Polk & Wardell, counsel to R.J. Reynolds; (5) Francis Decker, Webster, Sheffield, Fleischmann, Hitchcock & Chrystie, counsel to Liggett; (6) Alexander Holtzman, Conboy, Hewitt, O'Brien & Boardman, counsel to Philip Morris; (7) Edwin J. Jacob, Jacob, Medinger & Finnegan, counsel to CTR, Brown & Williamson, and R.J. Reynolds; and (8) William W. Shinn, Shook, Hardy, Ottman, Mitchell & Bacon, counsel to Philip Morris, Lorillard, and Brown & Williamson.

2015059690-9697 (U.S. Ex. 20,309).

335. It is clear that "Special Projects" research was designed to retain witnesses rather

SECTION I.

than address smoking and health issues in a way that would be helpful to the public. A 1960 CTR document lists the names and addresses of forty scientists as possible medical witnesses in lawsuits. 10079816-9817 (U.S. Ex. 26,215). An undated Lorillard document lists as one of the recommendations for industry research support: "Be prepared to increase industry funding of special projects to resolve scientific problems and develop witnesses." 80419203-9203 (U.S. Ex. 21,062).

336. On December 17, 1965, at a meeting of the "Committee of Six," representatives of at least CTR, Brown & Williamson, and R.J. Reynolds, and outside counsel met to discuss CTR and Ad Hoc projects in relation to the need for industry witness development. LG2000139-0144 (U.S. Ex. 21,196), RC-6033491-3496 (U.S. Ex.21,196); 2072420469-0469 (U.S. Ex. 86,226); 95522182-2185 (U.S. Ex. 56,821); 01124441-4444 (U.S. Ex. 20,034).

337. By letter dated January 4, 1966, attorney John Russell of Perkins, Daniels & McCormack informed J.E. Bennett, President of Lorillard: "As you are aware, the lawyers have, together with the staff of Council for Tobacco Research, been reviewing our industry's research program with a view toward developing some sort of a master plan." Russell advised that there were three categories of research: "A. Adversary needs (Congress, litigation, etc.); B. Defensive needs; and C. Basic research." He further advised that some projects would be paid through Lawyers' Special Accounts and some out of CTR. 01124445-4445 (U.S. Ex. 26,400).

338. An April 12, 1966 R.J. Reynolds document describing the mission of the Tobacco Institute discussed Defendants' goals including witness development in upcoming health litigation. The document stated that the authorization and purpose of CTR Special Projects and

SECTION I.

Ad Hoc Committee lawyer projects was to assure efficient handling of medical evidence and to provide the industry with witnesses for health litigation. 502645038.S-5038.Z (U.S. Ex. 23,053).

339. In a letter dated October 28, 1966, attorney Francis Decker advised David Hardy of Shook, Hardy & Bacon on the status of certain Ad Hoc matters. He stated, "Dr. Pratt is presently only available on a limited basis. However, we intend to try to develop him as a possible witness. . . . Dr. Soloff made the remark about the finding that the non-smoker and ex-smoker have the same incidence of heart disease. Nonetheless, I think he could be an excellent witness. To begin with, I think he might be persuaded that the validity of the above statement is questionable." 1005105988-5990 (U.S. Ex. 36,020).

340. In a January 12, 1967 letter to the Ad Hoc Committee, David Hardy of Shook, Hardy & Bacon requested evaluations of potential industry witnesses. In the same letter, Hardy asked Ad Hoc Committee members to analyze the value of various CTR and Ad Hoc projects in an effort to get practical use out of them in time for expected Congressional hearings. 2015059690-9697 (U.S. Ex. 20,309).

341. Hardy's involvement in Defendants' witness development plans to perpetuate the Enterprise's "open question" position had no limits. A February 8, 1967 letter to Hardy from Donald Cohen and Francis Decker, attorneys with Webster, Sheffield, Fleishman, Hitchcock & Chrystie, responded to Hardy's January 12, 1967 request for comments and evaluations of potential industry witnesses. It addressed many areas of possible testimony in great detail and provided names of doctors and scientists, many of whom were CTR Special Projects recipients and funded by various Defendants in later years. Cohen and Decker stated that Defendants'

SECTION I.

witnesses "should describe the unexplained paradoxes in the cigarette smoke theory of disease causation. [They] should present the idea that the statistics are as consistent, if not more so, with the constitutional theory as with the cigarette smoking theory." Cohen and Decker also recommended that doctors and scientists who had received CTR grants-in-aid through the Scientific Advisory Board review process and CTR Special Project funding be used as potential witnesses. 1005154422-4435 at 4425 (U.S. Ex. 20,228).

342. In response to Hardy's January 12, 1967 letter, William Shinn of Shook, Hardy & Bacon drafted a letter on February 2, 1967, which was copied to members of the Ad Hoc Committee, regarding potential witnesses for Defendants in upcoming congressional hearings. 1005154472-4479 (U.S. Ex. 20,229); 2015059690-9697 (U.S. Ex. 20,309).

343. A February 27, 1967 Ad Hoc Committee document indicated that each member of the Ad Hoc Committee was assigned to specific scientific witnesses. This document listed the proposed witness names, the individual who suggested that particular witness, the corresponding assignments for the Ad Hoc Committee members, and the field in which that witness could provide testimony. 2015033925-3934 (U.S. Ex. 20,317).

344. Hardy continued to round up possible witnesses for future litigation throughout the 1960s. On March 31, 1967, Robert Hockett, on behalf of CTR, sent a memorandum to Hardy describing Adolphe D. Jonas, a psychiatrist who had worked on the psychology of smoking. In this memorandum, Hockett mentioned Jonas as a potential industry witness. 2015034120-4121 (U.S. Ex. 20,319).

345. One Tobacco Institute executive voiced his concern over Hardy's overt witness

SECTION I.

development. According to a memorandum memorializing a meeting between John Blalock, Brown & Williamson Public Relations Director, a member of the Tobacco Institute's public relations committee, and Gil Heubner, Medical Director at the Tobacco Institute, "[a] point of real distress to Dr. Heubner is the influence of the Dave Hardy group." According to Huebner, whenever he mentioned a doctor or scientist, Hardy questioned whether or not they would make a good witness rather than focusing on their scientific contributions. 680241709-1712 at 1710 (U.S. Ex. 30,849).

346. CTR also recommended specific possible witnesses to the Cigarette Company Defendants. In a March 17, 1967 letter to Henry Ramm, Vice President and General Council to R.J. Reynolds, Clarence Cook Little of CTR provided the name and address of a scientist who had impressed him, recommending, "Both Tom and I think he might be a very valuable material witness before Congress or in court." 11327179-7179 (U.S. Ex. 26,436).

347. In an April 27, 1967 letter from Edward Cooke of Davis Polk Wardwell Sunderland & Kiendl to David Hardy of Shook, Hardy, Ottman, Mitchell & Bacon, Cooke advised that "surprisingly, [Mason Sones of the Cleveland Clinic] would reconsider his unwillingness to prepare a statement for Congress. I told him I would call him again in about ten days for his decision." 2015059590-9593 (U.S. Ex. 20,329).

348. A June 2, 1967 document listed potential industry witnesses. This list included scientists, doctors, and researchers in a wide range of fields with a brief biographical summary of their work and a characterization of their stance towards the industry. The lists also indicated whether any of these potential witnesses had an affiliation with CTR and handwritten notes about

SECTION I.

any prior relationship these individuals had with industry counsel. 2015033948-3978 (U.S. Ex. 20,318).

349. Scientists' work was often funded by CTR solely because of a scientist's willingness to act as a witness in litigation or congressional hearings on behalf of the Enterprise. On October 3, 1968, in an attempt to funnel names to Hardy as potential witnesses before awarding scientists industry funding, Alexander Holtzman wrote a letter proposing CTR Special Project funding for Richard Hickey. Hickey's application to CTR had previously been turned down, but Holtzman stated that "Dr. Hickey is willing to prepare a statement for Congress provided that he is put in a position to complete the analysis of data which he has in-hand and he would, in my opinion, make an excellent witness." 1005084784-4786 at 4784 (U.S. Ex. 22,988).

350. Defendants' support of scientists through CTR Special Projects and Lawyers Special Projects allowed them access to papers and statements by such scientists before they were submitted for publication to journals or to regulatory bodies. For example, in 1968, William Shinn of Shook, Hardy & Bacon circulated an analysis of the Public Health Service morbidity study prepared by Theodor Sterling to Frederick Haas, Cyril Hetsko, Henry Ramm, Paul Smith, and Addison Yeaman. Shinn requested comments on Sterling's analysis because "[w]e want, of course, to make suggestions with respect to the enclosed papers" and noted that Sterling also was going to prepare documents for Congressional use. LG2006165-6167 (U.S. Ex. 34,088).

351. Similarly, on March 6, 1972, Shinn sent a letter to Jack Mills of the Tobacco Institute enclosing "a draft of a paper prepared by Dr. Sterling following our meetings in

SECTION I.

Washington. He has asked my opinion with respect to his submitting this for a publication and I would appreciate being in a position to reflect your views as well as my own when I meet with him. I expect to talk with Dr. Sterling on March 14. I believe it to be extremely important that you and I discuss the enclosed draft prior to that date." TIMN460624-0624 (U.S. Ex. 62,774).

352. On September 26, 1977, Edwin Jacob sent a letter to Shinn, which enclosed a proposal from L.G.S. Rao. Jacob noted that "it now appears that this research is not appropriate for consideration as a CTR special project. Nevertheless, the work is of obvious value. . . . Dr. Rao should be a most effective proponent of some of his views and, under appropriate circumstances, might well be able to provide useful information to a Congressional Committee or other body inquiring into certain aspects of smoking and health. . . . For these, reasons, I would recommend that we fund Dr. Rao as a special project through Special Account No. 4." 503673274-3275 (U.S. Ex. 29,716).

353. An industry document that described the minutes of a General Counsel meeting at the offices of Philip Morris on January 4, 1978, at which representatives from Brown & Williamson, Liggett, R.J. Reynolds, the Tobacco Institute, and Philip Morris were present shows the development of Special Account No. 4 (a specific type of Lawyers Special Projects) to address the industry's need for witnesses. The Enterprise used Special Account No. 4 to fund researchers and scientists and to pay fees to consultants who could offer expert knowledge to Defendants and act as witnesses on their behalf. Recipients of such funding were sought out by Defendants' attorneys based on how helpful they would be in future litigation and congressional hearings. Funds were allocated accordingly. Discussions and details of the lawyers' special

SECTION I.

projects were to be kept confidential. In this document, attendees of this meeting were advised to not discuss the details of Special Account No. 4 in writing, and instead questions on the matter would require a phone call. No response to a letter with a given date was assumed to mean that "the matter is agreeable." BWX0004364-4375 (U.S. Ex. 36,228); 03658901-8901 (U.S. Ex. 20,061); LG2024193-4196 at 4196 (U.S. Ex. 21,212).

354. In a February 9, 1978 letter to Thomas F. Ahrensfield, General Counsel for Philip Morris; Max H. Crohn, Jr., General Counsel for R.J. Reynolds; Joseph Greer, General Counsel for Liggett; Arnold Henson, an attorney with Chadbourne & Parke; Ernest Pepples, General Counsel for Brown & Williamson; and Arthur J. Stevens, General Counsel for Lorillard, William Shinn of Shook, Hardy & Bacon wrote of the "need for special areas of research with due regard for the politics of science, the importance of developing witnesses and the need for a responsive mechanism to meet unfounded claims made about tobacco." In this document, Shinn recommended approval for Hans Eysenck funding through Special Account No. 4 and the Franklin Institute request through a CTR Special Project. Once again, recipients of this letter were reminded to not retain notes on matters of witness development. 503655086-5088 at 5087 (U.S. Ex. 20,720); 503655086-5088 (U.S. Ex. 75,190).

355. Special Project funding also allowed Defendants to have some say in publications resulting from such funding. In an April 17, 1979 letter from Henry Rothschild (recipient of CTR Special Projects and Lawyers Special Project funding) to Timothy Finnegan of Jacob, Medinger & Finnegan, Rothschild included a "preprint of a next to final copy of the paper we would like to submit to the New England Journal of Medicine I say the penultimate copy

SECTION I.

because I await your comments prior to submission." 521031942-1942 (U.S. Ex. 30,469).

356. By at least the late 1970s, the Tobacco Institute and its agents became coordinators in Defendants' efforts to develop a group of witnesses for future litigations and hearings. An August 30, 1978 letter from Ernest Pepples of Brown & Williamson to British-American Tobacco Company, Ltd., discussed the request of Horace Kornegay, President of the Tobacco Institute, that the Committee of Counsel, which was comprised of the General Counsel from R.J. Reynolds, Philip Morris, Brown & Williamson, American Brands, Lorillard, and Liggett, be involved in selecting and providing scientific witnesses and documentary testimony for use in hearings before Congress and elsewhere. During its years as an active trade association, the Tobacco Institute prepared or provided over 100 witnesses for testimony before Congress, courts or state legislatures. 681725305-5307 (U.S. Ex. 21,019); 681725305-5307 (U.S. Ex. 75,407); Response of Defendant The Tobacco Institute to Plaintiff's First Set of Requests for Admission Amended Pursuant to Order #119, United States v. Philip Morris, et al. (served April 19, 2002), at Request/Response No. 161 (U.S. Ex. 87,227).

357. On September 7, 1978, the Subcommittee on Tobacco of the House Agriculture Committee, chaired by Walker Jones, held a hearing on smoking in public places. There were nine witnesses present to testify at this hearing, eight of which were paid by R.J. Reynolds, Philip Morris, Lorillard, Liggett, Brown & Williamson, and American through Special Account No 4. The remaining witness was a recipient of CTR Special Project No. 95 which was a feasibility study recommended by attorney Edwin Jacob. All of these witnesses testified that there was no good evidence that smoke was harmful to those people who do not smoke. A November 1979

SECTION I.

R.J. Reynolds document described this hearing as "a structured hearing with only one side presented." 500025854-5856 (U.S. Ex. 20,615); 500025854-5856 (U.S. Ex. 75,396); 502122792-2797 at 2795 (U.S. Ex. 20,697); 502122792-2797 (U.S. Ex. 66,389).

358. Despite Defendants' assertions that CTR was an organization that funded independent research for the purpose of finding answers to smoking and health questions, a November 17, 1978 Philip Morris memorandum described CTR's role quite differently. This memorandum memorialized statements made by Shook, Hardy & Bacon partner William Shinn admitting that various Defendants and others continued to use the CTR for its public relations value and its value in defense of litigation, as well as for its overt value as a source and conduit for disinformation and as a means to introduce witnesses who would testify on behalf of the Enterprise:

As a means of introduction, Bill Shinn described the history, particularly in relation to the CTR. CTR began as an organization called Tobacco Industry Research Council (TIRC). It was set up as an industry "shield" in 1954. That was the year statistical accusations relating smoking to diseases were leveled at the industry; litigation began; and the Wynder/Graham reports were issued. CTR has helped our legal counsel by giving advice and technical information, which was needed at court trials. CTR has supplied spokesmen for the industry at Congressional hearings. The monies spent at CTR provides a base for introduction of witnesses.

2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

359. A February 22, 1980 letter from Arthur Stevens, Senior Vice President-General Counsel of Lorillard to Timothy Finnegan of Jacob & Medinger and copied to Thomas F. Ahrensfield, Alexander Holtzman, Max H. Crohn, Joseph H. Greer, Arnold Henson, Ernest

SECTION I.

Pepples, William W. Shinn, Ed Jacob, and Janet C. Brown acknowledged the reasons for why scientists were funded through Special Account No. 4. Stevens stated: "I am mindful of the continuing mandate with which your office, Shook, Hardy and others have been charged by your respective clients on behalf of the Industry: that is, to find witnesses and researchers – and, if necessary in order to determine the feasibility of developing a relationship with them, engage them as consultants, or as researchers on initially modest projects. . . . [T]his [is an] important aspect of the Industry's work, that is, to attempt to posture ourselves to defend product liability litigation and related attacks on our products." BWX0004097-4099 (U.S. Ex. 36,218); 85676690-6692 (U.S. Ex. 32,012); 1005146510-6512 (U.S. Ex. 36,118); 01110668-0670 (U.S. Ex. 87,679); 01335053-5055 (U.S. Ex. 26,480); 85676690-6692 (U.S. Ex. 32,012).

360. A March 11, 1980 document drafted by Max Crohn of R.J. Reynolds acknowledged that longtime CTR Special Project and Special Account No. 4 recipient Theodor Sterling was "one of our industry's most valuable outside assets." In addition to numerous publications and studies, Crohn noted that "he has continued to be one of the primary scientists available for consultation with Shook Hardy & Bacon in Kansas City." 503645463-5463 (U.S. Ex. 29,696).

361. Despite statements assuring the public that CTR and the Tobacco Institute were set up and acted as separate organizations for different industry purposes, a 1983 letter from Ernest Pepples of Brown & Williamson to Jim Bowling of Philip Morris and Alexander Spears of Lorillard attached "a paper proposing recommendations which we might make to the Executive Committee." 80419202-9202 (U.S. Ex. 21,061). The attached paper entitled "Industry

Research Support – Recommendations" listed the following among its considerations for upcoming scientific funding:

Be prepared to increase scientific funding of special projects to resolve scientific problems and develop witnesses. . . .
Maintain company cooperation – philosophies about research may differ at times, but goals should be the same. . . .
Improve cooperation between industry mechanisms such as CTR and TI.

80419203-9203 (U.S. Ex. 21,062).

362. In 1984, the Tobacco Institute published "The Cigarette Controversy: Why more research is needed" as the formal statement of its member companies' position on the primary smoking issue. The publication included testimony by a number of Defendant-funded scientists, many of whom were recipients of Special Account No. 4. This publication was a summary of testimony presented to congressional committees. TIEX0000964-1904 (U.S. Ex. 62,619).

363. In a February 2, 1984 memorandum written by Arthur Stevens, General Counsel for Lorillard, to Alexander Holtzman, General Counsel for Philip Morris; Ernest Pepples, General Counsel for Brown & Williamson; Josiah Murray, General Counsel for Liggett; and Samuel Witt, General Counsel for R.J. Reynolds, Stevens discussed the intent of the Ad Hoc Committee to "propose a witness development plan" to assist the litigious and regulatory efforts of the member companies. 85687269-7270 at 7269 (U.S. Ex. 21,081).

364. An April 7, 1986 letter from Patrick Sirridge, Shook, Hardy & Bacon, to Alexander Holtzman, General Counsel for Philip Morris; Wayne W. Juchatz, General Counsel for R.J. Reynolds; Josiah J. Murray, III, General Counsel for Liggett; Ernest Pepples, General Counsel for Brown & Williamson; Paul A. Randour, General Counsel for American; and Arthur

SECTION I.

J. Stevens, General Counsel for Lorillard, informed the CTR Board members that Shook, Hardy & Bacon would take over both the administration of Special Account No 4 from Jacob, Medinger & Finnegan and the submission of research proposals for CTR special projects. According to this letter, Shook, Hardy & Bacon anticipated higher funding requests for "certain witness development expenses incurred by national litigation counsel." 507877173-7174 at 7173 (U.S. Ex. 20,800).

365. An April 28, 1992 Wachtell Lipton memorandum from attorney David Murphy to attorneys Herbert Wachtell, Paul Vizcarrondo, Jr., and John Savarese described an issue that had come up at Lorillard. Art Stevens and William Allinder of Lorillard wanted to know if Lorillard could "participate in funding through a Shook, Hardy special account the work of a Georgetown pathologist, Bennett Jensen." Murphy reported that he had been advised that Jensen had received CTR Special Project funding in 1988, and now faced problems at Georgetown because of his ties to the tobacco industry. Shook, Hardy & Bacon proposed to "'give him' \$40,000 – not for specific research . . . or with an eye to publication but solely in order to maintain a good relationship with him and secure his continued help in making contact with other scientists." Murphy also reported that "Allinder admits that Shook, Hardy wants to give Jensen money to keep him happy and that there is no immediate value to his research." Jensen, however, was a potential witness in the Haines litigation and his contacts "could lead to legislative witnesses." At the end of the memorandum, Murphy opined:

In my overcautious view, the Jensen issue raises a larger question – whether "CTR Special Projects" funds (and after such activities were moved out of CTR, joint industry funds administered through Shook, Hardy) were used to purchase favorable judicial or

legislative testimony, thereby perpetrating a fraud on the public. Admittedly, this notion of fraud was unknown to the common law, but if we assume the other side of the looking glass . . . perhaps it is cause for concern.

87715635-5636 (U.S. Ex. 21,101).

(2) CTR Special Projects

(a) Nature of CTR Special Projects

366. CTR Special Projects were a separate category of research projects funded by CTR. Unlike the grant-in-aid category of research, CTR Special Projects were not vetted by the CTR Scientific Advisory Board ("SAB"); instead the process was led by the General Counsels of Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American, as well as attorneys at outside law firms including Jacob, Medinger & Finnegan, and, in later years, Shook, Hardy & Bacon. "Although Liggett withdrew from the CTR in 1968, it continued to participate in [CTR] special projects until April 1977." Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 56:9-57:18; 515772203-2211 (U.S. Ex. 30,200).

367. In several ways, CTR Special Projects and CTR grants-in-aid were not clearly separated. Members of the tobacco industry funded CTR grants-in-aid; many of those same members funded CTR Special Projects. The CTR Scientific Director signed off on CTR grants-in-aid and CTR Special Projects. Many of the same researchers who received CTR grants-in-aid also received CTR Special Projects funding, sometimes for the same research. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927); Deposition of Harmon McAllister, United States v. Philip Morris, et al., May

23, 2002, at 135:14-136:2, 143:11-144:25; 208:16-209:17; 70119271-9271 (U.S. Ex. 79,107).

368. CTR Special Projects also involved research including epidemiology, laboratory work, and animal experimentation; however, the lawyers who requested and monitored the work were not scientists and did not have scientific backgrounds. The lawyers needed to circumvent the CTR SAB method of funding because the SAB evaluated its project-funding requests in part for scientific legitimacy, while the lawyers had litigation and liability objectives foremost in mind for CTR Special Projects. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 58:20-59:19.

369. CTR Special Projects were initiated around 1965, following: 1) the 1964 Surgeon General Advisory Committee's Report; 2) the 1965 Congressional Hearings on the Labeling Act; and/or 3) criticisms by industry members of CTR's research program." 515772203-2211 (U.S. Ex. 30,200) ; 680900177-0182 (U.S. Ex. 30,918); 521300052-0053 (U.S. Ex. 86,228).

370. The creation of a different kind of research program at CTR was discussed at a November 15, 1965 meeting of counsel. Cyril Hetsko's notes from the meeting reported that: "Smith says there should be a way to have research done that the Industry would want done without getting into the SAB part of CTR. Clements thinks there should be some way of getting industry desired research done. Addison Yeaman and Frederick Haas argue for, perhaps, a separate unit in CTR (not involving SAB) to arrange for industry desired research. I suggested the possibility of reducing the 'free research' budget now enjoyed by SAB and applying some of that money to 'industry desired' projects not under SAB control." BWX0002863-2864 (U.S. Ex. 36,179).

371. In a November 18, 1965 internal Liggett memorandum regarding CTR, Frederick Haas, Liggett's General Counsel, further explained that:

As a result of a conference held by the General Counsel, we broached another subject with Council staff. In view of the present posture of the industry with the Congress, Federal Trade Commission, etc., it was suggested that the organization of the Council be further implemented by creating an Industry Projects Advisory Board, which could feed suggestions for research to the staff. The Industry Projects Advisory Board would consist of General Counsel with the aid and advice of the Ad Hoc Committee and at least, in our instance, Dr. Bates. As projects of particular interest to the industry are devised, these are submitted to the staff of the Council, which would evaluate whether the project would be likely to obtain SAB approval. If, however, such approval were unlikely, or the element of time necessitated prompt action, or in a particular instance if the SAB received the suggestions and declined to go forward with it, the project would be handled independently.

This, of course, means that in addition to the budget proposed by the Council for 1966, there would be additional expenditures for special industry projects. The Ad Hoc Committee has been commissioned to come up with ideas, which will be discussed at a meeting on December 7.

LG2002635-2638 at 2637-2638 (U.S. Ex.21,201).

372. Moreover, starting in the mid-1960s, Shook, Hardy & Bacon developed smoking and health literature databases within the firm to help the lawyers pick scientists friendly to the tobacco industry's liability positions so that these scientists could receive CTR funding through the CTR Special Projects method. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 61:16-63:20.

373. A January 10, 1966 letter from Frederick Haas, General Counsel for Liggett, to Milton Harrington of Liggett, explained CTR's recent request for funding: "As you know, general

SECTION I.

counsel had discussed with the staff of the Council the practicability of its conducting certain special projects in the areas of research which might be inspired by the industry. The suggestion was enthusiastically received. I previously informed you that this would require an additional budget separate and apart from that of the research approved by the Scientific Advisory Board grants in aid." LG2002641-2641 (U.S. Ex. 34,081) ; LG2002639-2639 (U.S. Ex. 34,080).

374. A January 17, 1966 memorandum prepared by Janet Brown and distributed to Edward Cooke, Francis Decker, David Hardy, Alexander Holtzman, Ed Jacob, and Butler, memorialized a conference that had been held with Robert Hockett and W.T. Hoyt of CTR at the direction of the Ad Hoc Committee regarding CTR Special Projects. It was decided that Hoyt would be the CTR person "apprised of all communications relating to [CTR] special projects." Ad Hoc Committee assistance to CTR was also discussed. Brown noted that "Hockett would welcome Ad Hoc recommendations for additional staff members. . . . Hockett would welcome Ad Hoc recommendations for additions to the Scientific Advisory Board." The status of several CTR Special Projects was also reviewed at the meeting. 2015033326-3339 (U.S. Ex. 36,642).

375. An April 14, 1967 memorandum from Addison Yeaman, Vice President and General Counsel of Brown & Williamson, addressed to Frederick Haas, General Counsel for Liggett; Cyril Hetsko, General Counsel for American; Henry Ramm, General Counsel for R.J. Reynolds; Paul Smith, Associate General Counsel for Philip Morris; and Earle Clements, President of the Tobacco Institute, confirmed that many of CTR's research activities were not independent and did not investigate the link between smoking and disease as publicly claimed by the industry: "We have deliberately isolated the SAB from those areas of research which they

SECTION I.

might consider were of a controversial or adversary nature and I see no reason why that isolation cannot and should not be maintained to the fullest preservation of the scientific integrity and dignity of the SAB, but with the release of funds from the SAB portion of CTR's budget to both research directly related to tobacco and the so-called Special Projects." 321668053-8055 at 8054 (U.S. Ex. 20,591); 680262182-2184 at 2183 (U.S. Ex. 20,997) (U.S. Ex. 86,229).

376. Sometimes projects rejected by the CTR SAB could be approved as CTR Special Projects. For example, on February 12, 1968, David Hardy of Shook, Hardy, Ottman, Mitchell & Bacon sent a letter to Alexander Holtzman, Assistant General Counsel of Philip Morris, advising that "General Counsel approved the idea of having Dr. Larson's project presented to the Scientific Advisory Board for their consideration, and if it is rejected that they would then consider it as a special project." 1005049459-9459 (U.S. Ex. 35,952); 1005049463-9466 (U.S. Ex. 26,182); 1005049467-9467 (U.S. Ex. 26,183); 1005049468-9470 (U.S. Ex. 26,184); 1005049471-9478 (U.S. Ex. 26,185); 1005049460-9460 (U.S. Ex. 26,180); 1005049461-9462 (U.S. Ex. 26,181); 1005049442-9442 (U.S. Ex. 26,179).

377. On July 26, 1968, Hardy advised Holtzman: "It is expected that Dr. Larson will soon come up with a draft of a statement for Congress in accordance with his earlier assurance to you and that in his project he will have a substantial number of lungs to examine and will cover both asbestos and a refutation of the Auerbach work on precancerous changes. . . . This will be handled as a CTR special project." 1005049457-9458 (U.S. Ex. 35,951).

378. A February 24, 1969 Lorillard memorandum described the origin of CTR Special Projects: "For a number of years, certain representatives of the industry have felt that the work of

the Council [for Tobacco Research] has not been as pertinent to our problems as it might be. . . .

In an effort to meet this objection, in 1965 the Council embarked on a program of guided research. . . . In order to finance this phase of their activity, a special projects budget was developed." 044227839-7844 (U.S. Ex. 20,066).

379. Janet Brown, in a letter to David Hardy dated June 13, 1974, addressed the issue of CTR's "independence" and the problem with CTR's Special Projects:

Where the industry is itself the arbiter of the amount and nature of research to be done, however, argument that the research is self-serving – that is, is too little, too late, does not bear reasonable relation to the nature and scope of the problems nor to the industry's market position, sales, profits, advertising expenditures – gain in force and acceptance. Moreover, the industry may have little, if any leeway to disassociate itself from any results of such research with which it does not agree.

03659023-9025 at 9025 (U.S. Ex. 87,177); LWODJ9055578-5580 (U.S. Ex. 87,176)

(Confidential).

380. In a September 22, 1978 memorandum from Henry Ramm of R.J. Reynolds to Colin Stokes of R.J. Reynolds, Ramm was seeking to be relieved of some of his responsibilities, including being on the CTR Board of Directors. He recommended that the R.J. Reynolds Legal Department continue to oversee "the special research projects conducted under the aegis of CTR; the Literature Retrieval Division of CTR; and other similar projects **which have traditionally been sponsored by lawyers in the industry for primarily legal reasons.**" 504480626-0629 at 0628 (U.S. Ex. 20,730) (emphasis added).

381. A November 17, 1978 memorandum written by Robert Seligman, Vice President of Research and Development of Philip Morris, described a November 15, 1978 meeting

SECTION I.

attended by Ernest Pepples, General Counsel for Brown & Williamson; Charles Tucker, General Counsel for R.J. Reynolds; Timothy Finnegan, attorney with Jacob, Medinger & Finnegan; William Shinn, attorney with Shook, Hardy & Bacon; Arnold Henson, General Counsel for American; Janet Brown, attorney with Chadbourne & Parke described as retained counsel for CTR; Ivor Wallace Hughes, Vice President of Brown & Williamson; Alexander Spears, Vice President of Lorillard; James Bowling, Senior Vice President of Philip Morris; Robert Seligman, Vice President of Philip Morris Research and Development; and Thomas Osdene, Director of Research for Philip Morris. The meeting had been "called to help an ad hoc committee, selected by the chief executives of the tobacco industry, do long-range policy planning in regard to smoking and health. On the ad hoc committee are representatives of legal, public relations, and research executives of various companies. Any long-range plans which are developed are to be made known to the individual companies through their chief counsel. The ad hoc committee is to consider policy questions in general and particularly grants, contracts, the fate of CTR, etc." At the meeting, Shinn described the history of CTR and CTR Special Projects. Seligman also reported that it was Shinn's feeling that "[CTR] special projects' are the best way that monies are spent. On these projects, CTR has acted as a 'front'; however there [were] times when CTR has been reluctant to serve in that capacity and in rare instances they have refused to serve in that capacity." 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

382. An April 18, 1980 memorandum to file by Arthur Stevens stated: "I concluded that this work [CTR Special Project recipients Kuper and Janis] is potentially useful from a

litigation point of view." 01336290-6290 (U.S. Ex. 88,436).

383. In certain instances, special projects were transferred among the different industry groups who administered them. A September 18, 1981 letter from Francis Decker, an attorney with Webster & Sheffield, to Joseph Greer, Vice President and General Counsel for Defendant Liggett, enclosed his notes from a September 10, 1981 meeting of the Committee of Counsel. Decker's notes described a discussion between Arthur Stevens, General Counsel for Defendant Lorillard, and Edwin Jacob, CTR attorney with Jacob, Medinger & Finnegan, regarding the differences between CTR Special Projects and Lawyers Special Projects:

Stevens: "I need to know what the historical reasons were for the difference between the criteria for lawyers' special projects and CTR special projects."

...

Jacob: "When we started the CTR Special Projects, the idea was that the scientific director of CTR would review a project. If he liked it, it was a CTR Special Project. If he did not like it, then it became a lawyers' special project."

Stevens: "He took offense re scientific embarrassment to us, but not to CTR."

Jacob: "With Spielberg, we were afraid of discovery for FTC and with Aviado, we wanted to protect it under the lawyers. We did not want it out in the open."

LG2000741-0750 at 0745-0746 (U.S. Ex. 36,269).

384. A 1984 document prepared by Lee Stanford of Shook, Hardy & Bacon to David Hardy of Shook, Hardy & Bacon, concerning the briefing of Alex Spears of Lorillard for a deposition, discussed CTR Special Projects. The document acknowledged that "[t]hese are initiated and developed through outside counsel (SHB and J&M)." 92456261-6268 (U.S. Ex. 21,658) (U.S. Ex. 75,420).

SECTION I.

385. A document prepared in or about 1992 entitled "Funding Sources of Tobacco Industry Research" noted that CTR Special Projects were "-Research directed at industry problem -Witness development objective -Approved by general counsel -Funded through CTR." 01334642-4655 (U.S. Ex. 34,528).

(b) Reporting CTR Special Projects to the Committee of Counsel

386. Industry lawyers at Jacob, Medinger & Finnegan and Shook, Hardy & Bacon monitored CTR Special Projects and provided reports to various General Counsels of Defendants Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American. For example, on October 11, 1966, David Hardy of Shook, Hardy & Bacon, sent a letter to Frederick Haas of Liggett, Cyril Hetsko of American, Henry Ramm of R.J. Reynolds, Paul Smith of Philip Morris, and Addison Yeaman of Brown & Williamson, transmitting a report providing the status, progress, and recommendations for special projects. On October 20, 1966, Hardy sent a letter to the Committee of Counsel updating the report on the status of special projects, which included an update of the CTR Special Projects that had been provided by CTR Executive Director W.T. Hoyt. LG2000149-0171 (U.S. Ex. 21,197); 2015059722-9723 (U.S. Ex. 20,332); 1005105992-6031 (U.S. Ex. 36,022); CTR98CONG00189-0358 (U.S. Ex. 25,898).

387. On April 21, 1967, Hardy sent a letter to Janet Brown, Kevin Carroll, Donald Cohen, Edward Cooke, Francis Decker, Alexander Holtzman, Edwin Jacob, and William Shinn requesting a status report on all Special Projects. On April 27, 1967, Cooke sent a response to Hardy providing reports on special projects. On May 2, 1967, Holtzman, General Counsel for Philip Morris, provided Hardy with the status of the special projects with which he was

SECTION I.

associated, including CTR Special Projects; Holtzman sent a second letter to Hardy on June 12, 1967, providing the status on an additional number of CTR Special Projects. 2015059705-9705 (U.S. Ex. 20,331); 2015059590-9593 (U.S. Ex. 20,329); 2015059701-9704 (U.S. Ex. 20,330); 2015059586-9588 (U.S. Ex. 20,328).

388. On March 17, 1977, Donald Hoel of Shook, Hardy & Bacon sent a letter to the following General Counsels: Thomas Ahrensfield of Philip Morris; Joseph Greer of Liggett; Cyril Hetsko of American; Ernest Pepples of Brown & Williamson; Henry Roemer of R.J. Reynolds; and Arthur Stevens of Lorillard, and provided observations on a report by the Karolinska Institute in Sweden, which had been supported with a CTR Special Project. The authors intended to publish an article entitled "The Interactions of Smoking, Environment and Heredity and Their Implication For Disease Etiology – A Report of Epidemiological Studies on the Swedish Twin Registry." TIMN261386-1387 (U.S. Ex. 21,288).

389. In October 1982, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to Joseph Greer, Arnold Henson, Alexander Holtzman, Ernest Pepples, Arthur Stevens, and Samuel Witt enclosing an "updated chart of CTR Special Projects and activities supports under Special Accounts 4 and 5." 1005048374-8374 (U.S. Ex. 35,939).

(c) Lawyer's Recommendations for CTR Special Project Approval

390. Attorneys at Jacob, Medinger & Finnegan and Shook, Hardy & Bacon made recommendations to Defendants' General Counsel and to each other as to whether projects should be conducted through CTR Special Projects. For example, on May 19, 1967, William Shinn of Shook, Hardy & Bacon, sent a letter to Alexander Holtzman, Philip Morris General

SECTION I.

Counsel, regarding CTR Special Projects, outlining a proposal to support and publicize research advancing the theory of smoking as beneficial to health as a stress reducer, even for "coronary prone" persons; representing that stress (rather than nicotine addiction) explains why smoking clinics fail; and proposing to publicize the "image of smoking as 'right' for many people . . . as a scientifically approved 'diversion' to avoid disease causing stress." 1005083882-3882 (U.S. Ex. 20,204) 1005083883-3886 at 3884, 3886 (U.S. Ex. 35,992).

391. On February 5, 1974, Shinn sent a letter to the following General Counsel: Thomas Ahrensfield of Philip Morris, DeBaun Bryant of Brown & Williamson, Frederick Haas of Liggett, Cyril Hetsko of American, Henry Roemer of R.J. Reynolds, and Arthur Stevens of Lorillard, stating that "Dave Hardy and I strongly recommend approval of the \$50,000 grant for Dr. Carl D. Seltzer's work as a CTR special project" at Harvard University, citing his valuable work underway and published works relating to smoking and health, which were helpful to the industry. 1005108380-8381 at 8381 (U.S. Ex. 20,209).

392. On April 15, 1975, Jacob sent a letter to David Hardy of Shook, Hardy & Bacon regarding a proposed University of Hawaii grant, which had been reviewed by William Gardner of CTR. 00552421-2422 (U.S. Ex. 88,837); 014044424443 (U.S. Ex. 88,838); 03658997-8998 (U.S. Ex. 88,839).

393. On April 8, 1976, Jacob sent a letter to David Hardy of Shook, Hardy & Bacon regarding the funding of a biostatistician at Yale to assist Alvan Feinstein, longtime CTR Special Project funding recipient. 507731449-1449 (U.S. Ex. 29,873).

394. On February 8, 1977, Timothy Finnegan of Jacob & Medinger sent a letter to

SECTION I.

William Shinn of Shook, Hardy & Bacon regarding funding for Theodore Finley. Finnegan noted that he had discussed the matter with William Gardner of CTR and that "Gardner feels that CTR cannot now support this project but is quite willing to have it as a special project." Finnegan recommended funding, noting that Finley was "willing to speak his mind on the issues." MNATPRIV00039087-9088 (U.S. Ex. 86,230).

395. On April 9, 1979, Timothy Finnegan of Jacob & Medinger sent a letter to William Shinn of Shook, Hardy & Bacon regarding research at the Franklin Institute on "tobacco glycoprotein." Finnegan noted that "Gardner [of CTR] has also reviewed Franklin Institute's proposal for additional research and is of the view that this work should be done as a special project." 521029925-9934 (U.S. Ex. 30,454).

396. On June 3, 1986, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to the following General Counsel: Alexander Holtzman of Philip Morris; Wayne Juchatz of R.J. Reynolds; Josiah Murray of Liggett; Ernest Pepples of Brown & Williamson; Paul Randour of American; and Arthur Stevens of Lorillard, recommending approval for additional funding of Henry Rothschild through CTR Special Projects. 507878840-8840 (U.S. Ex. 20,802).

397. Such industry attorney recommendations continued from the 1960s through the 1990s. 507731454-1455 (U.S. Ex. 29,877); 507731401-1402 (U.S. Ex. 29,869); LG2000429 - 0430 (U.S. Ex. 34,067); MNATPRIV0001240-1241 (U.S. Ex. 86,231); 01240529-0530 (U.S. Ex. 86,232); LG2002513-2514 (U.S. Ex. 34,076); 1005070386-0387 (U.S. Ex. 35,981); 00493288-3289 (U.S. Ex. 29,408); 1005108380-8381 (U.S. Ex. 20,209); MNATPRIV00012777-2778 (U.S. Ex. 86,233); BWX0003749-3749 (U.S. Ex. 36,197); 507731448-1448 (U.S. Ex. 86,234);

SECTION I.

Ex. 86,275); 507731487-1487 (U.S. Ex. 86,276); 507731428-1429 (U.S. Ex. 86,277); 507731973-1973 (U.S. Ex. 86,278); 507731911-1911 (U.S. Ex. 86,279); 507878874-8875 (U.S. Ex. 86,280); 1005064682-4683 (U.S. Ex. 35,976); BWX0002850-2850 (U.S. Ex. 36,176); 03751975-1976 (U.S. Ex. 29,340); 521029363-9367 (U.S. Ex. 30,448); 503645219-5219 (U.S. Ex. 29,694); 03747528-7528 (U.S. Ex. 29,328); 503673542-3545 (U.S. Ex. 88,437); 01336110-6113 (U.S. Ex. 26,519); 1005064561-4561 (U.S. Ex. 35,968); 01335579-5579 (U.S. Ex. 26,499); 521029353-9353 (U.S. Ex. 30,447); 2015029385-9385 (U.S. Ex. 36,639); 503645209-5209 (U.S. Ex. 29,693); 04225030-5031 (U.S. Ex. 29,396); TIMN460370-0370 (U.S. Ex. 67,773) (Category I); 03751970-1970 (U.S. Ex. 29,339); 03751968-1969 (U.S. Ex. 29,338); 85676224-6224 (U.S. Ex. 32,010); 01336499-6500 (U.S. Ex. 26,535); 03754228-4229 (U.S. Ex. 29,344); 507877111-7112 (U.S. Ex. 88,438); 86003017-3018 (U.S. Ex. 56,084).

398. General Counsel for individual Defendants – and even CTR staff – made recommendations for CTR Special Projects to Shook, Hardy & Bacon attorneys who then passed on such recommendations to other General Counsel. For example, on October 28, 1966, Henry Ramm, Vice President and General Counsel of R.J. Reynolds, sent a letter to Robert Hockett of CTR concerning a proposal by Josel Szepsenwol. Ramm advised Hockett: "This matter has been discussed briefly with other General Counsel. I think it is entirely possible that with your recommendation Special Project funds could be furnished to carry on the research project for the short term until a grant has been made by the SAB." CTR98CONG00057-0057 (U.S. Ex. 32,515).

399. On October 3, 1968, Alexander Holtzman sent a letter to Hardy proposing that

SECTION I.

Richard Hickey, who had previously applied for funding through CTR but was denied, receive Special Project funding. On October 21, 1968, Hardy endorsed that recommendation by sending a letter to Frederick Haas of Liggett; Cyril Hetsko of American; Henry Ramm, General Counsel for R.J. Reynolds; Paul Smith, General Counsel for Philip Morris; and Addison Yeaman, General Counsel for Brown & Williamson, recommending approval for Hickey as a CTR Special Project. 1005084784-4786 (U.S. Ex. 22,988); 1005084799-4800 (U.S. Ex. 20,206).

400. In 1981, Arthur Stevens of Lorillard engaged in extensive correspondence with Patrick Sirridge of Shook, Hardy & Bacon regarding the possibility of establishing an industry relationship with Henry Shotwell. 01349577-9577 (U.S. Ex. 86,281); 01349576-9576 (U.S. Ex. 86,282); 01349575-9575 (U.S. Ex. 86,283); 01349574-9574 (U.S. Ex. 86,284); 01349557-9557 (U.S. Ex. 86,285).

401. On November 28, 1983, Arthur Stevens, Senior Vice President and General Counsel of Lorillard, sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, which inquired: "Is Binstock someone who might be appropriate for a special project?" 03746232-6232 (U.S. Ex. 29,322).

402. CTR personnel also recommended that certain projects be funded as CTR Special Projects. For example, on December 24, 1969, Arthur Furst, CTR consultant, sent a letter to Hardy recommending Special Project funding for Professor Hans J. Eysenck to test the hypothesis of a relationship between the emotional make-up of people and cancer by conducting a pilot study of carcinogenesis in rats bred for differences in neurotic characteristics. 1005070515-0515 (U.S. Ex. 20,201).

SECTION I.

403. On March 6, 1970, W.T. Hoyt, CTR Executive Director, sent a letter to David Hardy of Shook, Hardy, Ottman, Mitchell & Bacon, enclosing a proposal from Richard Hickey. Hoyt requested "if the matter [of additional funding for Hickey] could be discussed informally [with general counsel] it would be helpful to me as we will soon have to request funds for special projects, and I will need to know how much to ask for." CTRSP-FILES0007856-7856 (U.S. Ex. 86,286); CTR98CONG00152-0152 (U.S. Ex. 32,528).

404. On April 15, 1970, Robert Hockett, CTR Associate Scientific Director, also sent a note to Alexander Holtzman of Philip Morris recommending special project funding for a second year of research by Hickey. Hockett noted that Hickey's project was "not likely to be funded by the Scientific Advisory Board from their budget. . . . We leave it to you to carry the ball on this." By letter dated May 28, 1970, William Shinn of Shook, Hardy & Bacon advised Holtzman that he now had approval from Philip Morris, R.J. Reynolds, and Liggett "with respect to the Hickey Special Project" and that he intended "to call the other General Counsel, if I have not heard from them by then, early next week." 1005065603-5603 (U.S. Ex. 21,691); 2015031514-1514 (U.S. Ex. 20,316).

405. A memorandum to the file prepared by William Gardner of CTR pertained to a CTR Special Project and the Indiana University School of Medicine. Gardner noted: "I suggest that [the project] be continued as a feasibility study for one more year as a special project." CTRSP-FILES015147-5147 (U.S. Ex. 21,296), CTR98CONG00168-0168 (U.S. Ex. 32,534).

406. Even representatives from the Tobacco Institute offered opinions on CTR Special Project recipients. By letter dated February 23, 1971, Marvin Kastenbaum, Director of Statistics

of the Tobacco Institute, advised William Shinn of Shook, Hardy & Bacon with respect to the funding of Hickey: "I see no objection to funding this project. It is very important to have people like Hickey in our stable. Also, his material is publishable." 2015031341-1341 (U.S. Ex. 36,640).

(d) Defendants' Approval of CTR Special Project Funding

407. After receiving recommendations, the General Counsels of Defendants Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American would decide whether a project was approved as a CTR Special Project. Sometimes, general counsel would advise CTR directly if a project was approved for CTR Special Project funding. For example, on July 22, 1970, Henry Ramm, Senior Vice President and General Counsel of R.J. Reynolds, advised Robert Hockett, Associate Scientific Director of CTR, regarding the "proposed Conference to be held in the West Indies in January 1972, counsel representing Philip Morris, Brown & Williamson, American Brands, Liggett & Myers and Lorillard which companies together with Reynolds participate in Special Projects have advised that if the Scientific Advisory Board does not approve this project the same can be treated as an approved Special Project." CTRSP-FILES009810-9810 (U.S. Ex. 21,696); CTRSP-FILES009811-9811 (U.S. Ex. 32,705); CTRSP-FILES009812-9813 (U.S. Ex. 32,706); BWX0010831-0840 (U.S. Ex. 36,244).

408. In fact, the proposed conference was approved as a CTR Special Project in October 1970; was held on St. Martin Island on January 12-15, 1972; and was called the Conference on the Motivational Mechanisms of Cigarette Smoking. Among the attendees were

SECTION I.

A.K. Armitage from Britain's Tobacco Research Council; Robert Hockett, CTR Associate Scientific Director; Henry Ramm, CTR Chairman and President; Gilbert Huebner, Tobacco Institute Medical Director; Marvin Kastenbaum, Tobacco Institute Director of Statistics; and several of the Defendants' research directors, including William Bates of Liggett, I.W. Hughes of Brown & Williamson, Murray Senkus of R.J. Reynolds, Alexander Spears of Lorillard, and Helmut Wakeham of Philip Morris; and several CTR Special Project funding recipients, including Hans Eysenck, Richard Hickey, Hans Selye, and Carl Seltzer. 503654881-4885 (U.S. Ex. 88,413); 105394371-4388 (U.S. Ex. 88,414); CTRSP-FILES009590-9590 (U.S. Ex. 88,415); CTRSP-FILES009589-9589 (U.S. Ex. 88,416). See U.S. FPPF § IV.E., infra, for additional discussion of the Conference and the subsequent publication of proceedings.

409. In general, however, General Counsel would subsequently advise Jacob, Medinger & Finnegan or Shook, Hardy & Bacon whether or not their companies would agree to fund the recommended CTR Special Projects. The following are but a few examples.

(i) American Tobacco

410. For example, on February 28, 1975, Cyril Hetsko, Senior Vice President and General Counsel for American, sent a letter to Donald Hoel of Shook, Hardy & Bacon indicating that American was agreeable to participating in the Cederlof-Friberg preparations and publication of a twin studies monograph with the understanding that "when the project has been approved by all, it will be handled as a CTR - Special Project." ATX300000157-0157 (U.S. Ex. 21,130).

411. On October 13, 1986, Paul Randour, Senior Vice President and General Counsel of American, sent a letter to Bernard O'Neill of Shook, Hardy & Bacon indicating that American

SECTION I.

had agreed to contribute to the CTR Special Project of Lawrence Kuper and Joseph Janis.

<http://energycommerce.house.gov/tobacco/docs/bw/0012685445.tif> (U.S. Ex. 87,682).

412. On April 27, 1988, Randour sent another letter to O'Neill indicating that American had approved a CTR Special Project for Alvin Feinstein. BWX9990349-0349 (U.S. Ex. 87,683).

(ii) Brown & Williamson

413. On February 18, 1977, Ernest Pepples, Vice President and General Counsel of Brown & Williamson, sent a letter to Shinn of Shook, Hardy & Bacon indicating that Brown & Williamson "will be pleased to join with the other tobacco companies in support of this [CTR special] project" for Theodore Finley. 507877537-7537 (U.S. Ex. 20,801).

414. On January 26, 1982, Pepples sent a letter to Patrick Sirridge of Shook, Hardy & Bacon indicating Brown & Williamson's agreement with Sirridge's recommendation that "the research proposal from Drs. Hutcheon and Regna be approved as a CTR Special Project." 521030631-0631 (U.S. Ex. 20,888).

415. On July 23, 1984, Pepples sent a letter to Chester Wroblewski, attorney with Jacob, Medinger & Finnegan, indicating that Brown & Williamson would approve the funding of the "two proposals submitted by Drs. Kuper and Janis as [CTR] special Projects." 521031038-1038 (U.S. Ex. 20,889).

416. On December 20, 1984, Pepples sent a letter to Donald Hoel, attorney with Shook, Hardy & Bacon, approving his request for funding from Brown & Williamson as a CTR Special Project the involvement of Marvin Kastenbaum of the Tobacco Institute on a symposium

on the human chromosome. 521030983-0983 (U.S. Ex. 86,287).

417. On July 8, 1985, Pepples sent a letter to Donald Hoel, attorney with Shook, Hardy & Bacon, approving his request for funding from Brown & Williamson for Air Conditioning & Ventilation Associates Atlantic, Inc. (ACVA Atlantic) as a CTR Special Project. 521028861-8861 (U.S. Ex. 52,692); 2050987576-7576 (U.S. Ex. 27,065).

418. Pepples also sent letters approving the funding of the following scientists through CTR Special Projects: 1977 - Sterling (68014337-4377) (U.S. Ex. 86,288) ; 1979 - Hutcheon (521030664-0669) (U.S. Ex. 30,460); 1979 - Franklin Institute/Salvaggio (521029925-9934) (U.S. Ex. 30,454); 1979 - Franklin Institute (521029925-9934) (U.S. Ex. 30,454); 1980 - Hutcheon (521030664-0669) (U.S. Ex. 30,460); 1982 - Hutcheon/Regna (521030631-0631) (U.S. Ex. 20,888); 1982 - Rothschild (521031875-1875) (U.S. Ex. 30,467); 1982 - Gorlin (521030032-0032) (U.S. Ex. 30,457); 1982 - Rao (521031322-1325) (U.S. Ex. 30,463); 1983 - Rothschild (521031846-1846) (U.S. Ex. 30,465); 1983 - Eysenck (521029712-9713) (U.S. Ex. 30,451).

(iii) Lorillard

419. In a July 14, 1970 memorandum from Arthur Stevens, Senior Vice President and General Counsel of Lorillard, to Alexander W. Spears of Lorillard, Stevens requested Spears' views of a proposed CTR Special Project - a "Benefits of Smoking" Symposium. 01243259-3259 (U.S. Ex. 20,041).

420. On February 8, 1972, Stevens sent a letter to David Hardy of Shook, Hardy & Bacon, indicating that Lorillard would participate in the industry funding of Hans Selye.

01240219-0219 (U.S. Ex. 26,444).

421. On February 4, 1980, Stevens sent a letter to William Shinn of Shook, Hardy & Bacon indicating Lorillard's participation in funding Domingo Aviado. Stevens stated: "Your efforts in obtaining Dr. Aviado's services, to the benefit of the Industry, are sincerely appreciated." 01334994-4994 (U.S. Ex. 26,475).

422. On July 10, 1980, Stevens sent a letter to Patrick Sirridge of Shook, Hardy & Bacon indicating that Lorillard would participate in the additional funding of Louis Soloff. In a blind copy note to Curtis Judge and Alexander Spears of Lorillard, Stevens indicated: "This work was started as a CTR grant. Two years of the intended three have been completed. Its continuation then encountered some 'political' problems. It seems appropriate to help CTR by adopting the third year as a Special Project." 01338114-8114 (U.S. Ex. 26,565).

423. On March 27, 1981, Stevens sent a letter to Timothy Finnegan of Jacob, Medinger & Finnegan, indicating that Lorillard would participate in the interim funding of Joseph Janis "pending consideration by CTR of a grant application." In a blind note to Curtis H. Judge and Alexander W Spears of Lorillard, Stevens advised: "This is intended to keep Janis in research funds until he either gets CTR or other funding. . . . This project is clearly litigation defense oriented. Janis will be a witness in the future. He is a protege of Greenberg and Kuper. Kuper will testify for UST [United States Tobacco] in its oral cancer case (Douglas) in Arkansas in May." 01336286-6286 (U.S. Ex. 26,527).

424. On August 28, 1981, Arthur Stevens sent a letter to Edwin Jacob of Jacob, Medinger & Finnegan, indicating that Lorillard would participate in funding for Charles

Spielberger. In a blind note to Curtis Judge and Alexander Spears of Lorillard, Stevens indicated: "We continue to regard Spielberger as an important potential witness." 01338207-8207 (U.S. Ex. 26,566).

425. By letter dated March 11, 1982, Arthur Stevens advised David Hardy that "Lorillard will participate in this funding" for Richard Hickey's CTR Special Project. In a blind note to Curtis Judge, Alexander Spears, and James Cherry of Lorillard, Stevens noted:

Despite Hardy's indication last year that we would not likely renew Hickey, I am satisfied that we should do so - for reasons relating to litigation and Congressional testimony. During the year it apparently became clear that Hickey has established a good relationship with two other scientists who remain important to us, viz., Burch and Feinstein. Hickey's work apparently ties well into work relating to genetic and constitutional theories of causation. CTR has strongly suggested that we continue to maintain a good relationship with Hickey. He remains one of the limited number of strong supporters who is willing to speak out on a variety of epidemiological questions, and has written a strong statement for the Waxman hearings.

01335922-5922 (U.S. Ex. 20,045).

426. On August 14, 1984, Stevens sent a letter to Chester Wrobleski indicating that Lorillard would participate in the funding of the two Kuper/Janis projects through CTR Special Projects. 80412203-2203 (U.S. Ex. 21,060).

427. On May 20, 1986, Stevens sent a letter to Patrick Sirridge indicating that Lorillard would participate in the funding of a two year extension of the Alfred Jenson CTR Special Project. 85171343-1344 (U.S. Ex. 22,042).

428. On September 16, 1986, Stevens sent a letter to O'Neill indicating that Lorillard would participate in the continued funding of the Kuper/Janis CTR Special Project. 80412199-

SECTION I.

2199 (U.S. Ex. 21,059).

429. By letter dated December 14, 1988, Stevens advised O'Neill that Lorillard would participate in the supplemental funding for Jenson's CTR Special Project. 91821884-1884 (U.S. Ex. 57,129).

430. Lorillard also sent letters approving the funding of the following scientists through CTR Special Projects: 1972 - Funderberg (1240455-0455) (U.S. Ex. 26,447); 1972 - Bahnson (01240436-0436) (U.S. Ex. 26,445); (01240437-0437) (U.S. Ex. 26,446); 1972 - MacDonald (01336587-6587) (U.S. Ex. 26,543); 1974 - Ogura (01336855-6855) (U.S. Ex. 26,545); 1974 - MacDonald (01336555-6555) (U.S. Ex. 26,541); 1975 - Ratcliffe (00499935-9935) (U.S. Ex. 29,415); 1980 - Franklin Institute (01335470-5471) (U.S. Ex. 26,492); BWX0002758-2759 (U.S. Ex. 36,169); 1980 - Furst (01335570-5570) (U.S. Ex. 26,497); 1980 - Hickey (01335958-5958) (U.S. Ex. 26,513); 1980 - Seltzer (01338086-8086) (U.S. Ex. 26,564); 1980 - Sterling (01338514-8514) (U.S. Ex. 26,569); 1980 - Brooke (04225204-5204) (U.S. Ex. 86,289); (01334889-4890) (U.S. Ex. 86,290); (01334892-4894) (U.S. Ex. 86,291); (04225198-5198) (U.S. Ex. 29,399); 1980 - Janis (01336289-6289) (U.S. Ex. 26,528); 1980 - Salvaggio (01337806-7806) (U.S. Ex. 26,556); 1980 - Macdonald (01336501-6503) (U.S. Ex. 26,536); (01336504-6505) (U.S. Ex. 26,537); 1980 - Hutcheon (01336190-6190) (U.S. Ex. 26,521); 1982 - Seltzer (01338062-8062) (U.S. Ex. 26,563); 1982 - Riley (01337090-7090) (U.S. Ex. 26,549); 1982 - Brooke (01334735-4735) (U.S. Ex. 26,469); 1982 - Kuper/Janis/Greenberg (01336268-6268) (U.S. Ex. 26,524); (01336271-6271) (U.S. Ex. 26,526); (503689655-9655) (U.S. Ex. 29,724); 1982 - Rao (01336959-6959) (U.S. Ex. 26,546); 1982 - Bick (01335009-5009) (U.S.

SECTION I.

Ex. 26,477); (85678325-8325) (U.S. Ex. 32,016); (01335008-5008) (U.S. Ex. 26,476); 1983 - Eysenck (01335403-5403) (U.S. Ex. 86,292); 1983 - Hickey (01335902-5902) (U.S. Ex. 86,293); 1983 - Seltzer (01337994-7994) (U.S. Ex. 26,562); 1983 - Salvaggio/Lehrer (01337733-7733) (U.S. Ex. 26,553); 1983 - Schrauzer (01337962-7962) (U.S. Ex. 26,557); 1983 - Rothschild (01337543-7543) (U.S. Ex. 26,551); 1983 - Kuper/Janis (01336249-6249) (U.S. Ex. 26,523); 1983 - Hutcheon (01336089-6089) (U.S. Ex. 26,518); 1983 - Eysenck (01335396-5396) (U.S. Ex. 26,486); 1983 - Lees (01336438-6438) (U.S. Ex. 26,531); 1984 - Kuper/Janis (80412203-2203) (U.S. Ex. 21,060); 1985 - Seltzer/van den Berg (80412549-2549) (U.S. Ex. 31,963); 1986 - Jenson (85171343-1344) (U.S. Ex. 22,042); 1986 - Kuper/Janis (80412199-2199) (U.S. Ex. 21,059); 1990 (Seltzer) - 87598541-8541 (U.S. Ex. 56,250).

(iv) R.J. Reynolds

431. On June 9, 1970, Henry H. Ramm, Vice President and General Counsel of R.J. Reynolds, sent a letter to David Hardy of Shook, Hardy & Bacon confirming R.J. Reynolds's funding for Alvan Feinstein's Special Project, which continued for a number of years.

507731453-1453 (U.S. Ex. 29,876); 507731447-1447 (U.S. Ex. 29,872).

432. On July 26, 1984, Samuel Witt, Vice President and General Counsel of R.J. Reynolds, sent a letter to Chester Wroblewski of Jacob, Medinger & Finnegan confirming R.J. Reynolds's approval of joint funding for Lawrence Kuper and Janis. 503655278-5278 (U.S. Ex. 21,683).

433. On January 10, 1985, Witt sent a letter to Donald Hoel of Shook, Hardy & Bacon, agreeing to share the cost of a CTR Special Project for the Marvin Kastenbaum symposium "The

SECTION I.

Human Chromosome"; Marvin Kastenbaum was Director of Statistics at the Tobacco Institute.

507734469-4469 (U.S. Ex. 29,909).

434. On August 23, 1985, Witt sent a letter to Sirridge accepting R.J. Reynolds's share of funding for William Gutstein "as a CTR Special Project." 507732293-2293 (U.S. Ex. 20,786).

435. On June 5, 1986, Wayne Juchatz, Vice President and General Counsel of R.J. Reynolds, sent a letter to Sirridge confirming that R.J. Reynolds would share funding for Alfred Jenson's CTR Special Project. 507731762-1762 (U.S. Ex. 20,785).

436. R.J. Reynolds also sent letters approving funding for the following scientists through CTR Special Projects over the years: 1979 - Eysenck (507731386-1386) (U.S. Ex. 29,867); (507731381-1381) (U.S. Ex. 86,294); 1981 - Janis (507731482-1482) (U.S. Ex. 29,880); 1981 - Eysenck (507731377-1377) (U.S. Ex. 29,865); 1983 - Eysenck (507731370-1370) (U.S. Ex. 29,863); 1982 - Rothschild (508371649-1649) (U.S. Ex. 86,295); 1983 - Hilado (507875736-5736) (U.S. Ex. 86,296); (03751438-1439) (U.S. Ex. 29,332); 1983 - Eysenck (507731343-1343) (U.S. Ex. 29,861); 1984 - Jenson (503645683-5683) (U.S. Ex. 29,698); 1985 - Gruhn (507734474-4474) (U.S. Ex. 29,910); 1985 - Hecht (507734459-4459) (U.S. Ex. 29,908); 1985 - Seltzer (507731676-1676) (U.S. Ex. 29,891); 1985 - IIT Research Institute (507734422-4422) (U.S. Ex. 29,907); 1985 - Wakefield (507734414-4414) (U.S. Ex. 29,906); 1985 - Salvaggio/Lehrer (507731547-1547) (U.S. Ex. 29,884); 1985 - Oak Ridge National Laboratory (507734377-4377) (U.S. Ex. 29,904); 1985 - Kuper/Janis (507731475-1475) (U.S. Ex. 29,879); 1985 - Seltzer (507731657-1657) (U.S. Ex. 29,890); 1985 - Gutstein (507732293-2293) (U.S. Ex. 20,786); 1985 - DiNardi (507734477-4477) (U.S. Ex. 29,911); 1986 - Bick

SECTION I.

(507737625-7625) (U.S. Ex. 29,912); 1986 - Bick (507731653-1653) (U.S. Ex. 22,769); 1986 - Feinstein (507731427-1427) (U.S. Ex. 29,871); 1986 - Jenson (507731762-1762) (U.S. Ex. 20,785); 1986 - Rothschild (507731504-1504) (U.S. Ex. 51,245); 1986 - Eysenck (507877123-7123) (U.S. Ex. 29,923); 1987 - Bick (507731975-1975) (U.S. Ex. 29,900); 1987 - Seltzer (507731649-1649) (U.S. Ex. 29,889); 1987 - Jenson (507731757-1757) (U.S. Ex. 29,895); 1987 - Gutstein (507732210-2210) (U.S. Ex. 29,901); 1987 - Rothschild (507731486-1486) (U.S. Ex. 29,882); 1988 - Sterling (507731727-1727) (U.S. Ex. 29,893); 1989 - Seltzer (507731568-1568) (U.S. Ex. 29,885); 1988 - Seltzer (507731646-1646) (U.S. Ex. 29,887); 1988 - Bick (507731972-1972) (U.S. Ex. 29,899); 1988 - Seltzer/van den Berg (507731572-1572) (U.S. Ex. 29,886).

(v) Liggett

437. When Liggett in-house counsel received recommendations regarding CTR Special Projects, the matter was reviewed internally before an answer was given to industry counsel. LG2000431-0431(U.S. Ex. 34,068) ; LG2002673-2673 (U.S. Ex. 34,084) ; LG2002696-2696 (U.S. Ex. 34,085) ; LG2002537-2537(U.S. Ex. 34,079); LG2002535-2535(U.S. Ex. 34,078); LG2000488-0488(U.S. Ex. 34,071); LG2000633-0633(U.S. Ex. 34,073); LG2002552-2552(U.S. Ex. 86,297).

438. On May 28, 1970, William Shinn of Shook, Hardy & Bacon sent a letter to Alexander Holtzman, Assistant General Counsel for Philip Morris, advising that he now had approval from Philip Morris, R.J. Reynolds, and Liggett for CTR Special Project funding for Richard Hickey. 2015031514-1514 (U.S. Ex. 20,316).

SECTION I.

439. On February 28, 1974, Frederick Haas, General Counsel for Liggett, sent a letter to Shinn advising him of Liggett's agreement to fund Carl Seltzer. LG2002533-2533 (U.S. Ex. 21,198).

(vi) Philip Morris

440. On February 21, 1979, Alexander Holtzman sent a letter to Donald Hoel of Shook, Hardy & Bacon confirming that Philip Morris would continue funding Richard Hickey's jointly sponsored research. 1005053953-3953 (U.S. Ex. 20,198).

441. On June 28, 1979, Holtzman sent a letter to Edwin Jacob of Jacob & Medinger indicating that Philip Morris would support approval of Hans Eysenck's request for additional funding. 2010047654-7654 (U.S. Ex. 22,948); 1005053931-3931 (U.S. Ex. 86,298).

442. On December 17, 1981, Frederic Newman, Assistant General Counsel of Philip Morris, sent a letter to Sirridge of Shook, Hardy & Bacon indicating that Philip Morris agreed to support the Jenson study, the Theodor Sterling study, the Arvin Glicksman study, and the Senkus consultancy (a Special Account No. 4 project). 1005113488-3488 (U.S. Ex. 86,299).

443. On August 11, 1983, Helen Frustace, Holtzman's secretary, sent a letter to Sirridge of Shook, Hardy & Bacon indicating that Philip Morris approved funding for Duncan Hutcheon. 1005064626-4626 (U.S. Ex. 20,200).

(vii) Philip Morris Companies

444. On March 13, 1986, Philip Morris Companies sent a letter from Philip Morris Companies' employee Helen Frustace to Donald Hoel of Shook, Hardy & Bacon indicating approval of the request to support Dr. Theodore Sterling's research project "provided it is also

approved by four other companies." 2015047160-7160 (U.S. Ex. 20,326).

445. On May 9, 1988, Philip Morris Companies sent a letter from Frustace addressed to O'Neill of Shook, Hardy & Bacon indicating approval of the request of Rodger L. Bick for a one-year extension on funding for his CTR Special Project. 2015006925-6925 (U.S. Ex. 20,310).

446. On May 16, 1988, Philip Morris Companies sent a letter from Frustace addressed to Donald Hoel indicating Philip Morris Companies' agreement to renew Carl Seltzer's CTR Special Project. 2015006923-6923 (U.S. Ex. 23,047).

(e) Administration of CTR Special Projects

447. Either before or after approval by the General Counsel of Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American, CTR Special Projects were sent to the CTR Scientific Director for "review." An employee of CTR testified, however, that she did not recall any projects approved by the General Counsel which were not also approved by the CTR Scientific Director. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 47:19-47:22; CTR98CONG01063-1063 (U.S. Ex. 32,544).

448. Once a CTR Special Project was approved by General Counsel and the CTR Scientific Director, Jacob, Medinger & Finnegan or Shook, Hardy & Bacon would communicate to CTR how CTR Special Projects were to be funded. CTR would then assign each Special Project a number and the CTR staff would administer and distribute the funds for the CTR Special Project to the recipient or his or her affiliated research institution from a separate bank account maintained solely by CTR to fund CTR Special Projects. For example, on June 27,

SECTION I.

1968, Jacob of Jacob, Medinger & Finnegan sent a letter to Wilson T. Hoyt, Executive Director of CTR, with respect to funding for A. Clifford Barger that had been approved for CTR Special Project funding, and requested: "[W]ould you please assign a CTR SP Number to the project and let me know what that number is." Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 24, 2002, 92:19-95:3, 136:2-136:7; Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 56:9-57:18; Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 43:10-54:18; 11330520-0520 (U.S. Ex. 20,282); CTR98CONG00058-0058 (U.S. Ex. 22,955); CTRSP-FILES025322-5322 (U.S. Ex. 86,300); CTRSP-FILES003693-3693 (U.S. Ex. 86,301), CTR98CONG00147-0147 (U.S. Ex. 32,526); 512678701-8710 (U.S. Ex. 20,847).

449. In April 1984, Lorraine Pollice of CTR hand-recorded a message from Patrick Sirridge, attorney with Shook, Hardy & Bacon, that a CTR Special Project for Hickey had not been approved by the companies and that Hickey would be sending in a new proposal. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 105:18-109:18; CTRSP-FILES018407-8407 (U.S. Ex. 87,684).

450. CTR Special Projects were not part of CTR's general fund budget; CTR's members provided the funding for CTR Special Projects in separate transactions. Each member company of CTR – Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American – could decide whether or not to contribute to a particular project. The division of costs, however, were usually based upon the companies' respective market shares and the companies sent their share of a project's cost directly to CTR. CTR personnel often sent letters to

SECTION I.

the General Counsels of the six companies' requesting payments for the CTR "Special Projects Fund." Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 66:9-67:9; CTRSP-FILES026615-6615 (U.S. Ex. 86,302); 81616878-6882 (U.S. Ex. 31,968); 671726536-6536 (U.S. Ex. 36,147); 671726538-6538 (U.S. Ex. 36,148); 680305856-5858 (U.S. Ex. 30,887); 564000689-0691 (U.S. Ex. 30,689); 508371654-1654 (U.S. Ex. 29,972).

451. From 1966 to 1990, Defendants contributed the following amounts to CTR Special Projects: American contributed approximately \$2,049,354; Brown & Williamson contributed approximately \$2,571,354; Lorillard contributed approximately \$1,638,490; Philip Morris contributed approximately \$5,837,923; and R.J. Reynolds contributed approximately \$6,029,255. From 1966 to 1975, Liggett contributed approximately \$143,830. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927).

452. According to a Shook, Hardy & Bacon document, CTR Special Project funds were disbursed by CTR "both as a matter of administrative convenience and because some researchers were reluctant to receive direct funding by tobacco companies." 2048925520-5539 at 5532 (U.S. Ex. 38,725). For the same reasons, letters advising of the funding of a CTR Special Project were sent directly from CTR to the CTR special project recipient. CTRSP-FILES0004380438-0438 (U.S. Ex. 87,680); CTRSP-FILES000195-0195 (U.S. Ex. 32,648); CTRSP-FILES000641-0641 (U.S. Ex. 32,654); CTRSP-FILES001483-1483 (U.S. Ex. 32,658); CTRSP-FILES001621-1621 (U.S. Ex. 32,662); CTRSP-FILES002290-2290 (U.S. Ex. 32,664);

SECTION I.

CTRSP-FILES022899-2899 (U.S. Ex. 32,961); CTRSP-FILES018201-8201 (U.S. Ex. 32,907); CTRSP-FILES014202-4202 (U.S. Ex. 32,792); CTRSP-FILES022863-2863 (U.S. Ex. 32,959); CTRSP-FILES018181-8181 (U.S. Ex. 32,905); CTRSP-FILES014196-4196 (U.S. Ex. 32,790).

453. CTR Special Project recipients were instructed to use an acknowledgment line in publications resulting from CTR Special Project funding different from the acknowledgment line used in publications resulting from CTR grant recipient funding. The ever-so-slightly different acknowledgment line, however, did not disclose that the CTR Special Project research program was undertaken at the specific request of Defendants for their own purposes and not vetted by the CTR Scientific Advisory Board. Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 24, 2003, at 145:23-149:18.

454. CTR did not include information about CTR Special Project research in its Annual Reports, which were widely distributed to medical editors at newspapers, medical editors for television programs, deans of colleges and universities in the United States, libraries at colleges and universities, college and university grant offices, the CTR board of directors, members of the CTR Scientific Advisory Board, CTR grantees, CTR Class A and B members, and the Tobacco Institute, and contained information about current and terminated grants-in-aid, grantees and their institutions. See U.S. FPF § I.B(5)(b), supra. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 64:11-75:17, 120:4-120:10.

(f) Defendants Continued to Fund Special Projects After They Stopped Using CTR to Fund Special Projects

455. CTR Special Project funding ended sometime around 1990; thereafter, Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American continued to

SECTION I.

jointly fund self-serving research projects on behalf of the Enterprise. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 54:13-54:18; CTRSP-FILES014196-4196 (U.S. Ex. 32,790).

456. For example, on March 2, 1990, Stevens sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, enclosing a check for \$46,461, which represented Lorillard's share of joint funding for Theodor Sterling. Stevens noted "that this is no longer a CTR project, but is now being funded directly by the Companies and administered as a Special Research Project through your firm." On March 7, 1990, Wayne Juchatz of R.J. Reynolds sent a letter to Sirridge enclosing R.J. Reynolds's portion for the continued funding of Sterling. On March 19, 1990, Paul Randour of American also sent a letter to Sirridge indicating approval of the joint funding of Sterling. On July 23, 1990, Ernest Pepples of Brown & Williamson sent a letter to Sirridge enclosing a check for \$65,579, which represented Brown & Williamson's share of funding for Sterling. Pepples sent another contribution for Sterling's work in 1991. 87598486-8486 (U.S. Ex. 21,096); 507731678-1678 (U.S. Ex. 29,892) (U.S. Ex. 76,278); ATX300004011-4011 (U.S. Ex. 21,131); 521100040-0040 (U.S. Ex. 20,893); 521100027-0027 (U.S. Ex. 22,969); 91765001-5001 (U.S. Ex. 32,125).

457. On September 26, 1990, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to Wayne Juchatz of R.J. Reynolds, Josiah Murray of Liggett, Ernest Pepples of Brown & Williamson, Paul Randour of American, Arthur Stevens of Lorillard, and Charles Wall of Philip Morris concerning funding for Rodger Bick. Sirridge noted that "[f]or over 10 years, Dr. Rodger Bick's research on lung cancer has been supported under a CTR Special Project. Dr. Bick has

SECTION I.

requested that his support be renewed so that he can continue the work. We recommend that this project be approved in the amount of \$40,404.32 and be funded directly by the companies."

Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, and American all agreed to jointly fund the continued research. 86002659-2661 (U.S. Ex. 32,046); 507731850-1851 (U.S. Ex. 86,308); 680712948-2948 (U.S. Ex. 30,912); 512678317-8317 (U.S. Ex. 30,044); ATX300004028-4028 (U.S. Ex. 76,276); BWX9990305-0305 (U.S. Ex. 34,129); 2021130228-0228 (U.S. Ex. 26,731); 507731849-1849 (U.S. Ex. 76,279); 86002653-2653 (U.S. Ex. 32,045); 87688005-8005 (U.S. Ex. 32,060); 91768262-8262 (U.S. Ex. 32,126).

458. In 1990, the companies continued to fund jointly the work of Alvan Feinstein that had previously been funded as a CTR Special Project on behalf of the Enterprise.

BWX9990237-0237 (U.S. Ex. 34,128); 507731403-1403 (U.S. Ex. 29,870).

459. By letter dated February 26, 1991, Sirridge requested continued funding from Randour of American and Juchatz of R.J. Reynolds for Carl Seltzer, a long-time CTR Special Project recipient. Sirridge advised that Brown & Williamson, Lorillard, and Philip Morris had already agreed to the continued funding. BWX0003847-3848 (U.S. Ex. 36,212).

460. In March 1992, Bernard O'Neill of Shook, Hardy & Bacon sent a letter to Wayne Juchatz of R.J. Reynolds, Ernest Pepples of Brown & Williamson, Paul Randour of American, Arthur Stevens of Lorillard, and Charles Wall of Philip Morris, and copied Steven Parrish of Philip Morris, recommending another extension of joint industry funding of Theodor Sterling, a long-time CTR Special Projects grantee. The funding was requested for Sterling's work on analyzing the "methodical weaknesses in the epidemiological data in the area of smoking and

health" and "address[ing] issues relating to indoor air quality and ETS exposure." According to O'Neill, Sterling's work "provide[d] a much needed perspective on the possible meanings of these scientific reports" on smoking and health issues. 2015002947-2955 at 2947-2948 (U.S. Ex. 20,308) (U.S. Ex. 75,121).

461. On May 18, 1992, Charles Wall, Vice President and Associate General Counsel of Philip Morris Companies, sent a letter to O'Neill of Shook, Hardy & Bacon which was accompanied by a check representing Philip Morris Companies' contribution to Sterling's research efforts. 2023230770-0770 (U.S. Ex. 20,384).

(g) Scientists Funded Through CTR Special Projects

462. Documents reflect that the following scientists were funded through the CTR Special Project program: William H. Alban; Austin; Domingo M. Aviado; Roberto Bachi; Claus B. Bahnson; William J. Bair; Clifford A. Barger; Bevilacqua; Cesare Biancifiori; Rodger L. Bick; Herman V. Boenig; Brian Bozelka; Lyman A. Brewer, III; Geoffrey L. Brinkman; Barbara B. Brown; Brunner; Victor B. Buhler; John Robert Carter; Jeffrey N. Clark; Richard C. Clelland; Irven DeVore; Salvatore R. DiNardi; William L. Dunn (Philip Morris); Kurt Enslein; Hans J. Eysenck; Alvan R. Feinstein; T.N. Finley; G.H. Friedell; H. Hugh Fudenberg; Arthur Furst (CTR); Arvin S. Glicksman; Victor Gould; John G. Gruhn; Michael R. Guerin; William H. Gutstein; Frederick Hecht; Norman W. Heimstra; Doris L. Herman; Katherine M. Herrold; Richard J. Hickey; Robert C. Hockett (CTR); Ebbe Curtis Hoff; Freddy Homburger; E. Lee Husting; Duncan Hutcheon; Joseph M. Janis; Alfred Bennett Jenson; William V. Judy; Marvin A. Kastenbaum (Tobacco Institute); Leo Katz; David M. Kissen; Jerome Kleinerman; Suzanne

SECTION I.

Knoebel; Lawrence L. Kuper; Hiram T. Langston; Mariano LaVia; Leonard A. Lee; Samuel B. Lehrer; Eleanor J. MacDonald; Thomas F. Mancuso; J.H. Manhold; Marcus M. Mason; Neal L. McNiven; Aldo Misefari; Kenneth M. Moser; Harry Ness; S. O'Shea; Joseph M. Ogura; Ingram Olkin; Oser; Harold Perry; Charles D. Puglia; L.G.S. Rao; Herbert L. Ratcliffe; Vernon Riley; J.B. Roberts; Jay Roberts; Gray Robertson; Lisa Rosenblatt; Henry Rothschild; Linda Russek; Henry I. Russek; John Salvaggio; G.N. Schrauzer; Segi; Carl C. Seltzer; Hans Selye; Lucio Severi; James F. Smith; Louis A. Soloff; Darrel H. Spackman; Douglas H. Sprunt; R. Stankus; Frederick J. Stare; Russell Stedman; Theodor D. Sterling; David A. Sterling; Harold L. Stewart; Guiseppe Teti; Thomas; J.R. Trinidad; James A. Wakefield; John S. Waugh; John Vivian Wells; Carolyn K. Wells; Travis Winsor; George Wolf; Wough; and J. Yerushalmy. 92613920-4198 (U.S. Ex. 32,132); 503654113-4113 (U.S. Ex. 86,310); 503654114-4153 (U.S. Ex. 86,311); 293001439-1443 (U.S. Ex. 28,115); LG2000495-0519 (U.S. Ex. 86,312).

(3) Lawyers Special Projects

463. In addition to CTR Special Projects, Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American also conducted special research projects on behalf of the Enterprise, often referred to as Lawyers Special Projects, under the guidance of the Ad Hoc Committee. The Ad Hoc Committee was made up of a Defendants' litigation counsel and other industry agents appointed to coordinate tobacco industry activity with respect to research. 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

464. An April 12, 1966 document entitled "The 'Mission' of the President of The Tobacco Institute" discussed the Ad Hoc Committee stating that it was "composed of lawyers

SECTION I.

representing each of the six major cigarette manufacturers [Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American] and was set up originally to assure efficient handling of medical evidence, and provide witnesses in health litigation. More recently Ad Hoc has been charged with preparing a compendium of needed research, both 'practical' and 'basic' – projects are with CTR Special Projects or Ad Hoc." 502645038S-5038Z at 5038W (U.S. Ex. 23,053).

465. In an October 27, 1966 memorandum from David Hardy to Ad Hoc Committee members Janet Brown, Kevin Carroll, Donald Cohen, Edward Cooke, Francis Decker, Alexander Holtzman, Edwin Jacob, William Shinn, and Edward DeHart, Hardy enclosed an outline of assignments for drafting industry position statements. 1005154394-4395 (U.S. Ex. 36,127); 1005154396-4401 (U.S. Ex. 36,128).

466. In another October 27, 1966 letter, David Hardy of Shook, Hardy & Bacon, discussed Ad Hoc projects with Alexander Holtzman, then an attorney with Conboy, Hewitt, O'Brien & Boardman. With respect to Holtzman's Ad Hoc assignments, Hardy stated: "I am counting on you strongly in shaping up some real ammunition for any upcoming hearings." 1005154393-4393 (U.S. Ex. 36,126).

467. In a September 1, 1967 letter, Robert Hockett, Associate Scientific Director of CTR, described the Ad Hoc program to Addison Yeaman. He wrote, "We really have two research programs now – the SAB program and the Ad Hoc program. The former is aimed at basic issues and ultimate solutions; the latter at immediate situations which must be handled or not." 70124399-4400 at 4399 (U.S. Ex. 31,506).

SECTION I.

468. Ad Hoc Committee Special Project funding was paid from Lawyers Special Accounts, which were initially maintained by Edwin Jacob's law firm and then transferred to Shook, Hardy & Bacon in 1986. In 1986, Shook, Hardy & Bacon advised that it anticipated higher funding requests for "certain witness development expenses incurred by national litigation counsel." 2015037179-7182 (U.S. Ex. 20,320); 507877173-7174 at 7173 (U.S. Ex. 20,800); 682166938-6938 (U.S. Ex. 86,313).

(a) Special Account No. 3

469. Special Account No. 3 was maintained to coordinate smoking and health databases for use by the members of the Enterprise. A January 15, 1975 memorandum from Frederick Haas, Liggett General Counsel, to Arthur Sloat, President of Liggett, describes how Defendants used Special Account No. 3 and Special Account No. 4: "Account #3 is the central file available to company and litigating counsel. . . . It is separated from Account #4 because we have considered it to be lawyers' work product, and, therefore, not subject to subpoena. Account #4 is utilized to obtain the services of doctors and scientists who could be available for Congressional hearings, litigation, etc." He further stated, "I and other lawyers who have for several decades been close to the litigation aspects of smoking and health have consistently found that the work done from the funds generated from the above accounts have been extremely important in defending lung cancer and related cases." LG2021550-1550 (U.S. Ex. 21,209).

(b) Special Account No. 4

(i) Nature of Special Account No. 4

470. From 1969 through at least 1989, the contributors to Special Account No. 4,

SECTION I.

which was used on behalf of the Enterprise for lawyers' special project funding, consultancy fees, and witness expenses, included American, Philip Morris, R.J. Reynolds, Brown & Williamson, Liggett, and Lorillard. <http://tobaccodocuments.org/atc/13255544.html> (U.S. Ex. 87,687); 80680301-0303 (U.S. Ex. 21,066); 80680283-0285 (U.S. Ex. 21,065); 2015038280-8284 (U.S. Ex. 20,321); 2015028333-8336 (U.S. Ex. 20,314); 80680143-0144 (U.S. Ex. 21,064); <http://tobaccodocuments.org/atc/13254063.html> (U.S. Ex. 21,858); 2015054674-4677 (U.S. Ex. 20,327); 2015026550-6553 (U.S. Ex. 20,313); 1005122219-2222 (U.S. Ex. 20,214); 100512228-2231 (U.S. Ex. 23,333); 1005122237-2240 (U.S. Ex. 20,215); 1005122246-2249 (U.S. Ex. 20,216); 1005122257-2260 (U.S. Ex. 20,217); 1005122262-2265 (U.S. Ex. 20,218); 1005122267-2271 (U.S. Ex. 20,219); 03638929-8931 (U.S. Ex. 20,059); 2015042056-2059 (U.S. Ex. 21,862); 2015042079-2082 (U.S. Ex. 20,325); 2015042069-2072 (U.S. Ex. 22,949); 507875857-5859 (U.S. Ex. 20,795); 507876993-6994 (U.S. Ex. 20,799); 507875832-5834 (U.S. Ex. 20,794); 507876986-6987 (U.S. Ex. 20,798); 507876979-6979 (U.S. Ex. 20,797); 507875698-5700 (U.S. Ex. 22,953); <http://tobaccodocuments.org/atc/13232355.html> (U.S. Ex. 87,688); 507875674-5674 (U.S. Ex. 20,793); 2015037179-7182 (U.S. Ex. 20,320); ATX140000938-0939 (U.S. Ex. 21,122); 03638985-8985 (U.S. Ex. 86,314); 682069982-9982 (U.S. Ex. 86,315).

471. A January 11, 1967 letter from Edwin Jacob to Frederick Haas, Cyril Hetsko, Henry Ramm, Paul Smith, and Addison Yeaman requested contribution to Cabell, Medinger, Forysth & Decker's (Edwin Jacob's law firm at the time) Special Account No. 4 to pay for the expenses of Arthur D. Little Company's multivariate analysis work. Jacob advised that the

SECTION I.

"funds in this account will be used solely for these A. D. Little projects and such other projects as may be designated by you as payable from that account." 03639032-9033 (U.S. Ex. 29,289).

472. A May 18, 1971 document prepared by Arthur Stevens of Lorillard noted the nature of "Special Account No. 4, which is used for Congressional and regulatory matters." 80680229-0229 (U.S. Ex. 31,967).

473. A September 19, 1973 document prepared by DeBaun Bryant of Brown & Williamson stated that Special Account No. 4 "is used to maintain expenses incurred for certain research work such as that done by Arthur D. Little on multivariate analysis; work performed by witnesses in preparation for Congressional or federal agencies hearings. The following companies contribute equal amounts to this account: American Brands, Brown & Williamson, Liggett & Myers, P. Lorillard, Philip Morris, Reynolds." 682150942-0942 (U.S. Ex. 86,491).

474. A December 9, 1977 document prepared by Max Crohn, Assistant General Counsel for R.J. Reynolds, further described Special Account No. 4: "Special Account No. 4 has been used to pay expenses and fees connected with expert consultancies and statement preparation." <http://energycommerce.house.gov/tobacco/docs/bw/0012685027.tif> (U.S. Ex. 86,815).

475. A document entitled "Special Account No. 4 - funding of Crohn Subcommittee Expenses and General Review" indicated that during a "General Counsel meeting" on January 4, 1978, it was agreed that "Special Account No. 4 could be used for paying fees and expenses of expert witnesses willing to prepare statements or consult." 03658901-8901 (U.S. Ex. 20,061).

476. A January 27, 1978 memorandum to the file prepared by Arthur Stevens of

Lorillard noted that

At a Committee of Counsel meeting on January 4, 1978 the future handling of Special Account No. 4 was discussed. Each project to be funded out of Special Account No. 4 will be the subject of specific prior approval by the Committee of Counsel. However, blanket approval was given by the Committee of Counsel for expenditures out of the account not to exceed \$10,000 per year, without the need for prior approval. L&M noted that it will participate in the funding of Special Account No. 4 during 1978 only to the extent that it did in 1977 (approximately \$40 - \$45,000?).

85675219-5219 (U.S. Ex. 32,009).

477. A February 9, 1978 memorandum from Shinn of Shook, Hardy & Bacon to Thomas Ahrensfeld, General Counsel for Philip Morris; Max Crohn, Assistant General Counsel for R.J. Reynolds; Joseph Greer, Vice President and General Counsel for Liggett; Arnold Henson, General Counsel for American; Ernest Pepples, Vice President and General Counsel for Brown & Williamson; and Arthur Stevens, General Counsel for Lorillard, stated in part: "Some of you have asked for additional information concerning funding through Special Account No. 4. This account is administered by Jacob & Medinger and Ed Jacob and I have reviewed the enclosed report. I also enclose a memorandum with regard to funding of projects and would appreciate your advice if you find this to be incorrect in any way. There is probably no need for you to retain those notes once you have satisfied yourself of the current situation." 503655086-5088 at 5086 (U.S. Ex. 20,720); 503655086-5088 (U.S. Ex. 75,190).

478. Another 1978 document described the present and future commitments of Special Account No. 4 funds and the procedure for the approval of emergency matters. The list of industry witnesses included: Aviado, Brown, Eysenck, Spielberger, Hine, Ridgon, Seltzer, Rao,

SECTION I.

Booker, E. Fisher, Valentin, Heimstra, Dunlap, Farris, F. Fisher, Hickey, Moser, Okun, Sterling, Weil, Jones, Bick, Soloff, Kuper, Harvard Medical School (Huber), Stanford Research Institute, Franklin Institute, and the Industry Research Liaison Committee. It was noted that the projects for Weil and Jones in New Orleans and Bick in Los Angeles "may be suitable as a CTR Special Project." LG2024193-4196 at 4195 (U.S. Ex. 21,212); 89694310-4312 (U.S. Ex. 32,089); 89694319-4325 (U.S. Ex. 32,091); 89694313-4318 (U.S. Ex. 32,090).

479. In the 1980s, Defendants Philip Morris, R.J. Reynolds, Brown & Williamson, American, Lorillard, and Liggett, through the law firm of Shook, Hardy & Bacon, contracted with Battelle Laboratories of Columbus, Ohio to conduct studies on tobacco smoke and nicotine in the environment. The project was funded through Special Account No. 4. Phase I involved the study of nicotine and the possible conversion of nicotine to cotinine in indoor atmospheres. Phase II involved the study of environmental tobacco smoke in indoor atmospheres. Alexander Spears, Research Director of Lorillard, and Murray Senkus, Research Director of R.J. Reynolds, assisted attorneys from Shook, Hardy & Bacon, including Patrick Sirridge, with review of the project, including site visits. Members of the Tobacco Institute Advisory Group on Environmental Tobacco Smoke consisting of Frank Colby, Michael Davidson, J.G. Easterle, Raymond Fagan, Charles Nystrom, Thomas Osdene, Alexander W. Spears, and Patrick Sirridge reviewed and approved the Phase II project. Philip Morris, R.J. Reynolds, Brown & Williamson, American, Lorillard, and Liggett also contracted, through the law firm of Covington & Burling, with Battelle Pacific Northwest Laboratories for inhalation toxicity studies. 01348599-8599 (U.S. Ex. 87,689); 01348503-8503 (U.S. Ex. 86,316); 01348490-8490 (U.S. Ex. 86,317);

SECTION I.

01348473-8473 (U.S. Ex. 86,318); 01348483-8488 (U.S. Ex. 86,319); 01348489-8489 (U.S. Ex. 86,320); 01348465-8465 (U.S. Ex. 86,321); 01348315-8315 (U.S. Ex. 26,580); 502667789-7790 (U.S. Ex. 29,584); 503673514-3515 (U.S. Ex. 29,720); 521028996-8997 (U.S. Ex. 30,443); 01348441-8441 (U.S. Ex. 34,535); 01348727-8727 (U.S. Ex. 86,322); 521028981-8982 (U.S. Ex. 30,442); 503673416-3417 (U.S. Ex. 29,719); 2010045875-5876 (U.S. Ex. 36,519); 682008633-8635 (U.S. Ex. 30,939); 682008636-8636 (U.S. Ex. 30,941); 19672-19674 (U.S. Ex. 86,323); 01346204-6205 (U.S. Ex. 34,532); 01346206-6208 (U.S. Ex. 34,533).

480. On September 10, 1981, a report was prepared on "Meeting of Company Counsel and Ad Hoc Committee Members" which discussed special projects and the Literature Retrieval Division. In it, the following comments were attributed to Edwin Jacob: "These 'special projects' are litigation and hearing oriented," and "Difference between C.T.R. and Special Four (lawyers' projects). Director of C.T.R. reviews special projects – if project was problem for C.T.R., use Special Four. Also, if there are work product claims, need the lawyers' protection . . . done through Special Four because of possibility that C.T.R. would be subpoenaed." The comments, "Concerned that science has become diluted and secondary to lawyers' advocacy interests," were attributed to Stevens of Lorillard. Thomas Bezanson of Chadbourne & Parke also prepared a memorandum regarding the September 10, 1981 meeting. 2023918181-8185 at 8181 (U.S. Ex. 20,397); 2045752086-2093 (U.S. Ex. 20,466); ATX9275490271-0280 (U.S. Ex. 36,231).

481. A January 10, 1983 chart demonstrates that Defendants jointly funded through Special Account No. 4. both consultancies (listed were Domingo Aviado, Theodore Blau, Walter Booker, Marc Micossi, Ragner Rylander, Carl Seltzer, and Murray Senkus of R.J. Reynolds) and

SECTION I.

research projects (listed were Battelle Columbus Laboratories, Melvin First, Arthur Furst, Nancy Mello and Jack Mendelson, L.G.S. Rao, and Charles Spielberg). This chart also recorded a Special Account No. 5 (listed were Richard Brotman and Alfred Freedman) and "Other Special Projects" (listed were Richard Gorlin and Lloyd Klein through the Heart Research Foundation in New York City). This chart was sent on January 11, 1983, by Sirridge of Shook, Hardy & Bacon to Joseph Greer, General Counsel for Liggett; Arnold Henson, General Counsel for American; Alexander Holtzman, General Counsel for Philip Morris; Ernest Pepples, General Counsel for Brown & Williamson; Arthur Stevens, General Counsel for Lorillard; and Samuel Witt, General Counsel for R.J. Reynolds. LG2002618-2626 (U.S. Ex. 21,200); LG2002617-2617 (U.S. Ex. 21,199); 1005061636-1636 (U.S. Ex. 35,962); 1005061637-1645 (U.S. Ex. 35,963).

482. A Lorillard document outlining its 1986 budget stated that Special Account No. 4 was "[t]o sponsor smoking and health research. For witnesses and statements for legislative and regulatory hearings and proceedings (pass-through payments)." 85174505-4505 (U.S. Ex. 31,997).

483. Special Account No. 4 was first administered by Edwin Jacob's law firm and then by Shook, Hardy & Bacon starting in 1986. Attorneys from Jacob's firm and Shook, Hardy & Bacon would periodically request contributions from Philip Morris, R.J. Reynolds, American, Brown & Williamson, Lorillard, and Liggett, and send accountant's reports regarding the activity in the account. 682069986-9986 (U.S. Ex. 86,324); 682069987-9987 (U.S. Ex. 86,325); 682069955-9955 (U.S. Ex. 30,949); 682069952-9952 (U.S. Ex. 30,948); 682069951-9951 (U.S. Ex. 30,947); 682069923-9923 (U.S. Ex. 30,946); 682069922-9922 (U.S. Ex. 30,945);

SECTION I.

682069917-9917 (U.S. Ex. 30,944); 682150944-0944 (U.S. Ex. 36,161); 682150943-0943 (U.S. Ex. 36,160); 682150938-0938 (U.S. Ex. 36,159); 682150937-0937 (U.S. Ex. 36,158); 682150933-0933 (U.S. Ex. 36,157); 682150932-0933 (U.S. Ex. 30,951); 682150940-0940 (U.S. Ex. 86,326); 682150931-0931 (U.S. Ex. 36,155); 682150925-0925 (U.S. Ex. 36,154); 507877173-7174 (U.S. Ex. 20,800); 682166939-6939 (U.S. Ex. 86,327); 682166940-6940 (U.S. Ex. 86,328); 507877176-7176 (U.S. Ex. 29,925); 507877175-7175 (U.S. Ex. 86,329); 507877176-7176 (U.S. Ex. 29,925); 682166937-6937 (U.S. Ex. 86,330); 682166936-6936 (U.S. Ex. 86,331); 682166935-6935 (U.S. Ex. 86,332); 682166930-6930 (U.S. Ex. 86,333); 682166929-6929 (U.S. Ex. 86,334); 680302487-2487 (U.S. Ex. 30,885); 86002376-2377 (U.S. Ex. 32,044).

(ii) Reporting Lawyers Special Projects to the Committee of Counsel

484. As with CTR Special Projects, progress and status of Lawyers Special Projects were sent to Committee of Counsel members. For example, on March 27, 1980, Edwin Jacob sent a letter to Thomas Ahrensfield, Max Crohn, Joseph Greer, Arnold Henson, Ernest Pepples, and Art Stevens, enclosing "two papers being sent to the publisher by Kieron O'Conner, who has been working with Professor Eysenck, in part supported by the consultation research funds you have provided to Professor Eysenck through Special Account #4." 521029758-9788 (U.S. Ex. 30,452).

485. On March 28, 1980, Jacob sent a letter to Thomas Ahrensfield, Max Crohn, Joseph Greer, Arnold Henson, Ernest Pepples, and Art Stevens enclosing a progress report from Professor Spielberg. 521032463-2496 (U.S. Ex. 30,476) 500515939-5939 (U.S. Ex. 29,465);

502822004-2004 (U.S. Ex. 29,586); 01355540-5540 (U.S. Ex. 26,583); BWX0002848-2848 (U.S. Ex. 36,175).

(iii) Lawyers' Recommendations for Special Account No. 4

486. General Counsel from Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American and lawyers from Jacob, Medinger & Finnegan and Shook, Hardy & Bacon made recommendations with respect to the funding of Special Account No. 4 projects.

487. For example, in a memorandum dated December 10, 1965, Alexander Holtzman of the law firm Conboy, Hewitt, O'Brien & Boardman, advised Janet Brown, Donald Cohen, Edward Cooke, David Hardy, Ed Jacob, and Butler about a proposal from P.E.S. Palmer of the Department of Radiology, University of Cape Town, South Africa, "for a study of lung cancer in a remote region of Southern Rhodesia." Palmer had come to his attention through his contact with Lauren V. Ackerman of Washington University (a researcher funded by the tobacco industry). The handwritten notation in the upper left-hand side of the document indicated "Rec. approval Ad Hoc!!" 01124431-4431 (U.S. Ex. 26,398).

488. On December 29, 1966, Alexander Holtzman, then Assistant General Counsel of Philip Morris, sent a letter to Paul Smith, General Counsel of Philip Morris, on possible Ad Hoc Committee funding for Alvan L. Baruch and Maurice Segal to write a paper to submit for publication on the information tending to show that cigarette smoking was not a cause of either chronic bronchitis or emphysema. 1005107379-7379 (U.S. Ex. 20,208).

489. On February 9, 1978, William Shinn of Shook, Hardy & Bacon sent a letter to Thomas Ahrensfield, General Counsel of Philip Morris; Max Crohn, General Counsel of R.J.

SECTION I.

Reynolds; Joseph Greer, General Counsel of Liggett; Arnold Henson, General Counsel of American; Ernest Pepples, General Counsel of Brown & Williamson; and Arthur Stevens, General Counsel of Lorillard, recommending the approval of funding for Hans Eysenck through Special Account No. 4. 03638976-8979 (U.S. Ex. 46,483).

490. On May 31, 1979, Edwin Jacob also sent a letter to Thomas Ahrensfield, Max Crohn, Joseph Greer, Arnold Henson, Ernest Pepples, and Art Stevens recommending an additional year of funding for Eysenck through Special Account # 4; at the same time, he recommended further funding for the CTR Special Project for Eysenck. 507731387-1388 (U.S. Ex. 29,868).

491. On February 12, 1982, Pepples sent a letter to Sirridge of Shook, Hardy & Bacon, recommending the renewal of an annual grant to Arthur Furst be paid from Special Account No. 4. 521029995-0008 (U.S. Ex. 20,887).

492. Such industry attorney recommendations continued from the 1960s through the 1980s. LG2024197-4197 (U.S. Ex. 34,106); 521029215-9222 (U.S. Ex. 30,445); 01335056-5057 (U.S. Ex. 26,481); 503655001-5002 (U.S. Ex. 29,709); 1000022740-2741 (U.S. Ex. 35,080); BWX0004100-4101 (U.S. Ex. 36,219); BWX0002845-2845 (U.S. Ex. 36,174); 502520270-0270 (U.S. Ex. 29,557); 01347171-7172 (U.S. Ex. 26,579); 521029440-9440 (U.S. Ex. 30,449); 01334907-4907 (U.S. Ex. 86,336); 1005125765-5765 (U.S. Ex. 36,095); 01348697-8698 (U.S. Ex. 86,337); 01346134-6135 (U.S. Ex. 26,577); 521029280-9285 (U.S. Ex. 30,446); 1005125796-5796 (U.S. Ex. 36,096); 1005125223-5224 (U.S. Ex. 36,087); 521031322-1325 (U.S. Ex. 30,463); 503566029-6030 (U.S. Ex. 86,338); BWX0002861-2862 (U.S. Ex. 36,178);

SECTION I.

503673531-3532 (U.S. Ex. 29,721) 1005125153-5154 (U.S. Ex. 36,085); 521029914-9918 (U.S. Ex. 30,453); 1005047922-7923 (U.S. Ex. 35,938); 521032350-2351 (U.S. Ex. 30,473); 503673356-3357 (U.S. Ex. 29,717); 521029990-9992 (U.S. Ex. 30,455); 503568475-8476 (U.S. Ex. 86,339); BWX0003802-3803 (U.S. Ex. 36,203); 521032142-2143 (U.S. Ex. 30,471); 1005064674-4674 (U.S. Ex. 35,974); 521028822-8822 (U.S. Ex. 30,439); 1005064613-4613 (U.S. Ex. 35,970); 503657525-7525 (U.S. Ex. 86,341); 507875777-5778 (U.S. Ex. 86,342); 521030551-0553 (U.S. Ex. 30,459); 03751441-1442 (U.S. Ex. 29,333); 508074841-4842 (U.S. Ex. 29,949); 2010045900-5901 (U.S. Ex. 36,520); 80411597-1598 (U.S. Ex. 31,961); 2010045907-5908 (U.S. Ex. 36,521); 507734373-4374 (U.S. Ex. 86,343); 86002656-2656 (U.S. Ex. 56,082); 86002593-2594 (U.S. Ex. 56,081).

(iv) Lawyers' Approval of Special Account No. 4 Funding

493. General Counsel from Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American advised Edwin Jacob's law firm and/or Shook, Hardy & Bacon whether or not their companies would contribute to the Special Account No. 4 project as the following examples confirm.

a. American Tobacco

494. A letter from Janet Brown, attorney with Chadbourne, Parke, Whiteside & Wolff, counsel for American, to Arnold Henson, Senior Vice President and General Counsel for Defendant American, dated August 11, 1981 confirmed American's participation in the joint funding of Thomas Mancuso, Charles Spielberger, and Evans through Special Account No. 4. ATX30 0011154-1154 (U.S. Ex. 21,132).

b. Brown & Williamson

495. A letter dated September 5, 1979 from Ernest Pepples to David Hardy of Shook, Hardy & Bacon, confirmed that "Brown & Williamson agrees to the use of Special Account No. 4 for funding Ms. Bowers." 521029306-9306 (U.S. Ex. 21,531).

496. On November 16, 1979, Pepples sent a letter to Patrick Sirridge of Shook, Hardy & Bacon indicating that Brown & Williamson would fund "Dr. Blau's work as a special non-CTR research project." 521029284-9284 (U.S. Ex. 87,690).

497. In 1980, Brown & Williamson agreed to fund Rodger Bick "out of Special Account No. 4." In 1981, they agreed to fund Theodore Blau's "non-CTR special project." In 1983, they agreed to fund Carlos Hilado "from Special Fund 4" and Arthur Furst "to be paid from Special Fund 4." 521029215-9222 (U.S. Ex. 30,445); 521029280-9285 (U.S. Ex. 30,446); 521030551-0553 (U.S. Ex. 30,459); 521029990-9992 (U.S. Ex. 30,455).

498. In 1982, Brown & Williamson agreed to fund Theodore Blau and Melvin First out of Special Fund 4. In 1983, Brown & Williamson agreed to fund Arthur Furst out of Special Fund 4. 521029280-9285 (U.S. Ex. 30,446); 521029914-9918 (U.S. Ex. 30,453); 521029990-9992 (U.S. Ex. 30,455).

c. Lorillard

499. A June 12, 1978 letter from Arthur Stevens to Edwin Jacob of Jacob & Medinger, confirmed that Lorillard would participate in the joint renewed funding for Hans Eysenck through Special Account No. 4. 85674693-4693 (U.S. Ex. 23,013).

500. A May 14, 1980 letter from Stevens to William Shinn of Shook, Hardy & Bacon

SECTION I.

confirmed that Lorillard would participate in the "funding of a Special 4 project for a contract for consultancy services between your firm and Murray Senkus [of R.J. Reynolds]." 01331861-1861 (U.S. Ex. 26,464).

501. A July 7, 1982 letter from Stevens to Donald Hoel of Shook, Hardy & Bacon confirmed the use of Special Account No. 4 funds to purchase word processing equipment for use by Carl Seltzer. 85678849-8849 (U.S. Ex. 32,022).

502. By letter dated October 5, 1990, Stevens advised Patrick Sirridge of Shook, Hardy & Bacon that Lorillard would participate in continued funding of Rodger Bick's Lawyer's Special Project for 1991. 86002657-2658 (U.S. Ex. 56,083).

503. Stevens also sent letters to Shook, Hardy & Bacon which confirmed Lorillard's participation for the joint funding through Special Account No. 4 of Blau in 1982, Melvin First in 1982, Murray Senkus of R.J. Reynolds in 1982, Zeidman in 1983, and Blau in 1983. 01335102-5102 (U.S. Ex. 26,483); 01335447-5447 (U.S. Ex. 26,489); 01346076-6076 (U.S. Ex. 26,574); 01338970-8970 (U.S. Ex. 26,573); 01335086-5086 (U.S. Ex. 26,482).

504. Lorillard also reviewed special projects proposals in-house and critiqued proposed publications resulting from special project funding. 01335026-5026 (U.S. Ex. 86,614); 01335103-5103 (U.S. Ex. 26,484); 01335449-5449 (U.S. Ex. 26,491); 01335027-5027 (U.S. Ex. 26,479).

d. R.J. Reynolds

505. A letter dated March 31, 1982, from Samuel Witt, Vice President and General Counsel for R.J. Reynolds, to Sirridge of Shook, Hardy & Bacon, gave R.J. Reynolds's approval

SECTION I.

for funding Arthur Furst's 1982 grant. The letter stated, "We agree that this should be paid from special fund four." 502499420-9420 (U.S. Ex. 21,720).

506. On October 31, 1985, Samuel Witt, Vice President, General Counsel and Secretary of R.J. Reynolds sent a letter to Patrick Sirridge of Shook, Hardy & Bacon advising that R.J. Reynolds agreed to contribute to "Dr. Blau's literature review project" through Special Fund 4." 507731747-1747 (U.S. Ex. 29,894).

e. Liggett

507. A letter dated June 27, 1984, from Josiah Murray, Vice President and General Counsel for Liggett, to Ed Jacob enclosed Liggett's quarterly contribution to Special Account No. 4. 507875702-5702 (U.S. Ex. 21,648).

f. Philip Morris

508. A letter dated August 15, 1978, from Alexander Holtzman of Philip Morris to Donald Hoel of Shook, Hardy & Bacon informed Hoel that Philip Morris would participate in the joint payment requested for Charles Hines that would be made from Special Account No. 4. 2010047953-7953 (U.S. Ex. 21,483).

509. A letter dated April 18, 1983, from Frederic Newman, Assistant General Counsel of Philip Morris, to attorneys Arthur Stevens, James Chapin, Joseph Greer, Joseph Murray, Paul Duke, Ernest Pepples, Samuel Witt, Arnold Henson, John Rupp and Bernard O'Neil, indicated that "a Special Research Project on proposed ventilation standards . . . will be performed by Code Consultants, Incorporated . . . the required funding of \$26,750 will be handled through Special

Fund 4, and other arrangements will be coordinated through Shook Hardy & Bacon."

503688635-8635 (U.S. Ex. 86,344).

(v) Individuals and Organizations Funded Through Special Account No. 4

510. Documents reflect that, at a minimum, the following individuals and organizations received funding through Special Account No. 4 beginning in the 1960s through the 1990s: Able-Lands, Inc.; Lauren Ackerman; ACVA Atlantic Inc.; George Albee; Aleph Foundation; Arthur D. Little, Inc.; Aspen Conference; Atmospheric Health Sciences; Domingo Aviado; James Ballenger; Alvan L Barach; Walter Barker; Broda O. Barnes; Battelle Columbus Laboratories; Battelle Memorial Institute; Walter Becker; Peter Berger; Rodger L. Bick; Billings & Gussman, Inc.; Richard Bing; BioResearch Laboratories; Theodore Blau; Irvin Blose; Walter Booker; Evelyn J. Bowers; Thomas H. Brem; Lyman A. Brewer, III; Brigham Young University; Oliver Brooke; Richard Brotman; Barbara B. Brown; K. Alexander Brownlee; Katherine Bryant; Victor B. Buhler; Thomas Burford; J. Harold Burn; Marie Burnett; Maurice Campbell; Carney Enterprises, Inc.; Duane Carr; Rune Cederlof; Domenic V. Cicchetti; Martin Cline; Code Consultants Inc.; Cohen, Coleghety Foundation, Inc.; Colucci, & Associates, Inc.; Computerland; W. Clark Cooper; A. Cosentino; Daniel Cox; Gertrude Cox; CTR; Geza De Takato; Bertram D. Dimmens; Charles Dunlap; Henry W. Elliott; Engineered Energy Mgt. Inc.; Environmental Policy Institute; J. Earle Estes; Frederick J. Evans; William Evans; Expenses related to Congressional Hearings in Washington D.C.; Hans J. Eysenck; Eysenck Institute of Psychiatry; Jack M. Farris; Sherwin J. Feinhandler; Alvan R. Feinstein; Herman Feldman; Edward Fickes; T. Finley; Melvin First; Edwin Fisher; R. Fisher; Merritt W. Foster; Richard Freedman; Herbert

SECTION I.

Freudenberger; Fudenberg; Arthur Furst; Nicholas Gerber; Menard M. Gertler; Jean Gibbons; Carl Glasser; Donald Goodwin; B. Greenberg; Alan Griffen; F. Gyntelberg; Harvard Medical School; Hearings-Kennedy-Hart Bill; William Heavlin; Norman Heimstra; Joseph Herkson; Richard J. Hickey; Carlos Hilado; Charles H. Hine; Hine, Inc.; Harold C. Hodge; Gary Huber; Wilhelm C. Hueper; Darrell Huff; Duncan Hutcheon; Industry Research Liaison Committee; Information Intersciences, Inc.; International Consultancy; International Technology Corporation; International Information Institute, Inc.; J.B. Spalding Statistical Service; J.F. Smith Research Account; Jacob, Medinger & Finnegan; Joseph Janis; Roger Jenkins; Marvin Kastenbaum; Leo Katz; Kirschbaum; Kravetz Levine & Spotnitz; Lawrence L Kuper; Mariano La Via; H. Langston; William G. Leaman; Michael Lebowitz; Samuel B. Lehrer; William Lerner; Edward Raynar Levine; G.J. Lieberman; Arthur D. Little; S.C. Littlechild; Eleanor Macdonald; Thomas Mancuso; Nathan Mantel; R. McFarland; Meckler Engineering Group; Milton Meckler; Nancy Mello; Jack Mendelson; Michigan State University; Marc Micozzi; Irvin Miller; K. Moser; Albert Niden; Judith O'Fallon; John O'Lane; William Ober; J.H. Ogura; Ronald Okun; Ingram Olkin; Thomas Osdene (Philip Morris); Peat, Marwick Main & Co.; Thomas L. Petty; Pitney, Hardin & Kipp; Leslie Preger; Walter J. Priest; R. Proctor; Terrence P. Pshler; Public Smoking Research Group; R.W. Andersohn & Assoc.; L.G.S. Rao; Herbert L. Ratcliffe; Attilio Renzetti; Response Analysis Project; Response Analysis Consultation; R.H. Rigdon; Jay Roberts; Milton B. Rosenblatt; John Rosencrans; Walter Rosenkrantz; Ray H. Rosenman; Linda Russek; Henry Russek; Ragnar Rylander; George L. Saiger; D.E. Sailagyi; I Richard Savage; Richard S. Schilling; Schirmer Engineering Corp.; S. Schor; G.N. Schrauzer; Charles Schultz; John Schwab;

SECTION I.

Carl L. Seltzer; Murray Senkus (R.J. Reynolds); Paul Shalmy; R. Shilling; Shook, Hardy & Bacon; Henry Shotwell; Allen Silberberg; N. Skolnik; JF Smith; Louis A. Soloff; Sheldon C. Sommers (CTR); JB Spalding; Charles Spielberg; Charles Spielberger; Lawrence Spielvogel; St. George Hospital & Medical School; Stanford Research Institution Project; Russell Stedman; Arthur Stein; Elia Sterling; Theodor Sterling; Thomas Szasz; The Foundation for Research in Bronchial Asthma and Related Diseases; The Futures Group; Paul Toannidis; Trenton, New Jersey Hearings; Chris P. Tsokos; University of South Florida; Helmut Valentin; Richard Wagner; Norman Wall; Wayne State University; Weinberg Consulting Group; Roger Wilson; Wisconsin Alumni Research Foundation; Jack Wiseman; George Wright; John P. Wyatt; J. Yerushalmy; and Irving Zeidman. 01347232-7243 (U.S. Ex. 75,293); LG2004445-4445 (U.S. Ex. 86,345); LG2004512-4512 (U.S. Ex. 86,346); LG2004838-4838 (U.S. Ex. 86,347); LG2004847-4847 (U.S. Ex. 86,348); LG2004857-4857 (U.S. Ex. 86,349); 03638929-8931 (U.S. Ex. 20,059); 03746156-6159 (U.S. Ex. 86,350); 03746164-6172 at 6168 (U.S. Ex. 87,691); 03746174-6183 at 6178 (U.S. Ex. 87,692); 03746244-6244 (U.S. Ex. 86,351); 03746253-6262 at 6256 (U.S. Ex. 85,646); 03746309-6316 at 6313 (U.S. Ex. 85,355); 03746320-6331 at 6327 (U.S. Ex. 75,305); 85672200-2200 (U.S. Ex. 86,352); 86002410-2413 (U.S. Ex. 85,716); ATX090001902-1904 (U.S. Ex. 86,353); ATX090002446-2448 (U.S. Ex. 86,354); ATX140000938-0939 (U.S. Ex. 21,122); ATX190000928-0933 (U.S. Ex. 86,355); 507875672-5673 (U.S. Ex. 86,356); 507875674-5674 (U.S. Ex. 20,793); 507875698-5700 (U.S. Ex. 22,953); 507875832-5834 (U.S. Ex. 20,794); 507875857-5859 (U.S. Ex. 20,795); 507876979-6979 (U.S. Ex. 20,797); 507876991-6992 (U.S. Ex. 86,357); 507876993-6994 (U.S.

SECTION I.

Ex. 20,799); 1005122219-2222 (U.S. Ex. 20,214); 100512228-2231 (U.S. Ex. 23,333); 1005122237-2240 (U.S. Ex. 20,215); 1005122262-2265 (U.S. Ex. 20,218); 1005122267-2271 (U.S. Ex. 20,219); 2015026550-6553 (U.S. Ex. 20,313); 2015028333-8336 (U.S. Ex. 20,314); 2015038280-8284 (U.S. Ex. 20,321); 2015054674-4677 (U.S. Ex. 20,327); 1005121995-1997 (U.S. Ex. 36,080); 1005122246-2249 (U.S. Ex. 20,216); 1005122257-2260 (U.S. Ex. 20,217); 2010047954-7955 (U.S. Ex. 86,358); 2015037179-7182 (U.S. Ex. 20,320); 2015041994-1997 (U.S. Ex. 36,654); 2015042056-2059 (U.S. Ex. 21,862); 2015042069-2072 (U.S. Ex. 22,949); 2015042079-2082 (U.S. Ex. 20,325); 507876986-6987 (U.S. Ex. 20,798); 80680143-0144 (U.S. Ex. 21,064); 80680283-0285 (U.S. Ex. 21,065); 80680301-0303 (U.S. Ex. 21,066); 86002393-2396 (U.S. Ex. 86,359); 681510941-0946 (U.S. Ex. 54,074).

(vi) Defendants Would Often Fund the Same Scientist Through Multiple Sources

511. Defendants would often fund the same scientist through a variety of different mechanisms. For example, on September 4, 1986, Patrick Sirridge of Shook, Hardy & Bacon sent a letter to General Counsel Alexander Holtzman of Philip Morris, Wayne Juchatz of R.J. Reynolds, Josiah Murray of Liggett, Ernest Pepples of Brown & Williamson, Paul Randour of R.J. Reynolds, and Arthur Stevens of Lorillard, recommending that Richard Hickey receive continued funding: "Because Dr. Hickey no longer has an official university position, we believe it is an appropriate time for his CTR Special Project support to end. However . . . Dr. Hickey [should be paid] for one year, \$12,000. The consultancy would be paid from Shook Hardy & Bacon Special Account." 507875961-5962 at 5961 (U.S. Ex. 20,796).

512. Another example is the multiple source funding for Hans Eysenck, professor at

SECTION I.

the University of London. Eysenck received CTR Special Project funding after initially applying – and being turned down – for a CTR SAB grant in 1969. Eysenck continued to receive CTR Special Project funding for a number of projects through 1986. Eysenck also received CTR SAB grant funding from 1973 through 1976. Jacob also recommended to Thomas Ahrensfield of Philip Morris, Max Crohn of R.J. Reynolds, Joseph Greer of Liggett, Arnold Henson of American, Ernest Pepples of Brown & Williamson, and Art Stevens of Lorillard that Eysenck receive funding through Special Account No. 4 in 1978 and 1979. CTRSP-FILES008806-8806 (U.S. Ex. 21,168); CTRSP-FILES008804-8804 (U.S. Ex. 21,167); CTRSP-FILES008801-8801 (U.S. Ex. 21,166); CTRSP-FILES 08799-8799 (U.S. Ex. 21,165); CTRSP-FILES016124-6124 (U.S. Ex. 21,169); HK1698002-8002 (U.S. Ex. 21,473); 507731385-1385 (U.S. Ex. 20,784); 03747024-7205 (U.S. Ex. 21,538).

(c) Special Account No. 5

513. In a memorandum dated November 8, 1978, from Edwin Jacob of Jacob & Medinger to Thomas Ahrensfield of Philip Morris; Joseph Greer, Liggett; Arnold Henson, American; Ernest Pepples, Brown & Williamson; Henry Roemer, R.J. Reynolds; and Art Stevens, Lorillard, and copied to Janet Brown of Chadbourne & Parke; DeBaun Bryant, Brown & Williamson; Max Crohn, R.J. Reynolds; Alexander Holtzman, Philip Morris; Lester Pollack, Lorillard; and William Shinn of Shook, Hardy & Bacon, Edwin Jacob enclosed a two-year, \$400,000 research proposal from Alfred M. Freedman and Richard Brotman. Jacob advised, "Janet Brown, Bill Shinn and I have discussed this proposal with [Brotman and Freedman]. We recommend its approval." The Brotman/Freedman project was designated by counsel as Special

SECTION I.

Account No. 5. 521029470-9485 (U.S. Ex. 30,450); 03639217-9217 (U.S. Ex. 29,290).

514. In a memorandum dated July 3, 1980 from Edwin Jacob to Thomas Ahrensfield, Max Crohn, Arnold Henson, Ernest Pepples, and Art Stevens and copied to Janet Brown and William Shinn, Jacob requested a \$10,000 further contribution from each company to "provide funds for defraying the expenses of the project of Drs. Brotman and Freedman for some months. Please make checks payable to Jacob & Medinger - Special Account # 5." 682070027-0027 (U.S. Ex. 36,145).

515. By memorandum dated February 2, 1982, Timothy Finnegan, partner in the Jacob & Medinger law firm, provided a status report on the Brotman/Freedman project to Joseph Greer, Arnold Henson, Alexander Holtzman, Ernest Pepples, Art Stevens, and Samuel Witt and copies to Janet Brown and Patrick Sirridge of Shook, Hardy & Bacon. Finnegan stated:

In broad outline, the purpose of the original project was to combat what Drs. Freedman and Brotman perceived to be the growing repression by the government and other establishment forces of the public's "unacceptable" routine behavior through regulation of such behavior as anti-social, criminal or ill. The long-term focus of the project was to be on abuse of the regulatory process and of medical power in defining risks and "unhealthy" habits. Tobacco was to be treated in this overall behavioral context, unrelated to smoking per se. . . . The vehicle for this effort by Drs. Freedman and Brotman was to be The Center for Behavioral Analysis of Policy Issues (later renamed The Madison Institute for Policy Research and Development). A two-year budget in the total amount of \$400,000 was approved to be funded on a per capita basis by American, Brown & Williamson, Lorillard, Philip Morris and Reynolds.

521029470-9485 at 9475-9476 (U.S. Ex. 30,450).

516. A February 1982 memorandum stated that there were two long-term goals of the Brotman/Freedman Institute: "establishing the Institute's credentials and securing broad-based

funding." The Institute did not, however, attract many other funds. As of February 1982, \$312,500 had been dispersed to the Institute and "the only funding the Institute has received from outside the tobacco industry is the \$25,000 from the Archdiocese of Brooklyn." 521029470-9485 at 9477 (U.S. Ex. 30,450).

517. In the February 1982 memorandum, Timothy Finnegan recommended a new one-year project for Brotman and Freedman for \$237,500, requiring an additional \$150,000 from the contributing companies. Finnegan described the new proposal as:

Drs. Brotman and Freedman, under the auspices of the Institute, propose to conduct, over a one-year period, six "mini-conferences" culminating in an international conference. The purpose of these conferences will be to explore "critical issues in psychiatric classification" which have arisen as a result of DSM III (Diagnostic and Statistical Manual of Mental Disorders) and which must be addressed in connection with DSM IV. Since the ICD (International Classification of Diseases) determines, to a major degree, the content of the subsequent DSM, an international conference is planned which will consider, among other things, the classification issues in the context of the ICD. Controversial issues will be addressed at the conferences in the presence of strong and articulate proponents of opposite positions, and an effort will be made to resolve the controversies in a constructive manner. A monograph will be prepared following an international conference.

521029470-9485 at 9477-9478 (U.S. Ex. 30,450).

518. The issues regarding the Diagnostic and Statistical Manual of Mental Disorders focused on tobacco use disorder and tobacco withdrawal. Finnegan advised that "[c]ontributions would be made by the companies on a per capita basis and would be distributed through Special Account No. 5" and that "Janet Brown, Pat Sirridge and I have met with Drs. Brotman and Freedman to discuss the current proposal. We recommend its approval. We are prepared to

SECTION I.

discuss it further with you as you may see fit." By letter dated February 12, 1982, Ernest Pepples advised Finnegan that "Brown & Williamson agrees with your recommendation." 03746884-6884 (U.S. Ex. 29,324); 521029470-9485 at 9478 (U.S. Ex. 30,450).

519. The Brotman/Freedman project was discussed at the June 1982 Committee of Counsel meeting. By memorandum dated July 15, 1982 addressed to Joseph Greer, Arnold Henson, Alexander Holtzman, Ernest Pepples, Art Stevens, and Samuel Witt and copied to Janet Brown and William Shinn, Chester Wroblewski of Jacob, Medinger & Finnegan provided an update of the proposal outlined in Finnegan's February 2, 1982 memorandum. LG2006022-6023 (U.S. Ex. 34,087); 521029470-9485 (U.S. Ex. 30,450); 511083098-3099 (U.S. Ex. 86,360); 1005125293-5294 (U.S. Ex. 36,088).

520. In July 1982, Arthur Stevens of Lorillard sent the Brotman/Freedman proposal to Lorillard scientist Alexander W. Spears for review. Spears prepared a memorandum to Stevens dated July 30, 1982, which included his assessment of the project. Spears stated:

As you recall, we have discussed the Brotman/Freedman proposals on several occasions in the past, and I have always been very negative with respect to the significance of their proposals to the tobacco industry. I continue to believe that the material is of little potential value to this Industry. If there would be some merit in providing this support, it would have to be in the area of Brotman's and Freedman's value as witnesses in legislative proceedings. . . . Perhaps a reason for our lack of participation can be framed around the inability of Brotman/Freedman to obtain any significant support for their institute from any industry other than tobacco."

By letter dated August 3, 1982 addressed to Chester Wroblewski and copied to Joseph Greer, Arnold Henson, Alexander Holtzman, Ernest Pepples, Samuel Witt, and William Shinn, Arthur Stevens advised that "Lorillard will not participate in the funding of this project." Stevens blind

copied the letter to Curtis Judge, Alexander Spears, and Robert Ave. 01335523-5523 (U.S. Ex. 26,496); 01335522-5522 (U.S. Ex. 26,495); 521029470-9485 (U.S. Ex. 30,450); 01335521-5521 (U.S. Ex. 26,494).

521. The Brotman/Freedman project was approved in 1982 by four of the Defendants: American, Reynolds, Philip Morris and Brown & Williamson. 521029470-9485 (U.S. Ex. 30,450); 1005125164-5164 (U.S. Ex. 36,086); 682070019-0019 (U.S. Ex. 36,144); 682070017-0017 (U.S. Ex. 86,361); 682070016-0016 (U.S. Ex. 86,362); 2075783285-3285 (U.S. Ex. 27,559).

522. The Brotman/Freedman project ran from 1979 through the mid-1980s. When Shook, Hardy & Bacon took over the Jacob & Medinger Special Accounts, Shook, Hardy & Bacon received a check from Jacob & Medinger in the amount of \$37,284.31 "that represented the balance of Special Account No. 5 that had been maintained by the Jacob, Medinger firm." Shook, Hardy & Bacon deposited the funds in its Special Account "to be used for the activities supported [sic] the SH&B – Special Account." Patrick Sirridge of Shook, Hardy & Bacon recommended, by letter dated August 24, 1989 addressed to Alexander Holtzman, Wayne Juchatz, Josiah Murray, Ernest Pepples, Paul Randour and Arthur Stevens and copied to Janet Brown, Francis Decker, and Michael Nims, that "those companies which supported the final extension of the Brotman/Freedman project (American, Brown & Williamson, Philip Morris, and Reynolds) be given per capita credit in the SH&B Special Account to be applied against the next request for funding." 86002376-2377 (U.S. Ex. 32,044).

(4) Institutional Grants

523. Lawyers' Special Accounts were also used to pay for the institutional grants funded by Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American. Defendants funded projects at Harvard University, University of California Los Angeles ("UCLA"), and Washington University. Defendants used institutional grants to promote self-serving research. This was described in a November 17, 1978 memorandum prepared by Robert Seligman, Vice President of Research and Development of Philip Morris, that detailed a November 15, 1978 meeting that was called to assist the Ad Hoc Committee, and discussed institutional grants. Seligman reported that at the meeting William Shinn had stated: "CTR began to lose their luster in the mid-60's and the tobacco industry looked around for more beneficial ways to spend their research dollars on smoking and health. It was at this time that special projects were instituted at Washington University, Harvard University, and UCLA. . . . [T]he industry received a major public relation 'plus' when monies were given to Harvard Medical School." 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902).

524. The institutional grants given to Harvard, UCLA, and Washington University were also discussed at an August 8, 1974 meeting of the Industry's Research Support Planning Committee (also known as the Research Liaison Committee) attended by Cyril Hetsko, General Counsel for American; Curtis Judge, President of Lorillard; William Bates, Assistant Director of Research for Liggett; Clifford Goldsmith of Philip Morris; Henry Roemer, General Counsel for R.J. Reynolds; William Kloepfer, Senior Vice President of the Tobacco Institute; Horace Kornegay, President of the Tobacco Institute; William Gardner, CTR's Scientific Director;

SECTION I.

Leonard Zahn, public relations consultant for CTR; and David Hardy, attorney with Shook, Hardy & Bacon. The minutes state: "The breadth of coverage of these grants exceeds the areas covered by the CTR-SAB in at least two instances. The duration of support and the flexibility of budgeting and of program are greater than with the CTR program. The staff of CTR has offered to exchange information with two of the institutional grants and has done so with one through several contacts. This is basically to avoid unnecessary or avoidable overlap and determine possible gaps." CTR98CONG01187-1189 at 1188-1189 (U.S. Ex. 21,137).

(a) Washington University

525. Defendants funded an institutional grant at Washington University in St. Louis. The purpose of the study funded by this grant was to research the immunologic aspects of cancer. In a February 2, 1971 memorandum, Frederick Haas urged Milton Harrington and Kenneth McAllister to consider funding this project primarily because it would not result in any damaging findings. Haas wrote, "I do not see how [the study] could ricochet to our detriment since the smoking habit has no part in the study and . . . the project is not involved in finding causation." LG2008401-8403 (U.S. Ex. 86,363).

526. Defendants began funding Lauren Ackerman and Paul Lacy at Washington University in 1971 with an initial \$2,000,000 five-year grant. Contributors included Brown & Williamson, Liggett, Lorillard, Philip Morris, R.J. Reynolds, and United States Tobacco. It was recognized that Lacy's "letter to Senator Morse commending the tobacco industry for its support of basic cancer research at Washington University" was beneficial to the industry. 2045752106-2110 at 2107 (U.S. Ex. 20,467); 1003718428-8432 at 8429 (U.S. Ex. 35,902);

SECTION I.

01338888-8888 (U.S. Ex. 26,572); 521033382-3383 (U.S. Ex. 30,478); 521033505-3505 (U.S. Ex. 30,480); 1005142952-2952 (U.S. Ex. 36,112); TIMN0144745-4746 (U.S. Ex. 62,703); 521033485-3486 (U.S. Ex. 30,479).

(b) Harvard University

527. The Defendants' institutional grant at Harvard University was under the direction of Gary Huber. Funding began in 1972, and the participating companies were Defendants American, Brown & Williamson, Liggett, Lorillard, Philip Morris, R.J. Reynolds, along with Larus & Brother, Tobacco Associates, and United States Tobacco. Areas of study included host response to environmental influences, isolation of tobacco smoke components, effects of smoke on heart muscle, and some examination of passive smoking. Arnold Henson of American described three reasons for the Harvard project: "(a) our obligation to spend money on research, (b) the value of Huber to the industry; and (c) the PR value of the Harvard name." ZN25950-5956 (U.S. Ex. 64,794); 96101622-6226 (U.S. Ex. 25,853); 955030735-0737 (U.S. Ex. 86,365); BWX0004364-4375 (U.S. Ex. 36,228).

528. The status of the Harvard project was closely monitored by American, Brown & Williamson, Liggett, Lorillard, Philip Morris, R.J. Reynolds, the Tobacco Institute, Ed Jacob, and attorneys from Shook, Hardy & Bacon and Covington & Burling. Huber, along with other researchers, was asked to provide updates through site visits and oral reports instead of written communications. According to David Hardy of Shook, Hardy & Bacon: "[Q]uite often the scientist who has no legal training and who does not fully understand some of our problems and concerns, exercises little care in his form of expression in written communications. For this

SECTION I.

reason, it was decided by counsel that site visits and oral reports at such site visits would be preferable to written reports . . . would be more informative and would involve far fewer problems." In 1975, Huber attended a meeting of the Committee of Counsel to discuss a number of issues related to the Harvard project. 968003136-3137 (U.S. Ex. 25,857); 961016507-6508 (U.S. Ex. 25,854); 1000207774-7775 (U.S. Ex. 26,078); 2015057132-7132 (U.S. Ex. 86,366); 980076941-6942 (U.S. Ex. 86,367); BWX0004364-4375 (U.S. Ex. 36,228).

529. In 1977, much to the alarm of Defendants, Huber advised William Shinn of Shook, Hardy & Bacon that the results of an experiment indicated that rats exposed to tobacco smoke developed emphysema and that such information would be released. Alexander Holtzman of Philip Morris recommended that the industry prepare a response through the Tobacco Institute. 1005053856-3856 (U.S. Ex. 20,197); 86001059-1071 (U.S. Ex. 86,369); 968003658-3666 (U.S. Ex. 25,860); 961017594-7594 (U.S. Ex. 86,370).

530. Despite this one finding, as summarized by Janet Brown of Chadbourne & Parke, Huber had assisted the Enterprise in numerous ways. In advocating continuing support for Huber, Janet Brown of Chadbourne & Parke wrote in a memorandum dated January 16, 1979, to Arnold Henson of American that "the CTR is becoming antiquated and enfeebled. Whether it could ever be restaffed – even if that were desirable, which is by no mean clear – is a large question. CTR may collapse. The work CTR is doing is far more dangerous to the industry and the Company [American] than anything Huber is doing." Brown described CTR "falling into oversimplified 'saccharin-type research' of an utterly unrealistic kind." 968003658-3666 at 3665 (U.S. Ex. 25,860).

SECTION I.

531. In the late 1970s, issues arose about the adequacy of the facilities at Harvard and whether the project would be renewed. There were extensive meetings between Defendants' representatives, Huber, and Harvard University officials. The Harvard project was ultimately phased out in the early 1980s and Huber ended his affiliation with Harvard. Defendants, however, continued to support Huber's work. 502026481-6487 (U.S. Ex. 29,549); 961017429-7430 (U.S. Ex. 32,399); 2010048605-8606 (U.S. Ex. 36,525); 100371866-8669 (U.S. Ex. 35,905); 2010048831-8834 (U.S. Ex. 36,526); 961017379-7379 (U.S. Ex. 86,371); 680260639-0642 (U.S. Ex. 30,860); 680503434-3439 (U.S. Ex. 30,897); 961000834-0834 (U.S. Ex. 32,366) (U.S. Ex. 75,437) (Confidential); 968003578-3578 (U.S. Ex. 25,858); 01335792-5793 (U.S. Ex. 86,372); 01335777-5778 (U.S. Ex. 26,508); 01335791-5791 (U.S. Ex. 86,373); 01335779-5779 (U.S. Ex. 26,509); 01335794-5794 (U.S. Ex. 86,374); 01335789-5789 (U.S. Ex. 26,510); 01347161-7161 (U.S. Ex. 86,375); 503646200-6200 (U.S. Ex. 29,701); 01335767-5772 (U.S. Ex. 26,506); 01335774-5774 (U.S. Ex. 26,507); 01335761-5764 (U.S. Ex. 26,505); 980078407-8411 (U.S. Ex. 25,865); LWDOJ00089028-9031 (U.S. Ex. 25,952) (Confidential).

532. In 1990, Gary Huber was working on three projects for the industry coordinated through Shook, Hardy & Bacon: The Environmental Tobacco Smoke Project, The Chronic Obstructive Pulmonary Disease Project, and the Gallaher tobacco-asbestos case in Australia. 94349850-9856 (U.S. Ex. 32,293).

(c) UCLA

533. Defendants' institutional grant at UCLA was under the direction of Martin Cline. Funding began in 1974, and the participating companies were Defendants Philip Morris, R.J.

Reynolds, and Brown & Williamson, along with United States Tobacco and Tobacco Associates. Areas of study included proliferative capacity of smokers' and nonsmokers' pulmonary cells; functional response of pulmonary cells to various factors; cell culture systems and specific antigens; and immunotherapy and chemotherapy. ZN25950-5956 (U.S. Ex. 64,794); 01338643-8643 (U.S. Ex. 26,571); TIMN217740-7743 (U.S. Ex. 62,720); TIMN217738-7739 (U.S. Ex. 62,719).

(5) Special Projects at the Tobacco Institute

534. Defendants Philip Morris, R.J. Reynolds, Lorillard, Liggett, and Brown & Williamson also collectively conducted "Special Projects" through the Tobacco Institute. The term "Special Projects" appeared in Tobacco Institute documents as early as 1962; the "Special Projects" were budgeted through the Tobacco Institute's public relations firm, Hill & Knowlton. In 1962, Special Projects were related to the following topics: the British Royal College of Physicians report, the Surgeon General's decision to appoint a special committee, the CBS Reports program, and the development of advertising message proposals. TIMN0070640-0656 (U.S. Ex. 21,299); TIMN0070657-0674 (U.S. Ex. 22,983).

535. In 1963, Tobacco Institute Special Projects "stemmed from activities related to the Surgeon General's special Committee, the NBC proposed program, renewed efforts to develop special paid messages from the industry, and completion of a filmed interview with Doctors Little and Hockett." TIMN0070657-0674 at 0672 (U.S. Ex. 22,983).

536. Throughout the history of the Tobacco Institute, special consultants were consistently paid through Special Projects and Special Accounts. "[T]he most likely area of

requirements for 1964 [Tobacco Institute Special Projects] relates to the aftermath of the report of the Surgeon General's Committee and perhaps the 'Second Phase' study. . . . All staff, **as well as special consultants**" worked on Special Projects. TIMN0070657-0674 at 0672 (U.S. Ex. 22,983) (emphasis added).

537. According to a document dated January 10, 1968, the Tobacco Institute approved, as a Special Project, a pilot study by its public relations firm Tiderock to determine whether the United States Public Health Services smoking and disease survey was refutable. TIMN0016964-6982 at 6975 (U.S. Ex. 21,564).

538. On February 6, 1969, General Counsel of Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, and Liggett gave approval, as a Tobacco Institute Special Project, for the running of a copy of a press release by Clarence Cook Little, CTR's Scientific Director, with a headline declaring "How Much is Known about Smoking and Health." The advertisement was run in major newspapers and medical journals across the country. The cost of the project was approximately \$68,000 and had not been previously budgeted. Stanley Temko, an attorney with Covington & Burling, was asked about the procedure for billing. He advised that the proposed amendment to the budget could be subject to informal submission to the Executive Committee and that Earle Clements, President of the Tobacco Institute, wanted information prior to the General Counsel meeting on March 3, 1969. 1005153098-3099 (U.S. Ex. 20,227); TIMN253001-3001 (U.S. Ex. 21,348) (U.S. Ex. 62,727); TIMN0081698-1698 (U.S. Ex. 21,309); TIMN0000560-0561 (U.S. Ex. 21,874); TIMN0081695-1696 (U.S. Ex. 21,308).

539. Member companies of the Tobacco Institute also utilized the staff of the Tobacco

Institute for projects that would assist Defendants. In a February 9, 1979 letter from Arthur Stevens of Lorillard to Marvin Kastenbaum, Tobacco Institute Director of Statistics, Stevens enclosed a copy of a newspaper article announcing the results of a "smoking-death" survey. Stevens asked: "Please consider the attachment and let me know if you are in a position to undertake a statistical analysis of the stated conclusions." 70124411-4412 (U.S. Ex. 88,417).

E. Committees

(1) Research Review Committee, Research Liaison Committee, and Industry Research Committee

540. In February 1974, a consensus had developed among Enterprise members that an industry committee should be established to review Defendants' support of medical research and to make recommendations as to the future course Defendants' support should take. In fact, at a CTR meeting, Lorillard, through its President Curtis Judge, only agreed to participate in an increased budget for CTR on the condition that there be a review of industry research.

2015040837-0837 (U.S. Ex. 86,376);

<http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif>. (U.S. Ex. 86,832); Third

Amended Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's Second Set of Individual Interrogatories, United States v. Philip Morris, et al. (served March 29, 2004), at Interrogatory/Response No. 23 (U.S. Ex..86,773).

541. Judge suggested that the research review committee be composed of two members of the Tobacco Institute Executive Committee; two members of the Committee of Counsel; two company scientific directors; Horace Kornegay, Tobacco Institute President; William Kloepfer, Tobacco Institute Senior Vice President; William Gardner, CTR Scientific Director; Leonard

SECTION I.

Zahn, CTR public relations advisor; and David Hardy, Shook, Hardy & Bacon attorney. William Smith, Chairman of R.J. Reynolds, suggested that there be only one representative from each Tobacco Institute member company on the committee. Internal Philip Morris correspondence drafted by Alex Holtzman of Philip Morris reported that Ross Millhiser of Philip Morris was considered for Chairman of the committee. One set of suggested guidelines for an Industry Committee for the Review of Industry's Overall Independent Scientific Research Effort was: (1) to reconsider the CTR research program, both SAB grants and special projects; (2) to reconsider non-CTR research projects undertaken by one or more individual tobacco companies; and (3) to consider the establishment of a means of coordinating the research undertaken in (1) and (2). 2015040937-0938 (U.S. Ex. 20,322); 2015040955-0955 (U.S. Ex. 20,323); TIOK0032723-2724 (U.S. Ex. 63,004); 2015057143-7144 (U.S. Ex. 87,693); 03659038-9039 (U.S. Ex. 29,304); 2015057137-7137 (U.S. Ex. 86,378); 2015057135-7136 (U.S. Ex. 86,379); 2015057134-7134 (U.S. Ex. 86,380); 2010070308-0308 (U.S. Ex. 86,381); 2010070309-0309 (U.S. Ex. 86,382); 2015057142-7142 (U.S. Ex. 86,383); 2015057145-7150 (U.S. Ex. 86,384); 680261981-1986 (U.S. Ex. 86,385).

542. William Smith, Chairman of the Tobacco Institute's Executive Committee, wrote to Curtis Judge, President of Lorillard; Clifford Goldsmith, President of Philip Morris; Henry Roemer, General Counsel for R.J. Reynolds; Cyril Hetsko, Senior Vice President and General Counsel for American; I.W. Hughes, Vice President of Defendant Brown & Williamson; and William Bates of Liggett in April 1974, that agreement had been reached with each of the major manufacturers as to their representative on the "committee to study the research programs funded

SECTION I.

by our industry, both through CTR and independent projects." Smith reported that David Hardy of Shook, Hardy & Bacon would chair the committee; Horace Kornegay and William Kloefer would represent the Tobacco Institute; and William Gardner and Leonard Zahn would represent CTR. Smith stated that the members of the committee were charged with the responsibility for studying industry research programs and research projects funded outside of CTR, such as those at Harvard, Washington University, and UCLA, and reporting their recommendations to the chief executives of the six major cigarette companies - American, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds. The first meeting of the Industry Research Committee was scheduled for May 7, 1974. CTRMN015328-5329 (U.S. Ex. 21,600) (U.S. Ex. 79,855); ZN22613-2614 (U.S. Ex. 64,796); 03659035-9036 (U.S. Ex. 29,303); 500799741-9742 (U.S. Ex. 86,386); LWODJ9055585-5585 (U.S. Ex. 26,006) (Confidential) (U.S. Ex. 26,019) (Confidential); LWODJ9055586-5587 (U.S. Ex. 26,007) (Confidential).

543. The first meeting of the Industry Review Committee was May 21, 1974 at CTR. At that meeting, Defendants agreed that only company representatives were to vote, while the remaining members were present as consultants to the company members. David Hardy of Shook, Hardy & Bacon was appointed chairman of the committee; William Shinn of Shook, Hardy & Bacon was appointed committee secretary. Shinn was to collect material related to all areas of smoking and health and to distribute it to other members of the committee for review. The committee met several times and, in its October 1974 report, the committee recommended that a Research Liaison Committee be appointed to serve indefinitely to achieve "a coordinated and informed overview of all industry research." LWODJ9055585-5585 (U.S. Ex. 26,006)

Ex. 31,525); 70124462-4464 (U.S. Ex. 31,526).

544. The Research Liaison Committee was approved at a meeting of the Tobacco Institute on October 3, 1974, as a successor to the Research Review Committee which had been

SECTION I.

established in April 1974. The aims and functions of Research Liaison Committee were to devise and implement fiscal and peer review for institutional grants, and to consider and make recommendations with respect to proposals for institutional and other research projects in light of total industry and other research effort. Members of the Research Liaison Committee were encouraged to attend CTR report meetings to keep informed of CTR plans and projects. LWODJ9055333-5333 (U.S. Ex. 25,954) (Confidential); LWODJ9055332-5332 (U.S. Ex. 25,953) (Confidential); 503672985-2985 (U.S. Ex. 29,715); <http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif>. (U.S. Ex. 86,832).

545. As an example of this review function, the Research Liaison Committee discussed an expanded version of the Colorado-Hawaii research proposal on Genetic and Environmental Bases of Tobacco-Related Behavior, a study designed to test, by elaborate epidemiological and experimental methods, the hypothesis that smoking behavior and increased susceptibility to certain chronic diseases were independently genetically determined; and decided to have Gardner, CTR's Scientific Director, and Sheldon Sommers, member of CTR's Scientific Advisory Board, make a site visit to this project. BWX0002609-2611 (U.S. Ex. 36,165); LG2023832-3834 (U.S. Ex. 34,105) (Confidential); <http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832); LWODJ9055329-5331 (U.S. Ex. 87,694).

546. In addition to those present at the first meeting, Robert Kersey, researcher at Liggett, and Alexander Holtzman, counsel for Philip Morris, were also members of the Research Liaison Committee as of May 15, 1975. Third Amended Response of Defendant The Council

SECTION I.

For Tobacco Research - U.S.A., Inc. to Plaintiff's Second Set of Individual Interrogatories, United States v. Philip Morris, et al. (served March 29, 2004), at Interrogatory/Response No. 23 (U.S. Ex.86,773).

547. At the January 1975 meeting, the Research Liaison Committee decided that the expenses of considering the feasibility of research projects and proposals would be funded through the CTR Special Project fund and funded by those companies agreeing to the research study. The Committee also decided that participating companies would pay for the auditing expenses for the Harvard institutional project, the UCLA institutional project, and the Washington University institutional project. It further discussed problems created by Henry Meadows, attorney for Harvard Medical School, regarding funding obligations for the Harvard/Huber research project.

<http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832);
BWX0002613-2614 (U.S. Ex. 36,166).

548. At its March 1975 meeting, the Research Liaison Committee discussed and then voted to offer Addison Yeaman a one-year position as CTR Chairman and Chief Executive Officer to replace Henry Ramm.

<http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832);
2015057125-7125 (U.S. Ex. 86,400).

549. At its May 1975 meeting, held jointly with the Committee of Counsel, the Research Liaison Committee listened to Gary Huber explain his problems with the Harvard research grant; voted to continue funding the Harvard project; voted to proceed with the

SECTION I.

Colorado-Hawaii genetics study, but made no decision on what entity would fund it (i.e., whether it would be a SAB grant, CTR special project, or institutional project); and discussed nonsmoker exposure research and authorized Hughes to explore the topic further and suggest specific proposals. Prior to the meeting, a memorandum entitled "Environmental Tobacco Smoke – Nonsmoker Research" and a two-page document headed "Suggested Areas of Research" were distributed. The memorandum noted that, if the Research Liaison Committee agreed with company executives and attorneys about an organized approach to an industry research effort with respect to nonsmokers and ETS, then the Research Liaison Committee or some other group should be authorized to suggest priorities and initiate discussions with researchers to develop specific research proposals for consideration by the Research Liaison Committee for funding. <http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832); 955002251-2251 (U.S. Ex. 32,354); 01404441-4441 (U.S. Ex. 86,401).

550. At its July 1975 meeting, the Research Liaison Committee decided that CTR's expenditures for making site visits related to Research Liaison Committee work would be reimbursed by the participants in the respective projects; rejected the Colorado-Hawaii animal work on the genetics proposal after CTR's Gardner stated that the research could be criticized for its emphasis on nicotine; and, in response to Gardner's assertion that some of the proposed participants did not have the requisite scientific background, and asked Gardner to look into the subject matter and make recommendations for research projects. ZN33612-3648 (U.S. Ex. 86,402), 70124410-4414 (U.S. Ex. 31,512); 70124415-4415 (U.S. Ex. 31,513); 70124416-4416 (U.S. Ex. 31,514); 70124417-4449 (U.S. Ex. 31,516);

SECTION I.

<http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832).

551. At the December 1975 meeting, the Research Liaison Committee discussed a proposal from the Stanford Research Institute for developing a machine to measure carbon monoxide in the work place and public places that would be used for legal and legislative purposes and decided that the Committee of Counsel would decide the manner of funding. It also decided to conduct a site visit to the Harvard University project in March 1976. It further decided that out-of-pocket expenses incurred by CTR staff, their consultants, and SAB members in the investigative phase of a proposed project being considered by Research Liaison Committee would be funded through Special Account No. 4. Moreover, it discussed the nonsmoker exposure proposal from Response Analysis Corp. of Princeton proposing a national survey comparing annoyance about smoking to other daily irritations and saw the survey as one that might develop information (persuasive in regulatory proceedings) that claimed annoyance about smoking is not real and is simply shared by a vocal minority "to develop an advocacy position for legal matters." It approved the survey proposal for \$45,000 to be funded through Special Account No. 4. Finally, it discussed a book containing material on the psychological benefits of smoking and decided Shinn should follow up on the subject with the author, and discussed a proposed brochure on industry research efforts to be published by the Tobacco Institute.

1003719192-9192 (U.S. Ex. 35,906); 03532075-2078 (U.S. Ex. 86,403); LG2011501-1503 (U.S. Ex. 86,404); 503673145-3146 (U.S. Ex. 86,405).

552. At the July 1976 meeting, the Research Liaison Committee discussed the FTC's

SECTION I.

request for industry cooperation on measuring carbon monoxide - it was noted that William Steele of the Tobacco Institute Testing Laboratory had not taken any action and it was suggested that he not innovate or give guidance to the FTC. It discussed a report from an Australian scientist that an enzyme test had been shown to predict cancer. It discussed polonium-210 and radioactivity and the increasing evidence linking smoking and cancer of the pancreas. It discussed the status of industry environmental smoke projects and of behavioral research projects. It discussed extensions of the Harvard and Washington University projects and the proposal by CTR's Gardner to set up a psychopharmacology planning committee and plan for working conference for 1977 or 1978, which would involve all CTR grantees interested in either drug metabolism, location of nicotine action, effect of nicotine competitors or inhibitors, or psychologists' studies of pH effects. It tabled Gardner's proposal after heated debate between those attendees who believed Gardner's proposal should be "review[ed] by all the lawyers" with "[n]o records of such a review are to be kept" versus those attendees who believed Gardner and the scientists should be allowed to proceed with planning but take no action. Finally, it discussed how information related to smoking and health issues should be exchanged within the industry including through the Tobacco Institute; through Leonard Zahn, public relations consultant for CTR; and through the lawyers groups. 1003712684-2688 (U.S. Ex. 76,277); 1003719175-9179 (U.S. Ex. 86,406); <http://energycommerce.house.gov/tobacco/docs/bw/0012690847.tif> (U.S. Ex. 86,832); LG2023838-3841 (U.S. Ex. 86,407); PM010430-0437 (U.S. Ex. 86,408); 1003712682-2688 (U.S. Ex. 86,409); 01421571-1572 (U.S. Ex. 86,410); 1005056168-6172 (U.S. Ex. 35,955); BWX000 2579-2583 (U.S. Ex. 36,163); 1000255997-6001 (U.S. Ex. 20,086).

SECTION I.

553. A report dated November 19, 1977, written by Janet Brown, attorney for American from Chadbourne & Parke, summarized the activity of the Research Liaison Committee from its inception as the Research Review Committee in April 1974 through 1977. Brown advised that American might wish to consider maintaining representation on the Research Liaison Committee after the departure of Cyril Hetsko, American's representative on the committee. BWX0007549-7588 (U.S. Ex. 20,286).

554. In 1978, the budget and direction of the CTR was again an area of concern to Defendants. It was proposed that a new committee would be convened again "to take up the general question of what kind of research the industry should be into through CTR or elsewhere." In correspondence to Thomas Ahrensfeld, Max Crohn, Joseph Greer, Arnold Henson, Ernest Pepples, and Arthur Stevens, William Shinn of Shook, Hardy & Bacon noted, "The Research Liaison Committee has not had a meeting since July 1976. I have had discussion with individual members of the committee about calling a meeting." The need for the committee was also articulated in a Lorillard document dated April 21, 1978, which stated: "We have again 'abdicated' the scientific research directional management of the Industry to the 'Lawyers' with virtually no involvement on the part of scientific or business management side of the business." Meetings were held by industry representatives and the group reported to the companies' General Counsel. The name of this new committee was the Industry Research Committee, which essentially performed the same functions as the prior Research Liaison Committee. 01346204-6205 (U.S. Ex. 34,532); 95539849-9850 (U.S. Ex. 56,829); TIOK0032721-2722 (U.S. Ex. 63,003); 03537201-7201 (U.S. Ex. 86,411); 680252124-2125 (U.S. Ex. 30,859); 03638976-8979

SECTION I.

(U.S. Ex. 20,060) (U.S. Ex. 46,483); BWX0007531-7548 (U.S. Ex. 36,238).

555. An internal Brown & Williamson letter from Ernest Pepples, Vice President and General Counsel, to Joseph E. Edens, Charles I. McCarty, I.W. Hughes and DeBaun Bryant dated April 4, 1978, discussed the new committee. Pepples reported: "That Committee, as you know, has a number of disciplines and attitudes represented including research and development, public relations, legal and one EEO (Curt Judge). It is the proper place to take up the general question of what kind of research the industry should be into through CTR or elsewhere. It can also deal with the issue of contract research versus grant research." 680212421-2423 (U.S. Ex. 54,024); 682338651-8653 (U.S. Ex. 22,899).

556. A meeting of the Industry Research Committee was held on November 6, 1978. In attendance were: Ernest Pepples, Brown & Williamson; Charles Tucker, R.J. Reynolds; Arnold Henson, American; Janet Brown, attorney with Chadbourne & Park; James Bowling, Philip Morris; Edwin Jacob, attorney for CTR; and Donald Hoel, attorney with Shook, Hardy & Bacon. An even larger meeting was held on December 13, 1978, and meetings continued throughout 1979, 1980 and 1981 which were attended by Defendants' representatives and industry attorneys. With respect to the direction and role of CTR, "[i]t was agreed that the CTR role would be one of basic research into the disease areas that have been statistically associated with smoking. CTR would not, however, engage in research designed to test the effects of tobacco smoke or tobacco products in animal or human systems." It is clear that coordination of oversight and the direction of industry research was a constant and consistent concern for members of the Enterprise for decades. 01347203-7209 (U.S. Ex. 86,413); 2075318262-8268

SECTION I.

(U.S. Ex. 43,667); 1000041870-1876 (U.S. Ex. 35,102); 03677101-7103 (U.S. Ex. 29,313); 2015015670-5675 (U.S. Ex. 36,619); 503673386-3387 (U.S. Ex. 29,718); 03754196-4198 (U.S. Ex. 29,342); 2015027357-7358 (U.S. Ex. 36,635); 521032356-2357 (U.S. Ex. 31,474); 01346193-6196 (U.S. Ex. 20,046); 01346881-6883 (U.S. Ex. 86,414); 11330072-0072 (U.S. Ex. 86,415); 03019566-9566 (U.S. Ex. 28,174); 01346186-6186 (U.S. Ex. 26,578); 01346656-6656 (U.S. Ex. 86,416); 80419203-9203 (U.S. Ex. 21,062).

(2) Industry Technical Committee

557. TIRC designated the research directors of its tobacco company members as the Industry Technical Committee in January 1954. The research directors on the first Industry Technical Committee were H.R. Hanmer of Defendant American; Irwin W. Tucker of Defendant Brown & Williamson; H.B. Parmele of Defendant Lorillard; Robert N. DuPuis of Defendant Philip Morris; Grant Clarke of Defendant R.J. Reynolds; Hugh Cullman of Benson & Hedges; Clinton Baber of Larus & Brother; C.S. Stephano of Stephano Brothers; and Ward B. Bennett of United States Tobacco. CTRMIN-ITC000003-0004 (U.S. Ex. 21,142); JH000395-0400 (U.S. Ex. 21,178); TLT0901400-1410 (U.S. Ex. 88,418); TLT0901057-1059 at 1059 (U.S. Ex. 88,419).

558. When TIRC was first created, the Industry Technical Committee assisted the TIRC Law Committee and the public relations firm of Hill & Knowlton in screening and selecting potential members for the TIRC Scientific Advisory Board and in retaining a Scientific Research Director for TIRC. 514804083-4086 (U.S. Ex. 20,859); CTRMIN-ITC000003-0004 (U.S. Ex. 21,142); CTRMIN-000005-0006 (U.S. Ex. 21,143); CTRMIN-ITC000007-0008 (U.S.

SECTION I.

Ex. 21,144); TLT0903186-3188 (U.S. Ex. 88,420); TLT0903149-3150 (U.S. Ex. 88,421); TLT0903151-3152 (U.S. Ex. 88,422); TLT0903153-3156 (U.S. Ex. 88,423).

559. After the TIRC Scientific Advisory Board was in place, the Industry Technical Committee provided technical information to the SAB concerning tobacco, its constituents, and other matters. The chairman of the Industry Technical Committee was invited to sit in on all SAB meetings in order to make sure that the SAB and the Industry Technical Committee were coordinated. Members of the Industry Technical Committee attended SAB meetings and answered questions from the SAB. CTRMIN-SAB000001-1061 at 0002 (U.S. Ex. 21,146); HT0128002-8023 (U.S. Ex. 21,176); CTRMIN-ITC000009-0011 (U.S. Ex. 21,445); CTRMIN-ITC000012-0013 (U.S. Ex. 21,446); CTRMIN-ITC000014-0016 (U.S. Ex. 21,447); CTRMIN-ITC000017-0019 (U.S. Ex. 21,448); 500500370-0373 (U.S. Ex. 21,768); ATX30 0000015-0017 (U.S. Ex. 21,129).

560. On May 5, 1958, members of the Industry Technical Committee, including H.R. Hanmer of American; Robert DuPuis and O'Keefe of Philip Morris; Alan Rodgman of R.J. Reynolds; C.S. Stephano of Stephano Brothers; Ward Bennett of United States Tobacco; George Shelton of Larus & Brother; Robert Hockett and Tom Hoyt of TIRC; and Coulson of Imperial Tobacco, met with members of the United Kingdom's Tobacco Manufacturers Standing Committee, including H.R. (Herbert) Bentley of Imperial Tobacco; David Felton of BATCo; and W.W. Reid of Carreras. Hanmer had called the meeting "to learn what new information had been gleaned and what the present feeling of the party was in regard to animal testing of cigarette smoke fractions. It would also afford an opportunity for a general interchange of opinions on the

SECTION I.

general question of health." 100175817-5820 (U.S. Ex. 76,152); 500500366-0369 (U.S. Ex. 86,417).

561. On September 25, 1967, a meeting was held at CTR with the following people present: Wilson Thomas ("Tom") Hoyt, Robert Hockett, John Kreisher, James M. Brady, Clarence C. Little, and Vincent Lisanti from CTR; Janet Brown from Chadbourne & Parke; William W. Bates from Liggett; Edward S. Harlow from American; Robert B. Griffith and Robert A. Sanford from Brown & Williamson; Arthur Burke from American; Murray Senkus and Ed Nielsen from R.J. Reynolds; Alexander Spears from Lorillard; Thomas Osdene from Philip Morris; and George Shelton from Larus & Brother. Osdene reported that "Dr. Hockett stated that CTR is moving into an era of active collaboration with the industry and they wish to make the technical committee more effective by including biologists. . . . Programs will be developed in which Hockett wishes to use the industry technical committee people to give advice which will go into the development of plans for submission to the SAB. C.C. Little would like to meet with this committee either before or after the SAB meeting. He feels that this would be an opportunity to build a creative future and that CTR would move with more speed." 682011463-1466 (U.S. Ex. 86,418); 1001609316-9320 (U.S. Ex. 86,419).

562. On December 8, 1967, a meeting was called to "organize the Industry Technical Committee." Present at the meeting were James Brady, Tom Hoyt, Robert Hockett, John Kreisher, Clarence Little, and Vincent Lisanti of CTR; Robert Griffith of Brown & Williamson; Murray Senkus of R.J. Reynolds; Clifford Jensen of Lorillard; William Bates of Liggett; Thomas Osdene of Philip Morris; Ed Harlow of American; Ward Bennett of United States Tobacco;

SECTION I.

Coulson of Imperial Tobacco; Janet Brown of Chadbourne & Parke; and Forsyth of United States Tobacco. "It was stated that the Scientific Advisory Board and the C.T.R. staff [were] desirous of obtaining the regular and organized assistance of the industry technical group. Functions of the ITC [were]: 1. To bring its technical know-how to bear on problems in which it is desired. 2. To assist the staff. 3. Make suggestions. . . . While the makeup of the I.T.C. has usually consisted of the Research Directors of the various participating companies, it was recognized that any company could designate whomever it wished as I.T.C. member." The need for a representative cigarette sample which could be used as a standard in biological studies was discussed and a subcommittee was appointed to make recommendations. ATX300008549-8551 (U.S. Ex. 58,614).

563. In 1967, there was also some discussion about establishing a Scientific Task Force within the Tobacco Institute that would be comprised of the Defendants' scientific directors. William W. Bates of Lorillard sent a memorandum to Earle Clements, President of the Tobacco Institute, dated November 9, 1967, which opined that "the tobacco industry has a very serious problem in the current tobacco-health controversy and it is rapidly becoming worse." Bates determined that the program at CTR was faulty because it had "only a peripheral connection to tobacco use." Bates suggested that "a Scientific Task Force should be established in the Tobacco Institute. This Task Force should be composed of the Research Directors of the members of the Institute, with one of the group appointed chairman. This Task Force should attempt to establish liaison with all groups doing research on tobacco, with special attention being given to the Lung Cancer Task Force and other groups in PHS and USDA. The industry should demand a seat for

SECTION I.

this Task Force on all committees and councils which plan and interpret research. Provisions for modest funds should be made so that certain worthwhile projects may be jointly supported."

LG0208295-8299 (U.S. Ex. 21,193); LWDOJ8020110-0114 (U.S. Ex. 34,120) (Confidential);

LWDOJ8020115-0115 (U.S. Ex. 34,121) (Confidential); LWDOJ8020101-0101 (U.S. Ex.

34,116) (Confidential); LWDOJ8020102-0102 (U.S. Ex. 34,117) (Confidential);

LWDOJ8020103-0103 (U.S. Ex. 34,118) (Confidential); LWDOJ8020104-0104 (U.S. Ex.

34,119) (Confidential).

564. In a 1968 meeting of the General Counsel, the Defendants' influence – through the Industry Technical Committee – on CTR was discussed. A February 21, 1968 memorandum written by Cyril Hetsko of American reported that Janet Brown "questioned meetings of the Industry Technical Committee before SAB meeting as giving rise to inference of control of CTR Advisory Board" and that Brown advocated that "ITC [should be] only an informal advisory group on purely technical matters to the CTR staff 'when asked'. Any change in this policy raises problems of (1) company research in health (2) destruction of CTR independence."

BWX0002763-2763 (U.S. Ex. 36,170).

565. At a February 14-16, 1968 meeting of the Defendants' Directors of Research, including William Bates, Liggett; Robert Griffith, Brown & Williamson; Ed Harlow, American; Murray Senkus, R.J. Reynolds; Alexander Spears, Lorillard; and Helmut Wakeham, Philip Morris, which was also attended by Allan Topol, an attorney from Covington & Burling, the research directors discussed smoking machines and acknowledged that the results from the machines currently in use such as "nicotine and solids determined by these means do not really

SECTION I.

represent the amount of smoke and nicotine which are inhaled by a smoker." The directors also discussed areas for "mutual cooperation," including the possible recommendation of a cigarette research institute to be established by Defendants. 500500320-0323 (U.S. Ex. 20,633).

566. Another meeting of the company research directors was held on April 2, 1968. Items discussed included the Tobacco Institute Testing Laboratory; a report on the tar and nicotine content of fifty-nine varieties of cigarettes; an update on the development of a 'reference' cigarette; the Mason Laboratory Project by CTR; and a proposed joint study on pesticides and agricultural residues. 955009960-9963 (U.S. Ex. 32,361).

567. A meeting of the Industry Technical Committee was held on April 26, 1968, at the CTR office in New York and was called specifically by W.T. Hoyt of CTR on behalf of the CTR staff. Present at the meeting were: W.T. Hoyt, Robert Hockett, James M. Brady, Vincent Lisanti, and John Kreisher of CTR; Robert Griffith of Brown & Williamson; George Shelton of Larus & Brother; Alex Spears of Lorillard; Tom Osdene and Alex Holtzman of Philip Morris; Murray Senkus of R.J. Reynolds; Ward Bennett of United States Tobacco; Ed Harlow and Arthur Burke of American. The meeting was called "to hear presentations by the CTR-staff of the contract research program being proposed by Mason Research Institute," which was to involve large-scale, long-term mouse inhalation experiments. 955033996-4012 (U.S. Ex.). It was noted that "a) the contract status as proposed represents a significant change of 'fact'. b) the proposed program represents very considerable increase in costs and outlay. c) and therefore, this entire program may represent a significant 'departure from CTR plans and policy.'" 955033996-4012 (U.S. Ex. 32,363).

568. In describing the background for the Mason contract, Arthur W. Burke of American reported that the CTR staff had taken an interest in inhalation toxicology ten years prior. "About this time the CTR-staff began to visit the various grantees to learn what was forthcoming from their studies, and on a visit to the Leuchtenbergers' laboratory learned that evidence was accumulating that adenocarcinomas of mouse lung were occurring with smoke inhalations. . . . 'Since foes of Industry might snatch-up such preliminary findings and misuse the information, the CTR-staff entertained a limited project at Mason Research Institute, the purpose of which would be to set-up and compare the operation of several animal exposure-smoking machines in one place and at one time, using the same mouse strain, etc. – in short to study the smoking machines per se. This work was initiated at Mason about one year ago.' In the course of these machine evaluations, Mason noted some deficiencies in some of these machines, and the 'CTR recognized that they were piddling in some dangerous areas.'" 955033996-4012 (U.S. Ex. 32,363).

569. Burke further reported that: "Griffith asked, 'Why does the CTR-staff think we should consider this as a project, and is it important?'" Dr. Hockett responded that Auerbach claims premalignant changes are associated with cigarette smoke in his smoking dogs experiments; therefore, 'we need to know to evaluate and or rebut this and, or other claims.' 'The CTR needs to be able to attribute any such observed changes to specific smoke constituents.'" 955033996-4012 (U.S. Ex. 32,363).

570. The Industry Technical Committee debated whether the proposed study at Mason Laboratories was justifiable to the tobacco companies. Lisanti stated that "'My philosophy is to

SECTION I.

be there first before enemies - who won't want the details.' . . . Dr. Osdene asked, 'Why be first - for what purpose? – Propaganda - or to get the facts? Dr. Lisanti argues that this was a prime project - 'a special project – with top priority.' Hoyt corrected this statement. . . . 'This proposal is not a Special Project in our ordinary sense or usage of the word.'" 955033996-4012 (U.S. Ex. 32,363).

571. The Industry Technical Committee met again at the offices of CTR on October 25, 1968. Present at the meeting were: Robert B. Griffith of Brown & Williamson; Murray Senkus of R.J. Reynolds; Alex Spears of Lorillard; Helmut Wakeham of Philip Morris; George Shelton of Larus & Brother; Ward Bennet of United States Tobacco; Ed Harlow and Arthur Burke of American; Campbell of Imperial Tobacco (United Kingdom); W.T. Hoyt, Robert Hockett, and Vincent Lisanti of CTR; and Janet Brown of Chadbourne & Parke. Arthur Burke's report of this meeting discussed the development of a "reference" cigarette and noted that the University of Kentucky undertook this project "[w]ith technical assistance from the I.T.C." The report also disclosed that the "I.T.C. had expressed the opinion to [CTR's] SAB that the Mason [smoking] machine was inadequate." Consequently, the SAB requested that the Industry Technical Committee assist in developing a smoking machine and in developing procedures "for the determination of the extent of smoke exposure (e.g. to lung) of animals)." In addition, a discussion of the activities of the Tobacco Working Group (further discussion at U.S. FPF § I.E(3), infra) ensued. 955036231-6240 (U.S. Ex. 32,364).

572. At the October 25, 1968 meeting, there was also a discussion of the relationship between the Industry Technical Committee and the CTR Scientific Advisory Board. "Hoyt

voiced the opinion that the SAB is considering 'more targeted research with closer CTR staff monitoring which would be in a) academia by grants, and b) other places by contract - where necessary.'" 955036231-6240 (U.S. Ex. 32,364).

573. At the same meeting, Robert Griffith of Brown & Williamson was re-elected as Chairman of the Industry Technical Committee. Campbell of Imperial Tobacco (United Kingdom) noted that "'a very great change is taking place in the English setup', while the whole tobacco industry - as located in England, Germany, the U.S.A., and elsewhere - should come together more and more for exchange of information. In this connection, Campbell noted that 'Griffith is uniquely qualified'. Hoyt noted that the United States tobacco industry has difficult and different problems to face (than the others). Wakeham agreed and said - 'they should all join CORESTA.'" 955036231-6240 (U.S. Ex. 32,364).

574. In a 1970 report, the Defendants' research directors – Helmut Wakeham of Philip Morris; Preston Leake of American; Alexander Spears of Lorillard; Murray Senkus of R.J. Reynolds; William W. Bates of Liggett; and I.W. Hughes of Brown & Williamson – expressed their displeasure with CTR's research program, CTR's focus on studies of diseases that were associated with smoking, CTR's defensive posture, and CTR's lack of guidance for future strategy of the tobacco industry in the area of smoking and health. The report offered opinions as to how CTR might become more effective as an instrument for the good of the tobacco industry. 1002636362-6365 (U.S. Ex. 22,998).

575. In the 1960s, the Industry Technical Committee did assist the Tobacco Institute, and Industry Technical Committee members were encouraged to attend meetings at the Tobacco

SECTION I.

Institute. TIOK0032725-2726 (U.S. Ex. 63,005); 1001880732-0733 (U.S. Ex. 86,421). An Industry Technical Committee meeting at the Tobacco Institute was called "to discuss the possible implications of a \$50,000 grant from National Institutes of Health to the F.T.C. laboratory to develop a smoking machine capable of carbon monoxide analysis." Present at the meeting were Robert Kersey and James Mold of Liggett; Preston Leake of American; Murray Senkus of R.J. Reynolds; Alexander Spears of Lorillard; Helmut Wakeham of Philip Morris; C.J. Rosen and I.W. Hughes of Brown & Williamson; J.M. Weigsall of Covington & Burling; and Marvin Kastenbaum of the Tobacco Institute. There was much concern over the possibility that the FTC intended to publish brand carbon monoxide levels. The attendees suggested that Defendants be ready to demand public hearings on methodology and be prepared to "counteract the increasingly irrational public image being drawn by anti-smoking forces" on carbon monoxide hazard. TIMN0134876-4877 (U.S. Ex. 65,574); 950148089-8091 (U.S. Ex. 32,348); 950148092-8093 (U.S. Ex. 32,349).

576. I.W. Hughes, Brown & Williamson Senior Vice President of Manufacturing, Research, and Development, circulated the minutes of the October 17, 1975 Industry Technical Committee meeting to Robert L. Kersey; James Mold; Preston H. Leake; Murray Senkus; Alexander Spears; Helmut Wakeham; J.M. Weisgall; Marvin Kastenbaum; Horace Kornegay; and Allan J. Topol of Covington & Burling. Hughes stated that "I now propose to get the minutes before the lawyer group, and will use DeBaun Bryant of our Law Department to do this." 950148087-8088 (U.S. Ex. 32,347).

577. On May 14, 1976, there was another meeting of the Industry Technical Committee

SECTION I.

at the Tobacco Institute regarding the Tobacco Institute Testing Laboratory. Present at the meeting were: I.W. Hughes and J.L. Knoop of Brown & Williamson; P.H. Leake of American; Allan J. Topol, Covington & Burling attorney; Robert L. Kersey of Liggett; Fred J. Schultz of Lorillard; Robert B. Seligman of Philip Morris; and Murray Senkus of R.J. Reynolds. The discussion included: "(1) gas chromatographic measurement of nicotine in cigarette smoke; (2) the possibility of using a second monitor and (3) carbon monoxide determination in cigarette smoke." ATX090001047-1048 (U.S. Ex. 32,504); 950148084-8085 (U.S. Ex. 32,345); 950148086-8086 (U.S. Ex. 32,346); 950148076-8078 (U.S. Ex. 32,341); 950148079-8079 (U.S. Ex. 32,343); 950148080-950148083 (U.S. Ex. 32,344); 680241903-1904 (U.S. Ex. 87,696).

578. On October 15, 1986, the Industry Technical Committee met at Knoxville, Tennessee, during the 40th Tobacco Chemists' Research Conference. Present at the meeting were Preston Leake and Everette Cogbill of American; Roy Hilliard of Liggett; Gil Esterle of Brown & Williamson; Leo Meyer of Philip Morris; Richard Manning of United States Tobacco; John Campbell of John S. Campbell Ltd.; Larry Lyerly of R.J. Reynolds; Fred Schultz of Lorillard; and John Rupp of Covington & Burling. The status and viability of the FTC laboratory was discussed and also the "further operation of the Tobacco Institute Testing Laboratory." Rupp advised that the Tobacco Institute "will seek the acceptance of TITL data for submission to the FTC (assuming discontinuance of the FTC lab)." 507079688-9689 (U.S. Ex. 29,831).

(3) Tobacco Working Group

(a) Defendants' Participation in the Tobacco Working Group

579. Although representatives from Defendants Philip Morris, R.J. Reynolds, Lorillard,

SECTION I.

Brown & Williamson, and Liggett were members of the Tobacco Working Group ("TWG"), a federally appointed group within the National Cancer Institute, their participation was far from altruistic. Their participation allowed the industry to keep abreast of what the United States Government was doing with respect to smoking and health issues and provided a mechanism by which Defendants could try to influence the United States Government's activities in the smoking and health arena. Thus, far from being a "partnership," Defendants' participation was vital to their continued individual and collective livelihood and the Enterprise.

580. The National Cancer Institute ("NCI") Lung Cancer Task Force was appointed in July 1967, and the TWG, which initially was the Less Hazardous Cigarette Subcommittee of the Lung Cancer Task Force, was appointed in March 1968. The name changed from the Less Hazardous Cigarette Working Group to the TWG in order to facilitate Defendants' participation. 11300905-0905 (U.S. Ex. 87,697).

581. The TWG in various forms existed from 1968 through 1977, when it was dissolved – along with three other NCI advisory groups – as a cost cutting measure. 680142974-2974 (U.S. Ex. 22,254); 680142966-2966 (U.S. Ex. 30,817); 680142967-2967 (U.S. Ex. 54,018); "Diet & Nutrition, Carcinogenesis, Virus, Tobacco Committees Proposed for Elimination," *The Cancer Letter*, Vol. 3, No. 18, May 6, 1977, pp. 1-2 (U.S. Ex. 86,842). Funding for TWG projects, however, continued until 1980. "Smoking Program May Have Succeeded, Rauscher Says, Looking At Its Budget," *The Cancer Letter*, Vol. 2, No. 30, July 23, 1976, pp. 4-5 (U.S. Ex. 86,843).

582. The TWG and its Defendant participants were not actually conducting the work of

SECTION I.

researching and testing potentially less hazardous cigarette products. Rather, the TWG functioned solely as an advisory group to the NCI's Smoking and Health Program staff and its director who, for most of the duration of the TWG, was Gio B. Gori. The TWG met quarterly, and its members served on subcommittees, advising Gori and his staff as to "overall program approaches and priorities; interpretation and publication of . . . data . . . ; experimental methods and design; and design of less hazardous cigarette models and definition of other experimental approaches, devices or processes." 87754028-4373 (U.S. Ex. 22,259).

583. Initial Defendant membership included Murray Senkus, Director of Research for R.J. Reynolds; Alexander Spears, Director of R&D for Lorillard; and Helmut Wakeham, Vice President of Corporate Research & Development for Philip Morris. Charles Kensler was also an initial member; Kensler, who worked for Arthur D. Little, Inc., had strong ties to and performed research for Liggett. By 1969, William Bates of Liggett attended TWG meetings, and, by 1974, Bates had accepted membership on the TWG. John Bugard of Brown & Williamson, and Ed Harlow of American, were invited to attend the October 16, 1969 special TWG meeting and, by 1971, I.W. Hughes of Brown & Williamson had accepted membership on the TWG.

HHA6060033-0036 (U.S. Ex. 86,422); 501555964-5966 (U.S. Ex. 22,284); LDOJ3002797-2803 (U.S. Ex. 86,423); LG0267405-7405 (U.S. Ex. 59,094); 680231778-1778 (U.S. Ex. 86,424).

584. An undated Brown & Williamson document, discussing United States Department of Health, Education and Welfare activity in the 1960s, clearly articulated the reasons for Defendants' participation on the TWG:

Of these four actions [taken by the United States Department of Health, Education and Welfare with respect to smoking and health

issues], the first three [developing epidemiological evidence linking smoking and certain diseases; launching a program to alert the public about the dangers of smoking; and pushing for legislation which would reduce cigarette consumption] have been of such immediate concern that they have received most of the attention of the tobacco industry. **However, the later [initiating a research program designed to produce a "less hazardous cigarette"] is probably as important, or perhaps more important for the long-term future of the industry.** Although work in this area is in its initial stages, the direction of this work seems clearly indicated and should be evaluated.

...

One can logically expect that any reluctance on the part of industry to voluntarily produce commercial cigarettes on the basis of positive results from this program would result in legislation to force adoption. In all probability, little attention is likely to be given to the commercial acceptability of the [unreadable] from this program.

...

Since industry has representatives on this committee, it should be possible to remain completely aware of all actions taken and to have at least some influence on these actions. If one assumes complete and frank interchange of information arising from within this committee among all companies, the companies should then operate from a common base.

HHS1330992-0998 (U.S. Ex. 76,082) (emphasis added).

585. Defendants' conduct in connection with the TWG demonstrates the extraordinary extent to which Defendants coordinated their actions in the area of smoking and health, and in particular, coordinated their approach to the issue of less hazardous cigarette design, development, and marketing. Defendants' approach to the TWG and all Defendants' related activities were jointly formulated and closely monitored by committees of industry lawyers and executives to ensure that such "participation" in the TWG did not threaten – and indeed served – Defendants' common purposes. Defendants' representatives to the TWG regularly reported to

SECTION I.

their counsel, who kept company executives, CTR, the Tobacco Institute, and one another abreast of TWG activities. 501556259-6263 (U.S. Ex. 22,283); 501555964-5966 (U.S. Ex.22,284); 500502060-2063 (U.S. Ex.22,286); 501990370-0374 (U.S. Ex.22,287); 1005070117-0121 (U.S. Ex. 22,288); 1005070122-0122 (U.S. Ex. 22,903); 680142648-2648 (U.S. Ex. 22,374); 2015040862-0863 (U.S. Ex. 36,652); LG0208389-8389 (U.S. Ex. 59,040); 680143084-3084 (U.S. Ex. 22,293); 03540217-0225 (U.S. Ex.22,294); BWX0003934-3938 (U.S. Ex. 86,425); 03753993-3994 (U.S. Ex. 22,295); 03646227-6228 (U.S. Ex. 22,296).

586. Murray Senkus, R.J. Reynolds's longtime representative to the TWG, admitted that Defendants' attorneys encouraged Defendants' participation in the TWG; he recalled that Defendant lawyers conceived of the project because it would enhance their public image and "might be useful in anticipated litigation." 515872408-2456 at 2416-2417 (U.S. Ex. 22,261).

587. A March 9, 1972 document drafted by Alexander W. Spears of Lorillard recognized: "If I were to withdraw [from the TWG], Lorillard would lose considerable insight into the workings of the National Cancer Institute program with respect to cigarettes. There is a very real possibility that this program is going to have a profound effect on the cigarette industry, and I believe that we should be aware of these effects as soon as they become clear. **We also have some significant influence on the course of the detailed activities and, therefore, some effect on ultimate results.**" 01240178-0178 (U.S. Ex. 22,282) (emphasis added).

588. Defendants' employees who "participated" in the TWG repeatedly: (1) informed the TWG that their participation was in their individual capacities, not as representatives of a tobacco company; and (2) disclaimed that such participation represented acceptance that any

SECTION I.

cigarettes were unsafe. In fact, letters echoing this view – some of which are nearly verbatim – were drafted by Defendants' lawyers after their discussion with Defendants' executives, and were sent according to the timing decided upon by the Defendants' Committee of Counsel. For example:

- On March 27, 1968, R.J. Reynolds's Murray Senkus stated in his acceptance letter that, by agreeing to serve on the TWG, "I am in no manner accepting the view (1) that present cigarettes are hazardous or (2) that the smoke of such cigarettes causes or contributes to the development of human lung cancer." 501990061-0062 (U.S. Ex. 88,489); 500502337-2338 (U.S. Ex. 67,920) (draft of Senkus letter prepared by R.J. Reynolds's counsel Henry H. Ramm).
- On March 28, 1968, Lorillard's Director of Research and Development, Alexander Spears, wrote in his acceptance letter to TWG Director Endicott that he agreed to serve as a scientific advisor to the group in his "individual capacity, and not as a representative either of my company or of the tobacco industry and, accordingly, it should not be stated or implied that the tobacco industry or my company is represented." 03645686-5686 (U.S. Ex. 22,263).
- On March 28, 1968, Philip Morris's Helmut Wakeham agreed to serve on the TWG, writing: "as a scientific advisor to the group, I understand that I will be serving in my individual capacity and not as a representative either of my company or of the tobacco industry and, accordingly, it will not be stated or implied that the tobacco industry or my company is represented." Wakeham also stressed that his participation did not imply "acceptance by any of us [Wakeham himself, his company, or his industry] of the premise that cigarettes presently manufactured are hazardous or that there is a scientifically demonstrated causal relationship between cigarette smoking and human disease." 1003729890-9890 (U.S. Ex. 69,276).

589. Four years later, at a March 10, 1972 meeting of Defendants' counsel and scientific directors at the Tobacco Institute, the attendees formulated a course of action to respond to congressional testimony by the head of the TWG who had testified that the recommended animal inhalation tests the TWG was considering represented the joint understanding of United States Government and tobacco industry scientists as the best way to

SECTION I.

proceed. Defendants' lawyers discussed the need to "correct that impression . . . for the purpose of . . . litigation" that the scientific directors concurred in the type of animal tests which were being sponsored by the TWG: "After discussion it was agreed that the three original members of the Working Group (Wakeham [of Philip Morris], Senkus [of R.J. Reynolds], and Spears [of Lorillard]) would write separate letters to [Director] Gori correcting his statement. [Outside industry counsel David] Hardy was requested by [B&W general counsel and later CTR president Addison] Yeaman to draft the substance of such a letter." 1005055229-5230 (U.S. Ex. 26,186).

590. That very day, attorney David Hardy of Shook, Hardy & Bacon wrote to Tobacco Institute Executive Committee member Thomas Ahrensfeld and lawyers for Defendant Cigarette Companies, enclosing "a draft of the type of letter that should go to Dr. Gori from Doctors Helmut Wakeham, Murray Senkus and Alexander Spears, the three initial members of the Tobacco Working Group. . . . The enclosed draft is not being sent directly to the research directors because I thought that in each instance counsel would want to take it up with their own director." 03645691-5692 (U.S. Ex. 22,265).

591. The scientific directors dutifully sent to Gori the letters drafted for them by Hardy:

- On March 29, 1972, Senkus reiterated his 1968 position upon accepting the invitation to participate on the TWG: "I am in no manner accepting the view (1) that present cigarettes are hazardous or (2) that the smoke of such cigarettes causes or contributes to the development of human lung cancer." 501990268-0269 (U.S. Ex. 22,266).
- On March 28, 1972, Brown & Williamson's representative on the TWG, I.W. Hughes, wrote to Gori also using disclaimer language taken verbatim from Wakeham's 1968 letter:

Although I am Research and Development Director for Brown & Williamson Tobacco Corporation, I am not purporting to serve on the Tobacco Working

Group as an official representative of my company or of the tobacco industry. Further, my participation is not to be construed as concurring with **the premise that cigarettes presently manufactured are hazardous or that there is any scientifically demonstrated causal relationship between cigarette smoking and human disease.** 680231759-1760 at 1759 (U.S. Ex. 22,269) (emphasis added).

- On May 26, 1972, Spears also repeated the position in language nearly identical to Wakeham's 1968 letter:

I am sure it has been understood and should be understood in the future that I am not serving on the Tobacco Working Group as an official representative or spokesman for my company or the tobacco industry. I do not agree with the premise that cigarettes as presently manufactured are hazardous, or that a causal relationship between smoking and human disease has been established. 03645684-5685 (U.S. Ex. 26,069).

592. Similarly, at the Committee of Counsel meeting held at the Tobacco Institute on March 14, 1973, Defendants' lawyers and research directors discussed Defendants' participation in the TWG. The minutes reflect that during the afternoon session of the meeting, they

consider[ed] an appropriate response to the letter dated March 9, 1973, from Dr. Gori to the Research Directors in their capacity as members of the Tobacco Working Group. . . . After careful consideration of the views of the members of the Tobacco Institute staff with regard to the public relations and political effects of the public withdrawal from the TWG, it was concluded that the research directors cannot withdraw. We should take steps to give the industry as much protection as is possible and at the same time remain in the Tobacco Working Group.

680143026-3027 (U.S. Ex. 22,902). The Committee adopted a three-point proposal whereby Defendants' scientific directors would decline to concur with or comment on Gori's recommendations. 680143026-3027 (U.S. Ex. 22,902).

593. Defendants' research directors subsequently mailed new reservation and disclaimer letters prepared or outlined by counsel. On May 14, 1973, Liggett's counsel Joseph

SECTION I.

Greer wrote to his colleague Frederick Haas advising that Jack Roemer, Chairman of the Committee of Counsel, scheduled a CTR meeting for May 15, 1973, to discuss whether the scientific directors should send a disclaimer letter to Gori concerning their participation on the TWG and whether CTR should participate in the TWG. LG2000466-0467 (U.S. Ex. 22,270). Philip Morris's scientific representative Hugh Wakeham wrote to Associate General Counsel Alex Holtzman recalling that it had been decided at the CTR meeting on May 15th that the research directors should write another letter to NCI and that, "[a]s I recall it, you were going to prepare such a letter from me." 1004863309-3309 (U.S. Ex. 22,271). Senkus subsequently wrote to Gori stating that "my role in the TWG is that of a scientific advisor. . . this role is confined to areas of chemical, analytical, physical and manufacturing problems related to cigarette smoke, tobacco composition, and physical and manufacturing characteristics of cigarettes." Senkus then informed his supervisor, William D. Hobbs, that "the other Research Directors will respond in the same vein." 501990170-0171 (U.S. Ex. 22,264); 500081721-1721 (U.S. Ex. 22,274); 501555598-5598 (U.S. Ex. 22,273).

594. When Liggett Research Department Director William Bates accepted formal membership on the TWG, he too carefully prefaced his acceptance with similar disclaimer language. Bates' July 12, 1974 letter to James Peters of NCI stated:

As a scientist who is extremely interested in ascertaining the facts about the areas of work with which the Tobacco Working Group is concerned, I am pleased to accept the invitation in your letter referred to above. Needless to say, however, you should understand that my services on the Group will be totally in my capacity as an individual and not as an employee or representative of Liggett and Myers Incorporated.

LG0267405-7405 (U.S. Ex. 59,094).

(b) Defendants Received Access to Information Through the Tobacco Working Group

595. Information gathering was a critical aspect of Defendants' involvement with the TWG. Defendants' scientific representatives on the TWG reported directly to their respective company counsel. For instance, over a number of years, R.J. Reynolds's Murray Senkus sent regular "Confidential – For Legal Counsel" summaries of TWG activity to R.J. Reynolds counsel Henry Ramm. E.g., 501556259-6263 (U.S. Ex. 22,283); 501555964-5966 (U.S. Ex. 22,284); 500502060-2063 (U.S. Ex. 22,286); 501990370-0374 (U.S. Ex. 22,287). Philip Morris's Osdene and Wakeham did the same for their counsel, Alex Holtzman. 1005070117-0121 (U.S. Ex. 22,288); 1005070122-0122 (U.S. Ex. 22,903).

596. The Tobacco Institute was kept informed of the activities of the TWG. On February 22, 1973, Alexander Holtzman, counsel for Philip Morris, wrote to Horace Kornegay, President of the Tobacco Institute, advising that Philip Morris scientist Wakeham had been invited to a meeting of two subcommittees of the TWG on March 8, 1973. Holtzman also advised that the letter of invitation had advised that Gori would "set forth his ideas for future projects of the Tobacco Working Group and present a proposed budget for those budgets" at a meeting on March 25, 1973. 680142648-2648 (U.S. Ex. 22,374). Holtzman stated: "Perhaps Dr. Wakeham and others who may attend the meetings on March 8 will get some additional information about Gori's plans at that time." 680142648-2648 (U.S. Ex. 22,374). Representatives of the Tobacco Institute also met directly with Gori in 1973. 690020214-0255 (U.S. Ex. 31,061).

SECTION I.

597. Like the Tobacco Institute, CTR similarly was informed about TWG activities. On May 31, 1974, Defendants' outside counsel, David Hardy of Shook, Hardy & Bacon, wrote to members of the CTR Research Review Committee and the Industry Research Committee advising that summaries were "to be prepared with, if applicable to the topic, an emphasis on objectives (or relevancy), cost, source of funds, and supervisory information" on the TWG. William Bates, Liggett's TWG representative, was assigned responsibility for the TWG summaries. 2015040862-0863 (U.S. Ex. 36,652). Bates provided the requested material for the CTR Research Review Committee and Industry Research Committee related to the TWG to David Hardy by letter dated July 30, 1974. Among the material Bates included was "a draft copy of the annual report for the Tobacco Working Group," which he indicated "should be used only for information purposes for members of the committee" because of the draft nature of the report. LG0208389-8389 (U.S. Ex. 59,040); 680143084-3084 (U.S. Ex. 22,293). The draft annual report of the TWG was discussed at a subsequent research committee meeting at which there was a question by one of the participants asking, "Do we **disassociate** ourselves with this document? If so, should we reaffirm this or is this necessary? . . . Co's R&R Directors can submit written reservations?" 03540217-0225 (U.S. Ex. 22,294) (emphasis added). That same participant attributed a comment by Brown & Williamson's Wally Hughes that the "'Experimental Cigarette Report' to be presented at [the] Sept[ember] TWG [meeting is] going to be **much** more dangerous." 03540217-0225 at 0218 (U.S. Ex. 22,294) (emphasis added).

598. A letter dated August 30, 1974 letter from David Hardy to DeBaun Bryant, Vice President and General Counsel of Brown & Williamson, enclosed a copy of the draft TWG

annual report, and stated: "As I indicated on the telephone, no one on the Industry Research Committee had ever seen it except the company research directors I was under the impression that you and I were both receiving all of the Tobacco Working Group material." 680143084-3084 (U.S. Ex. 22,293). As a result, CTR was able to regularly monitor and discuss TWG activity.

599. Lorillard counsel Arthur Stevens similarly kept Defendants' outside counsel, William Shinn of Shook, Hardy & Bacon, informed about TWG activity. In an April 23, 1975 letter, Shinn thanked Stevens for material Stevens sent him on the TWG: "The status report on the smoking and health program and policies and procedures manual were most welcome. I have been trying to keep abreast of the Tobacco Working Group projects and found the material very helpful." 03753993-3994 (U.S. Ex. 22,295). In a March 25, 1977 letter, Shinn noted further, "I think you sent [these documents] to me in the first place" and that "I do . . . try to review the TWG material and very much appreciate receiving any relevant material available. It would probably be useful to have a list of the meetings held over the past year so that we can determine whether or not we have received reports on all of them." 03646227-6228 at 6227 (U.S. Ex. 22,296).

(c) Defendants' Interference With the Work of the Tobacco Working Group

600. Defendants' approach to the TWG was based primarily on legal, not scientific, considerations. Thus, the actions – even of a scientific nature – of Defendants' scientific representatives on the TWG were proposed, discussed, and decided upon at meetings of the Committee of Counsel, often with the scientific representatives present. As documented below,

SECTION I.

the Enterprise engaged in a concerted effort to prevent, curtail, and ultimately to neutralize the TWG's efforts to evaluate cigarettes' effects using an animal inhalation bioassay.

601. Defendants were quite alarmed when it was reported in a 1970 news conference in New York City that animal inhalation experiments conducted by Oscar Auerbach and E. Cuyler Hammond produced lung cancer in the animals. A February 5, 1970 memorandum from R.N. Seleeby of Philip Morris to J.T. Lauduy of Philip Morris advised that: "This [Auerbach] report describes the study in which Beagle dogs smoked cigarettes for up to 2.3 years through a throat opening to their windpipes. The important finding is that two of the eighty-six dogs which started the test developed 'early squamous cell bronchial carcinoma', i.e., the most common lung cancer occurring in man. This is the first time that cigarette smoke as a direct agent has produced lung cancer in an animal in any reliably conducted experiment." Philip Morris gathered as much information about the Auerbach study as possible. 1000298389-8392 (U.S. Ex. 26,082); 1005086254-6254 (U.S. Ex. 86,426); 1002906624-6625 (U.S. Ex. 86,427).

602. The Tobacco Institute immediately responded to the 1970 news conference. A February 5, 1970 Tobacco Institute Informational Memorandum drafted by Fred Panzer of the Tobacco Institute distributed to the "TI Mailing List" reported the Tobacco Institute's response:

We are naturally interested in the reported results of Dr. Auerbach's experiment in which he used dogs forced to "smoke" through holes cut in their throats.

It is impossible, however, to draw a meaningful parallel between human smoking and dogs subjected to these most stressful laboratory conditions.

We will review all data which can be obtained about this experiment, in keeping with our policy to explore every avenue

which may be significant in terms of smoking and health.

There is a wide agreement reported to us from the scientific community, including government research agencies, that there is no satisfactory animal model for smoking experiments, and further agreement that the development of such a model is a basic research need.

We hope this current report will not serve to discourage work now in progress to develop animal smoking systems which might approximate human smoking.

500006051-6051 (U.S. Ex. 86,428).

603. In a February 6, 1970 memorandum to William Kloepfer, Vice President of the Tobacco Institute, Fred Panzer recounted a conversation between Robert Hockett, Associate Scientific Director of CTR, and Lee Steglmeyer of the *Tobacco Reporter*. According to Steglmeyer, Hockett believed "that the tissue produced from the [Auerbach-Hammond] experiment was actually cancerous[.]" TIMN0109576-9576 (U.S. Ex. 87,644).

604. Brown & Williamson's I.W. Hughes admitted in notes dated February 11, 1970, that "[a]lthough open to criticism on several counts, the general standard of the paper is good. I am of the view that this shows it is now possible to produce tumors in the respiratory system of an animal by direct inhalation." Hughes suggested that "it would seem pertinent for a pathologist from C.T.R. (Dr. Sommers) to visit Auerbach for discussion of the paper and the pathology." 690004474-4476 (U.S. Ex. 54,319); TIOK0034461-4462 (U.S. Ex. 86,429). J.K. Kennedy of Brown & Williamson also acknowledged in internal correspondence dated February 12, 1970, that "[t]here appears to be no question that Auerbach has indeed produced an effect identical to emphysema in his studies." 680265055-5056 (U.S. Ex. 86,430).

SECTION I.

605. Others in the tobacco industry also acknowledged the importance and significance of Auerbach's study. A Gallahers' (United Kingdom tobacco manufacturer) report, which was circulated among Defendants, dated April 3, 1970, stated that "we believe that the Auerbach work proves beyond reasonable doubt that fresh whole cigarette smoke is carcinogenic to dog lungs and therefore it is highly likely that it is carcinogenic to human lungs." The report further noted that "perseverance with rodent inhalation is vital to the industry since this would provide us with a relatively economic and effective way of testing our product modifications." The report concluded: "Apart from Auerbach's work, Dontenmill's work and the preliminary results from Harrogate [a biological research facility opened by Britain's Tobacco Manufacturers' Standing Committee in September 1962] all point to the fact that under suitable conditions fresh whole smoke inhalation in animals will produce pre-cancerous changes and, in certain, instances, true cancers which are similar to those found in human smokers. It therefore seems to us that it is more than coincidence that experimental evidence is building up in this direction from several independent research organizations, each of which is of a very high caliber." 321993992-3995 (U.S. Ex. 21,688).

606. The Tobacco Institute carefully researched Auerbach and his past research projects and shared information gleaned with its member companies on behalf of the Enterprise. 2015047506-7506 (U.S. Ex. 86,431); 508775596-5596 (U.S. Ex. 86,432); 500006028-6028 (U.S. Ex. 86,433); 1005086194-6194 (U.S. Ex. 86,434); 1005086196-6196 (U.S. Ex. 86,435); 1005086198-6198 (U.S. Ex. 86,436); 03758481-8482 (U.S. Ex. 86,437); 1005086201-6201 (U.S. Ex. 86,438); 2024991017-1017 (U.S. Ex. 86,439); TIMN221636-1636 (U.S. Ex. 86,440).

SECTION I.

Individual companies continued to carefully monitor the Auerbach study and related material as well. 1005086197-6197 (U.S. Ex. 86,441); 2015046703-6703 (U.S. Ex. 86,442); 1002616118-6118 (U.S. Ex. 86,443); 2016001661-1661 (U.S. Ex. 86,444) (Philip Morris); ATC2773324-3329 (U.S. Ex. 86,445); BWX0011936-1936 (U.S. Ex. 86,446) (American); 91017161-7161 (U.S. Ex. 86,447) (Lorillard); LATH00215897-5897 (U.S. Ex. 86,448) (Liggett); 504344618-4623 (U.S. Ex. 86,449) (R.J. Reynolds).

607. Despite the findings of Defendants' scientists, which affirmed the significance of the Auerbach study, the Tobacco Institute publically questioned the results on behalf of the Enterprise. A 1970 Tobacco Institute press release stated, "We have good reason to question whether lung cancer experts in this review group were able to confirm any finding of lung cancer[.]" TIMN0109556-9560 (U.S. Ex. 87,698).

608. Defendants also sent a letter dated February 27, 1970 to the American Cancer Society requesting that the industry be allowed access to relevant materials and data related to Auerbach's study so that industry scientists could study the material. Joseph F. Cullman, III, sent the letter on Philip Morris letterhead and signed it as Chairman of the Executive Committee of the Tobacco Institute; Joseph F. Cullman, III was also Chairman of the Board of Philip Morris. LATH00215951-5951 (U.S. Ex. 86,450); LATH00215952-5952 (U.S. Ex. 86,451).

609. Cullman wrote a follow-up letter dated March 20, 1970, also on Philip Morris letterhead and signed as the Chairman of the Executive Committee of the Tobacco Institute. In this letter, Cullman repeated his request for access to the underlying data and material. Cullman threatened: "If the Cancer Society does not accede to my request, we plan to use every means at

SECTION I.

our disposal to see to it that the medical and lay public are made aware of our respective positions in this matter." LATH00215953-5953 (U.S. Ex. 86,452); LATH00215954-5954 (U.S. Ex. 86,453).

610. Cullman repeated his threats in another letter dated April 29, 1970, also on Philip Morris letterhead. LATH00215955-5955 (U.S. Ex. 86,454); 500004588-4594 (U.S. Ex. 86,455); 502136771-6771 (U.S. Ex. 86,456). In a statement before the Overseas Press Club on April 30, 1970, Cullman reported on his interactions with the American Cancer Society and issued a press release stating that "The Tobacco Institute believes the American public is entitled to complete, authenticated information about cigarette smoking and health. The American Cancer Society does not seem to agree." 500006056-6065 (U.S. Ex. 47,760); TIMN0081949-1949 (U.S. Ex. 21,686).

611. Defendants also tried to persuade the American Medical Association to provide information related to the Auerbach/Hammond study. 508775475-5476 (U.S. Ex. 86,457); TIMN0001072-1077 (U.S. Ex. 86,458).

612. The Tobacco Institute mailed letters to all United States physicians discrediting the research by Auerbach and Hammond. In a June 19, 1970 memorandum to industry executives, counsel, and scientists, William Kloepfer, Vice President of the Tobacco Institute described the mailing and commented that "we had done the mailing to physicians because most major medical periodicals had refused the advertisement which we had offered to them on this subject." HK0431550-1550 (U.S. Ex. 87,699); TIOK003449-3449 (U.S. Ex. 87,700).

613. Auerbach invited industry pathologists – including CTR Research Director

SECTION I.

Sheldon Sommers – to come to his lab and review his work. 01246488-6489 at 6489 (U.S. Ex. 22,299). Indeed, Sommers had prepared an analysis of some of Auerbach's articles for David Hardy of Shook, Hardy & Bacon. 1005086446-6448 (U.S. Ex. 86,466); 10072395-2396 (U.S. Ex. 26,211); HK0429004-9005 (U.S. Ex. 26,211).

614. Philip Morris did send one of its scientists to Auerbach's laboratory. Raymond Fagan of Philip Morris visited Auerbach's laboratory in February 1970. Fagan's February 25, 1970 notes to Helmut Wakeham of Philip Morris stated: "As a farewell remark, Dr. Auerbach wanted to know that he welcomes any bona fide scientist who wants to visit his laboratory to see what he is doing and how he is doing it. He says he has nothing to hide." Fagan continued to monitor the Auerbach matter for Philip Morris. 1000298368-8369 (U.S. Ex. 86,459); 1000837394-7394 (U.S. Ex. 86,460); 1000298293-8294 (U.S. Ex. 86,461).

615. On November 3, 1970, a meeting was held at the offices of CTR "to discuss results of experiments with smoking dogs conducted by Dr. Oscar Auerbach." Present at the meeting were: Charles Kensler, member of the Tobacco Working Group; Alex Spears, Lorillard and member of the Tobacco Working Group; Helmut Wakeham, Philip Morris and member of the Tobacco Working Group; Murray Senkus, R.J. Reynolds and member of the Tobacco Working Group; Raymond Fagan, Philip Morris; Alex Holtzman and Mr. Hall, Philip Morris Legal Department; William Shinn, Shook, Hardy & Bacon; John Kreisher, CTR; Vincent Lisanti, CTR; Robert Hockett, CTR; W.T. Hoyt, CTR; and Sheldon Sommers, CTR. The medical attendees discussed points to be raised with Auerbach after his presentation at NCI on November 9, 1970. CTRMN043277-3279 (U.S. Ex. 86,462); 501990368-0369 (U.S. Ex. 64,004).

SECTION I.

616. Auerbach gave a presentation of his work at the November 9-10, 1970 meeting of the Tobacco Working Group. 501990296-0306 at 0299-0301 (U.S. Ex. 29,546); 01412382-2389 (U.S. Ex. 22,298); 01246488-6489 (U.S. Ex. 22,299); 110317791-7793 (U.S. Ex. 86,463). A November 13, 1970 memorandum from R.J. Reynolds's Murray Senkus to E.A. Vassallo reported the TWG minutes of this presentation. 501990296-0306 (U.S. Ex. 29,546). Senkus acknowledged that the "slides [Dr. Auerbach] now has in hand are of excellent quality." 501990296-0306 at 0300 (U.S. Ex. 29,546). In a separate memorandum, Alexander Spears remarked to Lorillard's Curtis Judge and Arthur Stevens on Auerbach's presentation: "To the writer, the slides represented obvious lung pathology with increased cellular proliferation with smoke exposure." Spears noted further that a clinical pathologist present at the meeting observed that, "if he had seen similar slides on patients, he would have ordered the lung removed." 01246488-6489 (U.S. Ex. 22,299); TIMN419023-9024 (U.S. Ex. 21,699).

617. In an internal Brown & Williamson memorandum from I.W. Hughes to Edwin Finch, John Bugard, and Addison Yeaman, Hughes updated senior Brown & Williamson management about the Auerbach presentation based upon his discussion with Murray Senkus of R.J. Reynolds. Hughes also forwarded information about Auerbach to Sydney J. Green and David Felton of BATCo. 110317791-7793 (U.S. Ex. 86,463); 110317790-7790 (U.S. Ex. 86,464); 110317789-7789 (U.S. Ex. 86,465).

618. Members of the Enterprise continued to monitor the Auerbach matter and to share information. On November 19, 1970, Alex Holtzman of Philip Morris advised Philip Morris executive James Bowling that the Tobacco Institute's William Kloepfer had telephoned him "to

SECTION I.

ask if we [Philip Morris] had any intelligence concerning the Tobacco Working Group's session with Dr. Auerbach. I told him that Wakeham had made a report covering the meeting. Kloefer asked if we could 'declassify' the portion of the report dealing with Auerbach and send him a copy. Do you have any objection to sending Kloefer this information?" 1005070141-0141 (U.S. Ex. 22,289).

619. Members of the Enterprise also decided to try to block the TWG from replicating Auerbach's research. Edwin Jacob, counsel to CTR and R.J. Reynolds, instructed R.J. Reynolds's scientists Murray Senkus and Alan Rodgman, as well as other Defendants' scientists, to prevent the TWG from performing dog inhalation studies such as those deemed necessary to develop new products. Jacob argued against such studies on the grounds that would be an admission by Defendants that existing cigarette products were harmful. Moreover, Jacob – an attorney, not a scientist – feared that these experiments might show proof of nicotine habituation. 515872408-2456 at 2424-2429 (U.S. Ex. 22,261); 501555624-5625 (U.S. Ex. 20,683).

620. After TWG Director Gori had sent Wakeham an advance copy of Auerbach's proposed experiments for NCI funding, a meeting was then held at CTR on December 21, 1971, to discuss Defendants' collective response. Edwin Jacob sent a letter to Brown & Williamson's DeBaun Bryant enclosing his notes from the meeting. Jacob reported that Alex Holtzman of Philip Morris had called the meeting and that Wakeham, another Philip Morris scientist, R.J. Reynolds's counsel Henry Roemer, Murray Senkus, as well as CTR's W.T. Hoyt, Robert Hockett, and Vincent Lisanti had attended. Jacob stated that the following points were agreed upon:

1. CTR could provide scientific points, but should not present to the government objections to the work being done.

SECTION I.

2. If objections were to be presented, it was probably best that they be presented to [Director] Gori, rather than at a higher (political) level. This would indicate that they should be presented by the scientists who were members of the Tobacco Working Group.

3. The objections should not be directed to specific points of the protocol that could be "cured" (e.g., which tobaccos to use, whether to incorporate a substitute larynx, etc.). Rather, they should be objections which went to and emphasized the invalidity of the entire experiment.

680264518-4520 at 4519 (U.S. Ex. 22,301); 500500668-0669 (U.S. Ex. 48,295).

621. "[A]fter ascertaining by a phone call from Wakeham to [TWG Director] Gori that Gori planned to make his decision on the matter by late January so that views presented after mid-January would be of little effect," Defendants decided that there would be a meeting of Defendants' scientists on the TWG at CTR on January 17, 1972, and that the scientists would then meet with Gori on January 18, 1972. 680264518-4520 (U.S. Ex. 22,301). In advance of that meeting, the Defendants' scientific directors sent a letter to Gori urging him not to support Auerbach's proposed experiments. 515872408-2456 at 2429 (U.S. Ex. 22,261). Though signed by the Defendants' scientific directors, attorney Edwin Jacob drafted this letter on behalf of the Enterprise. 515872408-2456 at 2429 (U.S. Ex. 22,261).

622. In his report to the Tobacco Institute Annual Meeting on January 28, 1971, William Kloepfer boasted that "[o]ur constant pressure on Hammond's and Auerbach's shaggy – or shabby – dog story has put that work as reported so far into a permanent file marked controversy – especially among scientists. It did more than that. It demonstrated our counterattack capability as a team. During the rest of the year we missed no event worth talking about in which our comment wasn't issued – and printed and broadcast – the same day."

TIMN0081403-1405 (U.S. Ex. 77,050).

623. On December 22, 1971, Helmut Wakeham of Philip Morris sent a letter to William Bates of Liggett; Murray Senkus of R.J. Reynolds; Alexander Spears of Lorillard; and I.W. Hughes of Brown & Williamson, enclosing "the preliminary proposal from Drs. Auerbach and Hammond to the National Cancer Institute for a 'proposed experiment to test the effects of three different types of cigarettes on male beagle dogs.' The very great probability that this proposal will be accepted and funded by the N.C.I. is a matter of considerable concern to the tobacco industry. This concern was discussed informally by a number of scientific and legal people at the Council for Tobacco Research yesterday" 1000299103-9104 at 9103 (U.S. Ex. 21,735). Wakeham advised that Defendants planned to have their research scientists meet "with both legal and scientific people" at CTR on January 17, 1972, "to clarify the points which would be made to Dr. Gori and then visit Dr. Gori on the following day in Washington D.C. for the discussion with him." 1000299103-9104 at 9103 (U.S. Ex. 21,735). Wakeham concluded, "I feel that if we make a strong presentation he may downgrade the priority of this proposed test sufficiently so that there may not be more than a 50% chance of the proposal being funded." 1000299103-9104 at 9104 (U.S. Ex. 21,735).

624. If that presentation failed, CTR had determined that "CTR's public relations counsel" Leonard Zahn would be tasked with preparing a document setting out the "shortcomings of the experiment." 501990307-0308 at 0308 (U.S. Ex. 49,013). Following the December 22, 1971 meeting at CTR, Robert Hockett of CTR prepared an outline of possible attacks on the proposed Auerbach study. CTRMN014958-4960 (U.S. Ex. 88,490). Subsequently, Shinn of

SECTION I.

Shook, Hardy & Bacon asked the Tobacco Institute to assist as well. 70124410-4411, CTC0190164-0165 (U.S. Ex. 87,218); ZN61577-1578 (U.S. Ex. 86,468); 70124410-4414, 70124410-4414 (U.S. Ex. 31,512); ZN61605-1606 (U.S. Ex. 86,469).

625. A Lorillard document entitled "Minutes, Meeting in Dr. Gio B. Gori's Office National Cancer Institute Bethesda, Maryland January 18, 1972" confirmed that the meeting between Gori and Defendants' research scientists did indeed take place. 01412335-2338 (U.S. Ex. 22,305); 01246351-6355 (U.S. Ex. 86,470). Those present at the meeting included Helmut Wakeham, Murray Senkus, I.W. (Ivor Wallace) Hughes, William Bates, Alexander Spears, Gio Gori, and Owen. Gori explained that the purpose of the proposed experiment was "to determine the effect of nicotine on cardiovascular disease in the dog, in a chronic fashion, in a smoking environment." 01412335-2338 at 2335 (U.S. Ex. 22,305). Gori concluded that, despite the Defendants' research scientists' objections, "the experiment would proceed." 01412335-2338 at 2337 (U.S. Ex. 22,305). A report by Helmut Wakeham of Philip Morris also memorialized the meeting. 1000299089-9093 (U.S. Ex. 86,472).

626. The Enterprise engaged in a coordinated effort to prevent Auerbach's proposed inhalation experiment from yielding meaningful results. A report by Brown & Williamson's I.W. Hughes on the same January 18, 1972 meeting, contained the notation in the top left-hand corner: "**Note to be destroyed after reading**" and a handwritten notation: "sent Shook Hardy 3-6-72." The report stated that "[a]s best as I can judge, **if he [Gori] is able to accommodate our criticisms, the experiment is not likely to show any significant differences, since most of our criticisms will tend to dilute the experiment.**" 680142682-2683 (U.S. Ex. 22,308) (emphasis

added); 680231776-1777 (U.S. Ex. 86,471).

627. Wakeham reported that Auerbach's experiment was to proceed. In a February 8, 1972 memorandum to Alexander Holtzman of Philip Morris and copied to Murray Senkus, R.J. Reynolds; Alexander Spears, Lorillard; and Clifford Goldsmith, Philip Morris, Wakeham advised: "On the pretense of needing to schedule our cigaret making operations, I have spoken informally with Dr. G. Gori about the proposed Auerbach smoking dog inhalation test. He confirmed that they are planning to go ahead with the test. . . . I think we must consider almost immediately whether the industry should do a parallel experiment. . . . I would appreciate it if Dr. Murray Senkus would discuss this informally with people in CTR who have expressed an interest in a parallel experiment and advise me whether I should go ahead and attempt to get a split sample arrangement." 1000299100-9100 (U.S. Ex. 86,473). A handwritten notation by Wakeham following a telephone call with Murray Senkus on February 10, 1972, indicated that a parallel test was unlikely. 1000299089-9093 (U.S. Ex. 86,472).

628. In a February 21, 1972 letter from William Shinn of Shook, Hardy & Bacon to Defendants' counsel, Shinn further discussed the Auerbach matter. Shinn reported that:

Dave Hardy hopes that you are considering the implications of NCI approval of the second Auerbach dog project. We understand that the project either has been given the go-ahead by Dr. Gori or is likely to receive it. What will the industry's position be in the event this receives considerable publicity? Should the research directors who serve on the Tobacco Working Group send a letter setting forth their position? If no response is made, would the industry's silence confer approval?

680041440-1441 (U.S. Ex. 22,311).

629. In March 1972, Wakeham further expressed his dissatisfaction with the Auerbach

SECTION I.

study in a communication to Alex Holtzman of Philip Morris and William Shinn of Shook, Hardy & Bacon. 1000299085-9085 (U.S. Ex. 86,474); 1000299086-9086 (U.S. Ex. 86,475); 1000299087-9088 (U.S. Ex. 86,476).

630. A March 14, 1972 Philip Morris interoffice correspondence from Alexander Holtzman to Thomas Ahrensfield described a "Meeting of Counsel at Tobacco Institute, March 10, 1972." At the meeting, Brown & Williamson's counsel Yeaman proposed, and the attendees agreed, that "the research directors should write a letter to Dr. Gori recording their objections to the repetition of the Auerbach/Hammond study." 1005055229-5230 (U.S. Ex. 26,186). A draft letter was circulated by Wakeham to William Bates, I.W. Hughes, Murray Senkus, and Alexander Spears. 1000299075-9075 (U.S. Ex. 86,477); 1000299078-9079 (U.S. Ex. 86,478); 1000299095-9095 (U.S. Ex. 86,479); 1000299082-9084 (U.S. Ex. 86,480).

631. On March 24, 1972, a joint letter was sent from Defendants' TWG representatives William Bates, I.W. Hughes, Murray Senkus, Alexander Spears, and Helmut Wakeham to Gio Gori "to express in writing [their] major objections" to the Auerbach study on behalf of the Enterprise. 680231761-1762 (U.S. Ex. 22,313); 1000299076-9077 (U.S. Ex. 86,481).

(d) Defendants Never Intended to Make Any Affirmative Contributions To the Work of the Tobacco Working Group

632. In the early 1970s, Defendants' lawyers and executives determined that their scientist representatives on the TWG would not offer suggestions to the TWG about the experiments to conduct or projects to pursue in the search for a less hazardous cigarette. Defendants' outside counsel David Hardy of Shook, Hardy & Bacon wrote company counsel and executives on August 7, 1973, that:

SECTION I.

I have gotten from [CTR Scientific Director] Dr. Sheldon Sommers a list of suggested projects for the Tobacco Working Group. . . . If you will arrange through Dr. Spears to find out which of this list of suggestions might be favorably considered by the Tobacco Working Group, Dr. Sommers will supply a proposed detailed protocol. . . . You will notice that a copy of this letter, as well as a copy of the suggested projects, is going to each General Counsel of the Institute members, who can take it up with their respective Scientific Directors, keeping in mind the stated limitations on the function of company scientists in connection with the Tobacco Working Group.

1005056343-6343 at 6343 (U.S. Ex. 22,272).

633. Philip Morris counsel Alexander Holtzman forwarded Hardy's list to Philip Morris scientist Helmut Wakeham on August 10, 1973. 2021016081-6085 (U.S. Ex. 22,276). Defendants' scientists marked up the list for potential priorities and circulated it to the scientific representatives on the TWG from the various cigarette companies. 000240215-0215 (U.S. Ex. 26,067); 2021016079-6080 (U.S. Ex. 22,277).

LWDOJ00095517-5517 (U.S. Ex. 34,114) (Confidential); LWDOJ0095518-5519 (U.S. Ex. 88,792).

634. On August 30, 1973, Wakeham wrote to his fellow TWG Defendants' scientific representatives William Bates, I.W. Hughes, Murray Senkus, and Alexander Spears confirming the substance of their conference call and advised that a meeting of lawyers and scientists was to take place on September 6, 1973. 000240213-0214 (U.S. Ex. 26,066).

635. The "meeting of lawyers and scientists" to which Wakeham referred was the

SECTION I.

September 6, 1973 meeting of the Committee of Counsel at 100 Park Avenue in New York.

Those present included Henry Roemer, R.J. Reynolds counsel; Frederick Haas, Liggett counsel; Art Stevens, Lorillard counsel; Alexander Holtzman, Philip Morris counsel; Thomas Ahrensfeld, Tobacco Institute; DeBaun Bryant, Brown & Williamson attorney; Horace Kornegay, Tobacco Institute; Thomas Austern, outside counsel; Fred Panzer, Tobacco Institute; Allan Topol, outside counsel; Ed Jacob, outside counsel; Murray Senkus, R.J. Reynolds scientist; Alexander Spears, Lorillard scientist; Marvin Kastenbaum, Tobacco Institute; Helmut Wakeham, Philip Morris scientist; David Hardy, outside counsel; William Shinn, outside counsel; Michael Gastman, Lorillard; Joseph Greer, Liggett counsel; and Cyril Hetsko, American Tobacco counsel. At this meeting, Defendants decided **not to submit any of Sommers' proposals or make any additional research recommendations at all to the TWG.** 1000255835-5836 (U.S. Ex. 26,068); 680215434-5435 (U.S. Ex. 22,279).

636. Haas' and Greer's notes from the September 6, 1973 meeting shed light on Defendants' real motivation for their participation in the TWG:

LWDOJ00095539-5542 (U.S. Ex. 34,115) (Confidential) (emphasis added); see also 1000255835-5836.

637. Individual company research directors also withheld potentially useful information from the TWG. Instead, Defendants let the TWG use its resources to investigate questions that Defendants had already explored in the mid to late 1960s. A December 3, 1975 Philip Morris interoffice correspondence from Thomas S. Osdene to "File," and copied to Helmut Wakeham, Frank E. Resnik, Robert B. Seligman, W.F. Cannon, and R.G. Carpenter, discussed the "Reconstituted Tobacco Sheet Workshop, Bethesda, Maryland, November 24, 1975." Osdene reported that Gori was exploring possibilities for a fifth NCI biological testing series and discussing variations of a prototype for testing. Osdene commented: "In summary, the meeting was of great interest. Thus far, it appears that Gori is going down the road on which the tobacco manufacturers found themselves some 5 to 10 years ago." 1003729912-9914 at 9914 (U.S. Ex. 22,280).

638. Not only did Defendants never correct the path Gori was taking, but they never intended to work cooperatively with the TWG at all. For instance, Philip Morris scientist T.S. Osdene attended an October 1973 TWG meeting during which "Gori asked who should recommend 'a less hazardous cigarette', Gori or the industry? There was no reply from any industry representatives." 1000051661-1665 at 1664 (U.S. Ex. 22,281). As described by Tom Osdene, NCI TWG member Dr. Marvin Schneiderman told the TWG subcommittee at a April 2, 1974 meeting, "'We have found a less hazardous cigarette but it is not marketable or practical. We need more input from the tobacco companies: what can they market? I am tired of bull[deleted].' There were no comments from the members of the tobacco companies." 1003102962-2968 at 2965 (U.S. Ex. 22,443). In sum, the apparent goal of Defendants was to use

the TWG as a cover for their inactivity, as well to ensure that the TWG did not make any significant advances.

(e) Defendants Benefitted From Their Involvement with the Tobacco Working Group

639. Defendants utilized the connections made with certain government scientists through the TWG and retained two members of the TWG as consultants. Following the termination of the TWG, Gori left shortly thereafter to begin working at the Franklin Institute, thanks to a large grant by Brown & Williamson; he was not forced out of NCI. Deposition of Michelle Bloch, United States v. Philip Morris, et al., February 14, 2002, 1815:20-1819:20; HHS1091046-1048 (U.S. Ex. 88,738). Gori has been a spokesperson and consultant for the industry ever since the 1980s. 680900035-0045 (U.S. Ex. 21,013); 1005082903-2903 (U.S. Ex. 21,529); TIMN435245-5245 (U.S. Ex. 22,487); 2050986280-6281 (U.S. Ex. 27,064).

640. Another government employee who participated in the TWG, was T.C. Tso of the Agricultural Research Service of the United States Department of Agriculture. Tso covertly shared information with Defendants about the TWG's activities. In a March 10, 1975 letter from BATCo scientist David G. Felton to various industry personnel worldwide, Felton enclosed material on the TWG that he had received from Tso. Felton advised:

Following the meeting of the TWG held at Bethesda on February 18-19th, I have received, from Dr. T.C. Tso, a confidential copy of his internal report on the proceedings and, in accordance with my usual practice, I enclose a photocopy for your personal information. To preserve the confidentiality of the source, please do not discuss this report with outsiders.

105366949-6955 (U.S. Ex. 22,317). Tso also had a meeting with J.C.B. Ehringhaus of the

Tobacco Institute on July 23, 1975, in which he provided a status report on the TWG.

TIMN449671-9671 (U.S. Ex. 22,391).

641. Philip Morris secured the services of Tso upon his retirement in 1983. Philip Morris, along with two other companies with whom he had worked at the TWG, approached Tso **prior to** his retirement from the Federal government; he was persuaded to join Philip Morris by Tom Osdene, who had regularly participated in TWG activities for that company. 2023799642-9642 (U.S. Ex. 87,701); 2000631334-1337 (U.S. Ex. 87,702); 2000511301-1302 (U.S. Ex. 87,703); 2000596045-6045 (U.S. Ex. 87,704); 2001202319-2319 (U.S. Ex. 87,705).

F. Coordinated Smoking and Health Literature Collection and Retrieval

642. A shared objective of the members of the Enterprise has been to avoid liability findings that could result both in large damage awards and in increased public recognition of the harmful effects of smoking. As detailed below, as members of the Enterprise, Defendants collectively gathered, organized, stored, and eventually automated medical and scientific literature related to smoking and health research for this common purpose.

643. According to a February 1969 Lorillard memorandum, Defendants' "Central File" was started in the late 1950s, was supported financially by all members of the industry and was supervised by the Ad Hoc Committee. It was eventually consolidated and put under the direct supervision of Defendants' attorney Edwin Jacob. The "Central File" was a collection of every document which could be found relating to the smoking and health controversy. Beginning in or about 1967, the major tobacco companies with the exception of Lorillard also joined together and established an "Information Center" for the collection, summarizing, and computerization of all

SECTION I.

information and documents concerning smoking and health. The purpose of the information center was to have information readily available to the industry for litigation and congressional hearings. 044227839-7844 (U.S. Ex. 20,066).

644. In 1958, Frederick P. Haas of Liggett sent a memorandum to Freeman Daniels of Perkins, Daniels & Perkins; John Vance Hewitt of Conboy, Hewitt, O'Brien & Boardman; Horace Hitchcock of Chadbourne &, Parke; Frances Horan, Liggett General Counsel; Porter Chandler of Davis Polk; and Mr. Johnston that stated: "As you know, thought has been given to the development of a central file of cancer literature which would be helpful to counsel for all companies in defending claims against them, individually or collectively. . . . Despite the fact that a good deal of bibliographic material has already been assembled in Richmond under T.I.R.C., I believe it important that the future literature be collected and analyzed 'under the wing' of counsel." Haas advised that there was space available under the lease to Webster, Sheffield & Chrystie, one of Defendants' law firms, where a person hired to gather literature, and an assistant, could be situated. LG2017032-7034 (U.S. Ex. 34,100). For a period of time, Webster, Sheffield & Chrystie handled what was known as the Defendants' "Central File" account. LG2023462-3462 (U.S. Ex. 34,103).

645. By 1964, indices of scientific literature were also being compiled by Defendants and their agents for litigation purposes. Edwin Jacob, attorney for CTR, R.J. Reynolds, and Brown & Williamson, employed a supervisor and three other employees to abstract and catalogue current medical and scientific literature by subject and author for litigation purposes. Henry Ramm, attorney for R.J. Reynolds, kept a similar but larger index, containing over 20,000

SECTION I.

documents in eight volumes. In addition, Kenneth Austin and three other CTR staff members compiled indices of scientific literature for litigation purposes. Litigation indices were also kept by Janet Brown, attorney for American Tobacco and CTR, and Alexander Holtzman, attorney for Philip Morris. 1003119099-9135 (U.S. Ex. 20,152) (U.S. Ex. 35,649).

646. In the mid-1960s report, Lorillard stated, "Because of the continued attacks on the industry . . . it is in the best interests of Lorillard to join forces with all other members of the industry concerning the health controversy." Although each cigarette company handled its own litigation through various trial attorneys, "there is a high degree of cooperation between the companies through . . . the 'Ad Hoc Committee' which finds medical witnesses and prepares testimony. Lorillard's representative on this Committee is Mr. David Hardy. The Committee supervises the Central File which is a collection of every document which can be found relating to the smoking and health controversy. This cooperation must be continued. An adverse decision against any member of the industry would be disastrous to all." 80684691-4695 (U.S. Ex. 21,067).

647. In 1967, Edwin Jacob continued to request contributions from each of the companies for the expenses of the Central File, in the form of checks payable to Cabell, Medinger, Forsyth & Decker – Special Account No. 3. LG2023460-3460 (U.S. Ex. 21,210). In this way, expenses for the Central File were handled out of one of the Defendants' Lawyers Special Accounts.

648. According to a February 28, 1968 letter from Janet Brown of Chadbourne, Parke, Whiteside & Wolff to Cyril Hetsko, Vice President and General Counsel of American, the cost of

SECTION I.

the bibliographic services and analysis performed for the Central File were approximately \$60,000 per year in the 1967/1968 time frame; this expense was shared by six companies. Charged to this account were also expenses of approximately \$8,000 per year for "Dr. Berkson's consultation fee," which "continue[d] to be charged though Special Account No. 3, according to Jacob, his instruction being that Dr. Berkson is a litigation consultant to all of the six companies." Other expenses included a fee for Taylor and Lynch Co. for work done under "Special Project 110." However, Brown noted that "no further 'consultants' fees' of this type will appear under Special Account No. 3, Mr. Jacobs tells me, since his subsequent instructions from the General Counsel are to bill everything having any on-going connection with Congressional preparation through Central File Special Account No. 4." XBW0010893-0896 (U.S. Ex. 26,456).

649. The collection services supported under the Central File were in addition to the services performed by the Information Center. Back in 1966, Covington & Burling contracted with International Information Institute, later known as Information Interscience Incorporated, also known as "3i," to provide confidential, automated litigation support services to the law firms representing cigarette manufacturers in products liability litigation. LG2018129-8132 (U.S. Ex. 20,145); LG2018124-8126 (U.S. Ex. 20,148); LG2018123-8123 (U.S. Ex. 20,150); 1005077723-7724 (U.S. Ex. 86,482); 1005077664-7664 (U.S. Ex. 86,483); 1005077657-7657 (U.S. Ex. 86,484); 1005077719-7719 (U.S. Ex. 86,485); 1005077676-7677 (U.S. Ex. 86,486); 1005078101-8101 (U.S. Ex. 86,487); 500290898-0898 (U.S. Ex. 86,488). In Brown's February 28, 1968 letter, she noted that the issue of whether there was duplication between the work

SECTION I.

performed through the Central File and Information Center had been discussed at the last Ad Hoc Committee meeting. XBW0010893-0896 (U.S. Ex. 26,456).

650. In 1968, an Evaluation Committee was appointed to review the work performed under the Central File and the Information Center. The Evaluation Committee recommended that "the computerized information storage and retrieval System [3i] should be continued in substantially its present form. . . . [i]n order to prepare adequately for the defense of the more than 50 suits now pending against the industry . . . relevant scientific literature must be exhaustively scanned, thoroughly indexed, and made rapidly retrievable. . . . [t]he System is also extremely important in preparing testimony or other submission to Congress or to the executive agencies[.]" It was encouraged that the General Counsel make a permanent commitment to the System so as to phase out other methods for "gathering and filing relevant documents." The Evaluation Committee also recommended greater coordination with efforts by the CTR and the Tobacco Institute. 500289382-9398 (U.S. Ex. 29,453).

651. A February 1969 Lorillard memorandum reported that there was a feeling by some Defendants that as the Information Center expanded, the industry's Central File and much of the library maintained by CTR could be eliminated. 044227839-7844 (U.S. Ex. 20,066).

652. However, efforts by the Evaluation Committee continued through 1969 as evidenced by a March 28, 1969 letter from Francis Decker, attorney at Webster, Sheffield, Fleischmann, Hitchcock & Brookfield, to Donald Hoel, Shook, Hardy & Bacon. Members of the Evaluation Committee included Francis Decker, Preston Leake, Arthur Burke, and Frank Colby with guidance from company General Counsel. The letter stated that it had been decided once

again that an evaluation of the efforts by CTR, the Tobacco Institute, the Central Files, and the 3i system was necessary. 500289915-9918 (U.S. Ex. 29,454).

653. In December 1970, Hardy of Shook, Hardy & Bacon wrote that it was "impossible for anyone at this stage of the game to be exact as to any savings by the consolidation of library functions. It is presently contemplated that the retrieval system will be a special project and division of CTR and as such would be under the jurisdiction of Henry Ramm after he assumes his new responsibilities" as CTR Chairman and President. Hardy thought that "the consolidation of libraries of Central File, CTR, etc. would result in greater efficiency and less total expense." 01422304-2304 (U.S. Ex. 20,288).

654. In 1970, the Central File was moved to 110 East 59th Street, 14th floor, New York, New York. It was advised that all mail to the Central File was to be addressed to Gisella Cahnman or to Lauterstein & Lauterstein, the law firm that Edwin Jacob was with at that time. 80680314-0315 (U.S. Ex. 86,489).

655. A 1971 memorandum described the Central File as an information gathering and library service conducted by and for the tobacco industry:

Established in 1958 in connection with the defense by cigarette manufacturers of health litigation (cases alleging cancer and other diseases contracted from cigarette smoking), the Central File is a continuing collection and maintenance of documents and information relating to the smoking and health controversy. It is a work tool and source of information for the tobacco companies and their counsel in conjunction with litigation, and in recent years has also been utilized in connection with the industry's preparation of materials for response to Government and private reports with respect to smoking and health, as well as for the preparation of testimony and documents given before and submitted to Congressional committees and regulatory agencies. The financial

support of the Central File is borne equally by the six major cigarette manufacturers.

85649920-9920 (U.S. Ex. 21,080).

656. Similarly, in a 1969 letter from Edwin Jacob to Arthur Stevens of Lorillard, Jacob confirmed that the Central File pertained "to the litigation expenses which are shared by the participants." 80680317-0318 (U.S. Ex. 86,490). A May 18, 1971 memorandum by Stevens explained to Lester Pollack of Lorillard that the "Central File accounts, relating to litigation and doctors' expenses, are not maintained at high levels, and are, in Jacob's words, largely self-liquidating." 80680229-0229 (U.S. Ex. 31,967).

657. In 1971, the operations of 3i were transferred to CTR. A document dated December 28, 1970, memorialized the agreement between CTR and Defendants American, Brown & Williamson, Liggett, Philip Morris, and R.J. Reynolds regarding "the operation of an information storage and retrieval system for the lawyers of these five companies." The document, signed by Wilson Thomas Hoyt of CTR, stated that: "We understand that the Committee of Counsel of the five participating companies, at its meeting on December 18, 1970, authorized with respect to this system a capital budget of approximately \$220,400.00 and an operating budget for 1971 of \$750,000.00." The document outlined how the Defendants were going to advance funds to Edwin Jacobs' law firm, Lauterstein & Lauterstein at the time, for certain capital expenditures; the remaining funds would be transferred to CTR at the time CTR assumed full responsibility of the project. 680300736-0738 (U.S. Ex. 54,044); 2015021479-1481 (U.S. Ex. 20,312).

658. At the first meeting of CTR's Board of Directors after CTR had incorporated in

SECTION I.

1971, the Board gave approval to CTR to take over and operate, as a CTR Special Project, an information and retrieval system and to computerize medical literature, articles, and other published documents relating to tobacco and health, the expenses to be borne by the participating companies. At the first annual meeting of CTR members after incorporation, the members approved the name Information Systems for this special project. Information Systems became a division of CTR performing the function of analyzing, summarizing, indexing, and retrieving scientific and medical literature at the direction of Defendants' attorneys. Defendants relied on this division of CTR to review the medical literature relating to smoking and health even though they continued to monitor literature in-house. CTRMIN-BD000001-0009 (U.S. Ex. 21,141); CTRMIN-MOM000001-0015 (U.S. Ex. 21,145).

659. The Report of the Chairman to the Second Annual Meeting of CTR Members held on January 28, 1972, revealed that the name of the operation had been changed to Information Retrieval Division. The division was staffed by a group of twenty-six people and financed separately from the general budget; its name was eventually changed to the Literature Retrieval Division ("LRD"). CTRMIN-MOM000016-0034 (U.S. Ex. 21,170); Response of Defendant The Council For Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Interrogatory/Response No. 26 (U.S. Ex. 75,927).

660. CTR maintained a separate checking account called CTR Special Account No. 1 for the Literature Retrieval Division. CTR requested, received, and deposited monies from its sponsor companies for the Literature Retrieval Division. Deposition of Lorraine Pollice, United

States v. Philip Morris, et al., June 27, 2002, 24:11-30:5.

661. In addition to the CTR LRD division, Defendants American, Brown & Williamson, Liggett, Lorillard, Philip Morris, and R.J. Reynolds also continued to fund Special Account No. 3 through Edwin Jacob's firm. The account was designated as a "File for Litigation" and was "used to maintain an office where several doctors work on an analysis of medical literature." 682150942-0942 (U.S. Ex. 86,491).

662. A January 1975 memorandum described Special Account No. 3 as the Central File, a library available to company and litigating counsel and operated under the direction of staff who analyzed scientific articles in the area of smoking and health for counsel. Defendants considered Special Account No. 3 as lawyers' work product not subject to subpoena, which is why it was separated from Special Account No. 4, the account utilized to obtain the services of doctors and scientists who could be available for Congressional hearings and litigation. Frederick Haas, attorney for Defendant Liggett, felt that the work done from funds generated from both accounts had been "extremely important in defending lung cancer and related cases." An April 1975 memorandum written by Haas to James Scott Hill of Liggett reported that "[t]he law firm of Jacob and Medinger handles the expenses [of the Central File] through equal payments by all six companies." LG2021550-1550 (U.S. Ex. 21,209); LG2023420-3421 (U.S. Ex. 23,014); 682069946-9946 (U.S. Ex. 20,009); LG2000526-0531 (U.S. Ex. 34,072).

663. Informal and formal reviews of the CTR Literature Retrieval Division operations were undertaken in 1975. The formal review was prepared by Frank Colby, Director of Scientific Affairs for R.J. Reynolds; Fred Giller, Director of CTR's Literature Retrieval Division;

SECTION I.

and William Benbow, a systems analyst for R.J. Reynolds. The formal review report opined that "[t]he quality of the abstracting and indexing has improved substantially since the 3i [Information Interscience Incorporated] and O'Shea eras, especially since the abstracts have been structured . . . the quality of the abstracting and indexing is much better than that provided by any information service in the public domain." The formal review of LRD also recommended that Frank Colby continue to make available to LRD the results of his scanning and selection from approximately twenty primary journals and a few secondary sources. LG2024393-4400 (U.S. Ex. 21,213); 70124419-4421, CTRLRD004070-4072 (U.S. Ex. 31,518); 11275289-5289, CTRLRD004069-4069 (U.S. Ex. 26,401).

664. In 1979, W.T. Hoyt, Executive Vice President of CTR, advised Thomas Ahrensfeld, Philip Morris; Max Crohn, Jr., R.J. Reynolds; Joseph Greer, Liggett; Arnold Henson, American; Ernest Pepples, Brown & Williamson; and Arthur Stevens, Lorillard, that anticipated expenditures for the Literature Retrieval Division for 1979, would exceed the budgeted amount by \$225,000. All agreed to the increased amount. 70124547-4547, CTRLRD004193-4193 (U.S. Ex. 31,557); 70124546-4546, CTRLRD004192-4192 (U.S. Ex. 31,556); 70124548-4548, CTRLRD004233-4233 (U.S. Ex. 31,558); 70124544-4544, CTRLRD004190-4190 (U.S. Ex. 31,554); 70124545-4545, CTRLRD004191-4191 (U.S. Ex. 31,555); 11275453-5453, CTRLRD004232-4232 (U.S. Ex. 26,402).

665. An informal review of CTR's Literature Retrieval Division was also done by Lorillard's Research Director Alexander Spears and covered methods of handling the literature and the computer process. The data source for the LRD system consisted of approximately 400

SECTION I.

medically-oriented journals, ten abstracting publications, and various United States Government publications. There were approximately 75,000 entries in the system. Computer searches (by author, journal, year, title, author affiliations, accession number, category of document, or key word descriptors) of the articles stored in the data bank could be reported as either a list of accession numbers of documents or as a full report of all information stored in the data bank for each document. However, the abstract of the article was not stored in the data bank and did not appear in the full report. The final stage of a search required pulling aperture cards on which appeared a printed abstract of the article and/or pulling the microfilm of an article. LG2024393-4400 (U.S. Ex. 21,213).

666. During her tenure in the Public Affairs Division of the Tobacco Institute, Anne Duffin used material from the LRD to write articles, pamphlets, handouts, and other publications. Examples include "Smoking and Health 1964-1979, The Continuing Controversy," "Cigarette Smoking and Cancer: A Scientific Perspective, 1982," and "Cigarette Smoking and Heart Disease, 1983." Deposition of Anne Duffin, Munn v. Philip Morris, January 7, 1987, 164:23-166:23, 168:13-169:16, 171:7-172:13, 173:2-175:1, 176:18-22; Deposition of Anne Duffin, Munn v. Philip Morris, January 8, 1987, 214:4-20, 224:1-22; 519838352-8517 (U.S. Ex. 87,707); 519838518-8621 (U.S. Ex. 87,708); 519838622-8674 (U.S. Ex. 87,709).

667. Alexander Spears' informal review report described the LRD operation as "nearly complete coverage of the world medical literature on tobacco and health available at each user location with essentially state of art information search and retrieval capability." According to Spears, the LRD system served relatively little purpose to Lorillard "except in the area of tobacco

SECTION I.

and health related to litigation and governmental regulatory proceedings;" therefore Spears supported the decision by Lorillard to fund the LRD "since it seems an integral part of defending the industry and this company in the defined area." Lorillard eventually did fund the LRD from 1980 through 1983. 01422327-2328 (U.S. Ex. 20,050); Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al. (served February 6, 2001), at Schedule C (U.S. Ex. 75,927).

668. In September 1981, the Ad Hoc Committee – William Shinn and Robert Northrip from Shook, Hardy & Bacon; Francis Decker, Jr., from Webster & Sheffield; Ed Jacob and Timothy Finnegan from Jacob, Medinger & Finnegan; and Janet Brown and Thomas Bezanson from Chadbourne, Parke, Whiteside & Wolff – met and discussed a proposal to sever LRD from CTR and reorganize it, along with the Central File (sometimes referred to as the Tobacco Litigation File), as a corporation providing litigation support services to counsel defending smoking and health actions. In order to provide work product protection for LRD's microfilmed, computerized database and abstracts on smoking and health information, the proposal recommended that LRD would be removed to the custody of defense counsel into a new business corporation to be formed called LS, Inc., the stock of which would be owned by the four law firms; payments to LS, Inc. by the law firms would be on a per client market share basis for all functions; the only users of the system would be the four law firms plus Covington & Burling, representing the Tobacco Institute; the only use of the system would be for litigation, which would be defined to include administrative proceedings and legislative hearings, at which proceedings and hearings the law firms were representing their clients; and Fred Giller, then-

SECTION I.

Director of CTR's LRD, would be President and CEO of LS, Inc. ATX9275490271-0280 (U.S. Ex. 36,231); ATX9275490282-0286 (U.S. Ex. 21,133); LG2000741-0750 (U.S. Ex. 36,269); 515848825-8830 (U.S. Ex.21,583).

669. The organization and incorporation of LS, Inc. (Legal Services Corporation for Cigarette Industry Litigation Support) and its removal from LRD was the subject of extensive study, review, and evaluation for a considerable period of time in the early 1980s. In 1982, W.T. Hoyt, President of CTR, sent a number of requests to Thomas Ahrensfeld, Philip Morris; Joseph Greer, Liggett; Arnold Henson, American; Ernest Pepples, Brown & Williamson; Arthur Stevens, Lorillard; and Samuel B. Witt, III, R.J. Reynolds, requesting approval for interim funding to cover expenses for the Literature Retrieval Division. 2015020054-0054 (U.S. Ex. 36,628); 2015020046-0046 (U.S. Ex. 36,627); 2015020038-0038 (U.S. Ex. 36,626); 2015020032-0032 (U.S. Ex. 36,625); 2015020021-0021 (U.S. Ex. 36,624).

670. In March 1983, the Committee of Counsel approved the implementation and incorporation of LS, Inc. On November 9, 1983, CTR drew a check for the \$4,739.60 remaining in CTR Special Account No. 1 at Citibank, closed the account, and transferred the monies to LS, Inc. LG2000823-0832 (U.S. Ex. 21,544); 2047663658-3695 (U.S. Ex. 20,481); CTRLRD004451-4451 (U.S. Ex. 21,140); CTRLRD000171-0171 (U.S. Ex. 21,139); 640000135-0136 (U.S. Ex. 86,500); 508371652-1652 (U.S. Ex. 29,971); Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 29:14-30:5.

671. According to a 1998 brochure, LS, Inc. was a lawyers' assistance corporation that provides litigation support services to certain law firms engaged in the defense of tobacco project

liability lawsuits. LS, Inc. or its predecessor organizations have provided litigation support services to Defendants since 1966. The Board of Directors was comprised of representatives from Chadbourne & Parke, attorneys for Defendants American Tobacco and Brown & Williamson; Shook, Hardy & Bacon, attorneys for Defendants Lorillard and Philip Morris; and Jones Day Reavis & Pogue, attorneys for R.J. Reynolds. 190204278-4284 (U.S. Ex. 20,294).

G. Center for Indoor Air Research (CIAR)

672. Members of the Enterprise, specifically Philip Morris, R.J. Reynolds, Lorillard, and the Tobacco Institute on behalf of its member companies, pooled their resources and coordinated their activities with respect to environmental tobacco smoke ("ETS") issues through a variety of mechanisms and committees. The purpose of the various industry ETS committees was to fund research to benefit litigation defending the Enterprise. Although Defendants claimed that CIAR existed to conduct "sound science" on ETS, its actual purpose was to fund projects that would counter the public's concern over the harmful nature of ETS, a concern a growing – and real – concern. See U.S. FPF § IV.C., infra.

(1) Formation

673. The first industry committee dedicated specifically to address ETS concerns was formed as early as 1975. This informal committee met for the first time on April 25, 1975. The name of this committee changed frequently but participants remained almost constant. Those present at the first gathering included: Pat Sirridge, Shook, Hardy & Bacon; Frank Colby, R.J. Reynolds; I.W. Hughes, Brown & Williamson; Edwin Jacob, Jacob, Medinger & Finnegan; William Dunn, Philip Morris; and Raymond Fagan, Philip Morris. Donald Hoel, an attorney

SECTION I.

with Shook, Hardy & Bacon, was also an early member of the committee. The group discussed the "environmental tobacco smoke-nonsmoker" research situation and it was "the unanimous opinion of the group that there appeared to be a pressing need for industry-sponsored research in this general area to produce objective and high quality scientific data to meet current legislative and scientific challenges. . ." The group devised specific research proposals to be submitted to the Research Liaison Committee for approval and funding. 50294827-4827 (U.S. Ex. 86,501); 1003293764-3764 (U.S. Ex. 23,390); 1003293761-3763 (U.S. Ex. 86,502).

674. The Hoel committee, an informal name given to the group, worked closely with the Research Liaison Committee ("RLC") (further discussion at U.S. FPF § I.E(1), supra). David Hardy acted as the liaison between the two groups. Hoel's committee initially referred to itself as the "Special Subcommittee on Environmental Tobacco Smoke," although it appears that certain people were not comfortable with that designation. According to a memorandum from Raymond Fagan and William Dunn, "[t]he RLC under the urging of Hetzko [sic] wanted to be sure that we did not consider ourselves a committee of any sort. We were not to consider ourselves a subcommittee of the RLC. We are to report to Dave Hardy who will in turn convey our findings, suggestions and recommendations to the RLC." Nevertheless, Hoel's committee continued to submit recommendations to the Research Liaison Committee for consideration. 1003186183-6184 (U.S. Ex. 86,503); 504126505-6507 (U.S. Ex. 24,216); 1003293752-3753 at 3752 (U.S. Ex. 20,169) (U.S. Ex. 75,204); 500294698-4698 (U.S. Ex. 24,145); 5002944700-4701 (U.S. Ex. 88,834).

675. As the years progressed, the Hoel committee continued to recommend studies on

SECTION I.

ETS. However, by 1978, the name of the group changed to the Public Smoking Advisory Group ("PSAG"). Funding for the group came from Special Account No. 4. In 1982, members of the Advisory Group met at CTR. Present were: Frank Colby, R.J. Reynolds; J.G. (Gil) Esterle, Brown & Williamson; Timothy Finnegan, Jacob, Medinger & Finnegan; Thomas Osdene, Philip Morris; Murray Senkus, R.J. Reynolds; Pat Sirridge, Shook, Hardy & Bacon; and Alexander Spears, Lorillard. The PSAG continued to meet regularly until 1983. 03638976-8982 at 8981 (U.S. Ex. 46,483); 01337388-7388 (U.S. Ex. 86,504); 1000125386-5386 (U.S. Ex. 86,505); 504339411-9412 (U.S. Ex. 86,506); 501627024-7024 (U.S. Ex. 86,507).

676. According to a September 13, 1984 letter written by Hoel, the Committee of Counsel suggested that the PSAG be reactivated. Hoel reorganized the committee, which became known as the Tobacco Institute ETS Advisory Group. The purpose of the group was to provide advice, solicit, and review proposals on ETS and recommend to the Committee of Counsel which projects should be funded as Special Projects. Participating Defendants included Brown & Williamson, R.J. Reynolds, Lorillard, and Philip Morris. Hoel chaired the committee. Attorneys from Covington & Burling and the Tobacco Institute staff also attended the group's meetings. According to an industry document on the ETS Advisory Group, "[w]hile neither Liggett or American directly participate in the group both are participating with the funding of approved projects." 2021004058-4064 at 4058 (U.S. Ex. 20,339); Response of Defendant The Tobacco Institute to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 3 (U.S. Ex. 87,710); Response of Defendant R.J. Reynolds Tobacco Company to Plaintiffs' Second Set of Interrogatories, Dunn v.

SECTION I.

R.J. Reynolds (filed January 18, 1996), at Interrogatory/Response No. 10 (U.S. Ex. 87,711); 516765394-5431 (U.S. Ex. 87,712).

677. In 1987, a new organization dedicated to ETS research was organized. The organization came about through the joint efforts of the various Tobacco Institute committees, the ETS Advisory Group and a subcommittee regarding indoor air research led by Mary Ward, counsel for R.J. Reynolds. A June 15, 1987 memorandum from Peter Sparber, Vice President of Public Relations for the Tobacco Institute, to Sam Chilcote, Jr., President of the Tobacco Institute, and William Kloepfer, Jr., Tobacco Institute Senior Vice President for Public Relations, stated that Ward's subcommittee (related to the new organization) was in its final stages and that the ETS Advisory Group was one of the groups responsible for approving the inception of this new organization. TI10411343-1343 (U.S. Ex. 21,251).

678. In its recommendation for the establishment of the Center for Indoor Air Research ("CIAR"), the ETS Advisory Group explained the Defendants' motives in creating the new organization:

Tobacco industry scientists agree with other scientists who maintain that there is no persuasive evidence that ETS might constitute a health hazard to nonsmokers. The tobacco industry is not content, however, to merely debate the inadequacies of existing research; the TI-ETS Advisory Group recommends that the industry renew and strengthen its commitment to foster and support research on this issue through establishment of an Institute to develop and oversee such research.

The ETS Advisory Group recommended that the projects they currently monitored (primarily CTR Special Projects) be assumed by the new organization. The Tobacco Institute ETS Advisory Group clearly stated that they envisioned the purpose of the new organization was "to

SECTION I.

provide a more efficient mechanism for identifying, funding, and coordinating specific research to gain understanding of the ways in which particular components of indoor air - with an emphasis on ETS - may affect human health and well being." TI00610469-0477 at 0469, 0470, 0477 (U.S. Ex. 62,068).

679. In March 1988, Defendants Philip Morris, R.J. Reynolds, and Lorillard formed CIAR in an effort to pool their efforts on ETS research and to disassociate that research from the Tobacco Institute. The Tobacco Institute assisted with the initial organization of CIAR. 321141105-1144 at 1142 (U.S. Ex. 20,588); 506300804-0814 at 0804 (U.S. Ex. 20,756); 506647151-7156 at 7151 (U.S. Ex. 20,761); 2071412978-3143 at 3082-3096 (U.S. Ex. 23,061); 506662315-2316 (U.S. Ex. 20,762) (U.S. Ex. 75,277); Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 116:11-117:2; Response of Defendant The Tobacco Institute to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Request/Response No. 11 (U.S. Ex. 87,710).

680. As set forth below, CIAR furthered the unlawful goals of the Enterprise by (1) coordinating and funding Defendants' efforts to generate evidence to support its position that there remained an "open controversy" as to the health implications of exposure to ETS; (2) leading the attack on United States efforts to act on evidence linking ETS to disease; and, (3) acting as a "front" organization for tobacco funds so that CIAR appeared to be an independent research funding organization.

681. According to CIAR's proposed bylaws, its mission was to "exist to encourage scientific inquiry and appropriate public policy related to the composition and possible health

SECTION I.

effects of indoor air." By May 1989, CIAR had re-written its stated mission: "[T]o create a focal point organization of the highest scientific caliber to sponsor and foster quality, objective research in indoor air issues including environmental tobacco smoke and to effectively communicate research findings to the broad scientific community." In 1994, CIAR's stated mission was to "sponsor high quality research on indoor air issues and to facilitate communication of research findings to the broad scientific community." TII0630369-0369 (U.S. Ex. 21,861); 321141105-1144 at 1106 (U.S. Ex. 20,588); 515928375-8378 at 8375 (U.S. Ex. 30,290).

682. In 1988, the first members of the CIAR Board of Directors included Gary T. Burger, Vice President of R.J. Reynolds; Charles R. Green, R.J. Reynolds scientist; Vello Norman, Lorillard scientist; Thomas S. Osdene, Philip Morris Director of Research; Robert A. Pages, Philip Morris scientist; and Alexander W. Spears, President of Lorillard. TI01900211-0214 at 0211 (U.S. Ex. 21,241).

683. Defendants Philip Morris, R.J. Reynolds, and Lorillard were CIAR's charter members and provided CIAR with the majority of its funding. According to a May 3, 1995 CIAR memorandum from Max Eisenberg, Executive Director of CIAR, to board members Charles Green of R.J. Reynolds, Richard Carchman of Philip Morris, and Alexander Spears of Lorillard, the annual contributions to CIAR for that year by these three companies were \$1,966,049, \$3,505,010, and \$539,937 respectively. 2050764508-4508 (U.S. Ex. 20,492) (U.S. Ex. 75,540); Response of Defendant R.J. Reynolds Tobacco Company to Plaintiffs' Second Set of Interrogatories, Dunn v. R.J. Reynolds (filed January 18, 1996), at Interrogatory/Response No.

10 (U.S. Ex. 87,711).

684. In addition to these three charter members, CIAR also had regular and associate members who were people or organizations allegedly interested in indoor air quality research, but who were not founding members. These members included, among others, Consolidated Safety Services, ENV Services, Inc., Meckler Engineers Group, and Universal Corporation.

321141105-1144 at 1142 (U.S. Ex. 20,588).

685. Ultimately, the Board of Directors was responsible for all aspects of CIAR's operations. CIAR's bylaws guaranteed that the Charter Members would have a voting majority on all matters coming to the Board. According to the CIAR charter membership proposal, each charter member was entitled to elect two people to serve on CIAR's Board of Directors. Regular members, at the discretion of the Board of Directors, could elect up to five directors. Associate Members had no right to representation on the board. 300519669-9672 (U.S. Ex. 86,508).

686. A CIAR Science Advisory Board ("SAB") was created upon the CIAR's establishment. The CIAR SAB consisted of a number of scientists from varying fields, and was "assembled to assist in the formation and review of the research program." In May 1989, the CIAR SAB consisted of Jared Cohon, James Crapo, Gareth Green, Irving Kessler, Morton Lippman, Demetrios Moschandreas, and Alfred Wolf. TI01900167-0167 (U.S. Ex. 62,140); 321141105-1144 at 1106 (U.S. Ex. 20,588).

687. CIAR's decisions with respect to funding research were very similar to CTR's. CIAR had two methods of funding research on ETS. The first was to have research proposals submitted to and reviewed by peer reviewers and then by the CIAR SAB. The CIAR SAB then

SECTION I.

made recommendations for research project funding. These recommendations were evaluated and put to a final vote by the CIAR Board of Directors. The second was to have projects proposed and funded by the CIAR board directly without the review of the CIAR SAB.

321141105-1144 at 1112 (U.S. Ex. 20,588); 86205370-0370 (U.S. Ex. 32,050) (U.S. Ex. 81,247); Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 110:20-111:25.

688. An April 25, 1988 letter from Tom Osdene, a member of CIAR Board of Directors, to Samuel Chilcote, President of the Tobacco Institute, articulated the Enterprise's use of CIAR. Osdene wrote, "I think many of us have conceptualized the ETS issue as a battlefield in which the arena is dominated by public relations and legal issues while the ammunition which is used happens to be science. It has been the purpose of CIAR, as well as its precursor, the ETS Advisory Committee, to provide ammunition for this fight." In the letter, Osdene described the scope of CIAR research in overall air quality and acknowledged that CIAR was restricted to funding research that specifically dealt with the alleged health affects of ETS. Osdene concluded the letter advising that, "it is vital that there be a unified position and an appreciation of the role that science and therefore CIAR can play in this [ETS] controversy." TI1130138-0144 at 0138, 0140, 0444 (U.S. Ex. 62,287).

689. A confidential memorandum on the January 29, 1988 meeting between the ETS Advisory Group of the United Kingdom's Tobacco Advisory Council (discussed further at U.S. PPF § I.H(3), infra) and R.J. Reynolds – with BATCo and Brown & Williamson present – discussed the activities of CIAR. It was noted that CIAR would "try to broaden the issue by

focusing not simply on ETS." BWBU242341-2343 at 2342 (U.S. Ex. 21,136).

690. CIAR was also used by the Enterprise as a front to conceal industry participation in certain studies. In an April 15, 1991 memorandum to Steve Parrish, Robert Pages, a Philip Morris Researcher, recommended that Philip Morris fund an ETS exposure assessment study in Japan. Pages also recommended, "This is NOT a project that should be funded by CIAR, although there MAY be (I'm not convinced yet) a reason to say it was sponsored by CIAR so as to 'hide' industry involvement (as was done in Rupp's 'Asia Project')." 2023544456-4456 (U.S. Ex. 22,816) (U.S. Ex. 75,342).

691. Liggett participated in meetings involving the organization of CIAR though it was not a formal member. For example, the formation of and financing for CIAR were discussed at meetings of the Tobacco Institute Executive Committee on June 18, 1987, and August 20, 1987, at which committee member Kinsley R. Dey of Liggett was present. 2025856068-6073 (U.S. Ex. 86,509); 2023723951-3955 (U.S. Ex. 86,510).

692. On January 19, 1993, Dennis Dietz, Manager of Scientific Issues for Liggett, attended a CIAR meeting in London, which was also attended by scientific personnel from Defendants Philip Morris, Lorillard, R.J. Reynolds, BATCo, and Brown & Williamson. According to the meeting notes, the attendees reviewed several "major on-going or planned" studies sponsored by CIAR and "seemed cautiously interested in a collaborative approach such as CIAR to proactively address the ETS issue with good, solid science." 87802763-2763 (U.S. Ex. 23,536); 20230537331-7331 (U.S. Ex. 86,513); 89259462-9465 (U.S. Ex. 86,512).

693. Brown & Williamson was not an charter member of CIAR due to the dominating

leadership of Defendants R.J. Reynolds and Philip Morris. However, Brown & Williamson worked closely with the members during the conceptualization and establishment of CIAR. Moreover, in 1995, Brown & Williamson officially joined CIAR. 401104890-401104890 at 4890 (U.S. Ex. 47,545); 620002505-2506 (U.S. Ex. 53,330); 800105506-5506 (U.S. Ex. 31,679); 2063650456-0456 (U.S. Ex. 39,805).

694. Though BATCo never became a direct member of CIAR, it played a cooperative role with that organization to advance the Enterprise. In a May 24, 1988 memorandum to BATCo's Richard Baker, Chris Proctor, then-Head of Science at BATCo, described the purpose and activities of CIAR. According to Proctor, Philip Morris was very interested in obtaining associate memberships from tobacco companies based outside the United States. Baker then wrote a memorandum recommending that BATCo join CIAR. Baker wrote, "BAT is on the way to becoming an important industry centre for ETS. To enhance this, it would be desirable to become an associate member of the US Center for Indoor Air Research." Although it did not officially become a member, BATCo participated in some of the studies conducted by CIAR. 401104890-4890 (U.S. Ex. 47,545); 800105506-5506 (U.S. Ex. 31,679).

695. An August 17, 1988 memorandum, written by Christopher Proctor when he served as a research scientist at BATCo's Southampton (England) laboratories, discussed CIAR and its articles of incorporation. This memorandum stated, in part:

Meetings of the board are held every five weeks in Washington and, in addition to the board members, John Rupp (Covington & Burling), Don Hoel (Shook Hardy & Bacon), Mary Ward (RJ Reynolds) and a TI representative attend to observe. Rupp and Hoel comment on product liability aspects. **In terms of scientific acceptability, CIAR provides a further buffer between the**

Company and the third party, yet allows strong control of projects without major in house effort.

400974598-4600 at 4598, 4600 (U.S. Ex. 47,526) (emphasis added).

696. A series of slides from a 1995 R.J. Reynolds Tobacco International Inc. presentation, entitled "ETS: a global offensive and defensive strategy" and produced from BATCo's files, reveals that the two Defendant Cigarette Companies coordinated their efforts to use CIAR to preempt an upcoming International Agency for Research on Cancer ("IARC") study, which was to be the largest epidemiological study of ETS. These slides stated, in part:

ETS Objectives: Pre-empt IARC with CIAR exposure studies . . .
Counter directly with misclassification & confounder data . . .
Build positive approach on IAQ – ventilation/ accommodation.
ETS key messages: Threats related to ETS exposure grossly exaggerated . . . Adults have the right to be properly informed about smoking . . . Consumers favor separation and accommodation, not total bans . . . Tobacco industry will take lead on encouraging 'equal' accommodation.

502558482-8497 at 8489, 8491, 8493, 8496 (U.S. Ex. 29,562).

697. CIAR's principal offices were located in Linthicum, Maryland. 321141104-1104 (U.S. Ex. 20,587).

698. The dissolution of CIAR was authorized by its voting members on October 7, 1999. See U.S. FPF § II(3), infra. 86205205-5206 (U.S. Ex. 21,091) (U.S. Ex. 75,411); 520936046-6049 (U.S. Ex. 86,631).

(2) CIAR Special Projects

699. Lorillard, Philip Morris, and Brown & Williamson also conducted "special projects" through CIAR similar to CTR Special Projects. In addition to scientific grants

SECTION I.

approved through the CIAR SAB, CIAR also had an "applied research" program through which it approved projects requested by the funding entities, which were used to develop evidence to support Defendants' litigation positions on ETS issues. Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 110:20-111:25.

700. These projects were approved by CIAR's Board of Directors and not vetted through the scientists on the CIAR SAB. For example, on November 13, 1996, CIAR's Board of Directors considered Edward Domino's proposal entitled "Dietary Nicotine: A Possible Source of Blood, Salivary, and Urinary Cotinine." 517577761-7761 (U.S. Ex. 20,867); 86617703-7703 (U.S. Ex. 21,094).

701. "Applied" or special project research done for CIAR also sometimes entailed an initial pilot study on the ETS-related topic to see what the results a full proposed "applied" project might be, such as the 1993 ETS cross-contamination field study. This procedure allowed Defendants the opportunity to not continue to fund a study, which might have an adverse outcome to the one desired by Defendants. 89259467-9468 (U.S. Ex. 22,982).

702. Defendants Lorillard, Philip Morris, and Brown & Williamson agreed to continue to fund nine of the twenty-three CIAR projects after dissolution of CIAR. The agreed upon participation in the cost of the work was 66% for Philip Morris, 22% for Brown & Williamson, and 12% for Lorillard. The single year cost for the nine proposals was \$320,000. 83499144-9145 (U.S. Ex. 55,852); 2063908736-8736 (U.S. Ex. 20,514) (U.S. Ex. 75,364).

H. International Organizations, Committees, and Groups

703. Defendants believed that global coordination and action were critical to protecting

and enhancing tobacco companies' positions in their respective countries and that their economic interests would be best served by pursuing a united front on smoking and health issues. To further the shared objectives of the Enterprise, the alleged conspiracy and the scheme to defraud, Defendants worked together over a period of time to form, control, use, and participate in overseas entities, including but not limited to, the Tobacco Manufacturers' Standing Committee ("TMSC"), which became the Tobacco Advisory Council ("TAC") and then the Tobacco Research Council ("TRC"); the International Committee on Smoking Issues ("ICOSI"), which became the International Tobacco Information Inc. ("INFOTAB") and then the International Tobacco Documentation Center ("TDC"); and Centre for Cooperation in Scientific Research Relative to Tobacco/Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac ("CORESTA").

(1) TMSC - Tobacco Manufacturers' Standing Committee

704. On February 12, 1954, the British Minister of Health made a statement before the House of Parliament regarding the report of a special committee appointed by the British Health Ministry which had found a strong presumption that the relationship between smoking and lung cancer was causal. The British tobacco manufacturers "decided that the best way to deal with the matter was on an industry rather than on a individual company basis, following the lead of the industry in the U.S.A., who formed the Tobacco Industry Research Committee in December 1953." Shortly before the report was made public, the tobacco manufacturers in the United Kingdom approached the Minister of Health, and, on his advice, agreed to donate £250,000, to be spread over seven years, to the Medical Research Council for research into smoking and lung

SECTION I.

cancer. TLT0900916-0916 (U.S. Ex. 87,968); TLT0900150-0153 (U.S. Ex. 88,780); TLT0900943-0943 (U.S. Ex. 88,491); 110070785-0842 at 0788 (U.S. Ex. 20,270).

705. In March 1954, John Hill of Hill & Knowlton, TIRC's public relations counsel, and Alan Campbell-Johnson, the London associate of Hill & Knowlton, met with D.M. Oppenheim, BATCo Chairman; Robert Sinclair, Imperial Tobacco Chairman; and E.P. Partridge, Imperial Tobacco Director and Secretary, to discuss the newly-formed TIRC and a possible relationship between TIRC and the tobacco manufacturers in the United Kingdom. Hill outlined proposed plans, policies, functions, and responsibilities for TIRC, the TIRC Scientific Advisory Board, and the TIRC Research Director, and showed the group the proofs of the about-to-be published white paper. See U.S. FPF § I., supra, discussing the Hill & Knowlton white paper released April 14, 1954, entitled "A Scientific Perspective on the Cigarette Controversy." The British executives offered suggestions for changes to the white paper because "[q]uite naturally the British Tobacco group is vitally interested in what we do because the repercussions of what happens in the United States will affect Great Britain and vice versa." Timothy Hartnett, President of Brown & Williamson, and other members of the TIRC Board "had asked [Hill] to discuss with [the BATCo and Imperial Tobacco executives] the possibility of some form of liaison between the two groups" and to suggest "that this could be worked through Hill & Knowlton, Inc. and our London Associate Campbell-Johnson, or in any other way they might suggest. The reaction to the idea of liaison was most favourable." TLT0900159-0161 (U.S. Ex. 87,720).

706. In April 1956, TIRC's Clarence Cook Little, TIRC Scientific Director, traveled to

SECTION I.

London and met with representatives of the British tobacco industry, including D.M. Oppenheim and Anthony D. McCormick of BATCo. According to Alan Campbell-Johnson, Hill & Knowlton's London associate, "the British tobacco manufacturers [were] increasingly alive to the benefits conferred by the T.I.R.C. and would like to see a similar body set up in [England] both as a source of objective information on the whole problem and as a co-ordinating centre for research." TLT0900794-0798 (U.S. Ex. 87,721). Likewise, the Defendants in the United States and their public relations counsel were "much concerned over the apparent seriousness of the threats posed to TIRC's position by recent and continuing attacks on smoking overseas." They realized that official government statements in the United Kingdom and other European countries regarding the connection between smoking and lung cancer "further complicate[d] the handling of serious problems of domestic origin which may be faced in the period ahead." TLT0900324-0324 (U.S. Ex. 88,492).

707. In June 1956, the Tobacco Manufacturers' Standing Committee ("TMSC") was formed by BATCo and other United Kingdom tobacco manufacturers, giving "formal status to the co-operation in research of the group of manufacturers who in 1954 made a donation of £250,000 to the Medical Research Council for investigation into the causes of lung cancer." Its stated purpose was "to assist research into questions concerned with the relationship between smoking and health, to keep in touch with scientists and others working on this subject in the United Kingdom and abroad, and to make information available to scientific workers and the public." Geoffrey F. Todd was appointed Director of TMSC. Alan Campbell-Johnson, Hill & Knowlton's London associate, was appointed public relations consultant to the TMSC.

SECTION I.

105610912-0949 at 0914 (U.S. Ex. 20,245); 100276405-6411 (U.S. Ex. 67,689); 110070785-0842 at 0788-0789 (U.S. Ex. 20,270); TLT0900802-0803 (U.S. Ex. 87,722); TLT0900804-0804 (U.S. Ex. 87,723); TLT0900808-0808 (U.S. Ex. 87,724); TLT0900822-0825 (U.S. Ex. 87,725).

708. TMSC member companies in the United Kingdom and TIRC member companies in the United States coordinated their efforts to promote the open question on the relationship between smoking and disease and to deny causation.

709. After Timothy Hartnett, TIRC Chairman, traveled to England to meet with TMSC members in June 1956, Campbell-Johnson wrote to John Hill that Hartnett's "presence at that particular moment should do much materially to help to get relations between TIRC and the new committee [TMSC] off to a good start." Campbell-Johnson ended the letter by counseling that: "Close thought is needed on the relationship between TIRC and TMSC and the public relations implications of this are clearly left to our discretion to consider. While it is fully appreciated that the operations are, in fact, and should appear to be entirely separate, there clearly will be occasions when pronouncements emanating from one or other side of the Atlantic, from our respective authorities, can be usefully promoted at both ends. There now exists a potential interest in TIRC dicta on this side of the Atlantic and perhaps in TMSC statements on your side." TLT0900822-0825 (U.S. Ex. 87,725); TLT0900811-0811 (U.S. Ex. 87,726); TLT0900341-0341 (U.S. Ex. 87,727); TLT0900323-0323 (U.S. Ex. 87,728).

710. During the summer of 1957, John Hill traveled to Europe and in London "spent a great deal of time with the [Tobacco Manufacturers' Standing] Committee in connection with the issuance of its Annual Report." John Hill wrote to Timothy Hartnett, TIRC Chairman, that as a

SECTION I.

result of comments by Robert Hockett, TIRC scientific staff, Appendix II of the TSMC Annual Report had been rewritten because the TSMC members "seemed anxious to go as far as possible in meeting your wishes." TLT0900348-0349 (U.S. Ex. 87,729); TLT0900347-0347 (U.S. Ex. 87,730).

711. In June 1957, the Medical Research Council in England issued a statement which was supplemented by a statement by the Minister of Health condemning tobacco as a major cause of lung cancer and calling for a program by local health authorities and their education departments that would inform the general public of the risks of smoking. 501941569-1572 at 1569 (U.S. Ex. 49,007).

712. In an August 14, 1957 letter to Clarence Cook Little, TIRC Scientific Director, John Hill wrote that TSMC "has decided to conduct its own research henceforth, and a scientific board will be appointed - although probably not with the same status as has the [TIRC] SAB." TLT0900343-0343 (U.S. Ex. 87,731); TLT0900342-0342 (U.S. Ex. 87,732).

713. In a letter dated April 23, 1958, to John Hill regarding the "forthcoming Cancer Congress," Alan Campbell-Johnson wrote that he was glad that someone from Hill & Knowlton representing TIRC would be in Britain during the Congress so that "we can co-ordinate PR procedures as they arise on the spot." Campbell-Johnson believed that it was vital that TMSC and TIRC "in spite of their differing structures and scientific status should march in step." TLT0900879-0884 (U.S. Ex. 88,493).

714. Representatives from the TMSC came to the United States in 1958, and met with representatives from Defendants TIRC, American, Liggett, and Philip Morris among others. A

SECTION I.

report by the TMSC representatives from those meetings noted, "With one exception . . . the individuals who we met believed that smoking causes lung cancer if by 'causation' we mean any chain of events which leads finally to lung cancer and which involves smoking as an indispensable link." TINY0003106-3116 at 3108 (U.S. Ex. 21,369); 105408490-8499 at 8492 (U.S. Ex. 21,135) (U.S. Ex. 76,169).

715. On May 5, 1958, members of the TMSC met in Richmond, Virginia, with members of the Industry Technical Committee. See U.S. FPPF § I.E(2), supra. H.R. Hanmer of American Tobacco had called the meeting "to learn what new information had been gleaned and what the present feeling of the party was in regard to animal testing of cigarette smoke fractions. It would also afford an opportunity for a general interchange of opinions on the general question of health." 100175817-5820 (U.S. Ex. 76,152); 500500366-0369 (U.S. Ex. 86,417).

716. As of August 31, 1959, the members of the TMSC were Anthony McCormick and D.M. Oppenheim of BATCo; Alexander H. Maxwell, Chairman; E.R. Adler of Carreras; R.S.W. Clark and E.J. Partidge of Imperial Tobacco; E.J. Foord of Gallahers; P.A.G. Phillips of Godfrey Phillips, Ltd.; J. Wallington of Ardath Tobacco Co., Ltd.; and F.H. Wright of J. Wix & Sons, Ltd. TMSC also had a Technical Subcommittee which was comprised of members from the various United Kingdom tobacco manufacturers. 322117427-7432 (U.S. Ex. 47,043).

717. A 1959 TMSC report stated that the main fields of research with which the committee was concerned were: "1. Factors affecting smoking habits. 2. The chemical and physical properties of tobacco and tobacco smoke. 3. The principles of the smouldering process applicable to tobacco. 4. Biological activity of tobacco smoke. 5. Factors affecting the incidence

of lung cancer and certain other diseases. 6. The physiological and psychological effects of human smoking." 322117427-7432 at 7430 (U.S. Ex. 47,043).

718. According to a June 14, 1961 report entitled "Visit to U.S.A. and Canada by G.F. Todd, Report to T.M.S.C.," Todd, then-Director of TMSC, met with George W. Allen and Ed Ragland of the Tobacco Institute and attended a TIRC Scientific Advisory Board meeting. Todd outlined the situation in the United Kingdom to his hosts and explained that, in considering TMSC's response to a United Kingdom government report, TMSC's main concern was "to prevent the report leading to a change in government policy" in the United Kingdom. He further noted that, "If a change occurred, this could spark off similar changes in U.S.A. and Canada, so that we were fighting their battle also to some extent." Finally, he concluded with a concern that "there should be more exchange of views and better understanding of each other's difficulties than in the past, but it is a situation that calls for frequent and informal exchange of information and opinion." 105367082-7098 at 7091 (U.S. Ex. 26,267).

719. In September 1962, the TMSC opened a biological research facility at Harrogate, England, for smoking and health research, under the leadership of Dr. T.D. Day. Harrogate's TMSC research involved developing tests for measuring the biological effects of tobacco smoke and included: irritation/inhalation research, mouse skin painting experiments, bioassay research on carbon monoxide and nitrogen monoxide, and measurement of cigarette smoke. The TMSC also provided grants to external researchers, in such areas as physiological response of animals exposed to cigarette smoke, regression of chemically induced tumors, comparison of effects of inducing epidermal cancer by injection and skin painting, effects of smoking on human behavior,

SECTION I.

personality factors in smoking and lung cancer, and epidemiological studies of lung cancer and bronchitis. The TMSC published four annual reports, from 1957 through 1960, outlining the group's objectives and summarizing the year's research. Second Supplemental Responses by Brown & Williamson Tobacco Corporation (as Successor by Merger to the American Tobacco Company) to The Court's Questions, Minnesota v. Philip Morris (filed January 19, 1998), at 20-24, MPL0010690-0718 (U.S. Ex. 88,494).

720. A 1962 BATCo report stated that the TIRC in the United States occupied a position analogous to the TMSC in the United Kingdom. 110070785-0842 at 0793 (U.S. Ex. 20,270).

721. In a February 21, 1962 memorandum to Freeman Daniels of Perkins, Daniels & Perkins, John C. Russell, counsel for Lorillard, relayed that Dick Darrow of Hill & Knowlton reported that the TMSC in England planned to informally approach the Minister of Health and concede that tobacco was in some way implicated in the cancer problem. 01138122-8123 (U.S. Ex. 20,035).

722. In 1963, TMSC decided to conduct and be directly involved in its own smoking and health research program at its laboratories at Harrogate. To reflect that fact, TMSC was renamed the Tobacco Research Council in January, but maintained the same purpose and mission as its predecessor. 105610912-0949 (U.S. Ex. 20,245); 100240241-0241 (U.S. Ex. 86,889); 325298554-8579 at 8554-8561 (U.S. Ex. 67,847).

(2) TRC - Tobacco Research Council

723. When TMSC changed its name to the Tobacco Research Council ("TRC") in

1963, TRC continued to be funded by BATCo and other United Kingdom tobacco manufacturers. TRC published four reviews of its research activities between 1963 and 1974, setting forth the main conclusions of research funded or conducted by TRC. Research was conducted at the TRC laboratories in Harrogate from 1962 through 1974, when Harrogate was sold, and included mouse skin painting, inhalation studies, other biological assays, and nicotine pharmacology. Second Supplemental Responses by Brown & Williamson Tobacco Corporation (as Successor by Merger to the American Tobacco Company) to The Court's Questions, Minnesota v. Philip Morris (filed January 19, 1998), at 20-24, MPL0010690-0718 (U.S. Ex. 88,494); 100240241 (U.S. Ex. 86,889); 100392227-2251 at 2232 (U.S. Ex. 67,691); 325298554-8579 (U.S. Ex. 67,847).

724. Frequent communications kept Defendants and tobacco research organizations throughout the world apprised of each other's decisions and activities. A TRC confidential document entitled "Tobacco Research Council Review of Research Activities, 1963-64" stated that TRC "is in close touch with research being carried out in other parts of the world, and has particularly close working links with similar organizations in U.S.A. and Germany." 105610912-0949 at 0914 (U.S. Ex. 20,245).

725. An October 1964 TRC trip report confirmed that Sir Philip J. Rogers, TRC Chairman, and Geoffrey F. Todd, TRC Director, had visited the United States and met with representatives of Defendants R.J. Reynolds, American, Brown & Williamson, Philip Morris, Liggett, Lorillard, CTR, and the Tobacco Institute, as well as Hill & Knowlton executives and attorney Edwin Jacob in a series of meetings. The United States' manufacturers' main criticism

SECTION I.

of TRC's bio-assay research at Harrogate was that the research was an "implied admission that cigarettes are harmful." Brown & Williamson considered TRC's research policy "particularly prejudicial to them through their association with B.A.T. The TRC representatives agreed that Harrogate bio-assay research might be seen as an implied admission, but pointed out that "TRC constantly bore in mind the possible repercussions of its actions in U.S.A. and the T.R.C. research was based on the needs of the situation in the U.K., including a need from the legal point of view to give no grounds for an accusation of negligence against the manufacturers." At one of the meetings with Philip Morris, "[t]he informal agreement between TRC members not to make health claims was explained. 1003119099-9135 at 9106, 9108, 9115 (U.S. Ex. 20,152) (U.S. Ex. 35,649).

726. In October 1965, Addison Yeaman of Brown & Williamson wrote that he planned to meet with lawyers Edwin Jacob from Jacob & Medinger and David Hardy from Shook, Hardy & Bacon, as well as representatives from CTR to discuss the report on mouse skin paintings, which was soon to be published by TRC's laboratories in Harrogate. Jacob and Yeaman felt it "highly desirable that there be a full exchange between T.R.C." and a small group from the United States prior to commencing preparation of the Harrogate report because "it would be far easier to influence the tone and even the context of the report . . . before it is written, than it would be to 'rewrite' a completed report." 680204121-4122 (U.S. Ex. 30,825).

727. Correspondence between Brown & Williamson and BATCo in February 1966 arranged for a visit by a delegation from the Tobacco Institute with members of the TRC. In a letter to Anthony D. McCormick of BATCo, Addison Yeaman of Brown & Williamson

SECTION I.

discussed (a) developing a closer liaison between England's Harrogate facility, Germany's Hamburg research facility, and CTR in the United States, and (b) organizing a small group to coordinate the research efforts of the tobacco industries of England, Germany, and the United States, with Ed Finch, Brown & Williamson CEO and Chairman of the Tobacco Institute Executive Committee, as its head. 680204115-4117 (U.S. Ex. 20,990). In a February 14, 1966 letter to Edwin Finch, Anthony McCormick surmised, "I am assuming that the visit will not be a formal one between representatives of the Tobacco Institute and T.R.C. but rather an informal get together of those members of both bodies who determine industry policy in each country." 680204118-4118 (U.S. Ex. 30,824).

728. The TRC and CTR shared and coordinated research. A June 6, 1966 letter to W.T. Hoyt, Executive Director of CTR, from Geoffrey F. Todd, Director of TRC, enclosed a table showing the number of lung cancer deaths and mortality rate in the United Kingdom. Todd also offered for TRC to follow-up on the research if CTR so desired: "We have not attempted to analyse the figures by age-groups as this would be a rather lengthy operation but if you would like us to do this we should be pleased to put it in hand." CTRSP-FILES001103-1103 (U.S. Ex. 86,530); CTRSP-FILES001104-1104 (U.S. Ex. 88,776). On October 6, 1966, Todd sent Hoyt a letter and enclosed a copy of a pre-publication "highly confidential" research paper reporting on the first main experiment at Harrogate. ATC2637891-7935 (U.S. Ex. 88,777).

729. A channel of communication existed between Geoffrey Todd of TRC and Addison Yeaman of Brown & Williamson by which information could be passed "on a highly confidential basis." After Yeaman received a confidential report Todd had written about "a

SECTION I.

meeting between 'the U.K. domestic manufacturers and Todd, as Director of T.R.C.', and the [British] Minister on Health on 27th April [1967]," Yeaman wrote to Frederick Haas, attorney for Liggett; Cyril Hetsko, American Tobacco Vice President and General Counsel; Henry Ramm, R.J. Reynolds General Counsel; Paul Smith, Philip Morris General Counsel; and Earle Clements, President of the Tobacco Institute that: "I have reason to hope that the Minister of Health indicated considerable reserve as to publishing tar figures on the ground that such disclosure might give unwarranted reassurance I am more than ever persuaded that the present condition of affairs in England justifies a meeting between counsel for the U.S. companies and representatives of the industry in the U.K." LG2000185-0186 (U.S. Ex. 88,495).

730. On February 14, 1967, A.W.H. Stewart-Moore, a member of the TRC Executive Committee, sent a letter to Virgil D. Heger, Executive Vice President of American Tobacco, notifying him that TRC would be sending a delegation of scientists to the United States in March to discuss nicotine with scientists designated by CTR. Despite the scientific nature of the meetings, Stewart-Moore indicated that the meetings would include "the lawyers from the major American tobacco manufacturers." 0060293378-3378 (U.S. Ex. 85,326).

731. In July 1967, counsel from R.J. Reynolds, Philip Morris, Brown & Williamson, and BATCo visited TRC to discuss a variety of issues such as research objectives, the status of pending legislation in the United States, and the implications of British research in the United States. In terms of communication between the United States and the United Kingdom, it was noted that

[t]he private channel of communication between Mr. Todd and Mr. Yeaman [Brown & Williamson Vice President and General

Counsel] has proved valuable and all three visitors have expressed appreciation of information conveyed in this way. The representatives of the other companies are perfectly satisfied with this link through Brown & Williamson. They all hope that this channel of communications will be continued and developed.

At the end of the meeting, the United States visitors from R.J. Reynolds, Philip Morris and Brown & Williamson "expressed the hope that the present close liaison would be maintained in the future. " LG0298922-8924 at 8922, 8924 (U.S. Ex. 36,266).

(3) TAC - Tobacco Advisory Council

732. The TRC was re-named the Tobacco Advisory Council ("TAC") on August 31, 1978. In a letter to D. Jones of BATCo, Clifford Jarrett, TRC Chairman, explained that TAC would have an Executive Committee which would be a top level of control over the research activities of TAC. According to Jarrett, the membership of TAC would remain the same as the TRC after the name change, and "[a]ll the outstanding commitments of TRC, to contractors and grantees, will be taken over and honoured in full by TAC." 100142494-2495 (U.S. Ex. 21,489); 109840381-0383 at 0383 (U.S. Ex. 20,261).

733. At a November 16-17, 1983 meeting, the TAC member company tobacco research directors agreed to modify a TAC publication, "Review of Research Activities," in response to "the eleventh hour intervention by BAT lawyers on many aspects of the galley proof of the publication [because of] the extreme sensitivity of many of the issues, and of the vital need to be safe rather than sorry." The participants agreed to replace summaries of the results of grantees' research – which the researchers had written – with "much shorter statements of results prepared by TAC and agreed by the grantees." 109840381-0383 at 0383 (U.S. Ex. 20,261).

SECTION I.

734. These modifications to the TAC publication that were recommended by BATCo attorney Anne Johnson also included removing the historical perspective and general summary sections of the publication based on a rationale that TAC was meant to sponsor "independent research, which is carried out at arms length with no interference or control from TAC or the industry. . . . Both the existence and particularly the general tone of the Historical Perspective and the general survey were contrary to this position." Johnson's comments also promoted the idea that "it would be better to follow the pattern of the CTR reports . . . which simply present the research without comment." 107317780-7795 (U.S. Ex. 86,532).

735. In 1983 and 1984, TAC research directors met to discuss "the industry response" to the Third Report of the Independent Scientific Committee on Smoking and Health ("ISC"). They decided not to inform the ISC that there was "little scientific opportunity to identify and then selectively eliminate any specific components [of 'other noxa' found in the vapor phase of smoke] that could be unequivocally linked with the alleged smoking associated diseases." This decision was made in part because "the Committee might press industry to undertake or fund research on 'the quality of tar,' ie on the specific biological activity of tobacco types and commercial products" – a "possibilit[y not] welcome to the industry." Each TAC member company prepared and exchanged draft position papers on one of "the six main areas of 'other noxa' identified by the ISC. . . . We agreed that the draft position papers should not be revealed to the ISC but that individual Research Directors would be responsible for introducing any discussion that arose on a particular subject." 101003866-3870 at 3866-3867 (U.S. Ex. 20,232).

736. TAC continued the British tobacco industry's relationship with public relations

and research entities in the United States, especially on environmental tobacco smoke ("ETS") issues.

737. For example, TAC met with the Tobacco Institute, Germany's Verband der Cigarettenindustrie ("Verband"), and Japan Tobacco International in Washington, D.C. on March 18-19, 1987, to address the need for "increased cooperation among the participating countries and on an international level." The meeting was designed to be "a show-and-tell, with specific emphasis on the current status of ETS scientific research, public affairs, and political nuances in each of the countries." TI00682162-2163 (U.S. Ex. 21,240); TI00612460-2461 (U.S. Ex. 62,070).

738. A February 24, 1986 R.J. Reynolds interoffice memorandum from Charles Green, R.J. Reynolds scientist, to Alan Rodgman, another R.J. Reynolds scientist, concerning the International ETS Working Committee stated: "A proposal has been made to Mr. Don Hoel, an attorney for Shook, Hardy & Bacon and chairman of the TI-ETS Working Committee, that more formal cooperation be established between the scientific committees concerned with ETS." The memorandum further pointed out that members of Britains' TAC, which included BATCo, and Germany's Verband were "prepared to meet with representatives of the U.S. Tobacco Institute ETS Working Committee in London on April 8th. Mr. Hoel has requested that Dr. Tom Osdene of Philip Morris and I accompany him to this meeting. It is expected that this will be the first of two or three meetings per year where the various committees will exchange scientific information and coordinate proposed studies." Green requested permission from R.J. Reynolds to attend the meetings as "the value of our participation in these meetings should be obvious."

SECTION I.

Handwritten comments on the typed memorandum read: "Bob: Neither legal nor I have a problem with this. In fact, Mary Ward thinks it's a great idea. May we have your approval for Dr. Green to participate? -Alan 2/24/86; Approved! Bob 2/26/86." 508192982-2982 (U.S. Ex. 86,533).

739. According to an April 15, 1986 R.J. Reynolds memorandum from Charles Green to Alan Rodgman, a "joint meeting of the ETS advisory groups from West Germany, the United Kingdom, and the United States as well as the INFOTAB Board of Directors" was in fact held on April 8, 1986, at the TAC's London office to discuss "scientific and public relations problems related to environmental tobacco smoke." The meeting included representatives from Defendants Philip Morris, BATCo, R.J. Reynolds, and the Tobacco Institute, as well as Imperial Tobacco, Reemtsma, Rothmans International, and the law firm of Shook, Hardy & Bacon. The attendees discussed various research projects which could be used to address proposed regulations with respect to ETS, including projects and programs sponsored by the Tobacco Institute and the "cooperative [United States] industry study to measure carbon monoxide, nicotine, and particulate matter in restaurants." 505347172-7174 at 7172-7173 (U.S. Ex. 20,739) (U.S. Ex. 75,274); 2022932502-2506 (U.S. Ex. 22,828); (U.S. Ex. 75,125); (U.S. Ex. 75,333).

740. A fall 1987 report described ETS research activities in the United Kingdom by several entities, including TAC, CORESTA, and BATUKE. The section on TAC research activities stated that: "The overall strategy with TAC relating to ETS is to promote the 'no consensus' argument and to seek third party endorsement. The activities are aimed at - (a) Maintaining doubt, (b) Placing ETS into perspective, (c) Determine public opinion on ETS."

321091680-1729 at 1685 (U.S. Ex. 28,271).

741. Defendant Cigarette Companies circulated revised versions of TAC publications. According to a March 10, 1987 internal memorandum, Philip Morris planned to distribute the TAC publication "Tobacco Smoke and the Non-Smoker" to industrial organizations on behalf of the Enterprise once the document had met industry attorneys' approval. 2501009269-9269 (U.S. Ex. 27,917).

742. In a May 27, 1987 memorandum to Samuel Chilcote, Tobacco Institute President, William Kloepfer, Tobacco Institute Vice President, reported on his meetings with TAC in London. During the meeting, Kloepfer gave the TAC public relations committee an overview of Tobacco Institute issues and management. According to Kloepfer, TAC recognized ETS as its primary issue and wanted to adapt Tobacco Institute consultant Gray Robertson's video for TAC's use. TI05261937-1938 (U.S. Ex. 62,213); TI12260544-0545 (U.S. Ex. 62,328); TIDN0012090-2091 (U.S. Ex. 77,023).

743. According to a March 17, 1987 letter to Hans Verkerk of INFOTAB, William Kloepfer planned to "compare notes on the ETS issue" with his colleagues at TAC before attending a steering committee meeting in connection with the Sixth World Conference on Smoking and Health. TI12261173-1173 (U.S. Ex. 62,338).

744. TAC and the Tobacco Institute shared information on how to confront the ETS issue publically. For example, on August 23, 1989, Clive Turner, TAC Deputy Chief Executive, wrote to Sam Chilcote, Tobacco Institute President, requesting an ETS publication kit prepared by the Tobacco Institute. TI12240317-0317 (U.S. Ex. 86,537).

SECTION I.

745. In July 1993, Andrew Foyle, a solicitor at Lovell, White & Durrant, outside counsel for BATCo, expressed concerns about statements on ETS made by TAC's Clive Turner. The letter indicated that there were "legal reasons why he [Turner] should exercise care in making statements. . . . There is a view that the Industry now finds itself in the same position in relation to ETS that it was thirty to forty years ago in relation to active smoking. . . . Statements made by the TAC should, therefore, be consistent with the positions adopted by the individual Companies. On scientific matters relating to ETS, a common position has been agreed to by all the Companies. . . . We will be contacting each of you shortly to see if you consider that there are any other legal reasons as to why the TAC needs to exercise care in making public statements." 503055325-5326 (U.S. Ex. 20,712).

746. In January 1994, TAC changed its name to the Tobacco Manufacturers Association ("TMA") because "the name TAC did not clearly reflect the change of focus in its role to that of a trade association for the UK companies." TMA had become "an unincorporated trade association representing the tobacco companies participating in the UK market," and its prime function was to "represent the UK tobacco companies in negotiations and dealings with the UK Government and other authorities on issues of concern and interest to its members." It also provided information services to its members and, on request, to the public. TMA members include Defendant BATCo and R.J. Reynolds, as well as Gallahers, Rothmans International, and Imperial Tobacco. 325298554-8579 (U.S. Ex. 67,847); 503055247-5247 (U.S. Ex. 66,405); 321103764-3771 at 3764 (U.S. Ex. 67,807); 321103761-3761 (U.S. Ex. 28,286).

(4) ICOSI - International Committee on Smoking Issues

SECTION I.

747. On December 3, 1976, Hugh Cullman, Executive Vice President of Philip Morris, memorialized a phone call from R.A. (Tony) Garrett, Chairman of Imperial Tobacco, during which Garrett explained that he had been exploring, with a number of major tobacco companies, including Defendants BATCo and R.J. Reynolds, as well as Rothmans International and Reemtsma (Germany), whether company heads might be prepared "to meet discreetly to develop a defensive smoking and health strategy, to avoid our countries and/or companies being picked off one by one, with a resultant domino effect." The initial objective of this group would be "to develop a smoking and health strategy which would include a voluntary agreement that no concessions beyond a certain point would be voluntarily made by the members [to their governments] and, if further concessions were required by respective governments, that these not be agreed to and that governments be forced to legislate." The proposed agenda for the meeting included "Consideration of the international dimension to smoking and health. This might include such matters as . . . how do developments in one country affect others. . . ." Defendants' effort was ultimately termed "Operation Berkshire." 2025025286-5286 (U.S. Ex. 20,407) (U.S. Ex. 75,142) (U.S. Ex. 78,987); 2025025290-5291 (U.S. Ex. 22,980) (U.S. Ex. 75,144) (U.S. Ex. 75,145); 2025025347-5348 (U.S. Ex. 20,410) (U.S. Ex. 75,149); 501479772-9773 (U.S. Ex. 86,514).

748. On March 24, 1977, R.A. Garrett of Imperial Tobacco wrote to Alexander Holtzman, Associate General Counsel for Philip Morris, regarding "Operation Berkshire," an upcoming meeting between the executives of certain tobacco companies. Participants included representatives from Defendants BATCo, Philip Morris, and R.J. Reynolds, as well as

SECTION I.

Reemstma, Rothmans International, and Imperial Tobacco. The purpose of the meeting was to form a group to develop a common international position on smoking and health issues. The group formed was called the International Committee on Smoking Issues ("ICOSI"). The "open controversy" strategy (see U.S. FPF § IV.A, infra) was made the key topic of this meeting, and the position paper embodying this strategy was reviewed and edited by the law firm of Jacob & Medinger, which represented R.J. Reynolds, Brown & Williamson, and CTR. 2025025288-5289 (U.S. Ex. 20,408); 2025025313-5318 (U.S. Ex. 23,741); 2025025341-5343 (U.S. Ex. 20,409); 2025025347-5348 (U.S. Ex. 20,410) (U.S. Ex. 75,149); 2025025369-5369 (U.S. Ex. 20,411); 500269225-9228 (U.S. Ex. 20,622) (U.S. Ex. 75,188); 2025024797-4803 (U.S. Ex. 20,406); 2501020298-0303 (U.S. Ex. 75,180); 2501024103-4107 (U.S. Ex. 21,909) (U.S. Ex. 75,181); 2501024571-4575 (U.S. Ex. 21,904); 502948580-8591 (U.S. Ex. 21,908) (U.S. Ex. 75,189).

749. ICOSI was formally registered as a non-profit association in Geneva, Switzerland, on December 1, 1978. The seven founding members of ICOSI were Defendants BATCo, Philip Morris, and R.J. Reynolds, as well as Gallahers, Imperial Tobacco, Reemstma, and Rothmans International. Each member had one vote, and expenditures were shared equally. In 1980, ICOSI had an annual budget of over a million dollars. TIMN257288-7303 (U.S. Ex. 21,343) (U.S. Ex. 75,202); 500549436-9444 (U.S. Ex. 23,008); 502120799-0805 (U.S. Ex. 20,696); 321588692-8692 (U.S. Ex. 28,544); 2501017241-7256 at 7253 (U.S. Ex. 27,922).

750. The purpose and objectives of ICOSI, as set forth in its charter, were:

. . . the establishment of a forum for exchange of views and information on international smoking issues (to include tobacco and health) by the coordination of data and information in economic, scientific, and technical areas. The general objectives

SECTION I.

are to broaden the knowledge of its members, of consumers, and of appropriate authorities. In large part accomplishment of these objectives will be sought by providing information to various national and other tobacco trade associations and by serving as a resource of expertise, data analysis and opinion on these subjects of interest to the industry and its publics. The dissemination of the generality of this information will be made in the form of bulletins, reports, articles, surveys, pamphlets, and other analogous means.

2025048998-9014 at 8999 (U.S. Ex. 20,412).

751. According to notes in BATCo's files from a March 1978 meeting at the Menzies Hotel, in Sydney, Australia, however, the objective of ICOSI was "defensive research aimed at throwing up a smoke screen and to throw doubts on smoking research findings which show smoke causes deceases [sic]." 321588692-8692 (U.S. Ex. 28,544).

752. Attendees at the November 1981 Tobacco Institute College of Tobacco Knowledge were told that the organization (first named ICOSI and later named INFOTAB) was founded by BATCo, Imperial Tobacco, Philip Morris, Reemtsma, R.J. Reynolds, and Rothmans International in 1978, to perform internationally the functions that the Tobacco Institute performed for the domestic industry in the United States: "From the outset, the members recognized that the social acceptability of smoking, including the public smoking issue was a subject on which attention should be focused (sic)." 2501029891-9901 at 9896 (U.S. Ex. 20,557); see also TI04962210-2210 (U.S. Ex. 67,250).

753. ICOSI's key officers included the chairmen and other principals of the member companies who attended the Operation Berkshire meeting. They included: Patrick Sheehy, BATCo Chairman; Kit Stuart Lockhart, BATCo Deputy Chairman; William Hobbs, R.J. Reynolds Chairman; William Murray, President of Philip Morris Europe; Alexander Holtzman,

SECTION I.

Associate General Counsel for Philip Morris; and Andrew Whist, Director Corporate Affairs of Philip Morris (Australia) Ltd. 2025025341-5343 (U.S. Ex. 20,409); 2025025369-5369 (U.S. Ex. 20,411).

754. There were two governing groups of ICOSI. The Board of Governors was responsible for establishing policy; included one principal from each member company; and met at least annually. The Executive Committee was responsible for implementing the policies of ICOSI in those areas where decision-making powers had been delegated to the Committee by the Board of Governors. It was comprised of one representative from each company represented on the Board of Governors. The frequency of Committee meetings was determined by its members. A Secretariat was also established in a centrally-located European city, Brussels, under the direction of a Secretary General. Its tasks included handling administrative functions for ICOSI; monitoring developments in international organizations; and acting as a clearing-house to provide information relative to tobacco issues to members of the industry, tobacco trade associations, and other interested groups. 2501020298-0303 (U.S. Ex. 75,180); 2501029902-9918 (U.S. Ex. 20,558).

755. Representatives of the participating Defendants attended ICOSI meetings of several working groups and task forces. The names of some of these initial working groups and task forces were the Social Acceptability Working Group, which dealt with ETS issues, the Medical and Behavioral Research Group, the EEC Task Force, the Product Liability Task Force, and the Swiss Referendum Task Force. 2501020298-0303 (U.S. Ex. 75,180); 321588692-8692 (U.S. Ex. 28,544).

SECTION I.

756. At an ICOSI inaugural meeting held in the United Kingdom in June 1977, "a single company was chosen to be the 'lead company'" for each working group and was "charged to produce a report acceptable to the full ICOSI": R.J. Reynolds for Social Acceptability of Smoking; BATCo for Smoking Behavior; and Imperial Tobacco for Medical Research. Richard Haddon, BATCo Director of Public Relations, was a member of ICOSI's Social Acceptability Working Group. The first meeting of the Social Acceptability Working Group was to be held in the United States on July 27-29, 1977, with lead company R.J. Reynolds presenting a case history of the evolution of the Social Acceptability issue in the United States and proposing an assessment framework. 2025025294-5294 (U.S. Ex. 23,738); 2025025295-5300 (U.S. Ex. 75,146).

757. Frank Colby, R.J. Reynolds Scientific Information Division Manager, prepared notes dated July 28, 1977, on a "Meeting of the Working Party on Medical Research of the ICOSI, Shockerwick House, July 21 and 22, 1977," in which he remarked that R.J. Reynolds's objectives were mostly successfully met. 500943004-3011 (U.S. Ex. 20,662); see also 2025025145-5150 (U.S. Ex. 87,714).

758. Colby also sent an R.J. Reynolds inter-office memorandum dated October 6, 1977, to J.R. Peterson, R.J. Reynolds Vice President, William D. Hobbs, R.J. Reynolds President, and Samuel Witt, General Counsel for R.J. Reynolds, regarding a meeting of the ICOSI Working Party on Medical Research to propose research topics on non-smokers' issues. 500298379-8379 (U.S. Ex. 20,625).

759. On October 14, 1977, Dennis Durden, Vice President of R.J. Reynolds and then-

SECTION I.

Chairman of ICOSI's Working Party on the Social Acceptability of Smoking, forwarded a report to the members of ICOSI regarding the research and analysis activities that would be conducted by the working party. Members of the working party listed in the summary included representatives of Defendants R.J. Reynolds (Durden and James Hind, R.J. Reynolds Vice President of Planning); BATCo (Richard Haddon, BATCo Public Relations Manager); and Philip Morris (John T. Landry, Senior Vice President). 501472756-2794 at 2758, 2759 (U.S. Ex. 66,342).

760. The report noted, in its Summary of General Conclusions, that the area of greatest need for industry action was "at the passive smoker level" and suggested that although "[a]vailable research indicates that smoking does not harm the health of others who are nearby[,] [t]his must be sustained and firmly established as a 'fact' in all public discussion of the issue." The report added, on the issue of passive smoking, that "[u]ntil society believes that smoking does not harm the health of nearby smokers, the industry will continue to run grave risks of further reverses on social acceptability issues. For example, the industry's critical 'freedom of choice' position cannot be maintained if people believe they are harmed simply by being near a smoker." Indeed, the Working Party concluded that in order for the tobacco industry to survive on a "social acceptability" level, all tobacco companies must work together globally to promote the open question doctrine and deny the harmful effects of ETS. 501472756-2794 at 2762 (U.S. Ex. 66,342).

761. An ICOSI meeting was held in Lausanne, Switzerland, on November 10-12, 1977. Participants included Patrick Sheehy, BATCo Chairman; Sydney J. Green, Director of BATCo

SECTION I.

R&D; Richard Haddon, BATCo Marketing Consultant; Stewart Lockhart, BATCo Managing Director; Frank Colby, Dennis Durden, Samuel Witt, and William Hobbs of R.J. Reynolds; Alexander Holtzman of Philip Morris; and Helmut Gaisch and R.W. Murray of Phillip Morris Europe. Participants discussed position papers, activities and reports of the working parties, and proposed action recommendations. 502330543-0563 (U.S. Ex. 22,952); 2025025139-5142 (U.S. Ex. 23,736); 500298609-8611 (U.S. Ex. 20,626).

762. Suggestions for future ICOSI activities discussed at the November 1977 ICOSI meeting in Lausanne included the following: establishing a formula for continuing communication and cooperation within the industry and for monitoring industry behavior on all activity which might touch directly or indirectly on the smoking and health issue; initiating an executive orientation program for company executives to stimulate understanding and decision making on the issue; developing the means to neutralize and diminish the influence of the anti-smoking organizations; and considering the establishment of a suitable centralized European information and service center to service member tobacco companies so that a common approach to the smoking and health issue might be adopted. 502330543-0563 (U.S. Ex. 22,952); 2025025139-5142 (U.S. Ex. 23,736).

763. After the Lausanne meeting, Frank Colby received from "Herbert" at Imperial Tobacco an ICOSI directive regarding work assignments for the newly combined Medical/Behavioral Research Group and a letter regarding decisions reached by ICOSI principals in Lausanne. The letter indicated that additional meetings of the working party were scheduled for December 4, 1977, in Neuchatel, Switzerland, and for January 9-10, 1978, in Cologne,

Germany. 500298609-8611 (U.S. Ex. 20,626).

764. ICOSI member companies agreed to act together via the Enterprise to respond to smoking and health risk challenges worldwide by promoting the "open question" controversy and the myth of independent research. In an April 21, 1978, P. Isenring distributed a letter to several people including Alexander Holtzman, Philip Morris Vice President and General Counsel, about the ICOSI EEC Task Force on Consumerism. Isenring urged cooperation and coordination between Philip Morris and R.J. Reynolds concerning the involvement of the law firms of Jacob & Medinger and Shook, Hardy & Bacon, both of which represented several Defendants. Specifically, Isenring discussed the fact that the ICOSI EEC Task Force on Consumerism had to prepare an industry response to the EEC Consumer Consultative Committee's anti-smoking paper "Tobacco and the Health of the Consumer" and suggested that ICOSI members and their respective law firms work together on a common approach to the response, given their exposure to the situation in Europe over the years. 2501025098-5099 (U.S. Ex. 86,515); 2501025100-5100 (U.S. Ex. 86,516); 2501025108-5108 (U.S. Ex. 86,517).

765. In order to coordinate the Defendants' positions, the members of an ICOSI task force on the World Health Organization's Fourth World Conference on Smoking and Health met in Kansas City, Missouri, on November 20-21, 1978. Attendees included Gwynn Hargrove of Defendant BATCo; Murray Senkus of Defendant R.J. Reynolds; William Kloepfer of Defendant Tobacco Institute; Leonard Zahn, public relations counsel for Defendant CTR; Tim Finnegan of CTR's lawyers Jacob & Medinger; Hugh Grice of TAC; and Donald Hoel of Shook, Hardy & Bacon. 2501015475-5480 (U.S. Ex. 27,921)

SECTION I.

766. In a December 1978 memorandum, Jules M. Hartogh of Philip Morris Europe vigorously argued that the effectiveness of ICOSI required coordination with and input from the Tobacco Institute and Shook, Hardy & Bacon because of their resources and experiences. 2501018326-8327 (U.S. Ex. 21,505) (U.S. Ex. 75,179).

767. According to a January 1979 action plan that was proposed by the ICOSI Task Force covering the Fourth World Conference on Smoking and Health of which Leonard Zahn was a participant, the ICOSI coverage of the conference was to be low profile. The ICOSI task force appointed a Stockholm-based public relations agency to handle logistical matters without a public profile and under "strict" control of the task force. 2501015328-5331 (U.S. Ex. 86,519); 70049849-9853 (U.S. Ex. 86,520); Deposition of Leonard Zahn, Richardson v. Philip Morris, December 16, 1998, 537:1-538:18.

768. An April 1979 document listed, under the heading "Philip Morris Representation within ICOSI," Hugh Cullman on the ICOSI Board of Governors and Leonard Zahn, CTR's public relations advisor, as a consultant-scientific journalist on the Task Force covering the Fourth World Conference on Smoking and Health. 1003717317-7330 (U.S. Ex. 86,518); Deposition of Leonard Zahn, Richardson v. Philip Morris, December 16, 1998, 505:6-505:17.

769. Helmut Wakeham, Philip Morris Vice President of Research and Development, sent an August 7, 1979 memorandum to Hugh Cullman on Gio Gori, a former National Cancer Institute scientist. Wakeham asked if Gori might be "useful to ICOSI" and stated that Gori, was well-qualified, was looking for a job, could be helpful to the tobacco industry in the smoking and health field, and had international connections. 1005082903-2903 (U.S. Ex. 21,529).

SECTION I.

770. ICOSI developed and ran international smoking conferences. For example, in a November 28, 1979 memorandum regarding the "ICOSI International Public Smoking Symposium," Richard Marcotullio of R.J. Reynolds espoused the view that the symposium should be an industry show, should raise issues and present testimony to discredit the other side, and should use individuals solely supportive of the industry with the goal of producing a book that could be used to persuade legislators. The symposium was intended to "establish witnesses, international sociologists, lawyers and scientists that the industry could count on in other areas. It was intended to present the industry side of the public smoking issue, not the other side." The memorandum discussed whether or not ICOSI's or tobacco's sponsorship of the symposium should be made public because it could hinder the ability to attract certain participants. The symposium was not intended to create any kind of debate, and any debate that did occur would be "controllable and therefore not a real debate." 502122792-2797 (U.S. Ex. 20,697); 502122792-2797 (U.S. Ex. 66,389).

771. In March 1980, the Executive Committee of ICOSI was disbanded. At this time, the Board of Governors consisted of two named representatives of each member company who met at least twice a year, including one meeting which the Defendants' CEOs were to attend. Each member company was to have one vote at the meetings of the Board of Governors. Chairmanship was held in rotation by each member company. William D. Hobbs, Chairman of R.J. Reynolds, was Chairman of the Board of Governors in 1979, until March 31, 1980. 2501020298-0303 (U.S. Ex. 75,180).

772. In 1981, ICOSI discarded its old name "and started operating under [its] new

name: International Tobacco Information Center/Centre International d'Information Du Tabac - INFOTAB. We dropped the old name and adopted this new one for strategic reasons. The original name stated too aggressively and in a somewhat negative tone our objective. The new name is more neutral. The old name tended to draw attention to the members. The new name focuses attention on a neutral center, the Secretariat." 2501029902-9918 (U.S. Ex. 20,558).

(5) INFOTAB - International Tobacco Information Center

773. ICOSI was renamed the International Tobacco Information Center/Centre International d'Information Du Tabac ("INFOTAB") and registered in Geneva, Switzerland, on December 8, 1980. 2025049260-9260 (U.S. Ex. 20,413); 502120799-0805 (U.S. Ex. 20,696); 2501029902-9918 (U.S. Ex. 20,558).

774. INFOTAB's charter, filed with the Swiss Government on November 2, 1982, was substantially the same as ICOSI's charter. 504934906-4953 (U.S. Ex. 20,737).

775. The six founding members of INFOTAB were Defendants BATCo, Philip Morris, and R.J. Reynolds, as well as Imperial Tobacco, Reemtsma, and Rothmans International. 10987902-9803 (U.S. Ex. 87,715); 321796140-6207 at 6151 (U.S. Ex. 28,693).

776. Defendant BATCo belonged to INFOTAB from 1981 or 1982 to about May 1990. Deposition of Christopher Proctor, United States v. Philip Morris, et al., June 12, 2002, 15:23-16:18. A 1987 document revealed that "BATCo is the largest contributor" to INFOTAB, contributing £430,671 in 1987. 301124343-4345 at 4345 (U.S. Ex. 67,762).

777. According to a January 1986 document entitled "A General Briefing on INFOTAB," there were three categories of membership: Founding Members, Associate

SECTION I.

Members, and Allied Members. Defendants Liggett and Lorillard were Associate Members, while Defendant Tobacco Institute was an Allied Member, as was Britain's TAC. 321796140-6207 (U.S. Ex. 28,693).

778. By 1981, INFOTAB was in regular contact with tobacco industry groups in twenty-eight countries. Its strategic objective was "to help the industry around the world prevent unreasonable restrictions on its operations and help smokers preserve their freedom to choose whether or not they will smoke and where they will smoke, within the bounds of mutual courtesy." 2501029902-9918 (U.S. Ex. 20,558).

779. In the mid-1980s, Hugh Cullman of Philip Morris and Chairman of the INFOTAB Board of Governors; R.L.O. Ely of BATCo; Andrew Whist of Philip Morris; and Richard J Marcotullio of R.J. Reynolds were on the INFOTAB Board of Governors, which was later renamed the Board of Directors. 504934906-4953 at 4948 (U.S. Ex.20,737); 321796140-6207 (U.S. Ex. 28,693).

780. INFOTAB continued much of ICOSI's work using many of the same working groups and committees already established by ICOSI, including the Social Acceptability Working Party ("SAWP"), the EEC Consumerism Task Force, and the Developing Countries Group. 2025049380-9382 (U.S. Ex. 75,156).

781. In a 1983 letter drafted to INFOTAB, BATCo's Sir Patrick Sheehy asserted that the principles and beliefs that lay behind the formation of INFOTAB, formerly ICOSI, were "to establish[] agreed Industry positions upon matter of common concern and to protect[] the long-term interests of the Industry as a whole. Smoking and Health was seen as an issue of great

importance and it was considered that the Industry could only cope with the increasingly vocal and hostile attack of the anti-smoking bodies by better Industry co-operation and co-ordination." 321796112-6112 (U.S. Ex. 28,686).

782. A November 30, 1989 INFOTAB document includes among the "most important" roles to INFOTAB: "'Think tank' for industry cooperation worldwide, in association with member companies;" "Preparation of positions agreed by the industry;" "Preparation of published materials and kit sets for use by NMA's and lead companies;" and "Promulgation of strategies agreed by the industry." 300528729-8731 (U.S. Ex. 46,572).

783. INFOTAB prepared various materials on smoking and health issues including research-related materials, public relations campaign materials, and argumentation papers.

784. According to a March 1981 INFOTAB document entitled "The Public Position Question," an ad hoc meeting of members of all of INFOTAB's working parties and committees was held to discuss and report to the Board of Directors on "the public position question." The ad hoc group specifically advised the Board against the establishment of a separate Public Position Working Party because:

- (1) In general, there is a great overlap between social acceptability and the industry's credibility; and a Social Acceptability Working Party has been in existence as one of INFOTAB's main committees almost since the beginning of ICOSI. Moreover, last year SAWP established a working group to develop a long-range Communication plan, under the code name MAYFLY. The overall objective of the project is defined as "To influence, modify or change public opinion to: the industry, smokers and smoking, to create a more favourable climate, however directly or indirectly;
- (2) The existing working parties and other committees are already undertaking a number of projects which bear directly on the

credibility issue. They include (a) under SAWP, a Social Costs-Social Values programme is dealing with the allegations that the industry is an economic burden on society. Work on the public smoking issue is also relevant. These are in addition to the Mayfly project itself. (b) The EEC Consumerism task force has already recognized the credibility problem and is tackling it by the use of third parties, who can be quoted and therefore lend authority to the industry's positions. (c) The Developing Countries Group is preparing a model for economic impact studies, as well as a programme to communicate the industry's contributions to economical and social development through aid to tobacco farmers.

2025049380-9382 at 9380-81 (U.S. Ex. 75,156).

785. This document, which recorded activity by INFOTAB's working group members, subsequently noted that, although all of the above-referenced initiatives had been undertaken by the various working groups and committees, the issue of causation or smoking and health had not been addressed by any group. This was because to do so would be contrary to the purpose of INFOTAB and the position of INFOTAB on medical issues: "However, no work has been done on the primary health issue. The group doubts whether much usefulness would be derived from a review of the position on this question, unless the Board were willing to contemplate a re-examination of INFOTAB's basic position on this, as evidenced by its paragraph headed 'Medical Controversy' in the Position Paper of November 1977; by the current Board practice not to discuss the issue; and by Article 2 of the ICOSI Charter - which will be revised to state that the organization shall not 'make medical judgment on tobacco issues.' A similar sensitivity is evident from the disbanding of the Medical and Behavioral Research Group and the Science and Technical Advisory Group." 2025049380-9382 at 9381 (U.S. Ex. 75,156).

786. Although INFOTAB conducted no direct research on causation, the working

SECTION I.

group members concluded: "Nevertheless, the industry should continue and expand its commitment to independent research and close contact with independent scientists, in order to have the means to challenge whenever and wherever possible the often biased and inaccurate claims lodged against it." 2025049380-9382 at 9381 (U.S. Ex. 75,156).

787. In 1986, INFOTAB produced an Issues Binder which provided "members with reference materials and quotations in response to the major allegations in the smoking and health area. The binder is organized around nine issues – 'addiction', advertising and sponsorship, developing countries, the public smoking issue, legislation, smoking and health, social costs, taxation and warning labels." 321796140-6207 at 6151 (U.S. Ex. 28,693).

788. In 1990, INFOTAB also issued a "Spokesperson's Guide" for Defendants' use. The introduction stated that the manual was for the use of the recipient and that no copies were to be made. The manual addressed each and every claim against the tobacco industry and provided the standard script that all users were to use to respond to such claims. Among other false statements, the manual stated that cigarette smoking was not addictive. 2503017001-7186 (U.S. Ex. 20,568).

789. A document entitled "Report and Proposals - 'Passive' Smoking Assessment Group," issued by INFOTAB, described the recommendations of INFOTAB's Secretary General to "improve the industry's position with the 'passive' smoking issues." The report emphasized that commitment from the founding member companies of INFOTAB as well as coordination with the Tobacco Institute was needed, and that all member companies and the Tobacco Institute had discussed and were in unanimous agreement with the proposals. The proposals specifically

SECTION I.

called for (1) "a coordinated flow of publicity highlighting the positive results from three major symposiums . . . held in 1983 and 1984 which concluded that there was no hazard to health"; and (2) the industry to "take[] the initiative to support, at arms length, sound scientific research." 103366351-6353 (U.S. Ex. 26,249).

790. J. Kendrick Wells of Brown & Williamson sent a memorandum to Ernest Pepples of Brown & Williamson dated October 27, 1981, concerning a meeting held on October 26, 1981 with L.C.F. Blackman, Director of the Group Research and Development Center of BATCo in Southampton, England. At this meeting, Wells expressed concern with Blackman's slide presentation entitled "Basic Approach to Government and Medical Authorities." In October 1981, Blackman then made substantive changes to a document entitled "Basic Approach to Government and Medical Authorities." The reason for the change was that the initial document "admit[ted], despite a disclaimer, that cigarettes are harmful to health in proportion to delivery." It was noted that the document also "runs against important argument the U.S. industry is making in response to the FTC Staff Report and may need to make in response to charges that cigarettes are addictive." Blackman agreed to send the changed document to the other INFOTAB members. 680585063-5064 (U.S. Ex. 21,007); 680585041-5042 (U.S. Ex. 21,006).

791. BATCo also relied on position papers developed for the industry by INFOTAB. For example, an internal BATCo memorandum sent to all No. 1's and Public Relations Managers of Operating Companies indicated that a paper, "Advertising Argumentation," produced by INFOTAB provided arguments against advertising restrictions and was adopted for use in BATCo's 1981 Board Strategies on Smoking Issues. 100439233-9233 (U.S. Ex. 34,655);

100439234-9234 (U.S. Ex. 34,656); 100439235-9236 (U.S. Ex. 34,657).

792. Five members of INFOTAB attended the November 16, 1981 Tobacco Institute College of Tobacco Knowledge, a seminar put on by the Tobacco Institute to bring its managers and other industry employees up to speed on the history of tobacco and tobacco litigation.

2501029891-9901 (U.S. Ex. 20,557). See U.S. FPF § I.C(4)(c), supra, for detailed discussion of Tobacco Institute College of Tobacco Knowledge.

793. In November 1981, representatives from Defendants BATCo, Philip Morris, and R.J. Reynolds joined gatherings of National Manufacturers Associations ("NMAs") in Central America (Panama City) and South America (Rio de Janeiro) at INFOTAB Public Affairs Workshops. One of the speakers explained that, three weeks earlier, INFOTAB had held its fourth workshop on tobacco issues for NMAs at which "industry groups from 25 countries were represented, as well as senior public affairs managers from our six member companies. About once a month there is a meeting of one of our four committees, bringing company specialists together from different countries. . . . [T]hese gatherings are stimulating and supporting industry action on smoking issues at the international level and in national markets. 2501029902-9918 (U.S. Ex. 20,558).

794. Among the conclusions reached at the INFOTAB Public Affairs Workshops in South and Central America were that member companies would "give consideration to opening a dialogue with doctors . . . it will be necessary to be very careful in the selection of those who are likely to be neutral/un-committed on Smoking and Health issues. Nevertheless, the advantages of such a dialogue were appreciated, particularly if these doctors could publicly give endorsement

SECTION I.

of certain industry action (eg low tar development) on which the industry itself is legally constrained" and could "support the industry in negotiations with government." 301127373-7385 (U.S. Ex. 46,587).

795. INFOTAB held a Global Issues Working Party meeting on November 3, 1983. 202327000-0001 (U.S. Ex. 23,668).

796. E.A.A. Bruell, Chairman of BATCo, wrote "Letter to All No. 1s of Operating Companies" entitled "Relations with INFOTAB, National Manufacturers Associations and Competitors" in response to a September 2, 1983 advertisement placed by a Philip Morris affiliate in Holland regarding Barclay. Bruell noted that the advertisement "is the first occasion of which we are aware when a competitor has: 1. Raised the health issue to gain competitive advantage. 2. Quoted and thereby endorsed a report of an anti-smoking lobby . . . to attack another company in the industry." 104576617-6620 at 6617 (U.S. Ex. 78,985).

797. BATCo and other Defendants monitored research pointing to the conclusion that smoking caused cancer through INFOTAB. In a May 26, 1986 INFOTAB summary sent to BATCo's Kay Kinnard, Esther Maquet discussed one such study: "In view of the evidence that has been accumulated and presented at this meeting on the possible role of NOC [N-nitroso compounds] in the causation of human cancer, a causal association, although not rigorously established must be assumed." 2021594539-4540 (U.S. Ex. 36,773).

798. On October 15, 1986, R.J. Reynolds scientist Charles Green informed members of INFOTAB, as part of his work for the ETS Advisory Committee (further discussion at U.S. FPF § IV.C., *infra*), that Defendants' lawyers pressured scientists to influence the results of a proposed

SECTION I.

study before it was started, and that, therefore, tobacco scientists often did "pilot" studies to give the lawyers this information. 2501457517-7522 (U.S. Ex. 22,956) (U.S. Ex. 75,185).

799. In 1988, Philip Morris laid plans to create an International Center for Indoor Air Research ("ICIAR") which it envisioned would work cooperatively with INFOTAB and CIAR in the United States. 2501474262-4265 (U.S. Ex. 75,271).

800. A June 28, 1988 memorandum addressed to Todd Sollis, Assistant General Counsel of Philip Morris, from Donald Hoel, attorney with Shook, Hardy & Bacon, described Shook, Hardy & Bacon's role with respect to INFOTAB. Hoel stated: "SHB, as counsel to PM and other international manufacturers, was instrumental in the founding of INFOTAB to help strengthen and coordinate the activities of the various national manufacturers associations. The firm remains active in the operation of INFOTAB. It monitors the meetings and clears the draft minutes of the INFOTAB Board of Directors and the Global Issues Working Party, as well as INFOTAB workshops. All materials prepared by INFOTAB on smoking and health issues, including briefing documents sent to national manufacturers associations and presentations by the INFOTAB staff, are cleared by SHB in order to protect the member association and member companies. SHB also approves all public relations campaigns, tactics and strategies which address smoking and health issues." 2015007199-7207 at 7204-7205 (U.S. Ex. 20,311).

801. A January 30, 1989 INFOTAB document outlined how to "Attack WHO [World Health Organization]." The tactics it suggested included the following: "Criticize budget management, Address health priorities, Expose resource blackmail, Highlight regional failures, Attack 'behaviourism', Counter on public issues, Discredit activists' credentials, Engage in

statistical warfare, Invest in press relations, Show impact of 'cuckoo' organisations." The document also suggested the industry should "attack IOCU [the International Organization of Consumer Unions]" with the following program goals: "Relieve NGO pressure on WHO, Expose activists' 'credentials', Counter 'behaviourist' regulation, correct anti-business slant."

2501045258-5268 at 5260, 5266 (U.S. Ex. 20,559).

802. In 1990, INFOTAB also issued an INFOTAB publication entitled "Children & Smoking – The Balanced View" that addressed various World Health Organization claims. It stated that tobacco is not addictive, and that there were inconsistent findings as to whether smoking causes low birth weight, birth defects, and delayed mental and physical development in infancy. 2501342105-2110 (U.S. Ex. 20,565).

803. On January 19, 1990, Ron Loader, INFOTAB Director of Information Services, confirmed the first meeting of a worldwide industry working group at the offices of the Tobacco Institute in Washington, D.C. for the purpose of planning a Global Argumentation Project. The Global Argumentation Project was an effort to develop a standardized and comprehensive collection of argumentation papers on smoking and health issues, including ETS and youth marketing, which could be used by local management and NMAs for lobbying, public information campaigns, or as base documents for responding to public health advocates. Representatives from INFOTAB, the Tobacco Institute, Shook, Hardy & Bacon, and several European and United States' tobacco manufacturers attended the meeting, including Kay Comer, BATCo's Information Manager; Cynthia von Maerestetten, Philip Morris; Jim Goold, R.J. Reynolds; Donald Hoel and Jim Newsome of Shook, Hardy & Bacon; and Charley Powers and

SECTION I.

Fred Panzer of the Tobacco Institute. It had been decided that for several reasons "it would be sensible to hold this first meeting in Washington" because "we need to involve the US TI at an early stage in order to take advantage of their detailed information / argumentation / lobbying materials developed over years in practical situations and needing personal discussion;" "most members of the Working Group are already in, or need to be in, the States (i.e. 8 out of 11);" and "it provides the opportunity for INFOTAB coordinators to review other information sources (e.g. RJR) at first hand." TIMN362946-2949 (U.S. Ex. 62,874); TIMN362950-2952 (U.S. Ex. 62,872).

804. In 1991, the INFOTAB Board of Directors retained the law firms of (a) Lovell, White & Durrant to provide legal clearance for all documents related to smoking and health, and (b) Chadbourne & Parke to review the documents with an eye toward making sure that "due consideration is given to the legal position in the United States." 2023237649-7650 (U.S. Ex. 87,025).

805. An August 21, 1991 paper for the International ETS Management Committee ("IEMC") was originally prepared as the annual ETS update for INFOTAB. 507782317-2318 (U.S. Ex. 20,788).

(6) TDC - Tobacco Documentation Centre

806. On December 4, 1991, the Tobacco Documentation Centre ("TDC"), a successor entity to INFOTAB, was established. BATCo joined the TDC at its inception. Its charter stated:

The Association has as its purpose the establishment of a forum for exchange of views and information on international tobacco issues by the coordination of data and information in economic, social scientific and technical areas. The general objectives are to

broaden the knowledge of its members. In large part accomplishment of these objectives will be sought by providing information to various national and other tobacco trade associations and by serving as a resource of expertise and data analysis on these subjects of interest to the industry.

301159102-9113 (U.S. Ex. 88,445); 301159095-9097 at 9095 (U.S. Ex. 86,873); Deposition of Christopher Proctor, United States v. Philip Morris, et al., June 12, 2002, 15:23-16:18, 113:7-11.

807. The Founding Members of the TDC and subscription levels for each were as follows: BATCo, 20%; Gallahers, 10%; Philip Morris International, Inc., 20%; Reemtsma, 10%; R.J. Reynolds Tobacco International, Inc., 20%; and Rothmans International, 20%. Subscription levels of membership categories were based on annual production. On the unanimous proposal from Charter members, the following persons were unanimously elected to the Board of Directors for 1992: D.J. Bacon of BATCo, L.E. Birks of Gallahers, Richard J. Marcotullio of R.J. Reynolds International, F.J. Moreno of Philip Morris, C.J. Walther of Reemtsma, and A.A. Woods of Rothmans International. Woods served as chairman. 301159095-9097 (U.S. Ex. 86,873).

808. The TDC was formed "to act as a central information resource for the tobacco industry worldwide. [Predecessor] INFOTAB had an extensive information collection and database, which was considered valuable and worth maintaining." 502601564-1567 at 1565 (U.S. Ex. 29,570). The TDC collected "publicly-available information on tobacco . . . and then . . . provide[d] it back out again to the members of the TDC." Deposition of Dr. Christopher, United States v. Philip Morris, et al., June 12, 2002, 113:7-114:7.

809. The TDC was headed by Ronald Tully and Fiona Deroulez. A 1992 newsletter

published by the Asian Tobacco Council described the TDC:

This new organisation will be concentrating on providing added value information services for the industry globally, to the highest possible standards. Operating from the previous INFOTAB premises at Kew, the TDC will be chaired for the first year by Tony Wood, from Rothmans International Services and we wish him well with his interesting new responsibilities. The ATC will continue to keep in very close touch with Kew and liaison will be well maintained. With the increasing experience of the NMAs and regional groupings like our own ATC, it was inevitable that a fresh approach was appropriate for the industry's future information-related requirements.

http://tobaccodocuments.org/guildford_misc/300515974-5990.html at 5985 (U.S. Ex. 86,844).

810. On April 28, 1992, the International ETS Management Committee ("IEMC"), which was comprised of representatives from Defendants BATCo, Philip Morris, and R.J. Reynolds, prepared comments for distribution by the TDC regarding the draft EPA Risk Assessment on the health hazards of ETS. All NMAs were to use these comments in responding to inquiries regarding the draft Risk Assessment. The document was also provided to TDC member companies. 515622547-2547 (U.S. Ex. 20,865) (U.S. Ex. 75,281).

811. TDC distributed the IEMC ETS position papers, dated May 6, 1992, to the NMAs and lead companies, stating that the documents had been cleared for use by Defendants BATCo, Philip Morris, and R.J. Reynolds. T113040345-0424 (U.S. Ex. 86,522).

812. On June 19, 1992, Philip Morris's Matt Winokur, Director of Corporate Affairs at Philip Morris International, informed Geoffrey Bible, President of Philip Morris, and other Philip Morris employees that the EPA talking points prepared by Covington & Burling were "also being used by our international competitors and by National Manufacturers Association via the TDC.

SECTION I.

This coordinated approach to communications is highly desirable. It enables the entire global industry to espouse a common position immediately, an essential element in quickly responding to local government and media." 2021173016-3016 (U.S. Ex. 20,342) (U.S. Ex. 75,122) (U.S. Ex. 75,228).

813. In July 1992, the TDC assisted Defendants by identifying activists thought likely to attend the Eighth World Conference on Tobacco and Health.

http://www.tobaccodocuments.org/guildford_misc/300504231-4263.html (U.S. Ex. 87,717).

814. TDC planned to coordinate and expand its membership within the industry. In its 1998 business plan and budget, TDC listed as two of its general objectives: "co-coordinate with other tobacco-industry information providers where appropriate" and "develop membership opportunities with large- and medium-sized tobacco companies that are of strategic value in information gathering and sharing." 321737734-7740 at 7734-7735 (U.S. Ex. 28,629).

815. In 1998, the TDC Board launched an audit of former CEO Ron Tully. In a series of letters written to Marion Funck, TDC Board member and General Counsel for Reemtsma, in response to the audit, Tully revealed a litany of unethical incidents in which he was involved during his years at TDC. Many of the fraudulent activities pertained to financial matters, such as "burying" personal expenditures among business costs of TDC. Some other of the improprieties were much more serious. Tully accused the TDC Board of using the association for "commercial gain" and therefore in breach of its non-profit status in the United Kingdom. 321737639-7643 at 7639-7640 (U.S. Ex. 87,718); 321737614-7623 (U.S. Ex. 28,612).

816. In his letters to Funck, Tully also described an elaborate document destruction

plan used by TDC to destroy possible evidence in litigation. Tully wrote:

I was requested by three of the largest Board Members to prepare a Board paper, which could be used as the justification for the systematic destruction of pertinent documentation (from Infotab and the TDC). The aim of the document destruction exercise was to identify and remove all documents which could be viewed as "problematic", damaging or useful to plaintiffs in any way. I have to admit that I undertook a complete document review and reduced the Infotab papers to only the bare statutory minimum. This was done under the guise of being liquidated I authorized the destruction of 1 million individual pages in my seven years at TDC, and that in my last week at TDC, I spent most of my time dealing with around 5,000 key documents from Infotab Working Groups, ICOSI and general correspondence and notes of meeting and discussions between senior industry executives.

321737639-7643 at 7641 (U.S. Ex. 87,718).

(7) CORESTA - Centre for Cooperation in Scientific Research Relative to Tobacco

817. The Centre for Cooperation in Scientific Research Relative to Tobacco/Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac ("CORESTA") was created following the resolutions approved by the First International Scientific Tobacco Congress held in Paris, France, on September 10, 1955. It was created "[i]n order to operate a permanent Secretariat for international co-operation in scientific studies relative to tobacco." Its registered offices are located in Paris, and every world-wide major tobacco company and tobacco industry organization is a member. Meetings have been held every two years and, as of 1992, CORESTA had approximately 190 members, including Defendants BATCo, Philip Morris, Lorillard, Brown & Williamson, Liggett, and R.J. Reynolds. 401349241-9242 (U.S. Ex. 47,550); 401349243-9248 at 9243 (U.S. Ex. 21,788).

SECTION I.

818. Defendants early on recognized the usefulness of CORESTA to the Enterprise and the implications of releasing papers at CORESTA meetings. For example, on November 3, 1971, Helmut Wakeham, Vice President of Research and Development at Philip Morris, sent interoffice correspondence to Alexander Holtzman, General Counsel for Philip Morris; Frank Saunders of Philip Morris Corporate Affairs; and Clifford E. Goldsmith, President of Philip Morris, recommending release of a manuscript entitled "Puff-by-Puff Determination of Carbon Monoxide, Cyanides and Aldehydes in the Gas Phase of Cigarette Smoke" at a CORESTA/TCRC Conference in October 1972. The paper had been originally completed about a year earlier. Wakeham explained that the two-year delay in its release was to avoid having the FTC Testing Laboratory establish specifications and/or restrictions on gas phase delivery of cigarettes. 1004861550-1550 (U.S. Ex. 20,186).

819. A BATCo document entitled "Meeting with Dr. Helmut Wakeham, Vice-President and Director of Research, Philip Morris Inc., 10th September 1970" described a meeting between "dgf," BATCo scientist David Geoff Felton, and Wakeham when Wakeham was in Europe for the CORESTA Congress in Hamburg. The main purpose of the meeting was to explore why Philip Morris was excluded from the Tobacco Research Council; how Philip Morris could work on becoming a member; and who to contact at CORESTA. Felton explained that one of the reasons for the exclusion was that Imperial Tobacco "claimed to see scientific co-operation [with scientists from companies in the United States] as the thin end of a wedge which might lead to undue influence in TRC affairs by American lawyers." 110315968-5971 (U.S. Ex. 26,378) (U.S. Ex. 26,379); (U.S. Ex. 63,573).

SECTION I.

820. The document further discussed "CTR Affairs" as well as "PM Affairs" and noted that BATCo had raised the issue of an International Tobacco Working Group and that Wakeham felt that the United States' tobacco companies should have been asked to participate.

110315968-5971 (U.S. Ex. 26,378) (U.S. Ex. 26,379); (U.S. Ex. 63,573).

821. Representatives from Defendants Philip Morris, Lorillard, Liggett, and R.J. Reynolds were involved in the planning of a CORESTA meeting to be held in Williamsburg, Virginia, in 1972. An internal Lorillard memorandum from W.D. Okerson, Vice President of Manufacturing, to M. Yellen, Vice President of Advertising, dated January 27, 1970, advocated supporting the meeting: "In line with our attempts to encourage more cooperative activity in the industry, I feel we would have to participate and so recommend." 01192037-2037 (U.S. Ex. 20,040); 01192039-2039 (U.S. Ex. 86,523); 01192040-2040 (U.S. Ex. 21,684); 01192042-2042 (U.S. Ex. 86,524); 01192043-2043 (U.S. Ex. 86,525); 01192044-2044 (U.S. Ex. 21,685); 80507039-7043 (U.S. Ex. 22,035); 88693136-3137 (U.S. Ex. 32,077); 89091323-1324 (U.S. Ex. 32,080).

822. A 1988 memorandum from Richard R. Baker, BATCo R&D Manager, to Richard Binns, a BATCo R&D Manager at Southampton, indicated that one of the reasons the BATCo Board authorized joining CORESTA in approximately 1986 was to "ensure that technical initiatives by CORESTA reflect BAT requirements, views and experience." Baker sought to achieve those goals by obtaining key positions in Study Groups and on the Scientific Commission, presenting research papers, and having BAT represented on the board.

321103761-3761 (U.S. Ex. 28,286); see also 800226534-6538 (U.S. Ex. 88,678) (same goals in

1996); BAG1563764-3768 (U.S. Ex. 88,679),

823. A March 31, 1992 BATCo document described CORESTA as not generally regarded as a lobbying organization, which is what made it "unique and very valuable" to the industry. The document also described the overall structure of CORESTA as follows: a General Assembly, in which every member had one vote, met every two years; the General Assembly appointed the Board and the Scientific Commission; and the Scientific Commission of CORESTA had four sub-groups, Agronomy, Phytopathology, Technology, and Smoke. 401349242-9242 (U.S. Ex. 21,787); 401349243-9248 at 9243 (U.S. Ex. 21,788); 401349241-9242 (U.S. Ex. 47,550).

824. It was BATCo's opinion that the structure of CORESTA in 1992, was "very restricted" and that "there is no doubt that it needs restructuring to meet the future demands of the Industry." Nonetheless, the resolution of the dispute between BATCo and Philip Morris over the Barclay issue was cited as an example of CORESTA's usefulness. 401349243-9248 at 9243 (U.S. Ex. 21,788). See U.S. FPF § IV.F., infra, for further discussion of the Barclay issue.

825. CORESTA served as a forum for the industry to discuss research related to ETS.

RJR0000000508020040700718044-8046 (U.S. Ex. 61,930) (Confidential);

SECTION I.

RJR0000000508020043700718047-8049 (U.S. Ex. 61,929) (Confidential); see also U.S. FPF § IV.C., infra.

826. In June 2001, representatives from Defendants Lorillard, Philip Morris, and R.J. Reynolds, along with other delegates from the industry, convened at CORESTA's ETS Sub Group meeting, where they discussed trends in ETS research. In November 2001, the CORESTA Sidestream Task Force, which included representatives from Defendants BATCo, R.J. Reynolds, and Philip Morris, among others, met to review research conducted on sidestream tar and nicotine. 525302822-2823 (U.S. Ex. 86,526); 525302728-2729 (U.S. Ex. 86,527); 525776902-6936 (U.S. Ex. 86,528); 325260347-0362 at 0348 (U.S. Ex. 29,146); 524596882-6890 at 6883 (U.S. Ex. 66,571).

827. In February 2002, the Board of Directors of CORESTA approved the admission of Vector Tobacco Inc. as a new member of the organization. 525303277-3285 (U.S. Ex. 30,576).

(8) Tobacco Institute Interaction with Overseas and International Groups

828. On behalf of the Enterprise, the Tobacco Institute worked closely with overseas and international tobacco organizations to present a unified front; to influence public opinion; to pressure government officials to adopt the public positions of the United States tobacco industry; to maintain the Defendants' open question position on the relationship between smoking and adverse health effects; to preserve and enhance the Cigarette Company Defendants' profits; and to avoid adverse liability verdicts in lawsuits brought around the world.

829. In 1973, the Tobacco Institute's Committee of Counsel discussed expanding the

SECTION I.

Tobacco Institute's central role in Defendants' Enterprise to offshore activities including combating foreign anti-cigarette activity. The purpose of expanding the Tobacco Institute's role was to preserve the industry's position on smoking and health abroad and prevent erosion of public industry positions that had been adopted and publicized in the United States by the actions of non-domestic companies. "It is preferable for the domestic industry to act together to combat foreign activity than for individual companies to act. On the subject of smoking and health the domestic industry has acted in concert through the Institute in the past, as it is legally permitted to do and presumably intends to continue to do. Thus, the policy with respect to combating anti-cigarette activity abroad would be but an extension of the domestic policy." 502429369-9373 (U.S. Ex. 29,556); 2501018123-8128 (U.S. Ex. 27,923); TI16740660-0663 (U.S. Ex. 72,403); 2501029891-9901 (U.S. Ex. 20,557); TI04962210-2211 (U.S. Ex. 67,250); 105367082-7098 (U.S. Ex. 26,267).

830. In a document dated October 1, 1973, and entitled "International Activities of the Tobacco Institute, Inc.," J.C.B. Ehringhaus, Jr., Tobacco Institute General Counsel, advocated that the Tobacco Institute have an increased role internationally. Ehringhaus noted that "any success of the anti-smoking group in another country 'diminishes' us. I think we have to do something about it, to be aware and to participate in order to protect the interests of the American companies." He further suggested: "We would keep aware of what's going on around the world and be able to advise out industry people in one country of these happenings so that they may be guided in dealing with their own local situations." 2010030234-0235 (U.S. Ex. 88,447).

831. The Tobacco Institute's role in international matters was then discussed at the

October 4, 1973 meeting of the Tobacco Institute Executive Committee, and it was agreed that "the Committee of Counsel should continue consideration of this area." TIMN0013425-3428 at 3427 (U.S. Ex. 88,448).

832. One way in which the Tobacco Institute coordinated worldwide industry positions was by publishing brochures, pamphlets, "backgrounders," industry position papers, and other materials on the Enterprise's stance on controversial smoking and health issues and made them available for overseas distribution, often through INFOTAB. Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

833. The Tobacco Institute developed a Tobacco Institute backgrounder entitled "Tobacco in the Developing Nations" and announced its availability in a Tobacco Institute newsletter on January 14, 1980. Copies were to be forwarded to international public relations personnel of member companies, overseas NMAs and other trade associations, and international organizations such as INFOTAB and ICOSI. TIMN0241954-1971 (U.S. Ex. 21,545); TI16740349-0366 (U.S. Ex. 86,538).

834. On October 15, 1981, Donald Hoel of Shook, Hardy & Bacon sent a letter to Horace Kornegay, President of the Tobacco Institute, transmitting a draft of a "Public Smoking Paper" for use by INFOTAB. TIMN0144678-4678 (U.S. Ex. 23,015) (U.S. Ex. 65,656).

835. In anticipation of a 1983 Surgeon General's Report on heart disease, the Tobacco Institute issued a report "Cigarette smoking and heart disease," which concluded: "Whether cigarette smoking is causally related to heart disease is not scientifically established." The report

SECTION I.

was distributed to Tobacco Institute member companies who were requested not to distribute it widely, but only to use it for internal purposes until the Surgeon General's report on heart disease was released when additional copies would be made available. INFOTAB distributed the report as well, advising its members that the Tobacco Institute would acquaint news reporters with its views about smoking and heart disease before the 1983 Surgeon General's report. 2501023645-3645 (U.S. Ex. 20,556).

836. In anticipation of the 1985 Surgeon General's Report on smoking and the workplace which was expected to be issued in early December, the Tobacco Institute staff gathered prior publications on similar subjects by the prospective authors of the report chapters in order to forecast the conclusions of the report with some degree of accuracy and develop "shadow" papers among scientist who would dispute such conclusions. TIMN0061572-1572 (U.S. Ex. 88,450). In November 1985, Antonietta Corti, INFOTAB Director of Information Services, informed NMAs throughout the world, including Britain's TMA (see U.S. FPF § I.H(3), supra), of which BATCo was a member, that the Tobacco Institute had assembled material for use in framing answers to possible specific questions from the media regarding the 1985 Surgeon General Report. INFOTAB forwarded a copy of this material for use as a basic reference by Defendants and spokespersons from the NMAs. 2501444186-4187 (U.S. Ex. 27,948); 2501444188-4213 (U.S. Ex. 27,949).

837. In June 1987, six draft briefing papers to be presented at the Sixth World Conference on Smoking and Health were given to the Tobacco Institute's William Kloepfer. The papers discussed ETS and Indoor Air Quality; the Science of ETS; ETS Legislation; Tobacco and

SECTION I.

Developing Countries; Smoking and Young People; and Smoking and Women. Kloefer was asked to, and did, rewrite all papers except the one on Smoking and Women. TIMN0269919-9920 (U.S. Ex. 86,539); TIMN0269920-9944 (U.S. Ex. 86,540).

838. In a 1990 memorandum and listing entitled "Allies to Be Notified of Industry Youth Initiatives," the Tobacco Institute directed that, prior to public announcement of any new industry initiatives in the area of youth smoking, the Tobacco Institute staff would inform organizations within the tobacco family, groups, and allies of the new program. The information to be provided to allies was to include advance copies of press and program materials and a cover letter to be signed by the Tobacco Institute President or other appropriate staff. Among the international organizations to be kept abreast of the Tobacco Institute's activities on behalf of the industry were INFOTAB and TMA. TIMS00026152-6153 (U.S. Ex. 88,451).

839. A letter dated March 6, 1992, from William Kloefer, Tobacco Institute Senior Vice President, to Ron Tully of INFOTAB, Robert Kaplan of Philip Morris International, Inc., and Graciela Fernandez Ivern of Philip Morris Latin America, provided information about the Surgeon General's Report entitled "Smoking and Health in the Americas" which was released on March 12, 1992. The letter explained that, if asked, the Tobacco Institute would comment on the Surgeon General's Report, if asked, to United States media and Latin America media; that the Pan American Health Organization would be issuing a country-by-country status report on tobacco prevention and control measures; and that Kloefer would bring briefing session materials prepared by Don Hoel of Shook, Hardy & Bacon and others. 2500121043-1043 (U.S. Ex. 20,552).

SECTION I.

840. Tobacco Institute materials were distributed to BATCo by the BAT Key Issues Council. The BAT group of companies had a "Key Issues Council," which was comprised of representatives of the legal and public relations functions of the various BAT operating companies, including BATCo and Brown & Williamson. Its purpose was to discuss smoking and health related issues because "some coordination and some exchange of information was necessary." At a meeting in April 1995, the Key Issues Council agreed that "[m]aterial used by Tobacco Institute in hearings should be assessed and possibly distributed around the Group." 503105240-5245 at 5240-5242 (U.S. Ex. 66,407); Deposition of Ulrich Herter, United States v. Philip Morris, et al., March 19, 2003, 60:3-62:3, 64:19-23.

841. The Tobacco Institute furnished advice, assistance, and even financial support to international industry-related groups and organizations as these groups worked on projects, publications, videos, conferences, briefing papers, and lobbying materials. Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

842. On November 17, 1976, interoffice correspondence from Paul Isenring of Philip Morris International noted that it had been decided, at a Board meeting of Germany's Verband regarding a research project entitled "Beneficial Effects of Smoking," that the Verband should "contact the Tobacco Institute in Washington as well as BAT, Haus Neuerburg, and Philip Morris in Germany. The idea was that these companies get in touch with their US-based companies" in order to consider how this project should be approached by Philip Morris and other Defendants. 1002610069-0069 (U.S. Ex. 86,541).

SECTION I.

843. A November 8, 1978 Philip Morris correspondence from Alexander Holtzman to Thomas F. Ahrensfield further discussed the Tobacco Institute's "role in smoking and health matters overseas." Holtzman suggested that Philip Morris agree that the Tobacco Institute be permitted to "provide to foreign association of tobacco manufacturers, at their request, position papers on specific issues which may have been developed by TI; documentary films; statements of the views of the American industry on particular problems based on scientific information available here; information about cigarette sales since the TV ban and other types of sales or marketing data generally available." 1005056379-6380 (U.S. Ex. 88,449).

844. In a January 17, 1983 form letter to its members, TAC informed each of its member companies, one of which was Defendant BATCo, that the Tobacco Institute had provided TAC with a copy of a Tobacco Institute videotape compilation showing their spokespersons team in action: "It shows extracts of the four members of the team being interviewed on television and speaking to live audiences. Two points are of particular interest. The first, the way in which the publicly face and handle health issues. The second that all the team are first and foremost media trained and therefore utterly familiar with, and relaxed in, dealing with hostile interviews and audiences: their knowledge of tobacco matters, while vitally important, is a secondary consideration in the selection and training process." 2024919702-9702 (U.S. Ex. 26,821).

845. The Tobacco Institute provided facilities at its offices for an INFOTAB Workshop for NMAs held on September 19-22, 1983. William Kloepfer, Tobacco Institute, and Tony St. Aubyn, TAC Assistant Director, were among the presenters. TI13161263-1266 (U.S. Ex.

SECTION I.

88,499); 100294426-4429 (U.S. Ex. 88,500); 2501021530-1532 (U.S. Ex. 27,924) (U.S. Ex. 75,260); 2501021486-1489 (U.S. Ex. 25,366); Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

846. During 1984, the Tobacco Institute provided \$70,000 (half the cost) to INFOTAB for a monograph commissioned by INFOTAB and edited by Robert Tollison, Professor of Economics and Director of the Center for Study of Public Choice at Virginia's George Mason University. The thrust of the monograph entitled "Smoking in Society," with a working title of "Free To Smoke," was that "conventional wisdom about smoking is either wrong, unproven, built upon faulty analysis, or pushed well beyond the point of common sense. TIMN371669-1669 (U.S. Ex. 65,655); TIMN371670-1682 (U.S. Ex. 65,654); Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

847. In November 1990, Samuel Chilcote sent Martin Oldman of INFOTAB a list of "messages and sub-messages [that] could be helpful as a starting point for any global and/or NMA ETS campaign." TI12200663-0663 (U.S. Ex. 62,313).

848. The Tobacco Institute provided guidance, advice, strategies, and tactics to overseas organizations and groups for setting up tobacco alliances outside the United States.

849. On November 16, 1981, Mary Covington, Secretary General of INFOTAB, spoke to the Tobacco Institute College of Tobacco Knowledge on an "International Perspective on Smoking Issues and Related Activities of the Tobacco Industry" and acknowledged that

INFOTAB had received outstanding help from the Tobacco Institute, "a valuable source of information and ideas." 2501029891-9901 (U.S. Ex. 20,557).

850. In a March 5, 1986 letter to Bryan Simpson, INFOTAB Secretary General, Arthur Stevens, Lorillard Senior Vice President and General Counsel, stated that:

Lorillard will not be renewing its INFOTAB membership subscription for 1986. Please understand that our action in no way reflects any disagreement or dissatisfaction with either the mission or the achievements of INFOTAB, all of which are credible and significant. You and your colleagues are performing valuable services for the tobacco industry worldwide, and we applaud INFOTAB's accomplishments. Although we are not engaged in the international sale of tobacco products, we recognize that restrictions and punitive measures directed against tobacco outside the U.S. are sometimes precursors to impacts felt here. However, as active and significant contributors to the program of the U.S. Tobacco Institute, whose assistance is generously and frequently afforded to INFOTAB, we believe we are already supporting INFOTAB's efforts to a very significant degree.

91820409-0410 (U.S. Ex. 57,120).

851. Simpson wrote back to Stevens on March 21, 1986, confirming Lorillard's withdrawal as a member of INFOTAB and acknowledging that "we are aware of your major contribution to TI, and the benefits that we receive indirectly." 85174260-4260 (U.S. Ex. 56,011) (U.S. Ex. 75,196).

852. Likewise, the formation of INFOTAB was "a god send as far as the TI is concerned." According to an October 2, 1981 BATCo document, the Tobacco Institute, commenting on the importance of INFOTAB to Defendants and the Enterprise, stated that the Institute had been "looking for 15 years for an international umbrella to enable them to deal with other NMAs and to improve the strength of the industry as a whole; -the back-wash from events

SECTION I.

and attacks affecting the industry in smaller countries comes back powerfully to the USA; . . . INFOTAB helps the industry to unite in trying to combat the attacks; -for years it had been hoped that there would be some sort of organization of international trade associations, which never happened." 321796064-6067 at 6067 (U.S. Ex. 28,685).

853. In remarks on September 20, 1983, at an INFOTAB workshop in Washington, D.C. on "How to Set Up a Tobacco Alliance," A.W.M. (Tony) St. Aubyn, Assistant Director of Britain's TAC, stated that the tobacco industry in the United Kingdom initially turned to the Tobacco Institute for guidance on setting up a tobacco alliance in early summer 1982. St. Aubyn continued: "[T]hanks to the unstinting help they gave us, we were able to draw much of our conceptual thinking from their experience with the Tobacco Action Network . . . T.I.'s experience, and especially their warnings of some of the problems and pitfalls we had to avoid, was invaluable." 2501021530-1532 at 1530 (U.S. Ex. 27,924) (U.S. Ex. 75,260); 2024919702-9702 (U.S. Ex. 26, 821).

854. Tobacco Institute representatives served on international teams, committees, and boards along with industry representatives from outside the United States where strategies were developed for a coordinated approach to scientific research studies and public relations campaigns. Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710); see also TI13161190-1190 (U.S. Ex. 65,495); TI12431630-1630 (U.S. Ex. 62,383); TI13111755-1755 (U.S. Ex. 75,448); TI13110904-0904 (U.S. Ex. 62,410); TI01791304-1305 (U.S. Ex. 88,496); TI12200663-0663 (U.S. Ex. 62,313).

SECTION I.

855. In order to coordinate the Defendants' positions for the Fifth World Conference on Smoking and Health organized by the World Health Organization ("WHO") and held in Winnipeg, Canada, Hans Verkerk of INFOTAB, invited William Kloepfer, Tobacco Institute Senior Vice President for Public Relations, to a meeting of "an industry 'steering team'" in Montreal on November 22, 1982. Other members of the industry steering team included Donald Hoel, Shook, Hardy & Bacon; Bob Ely, BATCo; and Gwynn Hargrove, a retired BATCo executive who was still active in international public affairs. TIMN270254-0254 (U.S. Ex. 72,405); TIMN270252-0252 (U.S. Ex. 86,542); TIMN270250-0251 (U.S. Ex. 86,543); TIMN270249-0249 (U.S. Ex. 86,544); TIMN270253-0253 (U.S. Ex. 86,545).

856. In a May 27, 1987 Tobacco Institute memorandum from William Kloepfer to Samuel Chilcote, Kloepfer reported on an all-day meeting of an industry steering committee for the Sixth World Conference of Smoking and Health that he had attended with INFOTAB staff. He had been asked to serve as editor of daily conference reports fed to the tobacco industry throughout the world. Kloepfer recommended an industry news conference for the evening of the conference opening to establish industry presence and to counter the opposition rhetoric of the preceding week's anti-smoking rally of WHO Pacific rim countries in Tokyo and the Japan-hosted indoor air symposium. TIDN0012090-2091 (U.S. Ex. 77,023).

857. The Tobacco Institute made countless presentations for INFOTAB and other international group workshops, seminars, symposia, and conferences outlining Defendants' strategies for attacking what Defendants deemed "anti-smoking" research and programs linking smoking and health and ETS and health. Responses of The Tobacco Institute, Inc. to Plaintiff's

SECTION I.

Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

858. William Kloepfer participated in a meeting of the Passive Smoking Project Group, an INFOTAB committee, in Lausanne, Switzerland, on March 29, 1984. TI12431630-1630 (U.S. Ex. 62,383) (U.S. Ex. 67,243); TI13161190-1190 (U.S. Ex. 65,495); Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

859. William Kloepfer attended the June 4, 1984 meeting of the INFOTAB ETS Committee in Brussels, Belgium. Scientists from Defendants Philip Morris and R.J. Reynolds also attended. TI13111755-1755 (U.S. Ex. 62,412); Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris, et al. (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

860. On October 10, 1985, Tobacco Institute President Samuel Chilcote spoke at an INFOTAB International Workshop on the credibility gap between the tobacco industry and the public. TIMN371764-1795 (U.S. Ex. 88,497); TIMN350605-0605 (U.S. Ex. 88,498).

861. INFOTAB held an International Workshop in Brussels on October 14-16, 1986. William Kloepfer, Tobacco Institute Vice President, spoke on Smoking in the Workplace and called ambient smoke a political issue rather than a health issue. R.L.O. Ely, head of BATCo Public Affairs, addressed WHO Initiatives. Tom Osdene, Philip Morris Director of Research, Charles Green, R.J. Reynolds scientist, and Donald Hoel, lawyer at Shook, Hardy & Bacon, took part in a panel discussion on ETS. 2021594646-4648 (U.S. Ex. 26,059); TIOK0029712-9712

SECTION I.

(U.S. Ex. 86,546); TIOK0029713-9723 (U.S. Ex. 86,547); TIOK0029724-9734 (U.S. Ex. 86,548); TI00612539-2543 (U.S. Ex. 62,076).

862. On October 18, 1988, Tobacco Institute Vice President Walker Merryman spoke at an INFOTAB Workshop in Malaga, Spain, on anti-smoking activists. TI12261398-1399 (U.S. Ex. 62,348).

863. The Tobacco Institute arranged visits and briefing sessions for domestic and foreign industry representatives to discuss current and emerging issues that the Tobacco Institute believed threatened the industry.

864. After attending a luncheon in Washington, D.C., hosted by the Tobacco Institute's Horace Kornegay, members of Japan Tobacco, Inc. ("JTI") were invited to attend a Tobacco Institute ETS Advisory Group meeting in Washington, D.C. In his July 15, 1986 letter to JTI's S. Takeda, Donald Hoel, Chairman of the ETS Advisory Group, wrote, "One of the purposes and benefits from the proposed joint meeting would be to exchange detailed information as to current research projects The second day would include identification of research needs and perceived problems." TI00610156-0156 (U.S. Ex. 86,549); TI00610153-0154 (U.S. Ex. 62,064).

865. In 1990, Charles H. Powers, Tobacco Institute Senior Vice President, arranged a visit and briefing session between the Tobacco Institute and the Canadian Tobacco Manufacturers' Council on current emerging issues in the two countries, particularly those issues with characteristics indicating potential spill over effects from the United States to Canada and/or vice versa. TI12910068-0069 (U.S. Ex. 86,550).

866. The Tobacco Institute organized meetings for industry representatives, from both

the United States and overseas, to review international work on both the science and public affairs aspects of smoking and health issues including ETS and to discuss common problems facing the tobacco industry in all countries.

867. The Tobacco Institute organized a meeting in Washington, D.C., on March 18, 1987, chaired by Don Hoel of Shook, Hardy & Bacon, to review international work on both the science and public affairs aspects of ETS. The meeting was attended by nine foreign delegates from the United Kingdom, Germany, and Japan, as well as sixteen domestic delegates drawn from Defendants R.J. Reynolds, Philip Morris, the Tobacco Institute, and industry lawyers. The objective of the meeting was to familiarize delegates with science and public affairs programs facing various countries. The participants agreed that public affairs and political concerns had common features across borders: anti-smoking "fanatics;" government legislation and regulation and private business rules restricting smoking in offices, transportation, and public places; harmful press coverage; the need to communicate ETS science using neutral scientists; and the need to move the debate from ETS to indoor air quality, where ETS played a minor role.

2501458142-8148 (U.S. Ex. 27,951); TI00682162-2163 (U.S. Ex. 21,240).

868. The Tobacco Institute worked with other members of the Enterprise, in the United States and overseas, to develop a global strategy on ETS in which teams of scientists, set up in key countries, would produce industry-friendly ETS research to stimulate the ETS controversy. An August 1986 list prepared by William Davis, Research Analyst for Shook, Hardy & Bacon, and sent to Lorillard's Alexander Spears, set forth Defendants' coordinated efforts to develop industry-friendly science on ETS, including projects undertaken by the ETS Advisory Group, the

SECTION I.

Tobacco Institute, R.J. Reynolds, Covington & Burling, and Shook, Hardy & Bacon on behalf of INFOTAB. 86024167-4167 (U.S. Ex. 56,093) (U.S. Ex. 75,197); 86024168-4172 (U.S. Ex. 21,089) (U.S. Ex. 75,198).

869. On February 17, 1988, Sharon Boyse of Defendant BATCo took notes at a London meeting where Philip Morris presented its global strategy on ETS to representatives of the British tobacco industry, including BATCo, Rothmans International, Imperial Tobacco, and Gallahers, and invited these companies to join in the proposed activities. The global strategy on ETS had been established at a meeting in the United States between Defendant Philip Morris and Covington & Burling, lawyers for Defendant Tobacco Institute. The proposal would set up, in key countries in every international area (United States, Europe, Australia, Far East, South America, Central America), teams of scientists organized by one national coordinating scientist and American lawyers. The teams of scientists would review scientific literature on ETS, or carry out work on ETS, and keep the ETS controversy alive. The scientists would produce research or stimulate controversy in such a way that public affairs people in the relevant countries would be able to make use of, or market, the information. The Tobacco Institute's lawyers, Covington & Burling, proposed to set up a London office later in the year to coordinate their ETS activities in Europe. Other Covington & Burling lawyers had been commissioned to coordinate ETS activities in the Far East, Australia, South America, and Central America. 401087258-7263 (U.S. Ex. 29,364); 401208386-8391 (U.S. Ex. 29,365).

870. The Tobacco Institute collaborated with overseas tobacco industry groups to discredit scientists and scientific research that the industry considered to be "anti-smoking." In

her November 1981 speech to the Tobacco Institute College of Tobacco Knowledge, Mary Covington, INFOTAB Secretary General, described how the Tobacco Institute had provided INFOTAB with its communications plans to discredit the Hirayama report on passive smoking in advance of any releases. INFOTAB alerted NMAs around the world about the Tobacco Institute's plans to attack and discredit Hirayama. As soon as the Tobacco Institute had their press releases prepared, it telexed them to INFOTAB and INFOTAB transmitted them to other worldwide NMAs for their possible use. INFOTAB followed up with a mailing of press clippings from the United States, enabling NMAs to generate similar press coverage in their own countries. 2501029891-9901 (U.S. Ex. 20,557).

871. Another idea hatched by the Tobacco Institute for carrying the industry's views on ETS to the general media was to use the industry's overseas consulting scientists "to bring a 'foreign' perspective on ETS science to U.S. journalists. . . . Through editorial board briefings and interviews with science and health reporters, these scientists will suggest that the U.S. understanding of ETS science is skewed by anti-smoker media hype, and that the U.S. response to ETS science is extreme and out of step with the rest of the world." TI01140121-0123 (U.S. Ex. 88,657); TI01140124-0133 (U.S. Ex. 62,100).

872. The Tobacco Institute funded consultants who would meet overseas with foreign industry representatives to discuss Tobacco Institute business and share ideas and strategies. For example, Tobacco Institute consultant Gray Robertson attended an ETS Symposium in Tokyo, Japan on November 4-6, 1987; a meeting with TAC in the United Kingdom on November 15-16, 1987; a meeting with TAC of Canada for government testimony on November 23-24, 1987; and

a meeting with the TAC in London on January 23-30, 1988. TIDN0012020-2020 (U.S. Ex.86,551); TIDN0012021-2021 (U.S. Ex. 86,552).

873. The Tobacco Institute organized a training program called the College of Tobacco Knowledge at which the participants were taught about the industry's positions on smoking and health issues; industry strategies for combating smoking restrictions and manipulating the public's perception of smoking and health issues; and how to transmit consistent public statements regarding smoking and health and other tobacco issues. See U.S. FPF § I.C(4)(c), supra.

874. Tobacco industry representatives from around the world attended the College of Tobacco Knowledge. At the October 1982 session, seventeen of the forty-nine students were from foreign countries, e.g., Paraguay, Canada, United Kingdom, Australia, Brazil, Switzerland, Holland, Venezuela, and Guatemala. 04163285-3285 (U.S. Ex. 74,872); 04235250-5251 (U.S. Ex. 75,000); TI04962210-2211 (U.S. Ex. 67,250); TI04962207-2207 (U.S. Ex. 88,501).

875. Employees from INFOTAB were invited to, and did, attend sessions of the Tobacco Institute College of Tobacco Knowledge. TIFL0067876-7877 (U.S. Ex. 88,633) ; TIFL0071174-1174 (U.S. Ex. 86,142); TIFL0071332-1332 (U.S. Ex. 88,634); TI11961377-1377 (U.S. Ex. 86,186); TIFL0068447-8450 (U.S. Ex. 88,635); Responses of The Tobacco Institute, Inc. to Plaintiff's Second Set of Interrogatories, United States v. Philip Morris (served March 15, 2002), at Interrogatory/Answer No. 15 (U.S. Ex. 87,710).

(9) Other Global Coordination/Cooperation

876. The Defendants coordinated the Enterprise and conspiracy through multiple

SECTION I.

meetings around the globe. These meetings, held between 1991 and 2000, were scheduled by correspondence and memorandums that were sent via facsimile and by mail. 536202391-2391 (U.S. Ex.86,553); 2023244508-4510 (U.S. Ex.86,554); 2025495788-5788 (U.S. Ex. 22,856); 2025495795-5795 (U.S. Ex. 26,848); 2065260331-0331 (U.S. Ex. 86,555); 2024771391-1391 (U.S. Ex. 86,556); 2063593893-3893 (U.S. Ex. 24,024); 518987394-7394 (U.S. Ex.24,791); 2025842508-2508A (U.S. Ex. 86,557); 2025477955-7955 (U.S. Ex.26,834); 700533941-3941 (U.S. Ex. 86,558); 321569320-9322 (U.S. Ex. 86,559); 321569292-9292 (U.S. Ex. 86,560); 321569060-9060 (U.S. Ex.86,561.); 321569236-9236 (U.S. Ex. 86,562); 321569039-9041 (U.S. Ex. 86,563); 321569222-9222 (U.S. Ex.86,564); 321569223-9224 (U.S. Ex.86,565); 503142364-2383 (U.S. Ex. 50,324); 2023244498-4498 (U.S. Ex. 86,624); 2070478698-8698 (U.S. Ex. 86,566); 2077748524-8524 (U.S. Ex. 86,567); 301099377D-9378 (U.S. Ex. 86,568); 503063153-3154 (U.S. Ex. 29,601); 503089496-9497 (U.S. Ex. 86,569); 503089491-9492 (U.S. Ex. 86,570); 503085845-5845 (U.S. Ex. 86,571); 503089413-9413 (U.S. Ex. 86,572); 503089408-9409 (U.S. Ex. 29,620); 503089421-9433 (U.S. Ex. 86,573); 321569392-9393 (U.S. Ex. 86,574); 321568973-8973 (U.S. Ex. 86,575); 321568996-8996 (U.S. Ex. 86,576); 321569097-9097 (U.S. Ex. 86,577); 321569098-9098 (U.S. Ex. 86,578); 322006693-6696 (U.S. Ex. 86,579); 322006698-6699 (U.S. Ex. 86,580); 322006529-6530 (U.S. Ex. 86,581); 2074164618-4618 (U.S. Ex. 86,905); 2078348038-8038 (U.S. Ex.86,906); 2502250129-0129 (U.S. Ex. 86,582); 300545714-5714 (U.S. Ex. 87,573); 2046546143-6143 (U.S. Ex. 88,502); 2046546144-6144 (U.S. Ex. 88,503); 2072416409-6410 (U.S. Ex. 88,504); 321569356-9357 (U.S. Ex. 88,505); 32156935-9358 (U.S. Ex. 88,841); 322006698-6699 (U.S. Ex. 86,580); 700533921-3921 (U.S.

SECTION I.

Ex. 88,565); 300543355-3356 (U.S. Ex. 88,506).

877. Defendants often transmitted agendas in advance of these meetings and corresponded as to which of their industry representatives would and should attend these meetings. 2023244498-4498 (U.S. Ex. 86,583); 2500061111-1111 (U.S. Ex. 86,584); 536202391-2391 (U.S. Ex. 86,625); 2023244315-4315 (U.S. Ex. 86,585); 2023244363-4363 (U.S. Ex. 86,586); 536202211-2211 (U.S. Ex. 30,671); 536202212-2212 (U.S. Ex. 30,672); 2028454705-4705 (U.S. Ex. 22,852); 2028360079-0079 (U.S. Ex. 86,587); 2023897308-7308 (U.S. Ex. 37,062); 2024210630-0631 (U.S. Ex. 22,868); 2051810327-0327 (U.S. Ex. 86,588); 2065260325-0325 (U.S. Ex. 86,589); 700533917-3917 (U.S. Ex. 86,590); 700534024-4025 (U.S. Ex. 86,591); 700534027-4027 (U.S. Ex. 86,592); 700533906-3912 (U.S. Ex. 86,593); 2065260328-0328 (U.S. Ex. 66,825); 503142364-2383 (U.S. Ex. 50,324); 2023245491-5493 at 5492 (U.S. Ex. 36,986); 2047654142-4143 (U.S. Ex. 86,594); 503063155-3155 (U.S. Ex. 29,602); 503063156-3157 (U.S. Ex. 29,603); 503087551-7552 (U.S. Ex. 86,595); 321569378-9379 (U.S. Ex. 86,596); 321568997-8998 (U.S. Ex. 86,626); 321568946-8947 (U.S. Ex. 86,627); 321569351-9352 (U.S. Ex. 86,628); 321569341-9344 (U.S. Ex. 86,629); 321569134-9137 (U.S. Ex. 86,630); 322006507-6507 (U.S. Ex. 86,597); 321987838-7859 (U.S. Ex. 79,445); 300543980-3980 (U.S. Ex. 87,574); 300543954-3954 (U.S. Ex. 87,575); 300543357-3358 (U.S. Ex. 87,576); 2046546160-6160 (U.S. Ex. 87,577); 300512229-2232 (U.S. Ex. 88,507); 300543968-3968 (U.S. Ex. 67,755); 300543811-3813 (U.S. Ex. 88,508); 2025495656-5656 (U.S. Ex. 88,509); 2078742951-2951 (U.S. Ex. 27,724); 2078742952-2952 (U.S. Ex. 27,725); 2078742954-2954 (U.S. Ex. 27,727); 2078742955-2955 (U.S. Ex. 27,728); 2047315968-5968

2028372583-2596 at 2594 (U.S. Ex. 22,926); 517002090-2091 (U.S. Ex. 66,527); 300512244-2245 (U.S. Ex. 67,752); 300543979-3979 (U.S. Ex. 87,578); 300545676-5680 (U.S. Ex. 87,579); 300543941-3042 (U.S. Ex. 87,580); 300545701-5704 (U.S. Ex. 87,581); 300543440-3454 (U.S. Ex. 87,582); 300544202-4208 (U.S. Ex. 87,583); 2047315978-5978 (U.S. Ex. 88,636); 2078742947-2948 (U.S. Ex. 27,721); 2047315962-5962 (U.S. Ex. 88,637); 2078742962-2963 (U.S. Ex. 45,192); 2078742949-2949 (U.S. Ex. 27, 722); 2078742958-2959 (U.S. Ex. 27,729); 900006192-6193 (U.S. Ex. 88,541); 900006155-6155 (U.S. Ex. 88,542); 517351492-1492 (U.S. Ex. 88,543); 900006065-6065 (U.S. Ex. 88,544); 300543360-3366 (U.S. Ex. 88,545); 300543940-3942 (U.S. Ex. 88,546).

I. Dissolution of CTR, the Tobacco Institute, and CIAR

879. Prior to CTR and the Tobacco Institute's voluntary dissolutions and contemporaneous with liability actions against them, the New York Attorney General sought the dissolution of CTR and the Tobacco Institute on several independent statutory grounds including that each entity had transacted its business in a persistently fraudulent or illegal manner with respect to smoking and health issues. New York Attorney General's Petition to Dissolve CTR and the Tobacco Institute dated April 30, 1998 and Memorandum of Law in Support of Petition for Dissolution (U.S. Ex. 87,584).

880. In November 1998, most of the State Attorneys General entered into a settlement agreement, referred to as the Master Settlement Agreement ("MSA"), with Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, Liggett, and Commonwealth Brands, Inc., to resolve all pending Medicaid recoupment litigation. The State Attorneys General for Florida,

SECTION I.

Mississippi, Minnesota, and Texas already had entered into settlements with tobacco defendants prior to November 1998. The MSA required that CTR, the Tobacco Institute, and CIAR cease all operations and dissolve. In addition, the tobacco products manufacturers signing the MSA were prohibited from reconstituting CTR or its function in any form. MSA, Sec. III(o), Permanent Relief - Dissolution of The Tobacco Institute, Inc., The Council for Tobacco Research-U.S.A., Inc. and the Center for Indoor Air Research (November 1998) (U.S. Ex. 64,359).

(1) CTR

881. On April 30, 1998, the Attorney General of the State of New York had commenced a special proceeding that sought, among other things, the dissolution of CTR. New York Attorney General's Petition to Dissolve CTR and the Tobacco Institute dated April 30, 1998 and Memorandum of Law in Support of Petition for Dissolution (U.S. Ex. 87,584); <http://www.oag.state.ny.us/tobacco/petition.html> (U.S. Ex. 21,478) (U.S. Ex. 76,201); <http://www.oag.state.ny.us/tobacco/toc.html> (U.S. Ex. 86,850); <http://www.oag.state.ny.us/tobacco/dissolve.html> (U.S. Ex. 86,851); <http://www.oag.state.ny.us/tobacco/cause.html> (U.S. Ex. 86,852).

882. On May 8, 1998, in connection with State of Minnesota v. Philip Morris Inc., Brown & Williamson, Lorillard, Philip Morris, and R.J. Reynolds (the four Class A members of CTR) entered into a Settlement Agreement and Stipulation for Entry of a Consent Judgment with the State of Minnesota ("Minnesota Settlement Agreement"), in which, among other things, the companies agreed to dissolve CTR and agreed to the entry of a consent judgment ("Minnesota

SECTION I.

Consent Judgment"). Section VI of the Minnesota Consent Judgment, entered on May 19, 1998, provided that, within ninety days of May 8, 1998, CTR would cease all operations except as necessary to comply with existing grants or contracts and to continue its defense of other lawsuits and that CTR would be disbanded and dissolved within a reasonable time period thereafter. Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. (October 19, 1998) State of Minnesota v. Philip Morris, Inc., No. C1-94-8565 (2nd Judicial District, Minn. May 18, 1998) (U.S. Ex. 86,853).

883. A special meeting of the members of CTR was held on October 19, 1998, at CTR's offices in New York City at which the Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. was submitted to the members for consideration and approved by a unanimous vote of the members present. The Class A members present were Brown & Williamson, represented by Senior Vice President Ernest Pepples; Philip Morris, represented by Senior Vice President of Operations John Nelson; Lorillard, represented by Chairman and CEO Alexander Spears; and R.J. Reynolds, represented by President and CEO Andrew Schindler. The Class B members present were Bright Belt Warehouse Association, Tobacco Association, Inc., Burley Auction Warehouse Association, Burley Tobacco Growers Cooperative Association, Inc., and United States Tobacco. Class B member Burley Stabilization Corporation was not present and did not vote on the Plan. Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. (October 19, 1998) (U.S. Ex. 86,853).

884. CTR reached an agreement with the Attorney General of New York with respect

SECTION I.

to the terms of the dissolution, and the New York court entered an Order Approving CTR's Plan of Corporate Dissolution and Certificate of Dissolution on or about October 21, 1998.

70005157-5161 (U.S. Ex. 54,380).

885. The Dissolution Plan permitted a winding up of CTR's research-funding activities and funding of the research grants-in-aid that had been previously awarded by CTR. CTR was required to wind up non-litigation activities no later than the 180th day after the date of entry of an order approving the Plan. Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. (October 19, 1998) (U.S. Ex. 86,853).

886. The Dissolution Plan allowed CTR to continue to defend itself and to protect its interest in litigation, and to assist in the defense of Defendants and CTR's other members in litigation, pursuant to joint defense agreements or arrangements. CTR also was permitted to continue to employ and/or retain as consultants personnel that it deemed reasonably necessary to conduct litigation-related activities. Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. (October 19, 1998) (U.S. Ex. 86,853).

887. The Dissolution Plan did not limit CTR's existence for purposes of conducting litigation-related activities. Section 6.3 (Duration) of the Plan stated that "in light of the large number of lawsuits pending against CTR and the possibility that numerous additional lawsuits will be filed against CTR in the future, CTR believes it is very likely that this need will continue to exist for a number of years after the conclusion of the winding up of CTR's research-funding activities." Plan of Corporate Dissolution and Distribution of Assets of The Council for Tobacco Research-U.S.A., Inc. (October 19, 1998) (U.S. Ex. 86,853).

SECTION I.

888. The terms of the MSA likewise provided that CTR was to cease all operations and be dissolved in accordance with the laws of the State of New York, with the preservation of all applicable privileges held by any member company of CTR. MSA, Sec. III(o)(1), Permanent Relief - Dissolution of The Tobacco Institute, Inc., The Council for Tobacco Research-U.S.A., Inc. and the Center for Indoor Air Research (November 1998) (U.S. Ex. 64,359).

889. In March 1998, James Glenn, CTR President, sent a memorandum to the members of the Scientific Advisory Board requesting that the members send him a letter "indicating their willingness to serve as a consultant or as a participant in any future activities of CTR or any successor organization." Glenn received mixed results to his request. Some members, such as Carlo Croce and Hugh McDevitt, replied affirmatively expressing their willingness to continue CTR's activities. Others such as Judith Swain, declined any further relationship with CTR, stating, "because of the information that has come out of the tobacco litigation process, I do not feel that I can continue as a member of the Council of Tobacco Research . . . the information from previous years indicates that the Council may not have been totally independent of the tobacco industry." TLT0270371-0371 (U.S. Ex. 76,329); TLT0270372-0372 (U.S. Ex. 76,330); TLT027 0370-0370 (U.S. Ex. 76,328).

(2) The Tobacco Institute

890. On April 30, 1998, the Attorney General of the State of New York had commenced a special proceeding that sought, among other things, the dissolution of the Tobacco Institute. TI16980952-0969 (U.S. Ex. 86,608); TI16980970-0984 (U.S. Ex. 86,609); TI16980985-0986 (U.S. Ex. 86,610); New York Attorney General's Petition to Dissolve CTR

SECTION I.

and the Tobacco Institute dated April 30, 1998 and Memorandum of Law in Support of Petition for Dissolution (U.S. Ex. 87,584); <http://www.oag.state.ny.us/tobacco/petition.html> (U.S. Ex. 21,478) (U.S. Ex. 76,201); <http://www.oag.state.ny.us/tobacco/toc.html> (U.S. Ex. 86,850); <http://www.oag.state.ny.us/tobacco/dissolve.html> (U.S. Ex. 86,851); <http://www.oag.state.ny.us/tobacco/cause.html> (U.S. Ex. 86,852).

891. Pursuant to a plan of dissolution that was to be negotiated by the Attorney General of the State of New York and the Original Participating Manufacturers, Brown & Williamson, Lorillard, Philip Morris, and R.J. Reynolds, in accordance with Exhibit G of the MSA, the Tobacco Institute was to cease all operations and be dissolved in accordance with the laws of the State of New York and under the authority of the Attorney General of the State of New York, with the preservation of all applicable privileges held by any member company of the Tobacco Institute. MSA, Sec. III(o)(2), Permanent Relief - Dissolution of The Tobacco Institute, Inc., The Council for Tobacco Research-U.S.A., Inc. and the Center for Indoor Air Research (November 1998) (U.S. Ex. 64,359).

892. According to the MSA, the Tobacco Institute and the Attorney General of New York were to agree on a not-for-profit health or child welfare organization that was to be named as the beneficiary of any Tobacco Institute assets that remained after lawful transfers of assets and satisfaction of the Tobacco Institute's employee benefit obligations and any other debts, liabilities or claims. The Tobacco Institute retained the right to continue to defend its litigation interests with respect to any claims against it that were pending or were brought or threatened in the future. The Tobacco Institute also was allowed to continue to engage such employees as

SECTION I.

reasonably needed for the sole purpose of directing and supporting its defense of ongoing litigation. However, as soon as the Tobacco Institute had no litigation pending against it, the MSA required the Tobacco Institute to dissolve completely and cease all functions. MSA, Exhibit G - Obligations of The Tobacco Institute Under the Master Settlement Agreement (November 1998) (U.S. Ex. 64,359).

893. The Tobacco Institute's Plan of Corporate Dissolution and Distribution of Assets was approved on August 7, 2000, by its Class A members: Ernest Pepples, Senior Vice President of Brown & Williamson; Michael Szymanczyk, CEO of Philip Morris; Alexander Spears, Chairman of Lorillard; and Charles Blixt, Executive Vice President and General Counsel of R.J. Reynolds. TI31113058-3165 (U.S. Ex. 21,261).

894. The Tobacco Institute's Dissolution Plan was also adopted without meetings by the written consent of the Tobacco Institute Board of Directors. The members of the Board of Directors at the time were Nicholas Brookes and Ernest Pepples for Brown & Williamson, Ronald Milstein and Alexander Spears for Lorillard, Tommy Payne and Andrew Schindler for R.J. Reynolds, Michael Szymanczyk for Philip Morris, and Howard Liebengood for Philip Morris Companies. TI14870293-0303 (U.S. Ex. 21,852).

895. The Supreme Court of the New York County entered an Order Approving the Tobacco Institute's Plan of Corporate Dissolution and Certificate of Dissolution on or about September 1, 2000. TI14870293-0303 (U.S. Ex. 21,852).

(3) CIAR

896. Pursuant to the MSA, CIAR was required to cease all operations within forty-five

SECTION I.

days after Final Approval and be dissolved in a manner consistent with applicable law, with the preservation of all applicable privileges, including those held by any member company of CIAR. MSA, Sec. III(o)(3), Permanent Relief - Dissolution of The Tobacco Institute, Inc., The Council for Tobacco Research-U.S.A., Inc. and the Center for Indoor Air Research (November 1998) (U.S. Ex. 64,359).

897. The dissolution of CIAR was authorized by its voting members on October 7, 1999. 86205205-5206 (U.S. Ex. 21,091); 520936046-6049 (U.S. Ex. 86,631).

898. At the time of CIAR's dissolution, its directors were Richard Carchman of Philip Morris, Chairman of the Board; Scott Appleton of Brown & Williamson; Tilford Riehl of Brown & Williamson; Daniel Heck of Lorillard; Alexander Spears of Lorillard; Steve Sears of R.J. Reynolds; Robert Suber of R.J. Reynolds; and Helmut Reif of Philip Morris Europe. 86205205-5206 (U.S. Ex. 21,091).

899. The Certificate of Dissolution was signed by CIAR Executive Director Max Eisenberg on December 6, 1999, and filed with the Secretary of State of the State of Delaware on December 21, 1999. 86205204-5204 (U.S. Ex. 21,090).

J. Gentlemen's Agreement

900. Defendants also used less formal mechanisms to organize the affairs of the Enterprise. As a means to further the aims of the Enterprise, and contrary to their repeated promises to protect the public health by conducting unbiased research related to smoking and health, the Cigarette Company Defendants adhered to a "gentlemen's agreement" -- so-called by Defendants themselves -- not to commission or perform in-house biological research on smoking

and health. The two components of this gentlemen's agreement were: (1) any company discovering an innovation permitting the manufacture of an essentially "safe" cigarette would share the discovery with others in the industry; and (2) no domestic company would use intact animals for in-house biomedical research. 501543470-3517 at 3504 (U.S. Ex. 21,737).

901. Although the Cigarette Company Defendants recognized that research and testing were essential to evaluating the health risk posed by their products, in-house scientists who urged their companies to develop safer products and compete on health grounds were often ignored or silenced.

902. The Cigarette Company Defendants' mutual commitment to share discovery of a "safe" cigarette with each other – the gentlemen's agreement – substantially reduced, by design, the financial incentive any cigarette company might otherwise have had to develop and market a safer product. See U.S. FPF § IV.G, infra, for a detailed discussion of the Gentlemen's Agreement.

K. Suppression and Concealment of Documents and Information

903. From at least 1954 to the present, Defendants engaged in efforts to suppress and conceal documents and information in order to further the goals of the Enterprise: (1) preventing the public from learning the truth about the adverse health impacts of smoking and ETS and about the addictiveness of nicotine; (2) avoiding or, at a minimum, limiting liability for smoking and health related claims in litigation; and (3) avoiding statutory and regulatory limitations on the cigarette industry. These activities occurred despite the promises of the Cigarette Company Defendants that they did not conceal, suppress or destroy evidence, and that they shared all

pertinent research findings with the American people.

904. Methods used by the Defendants to suppress and conceal documents and information, especially scientific research, included:

- (a) establishing and implementing company policies for document destruction;
- (b) destroying documents and evidence;
- (c) limiting the number of copies of memoranda in contemplation of eventual document destruction or concealment;
- (d) shipping and secreting documents outside the United States and/or at foreign affiliates;
- (e) establishing company policies of avoidance and delay of production of documents;
- (f) using their lawyers to assert improper claims of attorney-client privilege and work product protection for non-privileged documents through various means, including routing documents through lawyers, maintaining scientific materials in lawyer's files, and indiscriminately marking documents as privileged, confidential, or other such designations; and
- (g) using their lawyers, instead of scientists, to direct as well as suppress the scientific research and other scientific matters of the industry. See U.S. FPPF § IV.D. and § IV.H., infra.

II

**THE ENTERPRISE IS ENGAGED IN AND AFFECTS
INTERSTATE AND FOREIGN COMMERCE**

1. The RICO Enterprise established in this case at all relevant times has been and is engaged in interstate and foreign commerce and its activities have affected, and continue to affect, interstate and foreign commerce within the meaning of 18 U.S.C. § 1962(c) and (d). Regarding Defendant-members of this RICO enterprise, the Court finds the following facts.

A. Philip Morris Companies Inc. / Altria Group

2. Defendant Philip Morris Companies Inc. ("Philip Morris Companies") is a Virginia corporation with its principal place of business in New York, New York, and is the parent company of Philip Morris Inc. ("Philip Morris"). Since 1985, Philip Morris Companies and its subsidiaries have established offices and plants in at least twenty-nine locations in at least seventeen states, and twenty-five locations internationally. Answer of Philip Morris Companies, Inc. to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2001, at 14; Philip Morris, Inc. Annual Reports for 1954-1984 (U.S. Ex. 22,602); (U.S. Ex. 22,624); (U.S. Ex. 22,680); (U.S. Ex. 22,621); (U.S. Ex. 62,879); (U.S. Ex. 22,464); (U.S. Ex. 22,469); (U.S. Ex. 22,472); (U.S. Ex. 22,474); (U.S. Ex. 22,485); (U.S. Ex. 22,480); (U.S. Ex. 22,489); (U.S. Ex. 22,491); (U.S. Ex. 22,493); (U.S. Ex. 38,345); (U.S. Ex. 22,507); (U.S. Ex. 22,495); (U.S. Ex. 22,511); (U.S. Ex. 22,515); (U.S. Ex. 22,517); (U.S. Ex. 22,539); (U.S. Ex. 22,568); (U.S. Ex. 22,577); (U.S. Ex. 22,580); (U.S. Ex. 22,587); (U.S. Ex. 20,451); (U.S. Ex. 21,548); (U.S. Ex. 22,592); (U.S. Ex. 22,597); (U.S. Ex. 22,601); (U.S. 38,342); (U.S. Ex. 22,395); Philip Morris Companies, Inc. Annual Reports for 1985-2001

SECTION II.

(U.S. Ex. 38,638); (U.S. Ex. 65,267); (U.S. Ex. 65,268); (U.S. Ex. 65,269); (U.S. Ex. 65,270); (U.S. Ex. 65,271); (U.S. Ex. 65,272); (U.S. Ex. 37,522); (U.S. Ex. 22,440); (U.S. Ex. 22,445); (U.S. Ex. 22,446); (U.S. Ex. 22,447); (U.S. Ex. 22,448); (U.S. Ex. 40,495); (U.S. Ex. 64,485); (U.S. Ex. 65, 273); (U.S. Ex. 86,646).

3. From its creation in 1985 to the present, Philip Morris Companies and its subsidiaries employed at least 100,000 people in at least seventeen different states and twenty-two foreign countries. In 1985, Philip Morris Companies reported approximately 114,000 employees. On its website, Philip Morris Companies states that it currently has "169,000 talented and diverse employees, who keep Philip Morris Companies' business fundamentals strong and its companies growing." About Philip Morris, available at http://www.philipmorris.com/about_pm/about_pm_main.asp (U.S. Ex. 86,798); Philip Morris Companies, Inc. Annual Reports for 1985-2001 (U.S. Ex. 38,638); (U.S. Ex. 65,267); (U.S. Ex. 65,268); (U.S. Ex. 65,269); (U.S. Ex. 65,270); (U.S. Ex. 65,271); (U.S. Ex. 65,272); (U.S. Ex. 37,522); (U.S. Ex. 22,440); (U.S. Ex. 22,445); (U.S. Ex. 22,446); (U.S. Ex. 22,447); (U.S. Ex. 22,448); (U.S. Ex. 40,495); (U.S. Ex. 64,485); (U.S. Ex. 65, 273); (U.S. Ex. 86,646).

4. In each year since 1985, Philip Morris Companies' subsidiaries manufactured, advertised, and sold Philip Morris cigarettes to Philip Morris's customers for ultimate resale to consumers throughout the United States, including in the District of Columbia, and in foreign countries. At various times, Philip Morris Companies' subsidiary Philip Morris has manufactured, advertised, and sold the brands of cigarettes alleged in Paragraph 10 of the United States' First Amended Complaint. Answer of Philip Morris, Inc. to Plaintiff's Complaint for

SECTION II.

Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000, at 8-9.

5. Fortune Magazine ranks Philip Morris Companies as one of the ten largest corporations in America. The 2002 Fortune 500, available at <http://www.fortune.com/fortune/fortune500> (U.S. Ex. 86,776).

6. From 1985 to the present, Philip Morris Companies, its predecessors and subsidiaries have obtained at least \$803.4 billion in total revenue from the sale of goods and services throughout the United States.

a. From 1985 to the present, domestic sales of cigarettes account for at least \$167.1 billion of this revenue, and international sales of cigarettes account for at least \$163.8 billion.

b. For the year 2001, Philip Morris Companies' Annual Report reported total revenues of approximately \$89.9 billion, including \$51.37 billion from the sale of cigarettes from its subsidiaries. Philip Morris Companies, Inc. Annual Reports for 1985 - 2001 (U.S. Ex. 38,638); (U.S. Ex. 65,267); (U.S. Ex. 65,268); (U.S. Ex. 65,269); (U.S. Ex. 65,270); (U.S. Ex. 65,271); (U.S. Ex. 65,272); (U.S. Ex. 37,522); (U.S. Ex. 22,440); (U.S. Ex. 22,445); (U.S. Ex. 22,446); (U.S. Ex. 22,447); (U.S. Ex. 22,448); (U.S. Ex. 40,495); (U.S. Ex. 64,485); (U.S. Ex. 65, 273); (U.S. Ex. 86,646); Table, "Defendants' Gross Revenues Altria Group, Inc. (f/k/a Philip Morris Companies Inc.)," attached as Appendix at APP-1 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The RICO Claims

SECTION II.

And Relief Sought Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840096-0096 (U.S. Ex. 88,669).

7. Philip Morris Companies and its subsidiaries, or their employees, have made the following additional admissions or public statements regarding the interstate nature and international scope of its business:

a. Philip Morris Companies calls itself "the largest consumer packaged goods company on earth."

b. In 2001, the Philip Morris family of companies purchased more than \$1.4 billion worth of goods and services from minority- and women-owned firms.

c. Philip Morris Companies's 2001 Annual Report states that "[o]ur tobacco and food businesses extended their leading positions in markets around the world during 2001 and generated good income growth, continued improvement in 2002."

d. Philip Morris Companies admits "that on or about January 12, 1999, [Philip Morris] entered into an agreement with Liggett under the terms of which [Philip Morris] acquired the trademarks, trade names, trade dress, service marks, registrations, and registration applications for Lark, Chesterfield and L&M cigarette brands in the United States."

e. Philip Morris Companies-owned subsidiaries sell various brands overseas, including those brands owned by other companies and distributed through licensing arrangements; similarly, other companies distribute certain Philip Morris Companies-owned

SECTION II.

brands overseas. The Benson & Hedges brand is sold by Philip Morris Companies, as well as British American Tobacco, plc, and Gallaher. The Belmont brand is sold by Philip Morris Companies, as well as by British American Tobacco, plc. About Philip Morris, available at http://www.philipmorris.com/about_pm/about_pm_main.asp (U.S. Ex. 86,789); Supplier Diversity, available at http://www.philipmorris.com/about_pm/corp_initiatives/supplier_div.asp (U.S. Ex. 86,803); Philip Morris Companies, Inc. 2001 Annual Report at 3 (U.S. Ex. 86,646); Answer of Philip Morris Companies, Inc. to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000, at 9; Maxwell Tobacco Fact Book, Appendix 1 Manufacturing, Table 2 "Top World Brands 1984-2001" (2002) (U.S. Ex. 86,804).

8. Through 1999, Philip Morris Companies sold Liggett Group brands overseas; in 1999, Philip Morris Companies bought most Liggett premium brands, even in the United States, such as L&M, Chesterfield and Lark. Maxwell Tobacco Fact Book, Appendix 1 Manufacturing, Table 2 "Top World Brands 1984-2001" (2002) (U.S. Ex. 86, 804).

9. In a stipulation filed with this Court on December 10, 2002, Philip Morris Companies stipulated that it has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from July 1, 1985 to the present. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶7, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶7, filed December 11, 2002

B. Philip Morris Incorporated / Philip Morris USA Inc.

10. Philip Morris Companies' domestic tobacco subsidiary is Philip Morris Incorporated ("Philip Morris"). Philip Morris Companies, Inc. 2001 Annual Report at 6-7 (U.S. Ex. 86,646).

11. Philip Morris is also a Virginia corporation with its principal place of business in New York, New York. Since 1953, Philip Morris and its predecessors have had offices and plants in at least New York, New York; Richmond, Virginia; and Louisville, Kentucky. Current offices and facilities currently include headquarters in New York City; manufacturing, processing and support facilities in the Richmond, Virginia area; a manufacturing facility in Cabarrus County, North Carolina; a materials conversion plant in Louisville; sales offices throughout the United States; and an office in the Commonwealth of Puerto Rico. Answer of Philip Morris, Inc. to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000, at 9-10; Offices and Facilities, available at http://www.philipmorrisusa.com/about_us/company_information/offices_facilities.asp (U.S. Ex. 86,777).

12. In each year since 1953, Philip Morris and its predecessors have employed at least 3,800 people in its facilities in many states and foreign countries. Philip Morris, Inc. Annual Reports for 1954-1984 (U.S. Ex. 22,602); (U.S. Ex. 22,624); (U.S. Ex. 22,680); (U.S. Ex. 22,621); (U.S. Ex. 62,879); (U.S. Ex. 22,464); (U.S. Ex. 22,469); (U.S. Ex. 22,472); (U.S. Ex. 22,474); (U.S. Ex. 22,485); (U.S. Ex. 22,480); (U.S. Ex. 22,489); (U.S. Ex. 22,491); (U.S. Ex. 22,493); (U.S. Ex. 38,345); (U.S. Ex. 22,507); (U.S. Ex. 22,495); (U.S. Ex. 22,511); (U.S. Ex.

SECTION II.

22,515); (U.S. Ex. 22,517); (U.S. Ex. 22,539); (U.S. Ex. 22,568); (U.S. Ex. 22,577); (U.S. Ex. 22,580); (U.S. Ex. 22,587); (U.S. Ex. 20,451); (U.S. Ex. 21,548); (U.S. Ex. 22,592); (U.S. Ex. 22,597); (U.S. Ex. 22,601); (U.S. 38,342); (U.S. Ex. 22,395).

13. In each year since 1953, Philip Morris and its predecessors have manufactured, advertised, and sold its cigarettes to its direct customers for ultimate resale to consumers throughout the United States, including the District of Columbia, and from 1953-1967 in foreign countries. Answer of Philip Morris to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000, at 10.

14. Since 1953, Philip Morris and its predecessors have obtained at least \$157 million in total revenue annually.

a. From 1954 to the present, Philip Morris has obtained at least \$245.5 billion in total revenue from the sale of goods and services throughout the United States and in foreign countries.

b. Philip Morris's reported operating revenues for 2001 were over \$24.7 billion and reported operating companies' income for the same period was over \$5.2 billion. Philip Morris, Inc. Annual Reports for 1954-1984 (U.S. Ex. 22,602); (U.S. Ex. 22,624); (U.S. Ex. 22,680); (U.S. Ex. 22,621); (U.S. Ex. 62,879); (U.S. Ex. 22,464); (U.S. Ex. 22,469); (U.S. Ex. 22,472); (U.S. Ex. 22,474); (U.S. Ex. 22,485); (U.S. Ex. 22,480); (U.S. Ex. 22,489); (U.S. Ex. 22,491); (U.S. Ex. 22,493); (U.S. Ex. 38,345); (U.S. Ex. 22,507); (U.S. Ex. 22,495); (U.S. Ex. 22,511); (U.S. Ex. 22,515); (U.S. Ex. 22,517); (U.S. Ex. 22,539); (U.S. Ex. 22,568); (U.S. Ex. 22,577); (U.S. Ex. 22,580); (U.S. Ex. 22,587); (U.S. Ex. 20,451); (U.S. Ex. 21,548); (U.S. Ex. 22,592); (U.S. Ex. 22,597); (U.S. Ex. 22,601); (U.S. 38,342); (U.S. Ex. 22,395); Philip

Morris Companies, Inc. Annual Reports for 1985 -2001 (U.S. Ex. 38,638); (U.S. Ex. 65,267); (U.S. Ex. 65,268); (U.S. Ex. 65,269); (U.S. Ex. 65,270); (U.S. Ex. 65,271); (U.S. Ex. 65,272); (U.S. Ex. 37,522); (U.S. Ex. 22,440); (U.S. Ex. 22,445); (U.S. Ex. 22,446); (U.S. Ex. 22,447); (U.S. Ex. 22,448); (U.S. Ex. 40,495); (U.S. Ex. 64,485); (U.S. Ex. 65, 273); (U.S. Ex. 86,646); Table, "Defendants Gross Revenues Philip Morris USA Inc. (f/k/a Philip Morris Inc.)," attached at Appendix at APP-2-APP-3 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The RICO Claims And Relief Sought Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840097-0098 (U.S. Ex. 88,670); Philip Morris Companies, Inc. 2001 Annual Report, at 1, 6 (U.S. Ex. 86,646).

15. Philip Morris, its affiliates, or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business:

- a. Philip Morris proclaims itself as the "nation's leading cigarette manufacturer."
- b. Philip Morris markets eighteen brands of cigarettes throughout the United States and the District of Columbia: Marlboro, Virginia Slims, Benson & Hedges, Merit, Parliament, Alpine, Basic, Cambridge, Bristol, Bucks, Chesterfield, Collector's Choice, Commander, English Ovals, Lark, L&M, Saratoga and Superslims. Until the mid-1980s, Philip Morris included Philip Morris International. Philip Morris International, now a sister

SECTION II.

corporation, markets the following brands in foreign countries: Marlboro, L&M, Philip Morris, Lark, Bond Street, Parliament, Chesterfield, Diana, Apollo Soyuz, Merit, Petra, SG, Caro, Virginia Slims, Klubowe, Multifilter, Polyot, f6, Longbeach, Peter Jackson, Dallas, Muratti, Kazakstan, Benson & Hedges, Sparta, Next, Congress, Red & White, Le Mans, Helikon, Nacional, Medeo, Astor, Rubios, Galaxy, Astra, Belmont, Kosmos, Derby, Alpine, Lider, Raffles, Prima, Klaipeda, Português Suave, Eve, Brunette, Carmen, Palace, Imparciales, Luxor, Kaunas, Kastitys, Particulares, Fiesta, Diplomat, Partner, Colorado, Talisman, Kosmosas, Juwel, Zefir, Karo, Full Speed, Mercedes, Visa, Ritz, Saratoga, Premier, Good Companion, Bond, Wilton, Basic, and Freeport.

c. Philip Morris admits that "A Frank Statement to Cigarette Smokers" appeared in 448 newspapers in 258 cities on or about January 4, 1954. Philip Morris is informed and believes that the names of certain manufacturers, including Philip Morris, were listed as sponsors of the announcement. (U.S. Ex. 20,742); (U.S. Ex. 21,422); (U.S. Ex. 30,417); (U.S. Ex. 54,510); (U.S. Ex. 58,987); (U.S. Ex. 75,860).

d. Philip Morris calls its Marlboro brand "the number one brand across all states in the country and in every major trade class."

e. Philip Morris has "about 1,800 territorial salesmen."

f. According to Michael Szymanczyk, current Chairman and former President and Chief Executive Officer of Philip Morris until 2002, approximately 400,000 various kinds of retail operations sell cigarettes throughout the United States, and "probably the majority of them" sell Philip Morris products.

SECTION II.

g. On June 13, 2002, Szymanczyk testified that one of Philip Morris's objectives is "to grow our share of the brands in the marketplace" and to "increase [Philip Morris's] share of whatever market exists";

h. On June 13, 2002, Szymanczyk further testified that Philip Morris's marketing services staff also handles "print advertising" which includes print advertising in magazines or newspapers; About Philip Morris, available at http://www.philipmorris.com/about_pm/brands/pm_usa_brands.asp (U.S. Ex. 86,797); Philip Morris International Brands and Products, available at http://www.philipmorris.com/about_pm/brands/pm_intl_brands.asp (U.S. Ex. 86,858); Answer of Philip Morris, Incorporated to the Appendix to the Complaint, United States v. Philip Morris, filed October 30, 2000, at 3, 27; Philip Morris Companies, Inc. 2001 Annual Report at 7; Deposition of Michael Szymanczyk, United States v. Philip Morris, June 13, 2002, 23:3-23:37, 49:13, 67:7-18.

16. Philip Morris produces "between about 10 and 15 percent" of the sales product of Philip Morris International, Philip Morris Companies' international subsidiary. Deposition of Michael Szymanczyk, United States v. Philip Morris, June 13, 2002, 119:16-8.

17. As early as 1954, Philip Morris's Annual Report stated that "export sales show steady increase," and referred to markets in "Venezuela, Netherlands, Switzerland and Hong Kong." Philip Morris, Inc. 1954 Annual Report at 13 (U.S. Ex. 22,602).

18. In a stipulation filed with this Court on December 10, 2002, Philip Morris stipulated that it has engaged in and conducted activities affecting interstate commerce within the

SECTION II.

meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to the present. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶1, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶1, filed December 11, 2002

C. R.J. Reynolds Tobacco Company

19. Defendant R.J. Reynolds Tobacco Company ("R.J. Reynolds") is a New Jersey corporation with its principal place of business in Winston-Salem, North Carolina. Since 1953, R.J. Reynolds and its affiliates have had offices and plants in at least thirty locations nationally in nineteen different states, and forty-five locations internationally. Answer, Defenses and Jury Demand of Defendant R.J. Reynolds Tobacco Company, United States v. Philip Morris, filed October 30, 2000 at 5; Annual Reports of R.J. Reynolds Tobacco Company for 1954-1969 (U.S. Ex. 20,616); (U.S. Ex. 21,415); (U.S. Ex. 22,421); (U.S. Ex. 22,422); (U.S. Ex. 22,423); (U.S. Ex. 22,424); (U.S. Ex. 22,425); (U.S. Ex. 22,426); (U.S. Ex. 22,555)22,556); (U.S. Ex. 22,558); (U.S. Ex. 22,559); (U.S. Ex. 22,560); (U.S. Ex. 22,563); (U.S. Ex. 22,564); (U.S. Ex. 22,375); (U.S. Ex. 22,377); (U.S. Ex. 22,379); R.J. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840099-0100 (U.S.

Ex. 88,671).

23. R.J. Reynolds, its affiliates or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business.

a. R.J. Reynolds stated on its website in 2002 that it is "the second-largest tobacco company in the United States, manufacturing about one of every four cigarettes sold in the United States. R.J. Reynolds' tobacco product line includes four of the nation's ten best-selling brands: Camel, Winston, Salem, and Doral."

b. R.J. Reynolds has established an Electronic Data Interchange ("EDI") website to facilitate the procurement of goods and services in interstate commerce and the transmission of funds through the interstate banking system. The Mission Statement for this website states "RJRT strives to strengthen our Trading Partner relationship through the use of EDI and Electronic Funds Transfer ("EFT"). EDI and EFT allows computer-to-computer communication of business documents and banking transactions between RJRT and its valued trading partners."

c. In its Fact Book for 2001, R.J. Reynolds stated that it has "about a 23% share" of the U.S. cigarette market. It further claims that its Camel brand places with 5.5% Retail Market Share ("RMS") in 2001; that its Doral brand was fourth with 5.9% RMS; that its Winston brand was sixth, with 4.8% RMS; and that its Salem brand was eighth with 2.7% RMS.

d. R.J. Reynolds stated on its website in 2002 that "Our company's rich heritage of innovation in the laboratory and in the marketplace continue to serve us well in successfully meeting the cigarette brand preferences of about 25% of the nation's 46.5 million

adult smokers."

e. R.J. Reynolds admitted in its Answer to the United States' Complaint that "A Frank Statement to Cigarette Smokers" was published in a number of newspapers on or about January 4, 1954 and that R.J. Reynolds and other companies were identified as sponsors of this publication."

f. In a 1997 statement prepared for public release, R.J. Reynolds stated that since 1962, it has awarded research grants totaling over \$17.5 million in funds through the interstate banking system to land grant universities in seven tobacco producing states.

g. On March 13, 2002, Tommy Joe Payne, R.J. Reynolds's Executive Vice President for External Relations, testified in a deposition that R.J. Reynolds's External Relations group has a total of "about 55 full time employees" located in Winston-Salem, North Carolina, and Washington, D.C.

h.. On June 25, 2002, Mark Smith testified that he was formerly R.J. Reynolds Senior Manager for Public Affairs. The duties of this position included "working on brand publicity and tax issues in various states and the American Federal Government." R.J. Reynolds Tobacco Company, available at <http://www.rjrt.com/home.asp> (U.S. Ex. 86,779); Welcome, available at <http://www.rjrtdi.com/INDEX.htm> (U.S. Ex. 86,781); Mission Statement, available at <http://www.rjrtdi.com/mission.htm> (U.S. Ex. 86,782); R.J. SECTION II.

Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840103-0104 (U.S. Ex. 88,674).

31. Liggett's reported revenues for the calendar year ending December 31, 2001 were approximately \$728.2 million and reported operating income for the same period was over \$107 million. Vector Group, Ltd. SEC Form 10-K for Fiscal Year 2001, dated April 1, 2002 (U.S. Ex. 75,554).

32. Liggett, its affiliates, or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business.

a. On its website for 2002, Liggett stated that it is one of the six largest manufacturers of cigarettes in the United States in terms of unit sales.

b. On June 21, 2002, Bennett LeBow, Vector's Chairman and Chief Executive Officer, testified that Liggett is now growing genetically modified tobacco in Pennsylvania, Mississippi, Louisiana, and Illinois and that Vector Group, Ltd., built its own stemmery in Timberlake, North Carolina, to handle its genetically modified tobacco, at a cost of between fifteen and twenty million dollars.

c. Liggett calls its Mebane, North Carolina-based manufacturing complex "among the most modern and efficient in the industry." The operation currently produces almost 250 unique products and is designed to maximize manufacturing flexibility. The complex includes a 240,000 square foot manufacturing complex and a 60,000 square foot state-of-the art distribution center.

d. Liggett's Northern Strategic Business Unit currently consists of the sales

SECTION II.

force that covers the area from Maine to Maryland and out to Ohio, Indiana, Michigan, Illinois, Wisconsin.

Deposition of Harold J. Petch, United States v. Philip Morris, Inc., October 12, 2001, 13:24-14:2;

Deposition of Bennett LeBow, United States v. Philip Morris, June 21, 2002, 23:4-9

(Confidential).

33. Liggett affiliate Vector Tobacco is also wholly owned subsidiary of Vector Group, Ltd. Vector Tobacco has an office in New York, New York, that handles sales and marketing, public health, and some research matters. Deposition of Bennett LeBow, United States v. Philip Morris, June 21, 2002, 102:7-12.

34. In a stipulation filed with this Court on January 27, 2003, Liggett stipulated that it engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1990 through January 27, 2003. Liggett further stipulated that its predecessors in interest engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) from 1953 until 1990. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶1, filed January 27, 2003; Order #308, United States v. Philip Morris, at ¶1, filed January 31, 2003.

E. Lorillard Tobacco Company

35. Lorillard Tobacco Company ("Lorillard") is a Delaware corporation with its principal place of business in Greensboro, North Carolina. Lorillard is a wholly owned subsidiary of Lorillard, Inc., which in turn is a wholly owned subsidiary of Loews Corporation. Loews Corporation is a Delaware corporation, with its principal place of business in New York. Answer, Affirmative Defenses, and Jury Demand of Lorillard Tobacco Company, United States v. Philip Morris, filed October 30, 2000, at 7; Loew's Corp. SEC Form 10-Q filed Nov. 22, 2002, available at <http://www.sec.gov/Archives/edgar/data/60086/000006008602000026/septq.txt> (U.S. Ex. 86,786).

36. Since 1953, Lorillard has had as many as eleven offices and plants in nine different states, with Field and Division Sales Offices "in all principal cities," and at least two locations internationally until 1977. P. Lorillard Company, Inc. Annual Report for the Year Ended December 31, 1954; 89300905-0928 at 0907 (U.S. Ex. 21,106).

37. In approximately 1997, Lorillard moved its corporate offices from New York to North Carolina. Deposition of Kathleen A. Sparrow, United States v. Philip Morris, Inc., February 25, 2002, 57:6-7.

38. In each year since 1953, Lorillard has employed at least 3,000 people. In 1954, Lorillard reported 6,126 employees. On its website for 2002, Lorillard states that it currently employs "close to 3,300 people in 48 states, and do[es] business in all 50 states and Puerto Rico." P. Lorillard Company, Inc. Annual Report for the Year Ended December 31, 1954; 89300905-0928 at 0907 (U.S. Ex. 21,106); Who is Lorillard Tobacco Company?, available at

<http://www.lorillard.net/faq.html> (U.S. Ex. 86,787).

39. In each year since 1953, Lorillard or its predecessor entities have manufactured cigarettes that were advertised and sold throughout the United States, including the District of Columbia. Answer, Affirmative Defenses, and Jury Demand of Lorillard Tobacco Company, United States v. Philip Morris, filed October 30, 2000, at 7.

40. Since 1953, Lorillard, its predecessors, and affiliates have obtained at least \$116 million in total revenue annually from the sale of goods and services throughout the United States. P. Lorillard Company, Inc. Annual Reports for 1954-1967 (U.S. Ex. 21,106); (U.S. Ex. 22,631); (U.S. Ex. 22,632); (U.S. Ex. 22,633); (U.S. Ex. 22,644); (U.S. Ex. 22,634); (U.S. Ex. 22,635); (U.S. Ex. 22,636); (U.S. Ex. 22,637); (U.S. Ex. 22,638); (U.S. Ex. 22,639); (U.S. Ex. 22,640); (U.S. Ex. 22,641); (U.S. Ex. 22,643); Lorillard Corporation SEC Form 10-K for the Fiscal Year Ending December 31, 1968, 93485701-5726 (U.S. Ex. 22,439); Loews Corporation Annual Reports for 1969-1970, 1972-1973, 1976-1983, 1993-1997, 1999, 2001 (U.S. Ex. 57,202); (U.S. Ex. 56,498); (U.S. Ex. 22,648); (U.S. Ex. 55,394); (U.S. Ex. 22,649); (U.S. Ex. 55,398); (U.S. Ex. 22,655); (U.S. Ex. 87,989); (U.S. Ex. 55,399); (U.S. Ex. 55,400); (U.S. Ex. 55,402); (U.S. Ex. 55,401); (U.S. Ex. 56,356); (U.S. Ex. 56,507); (U.S. Ex. 57,231); (U.S. Ex. 56,717); (U.S. Ex. 56,718); (U.S. Ex. 58,883); (U.S. Ex. 75,921); Loews Corporation SEC Form 10-K for the Four Months Ended December 31, 1974 (U.S. Ex. 86,650); Loews Corporation SEC Forms 10-K for Years 1975, 1984-1992, 1998, 2000 (U.S. Ex. 56,355); (U.S. Ex. 22,536); (U.S. Ex. 56,166); (U.S. Ex. 57,146); (U.S. Ex. 86,651); (U.S. Ex. 65,288); (U.S. Ex. 56,318); (U.S. Ex. 56,317); (U.S. Ex. 22,557); (U.S. Ex. 22,565); (U.S. Ex. 22,593); (U.S. Ex. 75,924); Table,

SECTION II.

"Defendants' Gross Revenues Lorillard, Inc.," attached as Appendix at APP-10-APP-11 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The Rico Claims And Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, ARU5840105-0106 (R. 2330; filed July 1, 2003) (U.S. Ex. 88,675).

41. From 1954 to the present, Lorillard, its predecessors and affiliates have obtained at least \$277 billion in total revenue from the sale of goods and services throughout the United States. Loews Corp. reported operating revenues for 2001 of over \$19.4 billion. For the period 1973 to the present, Lorillard, its predecessors and affiliates have reported income of at least \$42.4 billion from tobacco sales. P. Lorillard Company, Inc. Annual Reports for 1954-1967 (U.S. Ex. 21,106); (U.S. Ex. 22,631); (U.S. Ex. 22,632); (U.S. Ex. 22,633); (U.S. Ex. 22,644); (U.S. Ex. 22,634); (U.S. Ex. 22,635); (U.S. Ex. 22,636); (U.S. Ex. 22,637); (U.S. Ex. 22,638); (U.S. Ex. 22,639); (U.S. Ex. 22,640); (U.S. Ex. 22,641); (U.S. Ex. 22,643); Lorillard Corporation SEC Form 10-K for the Fiscal Year Ending December 31, 1968; 93485701-5726 (U.S. Ex. 22,439); Loews Corporation Annual Reports for 1969-1970, 1972-1973, 1976-1983, 1993-1997, 1999, 2001 (U.S. Ex. 57,202); (U.S. Ex. 56,498); (U.S. Ex. 22,648); (U.S. Ex. 55,394); (U.S. Ex. 22,649); (U.S. Ex. 55,398); (U.S. Ex. 22,655); (U.S. Ex. 87,989); (U.S. Ex. 55,399); (U.S. Ex. 55,400); (U.S. Ex. 55,402); (U.S. Ex. 55,401); (U.S. Ex. 56,356); (U.S. Ex. 56,507); (U.S. Ex. 57,231); (U.S. Ex. 56,717); (U.S. Ex. 56,718); (U.S. Ex. 58,883); (U.S. Ex. 75,921); Loews

SECTION II.

Corporation SEC Form 10-K for the Four Months Ended December 31, 1974 (U.S. Ex. 86,650); Loews Corporation SEC Forms 10-K for Years 1975, 1984-1992, 1998, 2000 (U.S. Ex. 56,355); (U.S. Ex. 22,536); (U.S. Ex. 56,166); (U.S. Ex. 57,146); (U.S. Ex. 86,651); (U.S. Ex. 22,593); (U.S. Ex. 56,318); (U.S. Ex. 56,317); (U.S. Ex. 22,557); (U.S. Ex. 22,565); (U.S. Ex. 22,593); (U.S. Ex. 75,924; Table, "Defendants' Gross Revenues Lorillard, Inc.," attached as Appendix at APP-10-APP-11 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The Rico Claims And Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, ARU5840105-0106 (R. 2330; filed July 1, 2003) (U.S. Ex. 88,675).

42. For the year 2001, Lorillard reported total revenues of approximately \$4.528 billion, all of which was obtained from the sale of cigarettes. Loews Corporation 2001 Annual Report at 94 (U.S. Ex. 75,921).

43. Lorillard, its affiliates, or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business:

a. The 2001 Loews Corporation Annual Reports states that "Newport, Lorillard's flagship brand, increased its overall share of the cigarette market for the eleventh consecutive year, reaching 8.0 percent in 2001."

b. Lorillard created a computerized direct mail database in approximately 1993. According to Martin Orłowsky, Lorillard's Chairman, Lorillard buys names to add to this

SECTION II.

database from "organizations that have lists of names that they qualify as smokers . . ." and obtains names from "various promotional activities that we might conduct for the company, where . . . smokers can add their name to our list."

c. On February 25, 2002, Kathleen Sparrow, Lorillard's Vice President of Sales, testified in a deposition that Lorillard had approximately 150 divisions within its Sales Department.

d. Lorillard uses direct mailing as a form of direct promotion of its products to consumers throughout the United States. Loews Corporation 2001 Annual Report at 4 (U.S. Ex. 75,921); Deposition of Martin Orlowsky, United States v. Philip Morris, June 5, 2002, 257:24-259:14; Deposition of Kathleen A. Sparrow, United States v. Philip Morris, February 25, 2002, 10:19-20, 87:9-11.

44. The Newport brand is sold by both Lorillard (within the United States) and British American Tobacco, plc (overseas) by virtue of a licensing arrangement between the two companies. Maxwell Tobacco Fact Book, Appendix 1 Manufacturing, Table 2 "Top World Brands 1984-2001" (2002) (U.S. Ex. 86,804).

45. In a stipulation filed with this Court on December 10, 2002, Lorillard Tobacco Company stipulated that it has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to the present. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶5, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶5, filed December 11, 2002

F. British American Tobacco (Investments) Limited

SECTION II.

46. British American Tobacco (Investments) Limited ("BATCo"), formerly known as British American Tobacco Company Limited, is a company incorporated under the laws of England and Wales, with principal offices in London. BATCo is a subsidiary of British American Tobacco, p.l.c. ("BAT"), and between 1927 and 1979 was the corporate parent of Defendant Brown & Williamson Tobacco Company. Answer, Defenses and Jury Demand of British American Tobacco (Investments) Limited, United States v. Philip Morris, filed October 31, 2000, at 8.

47. In each year since 1953, BATCo and its affiliates have employed thousands of people in its facilities located in as many as thirteen states domestically and sixty-four countries internationally. BATCo currently employs 400 people in the United Kingdom and various foreign countries. Our Company, available at http://www.bat.com/oneweb/sites/uk__3mnfen.nsf/vwPagesWebLive/DO52ADCY?opendocument&TMP= (U.S. Ex. 86,789); Facts About Brown and Williamson Tobacco Corporation, available at http://www.brownandwilliamson.com/Index_sub2.cfm?ID=10 (U.S. Ex. 86,801); Deposition of Paul Adams, United States v. Philip Morris, August 22, 2002, 22:12-5.

48. In each year since 1953, BATCo has directly or through its affiliates manufactured cigarettes that were advertised and sold throughout the United States, including the District of Columbia, and in foreign countries. For each year between 1984 and 1999, sales of BATCo's State Express 555 brand have reached at least 84,000,000 cigarettes throughout the United States and the District of Columbia. Objections and Responses of Defendant British American Tobacco (Investments) Limited to Plaintiff United States' First Set of Interrogatories to

SECTION II.

Defendants, United States v. Philip Morris, et al, dated March 15, 2002, at 56-57.

49. In each year since 1989, BATCo has obtained at least £1 Million (an estimated \$1.53 million) in total revenue annually from the sale of goods and services throughout the United States. For the period 1989 to the present, BATCo net revenue of at least £42 Million (an estimated \$68.85 million based on average exchange rates for the relevant period) from tobacco sales in the United States. Objections and Responses of Defendant British American Tobacco (Investments) Limited to Plaintiff United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, et al., dated March 15, 2002, at 58.

50. BATCo, its affiliates, or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business.

a. BATCo has sold two brands of cigarettes in the United States: State Express 555 and Ruby Queen; BATCo's State Express 555 continues to be sold through an arrangement with BATCo's affiliate, Brown & Williamson.

b. BAT's Annual Report states that "British American Tobacco is the world's most international Tobacco company with an impressive market position in Latin America and a robust position in all other regions."

c. BAT calls itself "the world's most international tobacco group. We do business in 180 countries, with a global market share of 15.1 per cent. With over 300 brands in our portfolio, we make the cigarette chosen by one in seven of the worlds one billion adult smokers. We hold strong market positions in each of our regions and have leadership in more than 65 markets. The Group has over 80 factories in 64 countries, processing some 660 million

SECTION II.

kilos of leaf and producing over 800 billion cigarettes a year. Our companies, including associated companies, employ over 80,000 people worldwide."

d. BAT's website also contains the following financial summary for 2001:

Gross revenue £25,694 million (est. \$37.367 billion)	Net revenue £12,039 million (est. \$17.508 billion)
Operating profit pre exceptionals £2,771 million (est. \$4.030 billion)	Pretax profit £2,065 million (est. \$3.003 billion)
Adjusted EPS 61.82p (est. \$.899)	Dividends per share 32.00p (est \$.465)
Group volumes 807 billion	Global market share 15 per cent

e. BATCo has a Smoking Issues group, which has assisted in the training of BATCo employees on corporate policy in smoking and health in various parts of the world.

f. BATCo also acts as a service company that purchases raw materials on behalf of some BAT group companies; it purchases leaf, machinery, provides R&D expertise capability, and produces products for these BAT group companies.

g. BAT has approximately 17% of the global market share for "Light" cigarettes. Objections and Responses of Defendant British American Tobacco (Investments) Limited to Plaintiff United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, et al., dated March 15, 2002, at 57; 2001 British American Tobacco Annual Review and Summary Financial Statement 2001 at 23, available at http://www.bat.com/oneweb/sites/uk__3mnfen.nsf/vwPagesWebLive/C7E1095BB1D02C3B80256BF40003313D?opendocument&TMP=1 (U.S. Ex. 86,790); Deposition of Christopher Proctor,

United States v. Philip Morris, May 7, 2002, 62:13-15; Deposition of Paul Adams, United States v. Philip Morris, August 23, 2002, 203:25-204:7.

51. In a stipulation filed with this Court on December 10, 2002, BATCo stipulated that it has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to the present. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶6, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶6, filed December 11, 2002.

G. Brown & Williamson Tobacco Corporation

52. Defendant Brown & Williamson Tobacco Corporation ("Brown & Williamson") is a Delaware corporation with its principal place of business in Louisville, Kentucky. BATUS Holdings, Inc., a Delaware corporation with its principal place of business in Louisville, Kentucky, is an indirect subsidiary of BAT, and is an indirect corporate parent of Brown & Williamson. BAT is the ultimate shareholder and parent of Brown & Williamson. BATCo was formerly an indirect parent of Brown and Williamson and BATUS Holdings, Inc. Since 1953, Brown & Williamson has had as many as twenty-six offices, plants, and other facilities in twenty-one different states. Brown & Williamson's Answers, Defenses and Jury Demand to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2000, at 10, 12; Facts About Brown and Williamson Tobacco Company, available at http://www.bw.com/Index_sub2.cfm?ID=7 (U.S. Ex. 86,801).

53. In each year since 1953, Brown & Williamson and its affiliates have employed thousands of people. On its website in 2002, Brown & Williamson stated that it has

SECTION II.

"approximately 5,000 employees throughout the U.S." Facts About Brown and Williamson Tobacco Company, available at http://www.bw.com/Index_sub2.cfm?ID=7 (U.S. Ex. 86,801).

54. Brown & Williamson reported on its website for 2002, that it has plants and offices in several communities and purchases a wide range of products and services to support these operations. Commodities purchased include but are not limited to machinery, spare parts, packaging materials, industrial supplies, office supplies, fuel, gases, construction, and contract services. Commodities Purchased, available at http://www.bw.com/index_sub2.cfm?Page=/BWT/Index.cfm%3FID%3D190%26Sect%3D4 (U.S. Ex. 86,792).

55. In each year since 1953, Brown & Williamson has manufactured and sold numerous brands of cigarettes throughout the United States, including in the District of Columbia, and in foreign countries, including Kool, Lucky Strikes, Capri, Misty, Barclay, GPC, Private Stock, Raleigh, Tareyton Special Blend, and Viceroy. Brown & Williamson's Answers, Defenses and Jury Demand to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2000, at 11.

56. On its website for 2002, Brown & Williamson stated that it is the "third largest cigarette manufacturer and marketer in the U.S." and "[h]ad Third Quarter, 2001 market share of "approximately 11.2 percent of the total U.S. cigarette market." Facts About Brown and Williamson Tobacco Company, available at http://www.bw.com/Index_sub2.cfm?ID=7 (U.S. Ex. 86,801).

57. In each year since 1961, Brown & Williamson estimated that it has obtained at

SECTION II.

least \$402.687 million in total revenue annually from the sale of goods and services throughout the United States. For the period 1961 to the present, Brown & Williamson estimates net revenue of at least \$70.585 billion from tobacco sales in the United States. Response of Brown & Williamson Tobacco Corporation to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, et al., dated February 6, 2001, at 109; Brown and Williamson Tobacco Corporation Table, "Defendants' Gross Revenues Brown & Williamson Tobacco Corporation," attached as Appendix at APP-6 to United States' Rule 7.1/56.1 Statement Of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The Rico Claims And Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840101-0101 (U.S. Ex. 88,672).

58. Brown & Williamson's parent reported in its 2001 Annual Report that "In the U.S., Brown and Williamson contributed £356 Million [estimated \$517.731 million] an increase of 10 percent in local currency." British American Tobacco Annual Review and Summary Financial Statement 2001 at 23, available at http://www.bat.com/oneweb/sites/uk__3mnfen.nsf/vwPagesWebLive/C7E1095BB1D02C3B80256BF40003313D?opendocument&TMP=1 (U.S. Ex. 86,790).

59. Brown & Williamson, its affiliates, or their employees have made the following additional admissions or public statements regarding the interstate nature and scope of its

business.

a. Brown & Williamson stated that on December 22, 1994, it acquired Defendant American Tobacco Company from American Brands, Inc., in a stock transaction, and on February 28, 1995, merged American into Brown & Williamson.

b. On its website, Brown and Williamson posts a "Company Fact Sheet" claiming the following "Principal International Cigarette Brands": Lucky Strike, Kent, Barclay, Capri, Kool, Viceroy, and Pall Mall.

c. On its web site, Brown & Williamson permits the user to enter a brand name, brand style, and zip code, then displays (if available) retail outlets in that zip code carrying the brand and style selected.

d. On May 2, 2002, Nicholas Brookes testified that as Chairman and CEO of B&W, while based in Louisville, his responsibilities were to "lead Brown & Williamson Tobacco Corporation in its commercial endeavours . . . in the U.S. and . . . in Japan and Korea."

e. On June 25, 2002, Mark Smith, as Public Relations Manager for Brown & Williamson, testified that his duties covered activities in states other than Kentucky, such as Georgia, where Brown and Williamson has a major manufacturing facility in Macon, as well as researching activities in other states, such as North Carolina, where Brown & Williamson has a plant previously owned by American.

f. On August 15, 2002, Michael R. Diven, the Director of the Secondary Supply Chain at Brown & Williamson, testified that, in an earlier position with Brown & Williamson, Diven was involved with "moving [BATCO] products from production actually in

SECTION II.

Southampton, U.K. to our U.S. bonded facilities and on down to our direct customers . . . distributors and wholesalers." Diven further testified that, in 1996, BATCo transferred to Brown & Williamson the responsibility for the distribution and sale of the State Express brand as a "global initiative to reorganize BAT on a global basis." Diven further testified, "Prior to '95, '96 BATCo and Brown and Williamson competed with each other in the U.S. market," and that Brown & Williamson contracted for research related to BATCo brands among "aging consumers in . . . the New York City area, as well as California." Diven had seen "references to [BATCo] research that are conducted on a global basis and key cities have been denoted in that research where it was conducted." He remembered "New York always kind of being one that was prevalent in places where the research was conducted." Brown & Williamson's Answers, Defenses and Jury Demand to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2000, at 11; Facts About Brown and Williamson Tobacco Company, available at http://www.bw.com/Index_sub2.cfm?ID=7 (U.S. Ex. 86,801); Retail Store Locator, available at http://www.bw.com/Index_sub2.cfm?ID=7 (U.S. Ex. 86,801); Deposition of Nicholas Brookes, United States v. Philip Morris, May 2, 2002, 28:20-22; Deposition of Mark Smith, United States v. Philip Morris, June 25, 2002, 6:1-8:23; Deposition of Michael R. Diven, United States v. Philip Morris, August 15, 2002, 7:14-9:1, 17:21-18:11.

60. In a stipulation filed with this Court on December 10, 2002, Brown & Williamson Tobacco Corporation stipulated that it has engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to the

present. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶3, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶3, filed December 11, 2002

H. American Tobacco Company

61. Defendant American Tobacco Company ("American") was a Delaware corporation that was merged into Defendant Brown & Williamson on February 28, 1995. A separate New Jersey corporation named American Brands, Inc., was merged into American in 1985. As a result of this merger, American succeeded in interest to the tobacco products business of the New Jersey corporation named American Brands, Inc. From 1953 until its merger with Brown and Williamson, American and its affiliates have had at least four offices and plants in four different states. Brown & Williamson's Answers, Defenses and Jury Demand to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2000, at 2, 11.

62. In each year since 1953 until its merger into Brown & Williamson, American and its affiliates employed thousands of people. MNAT 00029599-9644 at 9603 (U.S. Ex. 22,653); MNAT 00029697-9748 at 9703 (U.S. Ex. 22,656); MNAT 00029749-9799 at 9755 (U.S. Ex. 22,657); MNAT 00029645-9696 at 9651 (U.S. Ex. 22,654); MNAT 00029551-9598 at 9557 (U.S. Ex. 22,651).

63. In each year from 1953 until its merger into Brown & Williamson, American and its affiliates manufactured and sold tobacco products throughout the United States, including the District of Columbia, and foreign countries. Brown & Williamson's Answers, Defenses and Jury

SECTION II.

Demand to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 31, 2000, at 11.

64. In each year since 1954 until its merger into Brown & Williamson, American has obtained at least \$558 Million in total revenue annually from the sale of goods and services throughout the United States and in foreign countries. For the period 1954 until its merger with Brown & Williamson, American had revenue of at least \$49.2 billion in tobacco sales throughout the United States and in foreign countries. The American Tobacco Company, Inc. Annual Reports for 1945 - 1968 (U.S. Ex. 86,633); (U.S. Ex. 86,634); (U.S. Ex. 86,635); (U.S. Ex. 86,636); (U.S. Ex. 86,637); (U.S. Ex. 86,638); (U.S. Ex. 86,639); (U.S. Ex. 86,640); (U.S. Ex. 86,641); (U.S. Ex. 22,567); (U.S. Ex. 22,570); (U.S. Ex. 22,573); (U.S. Ex. 22,575); (U.S. Ex. 22,576); (U.S. Ex. 86,642); (U.S. Ex. 59,754); (U.S. Ex. 22,598); (U.S. Ex. 22,600); (U.S. Ex. 22,605); (U.S. Ex. 22,607); (U.S. Ex. 22,610); (U.S. Ex. 22,612); (U.S. Ex. 21,222); (U.S. Ex. 22,616); American Brands, Inc. Annual Reports for 1969-1993 (U.S. Ex. 22,618); (U.S. Ex. 22,620); (U.S. Ex. 22,622); (U.S. Ex. 22,623); (U.S. Ex. 22,651); (U.S. Ex. 22,642); (U.S. Ex. 22,645); (U.S. Ex. 22,646); (U.S. Ex. 21,394); (U.S. Ex. 21,389); (U.S. Ex. 21,393); (U.S. Ex. 21,390); (U.S. Ex. 22,671); (U.S. Ex. 21,391); (U.S. Ex. 22,658); (U.S. Ex. 22,659); (U.S. Ex. 22,661); (U.S. Ex. 22,663); (U.S. Ex. 22, 678); (U.S. Ex. 22,666); (U.S. Ex. 22,668); (U.S. Ex. 22,669); (U.S. Ex. 58,530); (U.S. Ex. 22,672); (U.S. Ex. 22,674); (U.S. Ex. 22,677); American Tobacco Company Table, "Defendants' Gross Revenues American Tobacco Company," attached as Appendix at APP-7 to United States' Rule 7.1/56.1 Statement of Material Facts Not in Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding

SECTION II.

Defendants' Affirmative Defenses That The RICO Claims and Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly And Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840102-0102 (U.S. Ex. 88,673).

65. American, its affiliates, agents, or employees have made the following additional admissions or public statements regarding the interstate nature and scope of its business.

a. The 1993 American Brands Annual Report stated, "American successfully held its share of the U.S. cigarette market in spite of the fierce competition that sharply reduced contributions."

b. The 1993 American Brands Annual Report further stated that "[d]espite the fierce competition, American Tobacco held its own in the marketplace, with about a 6.75% market share . . . ," and that "Tareyton retained its position as the leading charcoal filtered brand, while Pall Mall Red and Lucky Strike regular held a combined 40% share of the non filter segment." American Brands 1993 Annual Report at 2, 9 (U.S. Ex. 22,677).

66. In a stipulation filed with this Court on December 10, 2002, Brown & Williamson, as successor by merger to American, stipulated that American engaged in and conducted activities affecting interstate commerce within the meaning of 18 U.S.C. § 1962(c) and (d) during the period from 1953 to February 28, 1995. Joint Stipulation Regarding Interstate Commerce, United States v. Philip Morris, at ¶4, filed December 10, 2002; Order #280, United States v. Philip Morris, at ¶4, filed December 11, 2002.

I. The Tobacco Institute

SECTION II.

67. The Tobacco Institute admits that it was a not-for-profit corporation and tobacco industry association formed in 1958 under the laws of the State of New York, and that, at one time, its principal place of business was located in Washington, D.C. Answer, Defenses and Jury Demand of The Tobacco Institute, Inc., United States v. Philip Morris, filed October 30, 2000, at 16.

68. The Tobacco Institute bylaws in Article II provide that "any person, firm or organization engaged in the business of manufacturing and marketing of cigarettes, smoking tobacco . . . shall be eligible to become a member of the Institute." The bylaws further provide in Article III that "[e]ach member elected pursuant to Article II shall pay initial annual dues (a) in the amount of \$2,000 or (b) at the rate of (i) two fifths of a cent for every thousand for every tax paid cigarettes (sic) plus (ii) one dollar and twenty cents for every thousand pounds of tobacco produced by it during the preceding calendar year, whichever of (a) or (b) shall be larger." TI 1259-2380 to 1259-2389 at 2380, 2382 (U.S. Ex. 22,394).

69. From at least 1958 until the Tobacco Institute's dissolution on January 31, 1999, Defendants Philip Morris (1958-1999), R.J. Reynolds (1958-1999), American (1958-1999, 1988-1991), Brown & Williamson (1958-1987, 1994-1999), Lorillard (1958-1967, 1971-1999), and Liggett (1964-1996) declared contributions of over \$618.4 million to the Tobacco Institute, which were processed through the interstate banking system. Response of Brown & Williamson Tobacco Corporation to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 97-103; Liggett Group Inc.'s Objections and Responses to United States' First Set Of Interrogatories to Defendants, United States v. Philip

SECTION II.

Morris, served February 6, 2001, at 54-56; Lorillard Tobacco Company's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 40-44; Philip Morris Incorporated's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 71-73; Response of R.J. Reynolds Tobacco Company to Plaintiff United States' First Set of Interrogatories, United States v. Philip Morris, served February 6, 2001, at 132-135; Table, "Defendants' Dues Paid And/Or Contributions To The Tobacco Institute," attached as Appendix at APP-13-APP-15 to United States' Rule 7.1/56.1 Statement of Material Facts Not In Dispute submitted in support of United States' Motion For Partial Summary Judgment Regarding Defendants' Affirmative Defenses That The RICO Claims And Sought Relief Are Prohibited By The Tenth Amendment And Separation Of Powers And That Defendants Are Not Jointly and Severally Liable For Any Disgorgement Ordered By The Court, United States v. Philip Morris, (R. 2330; filed July 1, 2003), ARU5840108-0110 (U.S. Ex. 88,677).

70. In addition, Tobacco Institute financial statements from 1958 until its dissolution declared contributions of at least \$548,000 and as much as \$46.2 million annually from all of its member organizations. TFAL 0000001-0010 at 0009 (U.S. Ex. 21,892); 2023390612-0616 at 0614 (U.S. Ex. 21,895); 81616559-6562 at 6561 (U.S. Ex. 21,897) ; 81616516-6520 at 6518 (U.S. Ex. 21,896); 89694214-4220 at 4216 (U.S. Ex. 21,898); 89693636-3641 at 3638 (U.S. Ex. 21,899); 89696116-6124 at 6118 (U.S. Ex. 21,900); 89693336-3342 at 3338 (U.S. Ex. 22,989); 89693376-3384 at 3378 (U.S. Ex. 21,901); TIOK 0000243-0249 at 0245 (U.S. Ex. 21,902); TIOK 0000250-0256 at 0252 (U.S. Ex. 21,907); TIOK 0000257-0265 at 0259 (U.S. Ex. 21,911);

SECTION II.

TIOK 0000266-0273 at 0268 (U.S. Ex. 21,912); TIOK 0000274-0281 at 0276 (U.S. Ex. 21,914); TIOK 0000282-0289 at 0284 (U.S. Ex. 21,919); TIOK 0000290-0297 at 0292 (U.S. Ex. 21,920), TICT 0009911-9918 at 9913 (U.S. Ex. 86,078); TIOK 0000298-0304 at 0300 (U.S. Ex. 21,962), TICT 0009919-9925 at 9921 (U.S. Ex. 62,582); TIOK 0000305-0312 at 0307 (U.S. Ex. 21,963), TICT 0009888-9895 at 9890 (U.S. Ex. 85,964); TIOK 0000313-0320 at 0315 (U.S. Ex. 21,967), TICT 0009896-9903 at 9898 (U.S. Ex. 85,965); TIOK 0000321-0327 at 0323 (U.S. Ex. 21,968); TICT 0009904-9910 at 9906 (U.S. Ex. 86,080); TI1635-2199 to 2432 at 2202 to 2211, 2271 to 2282, 2290 to 2294, 2309 to 2313, 2339 to 2341, 2368 to 2368, 2393 to 2395 (U.S. Ex. 22,183); TI1635-1836 to 1838 (U.S. Ex. 21,972); TICT 0009885 - 9887 (U.S. Ex. 21,974); TICT 0009871-9874 (U.S. Ex. 21,976); TICT0009863-9866 (U.S. Ex. 21,977); TICT0009867-9870 (U.S. Ex. 21,978).

71. In each year since 1953 until its dissolution in 1999, the Tobacco Institute disseminated advertisements, press releases, position papers, and other information to magazines, newspapers, the broadcast media, and other news outlets throughout the United States. For the period July 1981 through November 1981 alone, for example, the Tobacco Institute budgeted almost \$900,000 for advertising. Approximately 25% of the Tobacco Institute's budget was devoted to developing and disseminating such public statements. TI08970899-0899 (U.S. Ex. 21,248); Impropaganda Review, "Council for Tobacco Research," available at <http://www.prwatch.org/improp/ctr.html> (U.S. Ex. 86,794).

72. The Tobacco Institute, its agents, or former employees have made the following additional admissions or public statements as examples of the interstate nature and scope of its

business:

a. On July 1, 2002, Brennan Dawson, former Senior Vice President for Public Affairs of the Tobacco Institute, testified at a deposition that the Tobacco Institute funded a "truth squad" of scientific witnesses who gave legislative testimony and did media appearances on the issue of Environmental Tobacco Smoke ("ETS") throughout the United States. Members of the "truth squad" included Jack Peterson, David Weeks, and Larry Holcomb. During the media tours, members of the "truth squad" would talk about their areas of ETS expertise. Some of these interviews, or excerpts from them, were televised; some were on the radio; print media reporters would also attend the interviews. Members of the "truth squad" wrote editorials and opinion pieces on indoor air quality issues and what role ETS plays. In addition, Dawson testified that the Tobacco Institute retained scientists and consultants to testify at governmental and regulatory proceedings at the Federal, state, and local levels. Dawson testified at such proceedings on behalf of the Tobacco Institute thirty to forty times on issues including public smoking and taxation.

b. On August 31, 1994, William Adams, Senior Vice President of Administration of the Tobacco Institute, sent a letter to David Anderson of R.J. Reynolds advising that the Tobacco Institute Management Committee had approved additional lobbying expenditures for a state initiative and requesting R.J. Reynolds's payment of \$1,585,254.

c. A financial spreadsheet dated March 31, 1995 showed the Tobacco Institute's assessments upon member firms, payments from them, and Tobacco Institute disbursements to an Arizona initiative campaign totaling approximately \$5.5 million.

SECTION II.

d. J. Richard Eichman, an accountant reviewing Tobacco Institute financial records, sent a letter dated October 16, 1992 to Jan Krebs of R.J. Reynolds advising that the Tobacco Institute had made contributions to California campaign committees and that R.J. Reynolds's pro rata share of the contribution to the Tobacco Institute for this effort was over \$47,000.

e. Eichman also sent a letter dated July 17, 1992 to Nicholas Simeonidis of Lorillard advising that the Tobacco Institute made contributions to California campaign committees and that the pro rata contribution for this effort was over \$8,500.

f. A financial spreadsheet dated March 21, 1995 showed Tobacco Institute's assessments upon member firms, payments from them, and Tobacco Institute disbursements for a Colorado initiative campaign totaling approximately \$5.4 million.

g. A document entitled "The Tobacco Institute Massachusetts Fair Tax Coalition 1992 Assessment Number 1" showed Tobacco Institute's allocation of contributions due from member firms for payments of approximately \$208,000 to the Massachusetts Fair Tax Coalition Campaign.

h. Kurt L. Malmgren, Senior Vice President for State Activities of the Tobacco Institute, sent a letter dated February 25, 1994 to Ernest Pepples, Senior Vice President of Brown & Williamson, thanking him for the Brown & Williamson Tobacco contribution of \$100,000 to the Michigan Citizens for Fair Taxes to fight a 1994 ballot initiative and requesting that the funds be wired to the Tobacco Institute's bank account. Deposition of Brennan Dawson, United States v. Philip Morris, July 1, 2002, 67:19 - 68:19; T116370185-0402 at 0329, 0330,

0341, 0366 (U.S. Ex. 21,258); T116290292-0292 (U.S. Ex. 21,257).

J. The Council for Tobacco Research – U.S.A., Inc.

73. The Tobacco Industry Research Council ("TIRC") was formed in January 1954 by several entities, including Defendants Philip Morris, R.J. Reynolds, Brown & Williamson, American, and Lorillard. TIRC had its principal place of business in New York. In 1964, TIRC changed its name to The Council for Tobacco Research – U.S.A., and in 1971, the name was changed to The Council for Tobacco Research – U.S.A., Inc., ("CTR") when CTR incorporated as a not-for-profit corporation organized under the laws of the State of New York. Answer of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's Complaint for Damages and Injunctive and Declaratory Relief, United States v. Philip Morris, filed October 30, 2000, at 4, 6; 70047927-7952 (U.S. Ex. 85,984).

74. The bylaws of TIRC specified that "[e]ach of the cigarette manufacturing corporate members has pledged to the Committee for payment . . . an amount equal to 1/4 of one cent for each one thousand of tax paid cigarettes produced by such Company. . . . Such corporate members shall in addition be and remain liable for any obligation created or expense incurred by resolution of the personal committee adopted by majority vote and for any additional amounts assessed against each corporate member by resolution of the personal committee adopted by majority vote, such liability of such corporate members to be in proportion to the respective production of tax paid cigarettes of such corporate members" 70047927-7952 at 7929 (U.S. Ex. 85,984).

75. From 1954 to 1964, Philip Morris, American, Brown & Williamson, Lorillard,

SECTION II.

and R.J. Reynolds contributed a total of approximately \$9.92 million to TIRC, which payments were processed through the interstate banking system. Response of Brown & Williamson Tobacco Corporation to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 97-103; Liggett Group Inc.'s Objections and Responses to United States' First Set Of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 54-56; Lorillard Tobacco Company's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, served February 6, 2001, at 40-44; Philip Morris Incorporated's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris, filed February 6, 2001, at 71-73; Response of R.J. Reynolds Tobacco Company to Plaintiff United States' First Set of Interrogatories, United States v. Philip Morris, served February 6, 2001, at 132-135; Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al., (served February 6, 2001), at Schedule C (U.S. Ex.75,927).

76. Through 1990, CTR stated that it had funded 1,174 grants, totaling over \$238.1 million, in the United States and abroad. 60042239-2257 (U.S. Ex. 85,966); 60042281-2297 (U.S. Ex. 85,967); 60042374-2392 (U.S. Ex. 85,968); 60042594-2611 (U.S. Ex. 85,971); 60042406-2423 (U.S. Ex. 85,969); 60042490-2504 (U.S. Ex. 85,970); 60042788-2795 (U.S. Ex. 85,972); 60042815-2847 (U.S. Ex. 85,973); 60042927-2946 (U.S. Ex. 85,974); 60042970-2977 (U.S. Ex. 85,975); 60043072-3079 (U.S. Ex. 85,976); 60043084-3092 (U.S. Ex. 85,977); 60043093-3104 (U.S. Ex. 85,978); 60043105-3118 (U.S. Ex. 85,979); 60043119-3140 (U.S. Ex.

SECTION II.

85,980); 70000291-0301 (U.S. Ex. 85,981); 70056065-6076 (U.S. Ex. 85,982).

77. From 1964 to 1999, Philip Morris, American, Brown & Williamson, Liggett, Lorillard, and R.J. Reynolds contributed a total of approximately \$505.4 million to CTR, which payments were processed through the interstate banking system. From the period 1954 through 1999, member contributions to the CTR General Fund, processed through the interstate banking system, totaled over \$470.2 million. Response of Defendant The Council for Tobacco Research - U.S.A., Inc. to Plaintiff's First Set of Interrogatories, United States v. Philip Morris, et al., (served February 6, 2001), at Schedule C (U.S. Ex. 75,927).

78. From about 1966 to 1990, CTR also administered the funding of certain CTR Special Projects, which were separate and distinct from CTR's grant in aid program. CTR administered Special Project funding through a separate checking account, and received direction and funding from sponsor companies, including Philip Morris Companies, Philip Morris, American, Brown & Williamson, Liggett, Lorillard, and R.J. Reynolds and/or their attorneys. CTR also sent correspondence and funds to Special Project recipients and/or their affiliated institutions through the United States Mail. For the period 1966 through 1990, CTR members contributed over \$18.2 million toward the funding of these Special Projects. Answer of Council for Tobacco Research - U.S.A., Inc., United States v. Philip Morris, filed October 30, 2000, at 9; Deposition of Lorraine Police, United States v. Philip Morris, June 27, 2002, 43:10-54:18, 61:4-15; Response of Defendant The Council For Tobacco Research - U.S.A., Inc. To Plaintiff's First Set of Interrogatories, United States v. Philip Morris, served February 6, 2001, at Schedule C (U.S. Ex. 75,927).

SECTION II.

79. CTR provided funding to Special Projects recipients via checks processed through the interstate banking system, and delivered via the United States Mail, electronic funds transfer processed through the interstate banking system, or wire transfer processed through the international banking system. 50019509-9509 (U.S. Ex. 85,983).

80. The results of CTR-sponsored research have been published in numerous professional publications and other fora throughout the United States and in several foreign countries. 2028436582-6590 (U.S. Ex. 37,390); 2046089505-9508 (U.S. Ex. 38,499); 0000117458-7467 (U.S. Ex. 35,142); 2010045520-5526 (U.S. Ex. 36,518).

81. CTR had a contractual relationship with Processing Instruments in Brooklyn, New York, which stored smoking machines for it and shipped these machines to CTR researchers throughout the United States upon request. Deposition of Lorraine Pollice, United States v. Philip Morris, June 27, 2002, 72:18-73:13.

III

**EACH DEFENDANT IS DISTINCT FROM THE ENTERPRISE,
IS ASSOCIATED WITH THE ENTERPRISE, AND
HAS PARTICIPATED IN THE
CONDUCT OF THE AFFAIRS OF THE ENTERPRISE**

1. At all relevant times each Defendant: (a) has been distinct from the Enterprise; (b) has been associated with the Enterprise; and (c) has conducted, directly and indirectly, the affairs of the Enterprise and has participated in the operation and management of this Enterprise. See U.S. FPF § I, supra, and U.S. FPF §§ IV, V, and VI, infra.

2. First, as demonstrated supra, the Enterprise is an association -in-fact enterprise, including all Defendants. As further shown in U.S. FPF, §§ I & II, supra, at all relevant times each Defendant has been a legal entity distinct from each other Defendant and from the RICO Enterprise, which consists of a group of business entities, including Defendants, and individuals associated-in-fact. It is clear that the group of entities and individuals that constitutes the RICO Enterprise is broader than each corporate Defendant that is a member of the RICO Enterprise.

3. According to its Answer to the United States' Complaint, Defendant British American Tobacco (Investments) Limited ("BATCo") is a legal entity separate and distinct from the Enterprise and from its sister entity, Defendant Brown & Williamson ("Brown & Williamson" or "B&W"). BATCo is a company incorporated under the laws of England and Wales, with principal offices in London. Like B&W, BATCo is a subsidiary of BAT plc. Between 1927 and 1979, BATCo was the corporate parent of B&W. Answer, Defenses and Jury Demand of British American Tobacco (Investments) Limited, United States v. Philip Morris, et al., filed October 31, 2000, at 8 (U.S. Ex. 75,848).

4. In an affidavit filed in this case, Philip M. Cook, Company Secretary of B.A.T. Industries p.l.c., declared that, "Prior to July 23, 1976, ordinary shares of BATCo were publicly

owned and traded.” Mr. Cook further declared, “Since B.A.T. Industries became the parent company of defendants Brown & Williamson and BATCo, B.A.T. Industries, Brown & Williamson and BATCo always have operated as separate and distinct corporate entities and have scrupulously maintained all corporate formalities – each has had its own registered office and board of directors, and each has maintained separate accounts, records and minutes.”

Affidavit of Philip M. Cook In Support Of Defendant B.A.T Industries p.l.c.'s Motion To Dismiss The Complaint For Lack Of Personal Jurisdiction, United States v. Philip Morris, et al., at 2-4 (December 27, 1999) (U.S. Ex. 88,642); see also 800062323-2325 at 2323 (U.S. Ex. 56,552); Deposition of Murray Anderson, United States v. Philip Morris, et al., June 11, 2002, 32:18-33:16, 40:9-41:15, 30:10-31:8, 40:2-40:7, 60:23-61:7.

5. Second, the evidence presented in U.S. FPF § I, supra, and U.S. FPF § IV, infra, proves overwhelmingly that each Defendant is and has been associated with the Enterprise.

6. Similarly, there is overwhelming evidence, presented throughout these Final Proposed Findings of Fact, that all Defendants have participated in the operation and management of the affairs of the Enterprise. A brief sampling of evidence demonstrating each Defendants’ participation in the operation and management of the Enterprise is presented below.

7. In January 1954, Defendants Philip Morris, R.J. Reynolds, American, B&W, and Lorillard and other entities established the Tobacco Industry Research Committee (“TIRC”), which changed its name to the Council for Tobacco Research (“CTR”) in 1964. Defendant Liggett, while not a member of TIRC/CTR, did make contributions to CTR's Special Projects fund from 1966 through 1975 and to CTR's Literature Retrieval Division from 1971 through 1983. Representatives from Defendant Altria/PMC were members of CTR's Board of Directors. See FPF § I.B., supra. These seven Defendants controlled and funded TIRC/CTR to further

SECTION III.

the objectives of the Enterprise, including to preserve and enhance Defendants' profits by, among other means, devising and executing a scheme to defraud the public, as set forth in U.S. FPF § IV, infra, and to avoid adverse liability verdicts in the face of the growing body of scientific and medical evidence about the adverse health effects and addictiveness of smoking cigarettes. See FPF § I, supra.

8. Each Cigarette Company Defendant (except for BATCo) agreed to fund, and did jointly fund, numerous Special Projects overseen and administered by CTR, a component of the Enterprise, that were designed to generate information and support research to bolster Defendants' public relations and litigation positions. Such joint funding of Special Projects contradicted Defendants' promises to conduct independent research through TIRC/CTR in the Frank Statement and similar statements. See U.S. FPF §§ I.D. & II, supra, and U.S. FPF § IV.D., infra.

9. In January 1958, Defendants Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, Liggett, and American and other entities established the Tobacco Institute, another component of the Enterprise, and thereafter these Defendants controlled and funded the Tobacco Institute to further the objectives of the Enterprise. Representatives of Defendant Altria/PMC were also members of the Tobacco Institute's Board of Directors. See U.S. FPF § I.C. & II, supra, and U.S. FPF § IV.A., infra.

10. TIRC/CTR and the Tobacco Institute also participated in the operation and management of the Enterprise by, among other means, helping to coordinate and implement aspects of the Enterprise's scheme to defraud the public, especially its fraudulent public relations matters. See U.S. FPF § I, supra, and U.S. FPF § IV.A., infra.

11. Each Cigarette Company Defendant (except for BATCo) participated in the

Tobacco Institute Committee of Counsel and other Tobacco Institute committees, additional components of the Enterprise, to further the Enterprise's objectives. See U.S. FPF § I.C(3), supra.

12. Each Defendant (except for BATCo) caused and aided and abetted defendants TIRC/CTR and the Tobacco Institute to commit racketeering acts in furtherance of the affairs of the Enterprise. See U.S. FPF § I, supra and U.S. FPF §§ IV, V, and VI, infra.

13. Each Defendant further participated in the conduct of the Enterprise's affairs through one or more of various projects and committees designed to further the above-referenced objectives of the Enterprise, including, but not limited to: CTR Special Projects; Ad Hoc Special Projects; the Center for Indoor Air Research ("CIAR"); the Research Liaison Committee; the Industry Technical Committee; the Tobacco Manufacturers' Standing Committee ("TMSC"), which became the Tobacco Advisory Council ("TAC") and then the Tobacco Research Council ("TRC"); the International Committee on Smoking Issues ("ICOSI"), which became the International Tobacco Information Inc. ("INFOTAB") and its successor, the International Tobacco Documentation Center ("TDC"); and the Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac translated as the Cooperation Centre for Scientific Research Relative to Tobacco ("CORESTA"). See U.S. FPF § I.H., supra.

14. In furtherance of the objectives of the Enterprise, all Defendants developed and executed a scheme to defraud the public of money that was designed to preserve and enhance the market for cigarettes through a variety of means. See U.S. FPF § I, supra, and U.S. FPF § IV, infra.

15. Each Defendant committed racketeering acts in furtherance of the affairs of the Enterprise. See U.S. FPF §§ IV-VI, infra.

16. Each Defendant caused the public dissemination of numerous false, deceptive or misleading statements in furtherance of the affairs of the Enterprise. See U.S. FPF § I, supra, and U.S. FPF §§ IV and V, infra.

17. Each Defendant endeavored to conceal or suppress information and documents and/or to destroy records which may have been detrimental to the interests of the members of the Enterprise, including information which could be discoverable in smoking and health liability cases against Defendants or in congressional and other governmental proceedings and information that could constitute, or lead to, evidence confirming Defendants' understanding of the causal link between smoking cigarettes and adverse health consequences and addictiveness. See U.S. FPF § I, supra, and U.S. FPF § IV.D. & IV.H., infra.

18. All Defendants directed and coordinated various activities in furtherance of the affairs of the Enterprise through correspondence and other communications between and among Defendants and through their representatives' participation in meetings and committees. See U.S. FPF § I, supra, and U.S. FPF § IV, infra.

19. Defendant Altria, which was incorporated in 1985 (as Philip Morris Companies Inc.), effectively and actively controls the activities of all of its subsidiaries, including Defendant Philip Morris USA Inc. and Philip Morris International, Inc. ("PM International"). This control takes two main forms. First, overall policies on all major aspects of Altria operating companies' operations are set by Altria management, and senior Altria executives, employees, and agents participate in and/or control decisions about how the operating companies implement those policies, through both formal and informal reporting relationships. See 2076154982-4986 (U.S. Ex. 27,569); 2022833399-3399 (U.S. Ex. 88,044) (After 1993 briefing of Philip Morris Companies management about Philip Morris USA's development efforts on the electrically

heated cigarette test marketed as Accord, Philip Morris Companies authorized Philip Morris USA to continue working on the project.); see also Deposition of Denise Keane, United States v. Philip Morris, et al., October 1, 2002, 27:21-28:26; 2074163364-3366 (U.S. Ex. 27,488); 2078745991-6084 (U.S. Ex. 27,733) (Confidential); Deposition of Mark Berlind, United States v. Philip Morris, et al., May 23, 2002, 8:4-10:13; 2071412978-3143 (U.S. Ex. 23,061); 2073875307-5346 at 5326 (U.S. Ex. 27,450); 2077564763-4765 (U.S. Ex. 27,628); 2978740059-0063 (U.S. Ex. 86,929) (Confidential); Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2003, 13:24-15:5. Second, personnel often move back and forth between Altria and the various subsidiary operating companies including Philip Morris USA, blurring the lines between job responsibilities that are assigned to or conducted by Altria itself or one of the operating subsidiaries. TLT0720004-0004 (U.S. Ex. 80,767); see, e.g., Deposition of Michael Szymanczyk, United States v. Philip Morris, et al., June 14, 2003, 462:19-463:21; Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2003, 10:10-11:8, 81:4-12. For example, James J. Morgan, President and Chief Executive Officer of Philip Morris USA from 1994 to 1997, had previously served as a Philip Morris USA employee from 1963 to 1983; then as an Altria/PMC employee (Staff Vice President, Marketing Planning) from 1988 to 1989 and 1990-1993; and again returning to Philip Morris USA in 1993 as Senior Vice President of Marketing. 2065504972-4973 (U.S. Ex. 86,919).

20. Defendant Altria participated in the Enterprise both by its own actions in conjunction with other Enterprise members in furtherance of the goals of the Enterprise, and by controlling and participating actively in the day-to-day activities of its subsidiaries Philip Morris USA and Philip Morris International. See U.S. FPF § I, supra, and U.S. FPF § IV, infra.

21. Defendant BATCo participated in the Enterprise directly and indirectly by

coordinating research, policy, and public statements, with and through other Defendants and a variety of organizations, to direct and perpetuate the Enterprise. See U.S. FPF § I, supra, and U.S. FPF § IV, infra.

22. In short, the evidence presented throughout the United States' Final Proposed Finding of Fact prove that each Defendants is distinct from the alleged association-in-fact Enterprise, that each Defendant is associated with the Enterprise, and that each Defendant has participated in the conduct of the affairs of the Enterprise.

IV

DEFENDANTS DEvised AND EXECUTED A SCHEME TO DEFRAUD CONSUMERS AND POTENTIAL CONSUMERS OF CIGARETTES

1. From in or about December 1953 and continuing to the present, Defendants did knowingly and intentionally devise and execute a scheme and artifice to defraud consumers and potential consumers of cigarettes of money and property by means of material false and fraudulent statements, pretenses, representations and promises, and omissions of material facts, knowing that the statements, pretenses, representations and promises, were false, misleading and deceptive when made, including: (1) to deceive consumers into starting and continuing to smoke cigarettes by endeavoring to misrepresent and conceal the adverse health effects caused by smoking cigarettes and exposure to cigarette smoke and by maintaining that there was an "open question" as to whether smoking cigarettes causes disease and other adverse effects, despite the fact that the defendants knew otherwise; (2) to deceive consumers into starting and continuing to smoke cigarettes by undertaking an obligation to take actions, including funding independent research, in order to determine if smoking cigarettes causes cancer or other diseases, while pre-selecting researchers and directing funds to irrelevant research and research that supported Defendants' positions on smoking and health issues; (3) to deceive consumers into becoming or staying addicted to cigarettes by maintaining that nicotine is not addictive, despite the fact that Defendants knew that nicotine is addictive; (4) to deceive consumers into becoming or staying addicted to cigarettes by manipulating the design of cigarettes and the delivery of nicotine to smokers, while at the same time denying that they engaged in such manipulation; (5) to deceive consumers, particularly parents and children, by claiming that they did not market to children,

while engaging in marketing and advertising with the intent of addicting children into becoming lifetime smokers; (6) to deceive consumers through deceptive marketing to exploit smokers' desire for less hazardous and "low tar" cigarettes; and (7) to deceive consumers regarding Defendants' concerted efforts not to make less hazardous cigarettes.

A. Adverse Health Effects

(1) Cigarette Smoking, Including Exposure to Secondhand Smoke, Causes Disease and Death

2. Cigarette smoking and exposure to secondhand smoke (also known as environmental tobacco smoke or "ETS") kills nearly 440,000 Americans every year. The annual number of deaths due to cigarette smoking is substantially greater than the combined annual number of deaths due to illegal drug use, alcohol consumption, automobile accidents, fires, homicides, suicides, and AIDS. Approximately one out of every five deaths that occur in the United States is caused by cigarette smoking. Centers for Disease Control and Prevention, Smoking-Attributable Mortality and Years of Potential Life Lost—United States, 1994, MMWR, 46(20):444-450 (May 23, 1997) (U.S. Ex. 87,047); Thun M., Myers D., Day-Lally C., Namboodiri M., Calle E., Flanders W.D., Adams S., Heath Jr. C., Age and the Exposure-Response Relationships Between Cigarette Smoking and Premature Death in Cancer Prevention Study II, Chapter 5, Smoking and Tobacco Control Monograph 8: Changes in Cigarette-Related Disease Risks and Their Implications for Prevention and Control, National Institutes for Health – National Cancer Institute, p. 383-476 (1997) (U.S. Ex. 75,543); Expert Report of Timothy Wyant and Scott Zeger, United States v. Philip Morris, et al., (R. 674, filed November 15, 2001); Expert Report of David M. Burns, United States v. Philip Morris, et al., (R. 664, filed November 15,

2001); Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., (R. 666, filed November 15, 2001).

3. Lung cancer is the leading cause of cancer deaths in the United States and in the world. Ninety percent of all lung cancer cases are caused by cigarette smoking. Lung cancer death rates are directly related to smoking rates. Put simply, the most straightforward way to prevent lung cancer would be to eliminate tobacco smoking. Effective tobacco control measures could substantially reduce the incidence of and mortality caused by lung cancer. Greenlee, R. T., Hill-Harmon, M.B., Murray, T., and Thun, M., "Cancer Statistics 2001," *CA Cancer J. Clin.*, 51: 15-36, 2001 (U.S. Ex. 77,119); Peto, R., Lopez, A.D., Boreham, J., Thun, M., Heath, C., Jr., and Doll, R., "Mortality from smoking worldwide," *Br. Med. Bull.*, 52:12-21 (1996) (U.S. Ex. 77,120); Expert Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al., (R. 669, filed November 15, 2001).

4. Lung cancer kills more Americans each year than breast cancer, colorectal cancer, prostate cancer and ovarian cancer combined. In 2001, there were 169,500 new cases of lung cancer in the United States. Greenlee, R. T., Hill-Harmon, M.B., Murray, T., and Thun, M., "Cancer Statistics 2001," *CA Cancer J. Clin.*, 51: 15-36 (2001) (U.S. Ex. 77,119); Expert Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al., (R. 669, filed November 15, 2001).

5. Tobacco smoke contains multiple carcinogens and noxious substances that produce inflammation and genetic changes in the bronchial epithelium early after exposure. The genetic changes caused by exposure to tobacco smoke accumulate with continued smoke exposure, and most genetic changes are not reversible after cigarette smoking cessation.

Wistuba, I. I., Lam, S., Behrens, C., Virmani, A. K. Fong, K. M., LeRiche, J., Samet, J. M., Srivastava, S., Minna, J. D., and Gazdar, A. F., “Molecular damage in the bronchial epithelium of current and former smokers,” *J. Natl Cancer Inst.*, 89: 1366-1373 (1997) (U.S. Ex. 77,130); Wistuba, I. I., Behrens, C., Milchgrub, S., Bryant, D., Hung, J., Minna, J. D., and Gazdar, A. F., “Sequential molecular abnormalities are involved in the multistage development of squamous cell lung carcinoma,” *Oncogene* 18: 643-650 (1999) (U.S. Ex. 77,131); Expert Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al., (R. 669, filed November 15, 2001).

6. Because genetic changes caused by exposure to tobacco smoke accumulate with continued smoke exposure and most genetic changes are not reversible after cigarette smoking cessation, the risk of developing lung cancer declines very slowly after smoking cessation and remains elevated even twenty years after quitting. Individuals smoking ten to twenty cigarettes per day have a ten-fold increased risk and individuals smoking forty or more cigarettes per day – two packs and over – have more than a twenty-fold increased risk of developing lung cancer. Tong, L., Spitz, M.R., Fueger, J. J., and Amos, C. A., “Lung carcinoma in former smokers,” *Cancer* 78: 1004-1010 (1996) (U.S. Ex. 52,090); Expert Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al., (R. 669, filed November 15, 2001).

7. There are no proven methods for the early detection of lung cancer through routine screening methods. Consequently, less than 25% of patients have their lung cancer detected with stage I or II disease, the only stages curable by surgical resection. The overall cure rate for lung cancer remains less than 15%. Greenlee, R. T., Hill-Harmon, M.B., Murray, T., and Thun, M., “Cancer Statistics 2001,” *CA Cancer J. Clin.*, 51: 15-36 (2001) (U.S. 77,119); Expert

SECTION IV. A.

Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al., (R. 669, filed November 15, 2001).

8. Cigarette smoking causes atherosclerosis. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 21-23 (R. 666, filed November 15, 2001).

9. Cigarette smoking causes bladder cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 37-38 (R. 666, filed November 15, 2001).

10. Cigarette smoking causes cerebrovascular disease. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 40 (R. 666, filed November 15, 2001).

11. Cigarette smoking causes chronic obstructive pulmonary disease ("COPD"). Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 38 -39 (R. 666, filed November 15, 2001).

12. Cigarette smoking, including exposure to secondhand smoke, causes cardiovascular disease, including myocardial infarction and coronary heart disease. Expert Report of Ira S. Ockene, United States v. Philip Morris, et al., (R. 668, filed November 15, 2001).

13. Cigarette smoking causes esophageal cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 35-36 (R. 666, filed November 15, 2001).

14. Cigarette smoking causes kidney cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 36-37 (R. 666, filed November 15, 2001).

15. Cigarette smoking causes laryngeal cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 31-33 (R. 666, filed November 15, 2001).

SECTION IV. A.

16. Cigarette smoking causes oral cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 33-34 (R. 666, filed November 15, 2001).
17. Cigarette smoking causes pancreatic cancer. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 35-36 (R. 666, filed November 15, 2001)
18. Cigarette smoking causes peptic ulcer disease. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 41-42 (R. 666, filed November 15, 2001).
19. Cigarette smoking causes respiratory morbidity. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 19-21 (R. 666, filed November 15, 2001).
20. Cigarette smoking causes diminished health status. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., 43-45 (R. 666, filed November 15, 2001).
21. Prenatal and neonatal exposure to cigarette smoke causes sudden infant death syndrome ("SIDS"), otitis media, and cognitive and behavioral difficulties. Expert Report of Michael Weitzman, United States v. Philip Morris, et al., (R. 670, filed November 15, 2001).
22. On May 27, 2004, the U.S. Surgeon General announced causal conclusions in connection with a substantial number of additional diseases that were not previously causally associated with smoking: cancers of the stomach, uterine cervix, pancreas, and kidney; acute myeloid leukemia; pneumonia; abdominal aortic aneurysm; cataract; and periodontitis. The report also concludes that smoking generally diminishes the health of smokers. *The Health Consequences of Smoking: A Report of the Surgeon General*, Washington, DC: US Department of Health and Human Services, Public Health Service, 2004 TLT0940001 (U.S. Ex. 88,660); See also TLT0940031 (U.S. Ex. 88,661); TLT0940032 (U.S. Ex. 88,662); TLT090033-40048 (U.S.

Ex. 88,663); TLT0940084 (U.S. Ex. 88,664); TLT0940090 (U.S. Ex. 88,665); TLT0940092 (U.S. Ex. 88,666). This Report is supported by an on-line database of more than 1600 published research articles. www.cdc.gov/tobacco/sgr/sgr_2004/ (U.S. Ex. 87,978).

(2) The Scientific Evidence Establishing Smoking as a Cause of Lung Cancer Led to Concerted Action by the Cigarette Company Defendants

23. As detailed above in Section I of these Proposed Findings, by 1953-1954, tobacco company executives were aware both of the significant scientific studies establishing smoking as a cause of lung cancer and the public attention the studies were receiving. Defendants' executives well understood that this new scientific evidence constituted a full-scale crisis for their respective companies.

24. As epidemiological studies establishing the link between cigarette smoking and cancer appeared, the Cigarette Company Defendants engaged in advertising campaigns to induce the public to believe that cigarette smoking was actually beneficial to one's health. 800431008-1008 (U.S. Ex. 21,402); 89749589-9590 (U.S. Ex. 21,404); 2022971953-1953 (U.S. Ex. 21,405); 2061004941-4941 (U.S. Ex. 21,406).

25. While continuing to insist that there was no indication that cigarettes were unsafe, the Cigarette Company Defendants moved aggressively to market products which they subtly and not-so-subtly implied were safer. In 1953, Defendant Liggett hired Arthur D. Little, Inc. ("ADL") to test tobacco condensates on mice in an attempt to develop strategies for removing carcinogens, at the same time that it advertised its filters as "Just What the Doctor Ordered." Liggett Advertisement, "Fredric March Says - This Is It L & M Filters Are Just What the Doctor Ordered," (U.S. Ex. 63,542).

SECTION IV. A.

26. In a November 26, 1953 press release denying a link between smoking and lung cancer, Paul Hahn, President of Defendant American Tobacco Company, stated: "Believing as we do that cigarette smoking is not injurious to health, I feel that a statement of reassurance to the public should be made. What the public wants to know about is whether it is true that smoking has been proved to contribute to the incidence of lung cancer. The fact, of course, is that it has not been so proved." 98248074-8078, at 8074 (U.S. Ex. 22,990).

27. Rather than carefully and critically assessing the emerging scientific data concerning the harms of smoking, the Tobacco Industry Research Committee ("TIRC") took the lead in denying and distorting these harms. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 19 (R. 1147, filed May, 10, 2002).

28. Instead of "getting all the facts" in a timely way, TIRC focused its energies and resources in two areas: (1) it served as a public relations unit for the industry, especially with regard to growing public concerns about the risk of smoking, repeatedly attacked scientific studies demonstrating the harms of cigarette smoke, and worked concertedly to reassure smokers about cigarettes; and (2) it developed a research program that focused on basic science mechanisms in cancers that was distant, if not completely irrelevant, to evaluating the risks and harms associated with smoking. Indeed, the TIRC research program was organized and devised to **not** address the immediate and fundamental questions of the health effects of smoking. In this way, both functions of TIRC (public relations and research) were integrally related; both were fully committed to the goals of denying and discrediting the substantial scientific evidence of smoking's harms and reassuring the public (especially smokers and potential smokers) through

promotion of the image that a genuine scientific controversy existed about whether smoking caused disease. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 21-25 (R. 1147, filed May 10, 2002).

29. Thus, while Defendants maintained a public posture of protecting consumers, privately they were working hard to avoid any indication that they might believe that cigarettes could be harmful. Despite quite candid internal assessments, company executives continued to offer blanket reassurances to consumers and stockholders. From 1954 on, they relied on citing the program of TIRC as proof of their commitment to seeking definitive answers to the questions of smoking and health. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 19-25 (R. 1147, filed May 10, 2002).

30. In spite of the growing scientific evidence linking cigarettes to lung cancer and other diseases, Defendants continued to offer reassurances like the following 1954 Annual Report of R.J. Reynolds:

Many eminent medical authorities have stated that claims made as to a possible causal relationship between smoking and lung cancer are lacking in any real proof. Very little is known as to the true cause or causes of any cancer, and it is to be hoped that research financed by the Committee [TIRC] will aid medical science in discovering the cause.

500028279-8300 at 8285 (U.S. Ex. 20,616).

31. Representatives of Hill & Knowlton attended Scientific Advisory Board ("SAB") meetings of TIRC from 1954 to 1964, as did company lawyers. Anything but an organization committed to funding research into the health effects of cigarette use, TIRC instead proved to be a sophisticated public relations and legal tool of the Cigarette Company Defendants. Rather than

funding research to clarify the relationship of tobacco and health as it promised, TIRC oriented itself from its inception as an organization to bring "balance" – i.e., Cigarette Company Defendants' perspective – to the smoking and health debate. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 35 (R. 1147, filed May 10, 2002).

32. The first Scientific Director of TIRC, appointed in 1954, was biologist Clarence Cook Little. Little's personal commitments and *a priori* assumptions about cancer causality made him an ideal proponent of the Cigarette Company Defendants' goal of maintaining a "controversy" rather than scientifically resolving the questions regarding smoking and health. A former president of University of Maine, University of Michigan, and the founder of the Roscoe B. Jackson Memorial Laboratory, Little quickly became a steadfast critic of the emerging scientific data linking cigarettes to cancer. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 35-36 (R. 1147, filed May 10, 2002).

33. On June 15, 1954, Little publicly emphasized the purported purpose of the newly-formed organization during a press conference when he stated that TIRC was "trying to find out the facts." 11310464-0500 at 0466 (U.S. Ex. 20,278).

34. Little had no compunction about offering unsubstantiated claims about the health benefits of cigarette use: "It is very well-known, for example, that tobacco has relaxed a great many people. It is a very good therapy for a great many nervous people." 11310464-0500 at 0466 (U.S. Ex. 20,278).

35. A confidential report of a TIRC meeting held October 19, 1954, made explicit Little's and Defendants' agenda: "He [Little] declared that both he and the members of the board

were aware of the attacks which had been made on tobacco for over 200 years, and wished to build a foundation of research sufficiently strong to arrest continuing or future attacks."

CTRMN007295-7297 at 7295 (U.S. Ex. 22,900).

36. Little tended to castigate as moralists those whose findings showed harms with tobacco use:

The right of an individual to determine his own level or threshold of convincibility is unquestioned. . . . There are and will always be individuals who are convinced without the need of experimental evidence that all tobacco in any form is evil, noxious and toxic. There are individuals with a similar attitude toward alcohol, coffee, and the use of drugs, sera or medicines.

Such assumptions stimulated some investigators to begin an enthusiastic hunt for the 'component' or 'components' in tobacco smoke that can be blamed for the unproved cause-and-effect relationship as well as for the reported production of skin cancer in some experiments with certain strains of laboratory mice.

501773418-3466 at 3428 (emphasis in original) (U.S. Ex. 20,686).

37. Little continually called for more research:

In the active and continuing discussions about tobacco use and health, there seems to be nearly complete agreement among scientists on only one point: The need for much more intensive research into the subject.

501773418-3466 at 3425 (U.S. Ex. 20,686).

38. Under Little's leadership, the major thrust of TIRC was to emphasize that human cancers were complex processes--difficult to study, and difficult to understand. Little directed TIRC towards what he called "pioneer research." He claimed that studies focused on cigarettes could "stifle or delay needed research to find the basic origins of lung cancer or cardiovascular

diseases, which are most powerful, diversified and deadly enemies to our well-being." Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 38 (R. 1147, filed May 10, 2002); 501773418-3466 (U.S. Ex. 20,686).

39. TIRC never developed an approach to carcinogenesis and tobacco that could resolve the question of the harms induced by cigarette smoking. Although some researchers explored alternative hypotheses, TIRC did not pursue direct research on cigarettes and disease. Rather than directly addressing the constituents in tobacco smoke and their demonstrated effect on the human body, TIRC directed the predominance of its resources to alternative theories of the origins of cancer centering on genetic factors and environmental risks. Most research projects funded through TIRC's SAB were irrelevant to the immediate questions of the harms of tobacco. At the same time, Little and TIRC used truisms such as the "need for more research," and "how much more there is to learn" to deflect attention away from what was known. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 39 (R. 1147, filed May 10, 2002); 501773418-3466 (U.S. Ex. 20,686).

40. Little also argued that there were no known carcinogens in tobacco tars (this despite Defendants' clear knowledge to the contrary). He repeatedly centered attention on the so-called "constitutional hypothesis," other environmental risks, and the need for more research:

Too little is known about many factors, including why people smoke or what kind of people become particularly heavy smokers.

The problem of causation of any type of cancer is complex and difficult to analyze. All research on this so-called constitutional disease is, and must be, painstaking and time consuming. There is not known today any simple or quick way to answer the question of whether any one factor has a role in causing human lung cancer.

Despite all the attention given to smoking as an accused factor in human lung cancer, no one has established that cigarette smoke, or any one of its known constituents, is cancer-causing to man. 501773418-3466 (U.S. Ex. 20,686); Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., (R. 1147, filed May 10, 2002).

(a) Upon Formation of the Enterprise, Defendants' Decades-Long Campaign of Misinformation Began with False Statements about the Health Risks of Smoking in the 1950s

41. TIRC and the Cigarette Company Defendants, and later the Tobacco Institute and TIRC's successor, the Council for Tobacco Research–U.S.A., Inc. ("CTR"), issued numerous false public statements, similar to those of Little, designed to mislead the public about the connection between cigarette smoking and disease. The public campaign of misinformation was undertaken with reckless disregard for the truth of the assertions – its sole purpose was to mislead.

42. In March 1954, in a public speech to the National Association of Tobacco Distributors, George Weissman, a Vice President with Defendant Philip Morris USA, reiterated Defendants' public position that medical evidence had not established the link between smoking and disease:

For never in the history of American industry – a history that not so incidentally had its origins in tobacco – has one industry been under attack as we are today, never has an industry's very existence been so dependent on its relations with the public.

Which brings me to another, and even more important current problem! – the current medical propaganda being directed against the cigarette industry by a small number of doctors and a large number of magazines, and newspapers. As many, if not more, distinguished scientists have disputed the arbitrary statements of the few doctors. As many, if not more, distinguished researchers, have pointed out other factors such as air pollution rather than cigarette smoking. There are many scientists who question the

statistics and even doubt the fact that there is a health question involved in cigarette smoking. Yet, who rated the headlines when the charges were made? Unfortunately, the cigarette industry. Where were the denials and counterclaims? You sometimes had to use a microscope to find them. . . . If we had any thought or knowledge that in any way we were selling a product harmful to consumers, we would stop business tomorrow.

2022239339-9343 at 9339-9341 (U.S. Ex. 21,766).

43. On April 14, 1954, TIRC published "A Scientific Perspective on the Cigarette Controversy," which restated the Frank Statement's false pronouncement that the Cigarette Company Defendants had accepted "an interest in people's health as a basic responsibility, paramount to every other consideration in our business." A total of 205,000 copies were printed and sent to 176,800 doctors, general practitioners and specialists. It was also sent to the deans of medical and dental colleges. The book and an accompanying press release went to a press distribution of 15,000, including editors of daily and weekly newspapers, consumer magazines, veterans magazines, and medical and dental journals, news syndicate managers, business editors, editorial writers, science writers, radio and TV commentators, news columnists, and Members of Congress. The Sunday *New York Daily News* (circulation 3,800,000) gave feature treatment to the booklet, devoting a major part of the page to comment and a cartoon. The story was also sent to some 1,400 radio stations. 1005039987-0008 at 9990 (U.S. Ex. 20,192); 2023335303-5304 (U.S. Ex. 20,388).

44. On October 12, 1954, in newspapers such as the *New York Daily Mirror*, Timothy Hartnett, Chairman of TIRC, was quoted as saying that "no clinical evidence has yet established tobacco to be the cause of human cancer." "Tobacco Unit Assails Report," *New York Daily*

Mirror, October 13, 1954, (U.S. Ex. 87,049); *Wall Street Journal*, October 12, 1954, (U.S. Ex. 87,050).

45. On November 24, 1954, the *Richmond Times-Dispatch* quoted E.A. Darr, President of R.J. Reynolds, as stating that there still was not a "single shred of substantial evidence" linking cigarette smoking and lung cancer directly. ATC2454600-4600 (U.S. Ex. 87,051).

46. In a December 27, 1954 statement by TIRC, the Cigarette Company Defendants promised not only to conduct research, but to make their findings known to the public. CTRMN004957-4959 (U.S. Ex. 21,457).

47. In a December 30, 1954 letter to employees, R.J. Reynolds's President and Chairman laid out how TIRC would perpetuate the "open controversy" on smoking and health:

There have been countless claims and denials developing around lung cancer and cigarette smoking. We want you to know our thoughts about this situation We think these unfounded and totally unproved claims will have less effect in 1955, because the public is realizing that there has not been any real proof of the relationship Of course, we are concerned about these unfounded claims, but the lack of fair play is also of concern. Most of the claims are based on statistics, and it is the dishonesty in the use of figures that surprises us. They say more cigarettes, more lung cancer. On this basis, they could say that lung cancer is increasing because there are more oil furnaces, more diesel engines, and increasing number of automobiles, and so on. You can prove anything by statistics if you are willing to use just a part of all the facts. We feel, as we know you do, that any disease like cancer deserves the most comprehensive and thorough scientific research. In an effort to get the facts, your company and certain others in the tobacco industry formed the Tobacco Industry Research Committee late in 1953. . . . These men are going after the facts with the assurance of absolute scientific freedom in all phases of their work.

500034021-4021 (U.S. Ex. 20,617).

48. By the end of 1954, the Cigarette Company Defendants created the appearance of legitimate controversy among scientists by funding and publicizing studies specifically tailored to discredit independent studies that established causation or established a link between smoking and ill health. This was accomplished mainly through TIRC. 681510669-0689 (U.S. Ex. 21,017).

49. Little, TIRC's Scientific Director, noted that one year after the Frank Statement was published, "[t]here is clear evidence that the phase of uncontrolled fear and emotional speculation created by the original premature and over-balanced statement of the American Cancer Society, is rapidly passing." Little described how reactions obtained from "contacts with individuals" showed "instead of a general skepticism concerning the aims and motives of the tobacco industry, one finds now only scattered and isolated examples of that unfriendly attitude." This change in attitude was a reflection of "the general trust which the American people have begun to place in our efforts." TM0020056-0065 at 0064 (U.S. Ex. 21,776).

50. Defendants made many false statements in furtherance of the goals of the Enterprise through publications. The Tobacco Information Committee, a TIRC subcommittee, published the *Tobacco and Health* newsletter on behalf of Defendants. The first issue, published in October 1957, contained many articles that disputed the relationship between smoking and disease, criticized research that supported such a relationship, and asserted that differing opinions existed regarding tobacco use and health. TIMN123324-3327 (U.S. Ex. 21,282).

51. Subsequent issues of *Tobacco and Health*, published by the Tobacco Institute,

likewise contained articles that disputed the relationship between smoking and disease, criticized research that supported the relationship, and asserted that differing opinions existed regarding tobacco use and health. The newsletter was sent periodically to the medical and scientific communities. It reached a circulation of 520,000 in 1962, with about 315,000 copies going to doctors, dentists, and medical schools. Publication of research results helped "make news" and was coordinated with other publicity efforts. The newsletter carried articles relating to tobacco and health and materials that did not deal with tobacco, which suggested other causes of cancer, such as viruses, air pollution, or previous chest ailments. The admitted purpose of the publication was to rebut and discredit the charges against tobacco. 511018410-8413 (U.S. Ex. 22,459); TIMN0070640-0656 (U.S. Ex. 21,299); TIMN0070657-0674 (U.S. Ex. 22,983); TIMN0081443-1457 (U.S. Ex. 21,307); TIMN0016964-6982 (U. S. Ex. 21,564).

52. Internal communications make it clear that the goal was to steer attention away from anything that might support the link between smoking and cancer. An October 18, 1968 memo from Hill & Knowlton to the Tobacco Institute's head of public relations advised: "The most important type of story is that which casts doubt on the cause and effect theory of disease and smoking." TIMN0071488-1491 (U.S. Ex. 21,302).

53. Public statements and press releases were released and promoted regularly. In a May 27, 1957 speech, George Weissman of Philip Morris USA falsely stated that "there is not one shred of conclusive evidence to support the link between cigarette smoking and lung cancer." 1002366508-6519 at 6514 (U.S. Ex. 20,134).

54. In 1957, after the American Cancer Society released figures from an

epidemiological study showing that quitting smoking lowered one's risk, that death rates from lung cancer were ten times higher than for men who never smoked, and that the primary danger of smoking, in terms of average years of life lost, was from heart disease, Defendants responded with formulaic dismissals, arguing that smoking had never been conclusively linked with any kind of disease. A June 4, 1957, TIRC press release, for example, quoted TIRC Chairman Hartnett as asserting that "the causes of cancer and heart disease are not yet known to medical science." The *New York Times* picked up the release and published it in its entirety, including this same quote from Hartnett. The *Atlanta Constitution* cited the TIRC's assertion that Hammond and Horn's new study, "like their previous reports, does nothing to change this fact." The *Chicago Daily Tribune* and many other newspapers carried these rebuffs from the TIRC, which by this time was also boasting of its support for research ("at 16 centers") while in fact doing nothing to honestly explore the growing mountain of evidence indicating hazards. ATC3234544-4544; E. C. Hammond and D. Horn, "Smoking and Death Rates--Report on 44 Months of Follow-up of 187,783 Men: Part II Death Rates by Cause," *JAMA* 166:1294 (1958) (U.S. Ex. 20,279); (U.S. Ex. 22,871); "TIRC Report on Progress of Cancer, Heart Research," *Tobacco and Health Report*, June/July 1960, at 2, (U.S. Ex. 87,052).

55. TIRC issued a July 15, 1957 press release entitled "Scientist Comments on Benzopyrene Report" where it disputed the United States Surgeon General's report that benzopyrene had been identified in cigarette smoke, and stated that scientists had concluded that benzopyrene in cigarette smoke cannot be a cause of cancer in smokers. 11313243-11313244 (U.S. Ex. 20,280); TIMN123314-3317 (U.S. Ex. 21,345).

56. A December 16, 1957 press release from TIRC stated that "no substance has been found in tobacco smoke known to cause cancer." 500518708-8711 at 8708 (U.S. Ex. 21,834).

57. On June 27, 1958, Bowman Gray, President of R.J. Reynolds, told a meeting of the Flue-Cured Tobacco Co-operative Stabilization Corp.:

The theory that tobacco smoking is a factor in lung cancer causation rests almost entirely on statistical observations. These are chiefly that there are more smokers among lung cancer patients than among other patients and that a higher proportion of lung cancer seems to appear among smokers than among non-smokers. The statement that a mere statistical association is neither proof nor good evidence of a cause and effect relationship has been asserted so often by so many scientists that it sounds almost like a broken phonograph record. Nevertheless, it remains as true and significant as ever. Yet, assiduous search by these methods has failed to identify sufficient quantity of any substance that could account for even the relatively infrequent results obtained by painting on skins of mice. Additionally, there is the fact that all tobacco smoke inhalation studies, conducted with different species of animals over a period of several years, have consistently failed to produce any bronchogenic carcinoma – the type of lung cancer most frequently found in human beings.

TIMN436721-6734 at 6730, 6732 (U.S. Ex. 21,366).

58. With the rising popularity of filters, Cigarette Company Defendants found themselves in a delicate position of seeking to promote these new products as safer without explicitly indicating health problems with their previous products. They continued to insist that the rise of filter cigarettes merely reflected the nature of consumer demand. James P. Richards, President of the Tobacco Institute, explained on June 30, 1958:

The cigarette industry has not changed its mind. Our position was and is based on the fact that scientific evidence does not support the theory that there is anything in cigarette smoke known to cause human lung cancer. . . . [T]he production and marketing of filter

cigaretts are matters of individual company competitive business. Anyone familiar with the tobacco industry knows that tobacco manufacturers constantly compete to make products to please customers.

TIMN0122775-2775 (U.S. Ex. 21,326).

59. In a newspaper article published on November 19, 1958, Little was quoted as saying that there was scant clear evidence that smoking caused lung cancer, much more research was needed, and TIRC would continue to provide funds for independent research in universities and hospitals until the final answers were obtained. 501860595-0595 (U.S. Ex. 21,233).

60. In a December 27, 1958 public statement, Hartnett, still TIRC's Chairman, emphasized that links to smoking and disease remained undetermined and asserted that an increasing number of factors were being associated statistically with lung cancer incidents. He cited occupational exposures, specific air pollutants, place of birth and residence, previous lung ailments, and nutrition, claiming that these factors and others were subjects of much scientific investigation and further claiming that "at its formation in January 1954, the Tobacco Industry Research Committee stated its fundamental position: 'We believe the products we make are not injurious to health. We are pledging aid and assistance to the research effort and to all phases of tobacco use and health. That statement and pledge are reaffirmed by the members of the Tobacco Industry Research Committee.' 500518759-8761 at 8761 (U.S. Ex. 20,636).

(b) Defendants Knew Their Public Statements Were False and Engaged in Their Campaign of Public Misinformation Pursuant to Their Agreed-Upon Strategy with Reckless Disregard for Its Truth or Falsity

61. The public statements issued through organizations like TIRC and its successor, CTR, as well as the Tobacco Institute and the Center for Indoor Air Research ("CIAR"), and also by the Cigarette Company Defendants themselves, were flatly inconsistent with Defendants' actual knowledge about the link between smoking and disease.

62. At the same time that the Defendants assured the public through their "Frank Statement" that "there is no proof that cigarette smoking is one of the causes [of cancer]," they documented a large number of known carcinogens delivered in cigarette smoke.

63. During the 1950s, although the Cigarette Company Defendants (except for Liggett) agreed not to perform in-house biological research that might yield evidence of causation, in fact a number of studies were conducted to discover and analyze the constituents found in cigarette smoke, including successful attempts to replicate Wynder's experiments painting mice with tar condensates.

64. Although the presidents of Brown & Williamson and R.J. Reynolds signed the 1954 Frank Statement, internal documents at both companies were inconsistent with the public position taken. A December 24, 1952 "Report of Progress – Technical Research Department" from B&W contained a "Cancer" section, which noted: "The B&W lab has in the past made a partial isolation and identification of the aromatic hydrocarbons, benzopyrene, in both smoke and original tobacco from Raleigh blend cigarettes." The report refers to benzopyrene as a "carcinogenic hydrocarbon." 65020092-0092 (U.S. Ex. 85,927).

65. R.J. Reynolds also knew that smoking was a causal factor for disease as early as 1953. R.J. Reynolds's knowledge is documented in a February 1953 Report drafted by Claude Teague, an R.J. Reynolds research scientist, entitled "Survey of Cancer Research with Emphasis on Possible Carcinogens from Tobacco," which stated: "On the basis of the information at hand, it would appear that polynuclear aromatic compounds occur in the pyrolytic products of tobacco. Bensyrene and 'N-bensyrene[sic], both carcinogens, were identified in the distillates. . . . Studies of clinical data tend to confirm the relationship between heavy and prolonged tobacco smoking and incidence of cancer of the lung." Teague further acknowledged: "Some workers have attempted to produce experimental cancers in test animals by application of tars obtained from tobacco, tobacco smoke, and other materials derived from tobacco." 501932947-2968 at 2952-2953 (U.S. Ex. 21,407).

66. In 1954, R.J. Reynolds knew that cigarette smoke contained carcinogenic polycyclic hydrocarbons: "...approximately 60 polycyclic hydrocarbons have been identified—mostly on the basis of spectrophotometric evidence. Of these, eight are carcinogenic to mouse epidermis and another five or six may be carcinogenic. While there is no known laboratory evidence to show that these compounds have any carcinogenic effect on the human respiratory system, such an effect is implied since many authorities have suggested that it would be better for the consumer if cigarette smoke were devoid of such compounds." 500945991-5591 (U.S. Ex. 87,979).

67. In response to this information, RJ Reynolds sought to remove some of those compounds, at the same time denying that they existed: "[h]aving confirmed and extended the

early published findings on polycyclic hydrocarbons in cigarette smoke, we initiated a lengthy research program to develop methods to lessen the amounts of these potentially dangerous compounds in cigarette smoke." 500945991-5991 (U.S. Ex. 87,979).

68. Alan Rodgman, a scientist at R.J. Reynolds, drew similar conclusions in 1956.

He wrote an extensive paper on "The Analysis of Cigarette Smoke Condensate." In it, Rodgman explained:

The research described in this report represents a concerted effort to determine whether or not the polycyclic aromatic hydrocarbons are present in cigarette smoke condensate. One of the major objections offered to previous investigations is that the identification of specific compounds solely on the basis of ultraviolet absorption studies is not definitive. Since the present research describes the actual isolation, identification, and characterization of several polycyclic aromatic hydrocarbons, including the highly carcinogenic 3, 4-benzpyrene, the major criticism of past research are now nullified.

Rodgman further wrote of the studies undertaken using standard Camel cigarettes:

In view of this data, it is logical to assume that the carcinogenic activity of cigarette smoke condensate is due to the presence of one or more carcinogenic polycyclic aromatic hydrocarbons.

Since it is now well-established that cigarette smoke does contain several polycyclic aromatic hydrocarbons, and considering the potential and actual carcinogenic activity of a number of these compounds, a method of either complete removal or almost complete removal of these compounds from smoke is required.

501008241-8293 at 8254, 8279 (U.S. Ex. 20,667).

69. In 1959, Rodgman summarized his current research on known carcinogens in cigarettes in a memorandum sent to R.J. Reynolds executive Kenneth H. Hoover:

Some thirty-odd polycyclic hydrocarbons have since been similarly characterized in these laboratories. Of these eight are carcinogenic to mouse epidermis. Cholanthrene, a potent carcinogen, is one of three not yet reported by other investigators. In April of 1959, the first positive isolation and identification of 3, 4 benzpyrene, citing data similar to ours, was reported by other investigators.

TIOK0034800-4803 at 4800-4801 (U.S. 21,249).

70. In 1962, Rodgman offered his assessment of "the smoking and health problem":

Although the major part of the sales of this company consists of cigarettes, what the Company sells is cigarette smoke. This company, therefore, should be concerned with the physiological properties and composition of cigarette smoke. The benefits from such knowledge are obvious, particularly it anticipates possible governmental regulation. During the past two decades, cigarette smoke has been the target of a host of studies relating it to ill-health and particularly to lung cancer. The majority of these studies incriminate cigarette smoke from a health viewpoint.

Epidemiological data: The results of 34 different statistical studies show that cigarette smoking increases the risk of developing lung cancer. Many authorities believe the relationship to be one of cause-and-effect. . . . The statistical data from the smoking-health studies are almost universally accepted. After more than ten years, criticisms of the studies have been reduced to the dictum A statistical study cannot prove a cause-and-effect relationship between two factors.

Rodgman made explicit that reports within the industry considered the evidence of smoking's harm convincing:

The Evidence to Date: Obviously, the amount of evidence accumulated to indict cigarette smoke as a health hazard is overwhelming. The evidence challenging this indictment is scant. Attempts to shift the blame to other factors, e. g., air pollutants, necessitates acceptance of data similar to those denied in the cigarette smoke case.

It has been repeatedly stated that some scientists discount the

cigarette smoke-lung cancer theory. This is true. But it should be noted that many of those quoted in this regard are on record with contrasting views, e.g., Berkson, the statistician, has stated "the definitive important finding of these statistical studies is not that there is an association between smoking and lung cancer, but that there is an association between smoking and deaths from all causes generally.

Rodgman expressed concern and frustration that most aspects of the smoking and health questions had been left to the TIRC. He complained:

If a company pleads "Not guilty" or "Not proven" to the charge that cigarette smoke (or one of its constituents) is a factor in the causation of lung cancer or some other disease, can the company justifiably take the position that publication of data pertaining to cigarette smoke composition or properties should be withheld because such data might affect adversely the company's economic status when the company has already implied in its plea that no such etiologic effect exists?

It is not my intent to suggest that this Company accept the cigarette-smoke-health data at face value, but I do suggest that we actively participate in cigarette smoke-health studies.

504822847-2852 at 2847-2848, 2850-2852 (U.S. Ex. 20,735).

71. Rodgman's views were consistent with what visiting scientists from the United Kingdom

observed in 1958 about researchers working for the Cigarette Company Defendants. While TIRC

under Little's leadership never wavered from its essential mission of attempting to maintain

"controversy" and an "open question" while avoiding research centered on the potential impact of

smoking on health, Defendants' researchers did not necessarily accept this approach. The three British

scientists reported widespread acceptance that smoking causes disease among top officials and

scientists in the United States tobacco industry, including those at TIRC, Liggett, Philip Morris USA,

and American. They further noted that there was virtual consensus among researchers within the industry that cigarettes played a role in the production of human cancers:

With one exception (H.S.N. Greene) the individuals whom we met believed that smoking causes lung cancer if by 'causation' we mean any chain of events which leads finally to lung cancer and which involves smoking as an indispensable link. In the U.S.A. only Berkson, apparently, is now prepared to doubt the statistical evidence and his reasoning is nowhere thought to be sound.

In their opinion T.I.R.C. has done little if anything constructive, the constantly re-iterated 'not proven' statements in the face of mounting contrary evidence has thoroughly discredited T.I.R.C., and the S.A.B. of T.I.R.C. is supporting almost without exception projects which are not related directly to smoking and lung cancer. Liggetts [sic] felt that the problem was sufficiently serious to justify large-scale investment by the Company directly in experimental research on smoke and cancer, accepting privately that a strong case against tobacco had been made out and avoiding any public comment until their own research had provided something concrete to offer.

The majority of individuals whom we met accepted that beyond all reasonable doubt cigarette smoke most probably acts as a direct though very weak carcinogen on the human lung. The opinion was given that in view of its chemical composition it would indeed be surprising if cigarette smoke were not carcinogenic. This undoubtedly represents the majority but by no means the unanimous opinion of scientists in U.S.A. These individuals advised us that although it is not possible to predict unambiguously the effect of any substance on man from its effect on experimental animals the generally successful use of animals in other fields as a model for man fully justifies their use in our problem.

TINY0003106-3116 at 3108, 3111-3112 (U.S. Ex. 21, 369).

72. By 1960, R.J. Reynolds believed that there was a clear, strong, inherent risk from

smoking for not only lung cancer, but also for emphysema and COPD. Deposition of David

Townsend, United States v. Philip Morris et al, July 24, 2002, 178:1-180:24.

73. In 1968 RJR internally published findings regarding exposure of rats to cigarette smoke:

[t]he histology of the tissues from the rat which had smoked TEMPO cigarettes via an indwelling tracheal cannula has been completed with the results given on the following page. 1. A diffuse marked emphysema throughout the lungs. 2. Deposition of pigment (tars?) in lung tissue, mediastinal lymph nodes and tracheal adnexia. 3. Lymphocyte infiltration. 4. Frequent epithelial hyperplasia in trachea and bronchioles.

515384987-4993 at 4987-4988 (U.S. Ex. 87,980).

74. Lorillard conducted research which pointed to cigarette smoking as a cause of cancer and other diseases. In the early 1960s, Lorillard conducted in-house experiments on animals that showed ciliastatic effects of tobacco smoke on the respiratory tract. Deposition of Alexander Spears, Blue Cross and Blue Shield of New Jersey v. Philip Morris Inc., 18-CIV-3287 (JBW) (D.N.J.), March 23, 2000, 144:4-22.

75. Philip Morris USA researchers and senior executives knew that cigarette smoking caused disease as early as the 1950s.

76. A July 20, 1956 confidential memo to Philip Morris USA President and Chief Executive Officer O. Parker McComas, Executive Vice President Joseph F. Cullman, III, and Vice Presidents George Weissman, W.H. Hatcher, and R.N. DuPuis, concerning new product designs demonstrated Philip Morris USA's knowledge that smoking caused disease. In the memo, titled "Confidential memo re: new product advantages for ventilated cigarettes," Philip Morris USA scientists observed:

Decreased carbon monoxide and nicotine are related to decreased harm to the circulatory system as a result of smoking. . . . [C]arbon dioxide, although non-toxic in small amounts, is a respiratory contaminant, and its reduction in smoking is desirable. . . . [D]eased irritation is desirable . . . as a partial elimination of a cancer hazard. Decreased carbon monoxide and nicotine are related to decreased harm to the circulatory system as a result of smoking. . . . [I]ncreased oxygen content, according to the Warbury theory, means less chance of depriving cells of oxygen and of starting a possible chain of events leading to the information of a cancer cell.

2023226912-6913 at 6912 (U.S. Ex. 20,383).

77. A July 24, 1958 memorandum written by C. Mace, head of research for Philip Morris USA, admitted that Philip Morris USA was aware that smoking was a causal factor for lung cancer. The Mace memorandum described a 1958 memorandum sent by a Philip Morris USA researcher to the company Vice President of Research and Development – who later became a member of its Board of Directors – stating that "the evidence . . . is building up that heavy cigarette smoking contributes to lung cancer either alone or in association with physical and physiological factors." 1000305086-5087 at 5086 (U.S. Ex. 20,090).

78. Dr. Helmut Wakeham, a high ranking Philip Morris USA scientist, recognized the cancer-causing effect of cigarette smoke in a September 22, 1959 memorandum: "One of the main reasons people smoke is to experience the physiological effects of nicotine on the human system. Nicotine, to the best of present knowledge, does not produce cancer. Hence, in theory one could achieve the major advantage of smoking without the hazard of cancer. But Nicotine in tobacco smoke is present in the tar phase." 1005039423-9424 at 9424 (U.S. Ex. 21,657).

79. One Philip Morris USA report from the late 1950s notes that there were already

eleven studies demonstrating "an association between mortality (death) or morbidity (illness) from cardiovascular disease and cigarette smoking." This same report, summarizing an American Heart Association statement, noted that since coronary disease was "the foremost cause of death in the American population" the number of individuals suffering from this disease would have to be "many millions." The report noted the "convincing evidence which causally relates cigarette smoking to an obstructive diseases of the arteries" and that "many physicians" believe that "certain patients should not smoke." 1005039476-9476 (U.S. Ex. 21,751); 1005039477-9477 (U.S. Ex. 23,058); 1005039478-9480 at 9478 (U.S. Ex. 22,204).

80. On November 15, 1961, Wakeham offered a proposal to the Philip Morris USA Research & Development Committee in New York, to investigate the possibilities of reducing carcinogens in smoke. The proposal listed fifteen carcinogens, or tumor starters, and twenty-four co-carcinogens, or tumor promoters, in cigarette smoke. Wakeham also cited the belief that "cardiovascular ailments that may arise from smoking are due to the physiological effects of nicotine," noting, in particular, nicotine's "[s]pecific effects on the adrenal medulla, causing it to discharge epinephrine, a hormone which accelerates the heartbeat, contracts the peripheral blood vessels, and raises the blood pressure." Philip Morris identified 84% of the more than 400 gas and particulate compounds in cigarette smoke, including those that he specifically recognized as carcinogens, in sidestream, or secondhand, smoke. Wakeham informed his superiors at Philip Morris USA that "a medically acceptable low-carcinogen cigarette may be possible," but indicated that it would take "money, time and unfaltering determination." 2023193305-3328 at 3327 (emphasis in original) (U.S. Ex. 20,381).

81. On April 20, 1962, Wakeham recommended diversification of Philip Morris USA's business at a greater rate due to the evidence that smoking leads to disease. 1001882121-2122 (U.S. Ex. 20,120).

82. At the very time that Defendants worked in concert to disparage meticulously conducted scientific investigations, their advertisements offered unverifiable reassurances from "medical specialists." At the same time that industry researchers, such as Rodgman of R.J. Reynolds and Wakeham of Philip Morris USA, were detailing carcinogenic substances in cigarettes and potential strategies for their removal, TIRC put out a press release asserting: "Chemical tests have not found any substance in tobacco smoke known to cause human cancer or in concentrations sufficient to account for reported skin cancer in animals." 500518873-8875 at 8874 (U.S. Ex. 20,635); Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., (R. 1147, filed May 10, 2002).

83. Liggett replicated Wynder's mouse-skin painting research and knew that smoke constituents caused carcinogenic tumors.

84. After publication of Wynder's findings and a Rand Development Corporation study detecting carcinogenic compounds in the smoke from ordinary cigarette paper, Liggett hired ADL to attempt to replicate the results. In a memorandum dated March 15, 1961, ADL summarized:

1. There are biologically active materials present in cigarette tobacco. These are: a) cancer causing b) cancer promoting c) poisonous d) stimulating, pleasurable, and flavorful.
2. There is no reason why the poisonous group, CO, HCN, NO₂, etc., cannot be reduced, even though they are not seen as a primary

SECTION IV. A.

health hazard. Methods for removal are: a) filtration (treated carbon, etc.) b) treatment for removing precursors, CN elimination c) addition as a reactant (urea for NOs).

3. Cancer promoting materials, esters, phenols, amines, can possibly be reduced by some treatment, extraction, etc.

4. The cancer-causing materials apparently are in many substances that are pyrolyzed but seem to be associated with tobacco in greater concentration than for primarily cellulose.

Liggett and ADL agreed these findings would remain "confidential." 2021382496-2498 at 2496 (U.S. Ex. 20,345) (U.S. Ex. 36,738).

85. A Liggett document prepared on April 24, 1963 accepted inferences of a causal relationship between smoking and development of carcinoma that was suggested by non-Cigarette Company Defendant scientists. 2022969727-9728 (U. S. Ex. 20,368).

86.

682621615-1617 at 1615 (U.S. Ex. 54,180); Deposition of M. Lance

Reynolds, United States v. Philip Morris, et al., September 12, 2002, 350:12-351:14, 352:14-353:13 (Confidential).

87. On July 3, 1963, Addison Yeaman, Brown & Williamson in-house counsel, sent a wire cable to A.D. McCormick, a lawyer for BATCo, regarding his attempt to keep the results of legitimate research projects, Project Hippo and the Griffith Filter, from the Surgeon General despite his knowledge that the Surgeon General was preparing the first comprehensive report on smoking and health. Yeaman informed McCormick that "Hoyt of TIRC agreed to withhold disclosure Battelle report to TIRC or SAB until further notice from me. Finch agrees submission Battelle or Griffith developments to Surgeon General undesirable and we agree continuance of Battelle work useful but disturbed at its implications re cardiovascular disorders. . . . We believe combination Battelle work and Griffith's developments have implication which increase desirability reevaluation TIRC and reassessment fundamental policy re health." 689636015-6015 (U.S. Ex. 86,879).

88. Defendants' internal documents also reveal that top officials conceded that there was virtually no evidence to dispute their internal findings confirming that smoking causes adverse health effects, evidencing that Defendants' issuance of public statements denying causation occurred without any regard to their truthfulness. The President of B&W acknowledged in October 1962, in a letter to the Chief Executive Officer of R.J. Reynolds: "Let me make my position perfectly clear. If we are able to make strong, affirmative, well-documented statements which might tend to convince the public that the charges against our industry are invalid and insupportable, I would subscribe whole-heartedly to a series of paid

advertisements in which we could tell our story. But . . . we cannot take such a position."

515857280-7282 at 7281 (U.S. Ex. 20,871).

89. The views of scientists at the cigarette companies that smoking caused cancer, as observed by visiting scientists and as reflected in internal documents, were consistent with those in the mainstream scientific community, where research into smoking and health issues continued through the 1950s and into the 1960s.

(c) Continuing Research by Mainstream Scientists in the Late 1950s and Early 1960s Confirmed the Accuracy of Earlier Scientific Investigation

90. In 1956, at the urging of Surgeon General Leroy Burney, a study group on smoking and health was organized by the American Cancer Society, the American Heart Association, the National Cancer Institute, and the National Heart Institute. This group of distinguished experts met regularly to assess the character of the scientific evidence relating to tobacco and health. At that time the group noted that sixteen studies had been conducted in five countries all showing a statistical association between smoking and lung cancer. Among the studies they summarized, it was demonstrated that: lung cancer occurs five to fifteen times more frequently among smokers than non-smokers; on a lifetime basis one of every ten men who smoke more than two packs a day will die of lung cancer; and cessation reduces the probability of developing lung cancer. Strong, Frank M., et al., "Smoking and Health: Joint Report of the Study Group on Smoking and Health," *Science* 124:1129-1133 (1957), 2063629199-9203 (U.S. Ex. 23,005).

91. They also noted that the epidemiological findings were supported by animal studies in which malignant neoplasms had been produced by tobacco smoke condensates.

Further, human pathological and histological studies added evidence to strengthen the "concept of causal relationship." The authors concluded:

Thus, every morphologic stage of carcinogenesis, as it is understood at present, has been observed and related to the smoking habit.

The sum total of scientific evidence establishes beyond reasonable doubt that cigarette smoking is a causative factor in the rapidly increasing incidence of human epidermoid carcinoma of the lung.

Strong, Frank M., et al., "Smoking and Health: Joint Report of the Study Group on Smoking and Health," *Science* 124:1129 (1957), 2063629199-9203 (U.S. Ex. 23,005).

92. E. Cuyler Hammond and Daniel Horn conducted a massive epidemiological study of smoking and lung cancer under the auspices of the American Cancer Society. In the Hammond and Horn study more than 200,000 men were followed prospectively for nearly four years; during this period 12,000 died. They found that not only was lung cancer far more prevalent among those who smoked as a cause of death (twenty-four times more than non-smokers), so too was heart disease and circulatory disease. Hammond and Horn estimated that among smokers, smoking might account for up to 40% of their mortality. Hammond, E. Cuyler, and Daniel Horn, "Smoking and Death Rates--Report on Forty-four Months of Follow-up of 187,783 Men," *JAMA*, 2840-2857 (March 15, 1958) (U.S. Ex. 20,279).

93. In January 1959, another distinguished group of cancer researchers offered a substantive review of the available evidence linking cigarettes to lung cancer. This group carefully considered the range of alternative hypotheses to account for the significant rise in cases of, and deaths from, lung cancer. They concluded:

The magnitude of the excess lung-cancer risk among cigarette

smokers is so great that the results can not be interpreted as arising from an indirect association of cigarette smoking with some other agent or characteristic, since this hypothetical agent would have to be at least as strongly associated with lung cancer as cigarette use; no such agent has been found or suggested. The consistency of all the epidemiologic and experimental evidence also supports the conclusion of a causal relationship with cigarette smoking, while there are serious inconsistencies in reconciling the evidence with other hypotheses which have been advanced. Unquestionably there are areas where more research is necessary, and, of course, no single cause accounts for all lung cancer. The information already available, however, is sufficient for planning and activating public health measures.

This paper also explicitly refuted ongoing critiques by statisticians Ronald Aylmer Fisher and J. Berkson, often trumpeted by Defendants. Cornfield, Jerome, et al., "Smoking and Lung Cancer: Recent Evidence and Discussion of Some Questions," *Journal of the National Cancer Institute* 22.1:173, 195 (1959), 1004810186-0216 (U.S. Ex. 20,184).

94. Cornfield noted that investigations of the health implications of smoking had significantly accelerated following the epidemiological studies earlier in the decade. Not only did the new prospective studies conducted in diverse populations confirm and strengthen the earlier findings, so too did pathological and toxicologic analyses. Cornfield and colleagues also noted that the persistent "debate" about the scientific findings regarding cigarette smoking was driven by Defendants:

It would be desirable to have a set of findings on the subject of smoking and lung cancer so clear-cut and unequivocal that they were self-interpreting. The findings now available on tobacco, as in most other fields of science, particularly biologic science, do not meet this ideal. Nevertheless, if the findings had been made on a new agent, to which hundreds of millions of adults were not already addicted, and on one which did not support a large industry, skilled in the arts of mass persuasion, the evidence for the

hazardous nature of the agent would generally be regarded as beyond dispute.

As Cornfield suggested, the very idea of a "controversy" had been manufactured by TIRC and other public relations efforts by the Cigarette Company Defendants. Cornfield, Jerome, et al., "Smoking and Lung Cancer: Recent Evidence and Discussion of Some Questions," *Journal of the National Cancer Institute* 22.1:198 (1959), 1004800186-0216 (U.S. Ex. 20,184).

95. In November 1959, Surgeon General Burney offered his own evaluation of the scientific evidence linking cigarettes to lung cancer. Burney revisited the epidemiologic data, as well as other confirmatory animal and pathological investigations. After a thorough assessment of current data, Burney came to the following conclusions:

There can be no doubt that a significant portion of the increase in lung cancer is real. This rise has not been caused solely by improvements in diagnostic techniques, better reporting on death certificates, or an increase of older persons in the population. If we accept as valid the sequence of pathological changes given above the prevention of lung cancer, to a large extent, becomes possible. This will be accomplished if carcinogenic substances from any source can be kept out of the air inhaled into the lungs.

Burney, Leroy E., "Smoking and lung cancer: a statement of the Public Health Service," *JAMA* 71:1835 (1959) (U.S. Ex. 58,697).

96. For Burney, this fact meant that there were important and timely opportunities to prevent disease:

The Public Health Service believes that the following statements are justified by studies to date:

1. The weight of evidence at present implicates smoking as the principal etiological factor in the increased incidence of lung cancer.

2. Cigarette smoking particularly is associated with an increased chance of developing lung cancer.
3. Stopping cigarette smoking even after long exposure is beneficial.
4. No method of treating tobacco or filtering the smoke has been demonstrated to be effective in materially reducing or eliminating the hazard of lung cancer.
5. The nonsmoker has a lower incidence of lung cancer than the smoker in all controlled studies, whether analyzed in terms of rural areas, urban regions, industrial occupations, or sex.
6. Persons who have never smoked at all (cigarettes, cigars, or pipe) have the best chance of escaping lung cancer.

Unless the use of tobacco can be made safe, the individual person's risk of lung cancer can best be reduced by elimination of smoking.

Burney, Leroy E., "Smoking and lung cancer: a statement of the Public Health Service," *JAMA* 71: 1835-36 (1959) (U.S. Ex. 58,697).

97. In 1960, the World Health Organization ("WHO") also issued a statement signaling their own confirmations of the Surgeon General's conclusions, after conducting a review of the scientific findings. World Health Organization, "Epidemiology of cancer of the lung: Report of a study group," *WHO Technical Reports*:192 (1960), 2015064871-4871 (U.S. Ex. 20,336).

98. In 1962, yet another thorough and far-reaching assessment of the scientific evidence reached these same conclusions. The British Royal College of Physicians, after two years of investigation, stated, "[d]iseases associated with smoking now cause so many deaths that they present one of the most challenging opportunities for preventive medicine today." The

report concluded:

The strong statistical association between smoking, especially of cigarettes, and lung cancer is most simply explained on a causal basis. . . . The conclusion that smoking is an important cause of lung cancer implies that if the habit ceased, the death rate from lung cancer would eventually fall to a fraction, perhaps to one fifth or even, among men, to one tenth of the present level. Since the present annual number of deaths attributed to lung cancer before the age of retirement is some 12,000 . . . a large amount of premature shortening of life is at issue.

As this statement makes clear, lives were at stake in the assessment of this scientific evidence linking cigarettes to disease. Over and over again, independent critical evaluation of the scientific findings that cigarettes caused lung cancer reached the same conclusion. Royal College of Physicians of London, *Smoking and Health: Summary and Report of the Royal College of Physicians of London on Smoking in Relation to Cancer of the Lung and Other Diseases*, 1 (New York, London: Pitman Publishing Co. 1962) (U.S. Ex. 64,056).

99. By this time, the evidence supporting the conclusion that cigarette smoking causes cardiovascular disease was significant. The Framingham Study, a comprehensive prospective cohort study, had been initiated by the Public Health Service in 1948. The participants in the study included 2,282 men and 2,845 women aged twenty-nine through sixty-two and free of coronary heart disease at initial examination, based on a random subsample of the residents of Framingham, Massachusetts. A standardized cardiovascular examination at entry included information on habits, physical characteristics, and blood chemistries. Biennial reexamination was undertaken for ascertainment of cardiovascular disease and changes in characteristics. Cardiovascular disease case ascertainment included community and mortality surveillance

activities. By 1959, results of the long term, prospective Framingham Study had shown a three-fold increase in the incidence of myocardial infarction and coronary deaths in men who were heavy smokers, as compared to non-smokers, pipe and cigar smokers, and former smokers. By 1972, analysis through twenty-four years of follow-up showed cigarette smoking to be strongly related to myocardial infarction and death from coronary heart disease, with excess risk increasing progressively with the number of cigarettes smoked. Dawber T. Kannel W., Revotskie N., Stokes J., Kagan A., Gordon T., "Some factors associated with the development of coronary disease: Six years' follow-up experience in the Framingham study," *Amer. J. Public Health*: 1349-1356 (1959) (U.S. Ex. 64,229); Kannel B., "Some lessons in cardiovascular epidemiology from Framingham," *Amer. J. Cardiol.* 37:269-82 (1976) (U.S. Ex. 64,110); Expert Report of Ira S. Ockene, United States v. Philip Morris. et al., (R. 668, filed November 15, 2001); Doyle, J.T. et al., "The Relationship of Cigarette Smoking to Coronary Heart Disease," 190 *JAMA* 108-112 (Dec. 1964), VXB3290060-0064 (U.S. Ex. 88,653).

100. Subsequently, men who were cigarette smokers at the beginning of the Framingham study, but successfully stopped smoking had heart attack rates that were half that experienced by those who continued to smoke. This difference was not explained by other changes in coronary risk factors. Gordon, T. et al., "Death and Coronary Attacks in Men After Giving Up Cigarette Smoking," *Lancet* 1345-1348 (Dec. 1974), DXA0390696-0699 (U.S. Ex. 88,654).

101. Large-scale prospective studies of mortality in Britain in the 1950s showed a step-wise association between the amount of tobacco consumed and mortality from coronary heart

disease. Doll, R. and Hill, A., “Lung cancer and other causes of death in relation to smoking,” *Brit. Med. J.* 2:1071-81 (1956), TIFL0515048-5058 (U.S. Ex. 77,031).

102. In 1952, the New York State Health Department established at the Albany Medical College a prospective study of male civil servants working in Albany. Participation was obtained from 87% of eligible men aged forty through fifty-four, of whom 1,823 were free of coronary heart disease at initial examination. After six years, the incidence of myocardial infarction and death from coronary heart disease was significantly higher in cigarette smokers than in nonsmokers. Subsequent analysis after ten years of follow-up confirmed these findings. Doyle J., Heslin A., Hillehoe H., Formel P., “Early diagnosis of ischemic heart disease,” *New Eng. J. Med.* 261:1096-1101 (1959) (U.S. Ex. 87,053); Expert Report of Ira S. Ockene, United States v. Philip Morris, et al., (R. 668, filed November 15, 2001).

103. Study after study obtained consistent results: selected Minnesota businessmen and professionals were examined beginning in 1948; the Chicago Western Electric Company Study followed 1,981 workers beginning in 1957; the Chicago Peoples Gas Company medical department examined 1,264 persons beginning in 1958; the Minnesota Based Railroad Worker Study looked at coronary heart disease in 65% of the railroad workers in the northwest sector of the United States beginning in 1958; the Tecumseh Health Study began examination of the entire community of Tecumseh, Michigan in 1959. All of these studies revealed a higher incidence of myocardial infarction and death from coronary heart disease in smokers than in nonsmokers. Pooling Project Research Group, “Relationship of blood pressure, serum cholesterol, smoking habit, relative weight and ECG abnormalities to incidence of major coronary events: final report

of the Pooling Project,” *J. Chronic Dis.* 31:201-306 (1978) (U.S. Ex. 64,093); Liu K., Cedres L.B., Stamler J., et al., “Relationship of education to major risk factors and death from coronary heart disease, cardiovascular diseases and all causes, Findings of three Chicago epidemiologic studies,” *Circulation* 66:1308-14 (1982) (U.S. Ex. 64,098); Kemp H.G., Kronmal R.A., Vlietstra R.E., Frye R.L., “Seven year survival of patients with normal or near normal coronary arteriograms: a CASS registry study,” *J. Am. Coll. Cardiol.* 7:479-83 (1986) (U.S. Ex. 87,054); Alpert J., Braunwald E., “Pathological and clinical manifestations of acute myocardial infarction,” in *Heart Disease: A Textbook of Cardiovascular Medicine*, Volume 2, 1309-1352 (Braunwald E. ed., 1980) (U.S. Ex. 87,055); Expert Report of Ira S. Ockene, United States v. Philip Morris, et al., (R. 668, filed November 15, 2001).

(d) The Enterprise Responded to this Scientific Investigation in the Public Health Community by Intensifying Their Fraudulent Campaign in the Late 1950s and Early 1960s

104. The Tobacco Institute, TIRC, and its successor, CTR, were front and center in the Defendants' response to the mounting scientific evidence. TIRC representatives frequently issued statements during this period explaining: "Its purpose [TIRC] is solely to obtain new information and to advance human knowledge in every possible phase of the tobacco and health relationship." Nonetheless, the TIRC program funded almost no research whatsoever that focused on the constituents of cigarette smoke and/or the health of smokers. MNAT00515648-5651 at 5468 (U.S. Ex. 21,227).

TIRC's direct responses to the public statements emerging from groups of scientists and policy-makers were consistent with TIRC's general message. Little issued the following

statement upon the publication of Burney's 1959 evaluation:

Despite the recent research trends, the conclusions set forth in the Public Health Service review rely almost entirely on past reports that are no more conclusive today than when these reports were first published. Most of the points are not new but are familiar to the American public because they were first advanced some years ago in statistical studies that admittedly are not supported by experimental evidence.

This despite the fact that Burney had carefully evaluated the science of recent investigators, and did not limit his assessment to epidemiological studies. 503283464-3467 at 3465-3466 (U.S. Ex. 22,981).

105. The Tobacco Institute, the public relations entity which was created in 1958, worked closely with TIRC, despite claims of independence. The Tobacco Institute explained its related strategy in anticipation of the Burney report:

Comment from TIRC for the press remains an effective way to meet anti-tobacco publicity efforts and emphasizes the multiple factors that should be considered. This, of course, is complemented with a continuing program of supplying information to give editors and writers a balanced perspective on questions of tobacco and health.

Published in the November 28 issue of the Journal of the American Medical Association, the article signed by the Surgeon General presented a selection of published data about smoking as related to lung cancer. Anticipating the appearance of the Burney article and learning of its contents in advance of publication, it was possible to provide the press promptly with statements from Dr. C.C. Little, Mr. James P. Richards, president of The Tobacco Institute, and others. Press stories used the tobacco industry comment in covering the Surgeon General's article.

HT0145148-5150 at 5148 (U.S. Ex. 21,177).

106. For decades, the Tobacco Institute issued press releases and made public statements on behalf of Defendants that attempted to discredit non-industry scientists, government public health statements, and scientific findings that linked cigarette smoking to human disease. The statements contradicted both Defendants' own knowledge of the link between cigarette smoking and disease and the parallel, scientific study by public health scientists. See U.S. FPF §I.B supra.

107. For example, on November 27, 1959, the Tobacco Institute issued a press release containing statements attacking an article written by Burney on the hazards of cigarette smoking. The release marked a concerted and coordinated effort with TIRC to attack the Surgeon General, as Little's comments, cited above, were released the following day. TIMN0110091-0091 (U.S. Ex. 21,319).

108. On July 6, 1961, the Tobacco Institute issued a statement to United States newspapers for public distribution titled "Allen Gives Tobacco Institute Position on Health Scares" that quoted the Tobacco Institute President George Allen's comments on current health concerns regarding cigarette smoking: "The tobacco industry itself is more interested than anyone else in finding out and making public the true facts about tobacco and health." Allen further claimed that "research in recent years has produced findings that weaken rather than support the claim that smoking is a major contributor to lung cancer." TIMN0104428-4429 at 4428 (U.S. Ex. 21,762).

109. Defendants not only attacked mainstream scientists, they also made blanket

assertions, unfailingly false, denying the evidence that smoking caused disease.

110. For example, an October 24, 1958 Tobacco Institute press release reporting on animal research stated that more research was needed to prove a link between smoking and lung cancer. TIMN0130830-0831 (U.S. Ex. 21,335).

111. Another press release, issued following Allen's attack on the public health community, stated:

The causes of cancer are not now known to science. Many factors are being studied along with tobacco. The case against tobacco is based largely on statistical association studies, the meanings of which are in dispute.

1005136953-6980 at 6955 (U.S. Ex. 20,224).

112. These statements were made at the time the Surgeon General was forming an Advisory Committee on Smoking and Health, with the aim of developing the first Surgeon General's Report on Smoking and Health.

(e) In 1964, the Surgeon General Released the First Surgeon General's Advisory Committee Report on Smoking and Health

113. The 1964 Surgeon General's Report on Smoking and Health is widely considered by historians to be one of the most significant documents in the history of Twentieth Century public health. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 49 (R. 1147, filed May 10, 2002).

114. The Surgeon General's Advisory Committee on Smoking and Health was organized to evaluate the evidence about cigarettes and disease and offer a definitive assessment. As a result, the process of the committee's work, its selection, and its findings were designed to

represent a model of objective, public scientific and medical inquiry based on a rigorous and systematic assessment of the health implications of smoking. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 49-52 (R. 1147, filed May 10, 2002).

115. To establish the Advisory Committee, Surgeon General Luther Terry created a list of some 150 individuals. None were known to have taken a public position regarding the relationship of smoking and health. These individuals represented a number of fields and medical specialties from pulmonary medicine to statistics, cardiology to epidemiology. This list was then circulated to the American Cancer Society, the American Heart Association, the National Tuberculosis Association, the American Medical Association, as well as the Tobacco Institute. Each group was permitted to eliminate any name, without any reason cited. Individuals who had already published on the issue or had taken a public position were also eliminated. The selection process indicated Terry's commitment to a process that would eventuate in a genuine and definitive consensus. He had insured that the Report could not be attacked on the basis of its membership. All ten of the members were eminent physicians and scientists; eight were medical doctors, one was a chemist and the other a statistician. Three of the panelists smoked cigarettes, two others occasionally smoked pipes or cigars. Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, p. 9 (1964) (U.S. Ex. 64,057); Fritschler, A. Lee, *Smoking and Politics* 42 (Englewood Cliffs, NJ: Prentice Hall, 1975) (U.S. Ex. 76,135).

SECTION IV. A.

116. The 1964 Report explained: "All of the major companies manufacturing cigarettes and other tobacco products were invited to submit statements and any information pertinent to the inquiry. The replies which were received were taken into consideration by the Committee. Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, p. 14 (1964) (U.S. Ex. 64,057).

117. Terry's first ten selections all agreed to serve on the Advisory Committee, indicating to him "that these scientists were convinced of the importance of the subject and of the complete support of the Public Health Service." Terry, Luther L., "The Surgeon General's first report on smoking and health: A challenge to the medical profession," *New York State Journal of Medicine* 1254 (December 1983) (U.S. Ex. 21,376).

118. The Report drew on the respective disciplinary strengths of the committee members. Walter J. Burdette was a prominent surgeon and chair of the Surgery Department at the University of Utah; John B. Hickman was the Chair of Internal Medicine at the University of Indiana; and Charles LeMaistre was a pulmonary specialist and head of a very large cancer treatment center. The pathologists joining the Committee were Emmanuel Farber, Chair of Pathology at the University of Pittsburgh; Jacob Furth from Columbia, an expert on the biology of cancer; and Maurice Seevers, Chair of the University of Michigan Pharmacology Department. Louis Feiser of Harvard University was an eminent organic chemist. Completing the Committee were Stanhope Bayne-Jones, a bacteriologist, former head of New York Hospital and Dean of

Yale Medical School, Leonard H. Schumann, epidemiologist at the University of Minnesota, and William G. Cochran, a Harvard University mathematician with expertise in statistical methods. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 51-52 (R. 1147, filed May 10, 2002); Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service (1964) (U.S. Ex. 64,057).

119. Terry divided the work into two distinct phases. The first phase, the work of the Advisory Committee, was to determine the "nature and magnitude of the health effects of smoking." The Committee sought to arrive at a clinical judgment on smoking. As one public health official explained, "What do we (that is, The Surgeon General of the United States Public Health Service) advise our Patient, the American public, about smoking." Surgeon General's Advisory Committee on Smoking and Health, *The Nature, Purpose and Suggested Formulation of the Study of the Health Effects of Smoking, Phase I*, National Archives, Record Group 90, Typescript, p. 1 (U.S. Ex. 63,531)

120. The Advisory Committee met together nine times in just over a year. In between these meetings both committee members and staff worked to review, critique, and synthesize what had become a formidable volume of scientific work on tobacco. Terry promised that the report on these findings would be followed by phase II, proposals for remedial action. This was significant, for it kept the Committee away from the politics which swirled around the tobacco question. What Terry sought – and ultimately got – was a document that would be

unimpeachable from a scientific point of view. Terry astutely recognized that the Advisory Committee could only speak with authority about the scientific nature of the health risks of smoking; he would leave the policy questions to the political process. Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., 51-52 (R. 1147, filed May 10, 2002).

121. The Advisory Committee established a set of criteria to evaluate the significance of a statistical association. Recognizing that the nature of inference, as a process, requires judgment, the committee sought to define this process specifically, outlining five specific conditions for judging causal relations:

a. Consistency of the Association. Nearly all the retrospective and prospective studies produced comparable results, despite the fact that different methods were employed for collecting data.

b. Strength of the Association: the ratio of lung cancer rates for smokers versus non-smokers. The Committee assessed the significance of the dose effect phenomenon, finding that risk increased with amount smoked. According to the Report:

[A]verage smokers of cigarettes have a 9- to 10 fold risk of developing lung cancer, and heavy smokers, at least a 20 fold risk. . . . Thus it would appear that the strength of the association between cigarette smoking and lung cancer must be judged to be high.

c. Specificity of Association. This criteria, according to the Report:

implies the precision with which one component of an associated pair can be utilized to predict the occurrence of the other. i.e. how frequently the presence of one variable (e.g. lung cancer) will predict, in the same individual, the presence of another (e.g. cigarette smoking).

In a discussion of the specificity of the relationship between any factor causal in character and a disease it may produce, it must be recognized that rarely, if ever, in our biologic universe, does the presence of an agent invariably predict the occurrence of a disease. Second, but not less important, is our growing recognition that a given-disease may have multiple causes.

In the current case, the specificity of the association was especially strong. The Report explained, "of the total load of lung cancer in males about 90 per cent is associated with smoking."

d. Temporal Relationship of Associated Variables:

Exposure to an agent presumed to be causal must precede, temporally, the onset of a disease which it is purported to produce. . . . [N]o evidence has thus far been brought forth to indicate that the initiation of the carcinomatous process in a smoker who developed lung cancer antedated the onset of smoking.

e. Coherence of the Association:

A final criterion for the appraisal of causal significance of an association is its coherence with known facts in the natural history and biology of the disease.

Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, pp. 182-185 (1964) (U.S. Ex. 64,057).

122. The 1964 Surgeon General's Advisory Committee's assessment of causality was part of a coherent and logical explanation. These criteria have become the basic orthodoxy for causal inference concerning disease since the time of the report. Expert Report of Allan M.

Brandt, United States v. Philip Morris, et al., 55 (R. 1147, filed May 10, 2002); Expert Report of Ira S. Ockene, United States v. Philip Morris, et al., (R. 668, filed November 15, 2001).

123. In all, the 387-page 1964 Surgeon General's Report cited 7,000 articles; its critical review of this evidence substantiated the cigarette as a cause of disease. The Report came to the following conclusions:

Cigarette smoking is associated with a 70 percent increase in the age specific death rates of males, and to a lesser extent with increased death rates of females. The total number of excess deaths causally related to cigarette smoking in the U.S. population cannot be accurately estimated. In view of the continuing and mounting evidence from many sources, it is the judgment of the Committee that cigarette smoking contributes substantially to mortality from certain specific diseases and to the overall death rate.

Cigarette smoking is causally related to lung cancer in men; the magnitude of the effect of cigarette smoking far outweighs all other factors. The data for women, though less extensive, point in the same direction.

Their risk of developing lung cancer increases with duration of smoking and the number of cigarettes smoked per day, and is diminished by discontinuing smoking.

Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC:

US Department of Health, Education, and Welfare, Public Health Service, p. 31 (1964) (U.S. Ex. 64,057).

124. The 1964 Report carefully evaluated the animal studies that had been conducted up to that time:

Condensates of tobacco smoke are carcinogenic when tested by

application to the skin of mice and rabbits and by subcutaneous injection in rats. . . .

Bronchogenic carcinoma has been produced in laboratory animals by the administration of polycyclic aromatic hydrocarbons, certain metals, radioactive substances, and viruses. The histopathologic characteristics of the tumors produced are similar to those observed in man and are predominantly of the squamous variety.

Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC:

US Department of Health, Education, and Welfare, Public Health Service, p. 33, 143-45, 165 (1964) (U.S. Ex. 64,057).

125. The 1964 Report also found very high death rates among smokers, which increased with consumption:

The death rate for smokers of cigarettes only, who were smoking at the time of entry into the particular prospective study, is about 70 percent higher than that for nonsmokers. The death rates increased with the amount smoked. For groups of men smoking less than 10, 10-19, 20-39, and 40 cigarettes and over per day, respectively, the death rates are about 40 percent, 70 percent, 90 percent, and 120 percent higher than for non-smokers. The ratio of the death rates of smokers to nonsmokers is highest at the earlier ages (40-50) represented in the studies, and declines with increasing age. The same effect appears to hold for the ratio of the death rate of heavy smokers to that of light smokers. In the studies that provided this information, the mortality ratio of cigarette smokers to nonsmokers was substantially higher for men who started to smoke under age 20 than for men who started after age 25. The mortality ratio was increased as the number of years of smoking increased. In two studies which recorded the degree of inhalation, the mortality ratio for a given amount of smoking was greater for inhalers than for non-inhalers.

Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of*

the Advisory Committee to the Surgeon General of the Public Health Service, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, p. 35-36 (1964) (U.S. Ex. 64,057).

126. The 1964 Report also reached conclusions as to coronary heart disease: "It is also more prudent to assume that the established association between cigarette smoking and coronary disease has causative meaning than to suspend judgment until no uncertainty remains." The 1968 Report went a step further, concluding that "[b]ecause of the increasing convergence of epidemiological and physiological finding relating cigarette smoking to coronary heart disease it is concluded that cigarette smoking can contribute to the development of cardiovascular disease and particularly to death from coronary heart disease." The 1979 Report flatly stated that "for purposes of preventive medicine, it can be concluded that smoking is causally related to coronary heart disease for both men and women in the United States." Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of the Advisory Committee to the Surgeon General of the Public Health Service*, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, p. 35-36 (1964) (U.S. Ex. 64,057).

127. From both a clinical and a public health perspective, the 1964 Report concluded that stopping smoking lowered an individual's risk of disease and health:

Cigarette smokers who had stopped smoking prior to enrollment in the study had mortality ratios about 1.4 as against 1.7 for current cigarette smokers. The mortality ratio of ex-cigarette smokers increased with the number of years of smoking and was higher for those who stopped after age 55 than for those who stopped at an earlier age.

Surgeon General's Advisory Committee on Smoking and Health, *Smoking and Health: Report of*

the Advisory Committee to the Surgeon General of the Public Health Service, Washington, DC: US Department of Health, Education, and Welfare, Public Health Service, p. 35-36 (1964) (U.S. Ex. 64,057).

(f) Defendants Further Intensified Their Fraudulent Public Relations Campaign in Anticipation of and Immediately Following the Release of the 1964 Report

128. Even before the release of the 1964 Report, the scientific consensus regarding the harms of smoking was tacitly acknowledged at the highest levels of Defendant companies. And yet, the public position of the companies remained one of distortion and denial of the scientific facts.

129. The 1964 Report caused Defendants to further intensify their public relations campaign, which was undertaken without any regard for the truth of public statements and assertions and, in fact, with knowledge of the falsity of Defendants' claims that smoking had not been established as a cause of disease.

130. Before the Surgeon General's Report was released in January 1964, Defendants took steps to minimize its impact. George Allen, president of the Tobacco Institute, laid out the Cigarette Company Defendants' ongoing position in a radio interview:

All the medical authorities as far as I know, or practically all of them, agree that nobody knows what causes cancer, and specifically lung cancer, and this is a matter that remains to be found by thorough and energetic scientific investigation.

ALLEN: . . . That study [from the Royal College of Physicians, 1962], while considered very strong in its accusations, charges regarding smoking, nevertheless that study itself said that the majority of people smoke without any harm to their system. So if you say, am I going to get lung cancer if I smoke, a lot of people

get lung cancer who have never smoked in their lives. We had a recent case, in which 27 nuns had died of lung cancer, not all together, not in the same place, but among the statistics, who had never been near tobacco. So, certainly one would have to say that if you just ask the question flatly, if I smoke, will I get lung cancer, there are many, many cases and evidences - cited statements to the fact that there is no proved cause and effect relationship between the two.

This was precisely the kind of presentation designed to mislead the public concerning the known harms of cigarette smoking. 500062010-2018 at 2011, 2015 (U.S. Ex. 20,619).

131. On March 14, 1963, the Tobacco Institute issued a press release to the New York Times containing a statement by Allen:

Scientific opinions differ widely. Many scientists say that more must be learned before it will be known whether any of the factors now under study, including smoking, has a role in causation of diseases such as lung cancer, and if so, whether that role is direct or indirect, primary or incidental. In the opinion of these scientists, singling out tobacco as a major factor is not warranted by scientific knowledge.

TIMN0131426-1426 (U.S. Ex. 21, 336).

132. On April 15, 1963, the Tobacco Institute issued a press release containing "Comments on Cancer Society Booklet":

There is dispute among scientists as to the causes of lung cancer. Many differing opinions exist. . . . The booklet does not purport to contribute new knowledge. It is our belief that the answers to questions about diseases such as lung cancer will come through the research laboratory, not through booklets or campaigns for or against smoking.

TIMN0118348-8349 at 8348 (U.S. Ex. 21, 320).

133. A June 19, 1963 Tobacco Institute press release claimed that since 1954 the

tobacco manufacturers had supported grant-in-aid research through TIRC and had contributed more than \$6 million in funds towards independent medical and scientific research. While the research programs were continuing, the press release claimed that research findings regarding underlying causes of cancer and cardiovascular diseases were to that date inconclusive.

TIMN0104311-4312 (U.S. Ex. 21, 317).

134. A July 9, 1963 press release reaffirmed the Tobacco Institute's public position to not accept any claims that smoking may play a part in causation of human disease until further research provided facts to link smoking to certain health effects. The release quoted Allen: "With the numerous theories, statements, and resolutions that have been presented to the public, there is some danger of losing sight of what ought to be the basic objective of all who are concerned. That is doing the needed research. We believe the answers will be found. And they will be found in the scientific laboratory, not through pronouncements either for or against tobacco." TIMN0098597-8598 at 8598 (U.S. Ex. 21, 270).

135. In September 1963, the Tobacco Institute issued a publication entitled "Tobacco and The Public Interest--Reprint of George Allen address before the National Association of State Departments of Agriculture." It provided: "There ought to be a respite from theories, resolutions and emotional statements for a time at least, so that scientists can objectively evaluate, what is known and what is not known." He reaffirmed Defendants' purported commitment to research to find necessary facts: "That is what this industry has tried to do in the past, through the research program of the TIRC. And that is what we shall do in the future, until enough facts are known to provide solutions to the health questions involved." TIMN0104251-

4256 at 4254, 4256 (U.S. Ex. 21, 316).

136. On October 11, 1963, in order to intensify Defendants' public relations campaign in anticipation of the 1964 Report, the Tobacco Institute issued a press release: "Allen Outlines Some of Reasons Why Smoking-Health Theory is Disputed." It provided: "People sometimes forget that there are good reasons why the theories about smoking and health problems are in dispute, and are often questioned by responsible scientists. . . . [T]he original theory about smoking and lung cancer – the theory that smoke was a direct, contact carcinogen – has virtually been abandoned." He asserted that the case against smoking rested largely on statistical studies, whose meanings were questioned by many leading medical statisticians and that there was a growing interest among scientists studying the issue as to the possible role of constitutional and genetic factors. TIMN0118249-8250 at 8249 (U.S. Ex. 21,561).

137. On November 1, 1963, Hill & Knowlton distributed a Tobacco Institute news release entitled "Tobacco Industry Research Will Find Answers, George Allen Says." Allen stated he was "convinced that scientific research will discover the answers to questions about smoking and health and the causes of the diseases with which smoking has been associated." After cataloguing Defendants' positions on smoking and health, Allen "suggest[ed] a moratorium on 'resolutions and emotional statements' about smoking and health, so that scientists can objectively evaluate what is known and what is not known." TIMN0118245-8246 at 8246 (U.S. Ex. 77,055).

138. A November 3, 1963 Tobacco Institute press release stated that the tobacco industry was on a "crusade" to find answers to the "questions about smoking and health" and that

it "should be a crusade neither for or against tobacco. It is a crusade for research."

TIMN0118245-8246 at 8245 (U.S. Ex. 77,055).

139. Following the release of the 1964 Surgeon General's Report, the principal approach by Defendants to the burgeoning knowledge of tobacco's harms was to "stay the course." Defendants continued to rely on the basic strategic formulations set forth in the mid-1950s. They continued to assert alternative causation theories (through arguments that had already been effectively refuted). Despite overwhelming evidence from a wide range of disciplines including statistics and epidemiology, pathology and chemistry, clinical observation, and animal experimentation, including their own observations, Defendants continued to claim "no proof" and continued to attempt to create doubt about the scientific findings.

140. Defendants intentionally exploited denial and rationalization by smokers. In a memo to Joseph F. Cullman of Philip Morris USA, George Weissman described how in response to the 1964 Surgeon General's Report "we must in the near future provide some answers which will give smokers a psychological crutch and a self-rationale to continue smoking." Among the "crutches" and "rationales" proposed to be offered to the smokers were questions of medical causation, "that more research is needed," and that there are "contradictions" and "discrepancies." 1005038559-8561 at 8559-8560 (U.S. Ex. 20,189).

141. On January 13, 1964, in a *Wall Street Journal* article, Defendants disputed the 1964 Report saying the Report "was not the final chapter," and that more research was still needed "Tobacco Industry Says More Research Is Needed: State Laws on Labeling Possible," *Wall Street Journal*, January 13, 1964 (U. S. Ex. 21,377).

142. On March 6, 1964, the Tobacco Institute sent a press release announcing the reorganization of TIRC under its new name, CTR. This press release represented that CTR's research policy would be set by doctors and scientists independent of the tobacco industry. 508775085-5088 (U.S. Ex. 20,815)

143. In testimony on June 25, 1964 at a hearing of the Committee on Interstate and Foreign Commerce, Bowman Gray, Chairman of the Board of R.J. Reynolds, stated: "I believe . . . that nearly everyone familiar with these difficult problems would agree that there are large and basic areas where there is lack of knowledge, uncertainty, and where a great deal more research is essential before definitive answers can be made. Many distinguished scientists are of the opinion that it has not been established that smoking causes disease." He also informed Congress that Defendants would solve the health crisis: "If it is proven that cigarettes are harmful, we want to do something about it regardless of what somebody else tells us to do. And we would do our level best." 501935056-5071 at 5060 (U.S. Ex. 20,690); "Tobacco Industry Says More Research Is Needed: State Laws on Labeling Possible," *Wall Street Journal*, January 13, 1964, (U.S. Ex. 21,377).

144. In a newspaper article dated July 12, 1964, Horace Kornegay, the Chairman and President of the Tobacco Institute, declared: "There exists no definite proof that smoking cigarettes causes lung cancer or any other dreaded disease." TIMN013181-3181 (U.S. Ex. 88,779).

145. On August 17, 1964, CTR issued a press release quoting Little: "The fact remains that the knowledge is insufficient either to provide adequate proof of any hypothesis or to define

the basic mechanisms of health and disease with which we are concerned." MNAT00287815-7818 at 7815 (U.S. Ex. 21, 224).

146. On February 7, 1965, the *Binghamton Press* quoted a Tobacco Institute spokesman as saying that the link between smoking and disease is was still unproven despite the 1964 Surgeon General's Report. TIMN0104477-4478 (U.S. Ex. 21,484)

147. In June 1965, the Tobacco Institute's public relations campaign on issues of smoking and health was aptly dubbed in a confidential tobacco industry memorandum as the "chronology of confusion." The "chronology" was put together by Hill & Knowlton and notes that "TI and CTR publicized the industry stance on smoking and health in a variety of ways . . . none of which revealed the true hazards of smoking and all of which were intended to confound the issues (and the public)." 1003041092-1097 (U.S. Ex. 20,144).

148. Defendants continued to add to the "chronology of confusion" and continued to focus many of their efforts on the 1964 Report. On July 27, 1965, Paul D. Smith, a Philip Morris USA in-house attorney, sent a letter to David Hardy of the law firm Shook, Hardy & Bacon, providing a list of statisticians that could be used by the tobacco industry to discredit the Report. 2015033476-3477 (U.S. Ex. 36,643).

149. On December 29, 1965, the Tobacco Institute issued a press release stating that research had not established whether smoking causes disease and that it was still an "open question." The release went on to state that "[i]f there is something in tobacco that is causally related to cancer or any other disease, the industry wants to find out what it is, and the sooner the better." TIMN0123790-3793 at 3790 (U.S. Ex. 21,330).

150. On October 21, 1966, the Tobacco Institute issued a public statement to United States newspapers that stated that the tobacco industry knew "of no valid scientific evidence demonstrating that either 'tar' or nicotine is responsible for any human illness." TIMN0099040-9041 at 9040 (U.S. Ex. 21,550).

(g) Following Publication of the 1964 Report, the Scientific Community Continued to Document the Link Between Smoking and an Extraordinary Number of Serious Health Consequences

151. The medical literature is replete with extensive epidemiological studies, conducted over decades, comparing the disease and death rates of millions of smokers and nonsmokers. Every relevant population and demographic group has been examined. Examples of these studies are: American Cancer Prevention Study I and II; British Physicians Study; Dorn Study of U.S. Veterans; National Health Interview Study; Current Population Survey; and the Behavioral Risk Factor Survey. Expert Report of David M. Burns, United States v. Philip Morris, et al., (R. 664, filed November 15, 2001).

152. The science of epidemiology is well recognized as an integral part of medical science and a proper form of evidentiary proof. Expert Report of David M. Burns, United States v. Philip Morris, et al., 6-7 (R. 664, filed November 15, 2001).

153. Still more studies have examined the induction of cancers and abnormal pathology in animals, organ systems, and at the cellular and sub-cellular level. Expert Report of David M. Burns, United States v. Philip Morris, et al., 3 (R. 664, filed November 15, 2001).

154. The psychology of smoking behavior and the pharmacological addition to nicotine have all been extensively studied. Expert Report of David M. Burns, United States v. Philip

Morris, et al., 3 (R. 664, filed November 15, 2001).

155. These studies, performed by scientists for science, not for litigation, have been critically examined by blue ribbon scientific teams and peer reviewers to ensure accuracy and adherence to generally accepted scientific procedures. Expert Report of David M. Burns, United States v. Philip Morris, et al., 5 (R. 664, filed November 15, 2001).

156. This body of literature has been reviewed and presented in Reports of the Surgeon General on Smoking and Health published in 1964, 1967, 1968, 1969, 1971, 1972, 1973, 1974, 1975, 1976, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1988, 1989, 1990, 1992, 1994, 1998, 2000, and 2001. Expert Report of David M. Burns, United States v. Philip Morris, et al., 3-4 (R. 664, filed November 15, 2001).

157. Beginning with the first Report in 1964, the United States Public Health Service has followed the scientific consensus formation approach when producing a Report of the Surgeon General on Smoking and Health. The scientific community forms a consensus on issues of causation by reviewing all of the scientific evidence available; examining that evidence for its strength, consistency, coherence, temporal association and biological plausibility; and then reaching a judgment as to whether the data support a causal relationship between smoking and a disease. Expert Report of David M. Burns, United States v. Philip Morris, et al., 9-11 (R. 664, filed November 15, 2001).

158. The Surgeon General's Reports represent a state-of-the-art consensus of the scientific community on the extent of scientific knowledge about cigarette smoking at the time at which they are published. They are the product of a broad-based peer review process.

Widespread distribution to the scientific community ensures that the information reviewed in the process of preparing a Report is complete, that a wide variety of perspectives on the data are considered, that the causal judgments reached are sound and those of the mainstream of United States science, and that any potential confounding or biasing factors have been adequately accounted for in review. This process was followed in reaching conclusions about the causal relationships between cigarette smoking and cancer of the lung, cancer of the lip, cancer of the tongue, cancer of the mouth, cancer of the esophagus, cancer of the pancreas, cancer of the larynx, cancer of the bladder, cancer of the kidney, cardiovascular disease (coronary heart disease), atherosclerosis, aortic aneurysm, peripheral vascular disease, cerebrovascular disease, chronic bronchitis, emphysema and COPD, and these conclusions have stood the tests of time and review by a wide variety of scientific groups. Expert Report of David M. Burns, United States v. Philip Morris, et al., 7 (R. 664, filed November 15, 2001).

(h) Defendants Responded to the Scientific Consensus with a Determined Fraudulent Campaign Throughout the Late 1960s and Early 1970s

159. Defendants responded to the formation of scientific consensus throughout this period in the same way they had responded to the evidence that smoking caused lung cancer in the early 1950s: with a campaign of proactive and reactive responses to scientific evidence that were false and designed to mislead the public about the health consequences of smoking in furtherance of the goals of the Enterprise.

160. The literature published by the Tobacco Institute consistently argued that evidence implicating cigarettes and smoking as causes of disease remained hypothetical, limited and static.

161. In 1967, Defendants received feedback showing that their "open controversy" strategy was working. Through a focus group with smokers conducted by public relations firm Ted Bates for Lorillard, Defendants learned that

because they are still smoking, smokers are compelled to feel the government has not proved its case. If they want to hear anything, it is reassurance that smoking does not cause lung cancer – not that there is a difference of opinion. Smokers agree that smoking is 'unhealthy' but don't translate this as meaning it causes lung cancer or any specific, potentially fatal disease. Smoking may cause shortness of breath, a cough, or even a shorter life – but they don't expect it to give them lung cancer.

92382009-2011 at 2010 (U.S. Ex. 21,554).

162. In a 1967 press release entitled "AT Refutes Anti-Cigarette Charges," American Tobacco Company announced it was distributing a booklet entitled "The Cigarette Controversy." The booklet purported to review research done over the prior fifteen years and concluded that, in the absence of medical evidence, "the question is still an open one." It was mailed to more than 140,000 stockholders of American. (U.S. Ex. 88,668).

163. In an address delivered on October 3, 1967, Paul D. Smith, Vice President and General Counsel of Philip Morris USA, stated: "The truth of the matter is this: No one knows whether cigarette smoking causes any human disease or in any way impairs human health." Smith also claimed that "[n]obody has yet been able to find any ingredient as found in tobacco or smoke that causes human disease." He also criticized the Public Health Service's accusations against tobacco and claimed that the public research community was biased due to influence from the distribution of federal funds. 2015068601-8612 at 8603 (U.S. Ex. 20, 337);

2010035814-5818 (U.S. Ex. 21, 603).

164. In November 1967, at the direction of outside lawyers David Hardy of Shook, Hardy & Bacon, and Ed Jacobs of Cabell, Medinger, Forsyth & Decker, the Tiderock Corporation, the Tobacco Institute's public relations firm, prepared an action plan entitled "The Cigarette Controversy." The action plan laid out the objective of influencing public opinion by designing specific initiatives to re-establish the "cigarette controversy." The program called for a position paper for intra-industry use as well as one in journalistic form. The plan included targeted categories for mailings such as the medical profession, scientists, communicators (press, radio, television), educators, top public figures, and 10,000 top corporate presidents. It also detailed the publication of magazine articles. 1005109086-9106 (U.S. Ex. 20,211); TITX 0020537-0542 (U.S. Ex. 21,606); TIMN0070816-0821 (U.S. Ex. 20,703).

165. The Tobacco Institute placed an advertisement on November 21, 1967, which declared: "The Tobacco Institute has donated more than \$20,000,000 for independent research to resolve this controversy. We are pledged to continue this effort, regardless of cost, until a definitive answer is found." TIMN0070973-0975 at 0975 (U.S. Ex. 21,612).

166. In 1968, the Tobacco Institute published a statement entitled "The Cigarette Controversy: An Examination of the Facts by the Tobacco Institute -- The Tobacco Industry's Contribution to Health Research." It declared:

In order to help advance scientific understanding of the causes, as well as the means of preventing and controlling disease, the American tobacco industry has contributed millions of dollars for independent research on smoking and health. During the past thirteen years, the industry has supported over 300 independent health studies through the industry's Council for Tobacco Research

SECTION IV. A.

- U.S.A. Do Cigarettes cause disease? In spite of all the debate – in spite of all of the research – that questions is still unanswered. The industry will continue to seek the truth in the continuing cigarette controversy.

TINY0006498-6601 at 6535-6536 (U.S. Ex. 87,056); TIMN0104765-4868 at 4802-4803 (U.S. Ex. 21, 613).

167. In March 1968, the *National Enquirer*, with a circulation of close to 1,000,000 at the time, published an article titled "Cigarette cancer link is bunk." The article did not indicate that it was written by anyone with ties to Defendants and the article appeared under the pen name of "Charles Golden." Later, a sportswriter named Stanley Frank conceded that he wrote the article. Frank was at the time an employee of Hill & Knowlton and he was paid \$500 by the Tobacco Institute for the work. TIMN0070973-0975 (U.S. Ex.21,612).

168. Frank's article attacked the Surgeon General's report: "Very few people know however that 39 of the 49 medical experts who testified before the Senate and House Committees on Commerce the following year disagreed strenuously with the report. They charged that it was based on false interpretations of statistics. Only two of the dissenting experts were connected with the tobacco industry." The scientists that the article presented as not "connected with the tobacco industry" included Dr. Louis Clerf, who testified previously for Philip Morris USA as an expert in a civil cancer case, and Dr. Bernice C. Sachs, who cleared her testimony with Alexander Holtzman, counsel for Philip Morris USA. The article also indicated that \$8 million in research grants from Defendants allowed scientists to state that "no one working on these or any other, projects throughout the world has isolated a substance in cigarettes or tobacco smoke that is a proven lung cancer inducing agent." TIMN0104765-4868 at 4802-4803 (U.S. Ex.

21,613); TINY0006498-6601 (U.S. Ex. 87,056).

169. In accordance with the "The Cigarette Controversy" action plan developed by the Tiderock Corporation, the Tobacco Institute ordered millions of reprints of the Stanley Frank article (originally appearing in *True* magazine and the *National Enquirer*) for mass mailings and for use in response to inquiries from the public, many of which came from physicians (including a request for 400 copies for distribution to Purdue University medical students). The Tobacco Institute sent reprints of an article to over 500,000 opinion leaders at a cost estimated at \$836,000. In April 1968, Lorillard, R.J. Reynolds, Philip Morris USA, and Brown & Williamson purchased reprints of the *True* article for further mailings. 690012994-2994 (U.S. Ex. 54,322); TIMN0016964-6982 (U.S. Ex. 21,564); TIMN0070262-0263 (U.S. Ex. 21,567); TIMN0070270-0270 (U.S. Ex. 21,569); TIMN0070309-0309 (U.S. Ex. 21,570); TIMN0070307-0307 (U.S. Ex. 21,571); TIMN0070275-0275 (U.S. Ex. 21,572); TIMN0070304-0304 (U.S. Ex. 21,574); TIMN0070274-0274 (U.S. Ex. 21,578); TITX0000190-0190 (U.S. Ex. 21,581); TIMN0070295-0295 (U.S. Ex. 21,589); TIMN0070301-0301 (U.S. Ex. 21,590); TIMN0070257-0257 (U.S. Ex. 21,591); TIMN0070324-0335 (U.S. Ex. 21,592); TIMN0071398-1401 (U.S. Ex. 21,301).

170. Later, when the FTC began an investigation into industry involvement in the *True* article, the Tobacco Institute's Vice President of Public Relations, William Kloepfer, falsely denied direct involvement or knowledge of payment for the freelance article or mailings of *True* article reprints. In actuality, the Tobacco Institute had instructed Tiderock in December 1967 to make a mass mailing of reprints before the article appeared. In an internal memorandum outlining the Tobacco Institute's involvement with the *True* article, Kloepfer noted with approval

that the Tobacco Institute's involvement in another article, "the Barron's editorial," was not uncovered: "It should be noted that our earlier project, the advertisement of the Barron's editorial, escaped noticeable rebuttal. The editorial will be remembered, however, as an independent criticism of government activity, with no reasonable suspicion possible that cigarette interests were responsible for its preparation." TIMN0070242-0243 (U.S. Ex. 21,661); TIMN0070816-0821 (U.S. Ex. 21,606); TIMN0016964-6982 (U.S. Ex. 21,564); TIMN0071398-1401 (U.S. Ex. 21,301); 1005112459-2461 at 2460 (U.S. Ex. 20,213); (U.S. Ex. 21,302); (U.S. Ex. 21,614); (U.S. Ex. 63,014).

171. An April 23, 1968 pamphlet of questions and answers represented the Defendants' views:

Q: Has any important new evidence against cigarettes been reported in recent years?

A: No. Cigarettes today are branded guilty on virtually the same kind of evidence that was considered insufficient only a few years ago.

Q: Is smoking a health hazard?

A: That question is still an open one. . . . At that time, most scientists considered the findings of these studies insufficient to prove a case against smoking. Since then, many other studies have been done. But there is still no proof that cigarette smoking is a cause of lung cancer- or any other disease.

502644592-4616 at 4595 (U.S. Ex. 20,703).

172. The Tobacco Institute's internal documents reveal the Cigarette Company Defendants' true intentions with respect to the Tobacco Institute's press releases and public statements. The Tobacco Institute's 1968 "Tobacco and Health Research Procedural Memo" states: "The most important type of story is that which casts doubt on the cause and effect theory

of disease and smoking. . . . [T]he headline should strongly call out the point – Controversy! Contradiction! Other factors! Unknowns!" TIMN00721488-1491 at 1489 (U.S. Ex. 21, 302).

173. On August 17, 1968, the *New York Times* quoted the Tobacco Institute as attacking a Surgeon General's task force for a "shockingly intemperate defamation of an industry which has led the way in medical research to seek answers in the cigarette controversy." 1002401761A-1761A (U.S. Ex. 20, 136).

174. On December 24, 1968, Shook, Hardy & Bacon authored the following statement for Joseph F. Cullman, Chairman of the Board of Philip Morris USA: "The cigarette industry recognizes its responsibility to the American people. It is anxious to seek the answer to the question of whether cigarettes are in fact the cause of any human disease. It is unfortunate that emotional propaganda against cigarettes has been permitted to suppress scientific inquiry and proof." Shook, Hardy & Bacon also asserted that statistical association "can never prove cause and effect." 1000313777-3779 at 3779 (U.S. Ex. 20, 093).

175. In 1969, the Tobacco Institute published an article entitled "Centuries-old Smoking/Health Controversy Continues," stating that the causes of cancer and heart disease were still unknown. The article stated that evidence concerning smoking and cardiovascular disease was, if anything, more confused than it was in 1964 and did not permit the conclusion that there was a causal relationship. A supporting article by Dr. Carl Seltzer of Harvard University was cited as "independent" support for the position, but Seltzer's work was not independent. He forwarded his draft article to the Tiderock Corporation, which forwarded it to the Tobacco Institute. It was also circulated to the General Counsel, Ad Hoc Committee, Chief Executives,

and Defendants' public relations representatives prior to publication. TIMN395434-5437 (U.S. Ex. 21,664); 1005036071-6071 (U.S. Ex. 88,783).

176. A February 3, 1969 CTR press release explained:

The scientist who has been associated with more research in tobacco and health than any other person declared today that there is no demonstrated causal relationship between smoking and any disease. The gaps in knowledge are so great that those who dogmatically assert otherwise – whether they state that there is or is not such a causal relationship – are premature in judgment. If anything, the pure biological evidence is pointing away from, not toward, the causal hypothesis. Statistical associations between smoking and lung cancer, based on study of those two factors alone, are not proof of causal relationship in the opinion of most epidemiologists.

670307882-7891 at 7882 (U.S. Ex. 21, 867).

177. On February 6, 1969, General Counsel for Philip Morris USA, R.J. Reynolds, Brown & Williamson, Lorillard, Liggett, and members of the Committee of Counsel, approved as a special project the running of a copy of the foregoing press release under the headline: "How Much is Known about Smoking and Health." The ad was run in major newspapers around the country, advertising journals, and medical journals, including papers in Richmond, Raleigh, Knoxville, Nashville, Washington, New York, Louisville, Lexington and Columbia; in the eastern edition of the *Wall Street Journal*, *Advertising Age*, *Broadcasting, Editor and Publisher*, *Southern Advertising and Publishing*, *National Association of Retail Druggist Journal*, *Food Topics*, *VEND*, *Retail Tobacconist*, *Southern Tobacco Journal*, *Tobacco*, *Tobacco Distributor and Confectionary Guide*, *Tobacco Jobber*, *Tobacco Leaf*, *Tobacco Record*, *Tobacco Reporter*, *US Tobacco Journal*, *Medical World News*, *Medical Economics*, and *US Medicine*.

SECTION IV. A.

1005132848-2849 (U.S. Ex. 20,222); 1005153098-3099 (U.S. Ex. 20,227); TIMN243001-3001 (U.S. Ex. 87,057); TIMN0081698-1698 (U.S. Ex. 21,309); *The Wall Street Journal*, March 3, 1969 (U.S. Ex. 87,585); TIMN0000560-0561 (U.S. Ex. 21,874); TIMN0081695-1696 (U.S. Ex. 21,308); (U.S. Ex. 21,040).

178. Members of the Enterprise realized that they needed to change public opinion in order to sustain the viability of the tobacco industry even if there was no evidence to support their position. In an August 10, 1967 memo from J.S. Dowdell of R.J. Reynolds wrote to C.B. Wade of R.J. Reynolds, Dowdell acknowledged:

Despite the fact that the industry has very little, if any, positive evidence upon which to base the aggressive campaign necessary at this late date to materially change public opinion, public attitudes can be changed. At least to the extent that the majority who now believe smoking is a proven cause of lung cancer could become doubtful; and, other who are now skeptical could be convinced that before the industry is further penalized more evidence is required. However, the unfavorable opinion on the hazards of smoking will remain definitely high, and will not shift in a favorable direction, until positive action is taken by the industry to counter the anti-smoking propaganda and publicity.

Dowdell advocated that the Tobacco Institute Executive Committee approve the 1967 Public Relations Program and begin an aggressive public relations campaign. 500006192-6194 at 6193 (emphasis added) (U.S. Ex. 47,761).

179. At the same time, an internal B&W document entitled the "Smoking and Health Proposal" explained: "Doubt is our best product since it is the best means of competing with the 'body of fact' that exists in the mind of the American public." 690010951-0959 at 0954 (U.S. Ex. 21,040).

180. In a 1969 B&W document prepared for public dissemination entitled "How Eminent Men of Medicine and Science Challenged the Smoking-and-Health Theory During Recent Hearings in the U.S. Congress," B&W stated that "the question of smoking and health remains an open, not a closed, issue." B&W also asserted that "[t]he cause of cancer in humans, including the cause of cancer of the lung, is unknown" and that "[t]he concept that cigarette smoking is the cause of the increase in lung cancer and emphysema is a colossal blunder." 650332832-2839 at 2833, 2835-2836 (U.S. Ex. 20,947).

181. In April 1969, the Tobacco Institute issued to the public a pamphlet, "The Cigarette Controversy, 8 Questions & Answers" presenting "facts" explaining that there is "controversy" surrounding the science of smoking and health that must be answered by further scientific research and public discussion. The pamphlet was written with the assistance of the law firm Shook, Hardy & Bacon and reviewed by CTR's Scientific Director Robert Hockett prior to publication. According to a letter from David Hardy, an attorney with Shook, Hardy & Bacon, this Tobacco Institute booklet was written to explain to the public the "reasons why representatives of the Cigarette industry contend that the case against cigarettes has not been proven [and that the] Tobacco Institute has felt it desirable to have some readable document to give them which spells out some of the unanswered questions." 1005152849-2896 (U.S. Ex. 20, 226); HK0108004-8004 (U.S. Ex. 21, 171).

182. On November 11, 1969, the Tobacco Institute published an advertisement – "All Advertising Should be Truthful – Reprint from Advertising Age – The Truth Seems a Little Twisted" – which attacked American Cancer Society and the American Heart Association

SECTION IV. A.

commercials regarding cigarette smoking risks. The advertisement attacked the statements of the organizations as untruthful and misleading; as wild, unsupported allegations that should not be permitted on the air. The Tobacco Institute ran these advertisements in newspapers in New York, Boston, Philadelphia, Washington, Chicago, Los Angeles and San Francisco and in issues of *Time*, *Newsweek*, and the *Wall Street Journal*. 1005132832-2832 (U.S. Ex.21,666); 1005132842-2842 (U.S. Ex. 21,667); 1005132840-2840 (U.S. Ex. 21,668); 005132841-2841 (U.S. Ex. 21,669).

183. By the 1970s, the die of denial was long since cast, and it proved impossible to shift Defendants' position of "no proof," "open question," and "controversy." Even as new data confirming the powerful harms of tobacco came to be understood and articulated, Defendants held fast to their position that the dangers of smoking had not been demonstrated.

184. In February 1970, the Tobacco Institute issued an announcement intended for publication titled "The Tobacco Institute Believes the American Public is Entitled to Complete, Authenticated Information About Cigarette Smoking and Health," with the subtitle "The American Cancer Society Does Not Seem to Agree." This announcement challenged information issued by the American Cancer Society at a February 5th press conference concerning a research project titled "The Effects of Cigarette Smoking Upon Dogs." TIMN0081949-1949 (U.S. Ex. 4,724).

185. In March 1970, the Tobacco Institute ran TV spots which stated: "Today we in this industry support more impartial research on the vital question of tobacco and health than any agency of the Federal Government and more than all of the voluntary agencies combined. We

have great confidence that the findings of this research will lead the way in providing fair and accurate information regarding cigarette smoking. Do Smokers have common sense? We in the tobacco industry believe they do, and that millions of reasonable and responsible men and women who smoke will not be misled by the campaign of fear that is conducted against smoking. We believe that these emotional charges are no substitute for objective facts gathered from research." 2010008819-8822 at 8820 (U.S. Ex. 20,300).

186. On April 22, 1970, a CTR press release titled "Studies Raise Questions About Smoking as Health Hazard" stated: "The deficiencies of the tobacco causation hypothesis and the need of much more research are becoming clearer to increasing numbers of research scientists." 500015901-5905 at 5902 (U.S. Ex. 47,778).

187. On April 30, 1970, the Tobacco Institute sent a press release that falsely claimed that the American Cancer Society had refused to release experimental data underlying the Auerbach/Hammond "smoking beagles" study (which discovered bronchial carcinoma in beagle dogs forced to smoke tobacco). T076378-6379 (U.S. Ex. 21,237)

188. On September 7, 1970, Dr. Sheldon Sommers, Scientific Director of CTR and Chairman of the SAB, asserted in an article entitled "Smoking and Health: Many Unanswered Questions": "I do not believe it has been scientifically established that cigarette smoking causes human disease," and "CTR is deeply committed to the search for answers." ZN16062-6065 at 6063, 6065 (U.S. Ex. 21,161).

189. Later that month, a Tobacco Institute advertisement stated: "After millions of dollars and over 20 years of research – The question about smoking and health is still a

question." 500004807-4809 at 4807 (U.S. Ex. 20,608).

190. In December 1970, the Tobacco Institute issued yet another statement, published as an advertisement in major American newspapers, this one titled "The Question about Smoking and Health Is Still a Question":

A major portion of this scientific inquiry has been financed by the people who know the most about cigarettes and have a great desire to learn the truth . . . the tobacco industry. And the industry has committed itself to the task in the most objective and scientific way possible. 1115 reports in all. Through this work much valuable data have been produced about lung cancer, heart disease, chronic respiratory ailments and other diseases. However, there's still a lot more to be learned. There are eminent scientists who believe that the question of smoking and health is an open one and that research in this area must go forward. From the beginning, the tobacco industry has believed that the American people deserve objective, scientific answers. With this same credo in mind, the tobacco industry stands ready today to make new commitments for additional valid scientific research that offers to shed light on new facets of smoking and health.

But the eminent scientists in such pronouncements were never identified. Defendants widely distributed reprints of the advertisement and provided it to every Member of Congress with a personal letter from Kornegay, President of the Tobacco Institute. TIMN0081352-1352 (U.S. Ex. 21,305); 2010008873-8883 (U.S. Ex. 22,010); 1005132832-2832 (U.S. Ex. 21,666); 2010008871-8872 (US Ex. 36,509); 2010008873-8873 (US Ex. 22,010); 2010008874-8874 (US Ex 36,510); 2010008875-8875 (US Ex. 36,511); 2010008876-8876 (US Ex. 36,512); 201008877-8877 (US Ex. 36,513); 2010008878-8879 (US Ex. 36,514); 2010008880-8880 (US Ex. 36,515).

191. The Tobacco Institute published a shorter summary of the 1970 "Cigarette

Controversy" pamphlet in 1971 entitled "Smoking and Health: An Age-Old Controversy." This leaflet briefly stated the Cigarette Company Defendants' opinions on the questions of causation and the validity of the scientific research conducted to date. A November 9, 1973 Tobacco Institute memorandum regarded "Smoking and Health: An Age-Old Controversy" as a "good synopsis of the [1970] pamphlet" and a "shorter version of the industry stand on the cigarette controversy" that should "be put to good use." TIMN0121524-1527 (U.S. Ex. 21,710); TIMN0395428-5429 at 5429 (U.S. Ex. 21,365).

192. In 1971, the Tobacco Institute mailed a "backgrounder" in a three-ring binder to 1,065 chief editorial writers. The backgrounder was also sent to members of the National Association of Science Writers. The Tobacco Institute Backgrounder consisted of five parts: (1) Smoking and the nonsmoker; (2) The counter evidence (which cited many CTR Special Project recipients); (3) Smoking and Pregnancy (which emphasized the purported inconclusiveness of the evidence and attempted to explain how different surveys could be used to reach conflicting conclusions); (4) Some Facts About Tobacco; and (5) Vital Statistics – How Accurate are they? TIMN0263390-3393 (U.S. Ex. 62,868); TIMN0121463-1646 (U.S. Ex. 21,715).

193. In 1971, the Tobacco Institute revised and republished another edition of "The Cigarette Controversy - Eight Questions and Answers." It was distributed by direct mail to physicians, librarians, newspaper and magazine editors, Members of Congress and their top aides, members of public relations groups, medical school faculties, leading tobacco growers and executives of industry supplier firms, other United States business leaders, college and university presidents and department heads, science writers, and business and financial writers

SECTION IV. A.

and securities analysts. Copies were also mailed to a large list of ministers. The mailing went to nearly 350,000 persons. It was sent to over 300 radio and TV station managers together with a sixty second announcement. 1005111528-1575 (U.S. Ex. 20,212); 690014815-4838 (U.S. Ex. 21,041); TIMN0080470-0477 (U.S. Ex. 21,716); 03768320-8337 (U.S. Ex. 20,064); TIMN0263390-3393 (U.S. Ex. 62,868).

194. Defendants' executives also continued to insist in the 1970s, as they had in the 1950s, that "if and when" any harmful elements were identified in cigarettes, they would take necessary steps to remove them.

195. On January 3, 1971, Joseph Cullman III, President of Philip Morris USA, explained in a "Face the Nation" TV interview:

[T]his industry can face the future with confidence because when, as, and if any ingredient in cigarette smoke is identified as being injurious to human health, we are confident that we can eliminate that ingredient. We do not believe that cigarettes are hazardous; we don't accept that. But we are working with the government, working very hard with the government, on various methods of ascertaining whether or not cigarettes can be found hazardous. . . . I believe they have not been proved to be unsafe.

1002605545-5564 at 5550, 5560 (U.S. Ex. 35,622); 690003632-3650 at 3636, 3646 (U.S. Ex. 21,038).

196. During the same televised interview, Cullman falsely denied that cigarettes are hazardous or pose a hazard to pregnant women or their infants. His statement was directly contrary to what he had been informed by Helmut Wakeham, Philip Morris USA's Vice President for Corporate Research and Development, two years earlier. 1002605545-5564 at 5561-62 (U.S. Ex. 35,622); 690003632-3650 at 3647-48 (U.S. Ex. 21,038); 1000211305-1305 (U.S. Ex.

20,080).

197. In an effort to detract attention from smoking as a cause of disease, Defendants pointed to other possible causes. On January 1, 1971, a Tobacco Institute press release, contained statements criticizing public health efforts, suggesting to the public that not enough was being done to investigate incidents of lung cancer in non-smokers. The press release stated "[t]hat thousands of lung cancer victims who have never smoked cigarettes [are] being neglected by expensive propagation of myths instead of scientific knowledge." TIMN0123716-3720 at 3717 (U.S. Ex. 21,328).

198. A January 3, 1971 Tobacco Institute press release quoted Tobacco Institute President Horace Kornegay: "Any organization in a position to apply resources in the search for those keys [to the 'locked door' to the 'statistical path' that links smoking to ill health] – and which fails to do so – will continue to be guilty of cruel neglect of those who it pretends to serve." In this statement, Kornegay told the public that the cigarette company defendants planned to provide more than \$4 million for independent scientific research. 2001052715-2718 at 2718 (U.S. Ex. 21,719).

199. A May 25, 1971 Tobacco Institute press release again publicly denied any links between smoking and health. In this press release, Defendants represented that "many eminent scientists" believe that "the question of smoking and health is still very much a question." TIMN0131768-3769 at 3769 (U.S. Ex. 21,337).

200. In November 1971, R.J. Reynolds requested and received from the Tobacco Institute 1,000 copies of the pamphlet "Smoking/Health An Age Old Controversy" for use in

responding to inquiries from children about smoking and health. Again in February 1973, 500 more copies were requested for the latest printing, again for responding to school children.

TIMN0121524-1527 (U.S. Ex. 21,710); 500005148-5148 (U.S. Ex. 21,323); 500013882-3882 (U.S. Ex. 20,611).

201. On November 15, 1971, the Tobacco Institute stated in a press release that smoking is not harmful to pregnant women. They claimed that many doctors believe that the "question of smoking and health is still an open one." TIMN0100469-0470 at 0469 (U.S. Ex. 21,687).

202. In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris USA's Senior Vice President James Bowling declared that "[i]f our product is harmful . . . we'll stop making it. We now know enough that we can take anything out of our product, but we don't know what ingredients to take out." Bowling further stated that "[w]e don't know if smoking is harmful to health, and we think somebody ought to find out." 500324162-4164 at 4163 (U.S. Ex. 20,627).

203. On February 1, 1972, the Tobacco Institute issued a press release declaring that "[t]he cigarette industry is as vitally concerned or more so than any other group in determining whether cigarette smoking causes human disease, whether there is some ingredient as found in cigarette smoke that can be shown to be responsible, and if so, what it is," and that "despite this effort the answers to the critical questions about smoking and health are still unknown." 500324162-4164 at 4163 (U.S. Ex. 20,627).

204. Defendants vilified reports demonstrating the adverse health effects of smoking.

A press release asserted that the 1972 Surgeon General's Report "insults the scientific community" and that the report was "another example of 'press conference science' -- an absolute masterpiece of bureaucratic obfuscation." The press release further asserted that "the number one health problem is not cigarette smoking, but is the extent to which public health officials may knowingly mislead the American public." TIMN0120602-0603 at 0602 (U.S. Ex. 21,322).

205. In a Tobacco Institute press release on February 1, 1972, President Horace Kornegay stated that "[t]he cigarette industry is as vitally concerned or more so than any other group in determining whether cigarette smoking causes human disease . . . and that despite this effort the answers to the critical questions about smoking and health are still unknown." TIMN0120596-0597 at 0596 (U.S. Ex. 21,321).

206. The reason behind the Tobacco Institute's public statements is explained by a 1972 Tobacco Institute internal document, which stated: "In cigarette controversy, the public – especially those who are present and potential supporters (e.g. tobacco state congressmen and heavy smokers) – must perceive, understand and believe in evidence to sustain their opinions that smoking may not be the causal factor." 87657703-7706 at 7705 (U.S. Ex. 21,098).

207. After the publication of "The Cigarette Controversy," the Tobacco Institute published a series of classified advertisements in various magazines, inviting readers to request copies of the pamphlet. For example, on November 6, 1972, the Tobacco Institute ran an advertisement in *The Nation* that stated "YOU HAVE A RIGHT TO A FULL DISCUSSION ABOUT smoking and health. The Cigarette question is still a question. Send for free booklet 'The Cigarette Controversy'." TIMN0124460-4460 (U.S. Ex. 21,333).

SECTION IV. A.

208. The Tobacco Institute published a 1974 version of "The Cigarette Controversy" and continued to argue that objective research was needed to explore questions about smoking and health. The Tobacco Institute stated that a causal relationship between smokers and illness or death had not been established and that such claims were unproven. Over one million copies were in print by the end of the year. TIMN0017604-7612 (U.S. Ex. 23,020); TIMN217628-7639 (U.S. Ex. 21,263).

209. In a 1975 marketing document, B&W acknowledged the necessity of continuing the "open controversy" strategy, for the company discovered that: "Smokers perceive cigarette smoking as dangerous for one's health. However, they continue to smoke. Thus, they are faced with the fact that they are behaving illogically. They respond by providing either a rationalization for smoking or by repressing their perceptions of the dangers involved. . . . The advertising must also cope with consumer attitudes about smoking, providing either a rationale or a means of repressing the health concern." 680113760-3763 at 3762 (U.S. Ex. 20,987).

210. On April 7, 1975, the Tobacco Institute produced a pamphlet: "True? False? Tobacco Facts," which was sent out under various state tobacco trade associations. Over 10,000 copies were mailed to these groups. Each carried the following statement: "This leaflet is presented to aid full, free and informed discussion of the smoking and health controversy in the public interest and in the conviction that the controversy must be resolved by scientific research." The Tobacco Institute ordered 35,000 copies for itself. R.J. Reynolds requested 10,000 copies alone. The material was edited and republished in 1979 and 1982. TIMN0083360-3360 (U.S. 21,310); TIMN0083361-3368 (U.S. Ex. 87,058); TIMN0083371-3371 (U.S. Ex. 87,059);

TIMN0083397-3397 (U.S. Ex. 21,761); TIMN0083401-3401 (U.S. Ex. 21,311); TIFL0069486-9488 (U.S. Ex. 21,262).

211. These materials, and the entirety of Defendants' fraudulent campaign, took public positions that were both extraordinarily uniform in content as a result of Defendants' coordination, and directly contrary to Defendants' internal assessments, which recognized that smoking caused disease.

- (i) Defendants' Internal Documents and Research from the 1960s, 1970s, and Beyond Show Their Continued Recognition of the Health Effects of Cigarette Smoking

212. Defendants knew there was a consensus in the scientific community that smoking caused lung cancer and other diseases, yet they publicly insisted on the idea of a scientific controversy and disputed scientific findings knowing that their assertions were false. Defendants continued to make claims of an "open question" in rigid adherence to the strategy conceived by the Enterprise in late 1953. All of these claims were made with reckless disregard for the truth or falsity of matters asserted.

213. In a memorandum dated October 24, 1963, Wakeham wrote to Hugh Cullman, President and CEO of Philip Morris USA, warning him of future areas of attack and stating that the health community at that time was overlooking the dangers of nitrosamines, carbonates and other carcinogenic components of tobacco smoke. Referring to the link between smoking and chronic bronchitis and emphysema, Wakeham explained that "experts have predicted that the cigarette industry may be in greater trouble in this area than in the lung cancer field." 2002242310-2312, at 2312 (U.S. Ex. 21,910).

SECTION IV. A.

214. Following the 1964 Surgeon General's Report, a report by Wakeham noted that "little basis for disputing the findings [of the 1964 Surgeon General's Report] at this time has appeared" and that the report reflected a "professional approach" to the matter of smoking and health. However, Philip Morris USA continued to maintain – for another forty-five years – its public position that the causal link between smoking and health was an "open question." Philip Morris USA and the other Defendants attacked the Report with reckless disregard for the truth or falsity of their assertions. 1000335612-5625 at 5615 (U.S. Ex. 22,986).

215. According to a February 1964 report prepared by Alan Rodgman at R.J. Reynolds, "[t]he known composition of tobacco smoke is not inconsistent with the biological findings that cigarette smoke is carcinogenic and ciliastatic." 504912643-2713 at 2705 (U.S. Ex. 20,736).

216. Another of Rodgman's February 1964 reports indicated that all of the data acquired by R.J. Reynolds's studies found the same "biological, pathological, or statistical data indicting cigarette smoke as a health hazard." 504912643-2713 at 2705 (U.S. Ex. 20,736).

217. In August 1964, Rodgman recognized in an internal R.J. Reynolds document: "Many nitrosamines [substances in tobacco smoke] have been shown to be carcinogenic for different organs in several species of animals. As nitrosamines are formed by the reaction of oxides of nitrogen with secondary amines, it is possible that cigarette smoke could contain nitrosoanabasine and nitrosonornicotine. Nitroanabasine, which is a derivative of the carcinogenic nitrosopiperidine, has now produced many tumors of the esophagus when given orally to rats." 501013277-3277 (U.S. Ex. 20,670).

218. A report written in October 1964 by British tobacco scientists entitled "Report on

Policy Aspects of the Smoking and Health Situation in U.S.A." stated that "[b]oth [Liggett] and Lorillard scientists told us quite bluntly that they considered TRC [the British trade group] research was on the correct basis and CTR largely without value." The report explained that R.J. Reynolds, American, and B&W criticized the TRC approach to bio-assay research on three grounds: (1) "It constituted an implied admission that tobacco contained health hazards," which could be damaging in law suits; (2) mouse skin painting with smoke condensate, according to Little, was scientifically unsound and based on a fallacy (though CTR had contracted with Bio-Research Inc. for research of this type); and (3) it could present the United States' manufacturers in a bad light to the public since they could be represented by hostile writers as being negligent of public health in comparison with British manufacturers. 1003119099-9135 at 9115 (U.S. Ex. 20,152).

219. In 1966, in a semi-annual report on Philip Morris USA's "Project 6900," exploring the biological activity – carcinogenicity, mutagenicity, cytotoxicity, etc. – of tobacco smoke, Project Director Peter C. Luchsinger noted that "cigarettes will most likely be implicated as one of the causative agents in emphysema and bronchitis." Luchsinger noted that in a series of long-term primate experiments financed by Philip Morris USA, monkeys that were forced to inhale smoke had a higher rate of emphysema than those in a non-smoking control group. Project 6900 included other experiments with smoking rodents, cats and other animals to determine whether lung function was differently disabled by different types of cigarettes. Luchsinger's report, never released to the public and marked "[n]ot to be taken from this room," concluded that "gross lung pathology can be induced by smoking cigarettes." 100341400-1414 at 1406 (U.S. Ex. 20,095).

SECTION IV. A.

220. A May 1967 report on "Project 6900" described further tests with mice, pigs, monkeys and cats, concluding that filtered smoke was "no less tumorigenic than nonfiltered smoke." 1000342063-2073 at 2065 (U.S. Ex. 20,096).

221. In January 1967, outside counsel Ed Jacob of the law firm Cabell, Medinger, Forsyth & Decker (a firm that represented R.J. Reynolds and CTR) met with Dr. Arthur Furst, a CTR Special Project funding recipient. Furst informed Jacob that there is a dose response relationship between nickel added to cigarettes and tumors in mice. Jacob falsely and without any basis claimed that the relationship had not been demonstrated but was a statistical artifact resulting from using different mice at different times. 1005137411-7413 (U.S. Ex. 20, 225).

222. On June 20, 1967, G.F. Todd of the Tobacco Research Council (the British counterpart to TIRC/CTR) wrote to Addison Yeaman, Vice President and General Counsel of Brown & Williamson, expressing frustration at having to keep two sets of books due to the paradox that while Defendants refused to admit publicly any health effects of smoking, senior scientists at the Tobacco Research Council actually did "accept the causation" evidence: "The real difficulties that we encountered arose out of the unavoidable paradox at the center of our operations – namely that, on the one hand the manufacturers control TRC's operations and do not accept that smoking has been proved to cause lung cancer while, on the other hand, TRC's research program is based on the working purposes. In addition, the Council senior scientists accept that causation theory. We have not yet found the best way of handling this paradox." LG0298943-8944 at 8943 (U.S. Ex. 36,267).

223. Wakeham informed Philip Morris USA executives on January 10, 1969, that

"[n]ow we have a study of the effect of smoking in pregnancy which supports previous conclusions that smoking mothers produce smaller babies," and that the medical field recognized that "smaller babies suffer detrimental effects all through life," including "lower intelligence test scores at age 10." 1000211305-1307 at 1306 (U.S. Ex. 20,080).

224. A 1969 Phillip Morris USA memorandum revealed: "A review of recent mouse skin painting data from the Harrogate Laboratories appearing in progress reports of the Tobacco Research Council (Great Britain) indicates strong support for previously published data on the following points: Cigarette smoke condensate painted on the backs of mice over a two-year period produces tumors in numbers proportionate to the amount of condensate applied. In other words, the dose-response relationship is clearly being followed in these experiments."

2025010581-0583 at 0591 (U.S. Ex. 20, 405).

225. In the 1960s, R.J. Reynolds established a facility in Winston-Salem, North Carolina, to research the health effects of smoking using mice. In this facility, nicknamed the "Mouse House," R.J. Reynolds scientists researched a number of specific areas, including studies of the actual mechanism whereby smoking causes emphysema. Internally, an R.J.

Reynolds-commissioned report favorably described the Mouse House work as the most important of the smoking and health research efforts because it had come close to determining the underlying mechanism of emphysema. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 32:9-33:12.

226. Research done in R.J. Reynolds's science and health group was routinely withheld from the scientific community: scientists were forbidden both to discuss and publish their

findings. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 35:3-38:18.

227. In March 1970, the "Mouse House" group was informed by its supervisor that the legal department had requested their lab notebooks. Dr. Nystrom initially told them the notebooks would be returned, but they were not. Dr. Colucci later informed them that the notebooks had been accidentally destroyed in the legal department. During the tenure of Joseph Bumgarner, a scientist at R.J. Reynolds, no one ever told him that the notebooks had been retained, until 1992 when he was summoned by the law firm Womble Carlyle to verify that the notebooks one of their attorneys had belonged to him. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 38:19-44:4, 241:18-22; 257:11-17.

228. On the day the "Mouse House" was disbanded, twenty-six people were called into a conference room, including individuals who had been out on travel who were called to return. Management representatives Murray Senkus and Ed Vassallo were there. With the exception of a few technicians, everyone was terminated. Bumgarner testified that Mr. Vassallo said that the terminations were not a reflection on their work, but that economic reasons caused a change in the direction of the company. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 44:5-53:24.

229. Included in the remarks drafted for use by Dr. Senkus and Mr. Vassallo in discussing the termination with R.J. Reynolds employees, are the following statements:

...the primary result of this reorganization is to put even greater emphasis on research useful to our tobacco, food, packaging and

containerized operations, and to eliminate research programs which are no longer appropriate to corporate needs, objectives and strategies."

515384976 (U.S. Ex. 88,655).

"[t]he rules of termination notice and pay for the professionals who will be leaving the Research Department are special for the situation and will be discussed with each individual by George Cook or Alan Kirby.

515384979-4979 (U.S. Ex. 88,656).

230. When the scientists were dismissed they were reminded that they had signed confidentiality agreements that meant they were not to discuss company processes or secrets with competitors. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 44:5-53:24.

231. Bumgarner testified that he disagreed with a statement made by R.J. Reynolds scientist Sam Simmons that the group was not at the point of doing valid experiments. He believes that their work was on the cutting edge of science and given time it might have identified a mechanism or specific chain of events that leads to the onset of lung disease. Bumgarner testified that they had state of the art equipment and a clear mission—to determine whether smoking caused emphysema. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 53:25-54:11.

232. R.J. Reynolds was well aware that smoking was linked with emphysema. Bumgarner testified that he had seen slides from within his group comparing normal lung tissue with exposed lung tissue that was showing signs of emphysema. After exposure the animals suffered weight loss and changes in metabolism of lipids both in surfactant and in lung and liver.

Cytology—the study of cell structure—showed abnormal cell structure change from the smoke. Bumgarner further testified that he understood that ciliastasis (the cilia stopping from its function of clearing foreign material from the bronchial portion of the lung) was produced. To his knowledge, emphysema was produced in rats. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 63:17-66:8, 68:11-68:20.

233. Prior to the scientists' notebooks being seized, no one in management had ever reprimanded them or challenged the quality of their work. Bumgarner believes that they were fired because what they were working on was subject to subpoena. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 53:25-71:10.

234. By 1969 R.J. Reynolds had a plan to carry out studies to examine the lungs of animals to see if they could detect changes in chemical metabolism that would relate to the diseased state. Scientists had started that phase, but were interrupted by the seizure of their lab notebooks and subsequent termination. Prior to the seizure of the notebooks, the scientists' data was reflecting observed changes in metabolism, which are often indicators of existing or potential pathology. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 73:4-81:4.

235. The scientists' lab notebooks that were taken represented the permanent records of their data, observed facts and events. There was nothing in the notebooks relating to legal matters, and the notebooks had never previously been reviewed by the legal department. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 73:4-81:4.

236. R.J. Reynolds knew that epidemiology showed that there was a higher rate of emphysema in smokers and did research in order to find a mechanism to explain that. Rabbits were used in these experiments. One hypothesis tested was that smoke affected basic lipid metabolism in the lung, which, in turn, would affect the production of lung surfactant (a secretion of lipid-based film that coats the interior of the alveolar sacs). This process was thought to lead to emphysema. Deposition of Joseph E. Bumgarner, State of Texas v. American Tobacco Company, November 11, 1996, 129:17-131:14; 181:8-14.

237. That R.J. Reynolds's scientists had produced emphysema in chronic-smoke-exposed rats was known to Philip Morris USA. In a 1969 Philip Morris USA document concerning the biological research program at the Mouse House and the links it showed to smoking and disease, a Philip Morris USA scientist wrote: "I met Dr. Price from R. J. Reynolds at the CTR-USA meeting of December 11 and 12, 1969. He mentioned doing chronic cigarette smoke exposure studies with rats. The animals received up to 500 cigarettes and emphysema was produced." 1001882748-2749 at 2748 (U.S. Ex. 26,123).

238. R.J. Reynolds knew that exposing rabbits to tobacco smoke led to: slowing of heartbeat during puffs, decrease in pulse pressure, increased number of goblet cells, alveolar collapse, erythema of nasopharynx, acute pulmonary edema, erythema, endocardial hemorrhage, kidney disease, bronchial hyperplasia, emphysema, epithelial hyperplasia, bronchial edema, bronchiolar plugs, and gross lesions on lungs. 515384994-4999 (U.S. Ex.87,983).

239. According to lab notes from the Biologic Research Division's Chronic Smoking Studies at R. J. Reynolds, "[i]t appears that 6 to 7 months of smoking at a rate of 4 to 6 cigarettes

[Winston 85mm Filter Kings] per day may be sufficient to elicit [sic] changes in lung tissue of the rabbit." XRJ0030220-0220 (U.S. Ex. 87,984).

240. In 1970, Philip Morris USA's President complained to R.J. Reynolds about the work going on in the Mouse House. Despite the progress made there, R.J. Reynolds responded to the complaint by closing the Mouse House -- disbanding in one day, without notice to the staff, the entire research division, firing all twenty-six scientists at the Mouse House, and destroying years of smoking and health research. 110315968-5971 (U.S. Ex. 26, 378).

241. Scientists working for Cigarette Company Defendants also recognized the validity of research conducted by Dr. Oscar Auerbach with smoking beagles in the 1960s and early 1970s.

242. Principal Philip Morris USA scientist Raymond Fagan sent a memorandum to Wakeham, then Philip Morris USA's Research Director, on "Auerbach's Smoking Beagles" that described his visit to Auerbach's laboratory to observe a smoking dog and evidence slides. Fagan observed: "I would say that the experiment is a crude one but effective in that carcinoma in dogs has been produced. . . . The crux of the situation is whether there is general agreement by qualified pathologists that carcinoma . . . has indeed been produced. And even if the cancer production is invalidated the obvious emphysema produced cannot be denied." 1000837391-7392 at 7392 (U.S. Ex. 20,109).

243. On January 7, 1969, Wakeham informed his superiors at Philip Morris USA that "scientific findings suggest that inhalation of fresh cigarette smoke may enhance carcinogenesis." 682011667-1671 at 1668 (U.S. Ex. 21, 021).

244. On April 4, 1970, a company researcher wrote his managing director of Gallaher Ltd. (American Tobacco Company's British-based sister company) a confidential memo titled "Auerbach/Hammond Beagle Experiment" describing Auerbach's research as "undoubtedly a significant step forward. . . . We believe that the Auerbach work proves beyond reasonable doubt that fresh whole cigarette smoke is carcinogenic to dog lungs and therefore it is highly likely that it is carcinogenic to human lungs." The research manager continued, "[t]he results of the research would appear to us to remove the controversy regarding the causation of the majority of human lung cancer," and "[t]o sum up, we are of the opinion that Auerbach's work proves beyond all reasonable doubt the causation of lung cancer by smoke." 321993992-3995 at 3992, 3994 (U.S. Ex. 21,688).

245. After a review of a presentation before the Tobacco Working Group, Lorillard's Alexander Spears admitted that "[t]he slides (shown by Auerbach) represented obvious lung pathology with increased cellular proliferation with smoke exposure." Deposition of Alexander W. Spears III, Cippolone v. Liggett, (D.N.J.), July 26, 1984, 190:1-191:25.

246. According to Spears, a CTR study in the late 1960s or early 1970s produced tumors in the respiratory tracts of animals exposed to cigarette smoke. In a 1984 deposition, Spears disputed the CTR research results, blaming the tumors on viral infections unrelated to smoke. Deposition of Alexander W. Spears III, Cippolone v. Liggett, (D.N.J.), July 26, 1984, 190:1-191:25.

247. Wakeham realized how hard it was to restrict research to the narrow scope required by Defendants' governing myth of "no evidence of harm." In a 1970 memorandum to

Philip Morris USA Chairman Hugh Cullman, Wakeham indicated: "Let's face it. We are interested in evidence which we believe denies the allegation that cigarette smoke causes disease. If the CTR program is aimed in this direction, it is in effect trying to prove the negative, that cigarette smoking does not cause disease. Both lawyers and scientists will agree that this task is extremely difficult, if not impossible." 2022200161-0163, at 0161 (U.S. Ex. 21,705).

248. A November 1970 memorandum from Claude Teague to E.E. Vassalo made clear that R.J. Reynolds had engaged in research concerning smoking and health, including animal studies, but further stated that it would try to avoid any future research on smoking and health by farming such research out to industry fronts like CTR:

Yes, we have from time to time in the past, in various circumstances, performed animal experiments in the smoking-health area, in our laboratories. These have been short-term investigations made for various purposes such as: (1) monitoring of experiments published in the scientific literature, (2) evaluation of competitive products alleged to offer advantages to the consumer; and development, on behalf of the tobacco industry, of basic instrumentation for use by independent scientists engaged in basic research on the biological effects of smoking. Currently, we have neither staff nor facilities for performing animal experiments, and no further experiments are planned unless special circumstances arise which may require them. This, of course, reflects our basic consistent conviction the massive, collaborative industry-wide support of long term basic research by independent scientists and scientific organizations already expert in their fields is the most important and effective means for establishing fundamental scientific facts in the area of smoking and health. Thus, we continue our full support of the Council for Tobacco Research-USA, and the research programs of the American Medical Association.

500020977-0978 at 0977 (U.S. Ex. 20, 613).

249. CTR and its executives were also aware that Defendants' public statements were

false. Robert C. Hockett, CTR's Scientific Director, recognized in 1971 that benzo(a)pyrene, a chemical carcinogen, was easily detected in cigarette smoke. 502859720-9739 (U.S. Ex. 20,707).

250. Defendants also reviewed outside research that confirmed that smoke constituents were carcinogenic. A February 14, 1973 research report distributed to Defendants and their outside law firms linked smoking to cancer. The report, titled "Research Report re: Cigarette Smoke Condensate Preparation and Dermal Application to Mice," was prepared by Hazelton Laboratories and submitted to American, Brown & Williamson, Liggett, Lorillard, Philip Morris USA, R.J. Reynolds, and the law firm of Covington & Burling. It reported that "97 of the 100 mice developed gross lesions in the skin in the area of dermal applications of benzo(a)pyrene." Examination indicated that these were squamous cell carcinomas. 501547434-7448 at 7444 (U.S. Ex. 20,682).

251.

516966953-6953 (U.S. Ex. 79,297) (Confidential).

252. In 1970, Sir Richard Dobson, Director of BATCo, stated that "[c]igarettes in moderation do more good than harm." "Men and Matters," *The Financial Times*, March 20, 1970 (U.S. Ex. 86,875).

253. A July 21, 1970 letter from B&W outside counsel Shook, Hardy, Ottman, Mitchell & Bacon to B&W General Counsel Debaun Bryant, reveals that B&W was concerned that statements of B&W and BAT employees, "which appear to demonstrate a belief on the part

of company personnel that cigarette smoking has been established as a general health hazard or a cause of some particular disease or diseases," would expose B&W and BAT to smoking and health litigation. As examples, the letter discusses statements memorialized in the minutes of a conference at Kronberg, Germany, held from June 2 through 6, 1969 that was attended by both BAT and B&W researchers. It was David Hardy's opinion that such statements "constitute a real threat to the continued successful defense of smoking and health litigation." The letter also discusses additional concern stemming from the existence of a "'BAT/B&W Cost & Risk Pooling Agreement' executed in July 1969." 681805313-5319 at 5313, 5314, 5316 (U.S. Ex. 30,935).

254. In 1974, David Hardy of Shook, Hardy & Bacon advised BATCo against admitting to the public what its scientists knew internally, that smoking causes disease. At the time, BATCo was considering placing a warning on cigarette packages sold in England – with no government attribution – that stated that smoking "causes lung cancer, bronchitis, heart disease." In a letter addressed to BATCo, Hardy advised that this admission of fact would impede the defense of smoking and health litigation in the United States. He wrote:

The proposed new warning removes the attribution of the warning to "H.M. Government," and instead appears to be a voluntary and direct admission by the cigarette manufacturer that the cigarettes contained in the package cause "lung cancer, bronchitis, heart disease." A wholly owned subsidiary of the manufacturer would, in our opinion, be adversely and prejudicially effected by such a voluntary warning even though it is a separate entity.

....

Once the fact and content of the warning got before a jury in the United States in a case involving the subsidiary, the defense of "no proof of causation" would be lost for all practical purposes. Such a result would indeed be unfortunate in view of the fact that in every instance where the matter has been explored in our Court through expert testimony and otherwise, the cigarette manufacturer has

prevailed.

110318156-8157 (U.S. Ex. 34,974).

255. Similarly, a January 1, 1976 letter from B&W Vice President and General Counsel, Ernest Pepples, to BATCo General Counsel, H.A. Morina, discusses B&W's concern that voluntary consent by BAT to bring additives under the Tobacco Medicine Act would prejudice B&W, because it could attribute to B&W knowledge of specific hazards, which would badly weaken B&W's litigation position. MNATPRIV00023457-3457 (U.S. Ex. 86,869).

256. BATCo senior scientist S.J. Green questioned the logic of the Defendants' stance on smoking and health in the light of its knowledge, stating in an October 27, 1976 memorandum entitled "Cigarette Smoking and Causal Relationships":

The problem of causality has been inflated to enormous proportions. The industry has retreated behind impossible demands for "scientific proof" whereas such proof has never been required as a basis for action in the legal and political fields. Indeed if the doctrine were widely adopted the results would be disastrous. . . . It may therefore be concluded that for certain groups of people smoking causes the incidence of certain diseases to be higher than it would otherwise be.

1099384433-8436 at 8433, 8436 (U.S. Ex. 20, 267).

257. Green developed a "Safety Index for Cigarettes." His model included the following assumptions: "Cardiovascular disease is caused to the extent of 15% of all such deaths by cigarette smoking," "95% of all lung cancer deaths are caused by smoking," and "[b]ronchitis deaths are caused in 20% of the cases by smoking cigarettes." He explained: "This is merely an example of what such an index would involve and the sort of assumptions which must necessarily be made or implied. I think it demonstrates clearly that it is not a path we should

encourage anyone to follow at present." 110069816-9819 at 9816 (U.S. Ex. 21,403).

258. Undated draft notes to a BATCo memorandum, found in Green's files recognized that: Cigarettes of substantially reduced biological activity (SRBA) can be made by product modification and will continue to present a range of marketing opportunities. By SBRA is meant cigarettes where epidemiology would show no greater incidence of disease for smokers than non-smokers. But there remains a need for credible biological tests to facilitate developments. Green admitted: "There has been no change in the scientific basis for the case against smoking. Additional evidence of smoke-dose related incidence of some diseases associated with smoking has been published. But generally this has long ceased to be an area for scientific controversy." 110078609-8609 (emphasis added) (U.S. Ex. 34, 959).

259. In 1977, Sir Peter MacAdam, former Chairman of BATCo, stated that "I am not aware of any cause or relationship [between smoking and adverse health effects]." "Professor says BAT chief is 'stupid,'" *The Scotsman*, March 18, 1977, 1002420517-0528 (U.S. Ex. 86,876).

260. In September 1977, an R.J. Reynolds scientist asked to meet with company attorneys to discuss a "retrospective epidemiological examination" evidencing the "close relationship between cigarette smoking and lung carcinoma." 500269473-9474 at 9474 (U.S. Ex. 20,623).

261. In February 1978, Rodgman, R.J. Reynolds's Director of Research, wrote a colleague at the company, instructing him to decline an invitation to write a handbook of trace substances found in tobacco. He explained that he had spoken with both in-house and law firm attorneys, who asked: "Why hand the scientists antagonistic to the industry a complete

compilation of the information useful to them in their efforts to put us out of business."

501557495-7496 at 7496 (U.S. Ex. 20,684).

262. In an internal document dated February 9, 1979, Peter Lee, a consultant for BATCo, acknowledged that the 1979 Surgeon General's report on smoking and health was, "no doubt . . . an impressive document" and that "[t]he way in which the information was presented was on the whole sound, scientific and emotive." He also predicted that it will become "the Number One basic reference document for smoking and health researchers the world over."

100214029-4047 at 4030 (U.S. Ex. 21,515).

263. On August 5, 1980, J. Kendrick Wells wrote a memorandum chronicling B&W's concerns with a draft BAT position paper called "Change of Stance on Smoking and Health." Wells counseled BAT against releasing the statement as written because it constituted an admission that "BAT has been marketing products which are for the first time admitted to be dangerous by the manufacturer." Wells was concerned that the position paper and the implicit admission regarding causation "could cripple or destroy B&W's defense to smoking and health lawsuits and opposition to legislative attacks." Deposition of J. Kendrick Wells, United States v.

Philip Morris, et al., July 1, 2002, 142:10-144:9; 680050983-1001 at 0989, 0986 (U.S. Ex. 20,981).

264. J. Kendrick Wells, Brown & Williamson, sent a memo to Ernest Pepples, Brown & Williamson, dated October 27, 1981 concerning a meeting held on October 26, 1981 with Dr. Blackman, director of the Group Research and Development Center of BATCo in Southampton, England. At this meeting Wells expressed concern with a presentation slide titled "Basic

SECTION IV. A.

Approach to Government and Medical Authorities." Blackman then agreed to make substantive changes to the document. The reason for the change was that the initial document "admit[ted], despite a disclaimer, that cigarettes are harmful to health in proportion to delivery." The document also "runs against [an] important argument the U.S. industry is making in response to the FTC Staff Report and may need to make in response to charges that cigarettes are addictive." Blackman agreed to send the changed document to the other INFOTAB members.

680585063-5064 (U.S. Ex. 21,007); 680585041-5042 (U.S. Ex. 21,006).

265. In a May 1984 meeting with outside counsel, corporate counsel for Brown & Williamson and BATCo discussed methods for controlling admissions by BATCo scientists on causation because of the risks posed in product liability litigation in the United States.

521015673-5675 (U.S. Ex. 52,687).

266. A 1988 report labeled "Highly Confidential Work Product," extensively details how B&W and BAT sought to maintain consistency in their position on the primary issue of whether smoking causes diseases. Discussing the recognized importance of consistency of position between the two companies, the report states: "The importance of consonance between the positions of Brown and Williamson and BAT is essential because, in certain contexts, statements made by BAT personnel can be deemed to be admissions against Brown & Williamson in the pending litigation. As a result, BAT and Brown & Williamson have worked together at various times to coordinate their positions on smoking and health." The report goes on to discuss B&W's input in official position statements released by BAT, noting that "Brown & Williamson has . . . attempted to temper any effort by BAT to implement a moderation campaign

with implicit or express health claims." Indeed, "[t]he impact of such a statement on the smoking and health litigation in undermining the general causation and consumer awareness defenses was deemed so important that a legal opinion was drafted recommending that any change in BAT Group strategy on smoking and health not be made without agreement within the Group."

Furthermore, the report notes that Brown & Williamson was instrumental in curbing the potential detrimental legal impact of BAT research projects, by suggesting increased lawyer involvement in research activities. 689102113-2163 at 2116-2118 (U.S. Ex. 69,170).

267. Defendants also obtained evidence about the health effects of smoking that was contrary to their public statements from research they funded. Dr. Gary Huber conducted smoking and health research funded by Defendants from 1972 to 1980 while working at Harvard University Medical School. Huber's research was conducted pursuant to a written agreement between Harvard and B&W, Liggett, Lorillard, R.J. Reynolds, and Philip Morris USA. The agreement created the Harvard Research Tobacco and Health Program, with Huber as its head and chief investigator. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5473:2-13, 5484:5-5485:2.

268. Huber and his group conducted numerous studies into the response of the lung to tobacco smoke using laboratory animals. These studies assessed the effects of smoke on the lung airways, lung parenchyma, and the heart and cardiovascular systems of animals. The studies also looked at COPD, emphysema, chronic bronchitis and coronary artery disease. Huber's animal studies utilized commercially available and research cigarettes, including commercially available

SECTION IV. A.

cigarettes supplied by Defendants, and produced human-type diseases in the lungs of animals that inhaled cigarette smoke. The inhalation studies demonstrated changes in animal lungs that Huber's group concluded were analogous to human diseases. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5499:13-5500:13, 5475:3-5476:3, 5497:19-24.

269. Huber specifically reported to his sponsors – B&W, Liggett, Lorillard, R.J. Reynolds, and Philip Morris USA – that his research demonstrated a response to inhaled cigarette smoke, including disease mechanisms similar to those associated with diseases in humans. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5500:14-15.

270. Huber also conducted research funded by Defendants that studied changes in human smoking behavior as a function of lower and higher nicotine levels in cigarettes. The research, discussed at greater length in Section IV.B infra, inter alia, that smokers of lower nicotine cigarettes had an increased risk of developing pulmonary disease. Huber found that "compensation," or smoking behavior modifications, exhibited by smokers of lower nicotine cigarettes, rendered such cigarettes potentially more harmful than high nicotine counterparts because deeper inhalation carried the smoke deeper into the lung where adenocarcinoma generally occurs. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5477:9-23, 5513:25-5515:2.

271. Another group of inhalation studies conducted by Huber focused on rats. The

SECTION IV. A.

research showed that rats exposed to cigarette smoke developed emphysema. Huber reported these results to Defendants. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5478.

272. Huber had frequent contact with scientists working for Defendants, including Alexander Spears of Lorillard, Alan Rodgman of R.J. Reynolds, and Thomas Osdene of Philip Morris USA, but Huber's access to them was controlled by Defendants' attorneys. Additionally, Spears made several site visits to Huber's laboratory and reviewed his progress reports. Spears admitted that the research conducted by Huber concluded that tobacco smoke caused changes in the respiratory tracts of the animals consistent with chronic obstructive lung disease. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5468:3-13, 5487:20-5488:4; Deposition of Alexander W. Spears III, State of Texas v. American Tobacco Co., No. 5:96CV91, July 24, 1997, 233:1-238:12, 239:8-16; Deposition of Alexander W. Spears III, Cippolone v. Liggett, (D.N.J.), July 26, 1984, 177:1-181:25.

273. On September 26, 1977, Philip Morris USA's Assistant General Counsel, Alexander Holtzman, sent a warning to the company President, Joseph Cullman, informing him that the results from the Harvard Project had led Huber to the conclusion that exposure of rats to cigarette smoke for six months causes emphysema and that a paper announcing the results would be delivered at the American College of Chest Physicians meeting the next month. Holtzman indicated that attorney William Shinn of Shook, Hardy & Bacon, under the direction of the industry counsel at the Tobacco Institute, had been sent to change Huber's mind on the results

and causation, but the attorney did not succeed in altering the scientists' interpretation of the results of this study. The Tobacco Institute prepared a press release to mitigate the damage in the event Huber's interpretation received any media attention. 1005053856-3856 (U.S. Ex. 20,197).

274. In 1980, Huber sought to continue his research on animals at a time when he was making significant progress in his smoking and health research, but Defendants cut off funding for his research at Harvard and denied his request for funding after he moved later that year to the University of Kentucky. In a 1980 meeting at a Boston hotel, Defendants' attorneys told Huber that the reason funding for his research had been discontinued was because he was "getting too close to some things." The attorneys included Lee Stanford from Shook, Hardy & Bacon, Ernest Pepples from B&W, and Arthur Stevens from Lorillard. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5503:6-25.

275. Internal recognition of the validity of mainstream scientific investigation also continued. In 1978, Philip Morris USA researchers wrote: "Other nitrosamine compounds have been found in tobacco and tobacco smoke. Hecht determined the levels of N'-nitrosornicotine ("NNN") and N'-nitrosoanabasine ("NAB") using gas-liquid chromatography and mass spectrometry. NNN was found in the unburned tobacco at concentrations between 0.3 and 88.6 micrograms per gram. NNN levels are related to the increased of cancer of the oral cavity, esophagus and nasopharynx observed in tobacco chewers." 109881322-1331 at 1323, 1327 (U.S. Ex. 20,263).

276. In a 1980 memorandum, BATCo fully recognized that it was implausible to

continue to deny the internal evidence linking smoking with diseases when it stated the following: "The company's position on causation is simply not believed by the overwhelming majority of independent observers, scientists and doctors. . . . The industry is unable to argue satisfactorily for its own continued existence, because all arguments eventually lead back to the primary issue of causation, and on this point our position is unacceptable." BATCo then went on to admit causation: "On balance, it is the opinion of this department that we should now move to position B, namely, that we acknowledge 'the probability that smoking is harmful to a small percentage of heavy smokers'. . . . By giving a little we may gain a lot. By giving nothing we stand to lose everything." 109881322-1331 at 1323, 1332 (U.S. Ex. 20,263).

277. In 1980, BATCo internally admitted: "It is simply incorrect to say, 'There is still no scientific proof that smoking causes ill-health.'" And yet Defendants continued to do exactly that, throughout the 1970s, 1980s, 1990s, and beyond. 680050983-1001 at 0998 (U.S. Ex. 20, 981).

278. While Defendants' campaign of public false statements continued pursuant to the strategy initially conceived by the Enterprise in December 1953, internal documents provided further confirmation of their longstanding knowledge of the falsity of their public position.

279. Philip Morris USA scientist James Charles (who would later serve as the company's Vice President of Research) addressed a February 23, 1982 memorandum to department head Osdene, responding to the 1982 Surgeon General's Report on Smoking and Health: "Cigarette smoke is biologically active" and "cigarette smoke condensate applied to the backs of mice causes tumors." He listed nine facts on the biological activity of cigarette smoke

and told Osdene "you may shred this document . . . or use [it] in any way you see fit."

1003171563-1567 at 1564, 1566 (U.S. Ex. 26,137).

280. BATCo's initial inclination toward candor, admitting causation, quickly dissolved when its affiliate, Brown & Williamson, informed BATCo that conceding causation would be tantamount to going out of business, especially in light of smoking and health litigation in the United States.

281. In May 4, 1982, a BATCo consultant, Francis Roe, found the industry position on causation "short of credibility," noting that "[i]t is not really true, as the American Tobacco industry would like to believe, that there is a raging worldwide controversy about the causal link between smoking and certain disease." 100432193-2203 at 2194 (U.S. Ex. 20,182).

282. In early 1984, BATCo, concerned about the "biological activity" of its product, explicitly recognized the connection between smoking and lung cancer, heart disease, and emphysema, as well as the problems that arise from maternal smoking during pregnancy. The same year, BATCo also internally recognized the ability of epidemiological studies to demonstrate causation. 109837925-7928 (U.S. Ex. 20,260); 512102918-2955 (U.S. Ex. 51,615).

283. R.J. Reynolds's recognition of the validity of epidemiological and scientific studies led Anthony V. Colucci, Director of the company's Scientific Litigation Support Division, to write to attorney James E. Young of Jones, Day, Reavis & Pogue to push the "mechanistic argument" of causation. Colucci explicitly admitted: "That cigarettes are a risk factor for human lung cancer is an irrefutable fact." 507910855-0856 at 0855 (U.S. Ex. 20,803).

284. Lorillard was aware at the latest in 1997 that every major medical and scientific group in America that had studied the question has concluded that smoking causes disease. The company was equally aware that the only scientific studies to disagree with that conclusion were performed or funded by the tobacco industry. Deposition of Alexander W. Spears III, State of Texas v. American Tobacco Co., No. 5:96CV91, July 24, 1997, 58:3-60:12.

(j) Despite Their Internal Knowledge, Defendants Continued Their Public Campaign of Denial from 1975 Onward

285. Despite these candid internal acknowledgments that cigarette smoking caused disease, internal and commissioned research confirming the accuracy of results of studies in the public health community, and conclusions of the Surgeon General, Defendants' public position remained the same. They continued to make false statements in an effort to perpetuate the notion of an "open controversy." They continued to deny the serious health risks posed by smoking.

286. On January 14, 1975, the Tobacco Institute released a new announcement of the availability of the booklet "The Cigarette Controversy." This announcement stated that "[i]f smoking does cause disease, why after years of intensive research, has it not been shown how this occurs? And why has no ingredient as found in smoke been identified as the causal factor? These are among the unanswered questions set forth in a new publication of the Tobacco Institute, entitled The Cigarette Controversy." TIMN0120638-0639 at 0638 (U.S. Ex. 21,698).

287. Distribution of "The Cigarette Controversy" aided the goal of spreading the industry's statements about smoking and health to the public. While this booklet was published and most often distributed by the Tobacco Institute, the individual tobacco companies also made efforts to circulate this publication to its consumers. For example, on March 26, 1976, R.J.

Reynolds included an unsolicited copy of "The Cigarette Controversy" in response to a consumer's concern that cigarettes are a cause of lung cancer. 500320855-0855 (U.S. Ex. 21,894).

288. In addition to flat out denials of the health consequences of smoking, the Cigarette Company Defendants used advertising to provide rationalization to the smoker. As B&W stated in a November 29, 1976 memo entitled "Cigarette Advertising History": "Good cigarette advertising in the past has given the average smoker a means of justification on the two dimensions typically used in anti-smoking arguments: [health threats and immorality] . . . All good cigarette advertising has either directly addressed the anti-smoking arguments prevalent at the time or has created a strong, attractive image into which the besieged smoker could withdraw." 680086039-6044 at 6040 (U.S. Ex. 20,984).

289. R.J. Reynolds continued to represent that there was no evidence of adverse health effects caused by smoking in a 1977 document entitled "Scientific and Medical Aspects of the Smoking and Health Controversy -- Some Paradoxes and Fallacies." Dr. Frank Colby, a lead scientist for R.J. Reynolds, stated that "no component or group of components, as found in smoke, has ever been proven to be the cause of any disease in man." Colby added: "The smoking and health controversy is a very important question; our Industry has been -- and is, of course, trying to provide the answer. If there ever should be any component or components, as found in smoke, that can be proven to be, or contribute to be, a cause of any disease in man, we will of course, take them out." 5003230055-0055 (U.S. Ex. 87,060); 500021655-1710 (U.S. Ex. 20,614); TI04482775-2827 (U.S. Ex. 21,243).

SECTION IV. A.

290. On June 6, 1977, Addison Yeaman, B&W's General Counsel, publically explained in his remarks at Maxwell Associates Biannual Tobacco Seminar: "I am utterly secure in saying to you that the tobacco industry recognized its responsibility and its duty and that it will continue its every effort and at whatever cost to find the answer to the question, 'what part, if any, does tobacco play in human diseases.'" CTRPUBLICSTMT001437-1445 at 1445 (U.S. Ex. 21,164).

291. In a document distributed by B&W entitled "Facts Every Tobacco Man Should Remember," which appeared in the October 27, 1977 edition of the *United States Tobacco Journal*, B&W claimed that "[t]he case against tobacco is not closed . . . in a sense, the jury still isn't able to retire to consider the case because it doesn't have all the relevant facts." The document also stated in that the results of scientific studies regarding the health effects of smoking are "inconclusive." 544001284-1297 at 1285-1286 (U.S. Ex. 20,935).

292. The Tobacco Institute's public relations strategy was to focus as much attention as necessary in order to get the Cigarette Company Defendants' message out to the public that there was no definite link between smoking and health, and that until answers to these questions were found, smokers should not fear that their health was endangered. Defendants' four-point platform is set out in a December 29, 1977 Tobacco Institute press release: "1. The question of smoking and health is still a question requiring scientific resolution. 2. Tobacco smoke does not imperil normal smokers. 3. The tobacco farm program is an essential part of public policy. 4. The freedom of choice of our industry's customers must be preserved." TIFL0522279-2280 at 2280 (U.S. Ex. 21,424).

293. In 1977, the Tobacco Institute published a pamphlet that stated: "Has the Surgeon

General's report established that smoking causes cancer or other diseases? No." TIMN0055129-5135 at 5130 (U.S. Ex. 21,298).

294. Defendants focused much of their public relations campaign on lung cancer and, as time went on, heart disease. In 1978, a Tobacco Institute pamphlet falsely stated: "The flat assertion that smoking causes lung cancer and heart disease and that the case is proved is not supported by many of the world's leading scientists." TIMN319568-9604 at 9578 (U.S. Ex. 62,902).

295. On January 12, 1978, Ross Millhiser, President of Philip Morris USA, stated in a letter to the editor in the *New York Times*, "as for the lack of research on the 'harmful' effects of smoking, the fact is there is good reason to doubt the culpability of cigarette smoking in coronary heart disease." Millhiser, "In Defense of Smoking", *New York Times*, January 12, 1978; (U.S. Ex. 21,378).

296. In May 1978, the Tobacco Institute published a fifty-four page document entitled "Fact or Fancy?" and sent it to broadcasters, editors, writers, and officers of women's associations and organizations "because the tobacco and health controversy has increasingly focused on women and smoking." The document was produced "to present more factual and balanced answers on the health question about which mature women need to know more" and it presented the controversy argument that causality has not yet to be proved in any of the diseases and conditions linked statistically with cigarette smoking. 03731785-1838 (U.S. Ex. 21,466); 04326897-6897 (U.S. Ex. 21,468); 04326898-6898 (U.S. Ex. 21,467); 04326900-6900 (U.S. Ex. 21,469); 04326901-6901 (U.S. Ex. 21,470).

SECTION IV. A.

297. A number of exhibits were identified and introduced by plaintiff's and Defendant's counsel during Dr. Huber's September 20, 1997 deposition in the State of Texas litigation, documents that shed light on Dr. Huber's relationship with Defendants and that provide specific examples of information withheld from him by Defendants. HTT0010212-0214 (U.S. Exhibit 88,807); HTT0010215-0216 (U.S. Ex. 88,808); HTT0010217-0219 (U.S. Ex. 88,809); HTT0010220-0222 (U.S. Ex. 88,810); HTT0010223-0225 (U.S. Ex. 88,811); 1335866-5870 (U.S. Ex. 88,812); 1003119099-9135 (U.S. Ex. 88,813); HTT0010271-0358 (U.S. Ex. 88,814); HTT0010359-0360 (U.S. Ex. 88,815); HTT0010361-0363 (U.S. Ex. 88,816); HTT0010364-0368 (U.S. Ex. 88,817); 1000037069-7069 (U.S. Ex. 88,818); 501009723-9727 (U.S. Ex. 88,819); 01421596-1600 (U.S. Ex. 88,820); 03540193-0194 (U.S. Ex. 88,821); 01346204-6208 (U.S. Ex. 88,822); HTT0010392-0404 (U.S. Ex. 88,823); 504022923-2923 (U.S. Ex. 88,824); 504912643-2713 (U.S. Ex. 88,825); HTT0010502-0503 (U.S. Ex. 88,826); 0000130803-0803 (U.S. Ex. 88,827); 01370915-0915 (U.S. Ex. 88,828); HTT0010508-0510 (U.S. Ex. 88,829); HTT0010511-0513 (U.S. Ex. 88,830); HTT0010514-0516 (U.S. Ex. 88,831); HTT0010517-0531 (U.S. Ex. 88,832); HTT0010532-0534 (U.S. Ex. 88,833).

298. Defendants also continued to insist publicly that there was no need to undertake research to develop "safer" cigarettes, based on their assertion that no harm could be attributed to cigarettes. In June 1978, William Dwyer, Vice President of the Tobacco Institute, explained: "A question often asked of the tobacco industry is whether researchers are developing a 'safe' cigarette. A variation of that question is whether low 'tar' nicotine cigarettes are safer. The tobacco industry is convinced that no cigarette has been proved unsafe. Therefore, they regard

any suggestion of a 'safe' or 'safer' cigarette as tortured logic. The reduced 'tar' and nicotine cigarettes represent about 20 percent of sales and are in the marketplace because of consumer demand. That demand obviously reflects the personal preferences of smokers." TIMN0074796-4800 at (U.S. Ex. 21,480).

299. The Tobacco Institute published "The Smoking Controversy: A Perspective" in December 1978. Citing heavily to scientists who had received CTR Special Project and lawyers' Special Account No. 4 funds for their research, the publication stated that society was on the "brink of paranoia" regarding smoking, that "the onslaught has grown shrill, even hysterical" and that there was a parallel to the Salem witch trials. It stated that the "wars" against disease that were being "waged by the government and voluntary health agencies" are being taken "beyond the realm of science." TIMN0129593-9628 (U.S. Ex. 21,499), TIKU000004159-4194 (U.S. Ex. 64,071).

300. In 1979, the Tobacco Institute published a document entitled "TOBACCO from seed to smoke amid controversy." It declared that "it has not been established that smoking causes any human disease." 690142176-2180 at 2178 (U.S. Ex. 21,512).

301. Beginning around the time of the 1979 Surgeon General's Report, Defendants pursued with increasing vigor the strategy that the smoking and health evidence represented an "open controversy" and made unreasonable demands that "more proof" was needed before the scientific community could jump to the conclusion that cigarette smoking kills its users. On January 10, 1979, the Tobacco Institute published a document entitled "Smoking and Health 1964-1979: The Continuing Controversy." The Tobacco Institute prepared it for distribution to

the news media one day prior to the release of the 1979 Report of the Surgeon General on Smoking & Health and tailored it to respond to the content of the 1979 Report. The Tobacco Institute had managed to obtain three draft chapters of the Surgeon General's Report which assisted it in the development of the publication. Anne Duffin was assigned the responsibility at the Tobacco Institute of researching, writing and editing the report, under the direction and guidance of the law firm Shook, Hardy & Bacon. TIMN0055304-5469 (U.S. Ex. 21,522); TIMN0073990-3992 (U.S. Ex. 21,525); TIFL0403308-3312 (U.S. Ex. 62,631); TIMN0127049-7072 (U.S. Ex. 21,532); TIMN0084430-4594 (U.S. Ex. 21,534).

302. In further anticipation of the 1979 Report, the Tobacco Institute ran advertisements in media publications in early January containing the headline: "The Secretary of Health, Education and Welfare Cordially Invites you to A One-Sided Debate." TIFL053367-3367 (U.S. Ex. 88,658).

303. BATCo consultant Peter Lee characterized "Smoking and Health 1964-1979: The Continuing Controversy" (referred to as "TA73") as "misleading." He wrote that the Tobacco Institute's counter publication did not appear to understand the idea of medical causation: "Discussion of the role of other factors can be particularly misleading when no discussion is made of relative magnitudes of effects. For example, heavy smokers are observed to have 20 or more times the lung cancer rates of non-smokers. Sure, this does not prove smoking causes lung cancer, but what it does mean, and TA73 never considers this, is that for any other factor to explain this association, it must have at least as strong an association with lung cancer as the observed association for smoking (and be highly correlated with the smoking habit). TA73

seems ready to accept evidence implicating factors other than smoking in the aetiology of smoking. This is blatantly unscientific." 100214029-4047 at 4046 (U.S. Ex. 21,515).

304. Philip Morris USA's 1979 Annual Report continued the "open controversy" strategy and declared, "[n]o conclusive clinical or medical proof of any cause-and-effect relationship between cigarette smoking and disease has yet been discovered." 2043819548-9607 at 9561 (U.S. Ex. 20,451), 1005224256-4315 (U.S. Ex. 21,548).

305. On January 11, 1979, the *News and Observer* of Raleigh, North Carolina, quoted the Tobacco Institute as stating that "many scientists are becoming concerned that the focus on cigarette smoking diverts attention from other suspected health hazards." TIMN0122721-2721 (U.S. Ex. 21,325).

306. On January 17, 1979, the Tobacco Institute issued a press release which stated that the tobacco industry had spent \$75 million on research over twenty years to learn whether smoking is harmful but that "the case against cigarettes is not satisfactorily demonstrated." TIMN0074006-4006; T0017294-7294 (U.S. Ex. 87,985).

307. In July 1979, the Tobacco Institute announced to the public that "[f]rom the beginning, the tobacco industry has believed that the American people deserve objective, scientific answers." Moreover, its advertisement stated in bold type: "The findings are not secret." 500622750-2752 at 2752 (U.S. Ex. 20,643).

308. Internal documents showed that smokers relied on Defendants' public refutation of causation. Indeed, substantial numbers of smokers invoked Defendants' fraudulent public relations campaign. According to a 1979 study by BATCo, less than 50% of consonant smokers

agreed that smoking was harmful. Those smokers most often cited the industry's mantra, "no one has proved it," as reason for their belief. A September 1982 focus group study of smokers prepared for R.J. Reynolds in Minnesota concluded that smokers rationalize the risks of smoking and that they "discounted the statistical risk of smoking." 105589638-9949 (U.S. Ex. 20,243); 502458984-9004 at 8994 (U.S. Ex. 21,726).

309. The Roper Report was a biannual survey conducted by Roper Organization, a public relations firm specializing in corporate reputation building and public image, on behalf of the Tobacco Institute. In the 1980 report entitled "A Study of Public Attitudes towards Cigarette Smoking and the Tobacco Industry (May 1980)," the Roper Organization asserted the following findings: "The study finds that there are differences between smokers and non-smokers in demographics, health habits, and lifestyle. Presumably, these differences (rather than smoking itself) could account for the different disease and mortality rates observed between smokers and non-smokers." 03531619-1620 at 1619 (U.S. Ex. 20,058).

310. In 1981, the Tobacco Institute published a document entitled "On Smoking - 21 questions and answers," written by the law firm Shook, Hardy & Bacon, which stated: "The tobacco industry has committed more that \$91 million for independent research on smoking and health questions. . . . The tobacco industry remains committed to advancing scientific inquiry into the gaps in knowledge in the smoking controversy." TIEX0007587-7592 at 7589 (U.S. Ex. 87,061).

311. In 1982, the Tobacco Institute launched a national series of advertisements on behalf of Defendants that addressed smoking and health issues, environmental tobacco smoke

("ETS"), public smoking restrictions, and youth smoking. These ads asked readers to keep an open mind on tobacco issues and "[w]eigh both sides before [they] take sides." Readers were encouraged to request a free copy of the Tobacco Institute's booklet "Answers to the Most Asked Questions about Cigarettes." 03028799-8809 at 8801 (U.S. Ex. 20,053).

312. On December 31, 1981, the Tobacco Institute published a document that again asserted: "Questions of smoking and health are unresolved." 2046754709-4710 at 4710 (U.S. Ex. 20,474).

313. In 1982, the Tobacco Institute published a pamphlet in which it wrote, "[s]ince the first questions were raised about smoking as a possible health factor, the tobacco industry has believed that the American people deserve objective, scientific answers. The industry has committed itself to this task." 670500617-0619 at 0618 (U.S. Ex. 20,968).

314. On February 18, 1982, "Smoking and Cancer – A Scientific Perspective" was published by the Tobacco Institute in anticipation of the release of the 1982 Surgeon General's Report on Smoking and Health. The timing of the release was based on the Tobacco Institute's axiom that "it is more effective to take the initiative in situations involving a prospective negative news event." The press release accompanying the 104-page Tobacco Institute document stated that scientific research has not been able to establish a causal link between smoking and cancer. The publication was developed working closely with outside legal counsel. Copies were provided to correspondents and to various Members of Congress with a transmittal that reiterated Defendants' false commitment to independent research. It was later introduced as part of testimony in opposition to amendments to the Federal Cigarette Labeling and Advertising Act.

SECTION IV. A.

2025431644-1748 at (U.S. Ex. 20,417); TIMN0245529-5529 (U.S. Ex. 21,340); 03762472-2472 (U.S. Ex. 20,063); TIMN0245530-5532 (U.S. Ex. 21,341); TIMN0245292-5292 (U.S. Ex. 21,339); 03762460-2461 (U.S. Ex. 20,062); TIMN0246497-6497 (U.S. Ex. 21,342); TIOK0002758-2802 (U.S. Ex. 21,370).

315. A May 7, 1982 memorandum to R.J. Reynolds executives advised that the key point to be made in any discussion of the issue of smoking and health was that a scientific controversy continued unresolved. The question and answer piece provided R.J. Reynolds's public positions on causation (not proven), statistics (not reliable), and research (not enough yet). The insistence on an open controversy in 1982, along with the company's other positions, was contrary to at least twenty-nine years of internal research at R.J. Reynolds, as well as more than three decades of conclusive mainstream scientific study. 502483421-3421 (U.S. Ex. 20,700).

316. In June 1982, the Tobacco Institute launched a national series of advertisements appearing in some of the country's most widely read magazines (including *US News & World Report*, *TV Guide*, *Time*, *Sports Illustrated*, *People*, and *Newsweek*), attempting to reach eight out of ten Americans twenty-five years or older. The advertisements asked readers to keep an open mind on tobacco issues and to "weigh both sides before you take sides." It offered free copies of a booklet "Answers to the Most Asked Questions about Cigarettes." 93852922-2933 (U.S. Ex. 21,118); TIOK0002758-2802 (U.S. Ex. 21,370); 03028799-8880 (U.S. Ex. 20,053).

317. In 1983, in anticipation of 1983 Surgeon General's Report, "The Health Consequences of Smoking – Cardiovascular Disease," the Tobacco Institute published a document titled "Cigarette smoking and heart disease." It concluded, "[w]hether cigarette

smoking is causally related to heart disease is not scientifically established" and argued that smoking was not an important risk factor for heart disease. The document was first distributed to the Cigarette Company Defendants, who were asked not to distribute the publication widely, but to use it for internal purposes until the Report was released. Upon release, the Tobacco Institute distributed the document, as did the Cigarette Company Defendants' European information clearinghouse, known as "INFOTAB." 2501112047-2098 at 2091 (U.S. Ex. 20,561); 2023274132-4133 (U.S. Ex. 20,386); 2501023645-3645 (U.S. Ex. 20,556).

318. Sheldon Sommers, Scientific Director of CTR, testified before Congress that year that "cigarette smoking has not been scientifically established to be a cause of chronic diseases, such as cancer, cardiovascular disease, or emphysema." 503685073-5075 at 5073 (U.S. Ex. 88,734).

319. In 1983, R.J. Reynolds published its own advertisement in an effort to perpetuate the "open controversy." The advertisement declared: "It has been stated so often that smoking causes cancer, it's no wonder most people believe this is an established fact. But, in fact, it is nothing of the kind. The truth is that almost three decades of research have failed to produce scientific proof for this claim. . . . [I]n our opinion, the issue of smoking and lung cancer is not a closed case. It's an open controversy." 504638051-8051 (U.S. Ex. 20,732).

320. In August 1983, D.G. Felton, a BATCo scientist, while commenting on a paper written by R.J. Reynolds scientist Frank Colby, concluded that based on mainstream scientific knowledge, "to persist in stressing controversy . . . can only result in a complete loss of credibility." 10040293-0297 at 0297 (U.S. Ex. 20,183).

321. In 1984, R.J. Reynolds placed an ad in numerous newspapers, including the *New York Times*, entitled "Smoking and health: some facts you've never heard about." This ad contained the statement, "[y]ou hear a lot these days about reports that link smoking to certain diseases. This evidence has led many scientists and other people to conclude that smoking causes these diseases. But there is significant evidence on the other side of this issue. It is regularly ignored by the critics of smoking. And you rarely hear about it in the public media. But, it has helped persuade many scientists that the case against smoking is far from closed." Further, the ad contained the statement, "[n]o one wants to know the real answers more than R.J. Reynolds. That is why we are providing major funding for scientific research. The funds are given at arm's length to independent scientists who are free to publish whatever they find. We don't know where such research may lead. But this much we can promise: when we find the answers, you'll hear about it." 504100135-0136 at 0136 (U.S. Ex. 20,726).

322. In 1983, the Tobacco Institute published a pamphlet entitled "Tobacco Industry Research on Smoking and Health: A \$111 Million Commitment." This pamphlet stated: "Since the first questions were raised about smoking as a possible health factor, the tobacco industry has believed the American people deserve objective, scientific answers. The industry has committed itself to this task." 670500617-0620 at 0618 (U.S. Ex. 20,968).

323. Also in 1984, R.J. Reynolds placed an ad in daily newspapers entitled, "Can we have an open debate about smoking?" In this ad, R.J. Reynolds claimed that "studies which conclude that smoking causes disease have regularly ignored significant evidence to the contrary," that this "significant evidence" comes from research "completely independent of the

tobacco industry," and that "reasonable people" would consider the link between smoking and disease to be an "open controversy." 505743421-3421 (U.S. Ex. 87,063); 513943434-3434 (U.S. Ex. 50,268); (U.S. Ex. 51,761); WAS0451476 (U.S. Ex. 77,402).

324. In January 1984, David B. Fishel of R.J. Reynolds continued to parrot the line of the Enterprise when he publicly declared: "After all of this study, there are many scientists who believe there is no laboratory or clinical proof that cigarette smoke does – or does not – cause disease. We believe that reasonable people who examine all the evidence concerning smoking and disease would agree this is an open scientific controversy, not a closed case." 504638054-8056 at 8056 (U.S. Ex. 20, 733).

325. A month later, the Chairman of the Board at R.J. Reynolds made the following comments as part of a panel discussion on the "Nightline" television program: (1) it is not known whether cigarettes cause cancer; (2) despite all the research to date, there has been no causal link established (between smoking and emphysema); and (3) "as a matter of fact, there are studies that while we are accused of being associated with heart disease, there have been studies conducted over 10 years that would say, again, that science is still puzzled over these forces." 502371212-1223 at 1217 (U.S. Ex. 20,699).

326. The same year, the Tobacco Institute published a document entitled: "Cigarette Smoking and Chronic Obstructive Lung Diseases: The major gaps in knowledge." It declared that Defendants did not agree with the judgment of the Surgeon General's reports that cigarette smoking had been established as a cause of chronic bronchitis and that a causal relationship between smoking and either chronic bronchitis or emphysema had not been established

scientifically. TI13062142-2156 (U.S. Ex. 62,409).

327. Also in 1984, the Tobacco Institute published a report entitled "The Cigarette Controversy: Why More Research is Needed" as the formal statement of Defendants' position. It purported to be a review of testimony at the 1982 and 1983 congressional tobacco labeling hearings. It discussed the testimony of the thirty-nine scientists who testified to Congress, but undisclosed was the fact that most of these scientific witnesses were tobacco consultants receiving funds from the lawyer administered and controlled Special Account No. 4. It stated:

Thirty nine scientists presented testimony against proposals in the bills. Their evidence was based on their own published research or their review of scientific literature. Each of them in his or her own right is a recognized scientist, and most have reached eminence in their area of expertise. . . . The evidence presented by these men and women is summarized in the following pages. The scientists and their professional affiliations are listed in the appended. We publish this summary in the belief that the controversy about smoking must be resolved by scientific research and in the belief that informed discussion of the controversy is in the public interest. . . . [F]ifteen witnesses explained why they consider the hypothesis that cigarette smoking causes lung cancer to be unproven . . . [W]itnesses all questioned the assertion that cigarette smoking causes emphysema in particular and chronic obstructive lung disease in general.

The report also declared that: "This publication is presented to the United States congressional committees." TIEX000964-1904 at 0964, 0966, 0970, 0973 (U.S. Ex. 62,619).

328. In July 1984, R.J. Reynolds mailed letters from employee Ann Griffin addressed to various children who had written to the company. In the letters, R.J. Reynolds claimed to be engaged in an effort to determine the harmful effects of smoking for the benefit of smokers, promised to support disinterested research into smoking and health, and claimed that research

had not revealed any "conclusive" evidence linking smoking to disease. 505465919-5919 (U.S. Ex. 20, 741).

329. In a July 1984 deposition, Lorillard's Alexander Spears declared that there were no epidemiological studies that could be designed or conducted to determine if cigarette smoking played a role in lung cancer development. Deposition of Alexander Spears, Cipollone v. Liggett, July 26, 1984, 200:22-25.

330. In January 1987, the Tobacco Institute's Vice President of Media Relations, Walker Merryman, appeared in an advertisement where he was quoted as saying, "I'll fill in the government's blanks. No judge or jury would decide a case without hearing both sides. But a lot of people have done just that on the subject of smoking." TIMN0133708-3708 (U.S. Ex. 77,073); TIOK0035181-5184 (U.S. Ex. 88,042).

331. Over time, R.J. Reynolds sent numerous letters to survivors of deceased smokers, falsely denying the scientifically established links between smoking and disease. For instance, on August 18, 1988, R.J. Reynolds sent a letter to Anthony A. Christina (the widower of a lung cancer victim) in which the company denied that there was any causal link between smoking and disease. On April 12, 1990, R.J. Reynolds wrote a letter to a customer in Minnesota in which it asserted that "scientists do not know the cause or causes of the chronic diseases reported to be associated with smoking. . . . [O]ur company intends, therefore, to continue to support [research] in a continuing search for answers." In November 1993, R.J. Reynolds wrote to the relative of a deceased smoker in California, denying the existence of any proof that smoking causes lung cancer, heart disease, or emphysema, and asserting that "a cause and effect relationship between

smoking and disease has not been established." 515792869-2869 (U.S. Ex. 20,869); 507703861-3862 (U.S. Ex. 22,056); TI13610773-0777 (U.S. Ex. 62,416); TIMN389474-9479 (U.S. Ex. 21,286); TIMN339671-9676 (U.S. Ex. 21,362); TIMN339671-9676 (U.S. Ex. 62,915).

332. In 1989, R.J. Reynolds created a position paper which purported to refute the 1989 Surgeon General's Report by attacking the science linking smoking to disease. 507605620-6239 (U.S. Ex. 20,781).

333. In a January 11, 1989 appearance on the television show "Good Morning America," the Tobacco Institute spokesperson, Brennan Dawson falsely stated that "all the links that have been established between smoking and certain diseases are based on statistics. What that means is that the causative relationship has not yet been established." TIMN389474-9479 at 9475 (U.S. Ex. 21,286).

334. An April 1990 INFOTAB publication titled "Children & Smoking-The Balanced View" states that "scientific evidence has not conclusively established cigarette smoking as a causative agent in the development of disease." 2501342105-2110 at 2108 (U.S. Ex. 20,565).

335. In January 1990, R.J. Reynolds's Public Relations Manager wrote in a letter to the principal of a grade school and one of the school's students:

The tobacco industry is also concerned about the charges being made that smoking is responsible for so many serious diseases. Long before the present criticism began, the tobacco industry, in a sincere attempt to determine what harmful effects, if any, smoking might have on human health, established the CTR - USA. The industry has also supported research grants directed by the American Medical Association. Over the years the tobacco industry has given in excess of \$162 million to independent research on the controversies surrounding smoking – more than all the voluntary health associations combined. . . . Despite all the

research going on, the simple and unfortunate fact is that scientists do not know the cause or causes of the chronic diseases reported to be associated with smoking.

508466199-6200 at 6199 (U.S. Ex. 20,813).

336. More than forty years after Defendants issued the Frank Statement and invented TIRC, Defendants' essential position on the relationship of smoking and health had remained largely unchanged. In April 1994, over forty years after the Frank Statement, in congressional hearings before the Subcommittee on Health and the Environment, industry executives asserted yet again that the causal relationship of smoking and cancer had not been proven. In testimony before the United States House of Representatives, the CEOs of Defendants Brown & Williamson, Liggett, Lorillard, Philip Morris USA, and R.J. Reynolds publicly denied that smoking caused cancer. And the campaign went on. Expert Report of Allan Brandt, United States v. Philip Morris, et al., (R. 1147, filed May 10, 2002); Cimon, Marlene, "Cigarette Chiefs Steadfastly Deny Smoking Kills," *Los Angeles Times*, April 15, 1994 at A1 (U.S. Ex. 20,468); 502576586-6740 (U.S. Ex. 20,701).

337. In 1994, Michael Prideaux, a spokesperson for BAT, stated that BAT's current position was that there was no causal link between smoking and cancer. "British Tobacco Companies Hushed up Health Dangers," *The Independent*, June 19, 1994 (U.S. Ex. 86,882).

338. Martin Broughton, Chairman of BAT plc, the ultimate parent of BATCo, stated in opening remarks to analysts, investors and journalists at a briefing held at Windsor House on October 30, 1996, that "[w]e have no internal research which proves that smoking causes lung cancer or other diseases or, indeed that, smoking is addictive." 700506684-6688 at

6686 (emphasis added) (U.S. Ex. 69,196).

339. In April 1995, B&W informed B&W Japan to answer inquiries about smoking and health by reassuring the person making the inquiries that whether or not smoking cause diseases "is still [an] inconclusive matter." 450180143-0143 (U.S. Ex. 21,885).

340. In 1990, all Altria operating companies had the same position on causation, that smoking is a "risk factor" for disease. Deposition of Geoffrey Bible, U.S. v. Philip Morris, et al., August 22, 2002, 47:10-48:12.

341. In 1991, Philip Morris Companies coordinated with its international competitors the development of unified industry language continuing to deny that cigarette smoking had been proven to "cause" lung cancer. 2023235511-5512 (U.S. Ex. 26,780).

342. In 1991, Altria made decisions on behalf of its tobacco manufacturing subsidiaries regarding placement of health warning labels on export cigarettes and coordinated that decision with the parent companies of other U.S. and foreign cigarette manufacturers. 2022833439 (U.S. Ex. 26,758); 2023244601 (U.S. Ex. 26,782); 2022833411-3412 (U.S. Ex. 26,757).

343. Geoffrey Bible, CEO of Altria from 1994-9/02, was ultimate authority on content of public statements on smoking and health made by Altria subsidiaries, including Philip Morris USA. Deposition of Geoffrey Bible, U.S. v. Philip Morris, et al., August 22, 2002, 83:9-84:11, 85:22-86:26.

344. The October 2, 1997 so-called "Hatch Statement" in which Philip Morris agreed to stop debating whether cigarettes had been proven to cause disease was issued on Philip Morris Companies letterhead. 2063123083-3084 (U.S. Ex. 37,734).

SECTION IV. A.

345. In 1997, the Chief Executive Officer and Chairman of Philip Morris Companies, Geoffrey Bible, took the position that cigarettes were not a cause of lung cancer, but asserted that if they were shown to be, "I'd probably . . . shut [the] company down instantly to get a better hold of things." He made this statement four decades after Philip Morris USA recognized the carcinogenic and disease-causing nature of cigarettes in internal documents. Deposition of Geoffrey Bible, State of Florida v. American Tobacco Co., August 21, 1997, 27:1-24.

346. In 1998, Bible publicly denied the link between smoking and disease. At the 1998 Minnesota trial testimony during cross examination, Mr. Bible was asked: "Your company says smoking doesn't cause disease; don't you?" Mr. Bible responded, "I say I don't know. I just don't know. It may, but I don't know." Mr. Bible was also asked: "Has your company said smoking causes disease?" Mr. Bible answered, "Not to my knowledge, no." Trial testimony of Geoffrey Bible, State of Minnesota v. Philip Morris Inc., C1-94-8565, March 2, 1998, 5737-5738; Expert Report of Robert Dolan, United States v. Philip Morris, et al., (R. 671, filed November 15, 2001).

347. As reported in the *New York Times*, Bible was asked, "[h]as anyone died from smoking cigarettes?" His reply: "I don't know if anyone died from smoking tobacco, I just don't know." Bill Dedham, "Executive Says He's Uncertain about Tobacco's Harm," *New York Times*, March 3, 1998, at A16 (U.S. Ex. 22,167); Expert Report of Allan Brandt, United States v. Philip Morris, et al., (R. 1147, filed May 10, 2002).

348. In trial in Minnesota in 1998, the Chairman of Philip Morris USA and the Vice President of the Tobacco Institute returned to the industry's half-century old position: "We don't believe it's ever been established that smoking is a cause of disease." Trial testimony of Geoffrey

Bible, State of Minnesota v. Philip Morris Inc., C1-94-8565, March 2, 1998, 5737-5738.

349. In the development of its website in 1999, Philip Morris USA acknowledged internally that smoking causes disease but refused to share this information with the public. In a July 9, 1999 presentation related to the website development prepared by someone associated with Philip Morris USA's Strategic Issues Task Force, one slide indicated that, according to the "Scientists' Position on Causation," "from a public health perspective, it is appropriate to equate increased risk with causation." However, Philip Morris USA did not publicly communicate this information. Deposition of Denise Keane, United States v. Philip Morris, October 1, 2002; 297:16-17, 298:13-18, 299:9-13; 202674164-4190 at 4170 (U.S. Ex. 87066).

350. Altria set a company-wide policy regarding attribution of statements and positions to Philip Morris entities, which was binding on Philip Morris USA employees. 2502258272-8272 (U.S. Ex. 45,984).

351. Defendants also falsely denied what they knew internally in legal proceedings. On November 29, 1999, Philip Morris USA falsely stated in sworn pleadings: "[I]t has not been scientifically established whether cigarette smoking causes [disease] in humans." http://www.tobacco.neu.edu/Extra/hotdocs/simon_answer_ex.htm (U.S. Ex. 87,067).

352. Executives have falsely denied Defendants' decades-long "open controversy" strategy. Denise Keane, Philip Morris USA General Counsel and an attorney at the company since 1977, discounted the "open controversy" on October 2, 2002, when she stated "[f]rom my perspective, Philip Morris has not historically discussed smoking" publicly until the 1997 statement submitted to Senator Hatch and its 1999 website. "This company, in my knowledge,

has not been out historically doing anything to communicate about the health risks other than to sell a product for which there is a whole series of warnings that are communicated to the public." She added: "This company has not been out doing anything to impact or undermine the very important message that has been carried on cigarette products that have been sold in this country since the late 60s." Deposition of Denise Keane, United States v. Philip Morris, October 1, 2002, 297:16-17, 298:13-18, 299:9-13; 202674164-4190 at 4170 (U.S. Ex. 87,066).

353. Based on responses to Interrogatories and Requests for Admission in this case, it is clear that Defendants still refuse to publicly admit what they have known and acknowledged internally for fifty years. That smoking causes lung cancer, heart disease, emphysema, and other diseases is universally accepted by medical and scientific authorities, yet Lorillard, BATCo, and Brown & Williamson still qualify their statements on causation, and R.J. Reynolds acknowledges only that smoking "may contribute to causing . . . diseases in some individuals." Defendant R.J. Reynolds Tobacco Company Responses to United States' First Set of Interrogatories, United States v. Philip Morris et al. (February 6, 2001) (U.S. Ex. 61,446); Defendant R.J. Reynolds Tobacco Company's Responses to United States' First Set of Requests for Admission to All Defendants, United States v. Philip Morris et al. (April 19, 2002) (U.S. Ex. 77,413); Defendant Lorillard Tobacco Company's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris et al. (February 6, 2001) (U.S. Ex. 61,444); Defendant Lorillard Tobacco Company's Responses to the United States' First Set of Requests for Admission to All Defendants, Amended Pursuant to Order #119, United States v. Philip Morris et al. (April 19, 2002) (U.S. Ex. 86,742); Objections and Responses of Defendant British

American Tobacco (Investments) Limited to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris et al. (February 6, 2001) (U.S. Ex. 77,453); Brown & Williamson Tobacco Corporation's Responses to United States' First Set of Interrogatories to Defendants, United States v. Philip Morris et al. (February 6, 2001) (U.S. Ex. 75,693).

354. And while Defendants have grudgingly made certain concessions in the form of qualified admissions such as the foregoing that cigarette smoking can cause certain diseases, Defendants' decades-long campaign to falsely and fraudulently deny the harmful effects of smoking continues in the form of their intense efforts to mislead the public as to the link between ETS exposure and disease.

(3) Continuing the Pattern and Practice That Began in the 1950's, Philip Morris Suppressed Research and Failed to Warn Consumers about the Excess Fire Danger Posed by Its Banded Paper Cigarettes, Which Were First Marketed in 2000

355. In September 2000, as a result of a research endeavor known as the Banded Paper Program, which was initiated in anticipation of new fire safety regulations in a number of states known as ignition propensity standards, Philip Morris USA began marketing a new brand of Merit cigarettes that included a special cigarette paper. Philip Morris USA sought to develop cigarette paper that would have a lower ignition propensity in certain tests – that is, a product that would be less likely to start a fire if left unattended. The paper was first put on the market in 2000 in cigarettes called Merit PaperSelect. The cigarettes utilize a cigarette paper with bands on it that Philip Morris USA, on promotional materials (including informational "onserts" attached to individual packages of cigarettes for a period after its introduction), likened to "speed bumps" that slow the burning of the cigarette. Deposition of Michael Watkins, United States v. Philip

Morris, et al., May 8, 2002, 69:1-5.

356. Soon after the national introduction of Merit with banded paper, Philip Morris USA began receiving complaints about the product that far exceeded the number of complaints that Philip Morris USA ordinarily receives when it changes a product's design or features. In particular, an unusual number of complaints concerned a phenomenon known as "coal drop off" ("CDO") – literally, when the lit coal of the cigarette drops off the cigarette rod. The coal is the "fire" of the cigarette and is not to be confused with cigarette ash that smokers periodically tap off their lit cigarettes. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 35:6-21, 213:24-214:22.

357. Philip Morris USA has long been aware of the potential hazards posed by CDO. In fact, in the July 1997 manual explaining how to operate a drop impact machine Philip Morris USA had previously used to test for CDO, Philip Morris USA included a boxed warning for its researchers that stated, "[a]void contact with hot coals during testing." According to the testimony of Hector Alonso, Vice President of Product Development and Technology within Philip Morris USA's Research and Development Department (who has overseen the work of the Banded Paper Program and who had previously worked on CDO), the boxed warning was a valuable cautionary statement for researchers because a dislodged cigarette coal could potentially cause a burn. Yet when confronted with evidence that consumers were experiencing unusually frequent CDO with Merit PaperSelect, Philip Morris USA chose not to inform purchasers of Merit PaperSelect of the precise problem – about which it provided a prominent, explicit warning to its own researchers – because "[i]t's understood that cigarettes are hot." Deposition of Hector

Alonso, United States v. Philip Morris, et al., June 21, 2002, 124:1-127:25; 2083131281-1288 (U.S. Ex. 45,547); Deposition of Tyrone Murray, United States v. Philip Morris, et al., May 1, 2002, 76:5-10, 77:2-13.

358. Complaints about CDO are exceedingly infrequent for non-banded paper product – about one complaint every two weeks. By contrast, for Merit PaperSelect, Philip Morris USA received complaints at a rate far higher – 211 CDO complaints in September 2000; 247 CDO complaints in October 2000; 173 in November; and ninety-one in December 2002. Among the complaints about Merit's banded paper product were reports that coals had burned holes in t-shirts and sweatshirts, furniture, and rugs, and had fallen into smokers' laps. Persons at Philip Morris USA responsible for the product were informed of the complaints, including Urs Nyffeler, the Senior Vice President for Research, Development & Engineering, and Dave Beran, Senior Vice President of Operations. Philip Morris USA was also aware that the CDO problem could potentially distract people while they are driving, and that someone could get hurt as a result of CDO from banded paper cigarettes. Deposition of Tyrone Murray, United States v. Philip Morris, et al., May 1, 2002, 68:10-69:5, 100:8-22; Deposition of Hector Alonso, United States v. Philip Morris, et al., June 21, 2002; 2083131325-1326 (U.S. Ex. 20,538) (Confidential); 2079050806-0810 (U.S. Ex. 45,265); 2083131325-1325 (U.S. Ex. 20,538) (Confidential); 2083131343-1352 (U.S. Ex. 23,006).

359. Philip Morris USA assigned Michael Watkins, a Ph.D. physicist with a specialty in "nondestructive evaluation" who had been with Philip Morris USA for fifteen years and who was already working in the Banded Paper Program, to investigate the cause of the increase in

CDO reported by smokers of Merit banded paper cigarettes. Based on preliminary research involving thermography and magnetic resonance imaging techniques, Watkins reported to senior management of Research and Development in October 2000 that the bands on the cigarette paper – which were responsible for the claimed reduction in ignition propensity – also appeared to play a role in causing CDO. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 36:19-40:11.

360. Watkins' research first focused on testing the methodology of measuring the problem. Both he and Alonso concluded that Philip Morris USA's method of measuring CDO propensity – an old machine that imparted a large periodic impact vibration to a lit cigarette – was unreliable and inadequate for meaningfully detecting differences in CDO for the banded paper cigarette because the periodic impact event of the old machine did not necessarily occur when the cigarette is burning around the bands. Just as significantly, the drop machine also had little relation to the way in which consumers actually use and handle cigarettes, because it imparted forces to the cigarette of 100G forces, far in excess of the 3G-5G forces typical to consumer handling. Indeed, Watkins's supervisor, Tyrone Murray, admitted that even under the drop impact test, banded paper cigarettes had a 40% increase in CDO, but he did not recommend that this information – which he considered scientifically valid – be provided to consumers because the 40% increase occurred on the drop impact test, and "I don't know what kind of increase that would show in consumer use." Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 117:22-118:14; Deposition of Tyrone Murray, United States v. Philip Morris, et al., May 1, 2002, 154:1-155:25.

361. In early 2001, after Watkins was promoted to Senior Research Scientist, his supervisor, Tyrone Murray, communicated pressure from management to address and solve the problem because of Philip Morris USA's plans to launch other brands of its cigarettes using the banded paper. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 133:3-18.

362. In July 2001, based on his evaluation using several different research tools – thermal and magnetic resonance imaging, an "intrapuff" tool using infrared spectroscopy, and a low frequency excitation device designed to vibrate cigarettes at a force more comparable to that imparted by smokers than the impact machine – Watkins and his research team reported that the bands appeared to play a role in causing CDO. Watkins reported that initial data indicated that cigarettes with banded paper were seven times more likely to suffer CDO when the cigarette was vibrated while the burning coal was entering the band than a nonbanded cigarette. Watkins later replicated his results with a slightly different excitation technique. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 60:8-17.

363. Murray, who had a personal stake in the banded paper design, was visibly unhappy with the test results. He complained to Watkins and pushed to have the CDO research done on a vibration machine patterned after the drop-impact test, irrelevant to addressing the problem with the smoking habits of public consumers but more likely to yield the results that Murray wanted – namely, a finding of no increased CDO with banded paper. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 97:24-100:20.

364. In October 2001, Watkins reviewed his research findings with three high-ranking

scientists at Philip Morris (Hector Alonso, A. Clifton Lilly, and Urs Nyffeler), who complimented the quality of his research both as to the inadequacy of the old CDO testing device and as to his investigation into the cause of CDO. Subsequent to that review, he made a presentation reporting on his research to a forum of the Research and Development department. Based on his research, Watkins conservatively estimated that smokers are faced with burning coals dropping from cigarettes 30,000 more times per day than would occur with Merit cigarettes made with conventional cigarette paper. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 9, 2002, 299:10-318:22 (Confidential); Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 112:15-113:15, 151:1-154:2 (Confidential).

365.

Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 124; Deposition of Michael Watkins, United States v. Philip Morris,

et al., May 9, 2002, 311:3-318:22 (Confidential).

366. Watkins's findings were further confirmed in late 2001 when Watkins learned that another Philip Morris USA scientist, Melissa Jeltima, achieved nearly identical results in an extended product test that included the banded paper Merit. Jeltima performed product testing with human smokers. Her test subjects found that CDO occurred in Merit PaperSelect at an increased frequency equal to what Watkins found based on machine testing. Watkins reported Jeltima's consistent findings to Alonso and Lilly. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 165:8-168:23.

367. In December 2001, Jeltima reported that the results of a call-back study – in which Philip Morris USA contacted Merit banded paper smokers to learn more about consumers' reactions to the product, rather than relying only on complaints made to the company – showed Merit banded paper smokers were still experiencing CDO at elevated levels. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 155:13-156:18.

368.

Deposition of Michael Watkins, United States v. Philip Morris, et al., May 9, 2002, 179:1-184:4 (Confidential); Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 173:15-179:6 (Confidential), 187:4-187:16.

369.

Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 150:23-151:9, 192:15-200:21 (Confidential).

370. Notwithstanding the elevated consumer complaints and research indicating the increased frequency of CDO associated with Merit banded paper cigarettes, Philip Morris USA never warned consumers in any respect about the problem, never informed consumers specifically about CDO in the pamphlet attached to packs of Merit banded paper cigarettes, and fired the scientist whose research pointed to the bands as the cause of the CDO problem.

371. Philip Morris USA has attempted to, but has not successfully, licensed its banded

SECTION IV. A.

paper technology to other cigarette manufacturers. In its licensing efforts, Philip Morris USA has provided samples and information to other manufacturers, including R.J. Reynolds and Lorillard. Deposition of Hector Alsonso, United States v. Philip Morris, et al., June 21, 2002, 143:22-144:24; Deposition of Tyrone Murray, United States v. Philip Morris, et al., May 1, 2002, 30:16-31:12.

372. In sum, Watkins expressed concern that his widely supported, replicated, and compelling scientific research describing a design defect that, in a product intended to reduce ignition propensity, actually presents a disproportionate threat of burns and fires, has not caused Philip Morris USA to pull the product off the market or warn consumers. Deposition of Michael Watkins, United States v. Philip Morris, et al., May 8, 2002, 270:19-271:5, 300:10-21, 316:7-318:22, 322:16-323:18.

373. The company's failure to disclose its knowledge of the risks posed by its product is evidence that Philip Morris USA's pattern and practice of concealing the harmful nature of cigarettes continues unaltered.

B. To Support Their Public Relations Position Denying the Health Effects of Smoking, Defendants Agreed Not to Compete on Health Issues and Not To Perform Certain Biological Research

374. Defendants' conduct relating to the research, development, and marketing of potentially less hazardous cigarettes is powerful evidence of Defendants' execution of the alleged RICO Enterprise. Extensive documentary evidence proves that Defendants recognized that there was a substantial potential market for a cigarette that could be marketed as potentially less hazardous, but that they collectively agreed not to do anything in the marketing and development of cigarettes that would jeopardize the public relations position at the core of the scheme to defraud: the denial that any commercially sold cigarettes were a proven cause of disease.

375. Above all, Defendants agreed not to compete on smoking and health issues in the marketing of cigarettes. Accordingly, when a Defendant designed a cigarette – or developed a cigarette component – intended to potentially reduce the delivery of harmful smoke constituents to the smoker, the Defendant limited the types of information that it provided to consumers in marketing such products. Evidence shows that Defendants failed to provide information – even if they believed it to be truthful scientific information – that certain brands or types of cigarettes were likely to be less harmful than others, because such information carried the obvious implication that other cigarettes were harmful. Thus, for the first 46 years of the alleged fraudulent scheme, no Defendant that designed and tested a cigarette to potentially reduce the smoker's exposure to harmful smoke constituents told consumers about the product's potential exposure or harm reducing benefits. As of today, only a single product has been marketed to consumers as potentially less hazardous – R.J. Reynolds's Eclipse, beginning in 2000 after the

initiation of this lawsuit. Only a single such product has been made commercially available beyond a test market – Eclipse, and only beginning in 2003.

376. Similarly, documents show that Defendants limited the types of research they conducted, because they did not want to generate internal evidence to suggest that the companies believed there was any need to examine whether a causative link existed between smoking and disease, let alone create scientific information that demonstrated such a link. Accordingly, Defendants jointly agreed not to perform certain types of biological tests using commercially sold cigarette brands in their domestic research facilities.

377. In defense of their conduct in this area, Defendants collectively point to a half-dozen cigarettes for the entirety of the half-century of the alleged fraudulent scheme. Substantial evidence rebuts Defendants’ claims regarding their development and marketing of potentially less hazardous cigarettes. The products Defendants identify generally employ design features or technologies known to Defendants for at least 45 years. Further, there is substantial evidence that during the past five decades Defendants have decided not to incorporate design features or processes that Defendants’ own research concluded were likely to reduce the hazards of smoking, were technically feasible, and were acceptable to smokers. In sum, Defendants’ conduct in this area is consistent with their well documented agreement not to compete on smoking and health issues.

(1) Defendants Made Public Statements That Linked Development & Marketing of a Potentially Less Hazardous Cigarette to Their “Open Question” Position Denying the Adverse Health Effects of Smoking

378. Defendants made false representations to the public that they would do their best

SECTION IV.B.

to protect the public's health, while simultaneously taking the fraudulent public and litigation position that no cigarettes had been proven unsafe. Examples of such public false or fraudulent statements include the following.

379. In January 1954, certain Defendants published the Frank Statement – the seminal public statement (discussed U.S. FPPF § I, supra) that launched their coordinated fraudulent public relations campaign to preserve the market for cigarettes and the industry's profits. In the Frank Statement, Defendants told the American public: “We accept an interest in people's health as a basic responsibility, paramount to every other consideration in our business. We believe the products we make are not injurious to health. We always have and always will cooperate closely with those whose task it is to safeguard the public health.” 11309817-9817 (U.S. Ex. 20,277).

380. In March 1954, George Weissman, a Philip Morris Vice President, publicly reaffirmed the industry's commitment to protect the health of its customers, claiming that the cigarette industry would “stop business tomorrow” if it “had any thought or knowledge that in any way we were selling a product harmful to consumers.” 2022239339-9343 (U.S. Ex. 21,766).

381. In 1964, Bowman Gray, Chairman of the Board of R.J. Reynolds, stated publicly on behalf of R.J. Reynolds, Philip Morris, Brown & Williamson, Lorillard, Liggett, and American, that “[i]f it is proven that cigarettes are harmful, we want to do something about it regardless of what somebody else tells us to do. And we would do our level best. This is just being human.” 501935056-5071 (U.S. Ex. 20,690).

382. In 1971, Philip Morris chief executive officer Joseph Cullman III explained in a “Face the Nation” TV interview that Philip Morris was committed to removing harmful

constituents from cigarette smoke:

[T]his industry can face the future with confidence because **when, as, and if any ingredient in cigarette smoke is identified as being injurious to human health, we are confident that we can eliminate that ingredient.** We do not believe that cigarettes are hazardous; we don't accept that

1002605545-5564 at 5550, 5560 (U.S. Ex. 35,622; U.S. Ex. 63,571) (emphasis added).

383. In the January 24, 1972 issue of the *Wall Street Journal*, Philip Morris Senior Vice President James Bowling declared that “[i]f our product is harmful . . . we’ll stop making it.

We now know enough that we can take anything out of our product, but we don’t know what ingredients to take out.” Bowling further stated that “[w]e don’t know if smoking is harmful to health, and we think somebody ought to find out.” 500324162-4164 at 4163 (U.S. Ex. 20,627) (emphasis added).

384. In 1997, Altria’s Chief Executive reaffirmed his company’s professed concern for smokers’ health, stating in testimony that if smoking were found to be cause of lung cancer, “I’d probably . . . shut [the] company down instantly to get a better hold of things.” Deposition of Geoffrey Bible, State of Florida v. American Tobacco Co., August 21, 1997, 27.

385. In each of the above statements, Defendants’ stated commitment to act would have required them to accept and publicly acknowledge that their cigarettes were a proven cause of disease – an admission that would have required them to contradict the position at the core of their coordinated public relations campaigns and litigation defenses from 1954-2000.

(2) Defendants Internally Long Have Acknowledged the Competitive and Economic Advantages from Marketing a Potentially Less Hazardous

Cigarette

386. Over the past four decades, the Cigarette Company Defendants repeatedly have recognized consumer interest in cigarettes that could be marketed as potentially less hazardous. However, as shown throughout this section, Defendants' nonetheless chose not to market any cigarettes – cigarettes that they designed and in fact believed to be potentially less hazardous cigarettes – in this way.

387. In a June 1966 report by Philip Morris researcher Myron E. Johnston, Jr., sent to top scientists Helmut Wakeham and Robert Seligman, Johnston noted: “If we could develop a . . . ‘healthy’ cigarette that tasted exactly like a Marlboro, delivered the nicotine of a Marlboro, and was called Marlboro, it would probably become the best selling brand.” In recommending that Philip Morris develop a new filter design, Johnston indicated that Philip Morris’s marketing concerns predominated over actual development of such a “‘healthy’ cigarette,” stating that “the illusion of filtration is as important as the fact of filtration,” a novel filter method “need not be any more effective” than current filters. 1000338644–8671 (U.S. Ex. 21,487).

388. Similarly, in a May 25, 1966 report to Lorillard President J.E. Bennett from Alexander Spears, Lorillard’s Director of Basic Research who later became its Chief Executive Officer, Spears wrote that the development and marketing of a cigarette that yielded tar with “little or no tumorigenic response [in mouseskin painting tests], would be regarded as a highly significant development by the scientific community”:

Undoubtedly, **such a product would place the corporation in a highly enviable position, and in the writer’s opinion a two or threefold increase in sales could result within a short period.** . . . On the other hand, if we fail to pursue this research and/or a competitor marketed a

cigarette whose smoke condensate gave little tumorigenic response, the writer is of the opinion that a significant sales loss could result.

81577610-7625 at 7611-7612 (U.S. Ex. 55,403) (emphasis added).

389. In discussing one scientist's conception of a "safe cigarette" in its "Long Range Strategic Plan; External Forecast; 1979-1983," R.J. Reynolds noted internally: "If this concept received national consumer media, such as *Reader's Digest*, the dynamics of demand in the marketplace could change dramatically." 500676525-6577 at 6540 (U.S. Ex. 22,087).

390. In that same time period, Lorillard also recognized that the first cigarette company to market a less hazardous cigarette successfully would reap substantial and unilateral financial rewards. In a November 1977 letter, Benito Vila of Lorillard wrote to company marketing executive Richard E. Smith that since "I don't know of any smoker who at some point hasn't wished he didn't smoke," if Lorillard could develop an acceptable alternative method to deliver nicotine, "**I am 100% sure we would have a gigantic brand.**" Expert Report of Jeffrey Harris, United States v. Philip Morris, et al. (R. 690; filed Nov. 15, 2001) (U.S. Ex. 78,982) (emphasis added).

391. Undated draft notes to a BATCo memorandum, found in the files of S.J. Green, who served as a scientist, manager and director of BATCo's Research and Development Department in the late 1970's, recognized that a "reduced biological activity" cigarette could be made and offered many "marketing opportunities":

Cigarettes of substantially reduced biological activity (SRBA) can be made by product modification and will continue to present a range of marketing opportunities. By SRBA is meant cigarettes where epidemiology would show no greater incidence of disease for smokers than non-smokers. But there remains a need

for credible biological tests to facilitate developments. Credibility will continually evolve but could be provided by outside independent medical and scientific advice. . . . **Defensive research will need to be provided for as far ahead as can be seen and this may well include social aspects.**

110078609-8609 at 8609 (U.S. Ex. 34,959) (emphasis added).

392. Similarly, in a March 14, 1983 interoffice memorandum from R.J. Reynolds's R.A. Lloyd, Jr., Brand Manager, to Mike McKee, a Manager in the New Brands and Strategic Research Department, Lloyd commented on recent patents applied for or granted to Philip Morris and Imperial Tobacco Company:

It is quite likely that smoking devices similar to those described in these patents or other new products perceived as 'safer' will be introduced to the marketplace within the next few years by major tobacco companies. **The company which can introduce such products, which also supply a degree of user satisfaction which approaches that of current cigarette products, will become the dominate [sic] company in the industry almost overnight. It is reasonable to assume that the company who introduces such a product might capture as much as 25 share points in the first year if supply could keep pace with demand.**

505098631-8634 (U.S. Ex. 22,230) (emphasis added); Expert Report of Jeffrey Harris, United States v. Philip Morris, et al., (R. 690; filed November 15, 2001) at 18 (U.S. Ex. 78,982).

393. And again in 1990, Philip Morris indicated to the Altria (then-Philip Morris Companies) Board of Directors that "[w]e believe there is a potential consumer demand for a radically new smoking device that will provide a pleasurable smoking experience, address consumer concerns about health risks and social acceptability, and still be a profitable business venture." 2046741061-1074 at 1061 (U.S. Ex. 22,185).

394. Most recently, Brown & Williamson has recognized that a potentially reduced

exposure product represents . B&W believes
that

30(b)(6) Deposition of Paul Wessel, United States v. Philip
Morris, et al., March 19, 2003, 10:22-11:3, 11:17-12:2, 42:1-15 (Category 1).

395. Brown & Williamson has stated similarly that the development and marketing of
potentially reduced exposure cigarettes present an

271098692-8695 at 8694 (U.S. Ex. 22,033) (Category 1) (emphasis
added).

**(3) Defendants Agreed Not To Compete on Health Issues in the Marketing of
Potentially Less Hazardous Cigarettes.**

396. Internal documents show that Defendants recognized that no cigarette company
could make marketing claims about less hazardous cigarettes without implicitly or explicitly
admitting that all other conventional cigarettes were hazardous. For this reason, Defendants for
decades jointly maintained an agreement not to compete in the marketing of cigarettes by
claiming that some cigarettes were likely to be less hazardous or “safer” than others. This
coordinated approach ensured that cigarette marketing would be consistent with, and thus an
effective extension of, the core public relations position that cigarettes were not harmful to
health.

397. Even prior to issuance of the Frank Statement, in late 1953 the Presidents of three
Defendants – Philip Morris, Lorillard, and American – agreed at a meeting that “their own
advertising and competitive practices have been a principal factor in creating a health problem”
because to that point, Defendants had made express comparative health claims in advertising.

The meeting minutes stated that the Presidents “ha[d] informally talked over the problem and will try to do something about it.” 2048375960-5964 at 5962 (U.S. Ex. 85,819). What they did was stop competition in the marketing of cigarettes on health grounds. See Expert Report of Allan M. Brandt, United States v. Philip Morris, et al., at 6-7, 15-16 (R. 1147, filed May, 10, 2002).

398. In September 1983 – thirty years after this “informal” discussion among industry heads not to compete on smoking and health issues in the marketing of cigarettes – this agreement remained in force. Patrick Sheehy, then Chairman of BAT Industries and former Chair of Defendant BATCo, wrote to Philip Morris’s U.S. headquarters over a Philip Morris advertisement in Holland that was critical of BATCo’s Barclay brand on smoking and health grounds, an advertisement Sheehy considered “slanderous”:

I find it incomprehensible that Philip Morris would weigh so heavily the short-term commercial advantage from deprecating a competitor’s brand while weighing so lightly the long-term adverse impact from an on-going anti-smoking programme. **I believe this is the first time a Tobacco Manufacturer has purchased space to promulgate the anti-smoking position. In doing so, Philip Morris . . . makes a mockery of Industry co-operation on smoking and health issues**

2023102783 (U.S. Ex. 36,958) (emphasis added).

399. In a follow-up phone call in October 1983, BATCo board member Edgar A.A. Bruell and Philip Morris Chairman and Chief Executive Officer Hugh Cullman reaffirmed the need to maintain the policy of not competing on health grounds in cigarette marketing. Cullman agreed that it was “Essential Industry hang together,” that the activity undertaken in Holland was “not PM company policy,” and repeated BATCo’s request that Philip Morris “instruct its No. 1’s

[top executives] **they must not use anti-smoking activities, statements or programmes for competitive gain.**” BATCo board member Bruell likewise emphasized that it was “[e]ssential to ensure that in future no member of the Industry does anything similar.” 301030943-0944 (U.S. Ex. 46,577) (emphasis added).

400. Similarly, in March 1988, Geoffrey Bible, then President and Chief Executive Officer of Philip Morris International (and later of Altria) condemned tobacco companies publicly acknowledging the notion of reducing the risks from smoking. Decrying a BATCo employee’s referring to one of its products as “less harmful” in a newspaper article, Bible wrote, “The use of the words ‘less harmful’ and ‘harmful components’ has stunned us and I just cannot understand how tobacco companies can make such comments.” 2500046188A (U.S. Ex. 20,548).

(4) Defendants Adhered to the Agreement Not To Compete on Health Issues in the Marketing of Potentially Less Hazardous Cigarettes.

401. From the 1960s through the 1990s, the Defendants’ actual approach to marketing the cigarettes that they believed to be potentially less hazardous than other cigarettes confirms that they restricted their marketing of cigarettes so as not to contradict their core public relations position that smoking is not harmful. While Defendants have marketed remarkably few such products – cigarettes expressly and intentionally designed primarily to reduce the delivery of toxic constituents in cigarette smoke – Defendants’ marketing approach to them has been strikingly uniform.

402. Though Defendants know that commercial success of less hazardous products depended upon their informing consumers about their potential for harm reduction, Defendants consistently decided against providing information to consumers because it would contradict

their denial that smoking causes disease.

403. For example, a few years after Defendants initiated their public relations campaign hatched at the Plaza Hotel and launched it with publication of the Frank Statement, a memorandum from a Philip Morris marketing executive reflected Defendants' joint agreement not to inform consumers in marketing its cigarettes about any changes to cigarettes that might lessen their adverse health effects. A 1958 document by Philip Morris executive Jet Lincoln noted:

BENZPYRENE MUST GO. . . . Other ingredients that might be harmful must also go, but benzpyrene should go first because it is the one that seems to be under most suspicion at the moment. . . . **I think we could exploit it without ever saying a word about it in paid advertising.**

1005038656-8658 (U.S. Ex. 22,214) (emphasis added).

(a) The 1960s

(i). Philip Morris: Saratoga Cigarette

404. In the early 1960s, Philip Morris test marketed the Saratoga cigarette, which used a charcoal filter and which was, in its top researcher's view, "superior to anything in the marketplace" from a health standpoint. It failed, the company acknowledged, because Philip Morris chose not to inform consumers of what it believed to be its comparative health benefit relative to other brands.

Two years ago, in anticipation of a health crisis to be precipitated by the Smoking and Health Report of the Surgeon General's Committee, we undertook to develop a physiologically superior product. . . . That product was Saratoga. Physiologically it was an outstanding cigarette. Unfortunately then **after much discussion we decided not to tell the physiological story which might have**

appealed to the health conscious segment of the market. The product as test marketed didn't have good 'taste' and consequently was unacceptable to the public ignorant of its physiological superiority.

680907829-7987 at 7853-7859 (U.S. Ex. 21,014); 1000307159-7164 at 7160 (U.S. Ex. 20,092)

(emphasis added).

(ii). R.J. Reynolds: Multijet Filter

405. By the late 1960s, R.J. Reynolds had developed a feasible cigarette filter that, according to Reynolds's research, reduced the retention of smoke particulate matter by a smoker's lungs by 63%. Unlike the filters Defendants designed for cigarettes they marketed as "low tar" cigarettes, the "multijet" filter limited smoker compensation and yielded tar and nicotine deliveries to human smokers that closely matched their FTC machine-measured yields. R.J. Reynolds's marketers expressed "concern that **utilization [in marketing] of the retention story, scientifically endorsed, may jeopardize the rest of the Company's cigarette business.**" See 514901941-1966 at 1941 (U.S. Ex. 30,086) (emphasis added); 504210090-0091 (U.S. Ex. 29,749); 512279835-9836 (U.S. Ex. 30,037). Reynolds never incorporated the multijet filter into marketed products. In fact, R.J. Reynolds revived the idea in the 1990s, again recognizing its potential ability to modify the particle size of the smoke aerosol delivered to smokers, but again did not develop the filter for use in any commercialized product. 510926982-6983 (U.S. Ex. 87,554); 510827052-7068 (U.S. Ex. 87,555).

(b) The 1970s

(i). Brown & Williamson: FACT cigarette

406. In the mid-1970s, Brown & Williamson internally acknowledged a “scientific consensus on alleged ill effects of smoking” that included harm from constituents in the gas phase of cigarette smoke, including carbon monoxide (atherosclerosis, permeable arteries, displacement of oxygen in blood), nitrogen oxide (obstructive pulmonary disease, emphysema), and hydrogen cyanide (cilatoxic). It thus developed FACT, which the company touted as a “low gas” cigarette to compete with low tar products. Brown & Williamson perceived this sort of product as a potential vehicle not only to appeal to the “health-conscious” smoker, but as a method of slowing the incidence of quitting, and also as a way to address people’s burgeoning concerns about environmental tobacco smoke:

The gas reduction segment is expected to emerge in the next 1-2 years. The low gas segment is also seen as a means to eventually stem the decline in smoking incidence through positive statements to smoking consumers and passive smokers alike.

777076768-6792 at 6773, 6790 (U.S. Ex. 54,623).

407. While B&W believed that FACT presented a potential health benefit, it rejected a proposed marketing campaign that would have informed consumers “gas [from cigarette smoke] was a health hazard, and an effective campaign would both educate them of as much, and show how FACT responds to that hazard.” Indeed, B&W concluded that Liggett’s and Lorillard’s prior low gas products had failed in part because of “an inability to communicate . . . distinct health hazards arising from cigarette gases.” 777076768-6792 at 6771 (U.S. Ex. 54,623). Nevertheless, Brown & Williamson stated explicitly: “We do not support definition in advertising of the problem of gas in order to specifically communicate its consumer benefit and distinguish it from low ‘tar’. **To supply such definition would require overt references to the**

alleged ciliotoxic and cardiovascular ill effects of smoking. The possible ramifications of this in the Legal, Regulatory, and Policy area are appalling.” 667059296-9299 at 9297 (U.S. Ex. 69,068) (emphasis added).

(ii). Liggett: Project XA

408. Available evidence shows that by 1977, Liggett had developed a new cigarette product, known as “XA,” that internal research led it to conclude to be safer to smokers. Liggett viewed the XA cigarette as the means for its long-term survival as a cigarette manufacturer. Liggett saw XA as a way to increase its market share, which had fallen to around 5%, by attracting smokers who desired a cigarette that was potentially less harmful than the cigarette they had been smoking. Deposition of John Bowen Ross, State of Washington v. American Tobacco Co., October 22, 1998, 38, 97-98.

409. However, evidence shows that Liggett cancelled its plans to market the product and took steps to conceal information about the product because of because of pressure exerted by other Defendants which foresaw the potential adverse impact that accurate information communicated to the public about XA could have on the industry.

410. The XA product utilized palladium as a catalyst to alter the chemical reactions occurring in a burning cigarette, thus modifying the composition of cigarette smoke. LATH00312201-2202 (U.S. Ex. 22,149); Hearing on the Legality of Cigarette Advertisements Under the Federal Trade Commission Act, House Subcomm. on Transportation, Tourism and Hazardous Materials (1988) (testimony of James Mold). By 1972, researchers at Liggett had determined that the smoke from XA cigarettes contained lower concentrations of polycyclic

SECTION IV.B.

aromatic hydrocarbons (“PAHs”), some of the most harmful constituents in cigarette smoke. 681879254-9715 at 9485 (U.S. Ex. 21,020); LATH 00312201-2202 (U.S. Ex. 22,149); RC 6030071-0071 (U.S. Ex. 22,176); Deposition of James Mold, Cipollone v. Liggett Group, Inc., November 26, 1985, 362-364. By 1976, Liggett researchers had concluded that the smoke condensate from XA cigarettes was also far less carcinogenic (on the order of 77% to 100% less carcinogenic) in the widely accepted, standard mouseskin-painting model. Specifically, the research concluded that XA reduced overall tumors in mice by 85-88%, and cancerous tumors by 77-100%. Expert Report of Jeffrey Harris, United States v. Philip Morris, et al., (R. 690; filed November 15, 2001), at 10 (U.S. Ex. 78,982); LG 2013584–3587 (U.S. Ex. 21,208); LG166090–6102 at 6101 (U.S. Ex. 21,195) (Figure 2); Trial Testimony of Lawrence Meyer, State of Washington v. American Tobacco Co., November 10, 1988, at 5441-5443; Deposition of James Mold, Cipollone v. Liggett Group, Inc., November 25, 1985, 102. Liggett also performed animal inhalation studies and chemical analyses that showed that the addition of palladium did not adversely affect the test animals or create threatening byproducts. 681879254-9715 at 9487 n.298 (U.S. Ex. 21,020; U.S. Ex. 25,444); Deposition of James Mold, Cipollone v. Liggett Group, Inc., November 25, 1985, 102-105 (skin painting and inhalation studies “demonstrated that we had, in fact, eliminated the animal carcinogenicity”).

411. In preparing to market the XA cigarette in the late 1970s, Liggett, like the other Defendants, strictly refused to inform consumers about XA’s primary design feature and what Liggett concluded was its potential harm reduction benefit for the smoker. Liggett originally wanted to develop a marketing campaign simultaneously conveying the benefits of XA

SECTION IV.B.

(tentatively to be marketed as the “Epic” brand) while not making any express health claims about the product, because Liggett feared retribution from other Defendants in light of agreements to coordinate smoking and health research through CTR (which Liggett had not done with XA), and to coordinate marketing through the Tobacco Institute’s Committee of Counsel. Trial Testimony of Lawrence Meyer, State of Washington v. American Tobacco Co., November 10, 1988, 5471-5475, 5505-5517.

412. Liggett’s unwillingness to break from the Defendants’ joint agreement not to state explicitly or implicitly that any cigarettes were safer than any others was evident in a meeting it had with White House officials about XA. Liggett’s then-outside counsel, Lawrence Meyer, testified that the purpose of the White House meeting was “to let them know that the [XA] project was coming,” and how Liggett’s perception was that the White House meeting “was positive” and that “[t]hey were encouraged until such time as almost immediately, someone from the Tobacco Institute called and – and essentially asked . . . [Liggett counsel] Joe [Greer] and some of the others what the hell they were doing.” Deposition of Lawrence Meyer, State of Washington v. American Tobacco Co., September 8, 1998, at 109-110.

413. Liggett did not market XA. Explaining this decision, Liggett’s President K.V. Dey testified that the goal of the research, on which the company spent twelve years and millions of dollars, was for the purpose of producing a test cigarette yielding smoke condensate less tumorigenic to mouseskin, not to create a cigarette less hazardous to humans. Liggett considered the results irrelevant to the possible effects of smoking on humans,” and continued to deny any link between smoking and cancer in humans. Deposition of K.V. Dey, Cipollone v. Liggett, No.

SECTION IV.B.

83-CV-28642 (D.N.J.), April 19, 1984, 216:22-221:19; see also 85870124-0125 (U.S. Ex. 88,842); 8570123 (U.S. Ex. 88,843).

414. According to Liggett President K.V. Dey, pressure and threats from Philip Morris not to market XA in the United States contributed to Liggett's decision not to market XA. Deposition of James Mold, Cipollone v. Liggett Group, Inc., November 26, 1985, 191:17-193:18.

415. Lawrence Meyer, former antitrust counsel to Liggett, testified that Brown & Williamson threatened Liggett's "very existence" if it marketed the XA cigarette, including freezing Liggett out of joint defense agreements, and perhaps excluding Liggett from the Tobacco Institute as well. This instruction, delivered through Ernest Pepples, B&W's representative on the Tobacco Institute's Committee of Counsel, was based on B&W's fear that selling XA would be an admission against the interest of all Cigarette Company Defendants. 524007145-7151 at 7148-7149 (U.S. Ex. 20,917); Trial testimony of Lawrence Meyer, State of Washington v. American Tobacco Co., November 10, 1988, 5511-5518, 5540-5541.

416. Liggett feared that, given the view of the XA project by the other Cigarette Company Defendants, if Liggett decided to terminate the project to develop and market XA, it would appear that Liggett was responding to threats to terminate the project, and could be viewed implicitly or explicitly as a part to an agreement to restrain technology. Liggett in-house counsel Greer consequently instructed in-house antitrust counsel Meyer to create an opinion memo for Liggett's executives advising against mentioning outside the company the threats it received about XA because the pressure from Defendants/competitors could be viewed as unlawful. This

warning was circulated at Liggett. Trial testimony of Lawrence Meyer, State of Washington v. American Tobacco Co., November 10, 1988, 5519-5526; Deposition of John Bowen Ross, State of Washington v. American Tobacco Co., October 22, 1998, 82-86.

417. R.J. Reynolds recognized that XA was a feasible potentially less hazardous cigarette. In an internal defense memorandum prepared in approximately 1985, R.J. Reynolds (through its counsel) concluded that a non-carcinogenic cigarette could be made, noting with regard to Liggett's XA product: "Liggett abandoned it, but **only after it had come to a successful conclusion.**" (emphasis added). R.J. Reynolds admitted it has made no effort to emulate that product or otherwise to make a non-carcinogenic cigarette notwithstanding the expiration of Liggett's patent on the technology. R.J. Reynolds is well aware that it could market such a technology: "[XA] suggests that 'safer cigarette' technology has been available and in the tobacco industry's patented possession for the last 30 years . . . and still, no safer cigarette." 681879254-9715 at 9482, 9502-9503 (U.S. Ex. 21,020).

(c) The 1980s

(i). R.J. Reynolds: Premier cigarette

418. From the mid 1980s to 2000, R.J. Reynolds developed and test marketed three different products that were designed primarily – and R.J. Reynolds believed successfully – to reduce the delivery of harmful smoke constituents. The company marketed each of these products – Premier, Winston EW/Select, and Eclipse – in conformity with Defendants' joint agreement not to compete on health claims in the marketing of cigarettes, and with knowledge that adhering to the agreement prevented R.J. Reynolds from providing consumers with the

information it knew would have made the cigarettes commercially successful.

419. Dating back to as early as 1957, R.J. Reynolds was aware that researchers in the greater scientific community had recommended reducing the burning temperature of cigarettes to minimize the formation of harmful constituents such as polycyclic aromatic hydrocarbons (a family of compounds that include benzoapyrene). 506149753-9823 at 9767 (U.S. Ex. 20,752); see also U.S. FPF § IV.B(7), infra (discussions of BATCo’s Ariel and Philip Morris’s nicotine aerosol research). But it was not until the mid-1980s that R.J. Reynolds developed a cigarette utilizing this design approach. The cigarette, eventually given the name Premier, was specifically designed to reduce the delivery of toxic cigarette smoke constituents by reducing the temperature of the burning cigarette. See, e.g., Deposition of David Townsend, United States v. Philip Morris, et al., August 1, 2002, 551(“the real goal [wa]s to reduce the risks”); Deposition of Gary Burger, Arch v. American Tobacco Co., August 21, 1997, at 234; Deposition of J. Donald deBethizy, Hoskins v. R.J. Reynolds, September 25, 1997, at 47, 169 (Premier was “in a class of products that we were studying to try to address the risks associated with our product.”).

420. R.J. Reynolds conducted substantial research that led it to conclude that Premier accomplished its objective of decreasing delivery of many known harmful smoke constituents. See 0071763-1772 (U.S. Ex. 85,827); 504949270-9280 (U.S. Ex. 20,738) (Project Spa, the working name for Premier, produces “**no** constituents . . . as a consequence of the incomplete combustion of tobacco that are alleged in traditional cigarette products to cause diseases or contribute to disease causation in humans,” and Spa “is not mutagenic, produces no ‘adverse biological activity,’ and delivers full smoking satisfaction without burning tobacco.” (emphasis

in original)).

421. However, when it came to marketing Premier, R.J. Reynolds adhered to its longstanding agreement with Defendants rather than informing consumers of Premier’s potential less hazardous benefits. At an October 1987 meeting with the U.S. Food and Drug Administration about Premier, R.J. Reynolds’s attorney refused to discuss “safety issues” because the “tobacco industry” maintained that “**conventional cigarettes are not unsafe, and that it would never reverse this position.**” He made clear that R.J. Reynolds would not “promote or label . . . [Premier] as safer than conventional cigarettes . . . [because] **such a claim would be an indictment of the tobacco industry and its long standing position that conventional cigarettes are not unsafe.**” HHS0880359-0364 at 0361 (U.S. Ex. 85,828) (emphasis added).

422. In testimony in this case, R.J. Reynolds’s Chief Executive Officer during its test-marketing of Premier, Gerald Long, confirmed R.J. Reynolds’s commitment to protect Defendants’ position that cigarettes are not harmful. Long testified that R.J. Reynolds carefully selected its marketing strategy to avoid any implication that conventional cigarettes posed a health threat:

[O]ne of the guidelines that we had right from the beginning [of putting together the marketing strategy was] that Premier could not be and would not be marketed as a safer cigarette because of the implications on the tremendous business that we had at hand already. . . .

[I]f we had come out and stated here you have Premier, the safer cigarette or the safest cigarette or anything indicating to that, the implication would have come back on our own

products and our competitive products in the industry which we were aware of that that would have stated that they were not safe products, and since our position was that we were marketing, the industry and – ourselves and the industry were selling and marketing safe cigarettes, then we couldn't say in one of our brands that we were coming out with something that was safe, while all the rest was not safe. . . .

The negative implications, I think, are quite obvious, that **if we came out very strongly with a product, presuming that the product could deliver and it was the product that was in our opinion and the research showed it to be some kind of a – some kind of a product that was considered to be safer than any of the conventional cigarettes on the marketplace, it would have had a substantially negative effect on the rest of the tobacco industry**, and we felt we weren't ready to take on that obligation. . . . What kind of negative effects? It would have turned around and said to people, well, the tobacco companies are publicly admitting we do not market safe cigarettes.

Deposition of Gerald Long, United States v. Philip Morris, et al., October 18, 2001, 86-90

(emphasis added).

423. As a result of this decision, R.J. Reynolds's marketing of Premier focused not on its potential health benefits, but instead on its purported cleanliness and courtesy benefits. The company told the public that it spent the better part of one billion dollars to make a cigarette that "might be more acceptable for somebody to smoke in their home or enable them to be more . . . courteous around . . . nonsmokers, and so forth Then there are other benefits: no ashes to speak of, you don't get lingering smell of cigarette smoke in your care or in your clothing."

Deposition of Andrew Schindler, United States v. Philip Morris, et al., June 12, 2002, 278-279.

424. R.J. Reynolds was well aware that its refusal to inform consumers that Premier's technology reduced delivery of harmful smoke constituents contributed to its failure in the test

market. Then-Chief Executive Officer Long confirmed that Premier's chosen marketing campaigns "failed because we couldn't say what we wanted to say [i.e., that Premier was a safer cigarette]." Deposition of Gerald Long, United States v. Philip Morris, et al., October 18, 2001, at 86-88. Likewise, Reynolds's marketing executives concluded that "most [smokers] did not realize that the product had other [than low ETS] unique attributes (i.e., ... reduction in alleged controversial compounds) . . . As a result, many smokers who tried the product were not adequately prepared for its unique properties." 507543977-4004 at 3986 (U.S. Ex. 85,829); see also Deposition of Joseph Donald deBethizy, United States v. Philip Morris, et al., April 17, 2002, 122 (Premier's "taste was dramatically different and people were unprepared for it").

425. As David Iauco, R.J. Reynolds's head of business development, told the *Philadelphia Inquirer* in December 1997 (concerning R.J. Reynolds's Eclipse cigarette), "No smoker is going to switch to a lower-risk product unless they know of a benefit and believe it. There will be trade-offs and adjustments, things that the smoker will have to give up." 525413253-3262 at 3259 (U.S. Ex. 87,556); see also Expert Report of Jeffrey Harris, United States v. Philip Morris, et al. (R. 690; filed Nov. 15, 2001), at 22 & n.53 (U.S. Ex. 78,962) (quoting statements of R.J. Reynolds scientist David Townsend).

426. Philip Morris reached similar conclusions about R.J. Reynolds's marketing approach to Premier. Philip Morris hired consultants to evaluate R.J. Reynolds's marketing of Premier and found it to suffer from exactly the problem R.J. Reynolds's executive Iauco articulated: Premier's advertising was "ineffective in communicating a relative advantage over the smoker's current brand." 2022259027-9061 at 9027 (U.S. Ex. 20,363).

(d) The 1990s(i). R.J. Reynolds: Eclipse Cigarette

427. After abruptly ending Premier's test marketing after six months in 1989, R.J. Reynolds developed Eclipse – another cigarette that reduced the burning temperature of the cigarette to reduce the formation and delivery of harmful constituents. Eclipse was first test-marketed seven years later, in 1996. For the first four years of the Eclipse test-market, from 1996 to 2000, R.J. Reynolds marketed Eclipse in the same way it had marketed Premier: as a “cleaner” cigarette due to its producing very low levels of environmental tobacco smoke.

428. In April 2000, R.J. Reynolds announced that it was beginning a new test market of the Eclipse cigarette with the claims that it may present less risk of certain smoking related illnesses “compared to other cigarettes.” Specifically, it claimed that Eclipse may pose less risk for lung cancer, chronic bronchitis and emphysema. 530092076-2114 (U.S. Ex. 85,831).

429. While R.J. Reynolds did make some changes to Eclipse by 2000 compared to the initial release in 1996, none of the changes had to do with reducing health risks. See Deposition of David Townsend, United States v. Philip Morris, et al., August 1, 2002, 454.

430. Moreover, R.J. Reynolds's new health claim about Eclipse was not precipitated by any substantial scientific advancement or technology that had not previously been employed or discovered, nor was it supported by any epidemiological evidence. When Eclipse was first released in 1996, R.J. Reynolds scientific research already had let it to conclude that it was a reduced risk cigarette. See, e.g., Deposition of J. Donald deBethizy, Hoskins v. R.J. Reynolds, September 25, 1997, at 169 (Eclipse was “in a class of products that we were studying to try to

address the risks associated with our product.”). All but one type of study conducted on Eclipse was performed prior to 1996. While the results of the remaining “bronchoalveolar lavage” (“BAL”) study, which examined the lung tissue and measured degree of irritation, was deemed central to the decision to assert a reduced risk claim, Reynolds admits that “technically, those [BAL] studies could have been done” before 1996. Nothing prevented R.J. Reynolds from conducting BAL studies before R.J. Reynolds originally released Eclipse. Deposition of David Townsend, United States v. Philip Morris, et al., August 1, 2002, 454, 540-545.

(ii). R.J. Reynolds: Winston EW/Select cigarette

431. During the mid 1990s, R.J. Reynolds test-marketed its “EW/Select” product, which it developed to reduce certain harmful compounds in cigarette smoke and to be acceptable to consumers. See, e.g., 511080495-0496 at 0495 (U.S. Ex. 85,894) (EW’s “[p]rimary goal was to achieve major chemical reductions in controversial compounds. Another important goal was to maintain acceptable taste characteristics for the consumer.”).

432. A December 1994 memorandum prepared by Reynolds’s then-International Research and Development division describes the special components of the EW design and manufacturing process:

511025613-5615 at 5613-5614 (U.S. Ex. 30,004) (Confidential); see also 513039845-9847 (U.S. Ex. 22,095) (Confidential). The potential reduction in exposure caused by combining these design features, Reynolds scientists believed, had potential significance to cancer and heart disease caused by smoking. See Deposition of Gary Burger, Arch v. American Tobacco Co., August 21, 1997, 156-157, 237-238.

433. By 1994, R.J. Reynolds considered the EW cigarettes to be

By this time, R. J. Reynolds had developed

511689507-9510 at 9507 (U.S. Ex. 22,090) (Confidential).

434. Before EW was ever test-marketed, R.J. Reynolds already had concluded that it would be able to substantiate exposure-reduction marketing statements about EW. By as early as 1993, scientists in the company were confident enough in EW's potential to reduce exposure and its performance on established biological tests that they reached a consensus on scientific claims that R.J. Reynolds could place on a pack insert for EW. 514910471-0472 (U.S. Ex. 22,096).

511689507-9510 at 9507 (U.S. Ex. 22,090)

SECTION IV.B.

(Confidential); 517400643-0671 (U.S. Ex. 30,327) (Confidential)

(emphasis in original); see also 511025613-5615 at 5613-5614 (U.S. Ex. 30,004) (Confidential); 700488776-8789 (U.S. Ex. 61,898); 518379854-9867 (U.S. Ex. 30,346) (Reynolds concluded that EW offered reduced chemistry, reduced irritation, reduced cytotoxicity and reduced genotoxicity compared to its traditional cigarette counterparts); 511325258-5260 (U.S. Ex. 30,011)

(Confidential) 521909036-9039 (U.S. Ex. 30,518)

(Confidential) 510768455 (U.S. Ex. 87,557) (sensory irritation evaluation – November 1994); 521967676-7677 (U.S. Ex. 30,519)

(Confidential) 510334975-4977 (U.S. Ex. 29,997) (Confidential)

– September 1994); 510959750-9752 at 9750, 9752 (U.S. Ex. 51,536) (Confidential)

435. Further, R.J. Reynolds's marketing research had previously shown that potential consumers were most interested in hearing about a product's potential to reduce exposure to

SECTION IV.B.

carcinogenic smoke constituents. For example, in 1992-93, the company concluded that out of forty different product claims tested, the number one “enduring consumer want” was the “personal concern: want of “reduced controversial compounds.” 508128536-8563 (U.S. Ex. 85,883).

436. By 1994, R.J. Reynolds had sponsored extensive consumer concept and product testing for EW, including evaluations of the strength of various reduced exposure claims. It found that the stronger and clearer the reduced exposure message, the greater the consumer interest in the product. See, e.g., 508126677-6690 (U.S. Ex. 85,884); 515873569-3776 at 3681-3684 (U.S. Ex. 85,885); see also 515873569-3776 at 3687-3688 (U.S. Ex. 85,888) (the message of “50% reduction in **alleged cancer causing compounds**” was preferred over the traditional taste claim in consumer testing by a wider margin than the amount by which the milder “50% reduction in **controversial compounds**” was preferred to a taste claim). Even though “the [EW] concept conveyed substantial taste trade offs compared to the “traditional taste” claim, consumers had a significantly higher “Purchase Interest” in the “50% reduction” claim than the traditional taste claim.” 515873569-3776 at 3682 (U.S. Ex. 85,888). In light of these results, the marketing research team at R.J. Reynolds repeatedly recommended that its executives use a reduced exposure claim for EW. See 515873569-3776 at 3685 (U.S. Ex. 85,888) (citing 508585371-5427 (U.S. Ex. 85,887)).

437. R.J. Reynolds test-marketed six EW products beginning in April 1995 in Oklahoma as Winston Select (“EW/Select”), and R.J. Reynolds compared sales in that area to sales of non-EW Winston Select in the Memphis region, which was a comparable market.

517964251-4265 at 4253 (U.S. Ex. 30,341) (Confidential).

438. Notwithstanding that (1) R.J. Reynolds scientists designed EW for the purpose of creating a reduced exposure cigarette acceptable to consumers; (2) R.J. Reynolds had scientifically concluded that EW achieved that goal; and (3) marketing research showed that consumer interest was greatest for messages conveying potential exposure reduction, R.J. Reynolds **never informed** consumers in the Oklahoma test market

Deposition of David Townsend, United States v. Philip Morris, et al., July 24, 2002, at 255, 258-260 (Confidential).

439. While R.J. Reynolds proved willing to make health claims in 2000 about Eclipse without **any** epidemiological support, it claimed in 1995 that it could not and would not make health-related claims for EW/Select
510959750-9752 at 9750 (U.S. Ex. 51,536) (Confidential).

440. Instead of providing the EW test-market consumers the exposure-reduction information that R.J. Reynolds marketing personnel found to be the most appealing to consumers and that R.J. Reynolds scientists concluded could be substantiated, the EW/Select marketing campaign focused on taste. Yet even prior to the test market, R.J. Reynolds's internal research had shown that the taste message for EW

517964251-4265 at 4258 (U.S. Ex. 30,341)
(Confidential).

441. R.J. Reynolds's decision to avoid including health-related information in its EW

marketing campaign was based on the same exact reasons that underlay the half-century agreement among Defendants not to compete on health claims. Defendants refused to risk their profits from conventional cigarettes by implicitly or explicitly stating or disclosing that conventional cigarettes cause disease. In 1993, R.J. Reynolds chief counsel Wayne Juchatz asked outside law firm Jones Day Reavis and Pogue to conduct a thorough assessment of EW (then named “Project CC” internally) and its proposed potential marketing strategies, and to prepare a report for “attorneys defending Reynolds against future claims involving [EW].” In June 1994 Jones Day issued a 200-page report containing legal analysis and recommendations. See generally 515873569-3776 at 3575 (U.S. Ex. 85,888).

442. The Jones Day attorneys concluded that, in light of the scientific findings and the results of consumer tests conducted in 1993, “[i]n sum, it appears that, in terms of both taste and price, [EW] is now ready to be introduced onto the market.” Noting that R.J. Reynolds set as a benchmark for EW the reduction of 50% of “alleged carcinogenic compounds,” and concluding they succeeded (“[EW] substantially reduces certain compounds . . . identified . . . as being potentially harmful to human health”), the attorneys determined that “there are currently no regulations or statutes that prohibit the marketing of [EW]” as a potentially reduced exposure product. 515873569-3776 at 3581, 3667, 3672, 3699 (U.S. Ex. 85,888). Hence the law firm's analysis reiterated R.J. Reynolds’s scientific conclusion that EW had the potential to reduce exposure, discussed whether and how to let the public know about that potential, and deemed it legal for the company to do so.

443. Jones Day further acknowledged the ““50% less claimed cancer causing

SECTION IV.B.

compounds' is more appealing to consumers than 'reduces controversial compounds' or reduces irritancy,'" and that any of these messages regarding "personal concern" were more appealing to consumers than the message concerning the taste of the cigarette. The law firm nevertheless advised that any such direct, aggressive claims "may increase Reynolds' exposure to certain claims in smoking and health litigation," and recommended against even a watered down approach of "reduces irritancy" or "cleaner smoke." The law firm's advice was contrary to the desired approach of "[m]any in Reynolds R&D Division, including Dr. David Townsend, [who] appear to favor strongly an aggressive approach" 515873569-3776 at 3687-3690 (U.S. Ex. 85,888) (citing 508128039-8053 at 8048 (U.S. Ex. 85,886)).

444. EW's performance in the test-market was a commercial success and confirmed its consumer acceptability. Notwithstanding R.J. Reynolds's failure to disclose the exposure-reduction results it reported internally for EW/Select, sales for this cigarette **exceeded** R.J. Reynolds's market-share standards of at least 0.3 to 0.5%. See Deposition of David Townsend, United States v. Philip Morris, et al., July 24, 2002, 144-147. Sales for EW/Select in Oklahoma "held market share consistent with other products that didn't employ those technologies, but carried the same brand name." Deposition of David Townsend, United States v. Philip Morris, et al., July 24, 2002, at 144-47, 257; August 1, 2002, 447-449. In fact, after just four months

– more than triple or

quadruple the baseline requirement. See 514028318-8320 (U.S. Ex. 20,855) (Confidential).

And EW/Select actually outsold

514028318-8320 (U.S. Ex. 20,855) (Confidential); see Deposition of Gary Burger, Arch v. The American Tobacco Co., August 22, 1997, 131-132, 181-182, 188-189.

445. Notwithstanding its strong sales performance, R.J. Reynolds pulled the EW product from test market after six months, and has not reintroduced it in the eight years since.

(iii). Philip Morris: Accord

446. In 1998, Philip Morris began to sell, in one limited test market, its first cigarette since Saratoga in 1964 that was designed to reduce the delivery of, and thereby potentially the harm from, toxic smoke constituents. Known as Accord in the United States (“Oasis” in its Japanese test market), Accord is the first and only product marketed by Philip Morris in any capacity that exploits Philip Morris’s long-understood principle of heating rather than burning tobacco to avoid the creation of harmful constituents via combustion. Deposition of A. Clifton Lilly, United States v. Philip Morris, et al., May 14, 2002, 41:4-20.

447. Accord is Philip Morris’s electrically heated smoking “system.” The purchaser receives a kit – a starter set of shorter, specially designed cigarettes and a dark rectangular heating device approximately the size of a large candy bar. To smoke Accord, the smoker inserts a cigarette into the end of the heating device. When a smoker inhales on the inserted cigarette, the inhalation triggers the device’s electrical heating element, which heats the cigarette at a temperature below that necessary to create combustion and delivers smoke to the smoker. The device permits a maximum of eight puffs per cigarette, and information about the activity and puff count is provided to the smoker on a small LED display on the device. Deposition of A. Clifton Lilly, United States v. Philip Morris, et al., May 14, 2002, 41, 47-48, 53.

448. Philip Morris researchers claim that various scientific studies demonstrate that Accord has substantially reduced the delivery of fifty-eight harmful constituents believed likely to contribute to causing smoking-related diseases. For example, the company says the level of polycyclic aromatic hydrocarbons is below a measurable amount, the carbon monoxide delivery is extremely low, there is a 90% reduction in 1,3-butadiene production, and the TSNAs delivery is 50% below conventional cigarettes. Philip Morris researchers concluded that their tests have shown that mutagenic activity in the Accord cigarette is lower than conventional cigarettes, and the Ames test on Accord found essentially no mutagenic activity. Scientific evidence also shows that the design of the Accord product limits consumers' ability to compensate for reduction of nicotine and tar by taking stronger draws, because the Accord is designed to only deliver eight puffs of a limited amount of smoke. Deposition of Clifton Lilly, United States v. Philip Morris, et al., May 14, 2002, 53, 227, 246; Deposition of Richard Carchman, United States v. Philip Morris, et al., April 25, 2002, 80.

449. Yet despite its scientific research showing Accord to be a substantial technological achievement, Philip Morris has never informed potential consumers in the test market, through promotional or marketing materials, of its conclusion that Accord is a reduced exposure product and a potentially reduced harm product. Indeed, in a presentation to the Philip Morris Companies Board of Directors in late 1996, Philip Morris stated,

but that in marketing Accord to consumers,

2086120855-0890 at 0855, 0871 (U.S. Ex. 45,812). Just like Reynolds's approach to

marketing Premier and Eclipse, as of 2001 Philip Morris's marketing materials told potential consumers only that _____ with a

Philip Morris has marketed Accord as a cigarette

Deposition of Thomas Dudreck, United States v. Philip Morris, et al., June 21, 2002, 35-36; LB0011227-1236 (U.S. Ex. 21,854) (Category 1).

450. Philip Morris's marketing representations reflect the company's conscious decision to avoid informing consumers about Accord's lower delivery of harmful smoke constituents. In 2001-2002, Philip Morris's longtime advertising agency, Leo Burnett, was commissioned by Philip Morris to develop a set of Accord ads that included the messages that Accord _____ including fifty-two compounds that

Philip Morris has not used these ads.

Instead, the Accord advertising campaign continues to focus on neglecting to mention any health issues. Deposition of Thomas Dudreck, United States v. Philip Morris, et al., June 21, 2002, 33-34, August 26, 2003, 465-466, 467-468 (Confidential).; LB0037946-7950 (21,855) (Category 1).

(e) The 2000s: Brown & Williamson: Advance

451. In October 1999, B&W entered an agreement with an independent tobacco company, Star Tobacco, Inc., to develop a product utilizing tobacco cured by Star's patented process for creating low-TSNA bright tobacco. 321897765-7767 (U.S. Ex. 88,041); Deposition

of Rufus Hugh Honeycutt, III, United States v. Philip Morris, et al., April 23, 2002, 59:2-17.

452. B&W believes the product, called Advance, is a

B&W bases its conclusion about Advance on its incorporation of two components: a charcoal filter, intended to reduce the delivery of known gas-phase smoke toxins, and bright tobacco cured using a process that reduces the formation, and thus delivery, of TSNA's. 30(b)(6) Deposition of Paul Wessel, United States v. Philip Morris, et al., March 19, 2003, 42:1-43:1 (Category 1); 30(b)(6) Deposition of Sharon Boyse, United States v. Philip Morris, et al., October 11, 2001, 98:2-7; Deposition of Jeffrey Harris, United States v. Philip Morris, et al., March 20, 2003, 360:5-17; Deposition of R. Hugh Honeycutt, United States v. Philip Morris, et al., April 23, 2002, 13:23-15:6, 61:3-66:6; Star USvPM 001440-1459 at 1444 (U.S. Ex. 85,923).

453. On January 13, 2000, Star Scientific, Inc. ("Star") and B&W, agreed that Star would

Star USvPM-000241-0363 at 0362 (U.S. Ex. 85,920) (Category 2). Thus, in October 2000, Star began test-marketing Advance in Lexington, Kentucky, and Richmond, Virginia. Star USvPM 001440-1459 at 1442 (U.S. Ex. 85,923). In addition to the federally mandated warnings, Star voluntarily placed additional information about the product and smoking's harms on the package, and added an informational "onsert" attached to the package. B&W disagreed with Star on the package design for Advance because the copy of the back of Star's package included such statements as "Smoking can take YEARS off your life. It is much safer for you to QUIT than to switch or smoke" and "Star's processing methods greatly reduce SOME cancer-causing chemicals (nitrosamines) and its special filter reduced SOME toxic gases in cigarette smoke." At

SECTION IV.B.

deposition, B&W conceded that these statements were not misleading. 30(b)(6) Deposition of Paul Wessel, United States v. Philip Morris, et al., March 19, 2003, 19:3-23:9.

454. Nevertheless, at the conclusion of Star's test-marketing of Advance in Richmond and Lexington, the agreement between B&W and Star was renegotiated. Under the renegotiated agreement, B&W was "not required to get the approval of Star for the product because it is pretty much [B&W's] product." 30(b)(6) Deposition of Sharon Boyse, United States v. Philip Morris, et al., October 11, 2001, 119:3-24; 120:22-121:2.

455. B&W began a new test market in Indianapolis in November 2001, using its own, redesigned packaging and onsert. 30(b)(6) Deposition of Paul Wessel, United States v. Philip Morris, et al., March 19, 2003, 24. B&W retained some of the content from the Star onsert, including a chart comparing the amount of certain smoke constituents delivered by Advance to unnamed lights brands, a statement that there's no such thing as a safe cigarette, and a statement on there that there's not enough information to know whether Advance reduces health risks. 30(b)(6) Deposition of Sharon Boyse, United States v. Philip Morris, October 11, 2001, 117:6-20.

456. However, in contrast to Star, Brown & Williamson was unwilling to voluntarily communicate clear, direct statements of smoking's harms in the text section of its onsert.

Among the changes it made to Star's packaging and onsert, B&W:

- deleted Star's statements on the package that referred to "cancer-causing chemicals";
- deleted Star's statements that "Smoking related diseases can KILL you," "Smoking can take YEARS off your life," and "It is much safer for you to QUIT than to switch or smoke.";

SECTION IV.B.

- eliminated Star’s text references to “carcinogens (cancer-causing chemicals)” and “potent cancer causing chemicals in tobacco and tobacco smoke” in the onsert. B&W instead referred to “toxins”;
- deleted Star’s onsert statement that “ALL SMOKED TOBACCO PRODUCTS ARE ADDICTIVE AND POSE SERIOUS HEALTH HAZARDS”; and
- deleted Star’s statement explaining that “Because many smokers smoke to get nicotine, they tend to smoke more intensely when smoking “lights” or “ultra lights,” and that because of such nicotine-driven compensation “lights” and “ultra-lights” are NOT NOW viewed by health scientists as reliably less hazardous.” Instead, B&W stated in minuscule type only that smokers “can increase or decrease the amount of smoke that they take in depending on how they smoke their cigarettes” and thus actual delivery may differ from the FTC test measurements.

Compare 524942388-2389 (U.S. Ex. 52,963) & 524942390-2391 (U.S. Ex. 88,038) to Onsert to B&W Advance (U.S. Ex. 87,216).

457. In sum, there is compelling evidence that Defendants agreed not to compete on health claims in the marketing of cigarettes, and that they adhered to that agreement. Over the past 50 years, Defendants have collectively sold (in any capacity) a small handful of products that were designed primarily to reduce the delivery of known harmful constituents of cigarette smoke to the smoker, and thus to potentially reduce the harm to the smoker from smoking. Until Eclipse in 2000, none of Defendants’ marketing for any of these products expressly communicated to consumers the purpose behind the primary design features so as to allow smokers to evaluate the potential benefits of the product, even though Defendants’ marketing research showed that such information was important to consumers when considering whether to smoke the products.

(5) Defendants Agreed Not To Perform Certain In-House Biological Research That Would Confirm or Acknowledge That Smoking Cigarettes Causes

Disease.

458. Another facet of Defendants' long-term coordination related to the development and marketing of potentially less harmful cigarettes was reflected in the "Gentleman's Agreement" among the tobacco company Defendants. Under this agreement, Defendants committed not to perform certain types of in-house biological research. Though Defendants themselves acknowledged that such research was critical to a meaningful evaluation of whether certain cigarettes were likely to be less hazardous than others, it might lead to the conclusion or prove that smoking caused disease or illness, and thus conflict with their public denials of smoking's adverse health effects. By their words and their actions, Defendants confirmed their common understanding of, and basic adherence to, this agreement.

(a) R.J. Reynolds

459. In March 1983, high ranking R.J. Reynolds scientists Alan Rodgman and Frank Colby described the core parameters of this agreement:

Throughout the domestic industry, two "gentleman's agreements" were operative in the early days:

[a]ny company discovering an innovation permitting the fabrication of an essentially 'safe' cigarette would share the discovery with others in the industry; and

No domestic company would use intact animals in-house in biomedical research.

501543470-3517 at 3504 (U.S. Ex. 21,737) (emphasis added). This agreement reflected Defendants' intent that no company undertake activities that would explicitly or implicitly acknowledge that cigarettes are harmful or yield research that shows cigarettes are harmful. See

U.S. FPF § IV.B(3), supra.

460. In 1981, scientists at Temple University made a research proposal to R.J. Reynolds entitled “Selective Removal of Oxidants from the Tobacco Mainstream Smoke Aerosol.” In an October 26, 1981 memorandum concerning the Temple proposal, Colby wrote:

There is a clear-cut agreement among all U.S. cigarette manufacturers that any scientific discovery made within the companies, or otherwise sponsored by a single company, which might have a positive impact on the smoking and health controversy, would have to be freely shared, without any costs to the other manufacturers. There would, therefore, be no incentive for R.J. Reynolds to sponsor the Cohen project. This applies to any other product development oriented research by a medical institution to be sponsored by a U.S. tobacco company.

500534388-4389 (U.S. Ex. 29,467).

461. Earlier, the existence and terms of the Gentleman’s Agreement was expressly recognized by a member of the Board of Directors of R.J. Reynolds. In 1978, Herschel H. Cudd, Jr., criticized Philip Morris for performing animal research at its INBIFO laboratory in Germany: “A wholly-owned subsidiary in Cologne, Germany engages in carcinogenic biological research, such as mouse painting, **in violation of the verbal agreement among domestic companies not to perform animal testing in-house.**” 503940653-0688 at 0669 (U.S. Ex. 21,436) (emphasis added); 681879254-9715 at 9332 (U.S. Ex. 21,020; U.S. Ex. 25,444).

462. And in 1981, R.J. Reynold’s scientist Colby stated in a memorandum that “[i]nformation was obtained that Philip Morris U.S.A. does not live up to the **alleged ‘gentlemen’s agreement’ of not having animal laboratory facilities on their premises in this country.** Philip Morris indeed has had such facilities for at least 3-4 years and continues to

operate them. This information was communicated to all concerned.” 501626469-6469 (U.S. Ex. 21,576) (emphasis added).

463. R.J. Reynolds’s repeated references to the Gentleman's Agreement in the 1970s and 1980s came after the company was found briefly to have violated the Agreement in the late 1960s, when it established a facility (known as the “Mouse House”) to perform certain animal studies. And, as described more U.S. FPF § IV.D., infra, when Philip Morris discovered and complained about R.J. Reynolds’s violation of the Agreement, R.J. Reynolds quickly dismantled the Mouse House and its in-house biological research program.

(b) BATCo

464. Actions undertaken by BATCo also evidence an awareness of and conformity with the principles underlying the Gentleman’s Agreement. On September 16, 1976, B&W in-house counsel Ernest Pepples warned BATCo against participating in a British safer cigarette working group because it would be recognized as an acknowledgment (that could be attributed to B&W in the United States):

that there is a health hazard from smoking;

that the current state of the art knowledge is sufficiently advanced that an independent committee can posit reasonable steps for a manufacturer to take which may reduce risk to consumers; and

that BATCo would have to cooperate in reaching recommendations re changes to the product itself.

Instead, in order to protect United States legislative and litigation activities, B&W urged BATCo to take the following positions:

the scientific picture is so complex that a cause effect

relationship cannot be divined and therefore rather than researching a safer product, it is better to research the multifactorial relationships between individuals and onset of disease; [and]

to adhere to the view that the use of tobacco is not unduly dangerous, which permits the company to avoid any duty to warn or to make affirmative changes to the product.

680273641-3643 (U.S. Ex. 20,998) (emphasis added).

465. In 1986, BAT Industries Chair Patrick Sheehy, in a confidential internal memorandum in December 1986, again reaffirmed the Defendants' collective position in response to a request by a subsidiary to fund "safer cigarette research":

In attempting to develop a 'safe' cigarette you are, by implication in danger of being interpreted as accepting that the current product is 'unsafe' and this is not a position that I think we should take. . . . The BAT objective is and should be to make the whole subject of smoking **acceptable** to the authorities and to the public at large since this is the real challenge facing the industry.

109875217-5218 (U.S. Ex. 22,040) (emphasis added).

466. As early as the 1960s, the Cigarette Company Defendants funded carefully controlled and collectively supported research in order to prevent individual companies from performing their own scientific research that might link smoking to disease. In 1962, BATCo's Charles Ellis told a conference of BATCo and B&W scientists, "We are committed not to carry out any biological testing ourselves and as I have said this is a valuable safeguard against unilateral action." 107468730-8764 at 8744 (U.S. Ex. 20,252). The scientists recommended that any such testing be done through Harrogate, the lab supported by Tobacco Research Council, the British equivalent of the Tobacco Institute.

467. BATCo urged that, as a strategic matter, Defendants should collectively perform all future research on the biological activity of cigarette smoke, noting:

If, in fact, this had been the case in this circumstance then Lorillard could not have come out with such [a unilateral] pronouncement [that its Kent cigarette had a new filter with a 90% efficiency for phenol]. This is a good reason for doing medical and biological research industrywi[d]e and it points out the danger which might be expected when any single firm goes it alone.

107468730-8764 at 8735 (U.S. Ex. 20,252).

468. The BATCo researcher acknowledged that questions about the health effects of certain smoke constituents have both “the scientific side and the political attitude,” and that the **“political implications have at the moment by far the greater importance.”** He stated that Defendants refused to take “a more positive approach to this whole problem of producing ‘safe’ cigarettes” because of the threat it posed to defense of ongoing lawsuits. He further urged that Defendants proceed collectively in any research studying the composition and adverse physiological effects of cigarette smoke. 107468730-8764 at 8741-8744, 8750-8754 (U.S. Ex. 20,252) (emphasis added).

(c) Philip Morris

469. Immediately following the publication of the 1964 Surgeon General’s Report, Philip Morris’s scientists urged the company to be at the forefront of less hazardous cigarette development, reduced risk advancement, and product testing – to be prepared in case Defendants’ agreement not to compete on smoking and health issues was abandoned. As shown below, in-house scientists’ desire to take a responsible approach to the testing and research on the health effects of Philip Morris’s cigarettes were overridden by Philip Morris executives who were

SECTION IV.B.

committed to adhere to the Gentleman's Agreement and the original plan hatched at the Plaza Hotel in December 1953.

470. In a February 18, 1964 memorandum, chief scientist Helmut Wakeham urged Philip Morris to: (a) gain a competitive advantage by increasing in-house research on the connection between smoking and health and by developing a "superior filter cigarette with acceptable taste having high gas-phase absorption and very low TPM [total particulate matter, or tar]" which would be "biologically approved on all major health questions"; (b) recognize that "health impact will surely be an important, perhaps the most important, basis for competition in the industry in the next few years"; (c) break up what he acknowledged to be "the common front approach of the industry through The Tobacco Institute and TIRC [the Tobacco Industry Research Committee, which became CTR]. R.J. Reynolds advocates a joint front, sit tight, status quo approach"; (d) establish "suitable biological approval specifications for all new smoking products"; and (e) change the status quo so that Defendants would conduct their own research on the connection between smoking and health "if they expect to develop proprietary position for the health competition." 1000335612-5625 at 5615, 5616, 5617, 5618 and 5623 (U.S. Ex. 22,986; U.S. Ex. 63,579).

471. Later in 1964, chief scientist Wakeham confirmed that Philip Morris's interest in expanding its research capabilities was defensive in nature: "**Our philosophy is not to start a war, but if war comes, we aim to fight well and to win.**" 1000307159-7164 at 7164 (U.S. Ex. 20,092) (emphasis added).

472. Contrary to Wakeham's urgings, however, Defendants continued to **jointly** fund

and perform biological research on the health effects of smoking, rather than individually performing cigarette research and development programs that could lead to competition on health claims in the marketing of cigarettes. In February 1968, for example, the scientific directors of Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, American, and Liggett met “to discuss the scientific aspects of the problems facing the tobacco industry with specific emphasis on tobacco and health.” Notes of the meeting from Liggett’s representative reported “**a general feeling that an industry approach as opposed to an individual company approach was highly desirable.**” MNAT00770687-0691 at 0688 (U.S. Ex. 59,816) (emphasis added).

473. Chief scientist Wakeham admitted as early as 1964 that Philip Morris had the ability to conduct studies to determine whether Philip Morris’s various cigarette designs caused any differential incidence of disease. Wakeham argued that Defendants, through TIRC/CTR, should sponsor an epidemiological study of the comparative health effects on smokers of non-filtered cigarette and filtered cigarettes:

The health value of filters is undersold in the [Surgeon General’s] report and is the industry’s best extant answer to its problem. The Tobacco Institute obviously should foster the communication of the filter message by all effective means. At the same time TIRC can profitably sponsor development of those areas where exceptions to the report’s treatment have been made [earlier in the document]. **Specifically, a prospective survey of filter vs. non-filter smokers is appropriate.** . . . [T]he industry must come forward with evidence to show that its products, present and prospective, are not harmful. Medical research must be done for this purpose, as well as for judging the merit of work done outside the industry. **The industry should abandon its past reticence with respect to medical research. Indeed, failure to do such research could give rise to negligence charges.**

1000335612-5625 (U.S. Ex. 22,986) (U.S. Ex. 63,579) (emphasis added). Philip Morris never

conducted this or any other epidemiological research. See Deposition of Richard Carchman, Williams v. Philip Morris Inc., March 16, 1999, 54:22-58:13.

474. Chief scientist Wakeham was well aware of the existence of the Gentleman's Agreement and the Defendants' continued adherence to it. In fact, BATCo scientists reported that Wakeham “was told that **there was a tacit agreement among the head of the US companies that [in-house biological research] would not be done.**” 110315968-5971 at 5969 (U.S. Ex. 26,378) (emphasis added).

475. In the late 1960s, Wakeham again proposed to executives that Philip Morris abandon its agreement not to conduct in-house biological research that could lead to the conclusion that cigarettes cause disease. In a November 1968 internal memorandum identified as a draft and entitled “Need for Biological Research by Philip Morris Research and Development,” Wakeham referred explicitly to the Gentleman’s Agreement:

We have reason to believe that in spite of **gentlemans [sic] agreement from the tobacco industry** in previous years that at least some of the major companies have been increasing biological studies within their own facilities. . . . **Essential** to the development and introduction of any product are **biological studies** proving safety of the product

1001607055-7061 at 7058, 7061 (U.S. Ex. 21,617) (U.S. Ex. 76,155) (emphasis added).

476. Another version of the Wakeham memorandum, dated November 15, 1968, restated Wakeham’s proposal to Philip Morris executive Clifford Goldsmith that Philip Morris test its products notwithstanding Defendants' agreement: “We have reason to believe that while this proposal to carry out biological research and testing may seem a radical departure from previous policy and practice, we are in fact only advocating that which our competitors are also

doing.” 1002635062-5065 (U.S. Ex. 20,139).

477. In that same memorandum, Wakeham again proposed that Philip Morris test the biological effects of its cigarettes for defensive reasons: “We must know more about our products than anyone else so that we are not surprised when our competitors or our antagonists publish information about our products. We must know how our products perform in conventional tests regardless of whether or not we believe the tests to be significant.” 1002635062-5065 at 5065 (U.S. Ex. 20,139).

478. In July 1969, Wakeham, at the instruction of Philip Morris Chief Executive Officer Joseph Cullman III, prepared and distributed an eight-page proposal outlining a \$500,000 per year, in-house biological research and testing program for Philip Morris. Wakeham emphasized that since the National Cancer Institute (“NCI”) had begun using biological assays to test experimental cigarettes and was likely to proceed to test actual commercial brands of cigarettes, Philip Morris should perform its own testing on commercially sold cigarettes so that it would be prepared to respond to research results NCI produced. 2024972427-2436 (U.S. Ex. 87,559).

479. On September 9, 1969, Wakeham continued to advocate to Philip Morris executives that Philip Morris should perform research and testing of the health effects of its cigarettes. In a memorandum, Wakeham reviewed British mouse skin painting data and: (a) noted that this was the best test for measuring biological activity for cigarette smoke, notwithstanding Defendants' public criticisms of this method; (b) explained the results to show the existence of a dose-response relationship, and to show that reconstituted tobacco cigarettes

SECTION IV.B.

“made from whole leaves but not containing excess stems” produced fewer tumors than did condensate from flue-cured cigarettes, which suggested that the former results might play a positive role developing a less hazardous cigarette; and (c) urged Philip Morris to begin testing its cigarettes with this methodology. This memorandum stated, in part:

The mouse skin painting carcinogenicity test, despite all of its short-comings, is widely accepted as the critical test for biological activity of cigarette smoke. Even the tobacco industry is now hung on this one because of its acceptance of this test in the Chemosol evaluation. The Tobacco Working Group of the National Cancer Institute is also using this test as the primary assay of smoke. The conclusion from all this is inescapable: We should start testing our products now because it will be two years before we know the answer.

1000855768-5770 at 5768-5769 (U.S. Ex. 20,111).

480. One week later, on September 16, 1969, Philip Morris executive Ross Millhiser wrote to George Weissman, Philip Morris’s President, about the Wakeham proposal: “I strongly endorse the program and feel that further delay of its implementation would present undue risks to the corporation.” 2025010565-0565 (U.S. Ex. 87,560).

481. Nevertheless, Chief Executive Officer Cullman decided that Philip Morris would not pursue any biological research program. On October 7, 1969, Cullman wrote to Millhiser: “I have discussed with you and George Weissman informally my serious reservations about the wisdom of embarking upon this program at this time. . . . **I still favor having the Council for Tobacco Research - U.S.A. approach this problem as it has in the past. The legal, philosophical, and practical problems of mounting a PM biological research program seem to me to outweigh the advantages.**” 1003058247-8247 (U.S. Ex. 87,561) (emphasis added).

482. And in a February 24, 1970 memorandum to Wakeham that was copied to Weissman, company general counsel Paul Smith, Millhiser, and Wakeham's boss Clifford Goldsmith, Cullman elaborated on his decision and "the strong stand I have taken in connection with certain kinds of research activities by Philip Morris." He wrote that "our present policy is the correct one and that the program you are carrying out in Boston is as far as we should go now. **The possibility of getting answers to certain problems on a contractual basis in Europe appeals to me and I feel present an opportunity that is relatively lacking in risk and unattractive repercussions in this country.**" 1000216742-6742 (U.S. Ex. 20,081) (emphasis added). Philip Morris ended up buying the INBIFO lab in Cologne, Germany, to perform some biological research in a way that would avoid "unattractive repercussions" in the United States. As noted supra, U.S. FPF § IV.B(5), R.J. Reynolds considered research at this Philip Morris-owned facility a breach of the Gentleman's Agreement.

483. In May 2001, longtime Philip Morris scientist Jerry Whidby confirmed that Philip Morris USA never conducted such biological testing of commercial cigarette brands like that advocated by Wakeham in the 1960s.

Q. In the 1970s and 1980s and 1990s, while you were at Philip Morris, did Philip Morris do testing on commercial branded cigarettes like Marlboro and Winston, biological testing?

A. No, we did not.

...

Q. Did you ever see or hear, see or hear of any biological tests that were conducted by INBIFO that compared various whole products, commercial brands of cigarettes like Winston and Marlboro?

A. No, I did not.

...

Q. Has Philip Morris ever conducted a test to determine whether

in fact a Marlboro Light is any safer, any more safe or less safe than a Marlboro Red?

A. No, we have not.

Trial Testimony of Jerry Whidby in Blue Cross & Blue Shield of New Jersey v. American Tobacco Co., May 2, 2001, at 4808, 4814, 4849.

484. Similarly, former Philip Morris scientist Richard Carchman has confirmed that “the [Project] Parameter test [begun in 1999] is the first time Philip Morris commercial brands were subjected to these biological assays [for cytotoxicity].” Deposition of Richard Carchman, United States v. Philip Morris, et al., April 25, 2002, 220-223.

485. Consistent with the Gentleman’s Agreement not to perform certain types of biological research in the facilities of the Defendant Cigarette Companies, which continued into the 1980s, Philip Morris prohibited its scientists from publicly disclosing, without prior legal department approval, that Philip Morris was engaged in in-house animal research. See, e.g., 1000127789-7790 (U.S. Ex. 34,422) (1980 memorandum of a Philip Morris scientist referring to the Defendants' longtime legal defense that “‘We within the industry are ignorant of any relationship between smoking and disease. **Within our laboratories no work is being conducted on biological systems.**’”) (emphasis added).

486. On January 26, 1981, Paul Eichorn, a scientist on Philip Morris’s manuscript review board, requested permission to circulate for internal review a report of a study that involved administering nicotine to rats. Eichorn asked Robert Seligman, Philip Morris's Vice President for Research & Development: “Before the Manuscript Review Board starts its review we would like to know if the subject matter (nicotine and physiological response – study in our

SECTION IV.B.

facilities) would be allowed for release.” Seligman responded on February 2, 1981: “I plan to pass this by Alex Holtzman [Philip Morris’s counsel in New York] **before** going back to the M.S. board.” 2021380745-0746 at 0745 (U.S. Ex. 87,562) (emphasis in original).

487. Eichorn circulated the report to other Philip Morris personnel for review. The responses make clear Philip Morris’s continuing secrecy of its in-house animal research:

“**Are we willing to publish results of studies performed inhouse on intact animals?** WFG [Walt Gannon]” “Good question RT [Robert Thomson]” “Since word of this work and similar stuff does appear to find its way outside the company anyway publication may be preferable to suspicions. WF [William Farone]” “**Need to get legal OK out of N.Y.** [writer unidentified], 2021380714-0714 (U.S. Ex. 87,563) (emphasis added).

“**Do we want it known that we do animal studies?** CHO [Cynthia H. O’Donohue],” 2021380718-0718 (U.S. Ex. 87,564) (emphasis added); and

“Strongest abstract I’ve seen. **I’m still doubtful on publishing rat projects.** BK [B. Kosakowski],” 2021380721-0721 (U.S. Ex. 87,565) (emphasis added).

According to one scientist, the prohibition on publication extended even beyond animal research:

“My question – why are we allowing this type of information to be presented and **NOT** allow papers which refer to the chemical composition of tobacco/smoke (components which have previously been reported) to be published **or** presented? Manuel [Manuel Bourlas]” 2021380730-0730 (U.S. Ex. 87,566) (emphases in original).

488. And, notwithstanding the 1981 claim by R.J. Reynolds’s Frank Colby that Philip Morris was violating the Gentleman’s Agreement, in 1984 Philip Morris research Director Thomas Osdene, who oversaw Philip Morris’s externally conducted research related to the health effects of smoking, testified that all such research was done outside of Philip Morris’s research facilities in the United States. 30(b)(6) Deposition of Thomas S. Osdene, Cipollone v. Liggett,

October 3, 1984, at 47:25-48:16, 82:6-24, 123:15-124:5 (“We did not do any animal work in-house in the United States.”).

(d) Brown & Williamson

489. As indicated supra, U.S. FPF § IV.B(5)(b), Brown & Williamson’s continued adherence to the agreement not to conduct meaningful biological research in-house to develop potentially less hazardous cigarettes, and not to compete on health claims was articulated in a 1976 memorandum from counsel: **“the scientific picture is so complex that a cause effect relationship cannot be divined and therefore rather than researching a safer product, it is better to research the multifactorial relationships between individuals and onset of disease . . . [Brown & Williamson should] adhere to the view that the use of tobacco is not unduly dangerous, which permits the company to avoid any duty to warn or to make affirmative changes to the product.”** 680273641-3643 (U.S. Ex. 20,998) (emphasis added).

490. Brown & Williamson believed that research on potentially less hazardous cigarettes would undermine Defendants' public relations position that cigarettes are not harmful. Indeed, in 1989 Brown & Williamson’s longtime in-house counsel advised that Brown & Williamson should not pursue the development of any less hazardous cigarette or undertake meaningful biological research that would be inconsistent with its public position regarding smoking and disease:

You asked me to outline a response to a suggested strategy for modification of cigarettes in ways which would be said to reflect the smoking and health controversy. The suggestion includes constructing cigarettes which would have modifications such as lower biological activity, lower levels of specific smoke constituents, and lower tar and nicotine; approaching ‘regulators’

to seek approval of such modified products; and marketing the modified products to consumers. Brown & Williamson should oppose the suggested strategy for several reasons, the first of which is that **science does not support offering a modified product as relevant to concerns about smoking and health**. . . . Brown & Williamson's positions on smoking and health are based on science. Today, **our opinion is science has not established that smoking causes disease in humans and no cigarette can be constructed which would be safer than another**. . . . Neither the Ames test nor any other bioassay (including 90 day rodent inhalation tests) would provide substantiation for a manufacturer's statement that a product modification was significant for smoking and health. . . . [I]t is not established that the reduction or removal of specific smoke constituents or of smoke constituents across the board, such as in low tar cigarettes, is significant for smoking and health.

680701034-1038 at 1034 (U.S. Ex. 21,010) (emphasis added).

491. In the fall of 1989, scientific leaders of BATCo research from its Brown & Williamson location as well as from its foreign entities met in Vancouver, British Columbia, to discuss the development of a less hazardous cigarette, including the selective reduction of harmful substances and nicotine analogues. The scientists produced a fourteen page set of minutes from that meeting. Brown & Williamson and BATCo lawyers – particularly Brown & Williamson Assistant General Counsel Kendrick Wells – obtained a copy of those minutes and eliminated twelve of these pages. All references to less hazardous cigarettes – from which a conclusion ostensibly could be drawn that currently sold cigarettes were not safe and that nicotine is addictive – were removed. Deposition of Jeffrey Wigand, In re Mike Moore (No. 94-1429), November 29, 1995, 41:3-45:24, 54:13-55:11, 67:6-22, 69:1-70:23.

492. Following that Vancouver meeting, Brown & Williamson President Thomas Sandefur instructed Vice President for Research and Development Jeffrey Wigand to discontinue

SECTION IV.B.

discussion or research relating to the health or safety of cigarettes, even though BATCo was conducting selective reduction research in Canada and the United Kingdom. Sandefur said that alluding to the prospect of a less hazardous cigarette would be tantamount to admitting that its conventional cigarettes were not safe and therefore fatal to the company's public position. Sandefur also prohibited Brown & Williamson from having a scientific and medical advisory committee to provide direction or support for the development of a less hazardous cigarette. Deposition of Jeffrey Wigand, In re Mike Moore (No. 94-1429), November 29, 1995, 58:12-60:21, 70:2-71:23, 77:3-78:21.

493. When Wigand had first arrived at Brown & Williamson, he learned that it had previously conducted various biological studies including studies related to nicotine and the biological activity of different cigarette blends, but Brown & Williamson executives precluded him from learning the results of those studies – including the results of tests performed on potentially less hazardous cigarettes Ariel and Mad Hatter. Deposition of Jeffrey Wigand, In re Mike Moore (No. 94-1429), November 29, 1995, 62:2-66:20, 79:14-22, 89:20-91:15, 98:6-102:24; cf. Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 9 (U.S. Ex. 61,180) (as Philip Morris's Director of Applied Research, Farone was not permitted to see results of biological research conducted at Philip Morris's German INBIFO facility).

(e) American Tobacco

494. An August 1965 memorandum from counsel for Defendant American Tobacco reported the company's adherence to the agreement not to engage in an in-house biological

research program:

At the conclusion of our conference Harlow stated the opinion that the program contemplated would make the Company's past and current position in the health field untenable. Harlan thought that we'll have to give it [the program] up. Harlow ultimately stated that, while the program was important and he wanted very much to do it, he would certainly not want to do anything that has an impact on the Company's position or if it makes that position any less sound than it now is.

The memorandum further noted that American Tobacco had "initiated no biological research on animals in its own laboratory" since the 1930s. Counsel warned that undertaking a proposed biological research program, which included developing techniques "to measure and evaluate [and compare] the biological effects" of American Tobacco's products, would potentially undermine its "past fundamental position" denying the harmfulness of cigarettes and to support its position in product liability litigation: "any attempt by the Company publicly to assert product improvement in terms of health on the basis of its [proposed] animal results involves all the . . . problems for its public and legal position in the health controversy." MNATPRIV00026861-6916 at 6863, 6909, 6912 (U.S. Ex. 21,478).

(6) Defendants Have Developed Products To Use Defensively If Another Company Violated the Agreement Not to Compete

495. Consistent with Defendants' agreement not to compete on health claims in the marketing of cigarettes, Defendants have withheld or removed from the market cigarettes that their internal scientific research concluded were likely to reduce smoker's exposure to known harmful smoke components, and were improvements over competitor's cigarettes. To the extent that Defendants developed less hazardous cigarettes or technologies, they have done so for defensive reasons – to be prepared to respond if other Defendants contravened the agreement and

began marketing a cigarette using health-related claims. Notwithstanding these defensive efforts to internally develop potentially less hazardous cigarettes, Defendants continued to adhere to their Gentleman's Agreement not to market them in a manner that drew a favorable comparison to conventional cigarettes on health-related grounds.

(a) Philip Morris

496. By November 1961, Philip Morris had conducted sufficient research to conclude that a “medically acceptable low-carcinogen cigarette may be possible.” Its Research & Development Department continued research into less hazardous cigarettes in order to be prepared to compete on health grounds, but only if necessary. A Helmut Wakeham presentation to the Philip Morris board of directors in October 1964 noted:

[T]he Research and Development Department is working to establish a strong technological base with both defensive and offensive capabilities in the smoking and health situation. **Our philosophy is not to start a war, but if war comes, we aim to fight well and to win.**

1000307159-7164 at 7164 (U.S. Ex. 20,092) (emphasis added).

497. As additional evidence of Philip Morris’s defensive approach to the development of less hazardous cigarettes, in 1979 Philip Morris was considering the development of an extension of its new Merit brand that would reduce the delivery of carbon monoxide. In his notes from the October 15, 1979 meeting of scientists to discuss this product, Robert Seligman indicated Philip Morris’s plan to keep the less hazardous product on the shelf once developed: “!! May be a very important product to have ‘on the shelf’ and in test market.” 1003713936-3938 at 3938 (U.S. Ex. 35,855).

SECTION IV.B.

498. Also in the late 1980s, Philip Morris developed a product it considered competitively superior to Reynolds's Premier and that it believed to be a potentially less hazardous cigarette. However, a June 27, 1990 presentation to the Philip Morris Companies (now Altria) Board of Directors discussed Philip Morris's plan to market the less hazardous product as part of a defensive strategy only if necessary:

We have developed our . . . prototype to the point where **it is a good competitive product for the Premier category**. It is superior to Premier in taste, lightability, and it delivers much less carbon monoxide than Premier. Our product is approaching the point where it will be ready for test market – further refinements are required but **we think we are pretty well placed to respond if necessary to a relaunch of a Premier-type product by Reynolds**.

2046741061-1074 at 1063 (U.S. Ex. 22,185) (emphasis added).

499. In the late 1990s, Philip Morris undertook its Selective Constituent Reduction Program (“SCoR” or “SCRp”) to develop a conventional looking, lit-end cigarette product (unlike the electrically heated Accord device, discussed at U.S. FPF § IV.B(4), supra, that removes certain harmful constituents from the cigarette smoke. Philip Morris has failed to market this product at all even though its longtime advertising agency Leo Burnett has supplied all of the marketing communications (“since last July [2002], we performed design and creation of advertising, point-of-sale and direct marketing communication”) and spent “9-10,000 man hours on [the project in 2003].” 30(b)(6) Deposition of Thomas Dudreck, United States v. Philip Morris, et al., August 26, 2003, 216-217, 234-235, 236-239).

500. In addition, the marketing communications that Philip Morris has asked Leo Burnett to create in the event Philip Morris ever markets the cigarette demonstrates Philip

SECTION IV.B.

Morris's planned “wait and see” defensive approach. Leo Burnett has prepared for Philip Morris two entirely separate sets of communications for the same exact cigarette,

30(b)(6) Deposition of Thomas

Dudreck, United States v. Philip Morris, et al., August 26, 2003, 217-218, 227-230, 236-238;

Deposition of Suzanne LeVan, United States v. Philip Morris, et al., June 25, 2002, 163-175.

501. However, Philip Morris has not decided it will market the product at all or if it will eventually use marketing materials that convey accurate information about the cigarette’s delivery reduction features to consumers. 30(b)(6) Deposition of Thomas Dudreck, United States v. Philip Morris, et al., August 26, 2003, 231-232. Leo Burnett has separately prepared at Philip Morris's direction a separate set of communications (newspaper, magazine and point-of-sale materials) that do **not** inform the consumer that the

30(b)(6) Deposition of Thomas Dudreck, United States v. Philip Morris, et al., August 26, 2003, 239-241.

SECTION IV.B.

502. Philip Morris has failed to even test market SCoR, and according to Suzanne LeVan, former Philip Morris Vice President of Premium Brands from 1991-2001 and current Vice President of Marlboro,

Deposition of Suzanne LeVan,
United States v. Philip Morris, et al., June 25, 2002, 159-162, 163-175, 251; 2085803066-3084 (U.S. Ex. 25,329) (Category 1); 2085297717-7736 (U.S. Ex. 25,241) (Confidential).

(b) BATCo

503. The most significant example of BATCo developing less hazardous cigarette technology solely as a defensive measure is its history with its “Project Ariel.” Ariel represents the earliest known demonstration of a Defendant’s ability to deliver satisfying levels of nicotine – the primary reason people keep smoking – in aerosol form, without delivering the harmful constituents of tobacco combustion. However, BATCo failed to market Ariel because doing so would have implicitly undermined its public position that conventional cigarettes do not cause disease.

504. By 1962, Project Ariel, which had its origins in the 1950s, resulted in what BATCo considered a less hazardous product: “administration of nicotine in suitable form, should give full satisfaction to smokers while at the same time avoiding the well-known disadvantages inherent in actual cigarette smoking [i.e., the tar from combustion],” that provided “as much psychological and physiological pleasure to the smoker as conventional smoking does, and [that]

. . . also create[d] addiction in about the same relative amounts.” TIMN0105567-5568 (U.S. Ex. 21,765); 700743976-3996 at 3990 (U.S. Ex. 21,050) (origins of Project Ariel).

505. On February 13, 1963, Sir Charles Ellis wrote to BATCo Production Director D.S.F. Hobson to suggest a gradual transfer of responsibility for Ariel from Battelle to BATCo, and a “definite phrase stating that BAT will undertake the commercial realization of the project.” Ellis went on to state: “**There is no doubt that the project is feasible I myself smoked two crude versions of the devices . . . and obtained a marked nicotine effect without, of course, any combustion products.**” 301121935-1936 (U.S. Ex. 20581) (emphasis added).

506. In a Battelle report dated February 18, 1963, from Battelle scientist Hans Schachner to Ellis, Schachner confirmed that “**it was possible to smoke a complete cigarette and get some satisfaction out of it. These experiments make it appear very likely that a satisfactory device can be developed.**” 301121911-1917 at 1917 (U.S. Ex. 22,023) (emphasis added).

507. However, BATCo continued to adhere to Defendants’ joint position denying adverse health effects of smoking. On the same day, BATCo board member (and future Board Chairman) D.R. Clarke stated in a memorandum that he could not see any likely commercial application for Project Ariel, which “**certainly could have no future unless the ordinary cigarette is proved to be harmful and the industry is unable to remove the cause of the trouble.**” 201035126-5126 (U.S. Ex. 20,304) (emphasis added).

508. In July 1966, BATCo scientists again confirmed that with regard to Ariel, “the original objective is feasible and achievable.” 105534272-4285 at 4283 (U.S. Ex. 20,241). And

SECTION IV.B.

again in May 1967, BATCo in-house scientists concluded that “the ARIEL design provides . . . a satisfying smoke which, within present knowledge, is ‘healthy.’” 301099888-9902 at 9890 (U.S. Ex. 21,547).

509. BATCo’s adherence to Defendants’ joint public relations position scuttled further marketing development of Ariel by patent holder BATCo, Brown & Williamson, or a licensee of the Ariel patent. On March 2, 1970, BATCo’s S.J. Green (in London) informed Brown & Williamson researcher I.W. Hughes (in the United States) that he favored licensing the patent if a license were requested. He stated: “My reasoning is that to refuse is to invite adverse reaction – if we claim this invention has any conceivable contribution to make on health grounds.” Hughes responded to Green’s letter, stating that it was the view of people with whom he spoke at Brown & Williamson that “it would be inadvisable for his [sic] development to be licensed to anyone in the U.S.A.,” noting further both companies agreed that “**the time for marketing such a product has not yet come.**” 107623970-3970 (U.S. Ex. 34,856); 107623969-3969 (U.S. Ex. 20,257); 107623968-3968 (U.S. Ex. 20,256) (emphasis added); 107623967-3967 (U.S. Ex. 20,255). In the end, Ariel was neither developed by BATCo or Brown & Williamson, nor licensed to any third party.

(c) R.J. Reynolds

510. Notwithstanding Reynolds’s public statement that “[i]f it is proven that cigarettes are harmful, we want to do something about it **regardless of what somebody else tells us to do. And we would do our level best,**” see U.S. FPF § IV.B(1), supra, Reynolds has not sought to reintroduce into the market its EW product – which exceeded its market share benchmark when

briefly sold in the mid-1990s – despite repeatedly reaffirming its scientific conclusions that EW reduced the delivery of numerous smoke constituents to smokers and had great potential to reduce harm to its users.

511. Evidence suggests that R.J. Reynolds intends to withhold the re-introduction of an EW-based cigarette unless and until Congress assigns FDA jurisdiction over tobacco products.

An “EW-2 Product Development” memorandum states:

Importance to RJRT: With the prospect of a national tobacco settlement approval by congress and signed by the president during the fourth quarter, reduced risk products such as EW-2 would provide RJRT with a starting point for FDA approval. As a result RJRT would have a consumer acceptable product ready for human trials by 8/98 [p]roviding RJRT with an advantage in the establishment of testing protocols with the FDA for reduced risk products.

RJR000000053000092550386-0387(U.S. Ex. 22,188).

512. By 1998, it appeared that R.J. Reynolds had completed or scheduled testing for a
including two EW models.

519436056-6075 at 6065 (U.S. Ex. 30,352) (Confidential). Yet in preparing a budget for inclusion in the 1998-2002 Capital Plan to account for the possibility of legislation or regulation mandating compliance with FDA standards, R.J. Reynolds recognized that it

The budget listed a

at 3729 (U.S. Ex. 30,317) (Category 1).

513. In fact, when motivated in 1997 by the prospect that

and

R.J. Reynolds was willing,

to contemplate

See

519990585-0593 (U.S. Ex. 30,359) (Category 1); see also 519536925-6933 at 6927 (U.S. Ex. 30,354) (Category 1).

514. Another example of R.J. Reynolds's conscious withholding of less hazardous cigarettes from the marketplace as part of a defensive strategy is Reynolds's EW version of

In a 1997 R.J.

Reynolds document entitled,

519186833-6877 at 6835 (U.S. Ex. 30,349) (Category 1).

515. In short, since 1997 R.J. Reynolds has opted not to market EW products that it concluded were successfully designed to reduce exposure to certain smoke constituents and were

consumer acceptable.

(d) Brown & Williamson

516. Evidence shows that, notwithstanding Brown & Williamson's recognition of offensive or affirmative market opportunities for a potentially less hazardous cigarette, it has chosen not to market Advance, as a potentially less hazardous product, though it believes it to be one, unless other tobacco companies market reduced exposure or "reduced harm" cigarettes.

517. Since at least 2001, Brown & Williamson has had two versions of Advance ready to launch (a 100s version and a king-sized version). Brown & Williamson's reveals that it will

271098692-8695 at 8694 (U.S. Ex. 22,033) (Category 1) (emphasis added).

518. Brown & Williamson, in fact, has tracked its competitors' progress with respect to the development of potentially less hazardous products, and is ready to market the Advance cigarette. According to the Advance Brand Plan,

271098692-8695 at 8694

(U.S. Ex. 22,033) (Category 1) (emphasis added). Brown & Williamson has informed the public that it is in the process of developing less hazardous cigarettes. However, if Brown & Williamson eventually markets Advance nationally, even then Brown & Williamson intends to educate the public about Advance's potentially less harmful qualities only

That is, the Advance Brand Plan stated:

271098692-8695 at 8693 (U.S. Ex. 22,033) (Category 1).

519. Notwithstanding this or the potential further risk to Brown & Williamson's market share, it has not 30(b)(6) Deposition of Paul Wessel, United States v. Philip Morris, et al., March 19, 2003, 87:22-88:8 (Category 1); 30(b)(6) Deposition of Sharon Boyse, United States v. Philip Morris, et al., October 11, 2001, 125:16-126:10.

520. Therefore, as shown here, Defendants' agreement not to compete on health claims and not to conduct biological research in-house has led Defendants to abandon development cigarettes their in-house scientists have determined to be less hazardous until such a time as less hazardous cigarettes should be used defensively.

(7) There is Substantial Evidence That Defendants Chose Not to Incorporate Feasible Designs or Product Features Found to Potentially Reduce the Exposure to or Harm from Cigarette Smoke

521. Contrary to James Bowling's 1972 public statement that because Philip Morris

SECTION IV.B.

did not “know if smoking is harmful to health,” it did not know “what ingredients to take out” of cigarette smoke, substantial evidence shows that, internally, Philip Morris (as well as other Defendants) has recognized that cigarette smoke is harmful to smokers, and has focused considerable research attention on the primary known harmful chemicals in cigarette smoke. See 500324162-4164 at 4163 (U.S. Ex. 20,627). Since at least the early 1960s, Defendants knew about the many toxic constituents in cigarette smoke, several of which were known to be animal or human carcinogens, and include the tobacco-specific nitrosamines (“TSNAs”), aldehydes, and polycyclic aromatic hydrocarbons (“PAHs”). See Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 5 (U.S. Ex. 61,180); see also, e.g., 2023193305-3328 (U.S. Ex. 20,381). Further, Defendants have at times demonstrated – internally – the scientific capability to substantially reduce or remove those harmful components. See, e.g., U.S. FPF § IV.B(4)(a), supra (discussing RJR’s multijet filter). However, for innovations that chemical or biological tests suggested could potentially reduce hazards, Defendants failed to integrate the technologies into marketed cigarettes and to meaningfully test whether such features in fact caused less disease for smokers. Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001) at 11-16 (U.S. Ex. 61,180). Such evidence rebuts Defendants’ claims that their recently developed or test-marketed cigarettes use novel technologies to reduce smokers’ exposure to these toxins, and rebuts their claimed commitment to protect smokers’ health to the greatest extent possible.

- (a) Altering or Preventing Cigarette Combustion and Nicotine Aerosols
 - (i) Philip Morris

SECTION IV.B.

522. By 1957, Philip Morris knew that reducing the burn temperature of cigarettes would decrease the levels of certain health-threatening hydrocarbons contained in smoke, and had identified potential methods of doing so, such as using catalysts; modifying the width of the cut and of the blend; controlling access of the air to burning coal; altering the cross-sectional size and shape of the cigarette; and using a non-catalytic filling material to conduct heat away from the coal and reduce its temperature. 1001935513-5548 at 5535 (U.S. Ex. 20,124). It took Philip Morris forty years to test market a product based on this principle – its electrically heated Accord.

523. By February 1972, Philip Morris research uncovered that scientists had the capability to substantially control the content of the smoke delivered to smokers by its cigarettes, and to limit the delivery of substances in the particulate phase of smoke that it acknowledged internally were “unhealthful.” In a memorandum memorializing an “Idea Disclosure for an Indirect Cigarette,” a Philip Morris scientist described a product which could use indirect heat to generate and deliver to the smoker an aerosol. The researcher stated that “[t]he particulate phase of the aerosol is generated from pure substances and its composition **is under full control; hence, it is capable of being made not only not unhealthful, but positively healthful.**” In fact, this technology was publicly known since the patents for BATCo’s Ariel product were granted in the early 1960s (although the cigarette never was marketed). Philip Morris has never actively marketed an aerosol cigarette. 2026378749-8750 (U.S. Ex. 20,425) (emphasis added); see also PM3000136418-6422 at 6420 (U.S. Ex. 61,504) (1976 Philip Morris document indicating that “we can filter out all tar”).

SECTION IV.B.

524. In late 1993, Philip Morris conducted additional research regarding this approach through its “Ideal Smoke Program,” where the objective was to “develop an aerosol delivery system for desired compounds only.” 2050742052-2053 at 2052 (U.S. Ex. 20,491); 2061945926-5928 at 5926 (U.S. Ex. 20,509; U.S. Ex. 39,403). A high-ranking scientist at INBIFO stated that among the “[d]esirable components, . . . [n]icotine and flavor components are perceived as essential.” 2023119230-9231 (U.S. Ex. 20,376).

525. By the late 1970s, Philip Morris (similar to Liggett’s XA research with palladium, discussed at U.S. FPF § IV.B(4)(b), supra) also had researched the effect of adding platinum or other platinum group metals to cigarette filters, and found that doing so significantly reduced some of the chemicals presumed to contribute to smoking-related diseases, such as aldehydes. Philip Morris also performed laboratory toxicological tests for mutagenicity or abnormal cell changes – known as Ames mutagenicity studies – on tobacco that was burned with and without the addition of platinum, and found positive differences. Philip Morris, however, has not tried to market a cigarette with platinum filters. Deposition of William Farone, United States v. Philip Morris, et al., April 3, 2002, 376-378.

526. Additionally, Philip Morris could easily inform smokers how to substantially reduce their intake of benzoapyrene (“BAP”), which has been long recognized as a carcinogen delivered by cigarette smoke, but has not done so. As early as 1958, a Philip Morris executive, Jet Lincoln, decreed that “BENZPYRENE MUST GO.” 1005038656-8658 (U.S. Ex. 22,214). And in 1997, Philip Morris Companies pledged publicly to shareholders to “look for opportunities to eliminate BAP from tobacco smoke.” 2084331906-1944 at 1933 (U.S. Ex.

SECTION IV.B.

88,034); 2065378797-8797 (U.S. Ex. 88,037) (pledging, in draft opposition to shareholder proposal, to explore ways “to reduce, and perhaps eliminate, BAP from tobacco smoke”). In fact, Philip Morris has recognized that **90 percent of the BAP delivered by a cigarette is delivered in the “lighting” puff, and that the lighting puff of a match-lit cigarette delivers 20 times more BAP than any other puff.** 2086131534-1543 (U.S. Ex. 70,846); 2072217133-7134 (U.S. Ex. 88,033). Philip Morris has also discovered that **the delivery of BAP from the lighting puff is cut by half if the smoker uses an electric lighter**, rather than a match, to light the cigarette. Yet Philip Morris has not taken the simple step of informing consumers of this or providing smokers with instructions for how to light a cigarette to minimize the disproportionate level of BAP from the lighting puff. Deposition of Hector Alonso, United States v. Philip Morris USA Inc., et al., at 155-156 (July 11, 2003); see also Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 8 (U.S. Ex. 61,180) (adequate “directions for use would instruct foreseeable users in how to use tobacco products in such a way that their risks for disease might be reduced. Providing information of this sort, however, would be inconsistent with an agreement not to compete on health issues.”).

(ii). Liggett

527. In the late 1980s, then Liggett Chief Executive Officer Bennett LeBow was aware of the company’s earlier development of XA as a potentially less hazardous cigarette. In the early 1990s, John Bunch, then a Liggett scientist and researcher,

and thereby change the composition of the smoke. In the late 1990s, Liggett began

working with the XA process again.

Bunch testified in 2002 that

Bereman confirmed

Deposition of Bennett LeBow, United States v. Philip Morris, et al., June 21, 2002, 30; Deposition of John Bunch, United States v. Philip Morris, et al., May 22, 2002, 82-83, 116-117 (Confidential); Deposition of Robert Bereman, United States v. Philip Morris, et al., April 23, 2002, 17-19 (Confidential).

528. Bereman concluded that Liggett

Indeed, when he became a research chemist and then the Vice President of Chemical Research at Vector, Bereman

Defendants' Rule 7.1/56.1 Statement of Material Facts Not in Dispute in Support of memorandum of Points and Authorities in Support of Defendants' Motion for Partial Summary Judgment on Claims that Defendants Suppressed the Development of Potentially Less Hazardous Cigarettes ¶ 54 (R.2576; Oct. 8, 2003); Deposition of Robert Bereman, United States v. Philip Morris, et al., April 23, 2002, 64-65 (Category 1), 73-77 (Category 2), 164-165.

(iii). Lorillard

529. The lack of activity at Lorillard regarding development of a less hazardous cigarette similarly reflects behavior consistent with the "Gentleman's Agreement." In the early

SECTION IV.B.

1960s, Lorillard also studied ciliastasis. Ciliastasis is a condition in which the lung's cilia, the hair-like structures lining the lung passageways that are responsible for removing foreign matter such as particulate matter from cigarette smoke, become immobilized, or static, and cease their cleansing function. Lorillard conducted significant research relating to one compound in particular, phenol methyl oxadiazole ("PMO"), as a possible solution to the problem of ciliastasis. Deposition of Christopher Coggins, United States v. Philip Morris, et al., June 27, 2002, 32-35.

530. PMO was added to cigarettes and people were asked to test the cigarettes, but they found the taste unacceptable. Rather than conduct committed research to attempt to overcome this obstacle, Lorillard abandoned research on PMOs by the end of the 1960s. Deposition of Christopher Coggins, United States v. Philip Morris, et al., June 27, 2002, 32-35.

531. Like other Defendants manufacturers, Lorillard developed a sophisticated understanding of the physics and chemistry of tobacco and tobacco smoke. For example, a November 1973 document states that "The analysis of a number of tobacco and smoke components and sever tobacco physical properties is regularly carried out in support of projects originating both within R&D and in other departments . . . These analyses include menthol, humectants, flavors, **carbon monoxide**, carbon dioxide, plasticizer, specific volume, moisture, **particle size** and others." 83250679-0693 at 0688 (emphasis added) (U.S. Ex. 55,641). This document further discussed Lorillard's intent to research and develop what it termed a "safe cigarette," and estimated – **in 1973** – that with the expenditure of a few hundred thousand dollars, "a marketable ['safe cigarette'] product should be realizable within a total time span of

five years.” 83250679-0693 at 0692 (U.S. Ex. 55,641).

532. In 1977, Lorillard set a goal to develop and sell a “zero tar” cigarette by 1980, the year that Philip Morris introduced Cambridge. In a memorandum to Research Head Alexander Spears discussing the filtration, tobacco blend, and flavorant requirements to create such a low delivery product, Lorillard’s scientist set “the probability of total success at 75 to 80 percent.” 01417692-7714 (U.S. Ex. 20,047).

533. Notwithstanding Lorillard’s steadfast adherence to the industry’s public relations position that no cigarettes were a proven cause of disease, Lorillard has long recognized explicitly that a number of chemical and biological tests are capable of providing meaningful information about whether a change to a cigarette design or component is likely to reduce the carcinogenicity, mutagenicity, or genotoxicity of cigarette smoke. A 1986 draft document titled “Cigarette Modification Project: Biological Aspects” states Lorillard’s assumptions prior to embarking on a project to conducting biological tests to evaluate potentially less hazardous products. One such assumption is: “**Our understanding of the causation of these diseases [cancer, emphysema, and cardiovascular disease] is sufficient advanced that we may reasonable target specific smoke components or classes of components for reduction.**” The document goes on to identify several different tests – including Ames mutagenicity tests, mammalian cell genotoxicity assays, and in vivo genetic toxicity screening – that would allow Lorillard to evaluate whether its products were likely to be less hazardous. 87633619-3626 (U.S. Ex. 56,267) (emphasis added).

(b) Technologies to Reduce Delivery of Carcinogenic Tobacco-Specific

Toxins

534. For the last five decades, Defendants have been aware of various techniques to significantly reduce the delivery of tobacco-specific nitrosamines (“TSNAs”) in cigarette smoke. See Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 12, 16 (U.S. Ex. 61,180) (discussing alternate methods long known to reduce nitrosamine formation or delivery). Only in the last few years have any Defendants chosen to incorporate one of these approaches in a cigarette for sale.

(i). Philip Morris

535. Philip Morris has engaged in a course of delay and never-ending research of technologies to reduce TSNAs. By 1980, Philip Morris had developed at least three different technologies for lowering the oxides of nitrogen (“denitrification”) contained in reconstituted tobacco leaf, a tobacco filler created from bits of tobacco leaf discarded during the manufacturing process. Philip Morris found each of the three methods reduced the formation of nitrosamines well beyond the method then in use, and concluded each of the three was commercially and economically feasible. However, Philip Morris did not implement any of these technologies in the years after the technology was created. Deposition of William A. Farone, United States v. Philip Morris, et al., April 2, 2002, 413-414.

536. Philip Morris secured at least three patents on various denitrification processes. The first patent was for a denitrification process using electro dialysis. 2028516499-6546 (U.S. Ex. 21,568; U.S. Ex. 37,394).

537. In April 1978, Philip Morris scientist Bernard Semp filed a patent application for

SECTION IV.B.

a second invention, a “process for dissimilatory denitrification of tobacco materials” (hereafter referred to as the “Semp process”). Philip Morris filed an amended application for the Semp process in August 1979, and in January 1986, Patent No. 4,566,469 was issued. The patent claimed an “improved process for the reduction of the nitrate content of tobacco materials via dissimilatory denitrification.” The Semp process utilized microorganisms, and **the patent acknowledged the harmful role of oxides of nitrogen, which convert to TSNAs in cigarette smoke**: “It is generally recognized that smoking products having lowered amounts of oxides of nitrogen present in smoke are desirable.” The Semp patent further stated that “[s]moking articles prepared from the treated tobacco materials deliver significantly lowered amounts of oxides of nitrogen on smoking. . . . [T]he provision of a shorter processing time for denitration is a significant economic advantage, particularly when operating on a commercial scale.” Patent No. 4,566,469; 2051804769-4776 (U.S. Ex. 22,192; U.S. Ex. 78,963).

538. In December 1980, Susan Dobberstein, a Philip Morris scientist, reviewed three different approaches that Philip Morris had to date developed to denitrify tobacco in a memorandum titled “Summary Report: Second Generation Process for Denitrification of RL [Reconstituted Tobacco Leaf].” The three methods were: (1) the microbial anaerobic fermentation process generally referred to as “naturally occurring denitrification” (“NOD”), that was the subject of the then-pending Semp application; (2) electro dialysis; and (3) an aerobic fermentation process (“NINO process”). Dobberstein compared the technologies on “product and process quality, financial comparison, and other considerations,” for purposes of assessing incorporation into the commercial manufacturing process. Dobberstein reported that:

SECTION IV.B.

- (1) the Semp anaerobic process resulted in the lowest NO [nitric oxide] yields;
- (2) **consumer tests showed all three processes to be acceptable to the internal smoking panels used by Philip Morris to measure product “subjectives”**; and
- (3) the Semp process required the greatest start-up costs – about \$100 million – but would be the second cheapest to run once implemented (\$14 million/year); while the electro dialysis process was the cheapest both in up-front investment (\$30 million) and would be the cheapest to operate (\$7 million/year).

2028516499-6546 (U.S. Ex. 21,568; U.S. Ex. 37,394) (emphasis added).

539. In 1981, Philip Morris scientist Vedpal Malik filed a patent application for a “thermophilic” process utilizing microorganisms for “reducing the levels of certain nitrogen-containing compounds in tobacco materials.” 2028596292-6292 (U.S. Ex. 23,057). This patent (“Malik patent”) issued in 1987. Like the Semp patent (which was pending when the Malik application was filed), the Malik patent stated, “It is generally recognized that reduced delivery of oxides of nitrogen in the smoke of tobacco products is desirable.” The Malik patent further stated that the process covered by the patent:

[A]fford the production of smoking products having lowered amounts of oxides of nitrogen, and perhaps other oxides, in smoking without the possible addition of non-tobacco compounds to those products in a commercially effective and economically efficient manner. They also afford the production of other tobacco products having lowered amounts of nitrates and other nitrogen-containing compounds in a similarly effective and economical manner.

Patent No. 4,685,478.

540. In 1981, Semp further improved the NOD process, which Philip Morris preferred

for its “potential for a lower cost process plus the fact that it was clearly novel compared to any of the early processes.” 2022203905-3906 (U.S. Ex. 20,355).

541. Notwithstanding Dobberstein’s 1980 conclusion that three processes were consumer-acceptable and commercially and economically feasible, and notwithstanding the 1981 development of another, cheaper NOD process, Philip Morris utilized none of these technologies to reduce the delivery of oxides of nitrogen to the smoker. Philip Morris has claimed that the NOD process was abandoned in 1984 because it did not work consistently, even though it had patent applications stating to the contrary pending before the Patent and Trademark Office. In fact, a 1983 document states that NOD “[p]roduction feasibilit[y] was demonstrated.” 2021605662-5671 (U.S. Ex. 20,351); 2050824506-4550 at 4508 (U.S. Ex. 20,493).

542. Further, Philip Morris was able to fix an odor problem with the NOD process that had presented an alleged impediment to its use. A November 14, 1983 report from a Philip Morris scientist copied to numerous Philip Morris scientists including Max Hausermann, the head of Philip Morris Research & Development, Tom Osdene, Jim Charles, Cliff Lilly, Jerry Whidby, and William Farone, reviewed a project designed to fix the problems with the NOD process caused by an odor that affected subjective qualities. Mitchell reported that “modification of the NOD process improved the subjective character of NOD RL-TC on internal panel tests” and that the scientists had demonstrated the “reproducibility of the process.” 2050817028-7043 (U.S. Ex. 22,219).

543. In the end, Philip Morris did not incorporate any of the improved methods for denitrifying reconstituted leaf. The Philip Morris’s Tobacco Technology Group (“TTG”), the

SECTION IV.B.

internal committee responsible for deciding what manufacturing processes and technologies Philip Morris entities would use worldwide, preferred as of September 1983 to “put NOD on the shelf if it [was] ok with” Philip Morris’s European affiliates, and “decided not to rush into commercializing” this process which reduced the nitrates in reconstituted leaf by 95%.

Executive Hamish Maxwell reflected the ambivalence, questioning “whether we really need to bring our NO delivery down” at all. 2000750261-0264 at 0262 (U.S. Ex. 87,567); see also 2026232862-2862 (U.S. Ex. 87,568) (describing the TTG’s mission); 2000572749-2755 (U.S. Ex. 87,569) (minutes of TTG meeting discussing denitrification processes).

544. Yet in 2000, Philip Morris appeared to recognize again the effectiveness of bacterial denitrification and to consider this method in modifying the RL process to “eliminate or reduce” the elevated nitrosation occurring during the current RL process. 2086117481-7483 at 7481 (U.S. Ex. 45,774).

545. By at least 1982, Philip Morris developed another way to reduce the oxides of nitrogen in its cigarettes – blending and preparing tobaccos that would deliver lower levels of oxides of nitrogen. Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 12 (U.S. Ex. 61,180).

546. Bright tobacco, also known as flue-cured tobacco, is one of the main tobaccos used in cigarettes sold in the United States. Bright tobacco has been traditionally cured by heating it in barns with propane heaters. Burley tobacco is the other main tobacco used. Burley tobacco, which is naturally higher in alkaloids that promote TSNA formation, is “air-cured.” See, e.g., PM3000136161-6165 at 6161 (U.S. Ex. 61,555) (describing tobacco curing methods

SECTION IV.B.

and content of “important ingredients” in various strains including sugars, nicotine, and total volatile bases). In a 1985 patent that Philip Morris submitted in 1982, Philip Morris described its discovery of a way to air-cure Bright tobacco and reduce harmful NO in smoke:

This novel tobacco, when formulated as a smoking article, such as a cigarette, and smoked, presents the aroma and taste of a blended tobacco smoking article and may be substituted in whole or in part for burley tobacco in blended tobaccos while substantially maintaining the subjective qualities of the burley tobacco and yet, as compared to the burley tobacco-containing blends, provides a reduced NO content in the smoke.

1000015245-5246 (U.S. Ex. 22,133); 511351011-1019 (U.S. Ex. 88,040) (Patent No. 4,516,590; filed November 26, 1982, issued May 14, 1985); see also 2026526349-6353 (U.S. Ex. 86,964) (Patent No. 4,607,646, submitted in Feb. 1984 and issued to Cliff Lilly on Aug. 26, 1986, claiming a method for treating bright tobacco to create a tobacco with Burley’s smoking characteristics, but without Burley’s “less desirable features”).

547. Burley tobacco is naturally much higher in alkaloids – including nicotine and TSNAs – than Bright tobacco. Thus, this invention allowing substitution of air-cured Bright tobacco for burley tobacco offered a potential advance in reducing the delivery of harmful TSNAs to smokers. However, while Philip Morris conducted a successful trial of incorporating air-cured Bright tobacco into marketed products, Philip Morris did not pursue utilization of air-cured Bright further. Deposition of William A. Farone, United States v. Philip Morris, et al., Nov. 20, 2003, 538. Further, in a deposition in this case, Philip Morris’s Vice President of Product Development and Technology, Hector Alonso, who testified that Philip Morris is searching for ways to lower the TSNAs delivered by burley tobacco, was not aware of Philip Morris’s prior successful prior research and utilization of lower TSNA air-cured Bright tobacco.

See Deposition of Hector Alonso, United States v. Philip Morris, et al., July 11, 2003, 87-89 (burley tobacco highest in TSNAs), 131-132.

548. By 1985, Philip Morris had demonstrated its ability to use tobacco blend selection to “Deliver Adequate Nicotine and Reduced TSNA [Tobacco Specific Nitrosamines].” On April 1, 1985, Philip Morris scientists Sue Tafur and Ed Lambert wrote a memo to Ted Sanders, a high-level Philip Morris scientist, which was copied to other Philip Morris scientists including Jim Charles, Robert Ferguson, Robin Kinser, and William Morgan, reporting on their experiment “to determine if it is possible to deliver adequate nicotine to MS [mainstream] smoke while reducing mainstream TSNA by using an experimental filler blended from a high alkaloid tobacco with low alkaloid and oriental tobaccos. This work was designed to provide a preliminary indication of the feasibility of the concept.” Tafur and Lambert concluded that “[t]he data presented here indicate that **the approach to delivering adequate nicotine to MS while reducing TSNA can be met by judicious blending of tobaccos.**” 2001113614-3618 (U.S. Ex. 22,216) (emphasis added).

549. Thus, notwithstanding Defendants’ scientific knowledge for the last five decades of methods to substantially reduce TSNA delivery from several different types of tobacco, including burley and reconstituted leaf, Philip Morris (and other Defendants) have failed to incorporate such technology into a nationally marketed reduced risk cigarette.

550. To the contrary, rather than incorporate reduced risk technologies into cigarettes, as recently as 2001, in response to Vector announcing its plans to market Omni, Philip Morris and BATCo lobbied Argentinian officials to prohibit cultivation of the genetically modified

tobacco that Vector says is a key component of Omni, Vector's potentially reduced exposure cigarette. Roberto Sanchez Loria, Agriculture Secretary of Tucuman, Argentina, confirms that these two companies warned him that his province "is in danger" of losing business from Defendants if it continues to plant transgenic tobacco. 524007145-7151 (U.S. Ex. 20,917).

551. In the late 1980s, Philip Morris developed and utilized a process – supercritical fluid extraction – that removed virtually all of the nicotine from cigarettes. Because nicotine is the primary alkaloid in cigarettes responsible for TSNA formation, Philip Morris repeatedly demonstrated and reported that the supercritical fluid extraction process also removed virtually all of the harmful TSNA from tobacco. Expert Report of William A. Farone, United States v. Philip Morris, et al., (R. 663; filed November 15, 2001), at 16 (U.S. Ex. 61,180). Yet when Philip Morris test-marketed the product under the brand names Next and De-Nic, it did not inform consumers that by removing nicotine, the cigarette eliminated the physiological dependence that causes the repeated inhalation of harmful cigarette smoke constituents, or that the product had a substantially reduced level of TSNA. 2023088294-8297 at 8296 (U.S. Ex. 20,375); 2022207033-7038 (U.S. Ex. 20,356).

(ii). R.J. Reynolds

552. R.J. Reynolds, Philip Morris, and Brown & Williamson all claim to have incorporated in their products, to varying degrees, Bright tobacco that has been cured by an indirect heating process that replaces the old propane flue-curing technique. The supposedly novel process hinders the formation of TSNA by preventing the chemical reactions that previously occurred between the tobacco leaf and the nitric oxide from the direct-fire propane

burners. Deposition of David Townsend, United States v. Philip Morris, et al., September 5, 2002, 741-742. According to R.J. Reynolds, a heat exchange curing method similar to that it has begun (re)using recently was previously used by farmers in the early 1970s even before direct fire was introduced. However, although R.J. Reynolds was aware of the presence of TSNAs in tobacco smoke and in tobacco leaf, R.J. Reynolds did not measure for TSNAs at the time.

Deposition of David Townsend, United States v. Philip Morris, et al., September 5, 2002, 745-755.

553. Further, as discussed at U.S. FPPF §IV.B(4)(d), supra, R.J. Reynolds knew that removal of nitrogen-containing compounds from tobacco could yield cigarette smoke lower in TSNAs. In its EW/Select product developed in the early 1990s, a product R.J. Reynolds concluded was both a potential reduced exposure product and consumer acceptable in its test market, Reynolds included a “low nitrogen” tobacco blend intended to reduce the formation and delivery of TSNAs.

554. Moreover, R.J. Reynolds is aware that higher nitrate levels can increase the level of nitrosamines and that, to some extent, the level of TSNAs can be reduced if tobacco farmers reduce their use of nitrate fertilizers. And while R.J. Reynolds has conducted some experiments finding that, to some degree, using very low levels of nitrate fertilizers can reduce nitrosamine levels without any adverse effect on “taste,” R.J. Reynolds has opted not to restrict its tobacco purchases to tobacco grown with low-nitrate fertilizer. Deposition of David Townsend, United States v. Philip Morris, et al., September 5, 2002, 733-740.

(c) Charcoal Filters

SECTION IV.B.

555. Like the idea of reduced TSNA deliveries through tobacco growing, curing, or treating methods, the sudden re-focus on charcoal filters is a decades-late attempt to utilize a technology Defendants have known to be effective for at least 45 years.

556. By 1959 at the latest, Defendants knew of the potential for filters containing charcoal or activated carbon to absorb harmful constituents of smoke, in particular from the part of cigarette smoke which remains in gaseous (as opposed to particulate) form. The February 18, 1964 report from Helmut Wakeham to Philip Morris senior management titled “Smoking and Health Significance of the Report of the Surgeon General’s Committee to Philip Morris Incorporated,” stated that “[t]he [Surgeon General’s] report gives inadequate recognition to the selective adsorption of certain gas phase components from smoke which affect pulmonary cleansing mechanisms (viz., mucus flow, cilia activity). The statement that carbon filters previously employed do not have specific power to scrub the gas phase ignores pioneer work at American Tobacco reported in Tobacco Science, Vol. 3, pp. 52-56, 1959.” 1000335612-5625 at 5618 (U.S. Ex. 22,986; U.S. Ex. 63579). Among the harmful chemicals delivered in the gas phase of cigarette smoke are the toxic aldehydes.

557. By 1964 Philip Morris had test marketed the charcoal filtered Saratoga brand, which Philip Morris scientists considered “[p]hysiologically . . . an outstanding cigarette.” 2022889778-9801 at 9793 (U.S. Ex. 85,826). Results of research Philip Morris conducted in 1969 on the biological effects of whole fresh smoke and the gas phase of cigarette smoke in unfiltered and charcoal-filtered cigarettes included the finding that carbon “effectively . . . filters . . . the biologically active components of smoke.” 1000036347-6366 at 6354 (U.S. Ex. 20,070),

SECTION IV.B.

(U.S. Ex. 35,091). Despite this early recognition of the value of charcoal or carbon filters, however, Philip Morris and the other Cigarette Company Defendants have sold very few brands that contain activated carbon or charcoal filters, and have not communicated to consumers the reduced risk nature of the cigarettes containing these technologies. For example, the only brands that Philip Morris has sold with charcoal in the filter are: one packing of one brand of Parliament (Parliament Lights 100); Lark; and Multifilter, a brand launched in 1964 as the reformulated version of the Saratoga, but is no longer sold. Trial Testimony of Jerry Whidby in Blue Cross & Blue Shield of New Jersey v. American Tobacco Co., May 2, 2001, 4877-4878.

558. Similarly, R.J. Reynolds recognized the potential benefits of a charcoal filter by 1960. However, R.J. Reynolds's sole carbon filter cigarette during that time was Tempo, which sold from the early 1960s to the early-to-mid 1970s. Deposition of David Townsend, United States v. Philip Morris, et al., July 24, 2002, 144-164.

559. In 1957, at a time when Liggett was one of the largest American cigarette manufacturers, Liggett and its outside research consultant, Arthur D. Little & Associates, showed that the hydrogen cyanide components of cigarette smoke "inhibited and, in excessive quantities destroyed, the ciliary action of the mammalian trachea." The lung's cilia function to clear the lungs of toxic substances, and A.D. Little found that cigarette smoke was paralyzing their ability to do that – hence "ciliastasis." Liggett and Little developed techniques to measure the small quantities of hydrogen cyanide in smoke and techniques for measuring the amount of inhibition, and researched methods to solve this problem. 681879254-9715 at 9485 (U.S. Ex. 21,020).

560. In 1962, Liggett concluded that using a charcoal-like granular absorbent in filters

could reduce the hydrogen cyanide delivery substantially. By 1963, Liggett developed a filter medium consisting of activated charcoal manufactured from bituminous coal, and first marketed the Lark cigarette, some line extensions of which contained a charcoal filter. 681879254-9715 at 9485 (U.S. Ex. 21,020).

561. As shown below, Defendants' claim that consumers in the United States find the taste of charcoal filters unacceptable ignores evidence that their own research demonstrated their ability to develop consumer-acceptable charcoal filter cigarettes.

562. In 1971, R.J. Reynolds undertook research to "find[] chemical additives and blends which will reduce or mask the unpleasant off-taste associated with carbon filter cigarettes." 500605911-5915 at 5911 (U.S. Ex. 48,333). The research concluded:

Fifteen additives have been found which reduce the carbon taste on all flue cured test cigarettes, but these additives were not markedly effective on the TEMPO blend. By changing the blend, however, a significant reduction in the carbon taste was achieved even without the use of additives.

These researchers identified "Valmont" as an actual R.J. Reynolds brand sold abroad that modified Tempo and substantially reduced the carbon taste for smokers. 500605911-5915 at 5914 (U.S. Ex. 48,333). Yet R.J. Reynolds did not make that change for the domestic market.

563. Also in 1971, a report to Robert Seligman, Philip Morris's Vice President of Research and Development, described the results of a weeklong taste test of charcoal and noncharcoal versions of a new cigarette brand among almost 400 smokers. Almost one-fifth of the smokers (19%) had no preference between the two models, "many smokers had trouble discriminating between the two products," and even among those expressing a preference, "the two products were preferred about equally." 1000718502-8505 (U.S. Ex. 87,571).

564. More dramatically, in April 1984 Philip Morris reported on a Public Opinion Liking (“POL”) Study, a consumer test regularly utilized by Philip Morris to evaluate potential new cigarette brands, that compared a regular Merit cigarette to one utilizing a charcoal filter. The purpose of the study was “[t]o determine consumer acceptability of Merit 85mm with charcoal filter relative to control Merit 85mm.” The POL Study Leader summarized the results:

The results, based on this sample of the control and experimental cigarettes, indicate that **the experimental cigarette [the version with the charcoal filter] was preferred and rated significantly higher on the qualitative attributes by the Merit 85mm and Merit Ultra Lights 85mm smokers. These results support previous results from a Richmond Product Placement Panel test . . . run in 1976.**

2075008054-8067 at 8054 (U.S. Ex. 87,572) (emphasis added). Thus, Philip Morris confirmed on multiple occasions – in 1971, 1976, and again in 1984 – its ability to develop consumer acceptable charcoal-filter cigarettes.

565. Despite its scientific knowledge of the role of activated charcoal, in late 1997, Philip Morris re-initiated a research project with the objective of understanding “effects of carbon filters on gas phase deliveries” and included among its continued filtration research a project to “[d]evelop model of carbon adsorption.” 2086131512-1512 (U.S. Ex. 21,933); 2086131675-1675 (U.S. Ex. 21,934). Such repetitive study of previously researched questions has characterized Philip Morris’s research. Deposition of William A. Farone, United States v. Philip Morris, et al., April 12, 2002, 135-136; see also 2086117939-7940 (U.S. Ex. 70,837).

566. Similarly, in the mid-to-late 1990s Philip Morris performed research to explore the comparative adsorbent qualities of charcoal and silica gel and potential for application in cigarettes to reduce the delivery of harmful gas phase smoke constituents like the aldehydes and

SECTION IV.B.

1-3, butadiene. See, e.g., 2086117839-7852 (U.S. Ex. 45,806) (February 1999 presentation); 2086117648-7654 (U.S. Ex. 45,779); 2086117665-7674 (U.S. Ex. 45,781); 2086118001-8004 (U.S. Ex. 45,811); 2086117951-7972 (U.S. Ex. 70,806) (draft patent application). Philip Morris's documents describing this late-1990s effort reiterated conclusions that Philip Morris scientists had articulated 25 years earlier, in 1974. See 2028631322-1339 at 1339 (U.S. Ex. 88,022).

567. In short, for 40 years Defendants have understood charcoal's potential benefits, but ignored research demonstrating feasible ways to exploit charcoal's capabilities and claimed (falsely) that charcoal-filtered cigarettes were simply unacceptable to American smokers. Thus, the three charcoal-filtered products recently developed (or in development) that Philip Morris, R.J. Reynolds, and Brown & Williamson tout as potential reduced exposure products must be viewed in this context.

568. In the late 1990s, Philip Morris undertook its SCoR program, discussed at U.S. PFFF § IV.B(6), supra, to develop a conventional looking, lit-end cigarette product that removes certain harmful constituents from the cigarette smoke. To accomplish the intended reduced deliveries, Philip Morris has included a plug-space-plug filter – activated carbon is sandwiched in the space between two “plugs” of another filter material. See Deposition of Hector Alonso, United States v. Philip Morris, et al., July 11, 2003, 74-76. In fact, this filter design was known to Philip Morris **by 1959**. 2021656217-6217 (U.S. Ex. 88,023) (1959 memorandum discussing plug-space-plug filter research). And in the late 1960s and early 1970s, Philip Morris researched precisely this plug-space-plug design utilizing charcoal. 1000320914-0914 (U.S. Ex. 88,024)

SECTION IV.B.

(March 1970 document concerning plug-space-plug filter using carbon, stating that “project is economically feasible”); 1000320619-0619 (U.S. Ex. 88,025); 2028631322-1339 (U.S. Ex. 88,022) (November 1974 report). Philip Morris has not yet marketed any SCoR product, and has repeatedly pushed back its expected date of introduction.

569. Second, Reynolds’s EW/Select product, discussed at U.S. FPPF § IV.B(4)(d), supra, has a charcoal filter as one of its central exposure-reduction components, and R.J. Reynolds has internal information that the specific filter technology is decades old. Specifically, with regard to the carbon scrubber filter technology in EW, Jones Day identified a 1973 patent for technologies very similar to two of the primary features of the EW filter, and noted that R.J. Reynolds’s application to patent the EW filter was denied because it was not deemed novel, useful and not obvious. 515873569-3776 at 3739-3742 (U.S. Ex. 85,888).

570. Third, Brown & Williamson incorporated what it considers “really a sort of almost standard off-the-shelf filter” on its Advance brand – a product that has been briefly test-marketed but which, as discussed supra, Brown & Williamson appears to be holding back for defensive purposes. See Deposition of Sharon Boyse, United States v. Philip Morris, et al., October 11, 2001, 102:19-25.

571. In short, Defendants’ suggestion that recent product development efforts disprove the United States’ claims is rebutted by substantial evidence that these “new” products in fact rely on design approaches and features long known to Defendants, and reflect technologies that Defendants have for decades chosen not to meaningfully test and exploit.

C. Adverse Health Effects of Exposure to Environmental Tobacco Smoke**(1) Exposure to Secondhand Smoke Causes Disease and Death**

572. Environmental tobacco smoke ("ETS"), also called secondhand smoke, is a mixture of mostly sidestream smoke given off by the smoldering cigarette and some exhaled mainstream smoke, which is the smoke an active smoker exhales. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al. (R. 666; filed November 15, 2001) (U.S. Ex. 77,223).
573. Evidence of the health risks of ETS on passive smokers comes from epidemiological studies, which have directly assessed the associations of ETS exposure with disease outcomes, and also from knowledge of the components of ETS and their toxicities. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., (R. 666; filed November 15, 2001) (U.S. Ex. 77,223).
574. Conclusions about the causal relationship between ETS exposure and health outcomes are based not only on epidemiological evidence, but also on the extensive evidence derived from epidemiological and toxicological investigation of active smoking. Additionally, studies using biomarkers of exposure and dose, including the nicotine metabolite cotinine and white cell adducts, document the absorption of ETS by exposed nonsmokers, adding confirmatory evidence to the observed associations of ETS with adverse effects. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al. (R. 666; filed November 15, 2001) (U.S. Ex. 77,223).

SECTION IV.C.

575. ETS exposure of infants and children has adverse effects on respiratory health, including increased risk for severe lower respiratory infections, middle ear disease (otitis media), chronic respiratory symptoms and asthma, as well as a reduction in the rate of lung function growth during childhood, and causes sudden infant death syndrome and cognitive and behavioral disorders. Expert Report of Michael Weitzman, United States v. Philip Morris, et al. (R. 670; filed November 15, 2001) (U.S. Ex. 77,225); Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al. (R. 666; filed November 15, 2001) (U.S. Ex. 77,223).
576. In adults, ETS exposure causes lung cancer and ischemic heart disease. ETS exposure causes two to three percent of all lung cancer cases. In 1986, the Surgeon General and the National Research Council of the National Academy of Sciences concluded that passive smoking causally increases the risk of lung cancer in nonsmokers. Expert Report of Paul A. Bunn, Jr., United States v. Philip Morris, et al. (R. 669; filed November 15, 2001) (U.S. Ex. 87,321); Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al. (R. 666; filed November 15, 2001) (U.S. Ex. 77,223); A.K. Hackshaw, M.R. Law, & N.J. Wald, The accumulated evidence on lung cancer and environmental tobacco smoke, Br Med J., 315: 980-988 (1997) (U.S. Ex. 28,430); R. Taylor, R. Cumming, A. Woodward, & M. Black, Passive smoking and lung cancer: a cumulative meta-analysis, Aust. N.Z.J. Public Health, 25: 203-211 (2001) (U.S. Ex. 77,136).
577. Evidence also links ETS to exacerbation of asthma, reduced lung function, and

respiratory symptoms. Expert Report of Jonathan M. Samet, United States v. Philip Morris, et al., (R. 666; filed November 15, 2001) (U.S. Ex. 77,223).

578. Although Defendants publicly dispute the harmfulness of ETS, they have recognized the expertise and conservatism of the conclusions by United States' expert Jonathan Samet regarding passive smoke in an internal document that was written in or about August 1994:

Dr. Samet is highly respected by his professional constituency. His scientific/medical capabilities appear to be quite sophisticated and are recognized as such by the professional societies with which he is affiliated. . . . This is probably due at least in part to his scientific conservatism regarding inference and interpretations from limited information; in most instances, Dr. Samet carefully assesses the available information prior to drawing general conclusions. . . . He seems to be a believer in the 'weight-of-the-evidence' approach and, usually, does not form conclusive opinions until the available data are sufficiently consistent and of high enough quality to warrant such opinions.

2050987891-7898 at 7891 (U.S. Ex. 76,214). See also 2081784567-4574 (U.S. Ex. 88,567).

579. The issue of the harms of exposure to secondhand smoke began to receive public attention in the 1960s. A 1967 editorial by *Science* magazine's powerful editor, Philip Abelson, characterized indoor air pollution from secondhand tobacco smoke as a "toxic hazard," containing agents such as carbon monoxide, nitrogen dioxide, carcinogenic benzpyrene, and hydrogen cyanide. Abelson further explained the dangers: "In a poorly ventilated, smoke filled room, concentrations of carbon monoxide can easily reach several hundred parts per million, thus exposing smokers and nonsmokers present to a toxic hazard." Philip H. Abelson, A Damaging Source of Air Pollution, 158 *Science* 1527 (1967) (U.S. Ex. 86,748). Harold Diehl's popular

1969 account of scientific findings, *Tobacco and Your Health*, similarly castigated second-hand smoke as a source of pollution and a threat to non-smokers. Harold, Diehl, Tobacco & Your Health: The Smoking Controversy 52-54 (1969), VXA2640170-0313 (U.S. Ex. 63,422).

580. In 1971, U.S. Surgeon General Jesse Steinfeld called for a nonsmoker's "Bill of Rights," arguing that smoking should be banned in restaurants, theaters, airplanes, buses, and other public spaces. Reporting on Steinfeld's remarks, *Newsweek* asked whether there would be a ban on public smoking. A Ban on Public Smoking?, *Newsweek*, January 25, 1971, at 90-91 (U.S. Ex. 86,749). That same year, the Interstate Commerce Commission mandated separate (and confined) smoking sections on all interstate buses.

581. In 1972, the activist John Banzhaf, founder of "Action on Smoking and Health," used an article in *Today's Health* to call on smokers to "Please Put Your Cigarette Out; the Smoke is Killing Me!" John Banzhaf III, Please Put Your Cigarette Out; the Smoke is Killing Me!, *Today's Health*, April 1972, at 39-40 (U.S. Ex. 86,750). Surgeon General Steinfeld's Report that year pointed out that carbon monoxide levels in smoke-filled rooms could "equal and at times exceed the legal limits for maximum air pollution permitted for ambient air quality." U.S. General, U.S. Dept. of Health, Education, and Welfare, The Health Consequences of Smoking, (1972) (U.S. Ex. 60,597). In 1973, new federal guidelines made nonsmoking sections in airplanes mandatory.

582. Several of the earlier studies during the 1960s had focused on allergic and toxic substances in sidestream smoke – notably particulates in the form of soot and ash, but also carbon monoxide, nitrogen oxides, and other noxious/poisonous gases. A 1967 study by Milan

SECTION IV.C.

Srch of the Forensic Medical Institute of Karls University in Hradec Kralove, for example, examined the physiological impact of riding in a closed car with smokers and found significantly elevated levels of carbon monoxide in the blood of the non-smokers. Milan Srch, Ueber die Bedeutung des Kohlenoxyds beim Zigarettenrauchen im Personenkraftwageninnern, 60 Deutsche Zeitschrift für die gesamte gerichtliche Medizin, 87 (1967). 1000278778-8787 (U.S. Ex. 86,751). Srch stressed the decisive impact of tobacco smoke on CO levels in closed spaces, pointing to the need for ventilation as a remedy in most cases. A slightly different methodology was used in a 1973 experiment by the U.S. Department of Transportation, which measured the ambient carbon monoxide in a bus where every other seat had a smoker (twenty-five cigarettes), compared to a situation where smoking was allowed only in the rear 20% of the bus (five cigarettes). At the driver's seat, carbon monoxide levels rose to thirty-three parts per million in the unrestricted situation, compared to only eighteen parts per million in the "smoking only in the back of the bus" situation. H. E. Seiff, U.S. Dept. of Transportation, Carbon Monoxide as an Indicator of Cigarette-Caused Air Pollution Levels in Intercity Buses, (1973) (U.S. Ex. 86,752). Prolonged exposures to low levels of carbon monoxide had already been implicated in heart disease (angina pectoris) by this time. T. L. Kurt et al., Association of the Frequency of Acute Cardiorespiratory Complaints with Ambient Levels of Carbon Monoxide, 74 Chest 10-14 (1978) (U.S. Ex. 87,322); W. S. Aronow et al., Effect of Freeway Travel on Angina Pectoris, 79 Annals of Internal Medicine, 392-95 (1972) (U.S. Ex. 87,324); L. H. Kuller et al., Carbon Monoxide and Heart Attacks, 30 Archives of Environmental Health, 477-82 (1975), 100279086-9091 (U.S. Ex.88,568).

583. More generally, scientific studies documenting the health hazards of secondhand smoke increased in both quality and quantity in the 1970s and the concerns of earlier scholars were shown to be justified. In 1970 and 1971, Hans-Peter Harke found that nonsmoking waitresses working in smoky taverns inhaled the nicotine equivalent of about one cigarette per hour. Hans-Peter Harke, Zum Problem des Passiv-Rauchens, 51 *Münchener Medizinische Wochenschrift*, 2328-34 (1970) (U.S. Ex. 86,753). Other studies further analyzed the chemical composition of environmental tobacco smoke. Ulrich Hoegg's study of 1972, for example, is only one of about thirty at this time exploring the concentration of carbon monoxide in closed, smoke-filled environments; such studies were important technically, contributing as they did to efforts to find a common standard for measuring sidestream smoke concentrations.

584. Hoegg distinguished between "glowstream" smoke from the burning end of the cigarette emitted during puffs, "smoulder stream" from the mouth end of the cigarette, and "sidestream" smoke from the burning end emitted while puffing, each of which had properties differing to various degrees from those of the "mainstream" smoke inhaled by the smoker. The sidestream smoke released by a single cigarette, for example, was found to contain a concentration of carbon monoxide nearly five times as great as that derived from the mainstream smoke inhaled by the smoker. Ulrich R. Hoegg, Cigarette Smoke in Closed Spaces, 2 *Environmental Health Perspectives*, 117-28 (1972) (U.S. Ex. 86,754). Drawing from previous studies, Hoegg noted that "the pollution of closed spaces by cigarette smoke possibly contributes to such otherwise unexplained phenomena as lung cancer in nonsmokers." Id. at 117 (U.S. Ex.

86,754).

585. During the 1970s, Peterson and Stewart stressed the qualitative similarities of mainstream and sidestream smoke with regard to the intake of carbon monoxide, while Russell et al. and Cuddeback et al. further scored the high levels of toxic carbon monoxide in sidestream smoke. Jack. E. Peterson and Richard D. Stewart, Absorption and Elimination of Carbon Monoxide by Inactive Young Men, 21 Archives of Environmental Health, 165-71 (1970) (U.S. Ex. 86,755); Michael A. H. Russell et al., Absorption by Non-Smokers of Carbon Monoxide From Room Air Polluted by Tobacco Smoke, 803 Lancet 576-79 (1973), 2015043587-3590 (U.S. Ex. 88,569); John Cuddeback et al., Occupational Aspects of Passive Smoking, 37 American Industrial Hygiene Association Journal 263-67 (1976) (U.S. Ex. 86,757). Russell and his colleagues measured carbon monoxide concentrations in the blood of patients subjected to high ambient smoke levels and found that the amount absorbed by a non-smoker from passive smoking "was about the same as would be expected if they had actively smoked and inhaled one cigarette." Michael A. H. Russell et al., Absorption by Non-Smokers of Carbon Monoxide From Room Air Polluted by Tobacco Smoke, 803 Lancet, 576-79 at 576 (1973), 2015043587-3590 (U.S. Ex. 88,569). Their conclusion: "in addition to discomfort, occasional allergic reactions, and nasal and conjunctival irritation, a small but real health risk is another potential consequence of passive smoking." Id. at 579.

586. In 1974, Ferdinand Schmidt, publishing in one of Germany's leading medical journals, concluded that environmental tobacco smoke was an occupational hazard, given the levels of toxic substances in many workplace environments. Ferdinand Schmidt, Tabakrauch als

wichtigste Luftverschmutzung in Innenräumen und als pathogene Noxe für Passivraucher, 25 *Medizinische Welt*, 1824 (1974) (U.S. Ex. 86,758). Two years later in the United States, Cuddeback et al. also concluded that "passive smoke inhalation from cigarette effluents" should be considered "an occupational hazard." John Cuddeback et al., Occupational Aspects of Passive Smoking, 37 *American Industrial Hygiene Association Journal*, 263-67 at 266 (1976) (U.S. Ex. 86,757).

587. In 1980, following the lead of earlier researchers, James Repace and Alfred Lowrey of the United States Environmental Protection Agency and the United States Naval Research Laboratory respectively conducted measurements of soot, ash, and other particulates in the air of bars and other places where indoor air was dirtied by tobacco smoke, concluding that "indoor air pollution from tobacco smoke presents a serious risk to the health of non-smokers." James L. Repace and Alfred H. Lowrey, Indoor Air Pollution, Tobacco Smoke, and Public Health, 208 *Science*, 471 (1980) (U.S. Ex. 86,759). James White and Herman Froeb in the *New England Journal of Medicine* that same year found that nonsmokers working in smoky environments tend to have pulmonary functions similar to light smokers. White and Froeb calculated that in consequence of long-term lung (small-airways) dysfunction, nonsmokers working in a smoky environment had about the same risk of impairment as smokers who inhaled "between one and 10 cigarettes per day." James R. White and Herman F. Froeb, Small-Airways Dysfunction in Nonsmokers Chronically Exposed to Tobacco Smoke, 302 *New England Journal of Medicine*, 723 (1980) (U.S. Ex. 87,325).

588. Studies of the late 1970s and early 1980s centered around lung cancer and heart

disease. Earlier studies had noted the presence of benzpyrene in sidestream smoke; now, there was increasing attention given to nitrosamines, a family of carcinogens already coming under scrutiny for their presence in smoked and nitrate-cured meats. Studies by Klaus Brunnemann et al. in 1977 and in 1978, for example, showed the presence of volatile n-nitrosamines in sidestream smoke "in far greater concentrations" even than in mainstream smoke (e.g., up to twenty-fold higher for dimethylnitrosamines). Brunnemann, K.D., L. Yu, and D. Hoffmann, Assessment of Carcinogenic Volatile N-Nitrosamines in Tobacco and in Mainstream and Sidestream Smoke from Cigarettes, 37 Cancer Res. Vol. 3218-222 (1977), 2021621170-1174 (U.S. Ex.88,570); Brunnemann, K.D. and D. Hoffman, Chemical Studies on Tobacco Smoke LIX. Analysis of Volatile Nitrosamines in Tobacco Smoke and Polluted Indoor Environments, IARC Sci. Publ. Vol. 70, Pt. 2, No. 19, at 343-356 (1978), 2024833807-3819 (U.S. Ex. 88,571).

589. The results of two major epidemiological investigations were released in 1981. First, Takeshi Hirayama, Chief of Epidemiology at Tokyo's prestigious National Cancer Centre Research Institute, published a study showing a significant correlation between lung cancer and ETS based on his epidemiological studies of 91,540 nonsmoking Japanese women living in households with a smoking husband over nearly fifteen years. Hirayama showed that wives of heavy smokers had "a higher risk of developing lung cancer" and that "the effect of passive smoking was most striking in younger couples in agricultural families (ruling out the complication of urban air pollution), relative risk reaching 4.6, probably because of the lesser extent of the exposure to passive smoking outside the family in the case of rural residents."

Takeshi Hirayama, Non-Smoking Wives of Heavy Smokers Have a Higher Risk of Lung-Cancer:

A Study From Japan, 282 *British Medical Journal*, 183-85 (1981) (U.S. Ex. 22,963); see also Elisa Ong and Stanton A. Glantz, Hirayama's Work Has Stood the Test of Time, 78 *Bulletin of the World Health Organization*, 938-40 (2000) (U.S. Ex. 87,326).

590. Second, Dimitrios Trichopoulos, working with colleagues from the University of Athens School of Medicine and Harvard's School of Public Health, published a case-control epidemiologic study of fifty-one Greek women suffering from lung cancer (plus control groups) in the *International Journal of Cancer*, finding that the non-smoking wives of heavy smokers had elevated lung cancer risks. Dimitrios Trichopoulos et al., Lung Cancer and Passive Smoking, 27 *International Journal of Cancer*, 1-4 (1981) (U.S. Ex. 50,615). Trichopoulos, like Hirayama, found that lung cancer was about twice as common among nonsmoking women whose husbands smoke as among nonsmoking women whose husbands did not smoke.

591. Studies confirming the original Hirayama/Trichopoulos findings accumulated in the 1980s. See, e.g., Correa et al., Passive Smoking and Lung Cancer, 2 *Lancet* 595-97 (1983) (U.S. Ex. 87,327); Gus H. Miller, Cancer, Passive Smoking and Nonemployed and Employed Wives, 140 *Western Journal of Medicine* 632-35 (1984), 2505522186-2190 (U.S. Ex.88,572). These new studies strengthened the case that involuntary smoking was linked to lung cancer in nonsmokers. In 1985, James Repace and Alfred Lowrey calculated that about 5,000 nonsmokers die of lung cancer every year in the United States, based on average exposures of 0-14 mg tar per day, and an assumption of five lung cancer deaths per 100,000 persons exposed per milligram of daily tar exposure (derived from the better-known "mainstream smoke" dose-response relations and the observation of no thresholds). James Repace and Alfred Lowrey, A quantitative estimate

of nonsmokers' lung cancer risk from passive smoking, 11 Environ Int 3-22 (1985), 2502237574-7593 (U.S. Ex. 88,573).

592. The 1986 Surgeon General's Report specifically examined the health consequences of exposure to ETS. The Surgeon General explained:

The current Report, The Health Consequences of Involuntary Smoking, examines the evidence that even the lower exposure to smoke received by the nonsmoker carries with it a health risk. Use of the term "involuntary smoking" denotes that for many nonsmokers, exposure to ETS is the result of an unavoidable consequence of being in proximity to smokers. It is the first Report in the health consequences of smoking series to establish a health risk due to tobacco smoke exposure for individuals other than the smoker, and represents the work of more than 60 distinguished physicians and scientists, both in this country and abroad. After careful examination of the available evidence, the following overall conclusions can be reached:

1. Involuntary smoking is a cause of disease, including lung cancer, in healthy nonsmokers.
2. The children of parents who smoke, compared with the children of nonsmoking parents, have an increased frequency of respiratory infections, increased respiratory symptoms, and slightly smaller rates of increase in lung function as the lung matures.
3. Simple separation of smokers and nonsmokers within the same air space may reduce, but does not eliminate, exposure of nonsmokers to environmental tobacco smoke.

VXA2110670-1053 (U.S. Ex. 63,709).

593. Since the 1986 Surgeon General's Report, reviews and assessments of the science

SECTION IV.C.

on ETS conducted by other public health authorities have recognized this scientific consensus and consistently concluded that ETS causes disease. See, e.g., 2085579835-9871 (U.S. Ex. 22,135) (U.S. Environmental Protection Agency, Respiratory Health Effects of Passive Smoking: Lung Cancer and Other Disorders (1992)); 2065192422-2615 (U.S. Ex. 22,092) (Australian National Health and Medical Research Council, The Health Effects of Passive Smoking (1997)); 521550532-0586 (U.S. Ex. 22,093) (California Environmental Protection Agency, Health Effects of Exposure to Environmental Tobacco Smoke (1997)); 2072208812-8948 (U.S. Ex. 24,591) (Scientific Committee on Tobacco and Health of the United Kingdom, Report of the Scientific Committee on Tobacco and Health (1998)). More recently, in 2001, the United States National Toxicology Program in its *Ninth Report on Carcinogens* stated:

Environmental tobacco smoke (ETS) is known to be a human carcinogen based on sufficient evidence of carcinogenicity from studies in humans that indicate a causal relationship between passive exposure to tobacco smoke and human lung cancer. Studies also support an association of ETS with cancers of the nasal sinus.

TLT0680107-0142 (U.S. Ex. 65,180) (citations omitted) (emphasis in original). In June 2002, the International Agency for Research on Cancer of the World Health Organization recently released *IARC Monographs (Vol. 83) Tobacco Smoke and Involuntary Smoking*, the product of a scientific working group of twenty-nine experts from twelve countries which "reviewed all significant published evidence related to tobacco smoking and cancer, both active and involuntary," concluded that "[n]onsmokers are exposed to the same carcinogens as active smokers. (U.S. Ex. 86,807). Even the typical levels of passive exposure have been shown to cause lung cancer among never smokers. Second-hand tobacco smoke IS carcinogenic to

humans." VXA3090024-0025 (U.S. Ex. 60,680).

594. Many other organizations have likewise concluded that ETS causes disease in nonsmokers, including the American Cancer Society, the American Medical Association, the American Heart Association, the American Lung Association and the American Academy of Pediatrics. American Cancer Society, Cancer Facts & Figures 2002, at 31 (2002) (U.S. Ex. 86,715); American Medical Association, AMA House of Delegates, Environmental Tobacco Smoke (ETS), House Policy H-490.936 (established 1994; reaffirmed 1999, 2000) (U.S. Ex. 86,714); American Heart Association, 2003 Heart and Stroke Statistical Update 1, 21-22 (2002) (U.S. Ex. 86,716); American Lung Association, Fact Sheet: Secondhand Smoke (September 2000) (U.S. Ex. 86,717); American Academy of Pediatrics, Tobacco's Toll: Implications for the Pediatrician, 107 Pediatrics 794 (April 2001) (U.S. Ex. 63,833). See also Minutes, Board of Health for the Northwestern Unit, Dryden, Ontario, July 4, 2002, at 2 (U.S. Ex. 86,718) ("There is a remarkable and unusual scientific consensus that exposure to environmental tobacco smoke is a known cause of many diseases and that there is no safe level of exposure.").

(2) **Echoing Promises Made in the Frank Statement, Defendants Told the Public They Would Seek Answers to the Harms Associated with Exposure to Secondhand Smoke**

595. Defendants responded to the scientific evidence showing that exposure to secondhand smoke is a cause of lung cancer and other diseases in exactly the same manner in which they responded to the landmark epidemiological studies of the 1940s and 1950s concerning active smoking – by falsely promising publicly that they would conduct and support independent research into smoking and health issues, including the adverse health effects of ETS.

596. For instance, in 1982, one ad campaign asked "Does Cigarette Smoke Endanger Nonsmokers?" and "What Happens to Cigarette Smoke in the Air?" Defendants' response promised: "Like you, we seek answers. The tobacco industry has committed more funds for independent research on smoking and health than any non-governmental group. . . . The researchers we fund are encouraged to publish whatever they find. Whatever the outcome." TI04591849-1855 at 1853 (U.S. Ex. 22,028). Throughout the fall of 1983, these advertisements ran in the following publications: Washington Post, Time, New Republic, Wall Street Journal, US News & World Report, Sports Illustrated, National Review, Commentary, National Journal and Editor & Publisher, Progressive Farmer, Flue-Cured Tobacco Farmer, Kentucky Farmer, US Tobacco Journal, Tobacco International, Tobacco Reporter, Vending Times, Convenience Store Merchandiser and Supermarket News. 93852854-2869 at 2856 (U.S. Ex. 88,574).

597. Similarly, a 1984 R.J. Reynolds ETS advertisement in the *New York Times* promised to fund and support "independent" and "arms length" research. 504100135-0136 (U.S. Ex. 20,726).

598. And in 1987, continuing to reaffirm false promises initially made in the Frank Statement and adopted in the ETS arena more than three decades later, a Tobacco Institute brochure stated: "The tobacco industry is therefore devoting substantial resources to the investigation of indoor air quality generally and to the ways in which particular constituents of indoor air – including tobacco smoke – may affect human health." 2025364951-5007 at 4954 (U.S. Ex. 22,173).

599. In 1988, the Tobacco Institute issued a report stating that the "tobacco industry is therefore devoting substantial resources to the investigation of indoor air quality generally and to the ways in which particular constituents of indoor air - including tobacco smoke - may affect human health." 202101144-0201 at 0148 (U.S. Ex. 88,575).

600. These public promises, however, were false and fraudulent. Defendants' true goal with respect to passive smoking was not to support independent and valid research in order to answer questions about the link between ETS and disease, but rather the goal was simply "to keep the controversy alive." 206371182-1187 at 1182 (U.S. Ex. 88,576); see also 2021181803A-1812 at 1803 (U.S. Ex. 22,155) (U.S. Ex. 25,697) (noting specific ETS goals to include "maintain the controversy").

(3) Internally, Defendants Recognized the Connection Between Passive Exposure and Disease

601. Internally, however, Defendants recognized that secondhand smoke contained high concentrations of carcinogens and other harmful agents. Defendants recognized that the research showing that passive exposure caused disease was persuasive evidence of the harmful effects of exposure to secondhand smoke.

602. In the early 1980s, for instance, Philip Morris scientists reviewed the evidence showing that nonsmokers exposed to ETS suffer significant damage to their health and found such conclusions to be credible. A Philip Morris department head wrote: "I have reviewed the above paper [by James R. White, Ph.D. and Herman Froeb, M.D., concluding that nonsmokers exposed to secondhand smoke suffer significant damage to airway function] and find it to be an excellent piece of work which could be very damaging to our business." In response, Philip

SECTION IV.C.

Morris did not acknowledge the danger its cigarette products posed to nonsmokers, nor did it seek to conduct research similar to that undertaken by White and Froeb. Instead, it began to baldly and falsely deny the validity of the research results. Philip Morris also considered contacting Dr. Gary Huber to see whether he, as a "recognized medical authority," might be willing to publicly refute the paper's findings for them in a medical or scientific journal.

2024299572-9575 (U.S. Ex. 20,401); 1002641904-1907 (U.S. Ex. 22,933).

603. Philip Morris had recognized the dangers in ETS exposure long before the 1980s. In 1961, Helmut Wakeham, a Philip Morris scientist, drafted a paper cataloguing known gas and particulate chemicals in cigarette smoke, including those that Philip Morris viewed as carcinogens, identified 84% of the 400 then-identified chemicals in sidestream smoke, a large component of ETS. 2024947172-7196 (U.S. Ex. 22,891).

604. Philip Morris confirmed Wakeham's findings in a 1984 study conducted overseas at its research facility in Neuchatel, Switzerland. In a report, "Quantitative Evaluation of Cigarette Sidestream Smoke Components Under Controlled Experimental Conditions," Philip Morris summarized its detailed testing of the quantities of harmful chemicals generated by sidestream smoke in ambient air. Philip Morris did not only find that harmful constituents, including carcinogens, were generated, but it found their concentrations in the air to be directly related to the number of cigarettes smoked and, further, found that concentrations did not decay over a time period of an hour after cigarettes were extinguished. 2029269056-9126 (U.S. Ex. 20,432).

605. Brown & Williamson also specifically recognized the harms of ETS exposure.

On November 16, 1982, the company conceded internally that "the overwhelming weight of scientific literature point[s] toward toxicity" in ETS. 680546750-6752 (U.S. Ex. 21,001).

606. The tobacco industry would not support scientific studies concerning ETS that it feared would further reinforce the growing scientific recognition that ETS was harmful to nonsmokers. 508793116-3129 (U.S. Ex. 88,577).

607. Liggett recently admitted that ETS exposure causes disease. The chief chemist at Vector Tobacco, a Liggett corporate affiliate, testified in this case that ETS causes lung cancer in nonsmokers. Deposition of Robert Bereman, United States v. Philip Morris, et al., April 23, 2002, 28:15-29:5.

608. On July 6, 1994, the Majority Staff, Health and the Environment Subcommittee of the Committee on Energy and Commerce in the United States of Representatives sent each member of the Science Advisory Board of the Center for Indoor Air Research ("CIAR") a survey on the health effects of ETS. Six of the seven Board members agreed that ETS "presents a serious and substantial public health threat to children" and five of the seven members agreed that ETS is "a human lung carcinogen." The Committee found that these answers contradicted Defendants' public position that ETS is not a health threat to nonsmokers. 2044436543-6544 (U.S. Ex. 21,991).

(4) Defendants Viewed the Evidence of the Health Effects of Exposure to Secondhand Smoke as a Threat to the Social Acceptability of Smoking

609. In September 1986, William Kloepfer, Senior Vice President of Tobacco Institute Public Relations, acknowledged that ETS "is our biggest public/political issue and deserves top-level navigation." TII0191292-1293 (U.S. Ex. 62,270).

SECTION IV.C.

610. R.J. Reynolds established a project in the late 1970s entitled "Studies on the Social Aspects of Smoking" to reverse the steadily unfavorable trend toward decreasing social acceptability of smoking. The company tried to mobilize Defendants "aggressively" under R.J. Reynolds's leadership and structured the Tobacco Institute to engage in a "pre-emptive strike" on ETS. R.J. Reynolds conceded that "no counter-strategy can succeed unless we can refute the [ETS] causation theory." 500008899-8964A (U.S. Ex. 20,609).

611. In the early 1980s, the health effects of exposure to ETS had become a major threat to cigarette company profits and an important catalyst in attempts to regulate tobacco use. In a letter dated June 29, 1982, from E.A. Horrigan, Jr., Chief Executive Officer of R.J. Reynolds, to Robert Ave, Executive Vice President of Lorillard, Horrigan conceded that "[w]e all know that probably the biggest threat to our industry is the issue of passive smoking." 93443843-3843 (U.S. Ex. 32,289).

612. According to William Kloepfer, Senior Vice President of Public Relations of the Tobacco Institute, the Tobacco Institute had "shifted into high gear on the ETS issue" in 1984 by supporting ETS research and researchers likely to be favorable to the industry, ensuring publicity for research they hoped would perpetuate the idea of an ETS controversy, and using those researchers to testify at public hearings and scientific conferences: "It's been two years since we shifted into 'high gear' on the ETS issue, with PR 'issue management,' ETSAG (Hoel committee) research activity and IAPAG (Schwartz group) testimony." TI10191292-1293 (U.S. Ex. 62,270); 401033603-3603 (U.S. Ex. 88,578). Defendants recognized that evidence of the dangers of ETS would result in a decline in the social acceptability of smoking, which would prompt public

smoking restrictions and ultimately a substantial decline in sales.

613. Despite growing recognition that ETS is harmful to nonsmokers, Defendants undertook concerted deceptive action to forestall and undermine any public perception of risk by smokers and nonsmokers because, as early as 1974, such a perception was seen as a "movement could lead to the virtual elimination of cigarette smoking." TIMN0067732-7755 at 7734 (U.S. Ex. 22,047).

614. On January 31, 1974, at the 1974 Tobacco Institute's annual meeting in New York, Horace Kornegay, Tobacco Institute President, recounted the opening of official hostilities between the industry and the Federal Government ten years earlier over the 1964 Surgeon General's report. Kornegay then switched to the threat from research into passive smoking and stated:

our opponents are seeking a new strategic handle This time they will start trying to protect people from the smokers. Our efforts at the Tobacco Institute, with your support, will be to frustrate them. It is in this context that I hope you will view my report of what we have done this year. At the executive committee meeting in November we called attention to one aspect of the new agenda: . . . the successful efforts made in 1973 to prohibit smoking in public places. We illustrated the potential impact on sales and warned that the movement could lead to the virtual elimination of cigarette smoking.

TIMN0067732-7755 at 7734 (U.S. Ex. 22,047).

615. Two years later, in June 1976, BAT Industries/BATCo held a Chairman's Advisory Conference, in Hot Springs, Virginia. These conferences were attended by the Board and Chief Executives of the major overseas subsidiaries and other affiliates. 110069831-9831 (U.S. Ex. 88,579). At this conference, there was agreement that the social unacceptability issue

SECTION IV.C.

surrounding second hand smoke "constitutes 'a more serious threat to the industry's future than any other aspect of the attack on smoking.'" 2025025481-5494 at 5481 (U.S. Ex. 37,220); see also 680040485-0502 at 0489 (U.S. Ex. 25,437) (official notes of the conference) ("It had been estimated that the issue of passive smoking had already lost the industry cigarette sales of 1,000 million a year."); 2025025457-5460 at 5457 (U.S. Ex. 75,152) (R. Haddon); 2025025510-5512 (U.S. Ex. 37,221) (official notes of the Tobacco Advisory Counsel). Defendants BATCo and B&W had executives in attendance. C.I. McCarty, a Brown & Williamson Executive Vice President, member of its Board of Directors, and a member of the Tobacco Institute's Executive Committee, spoke to the conference about the situation in the United States relating legislative efforts on smoking restrictions. 680040485-0502 at 0490 (U.S. Ex. 25,437); 110069862-9862 (U.S. Ex. 88,580); 110069857-9857 (U.S. Ex. 88,581). In preparation for the 1976 BATCo Chairman's Conference, T.J.N. Foley, a former BATCo chairman, who later became a director of BAT's Australian subsidiary, provided comments on the draft agenda regarding social unacceptability of smoking: "The subject is inseparably linked with passive smoking and presents a major danger and challenge to the industry . . . the challenge lies in the industry's need to devise a counter-campaign . . . part of the industry's answer surely is to work towards making passive smoking the conflict issue." 110069863-9866 at 9863-9864 (US Ex. 34,951).

616. In 1978, the Roper Organization advised the industry that the passive smoking issue was:

the most dangerous development to the viability of the tobacco industry that has yet occurred. While there is little sentiment for an out-right ban on smoking in public gathering places, there is already a majority sentiment for providing separate facilities for

smokers and non-smokers. As the anti-smoking forces succeed in their efforts to convince non-smokers that their health is at stake too, the pressure for segregating facilities will change from a ripple to a tide as we see it.

TITX0000963-1015 at 0968 (U.S. Ex. 88,582).

617. In January 1980, Frank Colby, an R.J. Reynolds scientist, wrote in a draft memorandum addressing the activities of the Hoel Committee and recommending additional research and public relations efforts that the "'public smoking' activities of the anti-smoking forces do not only tarnish the 'image' of the industry, but they also represent a very substantive threat to sales. A cigarette which a smoker is prevented from smoking because of restrictions to smoke in public areas, is a cigarette not smoked, because, by and large, the smoker will not smoke that cigarette once he returns home." 502668016-8018 at 8018, RJR0023847-3849 at 3849 (U.S. Ex. 75,399).

618. On June 26, 1987, and throughout the 1990's, Philip Morris continued to stress the link between second hand smoke and cigarette sales: "a . . . multiple warhead . . . system that targets a specific audiences with specific messages and tactics [including] . . . longer term science work to address the health issue" raised by second hand smoke, it was recognized that "[t]he situation cannot get any worse. Sales are down, [and the decline] can't be attributed to taxes or price increases." 2021502671-2678 at 2671, 2678 (U.S. Ex. 22,950), (U.S. Ex. 75,076); 2021502135-2142 (U.S. Ex. 22,275); see also 2026226012-6021 at 6012 (U.S. Ex. 88,583) (an undated report from the 1990's stated "Without a doubt, the social acceptability of smoking practices is the most critical issue that our industry is facing today. . . . The consequences of any decrease in social acceptability are extremely important because of their direct effect on the total

volume of sales . . . "); 2041183751-3790 at 3752 (U.S. Ex. 37,924) (July 1994 document stated: "The achievement of universal accommodation [between smokers and non-smokers] . . . is imperative because the rights of smokers to smoke where they work, play – and even where they live – is under attack as it has never been before. The immediate implications for our business are clear: if our consumers have fewer opportunities to enjoy our products, they will use them less frequently and the result will be an adverse impact on our bottom line.").

619. Indeed, the actual impact of smoking restrictions on cigarette sales was known to be so substantial that by January 1992, Philip Morris USA was measuring past impacts on sales and modeling the future sales impact of only the possible workplace smoking restrictions resulting from public concerns about the significant health impacts of second hand smoke on non-smokers. "From 1987 to 1991, the industry lost an estimated incremental 1.7% (9.5 billion units) due to increasing workplace restrictions [alone]. If these trends continue, the industry will lose an additional 1.3% to 1.9% (8.4 to 11.4 billion units) from 1991 to 1996. . . . If smoking were banned in all workplaces, the industry's average consumption would decline 8.7%-10.1% from 1991 levels and the quitting rate would increase 74% (e.g., from 2.4% to 4.4%). 2023914280-4284 at 4280 (U.S. Ex. 88,584) (emphasis in original).

(a) Defendants Responded to the Perceived Threat with Concerted Activity Coordinated by their Attorneys

620. Defendants undertook concerted action in response to the foregoing scientific conclusions and evidence. The evidence linking ETS exposure to disease represented a threat to the social acceptability of smoking. Defendants viewed it as a crisis for the Enterprise and responded accordingly.

SECTION IV.C.

621. Through its representation of the members of the Enterprise, Covington & Burling was able to coordinate the actions of the members of the Enterprise.

622. Covington & Burling set up an office in London in March 1988 to coordinate the Enterprise's overseas activities to maintain an open controversy on ETS. 2060563936-3941 (U.S. Ex. 79,164); Deposition of Sharon Blackie (Boyse), United States v. Philip Morris, et al., April 29, 2002, 138:19-139:6.

623. During the 1990s, the law firm of Covington & Burling took over much of the industry's activities and coordination of scientific witness development. A February 20, 1988 draft memo by Covington & Burling attorney David H. Remes explained Defendants' view that organizing scientific witnesses to attack the weaknesses in evidence supporting the harmfulness of ETS was the best way to maintain a "controversy" on ETS and avoid smoking restrictions. Law firms have historically been a tool that Defendants have used to secure their joint objectives, and in the February memo, Remes explained that Covington & Burling, as an outside entity, was in a better position than its client, Philip Morris, to coordinate a multiple tobacco company effort on ETS. 2501474253-4259 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

624. Boyse testified that Philip Morris used Covington & Burling to coordinate ETS activities between the members of the Enterprise because "they had done a lot of regulatory work in the United States on helping advise companies and putting together consultants to testify in regulatory proceedings, again, when ETS bans were being proposed, and I think they just had a lot of general experience in this area." Deposition of Sharon Blackie (Boyse), United States v. Philip Morris, et al., April 29, 2002, 170:2-9.

625. BATCo Head of Science, Christopher Proctor, moved seamlessly between BATCo and Covington & Burling, moving from BATCo to Covington in 1989 and then back to BATCo in 1993. With Covington, Proctor provided "scientific advice to the attorneys who then provided advice to a variety of different clients." His duties included reviewing the scientific literature on ETS. Additionally, he "talked to scientists who were producing comments for the regulatory process that the Environmental Protection Agency was undertaking." In 1994, even after returning to BATCo, Proctor continued to work on projects he had worked on at Covington & Burling. Deposition of Christopher Proctor, United States v. Philip Morris, et al., May 7, 2002, 8:2-20, 9:15-23, 153:7-154:9; 2024210653-0653 (U.S. Ex. 22,867).

626. Defendants' response to the emerging scientific evidence was controlled by their attorneys. Attorneys were involved in the selection and management of "research" projects through front organizations like Council for Tobacco Research ("CTR") and various industry-wide ETS committees. Attorneys were also involved in the management of misinformation campaigns through the Tobacco Institute and international organizations like the International Tobacco Information Center/Centre International d'Informatin Du Tabac (commonly referred to as "INFOTAB"). Donald Hoel of Shook, Hardy & Bacon and John Rupp of Covington & Burling were predominant among the lawyers supporting the efforts of the Enterprise, which furthered the scheme to defraud. Hoel worked on a number of Defendants' ETS committees from the 1970s until 1993. In an internal Shook, Hardy & Bacon memorandum, Hoel admitted that his law firm was "instrumental in organizing the tobacco industry's response to the ETS issue." Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 96:12-99:23,

SECTION IV.C.

100:9-101:21; 2015007199-7207 at 7206 (U.S. Ex. 20,311); 2023590167-0174 (U.S. Ex. 20,393).

627. Hoel and fellow Shook, Hardy & Bacon attorney Patrick Sirridge were part of an *ad hoc* advisory group made up of tobacco company scientists and outside law firm lawyers that was organized to coordinate the tobacco industry's response to the emerging ETS issue in the mid-1970s. The lawyers assisted in contracting outside scientists and in generating scientific studies designed to yield evidence beneficial to the litigation and public relations positions of Defendants. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 96:12-97:16; 1003293752-3753 (U.S. Ex. 20,169) (U.S. Ex. 75,204); 1000205071-5073 (U.S. Ex. 20,079) (U.S. Ex. 75,203).

628. Defendants sought to hide lawyer involvement in, and all evidence of, these early ETS activities.

629. According to a handwritten note dated November 5, 1975, industry lawyers such as Edward Jacobs of Jacobs & Medinger wanted any notes taken by members of the ETS Advisory Group led by Hoel destroyed. 1003294811-4811 (U.S. Ex. 20,171) (U.S. Ex. 23,402) (U.S. Ex. 75,206).

630. Notes from a July 1976 meeting of Defendants' Research Liaison Committee show that outside law firms and the Committee of Counsel, a Tobacco Institute committee comprised in part of the general counsel of member tobacco companies, controlled what scientific research Defendants engaged in with regard to ETS exposure, as opposed to the independent scientists that the Defendants represented would control CTR's research funding.

SECTION IV.C.

The notes specifically indicated that records relating to review of scientific projects by outside law firms and the Committee of Counsel should not be kept. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 161:24-164:9; 1000255997-6001 (U.S. Ex. 20,086) (U.S. Ex. 25,506) (U.S. Ex. 34,283).

631. William Shinn, another Shook, Hardy & Bacon attorney, participated in the effort to hide evidence of the role of lawyers in designing favorable ETS exposure research. In a 1978 memorandum, Shinn described Special Account No. 4 to the Committee of Counsel. Cigarette Company Defendants pooled funds for research and litigation, including ETS exposure projects, into Special Account No. 4. Shinn instructed that notes regarding the workings and administration of Special Account No. 4 be destroyed. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 77:21-82:9; 03638976-8979 (U.S. Ex. 20,060) (U.S. Ex. 46,483).

632. In the fall of 1984, at the explicit direction of the Committee of Counsel, Hoel was asked to reconvene the committee he had helped run in the 1970s to coordinate Defendants' efforts on ETS, including the generation of scientific evidence to defend the tobacco industry's liability positions. This group was named the ETS Advisory Group, but was also referred to as the "Hoel Committee" after its chairman. The Hoel Committee operated not only as the ETS Advisory Group, but under a variety of different names. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 139:13-140:8; 2015029667-9667 (U.S. Ex. 20,315) (U.S. Ex. 75,222); 2015029667-9667 (U.S. Ex. 20,315); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 97:11-98:9; 86024168-86024172 (U.S. Ex. 21,089) (U.S.

Ex. 75,198).

633. The Hoel Committee was made up of tobacco company scientists, in-house counsel, outside law firm attorneys, and public relations experts from the Tobacco Institute. In addition to Hoel, some of the committee meeting attendees were: Bill Davis of Shook, Hardy & Bacon; John Rupp and Michael Michaelson of Covington & Burling; Alexander Spears, Lorillard executive; scientist Charles Green, scientist Guy Oldaker, and attorney Mary Ward of R.J. Reynolds; scientist Thomas Osdene and scientist Robert Pages of Philip Morris; scientist J.G. Esterle of Brown & Williamson; and Marvin Kastenbaum and William Kloepfer of the Tobacco Institute. The group met monthly. While Liggett and American Tobacco did not participate directly, they contributed funding to the committee activities. Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 91:10-97:10; 2021004058-4064 (U.S. Ex. 20,339) (U.S. Ex. 75,330).

634. The Committee of Counsel did not merely demand the creation of the ETS Advisory Group, it remained involved in the efforts of the Hoel Committee and oversaw its activities. The Committee of Counsel set guidelines for the types of scientific research that Hoel could direct his committee to engage in or fund. For instance, notes of a November 2, 1984 ETS Advisory Group meeting indicate that the group was given guidelines from the Committee of Counsel that no "body fluid" testing should have been done. Hoel and Rupp regularly briefed the Committee of Counsel on Hoel Committee activities. Along with the rest of the Hoel Committee, they made recommendations on which ETS projects to fund and, with the Committee of Counsel's approval, funded research as CTR Special Projects, with the intention

SECTION IV.C.

that the ties between recipients and Defendants remain hidden. Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 101:15-102:11; Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 129:3-7; 211:3-212:22; 2021004916-4917 (U.S. Ex. 21,706); 2021004058-4064 (U.S. Ex. 20,339); 508230855-0855 (U.S. Ex. 20,809) (U.S. Ex. 75,280).

635. The early efforts to coordinate a public relations and litigation strategy in the interest of maintaining the social acceptability of smoking involved other lawyer-dominated committees.

636. For instance, in the mid-1980s, Covington & Burling attorney John Rupp assembled an Indoor Air Pollution Advisory Group ("IAPAG") on behalf of the Tobacco Institute. IAPAG was a group of scientists organized to advise the Tobacco Institute on scientific issues related to ETS exposure and to provide favorable testimony at legislative hearings. The group included, among others, Rupp, Gray Robertson, Chief Executive Officer of ACVA Atlantic, Inc., later renamed Healthy Buildings International, and Sorell L. Schwartz, a paid tobacco industry consultant. Representatives from Defendants attended IAPAG scientific meetings. While IAPAG reported to Rupp, key IAPAG member Schwartz, a Georgetown University scientist who provided consulting and testifying services to the Tobacco Institute and to Defendants on ETS matters, understood Hoel to be the most significant player on ETS matters within the industry. 401087370-7384 (U.S. Ex. 85,517); 505454031-4034 (U.S. Ex. 20,740); 2021019013-9013 (U.S. Ex. 21,743); 2021019014-9016 (U.S. Ex. 21,746); TIOK0023344-3355 (U.S. Ex. 65,699); 504921177-1179 (U.S. Ex. 20,018); TITX0025965-5968 (U.S. Ex. 88,585);

Deposition of Sorell Schwartz, United States v. Philip Morris, et al., May 28, 2002, 164:2-165:1.

637. At the same time that Hoel and Rupp were beginning their efforts to assist Defendants' fraudulent public relations strategy in the United States, Defendants took steps to set up international organizations to address issues related to the health consequences of exposure to secondhand smoke.

(b) Defendants Responded to the Threat Posed by Evidence of the Harmful Effects of Exposure to Secondhand Smoke with Coordinated International Activity

638. Defendants' ETS exposure concerns were also addressed on an international level, springing from a meeting that took place in the United States in the spring of 1976. At the BAT Groups' Chairman's Conference in Hot Springs, Virginia, BATCo recognized that the health consequences of ETS exposure would lead to the "social unacceptability of smoking." The company acknowledged:

The subject is inseparably linked with passive smoking and presents a major danger and challenge to the industry. The danger exists in the clearly evident snowballing effect of the tactics aimed at making smoking a distasteful practice. The challenge lies in the industry's need to devise a counter-campaign. . . . Part of the industry's answer surely is to work towards making passive smoking the conflict issue.

At the conference "there was unanimous agreement that the social unacceptability issue constitutes a more serious threat to the industry's future than any other aspect of the attack on smoking." 110069863-9866 at 9864 (U.S. Ex. 34,951); 2025025481-5494 at 5481 (U.S. Ex. 37,220).

639. Later that year, in October 1976, BATCo expressed its "belief that whilst smokers

SECTION IV.C.

are prepared to sublimate their anxieties about the so-called health hazards, the need for industry margins to keep abreast of inflationary costs, with more smoke constituents coming under suspicion, and now with these social pressures, we foresee the possibility of a further diminution in the incidence of smoking unless Companies, either collectively or individually are prepared to take positive action." 2025025506-5507 at 5506 (U.S. Ex. 75,154).

640. In November 1976, the Tobacco Advisory Council ("TAC") in the United Kingdom, akin to Center for Tobacco Research in the United States, discussed TAC's future role. TAC members agreed that they needed to focus efforts on the social unacceptability of smoking. 2025025510-5512 (U.S. Ex. 37,221).

641. Thereafter, Tony Garrett, Chairman of Imperial Tobacco, called Hugh Cullman, then President of Philip Morris International and Executive Vice President of Philip Morris Incorporated, to explore with Philip Morris whether several of the world's largest manufacturers, including BATCo and R.J. Reynolds, "might be prepared to meet discreetly to develop a defensive smoking and health strategy for major markets such as the UK, Germany, Canada, US and possibly others." 2025025286-5286 (U.S. Ex. 20,407) (U.S. Ex. 75,142) (U.S. Ex. 78,987).

642. On December 3, 1976, Hugh Cullman, Executive Vice President of Philip Morris, memorialized Garrett's suggestion for a discreet meeting of the heads of certain tobacco companies, including BATCo, R.J. Reynolds, and Philip Morris International, "to develop a defensive smoking and health strategy." The initial objective of this group was to develop a smoking and health agreement which would include a voluntary agreement, that no concessions beyond a certain point would be voluntarily made by the members and if further concessions

SECTION IV.C.

were required by respective governments, that these not be agreed to and that governments be forced to legislate. These leaders met in 1977, and the meeting was called "Operation Berkshire." 500269225-9228 (U.S. Ex. 20,622) (U.S. Ex. 75,188); 2025024797-4803 (U.S. Ex. 20,406); 2025025286-5286 (U.S. Ex. 20,407) (U.S. Ex. 75,142) (U.S. Ex. 78,987); 2501020298-0308 (U.S. Ex. 21,903) (U.S. Ex. 75,180); 2025025288-5289 (U.S. Ex. 20,408); 2025025341-5343 (U.S. Ex. 20,409); 2025025347-5348 (U.S. Ex. 20,410) (U.S. Ex. 75,149); 2025025369-5369 (U.S. Ex. 20,411); 2501024571-4575 (U.S. Ex. 21,904); 1000219803-9803 (U.S. Ex. 21,906).

643. Garrett "was most encouraged to find a concensus [sic] emerging that some of the major companies expressed a wish to meet together to try to form a defensive smoking and health strategy, to avoid our countries and/or companies being picked off one by one, with a resultant domino effect." Garrett reported that BATCo, R.J. Reynolds, Reemtsma, Rothmans, and Imperial were prepared to consider such a unified strategy and suggested that a meeting take place in April or May 1977, with three representatives from each company, including its CEO. Garrett emphasized that the meeting should be as discreet as possible and avoid any publicity. 2025025290-5291 (U.S. Ex. 22,980) (U.S. Ex. 75,145).

644. In furtherance of the "Operation Berkshire" participants' desire to form internationally consistent positions on smoking and health issues, including the health effects of ETS exposure, the group agreed to form the International Committee on Smoking Issues ("ICOSI"). Pursuant to the agreement, certain companies would work to develop positions on specified issues, including R.J. Reynolds (leading the Social Acceptability Working Party or

"SAWP") and BATCo (the Behavior Working Party). 502948580-8591 (U.S. Ex. 21,908) (U.S. Ex. 75,189); 2501024103-4107 (U.S. Ex. 21,909) (U.S. Ex. 75,181).

645. An April 28, 1977 report, entitled "Position Paper for Operation Berkshire," developed by Philip Morris and BAT, suggests that Operation Berkshire participants agreed that "the Industry's activity in the smoking and health field should be carried out primarily by or through the Associations, wherever this is possible." They further agreed upon several tactics, designed to maintain the open question:

We acknowledge the fact that there is a continuing smoking and health controversy but we do not accept as proven that there is a causal relationship between smoking and various diseases

[W]e believe it is better to speak as an industry with one voice on such matters and that this can be accomplished through national associations of manufacturers.

We take the view that to date there is no persuasive scientific evidence to support the contention that the non-smoker is harmed by the tobacco smoke of others

The tactics were also designed to frustrate efforts to regulate the industry:

[resist] [t]he imposition of maximum tar and nicotine yields, as well as attempts by Governments to tax high tar products differentially to those with lower deliveries

[maintain the] Industry view that there is no valid evidence to support the contention that advertising increases total consumption of cigarettes . . . [and]

resist any requirements to put figures for the yields of smoke constituents or tar groups on packs or in advertising.

2025025313-5318 (U.S. Ex. 23,741).

646. In October 1977, BATCo's Director of Public Relations, Richard Haddon, was a member of ICOSI's SAWP. Working party members included representatives from R.J. Reynolds Industries, Inc., Rothman's International, R.J. Reynolds Tobacco Company, and Philip Morris, Inc. 501472756-2794 (U.S. Ex. 66,342); 2025025295-5300 (U.S. Ex. 75,146).

647. The First Report by SAWP to ICOSI stated, in part, that:

-[T]he industry has no time to spare before stepping up its actions on social acceptability as a separate set of issues [from that of smoking and health] where steps can and must be taken even while basic health questions remain unresolved.

-The Working Party finds that anti-smoking influences are increasingly linking themselves together into international movements. Negative social acceptability developments in one country are being picked up and transmitted through worldwide networks to other nations.

501472756-2794 at 2768, 2770-2771 (U.S. Ex. 66,342).

648. The First Report by SAWP also admitted that "[i]n dealing with current social acceptability issues, the industry has focused almost all its countermeasures on blocking, delaying or changing governmental actions and plans" and decided that the "industry also should launch sustained, long-term counter-measure programs . . ." rather than merely reacting "to outside pressures for laws and regulations." The SAWP further concluded that "national trade associations (rather than individual companies) are key vehicles for launching countermeasures on social acceptability issues. Such association countermeasures become even more effective when they carry 'third party' endorsements . . ." 501472756-2794 at 2772-2773 (U.S. Ex. 66,342).

649. In November 1977, ICOSI member companies were directed to: avoid making any

SECTION IV.C.

claims that one cigarette was healthier than others; resist strenuously warning labels implying that smoking causes diseases; and express the view that there was no persuasive scientific evidence that non-smokers are harmed by secondhand smoke. 321795932-5945 at 5936-5937 (U.S. Ex. 28,675); 321795889-5925 at 5911 (U.S. Ex. 28,667) (U.S. Ex. 28,668) (U.S. Ex. 28,669).

650. On February 7, 1978, SAWP recommended that future coverage of ICOSI activities be centered on the United States, the United Kingdom, Australia, Belgium, Canada, Ireland, the Netherlands, Switzerland, and Germany. Members of SAWP at that time included BATCo, Philip Morris, Inc., and R.J. Reynolds Tobacco Co. 980037079-7167 at 7077-7079, 7085, 7161 (U.S. Ex. 32,445).

651. A March 1978 BATCo document stated: "The aim of ICOSI is defensive research aimed at throwing up a smoke screen and to throw doubt on smoking research findings which show smoke causes diseases." 321588692-8692 (U.S. Ex. 28,544).

652. An internal Philip Morris memorandum dated December 12, 1978, from J.M. Hartogh, counsel for Philip Morris–London to A.E. Bellot, Philip Morris International Vice-President, expressed Philip Morris's view that the effectiveness of ICOSI would require coordination and input from the Tobacco Institute and Shook, Hardy & Bacon. 2501018326-8327 (U.S. Ex. 21,505) (U.S. Ex. 75,179).

653. Later, Lovell, White & Durrant (which became simply "Lovells"), counsel for BATCo, admitted that Defendants' approach to ETS exposure issues mirrored the approach to direct smoking that the Enterprise developed in the 1950s. Expressing its concern that

SECTION IV.C.

statements by TAC on ETS might be inconsistent with those of the Tobacco Institute and other Cigarette Company Defendants, Lovells observed that the industry found itself in "the same position in relation to ETS that it was thirty-to-forty years ago in relation to active smoking." Lovells urged: "Statements made by TAC should, therefore, be consistent with the positions adopted by the individual companies." Lovells further observed: "On scientific matters relating to ETS, a common position has been agreed to by all the companies." 503055325-5326 (U.S. Ex. 20,712).

654. That coordination and active participation occurred, most notably with ICOSI's successor organization, INFOTAB, which replaced ICOSI in November 1981. INFOTAB's Board of Directors included, at various times, Hugh Cullman, Executive Vice President of Philip Morris, Alexander Holtzman, Vice President & Associate General Counsel of Philip Morris Companies, and Edward A. Horrigan, Chief Executive Officer of R. J. Reynolds (who was also at the time the Tobacco Institute Chairman of the Executive Committee, and on the Tobacco Institute Board of Directors). Donald Hoel from Shook, Hardy & Bacon attended the organization's meetings. In 1992, INFOTAB was renamed the Tobacco Documentation Centre ("TDC"), but the name change did not lead to any change in its function. 2025013308-3308 (U.S. Ex. 21,585) (U.S. Ex. 75,238).

655. Members of the Tobacco Institute met and coordinated with members of INFOTAB, an international organization of which BATCo was a member, in furtherance of the Enterprise.

656. On November 16, 1981, the Tobacco Institute provided INFOTAB with its

SECTION IV.C.

communications plans regarding the Hirayama report, a report linking ETS and adverse health consequences. INFOTAB alerted national associations around the world and as soon as the Tobacco Institute had its press releases prepared, it telexed them to INFOTAB and INFOTAB transmitted them by telex to the other associations for their possible use. INFOTAB followed up with a mailing of press clippings from the United States, which enabled associations to generate similar press coverage in their own countries. 2501029891-9901 at 9898 (U.S. Ex. 20,557).

657. In October 1984, the Tobacco Institute underwrote half the cost of producing a monograph commissioned by INFOTAB entitled, "Free To Smoke" and edited by Robert D. Tollison, Ph.D., Professor of Economics and Director of the Center for Study of Public Choice, George Mason University that touted the United States industry's position on smoking and health and free choice. TIMN371669-1682 (U.S. Ex. 65,655), (U.S. Ex. 65,654).

658. In 1985, TAC was asked to circulate the Tobacco Institute's "refutation" of the forthcoming United States Surgeon General's report. 107354976-4981 at 4980 (U.S. Ex. 26,300).

659. In 1985, the Secretary General of INFOTAB sought to "improve the industry's position with 'passive' smoking issues" by highlighting symposia concluding that ETS did not pose a hazard to health and an increased emphasis on coordination with the members of INFOTAB and the Tobacco Institute. 103366351-6353 (U.S. Ex. 26,249).

660. On April 8, 1986, INFOTAB's Board of Directors, including Robert L. O. Ely, BATCo's Head of Public Affairs, met in the United Kingdom to discuss the industry's current

SECTION IV.C.

research activities concerning secondhand smoke. The meeting included representatives from Philip Morris USA, BATCo, R.J. Reynolds, the Tobacco Institute, and the law firms of Shook, Hardy & Bacon and Covington & Burling. It was decided to coordinate all available information and research on second hand smoke; and the industry would use all research results demonstrating that second hand smoke is not a risk to health. Various research projects were discussed, to be used by the attendees to address proposed regulations with respect to ETS, including programs sponsored by the Tobacco Institute and the "cooperative [United States] industry study to measure carbon monoxide, nicotine, and particulate matter in restaurants." 2022932502-2506 at 2506 (U.S. Ex. 22,828) (U.S. Ex. 75,333) (U.S. Ex. 75,125); 505347172-7174 at 7172-7173 (U.S. Ex. 20,739) (U.S. Ex. 75,274).

661. An August 1986 outline set forth the coordinated efforts of Defendants to develop industry-friendly science on ETS and included projects managed by the ETS Advisory Group (the "Hoel Committee"), the Tobacco Institute, Shook, Hardy & Bacon, Covington & Burling, and INFOTAB. 86024168-4172 (U.S. Ex. 21,089) (U.S. Ex. 75,198).

662. Through the Tobacco Institute, other Defendants (beyond Philip Morris, R.J. Reynolds and BATCo) were involved with INFOTAB's activities. A September 18, 1986 letter from Shook, Hardy & Bacon to Alexander Spears of Lorillard attached a listing of ETS projects that included preparation of a paper on ETS health claims and constituents for INFOTAB by the law firm for use by lead tobacco companies. The letter to Spears also advised of an INFOTAB workshop where Thomas Osdene, Director of Science & Technology of Philip Morris, Incorporated, Charles Green, Principal Scientist of Research & Development, R. J. Reynolds, and

SECTION IV.C.

Donald Hoel of Shook, Hardy & Bacon would serve as panelists for an ETS presentation.

86024167-4167 (U.S. Ex. 56,093) (U.S. Ex. 75,197); 86024168-4172 (U.S. Ex. 21,089) (U.S. Ex. 75,198).

663. INFOTAB functioned much like the Tobacco Institute, principally in its development and coordination of statements, that were prepared with reckless disregard for the truth or falsity of matters asserted relating to the health effects of smoking. As with the Tobacco Institute, INFOTAB prepared these documents for public dissemination by its members, which included Philip Morris, R.J. Reynolds, and BATCo, with the goal of creating the idea that a scientific controversy existed over the health effects of smoking.

664. One example of such materials was a document known at the ETS Kitset. It identified two key strategy objectives for its members:

Objective 1 To demonstrate the inconclusive nature of claims that ETS has harmful effects, by bringing to light the scientific controversy over such claims.

Objective 2 To position ETS as just one (and a very minor) factor in a complex atmospheric mix which also includes petrol/diesel fumes, dust, bacteria (particularly in air conditioned environments), pollen, and in industrial situations an enormous variety of chemical fumes and substances.

2501155644-5648 at 5646 (U.S. Ex. 45,901).

665. The Kitset also contained "Campaign Resource Materials" that instructed members on the best ways to run publicity campaigns, and publicity leaflets addressing six "sub-issues" created by INFOTAB for use by recipients, with the aim that the "scientific" presentations therein reach the "target audience." To that end, INFOTAB provided a Public Affairs Guide

("for use with politicians, civil servants, journalists and other opinion-leaders") and a "general leaflet" that addressed "the two major strategic themes of 'demonstrating scientific controversy' and 'ambient air quality.'" The introduction to the Kitset further indicated:

Finally, the key arguments on the claimed health effects of ETS and its contribution to indoor air quality have been picked out in two documents defined as *Useful Arguments*. These give more detail on what might be said in relation to the main strategic theme, and are designed to facilitate [members] construction of their own campaign materials.

2501155644-5648 at 5648 (U.S. Ex. 45,901) (emphasis in original).

666. The introduction to the Kitset made clear the INFOTAB Board's desire to keep its control and influence over the campaign secret:

This kitset contains two distinct types of document[s]. The leaflets have been written for publication outside the industry and have been scrutinized by industry experts. They are clearly distinguished as printed, two-colour publications, and do not carry either the Infotab name or the ETS campaign logo.

IN CONTRAST, THE INTERNAL PAPERS - OF WHICH THIS INTRODUCTION IS ONE - ARE FOR USE INSIDE THE INDUSTRY ONLY AND SHOULD BE TREATED AS CONFIDENTIAL. FOR THIS REASON, THE INTERNAL PAPERS HAVE BEEN PRODUCED IN A FORM WHICH IS INAPPROPRIATE FOR PUBLIC USE AND ARE CLEARLY MARKED AS CONFIDENTIAL INFOTAB DOCUMENTS.

2501155644-5648 at 5648 (U.S. Ex. 45,901) (emphasis in original).

(5) **Defendants' Response Ultimately Led to the Formation of Jointly Controlled Organizations to Carry Out Their Concerted Activity.**

(a) CIAR

667. Ultimately, these early international efforts through ICOSI and then INFOTAB

SECTION IV.C.

were coordinated with the domestic activities started by the Hoel Committee and the Tobacco Institute in a web of front organizations and joint strategies that included the Center for Indoor Air Research ("CIAR"), the ETS Consultancy Program, Project Downunder, ACVA and HBI, Covington & Burling and Shook, Hardy & Bacon, CORESTA, and currently the Philip Morris External Research Program.

668. At a Hoel Committee meeting on May 26, 1987, attended by representatives of Philip Morris, Lorillard, Brown & Williamson, and R.J. Reynolds and attorneys from Covington & Burling and Shook, Hardy & Bacon, the parties decided that a new ETS research coordinating organization for the Defendants should be called the Center for Indoor Air Research ("CIAR") in order to dissociate it from its tobacco funding. 506300804-0815 (U.S. Ex. 20,756) (U.S. Ex. 75,276) (U.S. Ex. 79,211).

669. After further planning discussions of the Hoel Committee, the Executive Committee of the Tobacco Institute convened in New York on December 10, 1987 to present a proposal for the formal organization of "a research organization to deal with issues relating to indoor air quality." The presentation was made by Thomas Ogburn, Vice President/Director - Public Issues and Charles Green, a scientist with R.J. Reynolds, and Thomas Osdene a scientist with Philip Morris. The meeting was attended by, among others, Tobacco Institute Executive Committee Chairman, Philip Morris President and Chief Executive Officer Frank Resnick; Philip Morris Senior Vice President and General Counsel Thomas Ahrensfeld; Lorillard's Chairman, J. Robert Ave, Executive Vice President, Alexander Spears, and General Counsel, Arthur Stevens; B&W Vice President and General Counsel, Ernest Pepples; Liggett Vice President and General

SECTION IV.C.

Counsel Josiah Murray III; recently retired R.J. Reynolds President Gerald H. Long; and Guy V. Smith IV, Philip Morris Vice President Corporate Affairs and Chairman, Communications Committee, Tobacco Institute. The proposal presented called for the creation of CIAR, an organization to be controlled by Defendants and intended to function in a virtually identical manner to TIRC and CTR. At the end of the meeting, "it was agreed that Dr. Osdene and his group would proceed with the hiring of an Executive Director and the preparatory corporate and other steps for the establishment of the CIAR." TIMN0014390-4393 (U.S. Ex. 62,782).

670. Pursuant to the agreement reached in December 1987, CIAR was officially created in 1988 to take over the research responsibilities of the Hoel Committee – that is, to act as a coordinating organization for Defendants' efforts to fraudulently mislead the American public about the health effects of ETS exposure. CIAR was created by Philip Morris, Lorillard, and R.J. Reynolds who controlled the activities of the organization. Brown & Williamson joined CIAR as a voting board member in 1995. While Liggett was never officially a member of CIAR, it attended meetings of the organization and participated in ETS seminars and meetings organized by Covington & Burling and was fully cognizant of, and in fact assented to, the activities of the organization. BATCo, while not a member of CIAR, provided funding to CIAR to hide BATCo and Philip Morris's involvement in at least one CIAR "sponsored" study. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 143:9-146:14, 197:9-199:11; Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 102:18-103:8; Deposition of Dennis Dietz, United States v. Philip Morris, et al., July 1, 2002, 132:1-138:17; 87803899-3916 (U.S. Ex. 21,103) (U.S. Ex. 75,283); 87802318-2319 (U.S. Ex.

23,535) (U.S. Ex. 75,418); 509591861-1870 (U.S. Ex. 24,741); 2023544456-4456 (U.S. Ex. 22,816) (U.S. Ex. 75,342) (U.S. Ex. 79,213).

671. CIAR's stated mission was to serve as a hub that would sponsor and foster quality, objective research in indoor air issues with emphasis on ETS and effectively communicate pertinent research findings to the broad scientific community. While Philip Morris, Lorillard, and R.J. Reynolds publicly represented that CIAR was independent, its by-laws revealed otherwise. The by-laws required that charter members be tobacco companies; dictated that only charter members have the power to choose CIAR's officers; and, significantly, gave charter members the exclusive power to decide what research the organization would fund. Max Eisenberg served as CIAR's Executive Director and John Rupp of Covington & Burling as its General Counsel. TIBU30949-0968 (U.S. Ex. 21,396); Deposition of Max Eisenberg, United States v. Philip Morris, et al., June 20, 2002, 12:17-13:1, 28:5-10, 38:19-39:12, 78:17-79:7.

672. In Report and Recommendation #151 in this case, adopted by the Court in Order #525, the Special Master concluded:

Plaintiff has offered evidence that could convince a trier of fact that the CIAR was publicly-billed as an independent scientific entity organized to support research projects addressing indoor-air issues, when in fact funding was controlled by the tobacco industry, and projects were sought for the purpose of establishing industry-favorable science and potential expert witnesses. . . . Plaintiff also establishes that CIAR-supported research was sought for litigation purposes, an interest that, for the industry, is not neutral and one not likely to be funded in a disinterested manner. . . . While Lorillard claims that the affiliation of CIAR to the industry was widely known, the Special Master is not persuaded in light of the paucity of evidence provided by Lorillard in support of its position, and the fact that it appears from counsel's correspondence that the industry intended to create an entity where

the affiliation would not be obvious. Also, while Lorillard claims that the researchers were free to publish the results of their research, the Special Master notes that the fact that the industry exercised final decision-making authority over what projects would be funded established sufficient industry control at the front end of the research to call into question CIAR's true intent, and to potentially manage what final results would occur.

R&R #151 at 110-111 (internal footnote omitted).

673. Internal documents reveal the true purpose of CIAR. On April 25, 1988, Thomas Osdene, Director of Science at Philip Morris, explained to the Tobacco Institute's President that the purpose of CIAR was to provide Defendants with ammunition in legal and legislative fora where ETS exposure was at issue. CIAR was intended to allow Defendants to perpetuate a "scientific controversy" surrounding the health effects of ETS exposure. As Rupp explained in March 1993: "In sum, while one might wish it otherwise, the value of CIAR depends on the industry's playing an active role (1) in identifying research projects likely to be of value and (2) working to make sure that the findings of funded research are brought to the attention of decision makers in an appropriate and timely manner." According to a former CIAR board member, "ETS was a litigation issue and a PR issue." 506662315-2316 (U.S. Ex. 20,762) (U.S. Ex. 75,277); 2021012384-2388 (U.S. Ex. 20,340) (U.S. Ex. 75,227) (U.S. Ex. 75,331); 2023053717-3720 at 3719 (U.S. Ex. 20,373); Deposition of Robert Suber, United States v. Philip Morris, et al., June 18, 2002, 77:4-5.

674. Many of the same officers of Defendants who were part of the Hoel Committee participated in CIAR Board discussions. Rupp also participated in Board discussions, including discussions that focused on whether CIAR should fund particular research. CIAR had two

SECTION IV.C.

methods of funding research on ETS. One method was to have research proposals submitted to and reviewed by a CIAR Science Advisory Board, with its selections subsequently voted on by the CIAR board members. The second method was for the CIAR Board to propose and fund projects directly, without any prior review by its Scientific Advisory Board ("SAB"), or to fund projects that the SAB had explicitly recommended against funding. This second group of projects were referred to as CIAR's "Applied Projects" and were the equivalent of Special Projects at CTR, discussed at U.S. FPF §I.D (2), I.G (2), supra. Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 110:8-111:25; 87697352-7354 (U.S. Ex. 56,308); 2023530027-0029 (U.S. Ex. 23,003); 2023054167-4167 (U.S. Ex. 20,374) (U.S. Ex. 75,232); 517577761-7761 (U.S. Ex. 20,867).

675. Certain Applied Projects were undertaken in order to counter the impact of mainstream publications such as the EPA Risk Assessment and the International Agency for Research on Cancer's ("IARC") 1998 report on ETS. Deposition of Helmut Reif, United States v. Philip Morris, et al., March 30, 2004, 15:4-21.

676. The lengths that Defendants went to in order to insure that CIAR served their litigation, legislative, and public relations needs were extraordinary. With the heavy involvement of lawyers in the scientific research on ETS exposure and health, scientists were often asked to provide the results of a proposed study first, and thus they employed "pilot" studies to give the lawyers advanced information. If the preliminary study produced results unfavorable to the litigation positions of Defendants, the lawyers would not continue to fund them. For example, R.J. Reynolds scientist Charles Green admitted in a presentation to an INFOTAB meeting on

October 15, 1986 that while he was a part of the Hoel Committee, lawyers commonly performed pilot projects so they could anticipate what the results of a study before it was completed. These pilot projects enabled the attorneys to discontinue projects if it appeared that the results would be unfavorable. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 176:13-179:22; 2501457517-7522 (U.S. Ex. 22,956); 89259467-9468 (U.S. Ex. 22,982); Deposition of Carr Joseph Smith, United States v. Philip Morris, et al., April 26, 2002, 63:23-67:12.

677. Defendants' efforts to fill a stable of paid international consultants – scientists who they could point to as purportedly independent support for their public relations position on the health effects of exposure to secondhand smoke – did not end with CIAR. Their massive coordinated campaign extended through a plan known as “Project Downunder” and its counterpart, the International ETS Consultancy Program.

(b) Project Downunder

678. Defendants' concern over the ETS issue was shaping up to be one of the most intractable problems for the tobacco industry. In 1987, Philip Morris explicitly recognized that “[i]t is apparent that the effects of ETS on others is now the most powerful antismoking weapon being employed against the industry.” 2050864094-4097 (U.S. Ex. 20,494).

679. Perhaps because of this recognition, Philip Morris acted aggressively. At a May 11, 1987 meeting on ETS strategy spearheaded by Philip Morris, Rupp was tapped to develop “buffer entities” to hide Defendants' connection to scientific consultants from the public. The meeting minutes, labeled “Strictly Confidential,” identified the following objectives of the ETS

strategy: (1) "[r]esist smoking restrictions;" and (2) "[r]estore smoker confidence." The latter identified objective is evidence of Philip Morris's specific intention that smokers be influenced by its public relations campaign. Philip Morris identified pre-requisites to achieving its goals: (1) "[r]everse scientific and popular opinion;" (2) "[r]estore social acceptability of smoking;" and (3) "[p]reserve product liability defences." In order to meet its identified prerequisites, Philip Morris required:

Industry Coordination

It is preferable to build up a coordinated, international industry effort. Ideally this would be under the auspices of INFOTAB. In many markets it will be advisable or even necessary to work through the [National Manufacturing Association] or an industry club. Nevertheless it was understood that PM must forge on and lead/act unilaterally whilst the industry coordination is being established in individual markets. This coordination should ultimately lead to integration with respect to the buffer entity.

At the same meeting, participants discussed the importance that consultant ACVA Atlantic (later renamed Heathy Buildings International) "be perceived to be at arm's length from the industry, including in media briefings. Its role at most should seem as yet another third party expert amongst others." 2046754737-4740 (U.S. Ex. 21,646).

680. A month later, Philip Morris hosted an internal conference code named "Project Down Under" to look at the ETS issue confronting Defendants.

681. The marching orders for "Project Downunder" came from the very top. In a June 8, 1987 letter from William Murray, Vice Chairman of Philip Morris, announcing the formation of the Project, Murray stressed that the company had to "take action to at a minimum slow down the anti-smoking forces and at best actually reverse some of their advances." In his letter, Murray

stressed:

I cannot overemphasize the importance of this activity It is important to point out that we are not embarking on this exercise to simply exchange ideas on the ETS problem. Rather, **we have been instructed to examine the problem and to arrive at solutions that can be immediately implemented.**

2023551340-1343 at 1341 (U.S. Ex. 88,586); PWO2067368-7371 (U.S. Ex. 85,518) (emphasis added). Murray, who was involved in Operation Berkshire in 1977, was on the CTR Board of Directors at when Project Downunder was formed. Murray had also been part of the industry's Operation Berkshire. The letter was copied to the Chairman of Philip Morris Companies, Hamish Maxwell.

682. According to the Project Downunder agenda, this meeting began on June 23, 1987 and ended on the afternoon of June 26 with a presentation of an ETS plan to senior management. Substantive discussions began the morning of June 24. All attendees were housed in private villas on the island, and all expenses were paid by the Philip Morris. 2024270524-0527 (U.S. Ex. 75,083).

683. Many details of the four-day meeting are contained in a thirty-three page Philip Morris document titled "PROJECT DOWNUNDER CONFERENCE NOTES." The morning session on June 24th began with the history of passive smoking, including: the 1972 Surgeon General's Report which was the first Report to address ETS, the 1981 Hirayama study, the 1985 Repace/Lowrey study, and the 1986 Surgeon General's Report that also concluded ETS posed a cancer risk to nonsmokers. 2021502102-2134 at 2102-2105 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

684. John Rupp then addressed the group, opening with, "Where we are. In deep shit."

He noted the "watershed significance" and "tremendous credibility" of the 1986 Surgeon General's report. He told the conference attendees the industry's position on passive smoking was restricted to "ETS not shown to be health hazard to non-smoker." He cautioned that, "[w]e cannot say ETS is 'safe' and if we do, this is a 'dangerous' statement." 2021502102-2134 at 2106 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

685. Rupp emphasized that the cigarette manufacturers had little on their side: "Someone has to say ETS is no risk. [This] has to come from somewhere." 2021502102-2134 at 2107 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

686. The importance of the ETS problem facing the industry was clearly expressed at the meeting - corporate profits, indeed corporate existence, was at stake. Conference notes revealed that sales were declining in the United States, and "in U.S., [the] ETS issue will have [a] devastating effect on sales." Philip Morris was very concerned that the industry was "just at the beginning of [the] impact of [the] ETS issue." 2021502102-2134 at 2109-2110 (U.S. Ex. 20,346) (U.S. Ex. 75,074)

687. At the conference, Rupp identified advertising as a key to influencing public opinion about the health effects of ETS exposure and the need for smoking restrictions:

Three types of ads.

1. "Designer" campaign. Artistic photo & copy. "I think we can live together." "Faulty data." "I'm a responsible guy," etc. Geared to smokers & non-smokers.

(noted here that copy has not been legally approved.)

2. "Rights" campaign. Subject standing outside restaurant, exclusion compared to that of minorities, prohibition.

3. "Science of ETS" campaign.

Did focus groups. Groups liked #1 best, liked #2 least. Quantitative research revealed #3 liked best, #2 worst. Therefore, we can't make call yet, need more research to determine ad strategy. . . .

As we think through this, remember there are different ways of getting information across to different people. E.g., some people would like science jargon.

2021502102-2134 at 2108 (U.S. Ex. 20,346) (U.S. Ex. 75,074) (emphasis in original).

688. At this Project Downunder conference, Rupp expressed a sense of urgency, noting, "Problem – threatens number of smokers & number of cigarettes they smoke," and then indicated that the question confronting Defendants was "[h]ow to alter public perception that ETS is damaging." To mold public perception, according to Rupp, would involve in part an attempt to "[c]hange underlying fact from 'not proven' to ETS is not harmful to non-smoker." Rupp admitted, however, that doing so would be a problem because of the "[I]ack of objective science" to support Defendants' public relations campaign. The lack of objective science, however, would not stand in Defendants' way. Rupp asked: "Is \$100 million campaign worth an x increase in sales?" The answer: "Yes." 2021502102-2134 at 2110-2114 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

689. Throughout the conference, the theme was to use science and other means to change public perception of the risk of harm from ETS, to make people "feel good" about ETS exposure, as opposed to actually reducing the known risk of harm. The industry had to do this (1) "in [the] face of overwhelming adverse information and publicity" relating to the harm of passive smoking to nonsmokers; (2) in the absence of "objective science" in favor of the

industry's position; and (3) despite the fact that "10 of the 13 [ETS] studies show [an] effect in the direction of harm." 2021502102-2134 at 2110-2112 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

690. The conference notes also included the admissions that "a scientific battle was lost" with the 1986 Surgeon General's report, the industry "can't say it [ETS] is safe," ETS research was historically feared and avoided by the industry partly because of the "risk in doing research where you don't know where it will lead." 2021502102-2134 at 2112, 2113, 2115 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

691. The conference attendees proposed the following solutions, among many: "Create our own expert," "More research – prove ETS is safe," "Create a bigger monster (AIDS)," "Make it hurt (political risk) to take us on," "Seriously look at TV, print, other media campaigns," "Create science journal," "Create non-science journal," "Infiltrate WHO," "\$2-5 million funding for CIAR now," "Sue the bastards," "Undermine Koop," "Defeat Waxman," and "Attack anti-groups where they hurt." The conference notes also stated, "Central to many of our ideas is a third-party conduit." The group debated and rejected a "lie low strategy," choosing instead a campaign to "take positive action." 2021502102-2134 at 2116-2118, 2123- 2124 (U.S. Ex. 20,346) (U.S. Ex. 75,074).

692. The conference attendees later agreed that the industry needed "substantial funding in ETS via CIAR" and needed to "increase [the] number of scientists up to 50 in the U.S. and also throughout world." The "effort should be organized worldwide" and the "science program has to be joint-industry based." 2021502102-2134 at 2130-2132 (U.S. Ex. 20,346) (U.S. Ex. 75,074); 2021502679-2683 (U.S. Ex. 26,057) (U.S. Ex. 75,077) (U.S. Ex. 75,078).

SECTION IV.C.

693. On June 26, 1987, the final day of "Project Downunder," the conference attendees presented their conclusions and recommendations to William Murray, Vice Chairman of Philip Morris. The group characterized their recommended strategy as staying the corporate course, while creating an appearance of change: "Do something that, for us, is not different, but for the world is different," while funding a "dramatic increase in scientific activity on ETS." Philip Morris did not view its inherently dangerous products as a problem; rather the only problem was the "perception" of smokers, non-smokers, public officials, media, and the scientific community. The group additionally adopted what they called an "NRA strategy" of "Select[ing] the weakest of our enemies, mak[ing] an active effort to defeat them in the next election, then let[ting] people know what we did and why we did it," in conjunction with the "financial support" of industry friends. The "perception" problem would be worked in the media and in the science community, worldwide. The increased funding of CIAR, the increased recruitment of "consulting scientists," and the establishment of an industry "scientific journal" were to play roles in the industry "solution" as well." 2021502671-2678 (U.S. Ex. 22,950) (U.S. Ex. 75,076).

694. The group also stated their intent to bring on the other members of the tobacco industry through discussions "at the highest level":

We also need to tell the tobacco industry, regarding accommodation strategy, [sic] This is what we are doing, join us. Use TI if helpful to do so. RJR can be expected to buy on. Concept should be introduced to R.J. Reynolds and other majors at the highest level. CEO to CEO, Chairman to Chairman.

2021502671-2678 at 2676 (U.S. Ex. 22,950) (U.S. Ex. 75,076).

695. When Murray asked about the risks of the proposals, and whether the proposals would "make the situation worse," he was told that "**The situation can't get any worse. Sales**

are down, can't be attributed to taxes or price increases. ETS is the link between smokers and non-smokers and is, thus, the anti's silver bullet. In this way, the Vice Chairman was convinced that Philip Morris was in a corner and threatened by a "silver bullet" issue that could destroy an industry. 2021502671-2678 at 2678 (U.S. Ex. 22,950) (U.S. Ex. 75,076) (emphasis added).

696. One week later, John Rupp took the Philip Morris ETS message out to the other members of the industry. A document titled "Report on Industry Meeting Concerning ETS" reveals that Rupp met with representatives of R.J. Reynolds, Philip Morris, Liggett, Hill & Knowlton, and the Tobacco Institute on July 2, 1987. Rupp "shared some general objectives which were articulated at a Philip Morris exercise a week earlier." The group agreed with the Philip Morris view that the industry needed to go on offense and create a perception that ETS does not cause harm. 87697186-7193 (U.S. Ex. 88,587); LWO1745979-5986 (U.S. Ex. 85,519).

697. To accomplish this, the group proposed the creation of a senior level task force composed of representatives from each company, a dramatic increase in funding to counter the ETS issue, and increased attention to industry scientific research, media relations, and blanket opposition to any restrictive legislation. Overall, the participants stressed the need for a long-term "commitment" among the companies and TI to get out the tobacco industry message. Rupp warned participants that the manufacturers had to act as a unified front on ETS: "Individual companies, he noted, are in a position to take advantage of their commercial resources but should make every effort to do so toward the common goal of the industry as a whole." 87697186-7193 (U.S. Ex. 88,587); LWO1745979-5986 (U.S. Ex. 85,519).

698. Shortly after the conference, Philip Morris approved the conclusions and recommendations of the Downunder project. In a July 14, 1987 letter from Guy L. Smith, Vice President, Corporate Affairs of Philip Morris, to Thomas Osdene, Director, Science & Technology of Philip Morris, Smith announced:

It is a great pleasure to inform you that Vice Chairman Murray, after consulting with Chairman Maxwell and President Resnik, asked that the recommendations of the Operation Downunder group proceed immediately. . . .

As we move into the executional elements of Operation Downunder, selected working groups will be established to make certain that the project advances according to plan.

2023551320-1320 (U.S. Ex. 23,682) (U.S. Ex. 23,683).

699. In an October 8, 1987 memorandum from Helmut Gaisch, Director of Philip Morris (Europe-FTR) Science & Technology, to Lee Pollak, in-house counsel in New York, Gaisch advised that Operation Downunder was being implemented in Europe with other cigarette companies and Covington & Burling. Gaisch further described the recruitment of scientific consultants, or "whitecoats," who would work on behalf of the industry throughout the world. Gaisch reported that:

Within the framework of the scientific part of "Downunder," we are involved in the process of enlisting the assistance of scientific experts on a world-wide basis. As there are other tobacco companies involved, e.g. R.J. REYNOLDS, John Rupp of C&B has been charged with coordinating this part of the project. . . . I have personally arranged meetings of John Rupp with key "whitecoats" in a number of European countries.

2501000364-0365 at 0365 (U.S. Ex. 45,866) (U.S. Ex. 75,259).

700. The industry as a whole followed Philip Morris's lead only months later. On

January 4, 1988, the Executive Committee of the Tobacco Institute "approved the concept of Operation Downunder." Tobacco Institute president Sam Chilcote wrote that:

[w]e have long agreed with many of Downunder's basic goals. . . .
Further, the aggressive industry posture evident throughout the plan is needed if we are to stem the tide of legislative and private industry initiatives to ban or severely restrict smoking, as well as deal with other important industry issues.

TIOK0024369-4378 (U.S. Ex. 88,844); TIDN0002710-2719 at 2711 (U.S. Ex. 65,548);
506617591-7594 (U.S. Ex. 20,759) (U.S. Ex. 75,191); 506617595-7596 (U.S. Ex. 20,760) (U.S. Ex. 75,100).

701. Shortly thereafter, the details of "Operation Downunder" were presented to the Tobacco Institute's Communications Committee for implementation by committee chairman Guy L. Smith, Philip Morris Vice President, who had been responsible for coordinating the June 1987 Philip Morris "Operation Downunder" conference held at Hilton Head. According to the minutes of the February 3, 1988 Communications Committee meeting, John Rupp of Covington & Burling and Lee Stanford of Shook, Hardy & Bacon were present along with representatives of all Defendants. The Minutes recorded the following:

Chairman Smith outlined "Operation Downunder," a program to support and extend widely the position of the industry on the ETS issue in order to slow the decline in social acceptability of smoking and create a more favorable legislative and regulatory environment at all levels of government. In essence, it will position the industry as positive, enlightened, and supportive of its customers while pressing for accommodation of smokers and nonsmokers in all social contexts without government intervention. . . .

It was the unanimous view of the committee members that development of the project should continue rapidly, and that the chairman should appoint a working subcommittee of company and

staff representatives to guide the development and implementation.

TIDN0005811-5812 at 5811 (U.S. Ex. 65,558) (U.S. Ex. 75,102); TIDN0008865-8890 (U.S. Ex. 65,559).

702. Industry implementation of "Operation Downunder" was further reviewed and discussed at the March 2nd meeting of the Tobacco Institute's Communications Committee, a meeting that included Sam Chilcote, President of the Tobacco Institute, and John Rupp, Covington & Burling lawyer. At this meeting, the industry (except Philip Morris) decided to continue their opposition to any policy of separating smokers and nonsmokers in restaurants, hotels and other public places. TIOK0031137-1143 (U.S. Ex. 65,703) (U.S. Ex. 75,110); TIOK0031144-1160 (U.S. Ex. 65,704).

703. On June 16, 1988, Sam Chilcote told the Tobacco Institute Executive Committee on June 16, 1988 that the Tobacco Institute and its member companies had discussed Operation Downunder "on numerous occasions" and that they were now tasked to "move forward with an expanded comprehensive effort" to deal with the ETS threat. At this meeting, Chilcote laid out the industry's "new and expanded approaches": utilizing mail, media, and outside scientists. The overarching goals were (1) "to defeat or lessen all smoking restrictions;" and (2) "to slow the decline of [the] social acceptability of smoking." These goals were to be achieved through funding the Center for Indoor Air Research, promoting ventilation to many audiences, intensified lobbying efforts, making use of the media, establishing smokers' rights groups, and "pointing a finger at rude anti-smokers." TIDN0008865-8890 (U.S. Ex. 65,559) (U.S. Ex. 75,103).

704. Philip Morris and Covington & Burling also presented "Operation Downunder" to

SECTION IV.C.

BATCo and other European cigarette manufacturers to bring them on board as part of what would become a complex worldwide ETS program. Sharon Boyse, Scientific Director of BATCo, took detailed notes of a "special meeting of the UK Industry on Environmental Tobacco Smoke" held in London on February 17, 1988 at which the details of Downunder were outlined. 401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 2060563936-3941 (U.S. Ex. 66,813) (U.S. Ex. 79,164); 321140944-0949 (U.S. Ex. 20,586). Boyse explained the plan, which would come to be known as the ETS Consultancy Program:

Philip Morris presented to the UK industry their global strategy on environmental tobacco smoke. In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they are proposing, in key countries, to set up a team of scientists organised by one national coordinating scientist and American lawyers, to review scientific literature and carry out work on ETS to keep the controversy alive.

401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 2060563936-3941 (U.S. Ex. 79,164); 321140944-0949 (U.S. Ex. 20,586); see also U.S. FPF § IV.C (5) (c), infra (discussing in detail the ETS Consultancy Program).

705. The Boyse record of the meeting parallels the recommendations that came out of "Operation Downunder" in June 1987. In fact, Helmut Gaisch, Director of Philip Morris Europe Science and Technology Division, announced at the meeting with the other companies that their ETS strategy had been established in the United States at a meeting between Philip Morris and Covington and Burling, who were "the lawyers acting for the Tobacco Institute of the USA." There can be no doubt Gaisch is referring to the "Operation Downunder" conference. David Remes, a Covington & Burling attorney, told the group assembled in London that the lawyers

would "act as intermediaries between the consultants and the industry," and "filter" the information from the consultants to "eliminate areas of sensitivity." He also stated that, "The Center for Indoor Air Research that Philip Morris, RJR and Lorillard have set up in the US was mentioned as a further development of this strategy." 401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 321140944-0949 (U.S. Ex. 20,586).

706. On January 4, 1988, the "Downunder" strategies were introduced and accepted by the Tobacco Institute's Executive Committee, and on February 18, 1988, R.J. Reynolds, Lorillard, Liggett, and American were invited by the Tobacco Institute to assist with the development of "Project Downunder." 506617591-7594 (U.S. Ex. 20,759) (U.S. Ex. 75,191); 506617595-7596 (U.S. Ex. 20,760) (U.S. Ex. 75,100).

707. A February 21, 1988 memorandum from Helmut Gaisch acknowledged the role of Philip Morris's Science & Technology Division, Covington & Burling, and Shook, Hardy & Bacon in "The European Counterpart to 'Operation Downunder.'" According to Gaisch, the ETS "Project" had two components: "a corporate affairs side (i.e. Big Chill) and a scientific side (i.e. indoor air quality research)." Gaisch's memorandum also stated that Covington & Burling attorneys would act as intermediaries between scientists and laboratories on one hand, and the cigarette manufacturers on the other. 2028343858-3860 (U.S. Ex. 75,086) (U.S. Ex. 75,165).

708. The phrase "Big Chill" used by Gaisch referred to the "unifying strategy" of Philip Morris, as memorialized and agreed upon at the "Operation Downunder" conference in June 1987, to "chill anti-smoking rhetoric" through a "major media campaign defining PM as reasonable on the ETS issue." An August 12, 1987 letter from Guy L. Smith, Vice President,

SECTION IV.C.

Corporate Affairs of Philip Morris, to Thomas Osdene, Director, Science & Technology of Philip Morris, titled "Operation Downunder Implementation" stated that "January 12, 1988 ha[d] been selected as the public launch date for "The Big Chill." 2021502679-2683 at 2679 (U.S. Ex. 26,057) (U.S. Ex. 75,077) (U.S. Ex. 75,078); 2021502671-2678 at 2671 (U.S. Ex. 22,950) (U.S. Ex. 75,076); 2023551295-1296 at 1295 (U.S. Ex. 23,681).

709. As ordered, the "Big Chill Strategy" later turned into a "Big Chill Campaign" of media and advertising in an attempt to change public perceptions on passive smoking and stop government intervention. The campaign was funded by each of the Cigarette Company Defendants, including Liggett. 506617633-7651 (U.S. Ex. 24,244); 2045624610 (U.S. Ex. 66,756); TI12191513-1513 (U.S. Ex. 65,461); TI12191475-1533 (U.S. Ex. 85,521); TI07561364;(U.S. Ex. 65,476) TI12050294-0294 (U.S. Ex. 65,476) (U.S. Ex. 87,328); MNAT00751879-1884 (U.S. Ex. 88,794).

710. An August 17, 1988 memorandum, written by Christopher Proctor (currently Head of Science at BATCo) when he served as a research scientist at the Southampton laboratories, discusses CIAR and its articles of incorporation. This document states, in part:

Meetings of the board are held every five weeks in Washington and, in addition to the board members, John Rupp (Covington and Burling), Don Hoel (Shook, Hardy and Bacon), Mary Ward (RJ Reynolds) and a TI representative attend to observe. Rupp and Hoel comment on product liability aspects. **In terms of scientific acceptability, CIAR provides a further buffer between the Company and the third party, yet allows strong control of projects without major in house effort.**

400974598-4600 at 4598, 4600 (U.S. Ex. 47,526) (emphasis added).

711. Operation Downunder was eventually executed on two tracks: (1) a domestic ETS

program through the Tobacco Institute and Covington & Burling that created and utilized seemingly "independent" consultants and front organizations such as CIAR, IAPAG, and CEHHT, to counteract the scientific consensus that linked certain adverse health effects to passive smoking; and (2) a parallel and coordinated international ETS program through Covington & Burling that created and utilized seemingly "independent" consultants and front groups such as ARIA, IAI, EGIL, ACVA/HBI and others to create the illusion of an international controversy on ETS. These two tracks consistently denied any proven ETS health risk, attempted to dilute the ETS issue by pulling it into a discussion of "indoor air quality" generally, and omitted their connection to Defendants. 401033325-3328 (U.S. Ex. 24,099); TITX0025965-5968 (U.S. Ex. 85,522); 87697186-7193 (U.S. Ex. 88,587); TITX0038050-8057 (U.S. Ex. 85,523); TIDN0008310-8312 (U.S. Ex. 85,524); TI07560615-0619 (U.S. Ex. 65,472); TIOK0023599-3602 (U.S. Ex. 65,701); 2501152077-2091 (U.S. Ex. 25,597); 300538976-8978 (U.S. 88,778); 2023542584-2586 (U.S. Ex. 87,329).

(c) The ETS Consultancy Program

712. The ETS Consultancy Program was an offshoot of Operation Downunder. In the late 1980s, Defendants, led by Philip Morris and industry attorneys, intensified their efforts to identify and fund industry friendly scientists around the world to attack the science linking ETS exposure to disease in furtherance of its Downunder program goals. This ambitious undertaking was referred to as, among other things, the ETS Consultancy Program. The project description revealed its scale and focus:

In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they are

proposing, in key countries, to set up a team of scientists organized by one national coordinating scientist and American lawyers, to review scientific literature or carry out work on ETS to keep the controversy alive. They are spending vast sums of money to do so, and on the European front Covington & Burling, lawyers for the Tobacco Institute in the USA, are proposing to set up a London office from March 1988 to coordinate these activities.

2060563936-3941 at 3936 (U.S. Ex. 79,164); 401247331-7336 at 7331 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 321140944-0949 at 0944 (U.S. Ex. 20,586).

713. According to a facsimile memorandum from J. Kendrick Wells to Nick Cannar, Senior Counsel for BATCo, the "central charge" of the ETS Consultancy Program was "to arrange public appearances and statements by the consultants," to give the appearance of independent, third party endorsement of the Enterprise's position on ETS. Wells further explained that "the consulting groups consist of scientists who will speak on the issue of ETS and who have been horse-shedded by John [Rupp] to ensure that their opinions support the industry's position on ETS and that their answers to the inevitable questions about the primary issue do not undercut the industry." 401033325-3328 at 3325 (U.S. Ex. 24,099).

714. A January 1992 BATCo document entitled, "Industry ETS Consultancy Programmes," highlighted the lack of credibility of the industry and the need to find "independent" spokespersons for the industry. The document notes that BATCo's relationship with Philip Morris and Covington & Burling, as well as its increasing participation in consultancy programs will provide it with increasing access to "independent" consultants. 300515335-5340 at 5335-5336 (U.S. Ex. 46,568).

715. The ETS Consultancy Program was sometimes referred to as the "Whitecoat

Project,” the “ETS consultancy,” or the “ETS scientific witness team.” Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 136:6-13.

716. In the late 1980s and the 1990s, Defendants shared the costs of the law firm efforts to develop scientific witnesses and evidence through the Tobacco Institute. The project was to "be independent from, but work cooperatively with, bodies such as INFOTAB and the US CIAR." In the 1990s, a "priority for the project [was] to address product liability concerns in all international markets including the U.S." Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 51:13-52:5, 173:14-174:12; Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 144:13-146:8; Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 67:12-68:17; 2021001643-1645 (U.S. Ex. 20,338) (U.S. Ex. 75,223); 2500017054-7063 (U.S. Ex. 10,543) (U.S. Ex. 75,093); 321140944-0949 at 0944 (U.S. Ex. 20,586); 2501152342-2344 (U.S. Ex. 20,017) (U.S. Ex. 75,184) (U.S. Ex. 75,263); 2501254705-4708 at 4705 (U.S. Ex. 75,267) (U.S. Ex. 75,382); 700528234-8234 (U.S. Ex. 88,793).

717. The international ETS Consultancy Program was an extension and amplification of multifaceted domestic initiatives by industry counsel to counter ever-mounting evidence implicating secondhand smoke as a cause of disease and other health problems; however, Defendants acted on a global scale. Through this program, Defendants worked to identify, "educate," and financially reward scientists in every world market to generate research results, present papers, pen letters to scientific journals, plan and attend conferences, and publicly speak on behalf of the cigarette companies. The overarching goal was to "keep the controversy alive"

and forestall legislation and any restrictions on public or workplace smoking. 2023590685-0687 (U.S. Ex. 37,027); 2023590786-0788 (U.S. Ex. 85,525).

718. Thus, the international ETS Consultancy Program resembled and modeled itself in many respects after the program already established and underway in the United States through the Tobacco Institute and Covington & Burling under the codename "Project Downunder." TIDN0007059-7110 (U.S. Ex. 65,551).

719. Defendants used the worldwide ETS Consultancy Program as a mechanism to distort and deny the health risks associated with passive smoking. Defendants accomplished this, in parallel with their domestic ETS attack, by funding and developing a network of seemingly "independent" and "objective" scientists to advance the goals of the companies themselves, protect public smoking, and secure the continued profitability of the cigarette manufacturers.

720. A July 1989 overview of the ETS Consultancy Program produced by Philip Morris in this litigation, provides an illustration of the size and complexity of the program. The 1989 document states that some seventy scientists had been recruited in Europe, Asia, Australia, and Canada. This number included forty-nine scientists who were university-affiliated and twenty-one who were private. The consultants were sent to thirty-six scientific conferences in 1989, published some forty-three papers, published three books in seven languages, delivered over seventy scientific and political briefings, published several books, gave over 1100 media interviews, and signed ten affidavits in an Australian ETS lawsuit (AFCO). According to the memorandum, this effort was managed by some thirty attorneys and cost approximately \$3.5 million in consultant and legal fees in 1989. Defendants would later expand the consultancy

program into Central and South America. 2024255285-5288 (U.S. Ex. 85,526); 2500048772-8781 (U.S. Ex. 85,527).

721. The numbers in the 1989 memo did not include ETS consultants in the United States working for the industry and its law firms (e.g., the Center for Indoor Air Research).

722. The ETS Consultancy Program was as much about the tobacco companies as it was about their law firms. The guiding force and structure behind the tobacco industry's comprehensive ETS program was stated in a February 20, 1988 "personal and confidential" memo written by Covington & Burling attorney David Remes describing the initiative in Europe (EEC) and Eastern Europe/Middle East/Asia (EEMA):

The objective of the PM EEC/EEMA ETS Project is to prevent the imposition of smoking restrictions in the EEC/EEMA regions based on the asserted health hazards of ETS to non-smokers. To realize this objective, three audiences must be persuaded that the health claims by anti-smoking forces concerning ETS are groundless. Those three audiences are the scientific community, regulatory authorities, and the general public. . . . For this purpose, scientists must be available who can attack the studies relied on by the anti-smoking forces to justify smoking restrictions on health grounds. Scientists and engineers also must be available who can demonstrate that any irritation to non-smokers from ETS can and should be mitigated through improvements in ventilation/filtration systems . . . [because] [s]olving the ETS "problem" should be made part of solving the more general indoor air quality problem."

2501474253-4259 at 4253 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

Remes explained Defendants' view that organizing scientific witnesses to attack the weakness in evidence supporting the harmfulness of ETS was the best way to maintain an "open controversy" on ETS and avoid smoking restrictions. He further explained that Covington & Burling, as an outside entity, was in a better position than its client, Philip Morris, to coordinate a multiple tobacco company effort on ETS. 2501474253-4259 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

723. Other documents show that Shook, Hardy & Bacon played a central role in the organization and management of the international program along with Covington & Burling:

The [ETS Consultancy] Programme is divided geographically into two parts:

(a) Europe, Middle East - organized by Helmut Gaisch (Neuchatel) and John Rupp (Covington & Burling)

(b) Rest of World - organized by Don Hoel (Shook, Hardy & Bacon).

401033488-3491, (U.S. Ex. 85,528); see also 401033609-3609 (U.S. Ex. 47,533) ("You are right about the tension between Hoel and Rupp.").

724. While the total cost of the worldwide ETS program has not been ascertained, the 1993 annual budget for the European, Asian, and Latin American programs alone was \$3 million, which is a sum described as a "substantial decrease" from the prior year." Financial responsibility for program was shared among Philip Morris, BAT, Japan Tobacco, Inc., RJ Reynolds, Brown & Williamson, and Rothmans, drawing "funds from a central budget (shared by all participants)." 2023590685-0687 at 0685 (U.S. Ex. 37,027); 2023590464-0466 (U.S. Ex. 85,529); (\$3.4 million projected for overseas ETS consultancy program in 1992).

725. As discussed below, the international ETS Consultancy Program was deceptive in at least three respects: (1) the program sought to create the false perception that a true "controversy" existed with respect to the adverse health effects of ETS, when there was in fact none; (2) the program sought to create a perception of "independent" scientists when in fact the scientists were working on behalf of and at the insistence of the tobacco industry; and (3) by identifying and hiring only scientists who were willing to dispute ETS health effects and

maintain a pro-industry position, the program contradicted public statements by the industry promising to conduct independent, objective research to find the truth.

(i) Creating and Sustaining an ETS "Controversy"

726. The first prong of the ETS Consultancy Program was to locate or create industry-favorable scientists to "attack" and disprove research finding or merely suggesting that secondhand smoke caused adverse health effects. In this way, the tobacco companies sought to maintain a "controversy" as to the health effects of ETS.

727. The tobacco industry's need to create and maintain ETS "controversy" was stated at a meeting of BATCo, Philip Morris, other European cigarette manufacturers, and Covington & Burling in February 1988. At this meeting, Philip Morris presented the ETS "global strategy" of spending "vast sums of money . . . to keep the controversy alive." 2060563936-3941 at 3936 (U.S. Ex. 79,164); 401247331-7336 at 7331 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 321140944-0949 at 0944 (U.S. Ex. 20,586).

728. The report of the February 1988 industry meeting stated that Philip Morris had prepared a list of prospective scientific consultants and the ETS Consultancy Program was already operating in many European countries. 2060563936-3941 (U.S. Ex. 79,164).

729. This was no surprise. On February 21, 1988, Helmut Gaisch, Director of Philip Morris Europe Science and Technology Division, wrote that the European ETS Consultancy Program was "the European Counterpart to Operation Down under," the industry's vast attack program in the United States to counter and neutralize adverse ETS research and comments. 2028343858-3860 at 3858 (U.S. Ex. 75,086) (U.S. Ex. 75,165).

SECTION IV.C.

730. "Operation Downunder" referred to the worldwide passive smoking strategy formed at the June 1987 Philip Morris conference, part of which included recruiting scientists to dispute the scientific consensus that ETS caused harm. The Downunder strategy was subsequently adopted by the Tobacco Institute and the other manufacturers. The origin, industry adoption, and execution of Operation Downunder is described in detail at U.S. FPF § IV.C (5) (b), supra.

731. Defendants reiterated their desire to "maintain doubt about the science" and "create marketable science" to oppose evidence implicating ETS at a June 17, 1988 meeting of the scientific directors and other representatives of Philip Morris, R.J. Reynolds, Brown & Williamson, BATCo, and the Tobacco Institute. The report from this meeting recited that the Tobacco Institute, with Covington & Burling, was in the process of identifying "expert witnesses" to meet industry objectives. 401033458-3465 at 3462 (U.S. Ex. 85,530).

732. The ETS Consultancy Program began in the late 1980s and continued well into the 1990s. By 1988, the program had ballooned to include over eighty scientists worldwide, outside of the United States. In 1994, an ETS Consultancy Program agenda discussed the continuing objectives of generating research, agreeing on public relations support, and insuring the ongoing recruitment of scientists. 2023542571-2573 (U.S. Ex. 85,531), PMP011726-1728 (U.S. Ex. 88,590); 2021012389-2390 (U.S. Ex. 26,725); 2025838391-8391 (U.S. Ex. 85,532).

733. The ETS Consultancy Program was actually a web of regional programs that were interlocked and synchronized, and sometimes undertook collaborative efforts on behalf of Defendants. For example, approximately sixty ETS consultants from the United States, Canada,

SECTION IV.C.

Asia, and Western Europe took part in a November 1989 symposium at McGill University. The purpose of the symposium was to generate a preemptive "monograph" to "neutralize" the anticipated EPA risk assessment and a parallel Canadian report finding adverse health effects associated with passive smoking. This collaborative effort was planned and managed by Covington & Burling, who billed the Tobacco Institute almost \$700,000 for the conference alone. 2500048508-8515 (U.S. Ex. 20,549); TIDN0021302-1305 (U.S. Ex. 75,291); 2500020313-0332 (U.S. Ex. 22,861).

734. The European ETS Consultancy Program had a 1988 budget of \$2.5 million from Philip Morris alone. That sum allowed the assembly of a "corps of scientific consultants" as well as "contracts with six research laboratories" in Germany, the Netherlands, Switzerland, France, and the United Kingdom. A November 1992 document titled "Revised 1993 Budget: European Consultant Program" lists a budget of \$1.6 million, ostensibly for Philip Morris's share of the costs alone. The "European Consultancy Programme" quickly grew and became a model for consultant initiatives in other regions. 2501474253-4259 at 4255 (U.S. Ex. 22,017) (U.S. Ex. 75,270); 2023590747-0751 (U.S. Ex. 85,533); 2063935003-5003 (U.S. Ex. 85,534); 2500048956-8969 (U.S. Ex. 27,901).

735. According to John Rupp, the ETS Consultancy Program had a 1990 budget of \$800,000 in Asia alone. This industry funding went to the "recruitment and orientation" of ETS consultants (also referred to by Rupp as "education," and then to their strategic "deployment" in China, Japan, the Philippines, Korea, Malaysia, Indonesia, and Hong Kong. In Asia, the supporting companies for Rupp and the ETS Consultancy Program were Philip Morris, R.J.

SECTION IV.C.

Reynolds, BATCo, and Brown & Williamson. Defendants sponsored some 20 consultants in Asia to conduct research related to indoor air quality, publish results favorable to the industry, and infiltrate major conferences and seminars. 300515335-5340 at 5337-5338 (U.S. Ex. 46,568); 2500048999-9001 (U.S. Ex. 85,535); 2500048976-8998 (U.S. Ex. 23,007) (U.S. Ex. 75,377); 2500101311-1323 (U.S. Ex. 20,551); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 182:18-185:11, 187:22-189:19.

736. The Latin American ETS Consultancy Program, also run by Covington & Burling, had a "central budget" as well as a "country-specific component" to fund its recruitment and use of scientists. 1992 and 1994 Philip Morris memoranda indicated that the program (also known as the "Central American Project) was active in Argentina, Brazil, Chile, Costa Rica, Ecuador, Guatemala, and Venezuela with an annual total budget of over \$600,000. 2023591264-1270 (U.S. Ex. 85,536); 2023590386-0386 (U.S. Ex. 85,537); 2023590390-0397 (U.S. Ex. 85,538); 500874585-4585 (U.S. Ex. 85,539); 500874587-4590 (U.S. Ex. 85,540).

737. Defendants' uses of the multifaceted ETS Consultancy Program are contained in a Philip Morris January 31, 1989 report titled "Boca Raton Action Plan." In this report, the company details its worldwide ETS initiatives, including placing consultants in scientific seminars, using consultants to resist aircraft smoking bans, using consultants to oppose restaurant smoking restrictions, the creation of Burson-Marsteller 'News Bureau' programs in Europe for media distribution, and the coordination with other industry groups such as INFOTAB and CORESTA. All of these initiatives helped create the illusion of an ETS controversy. 2021595753-5910 (U.S. Ex. 85,541).

738. Other examples of how Defendants were able to coordinate the use of the worldwide consultants were spelled out in a September 1989 Philip Morris document titled "Boca Raton Action Plan." This report discussed the role of consultants to influence the World Health Organization, to place consultants in conferences around the world, to use consultants in resisting airline smoking restrictions, to place "News Bureau" articles in the media and other initiatives. 2501204997-5021 (U.S. Ex. 22,858).

739. From the outset, the ETS Consultancy Program was designed to perpetuate an illusion of a credible controversy on the health effects of ETS. As stated by the industry in one BATCo document:

It has been apparent to the industry for some time that we do not have sufficient credibility to put forward a position on ETS (or any other issue for that matter) unless we can identify independent scientists who are saying the same thing. If independent scientists back up our position, it becomes more credible, not only to the general public and the media, but to politicians and other decision-makers. . . . Although it is essential for the industry to speak up about its positions, there are some things that are better left to independent scientists to express.

300515335-5340 at 5335 (U.S. Ex. 46,568).

Thus, the objective of ETS Consultancy Program was to use seemingly "independent" consultants both to attack scientists finding links between secondhand smoke and disease and to divert attention away from ETS and onto issues of "air quality" generally. In this way, Defendants could "place ETS in perspective—to demonstrate that a host of serious public health problems needs to be tackled by governments in certain countries before they address other indoor air quality in general, or ETS specifically." 300515335-5340 at 5337 (U.S. Ex. 46,568).

740. Many internal documents lay out the collaborative and global activities of the various tobacco companies to perpetuate a "debate" on the health effects of secondhand smoke. Other documents recommended that the industry go on offense and do even more, such as "establish affirmatively that ETS presents no significant health risk to non-smokers." 2501474253-4259 at 4254 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

741. Another Philip Morris document noted that, "The strategic objective for S&T [Science & Technology] PME [Philip Morris Europe] is to go beyond the establishment of a controversy concerning an alleged ETS health risk but to disperse the suspicion of risk." To meet this "strategic objective," "S&T PME continue[d] to consult with S&T Richmond , with C&B [Covington & Burling] and with SH&B [Shook, Hardy & Bacon]." 2028343858-3860 (U.S. Ex. 75,086) (U.S. Ex. 75,165) (emphasis in original).

742. The range of activities for the ETS Consultancy Program was as extensive as it was well-organized. For example, in 1989, after only two years of participating in the program, Philip Morris vice president Andrew Whist reported to Philip Morris International president Geoffrey Bible (who later became CEO of Philip Morris) that:

several hundred specific activities or events have been completed. These have included numerous press briefings, repeated briefings of important government officials, the publication of a number of review articles on the science of ETS, several air quality monitoring studies, convening of a number of scientific conferences, submission of comments on smoking restriction proposals being considered in a number of countries, testimony before a variety of legislative bodies, preparation and submission of affidavits and offers of proof in cases involving claims concerning ETS, publication of a book ("Clearing the Air") that seeks to put ETS into proper perspective, drafting of two additional books on ETS and indoor air quality issues, and approximately 100

separate presentations at major international scientific meetings challenging the unwarranted health claims that have been made concerning ETS.

2023034623-4632 at 4623 (U.S. Ex. 26,775).

743. A July 24, 1991 list of consultant "selections" by Covington & Burling, titled "Latin American Candidate Recommendations," showed how the industry only used scientists who were willing to toe the industry line, dispute the health risks associated with secondhand smoke, and generate the necessary "controversy." In the list, later approved by Philip Morris via letter dated July 25, 1991, Covington & Burling provided the details and qualifications of many scientists, but recommended only those whose pro-Industry views had been verified. For example, Carlos Alvarez from Buenos Aires had "already consulted for the companies in lawsuits involving cardiovascular disease from ETS exposure. Clearly, he shares the industry view on this issue." Eduardo Gros not only smoked, but had previously worked with BATCo scientist Chris Proctor. Covington & Burling had verified that Osvaldo Fustinoni of Argentina "does not believe that ETS poses a major health risk." On the other side, Morton Schienberg of Brazil was rejected because he and his wife "despise cigarettes and do not let anyone smoke in their house or around them." 2503001504-1519 (U.S. Ex. 85,542).

744. Another Covington & Burling document, dated April 10, 1989, detailed "selections" by their lawyers of consultants in Asia, again on the basis of their pro-industry views. The document described how the attorneys would make contact with potential consultants, withholding their affiliation with the tobacco companies until they were confident that the researcher was someone they wanted. The Covington & Burling attorneys would then

give him or her a "packet" of ETS materials for review and comments. The researcher's value as a consultant was then determined by these comments. 2500048643-8654 (U.S. Ex. 22,857).

745. Defendants' hand-picked ETS consultants were put to good use on behalf of the tobacco industry its efforts to defeat ETS-related regulation. For example, Cigarette Company Defendants (through co-defendant Tobacco Institute and its law firms) assembled and submitted many consultant opinions and studies to the U.S. Environmental Protection Agency in 1990 in response to the proposed ETS Compendium of Technical Information and the EPA Risk Assessment. 507775919-5963 (U.S. Ex. 85,543); 2021183709-3736 (U.S. Ex. 26,054); 87653565-6821 (U.S. Ex. 88,596).

746. The illusion of "controversy" was perpetuated in the press as well, where Defendants' consultants were used with no reference to their cigarette manufacturer benefactors. For example, a June 28, 1989 article in the South China Morning Post, in an article titled "Passive Smoking Fears Played Down," made the following reference to industry ETS consultant George Leslie:

An independent British scientist yesterday played down fears about passive smoking. Mr. George Leslie, a British consultant toxicologist, said published studies show a non-smoker would need to spend hundreds to thousands of hours in a public smoking area to take in the equivalent nicotine amount of one cigarette. . . .

2501204902-4902 (U.S. Ex. 85,544).

- (ii) Hiding the "Fingerprints": Masking Industry-Favorable and Law Firm-Controlled Consultants Behind a False Veil of Scientific "Independence"

747. As the second prong of the program, Defendants sought to create a source of

seemingly "independent" industry-favorable consultants to support the industry's position on secondhand smoke, primarily through their in-house and external counsel. This was intended to not only create an illusion of "controversy," but to create an illusion that the "controversy" was among "independent" scientists. As demonstrated below, the global effort to create and manage this illusion by masking the ties between the consultants and the Cigarette Company Defendants spanned years and required intensive coordination among the companies and their counsel.

748. The two primary law firms involved in finding these "independent" consultants and creating a "buffer entity" between scientists and their patron cigarette companies were Shook, Hardy and Bacon and Covington & Burling. In the words of Covington & Burling attorney David Remes, the lawyers were entrusted to locate a "corps of scientific consultants and engineers in each market" around the world. "Unsuitable candidates" had to be "weeded out." Covington & Burling used an entity called the Center for Environmental Health and Human Toxicology in Washington (CEHHT) to review the publications of prospective consultants to do the weeding. The guidance was that, "Candidates who ha[d] made public statements adverse to the industry on the primary health issue generally [we]re avoided." 2501474253-4259 at 4256 (U.S. Ex. 22,017) (U.S. Ex. 75,270); 2028355892-5903 (U.S. Ex. 85,545).

749. Philip Morris regional counsel Frederick Dulles memorialized a May 12, 1987 meeting with Covington & Burling attorneys and company in-house counsel to discuss "ETS-Legal Arrangements for European Consultants." In this memorandum Dulles discussed the possible creation of a "European Center" and recalled that:

John Rupp believes that the only way to keep studies, documents, and correspondence between external experts and the Company

from being "discoverable" (available to opposing parties and eventually subject to submission in court) in litigation, through the use of the 'attorney-client privilege,' would be to have a lawyer or law firm act as an intermediary. . . . In the U.S., Covington & Burling pays the invoices for independent experts on ETS and rebills the U.S. Tobacco Institute. . . . While the issues involved in establishing the European Center are being worked out, all outside scientists engaged on ETS matters will work through John Rupp, Covington & Burling, Washington.

2023542571-2573 (U.S. Ex. 85,531).

750. The Dulles memo shows that the law firm "buffer" was already in place in the United States, and the industry sought to export this structure ("independent" consultants paid by Covington & Burling, Covington & Burling paid by Tobacco Institute, Tobacco Institute funded by the cigarette manufacturers) to create two additional layers of potentially "protected" documents between the consultants and the cigarette manufacturers. In this way, the statements of the consultants would not be legally attributable to Philip Morris or the other defendants, and outsiders would have no means to obtain the "privileged" documents showing the true connection. 2023542571-2573 (U.S. Ex. 85,531).

751. Helmut Gaisch, Philip Morris Science & Technology Director, reiterated the role of attorneys as intermediaries: "S&T PME will systematically use C&B as legal intermediates with scientists and testing laboratories S&T PME uses SH&B as legal intermediate for the organisation of scientific events." 2028343858-3860 at 3859 (U.S. Ex. 75,086) (U.S. Ex. 75,165).

752. On July 15, 1988, company representatives (Philip Morris, R.J. Reynolds, BATCo and others) along with Covington & Burling, and Shook, Hardy & Bacon lawyers attended a

"Joint Meeting on ETS" at which they plotted the continuing industry ETS strategy of generating "marketable science" to use for public relations purposes. As one company representative told the group, "In providing this [ETS] information, the industry must be inconspicuous." Otherwise, he argued, the public will suspect the authenticity of the information." He recommended the use of third parties to convey Defendants' message. This tactic of hiding the Defendants' management and funding of the ETS consultants' work was adopted by Defendants and their lawyers. 2021548222-8235 at 8234 (U.S. Ex. 20,349).

753. Covington & Burling would bill the companies for the services rendered by the consultants, to avoid direct payments to the consultants from the companies themselves. 2023591935-1938 (U.S. Ex. 22,855); 2023856337-6349 (U.S. Ex. 23,709); 2023856390-6391 (U.S. Ex. 85,546); 2023856119-6119 (U.S. Ex. 85,547); 2023592502-2502 (U.S. Ex. 23,701) (U.S. Ex. 75,236); 2023591935-1938 (U.S. Ex. 22,855); 700534102-4103 (U.S. Ex. 87,331); 321324827-4827 (U.S. Ex. 87,332).

754. In some cases, additional layers were erected between the companies and the consultants to hide the tobacco connection. For example, the European ETS Consultancy Program created and employed other groups to organize and pay consultants, such as Associates for Research on Indoor Air ("ARIA"), the Indoor Air International ("IAI"), Scientific Consultancy Services ("SCS"), and EGIL (a Swedish acronym for Expert Group on Indoor Air). Thus, the consultant would bill ARIA, ARIA would bill Covington & Burling, Covington & Burling would bill the Tobacco Institute, and Defendants would make contributions to the Tobacco Institute to fund its payments to the consultants. 2023592986-2998 (U.S. Ex. 85,548);

SECTION IV.C.

2023592793-2797 (U.S. Ex. 20,394); 2063780058-0058 (U.S. Ex. 22,863); 2501152077-2091 (U.S. Ex. 25,597); 2500048956-8969 (U.S. Ex. 27,901); 2023592502-2502 (U.S. Ex. 23,701) (U.S. Ex. 75,236).

755. Industry consultant front organizations created by the tobacco industry, such as ARIA and IAI, were also used to "independently" organize conferences, attend conferences, and publish pro-industry papers on ETS issues. These organizations even published books on ETS and journals. 2500019903-9911 (U.S. Ex. 25,337); 2500048956-8969 (U.S. Ex. 27,901).

756. ARIA was an organization founded in 1988 by industry ETS consultants Francis Roe, George Leslie, and Frank Lunau. On October 25, 1988, these three men gave a presentation and progress update regarding ARIA to Philip Morris executives in Neuchatel. Covington & Burling monitored the organization and attended its meetings. 2500048956-8965 at 8960 (U.S. Ex. 27,901); 2501152077-2091 at 2089 (U.S. Ex. 25,597); 300538945-8954 (U.S. Ex. 85,549).

757. ARIA worked for the industry and Covington & Burling not only in the United Kingdom, but also in Asia. In addition, George Leslie personally traveled with John Rupp to identify and recruit industry ETS consultants. 300541891-1894 (U.S. Ex. 85,550); 300541877-1877 (U.S. Ex. 85,568).

758. Similarly, IAI was created in October 1989 exclusively by Defendants' paid European ETS consultants, notably Francis Roe, Frank Lunau, George Leslie, and Max Weetman. Covington & Burling managed the creation of IAI, publicly presented it as an "international learned society," and drafted the organization's bylaws ("statutes"). 2021598978-8991 at 8981, 8986 (U.S. Ex. 23,604) (U.S. Ex. 23,605); 2028440936-0950 at 0940 (U.S. Ex.

75,243); 2028467020-7028 (U.S. Ex. 85,551).

759. IAI was originally funded by Philip Morris, through the Covington & Burling conduit, until other industry funding/companies could be located. Covington & Burling billed Philip Morris for services it performed in connection with IAI. BATCo later participated in the funding of IAI's ETS activities. 300538942-8943 (U.S. Ex. 85,552); 300511564-1568 (U.S. Ex. 85,553); 2500048951-8955 (U.S. Ex. 85,571); 2500048931-8932 (U.S. Ex. 85,554); 2500049060-9062 (U.S. Ex. 85,555).

760. All of IAI's founding members were industry European ETS consultants and prior members of ARIA, except for Howard Goodfellow, an industry Canadian consultant who had previously been paid by the Tobacco Institute. 300538947-8954 (U.S. Ex. 85,556); 2023592986-2998 (U.S. Ex. 85,548); 2501151940-1955 at 1942 (U.S. Ex. 85,557).

761. In May 1990, the executive director of the Tobacco Advisory Council ("TAC") in the United Kingdom (which was the counterpart to the United States' Center for Tobacco Research) announced the formation of IAI to TAC members, and even forwarded an "earnest plea" to the companies "to steer papers for publication in the direction" of IAI. for publication in the new IAI. journal. 2028467016-7019 (U.S. Ex. 85,558).

762. IAI's publications and newsletters omitted any connection to the tobacco industry or tobacco law firms, both with respect to its inception and to its upcoming programs. Instead, its publications stated that the organization was merely a "learned society" dedicated to "promoting indoor air quality." 2028467035-7042 (U.S. Ex. 85,559); 2028467029-7034 (U.S. Ex. 85,560); 2023545366-5369 (U.S. Ex. 23,680); 325297289-7360 (U.S. Ex. 85,561).

763. IAI was a front group that allowed the industry ETS consultants to avoid admitting any association with Defendants. Helmut Gaisch, Philip Morris Director of Science & Technology, stated in an October 1989 memorandum that "The purpose of the creation of such an organisation is to provide a scientific "home" . . . in order to make sure that independent scientists can identify with a professional organisation and do not have to resort to giving vague explanations as to whom they are associated with." 2028440936-0950 at 0940 (U.S. Ex. 23,819) (U.S. Ex. 75,243).

764. The association with, and support of, IAI through Covington & Burling and the cigarette companies was intended to remain secret. In September 1991, Anthony Andrade, a Shook, Hardy & Bacon attorney seconded to Philip Morris in Lausanne in the early 1990s, wrote Mary Pottorff, Manager in Scientific Affairs, Philip Morris, expressing his concern that Philip Morris Science and Technology should avoid direct involvement with consultants actively working with Covington & Burling:

C&B should not recruit as consultants any scientists actively working for S&T. . . . There is a grave risk that IAI members may be compromised if they have a direct relationship with Philip Morris S&T. The best example would be Dr. Weetman. Dr. Weetman is obviously a critical leader in the C&B consultant program and IAI, and his potential usefulness could be jeopardized by his direct consulting relationship with PM S&T. Dr. Skrabanek is a second example.

2023856321-6328 at 6321-6322 (U.S. Ex. 22,037).

765. Geoffrey Bible, then President and CEO of Philip Morris International, was kept informed about progress made by the Defendants dealing with their ETS concerns. In 1991

Helmut Gaisch, Philip Morris Director of Science & Technology, wrote to Bible stating that he believed that Bible would find the status of the projects interesting since most were initiated during Bible's tenure as President of PMI. Gaisch emphasized the ability of industry ETS consultants and their front groups to appear "independent" of the Cigarette Company Defendants. Clearly, Philip Morris's investment in Covington & Burling and the consultancy program was paying dividends:

ARIA, an informal group, and IAI, a registered association, have made quite some progress during the recent months. It should be stressed that most act independently and are **seen to be independent of us**. IAI, Indoor Air International, who deal with the broad topic of the indoor environment, have a newsletter and a learned journal published by the respected Swiss scientific publishing house Karger. IAI have conducted large and successful international meetings in Lisbon and Montreux. IAI will jointly sponsor meetings in the near future with universities, government agencies and independent societies in Paris, Pavia, Perugia, Budapest, Prague, Bangkok, Bratislava, Athens and Rotterdam. . . . IAI members have met with governmental ministers and officials in several countries. . . . In all, no other resource gives the industry any similar access to the scientific community, government and those who make decisions about IAQ issues and standards. The key to this success is that an institution of growing professional authority was created, an institution that has developed an identity of its own.

2023856111A-6112 at 6111A-6112 (U.S. Ex. 23,708) (U.S. Ex. 75,237) (emphasis added).

766. In 1995, the IAI changed its name to the International Society of the Built Environment ("ISBE") and the IAI journal title was changed to "Indoor+Built Environment." The ISBE is still in existence today, continues to publish materials and hold conferences, and is still run by industry ETS consultants. TLT0500003-0506 (U.S. Ex. 65,083).

767. Philip Morris, JTI and R.J. Reynolds were sharing expenses for ISBE conferences

as late as 1998. 2063651094-1096 (U.S. Ex. 75,250).

768. In 1998, Ted Sanders, Director of Worldwide Scientific Affairs of Philip Morris, sent Richard Carchman, Vice President of Scientific Affairs of Philip Morris, a nineteen page document titled "WSA Consultant Evaluation exercise." The document explains how the ETS Consultancy program evolved after the early 1990s and eventually was subsumed by Philip Morris WSA ("Worldwide Scientific Affairs"):

European Consultant Program: This program which WSA inherited approximately one year ago, has gone through and is continuing to go through significant changes. The program, which dates back about ten years, was originally administered through C&B [Covington & Burling]. Once the program was transferred to WSA, scientists took on an active role in managing the program. That role has continued to expand to the point that for the first time in the program's history, face to face contact between the three principal consultants involved in the program and WSA scientists has been initiated. The three principal consultants involved are Dr. George Leslie, Dr. John Hoskins, and Dr. Max Wetman [sic]. By the end of next week I will have CV's on each on these three individuals which will be transmitted to you. At that time I think that further discussions are necessary to determine both how best to utilize these consultants and to ensure that this can be done.

2063593946-3946 (U.S. Ex. 24,025) (U.S. Ex. 75,249).

769. Helmut Reif, Director of Scientific Affairs for Philip Morris, met with John A. Hoskins, Max Weetman and George Leslie to discuss future arrangements for their consultancy program with Philip Morris WSA on May 26, 1998. Additionally, in November 1999, the three consultants visited the Philip Morris Worldwide Scientific Affairs facility in Neuchatel, Switzerland and discussed areas of mutual interest, as well as coverage by paid consultants at scientific meetings in 1999. 2060565811-5814 (U.S. Ex. 75,247); 2078462906-2909 (U.S. Ex.

23,029) (U.S. Ex. 75,367); 2023054167-4167 (U.S. Ex. 75,232).

770. While Covington & Burling attorneys were locating "suitable" consultants to offer pro-industry views to the scientific community, Shook, Hardy & Bacon attorneys were infiltrating and orchestrating "conferences, symposia, and major public hearings . . . to assure representation of the industry position" on ETS issues worldwide. 2501474253-4259 at 4257 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

771. Like Covington & Burling, Shook, Hardy & Bacon attorneys made certain that only pro-industry scientific consultants were recruited, that the lawyers served as intermediaries between the scientists and the companies, and that the companies worked in concert. In a letter dated June 28, 1988 from Donald Hoel, Shook, Hardy & Bacon attorney, to Todd Solis of Philip Morris, Hoel wrote with respect to the firm's ETS-related services that:

One of the most important roles assumed by SHB in the scientific development of the ETS issue is that of liaison between the researchers and sponsoring members of the tobacco industry. By facilitating communication among all parties involved, maximum cooperation can be achieved. This helps assure PM of a ready source of scientists prepared to address the ETS issue at public hearings and scientific conferences as needed.

Since 1974, SHB has been actively engaged in the organization and development of ETS conferences and symposia Once the proceedings from these conferences are published, they provide information that is useful in dealing with the attacks of anti-smoking activists.

SHB is instrumental in organizing the tobacco industry's response to the ETS issue Only by a coordinated effort can PM and the tobacco industry effectively counter what has become the favorite issue of the anti-smoking zealots.

2015007199-7207 at 7206 (U.S. Ex. 20,311).

772. Similarly, David Remes, an attorney with Covington & Burling, stated in a memorandum that his firm for "legal and logistical" reasons could serve as a "hub of a multi-company ETS effort." 2501474253-4259 at 4259 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

773. The need to use a law firm "buffer" was plain to Defendants. In a memorandum dated December 12, 1988 from Stig Carlson of Philip Morris, to Charles Lister, an attorney with Covington & Burling, Carlson listed some specific industry ETS initiatives in Scandinavia, emphasizing the need to use different "contact" points to "avoid the infamous 'fingerprints'" of the cigarette companies. 2501255446-5447 at 5446 (U.S. Ex. 85,562).

774. The covert method of recruiting industry-favorable ETS consultants to "maintain controversy" was described in an earlier BATCo document. This memorandum explained how the fact of tobacco industry funding was kept from scientists being recruited until the "screening" lawyers were confident that the scientist had a pro-industry slant:

The mechanism by which they identify their consultants is as follows: they ask a couple of scientists in each country . . . to produce a list of potential consultants. The scientists are then contacted by these coordinators or by the lawyers and asked if they are interested in problems of Indoor Air Quality: tobacco is not mentioned at this stage. Cvs are obtained and obvious "anti-smokers" or those with "unsuitable backgrounds" are filtered out. The remaining scientists are sent a literature pack containing approximately 10 hours reading matter and including "anti-ETS" articles. They are asked for a genuine opinion as independent consultants, and if they indicate an interest in proceeding further a Philip Morris scientist makes contact.

2060563936-3941 at 3938 (U.S. Ex. 79,164).

775. The same memo clearly indicated that these scientists are not intended to act as "independent consultants." Rather, "Philip Morris [] expects the group of scientists to operate

within the confines of decisions taken by PM scientists to determine the general direction of research, which apparently would then be **'filtered' by lawyers to eliminate areas of sensitivity.**" Indeed, Philip Morris's core strategy was that these scientists "should be able to produce research or stimulate controversy in such a way that public affairs people in the relevant countries would be able to make use of, or market: the information." 2060563936-3941 at 3938-3939 (U.S. Ex. 79,164) (emphasis added).

776. In a February 4, 1987 memorandum from Mary Pottorff, Manager of Corporate Affairs for Philip Morris International, to Bill Murray, Vice Chairman of Philip Morris, Pottorff reiterated Covington & Burling's method of anonymously asking scientists to comment on ETS literature in order to assess their suitability and value as potential tobacco industry ETS consultants. 2501152342-2344 (U.S. Ex. 20,017) (U.S. Ex. 75,184) (U.S. Ex. 75,263).

777. A letter from John Rupp of Covington & Burling dated January 25, 1988 to Philip Morris executives explained the same covert means of "recruiting," and that the Covington & Burling "recruiting" was to proceed are part of the European ETS Consultancy Program (also called the "whitecoat" program) in Scandinavia:

[W]e met with the first three of our Nordic "whitecoat" recruits in December 1987. A meeting has been scheduled for February 1 in Stockholm with three additional recruits. The purpose of the February 1 meeting is essentially the same as the earlier meeting – that is, to explain fully the purpose of the project, to give the scientists who have been recruited the kind of assurances that scientists typically want before embarking on a project such as ours, and to begin to develop a personal relationship with the scientists. . . . Assuming that all goes well at the February 1 meeting, there will be a full meeting of all of our Nordic Region scientists on March 2 and 3. The primary purposes of the March

meeting are training and further orientation. . . . Our goal is to leave the March training/ orientation session with seven scientists completely cognizant concerning the science of environmental tobacco smoke and prepared to share that knowledge with others at the industry's request.

2501474296-4301 at 4296-4297 (U.S. Ex. 27,955) (U.S. Ex. 75,273).

778. BATCo also emphasized the need for the cigarette manufacturers to hide behind a law firm "cover" in order to avoid a "direct association" between the manufacturers and the "independent" consultants. In a 1989 document titled "Industry ETS Consultancy Programmes," BATCo recommends the structure used by the industry in its Asia and Latin America programs, because they were "handled in such a way thanks to Covington & Burling that there was no direct association between the scientists and the tobacco industry." 300515335-5340 at 5336 (U.S. Ex. 46,568).

779. Throughout the existence of the ETS Consultancy Program, Defendants and law firms selected consultants on the basis of their industry-favorable views, not the strength of their resumes. See U.S. PPF § IV.C (5) (c) (i); see also 2503001504-1519 at 1508-1509, 1517 (U.S. Ex. 85,542).

780. While Philip Morris was perhaps the largest force behind the global ETS Consultancy Program, the other Defendants participated in the Program as well. In a 1988 internal memorandum, BATCo scientist Sharon Boyse traced the genesis of the program. Boyse stated that the ETS strategy "had been established in the USA at a meeting between Philip Morris and Covington & Burling, the lawyers acting for the Tobacco Institute of the USA, at a later date R J Reynolds "w[as] also brought in to support some of their US activities, one of these being the

Centre for Indoor Air Research." 401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 2060563936-3941 (U.S. Ex. 79,164); 321140944-0949 (U.S. Ex. 20,586).

781. BATCo recognized that the Cigarette Company Defendants needed to work together to create and perpetuate a secondhand smoke controversy. Boyse applauded Philip Morris for putting "vast amounts of funding into these projects . . . to keep the ETS controversy alive" and recognized that "[i]t is generally felt that this kind of activity is already giving them a market and public affairs advantage, especially in countries in which, until recently, they have played a rather low profile." 401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 2060563936-3941 (U.S. Ex. 79,164); 321140944-0949 (U.S. Ex. 20,586).

782. Boyse provided the following critique of the excessive use of lawyers in Philip Morris' to this end:

Although the industry is in great need of concerted effort and action in the ETS area, the detailed strategy of Philip Morris leaves something to be desired. The excessive involvement of external lawyers at this very basic scientific level is questionable and, in Europe at least, is likely to frighten off a number of scientists who might otherwise be prepared to talk to the industry. Also, the rather oblique initial approach may appear to be somewhat less than honest to many scientists.

401247331-7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190); 2060563936-3941 (U.S. Ex. 79,164); 321140944-0949 (U.S. Ex. 20,586).

783. Nevertheless, BATCo participated in the international ETS Consultancy Program with Philip Morris, R.J. Reynolds, Brown & Williamson, and other cigarette manufacturers. 2500048508-8515 (U.S. Ex. 20,549).

784. The participating companies all knew why the law firms had injected themselves

between scientists and the companies. In October 1988, Kendrick Wells, Assistant General Counsel, Product Litigation for BATCo wrote to Nick Cannar, Secretary and Counsel of BATCo, regarding his discussions with Rupp regarding the role of the law firms with the consultants:

I asked John why the U.K. industry should rely on a U.S. law firm to develop scientific consultants who would be active in Europe. John said it is important to have a law firm play the role of organizing because the firm can, in the process of organization and horse-shedding individual scientists, avoid product liability problems. The law firm also can serve as a buffer between the companies and the consulting scientists, providing both distance and some opportunities for work product protection.

401033325-3328 at 3326 (U.S. Ex. 24,099).

785. An undated Helmut Gaisch memo entitled "Proposal for the Organisation of the Whitecoat Project" described how the program was intended to be 100% pro-industry in its goals. In addition, Gaisch noted the need for Covington & Burling to act as a "legal buffer." Gaisch identified two elements to the consultant proposal:

Pro-active element: a) to generate a body of scientific and technical knowledge in the field of ETS within the PM EEMA and EEC markets. The Project's activities and programmes will include fundamental research, IAQ and IFAQ studies. These will be undertaken by whitecoats, contract laboratories and commercial organisations such as ACVA. b) to disseminate and exploit such knowledge within specific communications programmes in these markets

Reactive element: To provide scientific and technical resources to challenge existing laws; counter specific legislative and regulatory threats; and to respond to scientific misinformation and bias as it arises in these markets.

2501474262-4265 at 4262 (U.S. Ex. 75,271); 2501457517-7522 (U.S. Ex. 22,956); 2501254705-4708 (U.S. Ex. 75,267) (U.S. Ex. 75,382).

786. Gaisch also stated in his memorandum that the "whitecoat" consultancy program would "be independent from, but work cooperatively with, bodies such as INFOTAB and the US CIAR (Center for Indoor Air Research)." The plan provided for Covington & Burling to act as the "legal buffer" between, or "interface" with the cigarette companies and the "whitecoats." 2501474262-4265 (U.S. Ex. 75,271); 2501254705-4708 (U.S. Ex. 75,267) (U.S. Ex. 75,382).

787. A January 25, 1988 letter from John Rupp, Covington & Burling attorney, to Bradley Brooks, in-house counsel for Philip Morris, and Helmet Gaisch, Philip Morris scientist, referred to consultants obtained by the industry in the ETS Consultancy Program as "'whitecoat' recruits" and addressed a planned March 1988 training and orientation of these new recruits on ETS matters. Rupp stated that "[o]ur goal is to leave the March training/orientation session with seven scientists . . . completely cognizant concerning the science of environmental tobacco smoke and prepared to share that knowledge with others at the industry's request." 2501474296-4301 (U.S. Ex. 27,955) (U.S. Ex. 75,273).

788. Whitecoat recruits were intended to create and maintain the ETS controversy by publishing industry-favorable articles and infiltrating symposia to express a pro-industry view on ETS health effects. For example, in a letter dated January 25, 1988 from John Rupp, Covington & Burling attorney, to Bradley Brooks, in-house counsel for Philip Morris, and Helmet Gaisch, Philip Morris scientist, Rupp emphasized a proposed presentation by "whitecoat" scientist Sorell Schwartz:

The topic of Dr. Schwartz's proposed presentation will be ETS and lung cancer in an occupation setting, a topic that should permit him also to comment on the evidence on ETS and respiratory problems. Dr. Schwartz has been working for the past couple of months on a

article that he hopes eventually to submit for publication discussing the U.S. National Academy of Sciences' meta-analysis of ETS and lung cancer. He would hope to be able to present the substance of that draft article at the symposium.

2501474296-4301 at 4296-4298 (U.S. Ex. 27,955) (U.S. Ex. 75,273).

789. The direction of the ETS Consultancy Program was monitored by the Cigarette Company Defendants, both individually and collectively (e.g., through the Tobacco Institute). For example, to insure that proper resources were spent in countries where the tobacco industry was experiencing "problems" with regard to ETS issues, Shook, Hardy & Bacon attorney Anthony Andrade emphasized industry control over the research funded by the ETS Consultancy Program in a memorandum dated September 5, 1991:

I believe we should recommend formal quarterly or semi-annual reviews of the Covington & Burling consultant program to ensure that resources are being appropriately allocated. For example, we need to be in a position to direct C&B to expend more of its resources on Eastern European matters if the problems in that area take a higher priority than ETS issues within the European Community nations.

2023856321 at 6328 (U.S. Ex. 22,037).

790. Many industry documents illustrate how Covington & Burling maintained a buffer between the Cigarette Company Defendants and scientific research done by their paid consultants. For example, a May 1992 Philip Morris document indicated that Covington & Burling had funded ETS research in England and Sweden that cost the industry some \$400,000. The document also revealed that management of the ETS consultants was divided between Covington & Burling and Shook, Hardy & Bacon. 2028355892-5903 (U.S. Ex. 85,545).

791. Other documents illustrate how the purported "independent" consultants published

industry-favorable papers, letters, and other materials while avoiding any attribution to the cigarette companies or their law firms. See, e.g., 2505533679-3705 (U.S. Ex. 22,898); 2026127628-7634 (U.S. Ex. 85,564); 2046053072-3087 (U.S. Ex. 85,565); 2500019903-9911 (U.S. Ex. 25,337).

792. Following an adverse judgment in an Australian court, a group of international cigarette lawyers and public affairs people met in London to consider its implications for the industry. At this meeting,

[o]ne conclusion that was very clear from the industry lawyers was that we [the tobacco industry] had to further develop our resources of independent spokespersons who were not directly associated with the tobacco industry, in order to minimise situations in which we respond as an industry and so potentially lay ourselves open to legal claims. It was agreed that the kind of program that had been going on in the Far East and was being developed in Latin America was ideal, because the scientists were of good quality, were largely prepared to enter a more public arena than scientists normally would, and **the programme was handled in such a way thanks to Covington & Burling that there was no direct association between the scientists and the tobacco industry.**

300515335-5340 (U.S. Ex. 46,568) (emphasis added).

793. Although the law firms had the direct contact with the industry's scientific consultants, so as to maintain a "buffer," the companies reviewed the consultants' progress and provided their input to the law firms. A July 25, 1991 letter from Aurora Marina Gonzalez of Philip Morris International Inc. to Patrick Davis, a Covington & Burling attorney, showed Philip Morris International Inc.'s active and direct involvement in the recruitment of tobacco industry-friendly consultants in the ETS Consultant Program in Latin America. The letter stated that Philip Morris International Inc.'s affiliates will "review [Covington & Burling's]

recommendations an[d] [sic] get back to [Philip Morris International Inc.] as soon as possible so that [Covington & Burling] can plan [its] training seminar in Rio." 2503001506-1507 at 1506 (U.S. Ex. 85,566).

794. Tobacco company control is also evident in a March 14, 1990 "SECRET" document from Sharon Boyse of BATCo to Asian subordinates titled "Far East ETS Project Update." Boyse recalled that the ETS Consultancy Program was truly a collective effort executed by Covington & Burling:

The priorities and budget for the programme were subsequently discussed at a meeting of representatives from supporting companies (BAT/B&W, Philip Morris, R J Reynolds, Rothmans, and JTI) in Hong Kong on March 7th. Details of that meeting are now reported. . . . It was agreed that regular meetings of representatives from the five major supporting companies (BAT/B&W, PM, RJR, Rothmans, JTI) will be essential now that there are so many companies and countries involved. Setting of priorities and evaluating progress will of necessity be an ongoing process throughout the year. Meetings will therefore be held every 2-3 months in Hong Kong. Covington & Burling will continue to produce regular written reports.

Communication within BAT. All queries and comments about the programme should be fed back to me at Millbank to simplify communications with Covington & Burling and other supporting companies.

300541874-1876 at 1874 (U.S. Ex. 85,567).

795. Boyse knew that concealment of the control of the ETS consultants by the cigarette manufacturers and Covington & Burling had to be maintained in order to create and sustain the illusion of a "controversy" among "independent" scientists. In a November 28, 1989 letter to her counterpart at Malaysian Tobacco, Boyse described the ETS Consultancy Program

and invited Malaysian Tobacco to participate. She wrote:

I don't know whether you are aware that BAT are now funding a programme to identify scientific consultants in the Far East The programme is also funded by Philip Morris, Reynolds, Rothmans, and Brown & Williamson, and is organised by the US law firm Covington and Burling. Shaik Abbas may have heard John Rupp's presentation on the subject at the Infotab meeting in Hong Kong.

We are trying to encourage the development of consultants in countries that are of interest to BAT – especially in countries where ETS is not yet a major issue. One of the UK scientific consultants who helps John Rupp identify potential candidates for consultancy, Dr. George Leslie, will be in Malaysia in early January with a view to beginning discussions with some of his contacts. Does this idea interest you at all . . . ? A copy of a recent progress report from John Rupp is enclosed for your information; **please do not circulate widely!**

300541877-1877 (U.S. Ex. 85,568) (emphasis added).

796. The Tobacco Institute monitored much of the domestic ETS Consultancy Program, developed in part to counter smoking restrictions through the use of "independent" experts. The Tobacco Institute members spent millions of dollars in this effort. TIDN0008912-8988 (U.S. Ex. 85,569).

797. Under this program, ETS consultants in the United States would bill their services through the law firms of Covington & Burling and Shook, Hardy & Bacon; the firms would then bill the Tobacco Institute, who would pay the law firms with the funding from the participating companies. Using this scheme, the Cigarette Company Defendants were able to avoid direct payments to the ETS consultants and create an attorney wall between them and the ETS consultants. See, e.g., TIMN 435262-5262 (U.S. Ex. 22,603); TIMN435265-5265 (U.S. Ex.

SECTION IV.C.

22,609); TIMN435237-5237 (U.S. Ex. 22,471); TIMN435263-5263 (U.S. Ex. 22,604); TIMN435240-5240 (U.S. Ex. 22,477); TIMN435266-5266 (U.S. Ex. 22,611); TIMN435238-5238 (U.S. Ex. 22,936); TIMN4352645264 (U.S. Ex. 22,606); TIMN435241-5241 (U.S. Ex. 22,479); TIMN435267-5267 (U.S. Ex. 22,613); TIMN435239-5239 (U.S. Ex. 22,476); TIMN435265-5265 (U.S. Ex. 22,609); TIMN435242-5242 (U.S. Ex. 22,937); TIMN435268-5268 (U.S. Ex. 22,615); TIMN4352435243 (U.S. Ex. 22,960); TIMN435269-5269 (U.S. Ex. 22,940); TIMN435244-5244 (U.S. Ex. 22,486); TIMN435270-5270 (U.S. Ex. 22,617); TIMN435242-5242 (U.S. Ex. 22,937); TIMN435245-5245 (U.S. Ex. 22,487); TIMN435271-5271 (U.S. Ex. 22,962); TIMN435221-5221 (U.S. Ex. 22,432); TIMN435220-5220 (U.S. Ex. 21,734); TIMN435250-5250 (U.S. Ex. 22,961); TIMN435223-5223 (U.S. Ex. 22,436); TIMN435222-5222 (U.S. Ex. 22,433); TIMN435224-5224 (U.S. Ex. 22,442); TIMN435253-5253 (U.S. Ex. 22,939); TIMN435250-5250 (U.S. Ex. 22,961).

798. The tobacco lawyers were deeply involved in the ETS consultants' written projects, such as letters to scientific journals and other publications. For example, written responses by industry ETS Consultant Peter Lee to James Repace and A. Judson Wells were revised by both Shook, Hardy & Bacon and Covington & Burling prior to submission to a journal. Similarly, Covington & Burling made revisions prior to submission to an article criticizing the EPA risk assessment by industry ETS consultants Flamm and Todhunter, and a letter to the editor by ETS Consultant Gio Gori criticizing an adverse study by Brownson. TIMN435250-5250 (U.S. Ex. 22,961); TIMN435222-5222 (U.S. Ex. 22,433); TIMN435223-5223 (U.S. Ex. 22,436).

799. Through the domestic consultancy program, Defendants were able to manage the a seemingly "independent" attack on any adverse ETS research or proposed legislation. The Tobacco Institute paid consultants for written submissions attacking legitimate scientific studies that identified ETS as a cause of disease, including lung cancer. For example, on January 6, 1993, the Tobacco Institute paid scientific consultant Gio Gori \$3,555 to write a letter to the editor of the *Journal of the National Cancer Institute* ("*JNCI*") captioned: "Environmental Tobacco Smoke: The Price of Scientific Uncertainty. 2046591055-1056 (U.S. Ex. 20,473)." The Tobacco Institute paid Gori another \$4,137.50 five days later to write an Op-Ed newspaper submission on the Environmental Protection Agency's Risk Assessment for the *Wall Street Journal* (although the newspaper declined to publish Gori's work). The Tobacco Institute paid Peter Lee \$4,000 on January 29, 1993 to write a response to letters to the editor of *Environment International*, disputing the conclusion that ETS exposure caused lung cancer and mortality. On April 10, 1993, the Tobacco Institute paid Gio Gori \$4,000 to write a letter to *Lancet*, disputing an editorial that had found the Environmental Protection Agency's Risk Assessment provided a firm regulatory basis for increased social action to minimize the public's exposure to ETS. In June 1993, the Tobacco Institute paid Peter Lee \$5,000 to write a letter to the editor of *Journal of the National Cancer Institute* disputing results of an ETS study by Stockwell that post-dated the Risk Assessment and found a link between ETS exposure and lung cancer in nonsmoking women. The letter was published along with two other letters from Tobacco Institute consultants, Paul Switzer and Max Layard. All were critical of the Stockwell study. None of letters disclosed that tobacco industry money had funded the letters. TIMN0435220-5272 (U.S.

SECTION IV.C.

Ex. 21,734); 2046591055-1056 (U.S. Ex. 20,473); 2046342683-2686 (U.S. Ex. 20469).

800. The industry created and managed front groups such as IAI, and ISBE to carry out its mission of preventing the ETS issue from hurting its profits, yet appear independent and objective. In furtherance of this mission, Defendants made use of another group, both to spread the views of the "independent" consultants and to maintain distance from the Cigarette Company Defendants, namely the public relations firm Burson-Marsteller. In a memorandum dated October 10, 1988, Kendrick Wells, BATCo in-house counsel, to Nick Cannar, BATCo in-house counsel, stated that "A public relations firm has been retained in London and has begun to generate material for distribution which is intended to "leverage" the statements made by the consultants." 401033325-3328 at 3325 (U.S. Ex. 24,099).

801. Internal documents reveal that the public relations firm was in fact the London office of Burson-Marsteller, who tactically and proactively placed consultant statements in the European media through a contrived "News Bureau." Burson-Marsteller coordinated their media activities with Philip Morris and Covington & Burling. In particular, Covington & Burling attorneys often assisted Burson-Marsteller with its generation of pro-industry videos and other projects, from at least 1989 through 1991. 2501047768-7776 (U.S. Ex. 85,570); 2500048951-8955 (U.S. Ex. 85,571); 250048939-8941 (U.S. Ex. 85,572); 2500048926-8929 (U.S. Ex. 85,573); 2500048846-8847 (U.S. Ex. 85,574); 2500048931-8932 (U.S. Ex. 85,554); 2501474360-4360 (U.S. Ex. 85,575).

802. A 1989 Philip Morris document stated the Burson-Marsteller mission via the "News Bureau" was, entirely one-sided and industry favorable. This was logical given that the

firm was employed by Philip Morris. However, Burson-Marsteller admitted (and in fact intended) that the public relations firm would at times speak, not as the industry, but as "independent scientists":

The overriding strategy of the Philip Morris news bureau operation, then, is to fill that gap; to take the raw material of scientific fact, opinion and commentary from across Europe and re-package it into a range of targeted communications products that articulate the "other side" of the debate. . . .

At times, we will speak as Philip Morris; sometimes we will need to speak as independent scientists, scientific groups and businessmen; at other times we will talk as the industry; and, finally, we will speak as the smoker.

2021595842-5860 at 5844 (U.S. Ex. 85,576).

803. In the same 1989 Philip Morris document, Burson-Marsteller discussed the relationship with Covington & Burling and a targeted use of industry "independent scientists" in press interviews, with or without industry attribution:

Independent scientists

We will want to set up interviews for independent scientists. These will be set up under the name of Philip Morris or EGIL or any other group Covington & Burling recommends.

Recommendation: Covington & Burling identifies these scientists and makes them available for training and placement.

2021595842-5860 at 5857 (U.S. Ex. 85,576).

804. The Burson-Marsteller independent "News bureau" was implemented on behalf of Philip Morris in "marketing [the] ETS message." According to a Boca Raton Action Plan Status Report dated January 31, 1989, a "Full Burson-Marsteller "News Bureau" programme for

SECTION IV.C.

EEC/EEMA [was] developed and budgeted with an annual price tag of £879,813. The Burson-Marsteller "News bureau" ETS marketing scheme was also planned for Asia and Latin America. 2021595753-5910 at 5763-5765 (U.S. Ex. 85,541); 2501204997-5021 at 5007-5009 (U.S. Ex. 22,858).

805. Indeed, the illusion of "independent" scientists disputing the health risks attributable to ETS was played by the industry in the press throughout the world. For example, articles in the Hong Kong Standard and South China Morning Post identified British ETS consultant and ARIA president George Leslie simply as the "head of Associates for Research on Indoor Air UK," and even identified Covington & Burling's John Rupp only as "a senior US scientific adviser and member of the American Civil Liberties Union." The writer of the article was apparently never informed that Leslie and ARIA were part of the industry-financed ETS consultancy program, or that Rupp was a paid tobacco attorney. 2501204903-4903 (U.S. Ex. 85,577); 2501204902-4902 (U.S. Ex. 85,544).

806. Many other examples abound of newspaper and journal articles where consultants are quoted without attribution of tobacco industry funding. See, e.g., 2500048784-8784 (U.S. Ex. 85,578); 2501205177-5179 (U.S. Ex. 85,579); 2501205175-5175 (U.S. Ex. 85,580); 2048551288-1289 (U.S. Ex. 85,581); TOMN343061-3061 (U.S. Ex. 85,582); 86022880-2880 (U.S. Ex. 85,583); 86022881-2881 (U.S. Ex. 85,584); 2021181923-1943 (U.S. Ex. 25,589).

807. The illusion of independence was also peddled by the Tobacco Institute in its press releases attacking research and conclusions implicating ETS as a cause of disease. These press releases, distributed over the course of years, referred to industry-funded and managed

SECTION IV.C.

consultants and conferences without reference to their tobacco industry source. Rather, the Tobacco Institute quoted favorable opinions from "independent scientific teams" (referring to IT Corporation, a Special Account 4 recipient), "an expert on substances in indoor air" (referring to David Weeks, a paid industry ETS consultant), "a prestigious panel of scientists at an international symposium" (referring to the hand-picked EST consultants at the McGill Symposium), and "a US lawyer specializing in antitrust and trade regulation law" (referring to John Rupp). 92756893-6894 (U.S. Ex. 85,585); 87697659-7661 (U.S. Ex. 85,586); 86002410-2413 (U.S. Ex. 85,716); 86002393-2396 (U.S. Ex. 86,359); 91806529-6529 (U.S. Ex. 88,597); 87697701-7703 (U.S. Ex. 85,587); 87698341-8342 (U.S. Ex. 85,588); 87780965-0967 (U.S. Ex. 85,589); 2021160078-0081 (U.S. Ex. 85,590).

808. Similarly, the Tobacco Institute used industry ETS consultants in its brochures and pamphlets to create a wholly unbalanced presentation of ETS research.

ATX040667113-7126 (U.S. Ex. 85,591); TI00410250-0264 (U.S. Ex. 22,957); 520911538-1542 (U.S. Ex. 85,593); CTRPUBLICSTMT000355-0355 (U.S. Ex. 88,151).

809. Philip Morris used the industry consultants, again with no tobacco industry attribution, in its public statements disputing the health risks linked to ETS. 2500118008-8013 (U.S. Ex. 85,594).

810. Defendants also utilized their consultants in ETS and indoor air conferences around the world to ensure that the Defendants' point of view was represented and that, at a minimum, there was an illusion of "controversy" among independent scientists. See e.g., 2021012185-2192 (U.S. Ex. 85,595) (London Indoor and Ambient Air Quality Conference in

June 1988).

(iii) Despite Industry Public Promises to Find the Truth as to the Health Risks of Passive Smoking, Defendants Used the ETS Consultancy Program to Deny, Distort, and Dispute All Adverse ETS Research

811. As set out above, Defendants falsely promised publicly that they would conduct and support independent research into smoking and health issues, including the adverse health effects of ETS, asserting, for example, "Like you, we seek answers. The tobacco industry has committed more funds for independent research on smoking and health than any non-governmental group. . . . The researchers we fund are encouraged to publish whatever they find. Whatever the outcome." TI04591849-1855 at 1853 (U.S. Ex. 22,028).

812. Defendants' true goal with respect to passive smoking was not to support independent and valid research in order to answer questions about the link between ETS and disease; rather the goal was simply "to keep the controversy alive." 2063791182-1187 at 1182 (U.S. Ex. 85,516); see also 2021181803A-1812 at 1803 (U.S. Ex. 22,155) (U.S. Ex. 25,697) (noting specific ETS goals including "maintain the controversy").

813. Internal documents show that the real intent of the cigarette manufacturers was to dispute all adverse evidence and proclaim an absence of any risk posed by ETS. The ETS Consultancy Program supported this goal as well serve the industry's needs with regard to products liability defense and combating proposed regulations.

814. For example, in an effort to guide Philip Morris Science & Technology research regarding ETS, Anthony Andrade, a Shook, Hardy & Bacon lawyer, advised Philip Morris to "sponsor[] research . . . consistent with product liability, regulatory and public relations

SECTION IV.C.

considerations." To do so, Andrade stated that Philip Morris's Science & Technology division should develop a research plan that addresses "both primary issue and ETS research that S&T feels the company should be supporting." This research plan was to "be developed with input from legal, corporate affairs, etc." 2023856321-6328 at 6322-6323 (U.S. Ex. 22,037).

815. The plan was to attack and deny through the use of industry-controlled consultants, not to find the truth through the use of independent, objective science, as Defendants had publicly promised. David Remes, Covington & Burling attorney, described the ETS Consultancy Program in his February 20, 1988 "personal and confidential" memo as follows:

The objective of the PM EEC/EEMA ETS Project is to prevent the imposition of smoking restrictions in the EEC/EEMA regions based on the asserted health hazards of ETS to non-smokers. To realize this objective, three audiences must be persuaded that the health claims by anti-smoking forces concerning ETS are groundless. Those three audiences are the scientific community, regulatory authorities, and the general public. . . . For this purpose, scientists must be available who can attack the studies relied on by the anti-smoking forces to justify smoking restrictions on health grounds.

2501474253-4259 at 4253 (U.S. Ex. 22,017) (U.S. Ex. 75,270).

816. Sharon Boyse, BATCo scientist, noted in a February 17, 1988 memorandum that the goal was to "filter" out and unsuitable scientists and "carefully select" those who would follow industry direction and support the industry view. In this manner, Defendants sought the exact opposite of what they publicly promised. While promising to seek answers via independent researchers, Defendants internally plotted a consultancy program that sought "controversy," a consultancy program that generated biased research results and commentary, and a consultancy program that "eliminate[d] areas of sensitivity" from the public. 2060563936-3941

(U.S. Ex. 79,164).

817. The Tobacco Institute played a pivotal role in the ETS Consultancy Program. In a 1990 summary report titled "Consulting Scientists on ETS and Indoor Air Quality," the Tobacco Institute updated its progress in the retaining of American and foreign consultants domestically:

Scientific Witness Team. TI now has 23 consulting scientists whose businesses are to market their scientific expertise. Their principal mission is to testify before state and local legislative bodies on ETS and indoor air quality issues. They also respond to adverse articles in scientific technical, and general audience publications by submitting letters to editors. They attend and report on meetings of scientific organizations. . . . Members of the scientific witness team have made 48 legislative appearances and conducted 30 media tours to date this year. . . .

Foreign Scientists. This strategy is to bring a "foreign" perspective on ETS science to U.S. journalists through the use of the industry's overseas consulting scientists. Through editorial board briefings and interviews with science and health reporters, these scientists will suggest that the U.S. understanding of ETS science is skewed by anti-smoker media hype, and that the U.S. response to ETS science is out of step with the rest of the world. . . . Next year we anticipate foreign scientists conducting at least one media tour per month in connection with attendance at scientific meetings.

TIDN004239-4248 at 4239-4240 (U.S. Ex. 65,550) (U.S. Ex. 75,287).

818. The Tobacco Institute's use of the foreign consultants to convey the message that the American scientists are unduly influenced by the anti-smoking forces in the United States is particularly egregious given Defendants' acknowledgment that the rest of the world was largely in line with the scientific consensus in the United States that ETS was harmful. A July 15, 1988 "Joint Meeting on ETS" in London reported that the World Health Organization, the EEC, the West German Health Ministry, and the Canadian legislature had publicly recognized that the link

between passive smoking and human disease was conclusively established, and that foreign government groups were seriously studying whether to impose ETS-based restrictions in public areas. This meeting was attended by Tobacco Institute representatives. 2021548222-8235 (U.S. Ex. 20,349).

819. The Cigarette Company Defendants never instructed Covington & Burling to carry out its work on their behalf objectively. To the contrary, Kendrick Wells, B&W General Counsel, acknowledged that the ETS consultants would be managed by Covington & Burling "to insure that their opinions support the industry's position on ETS and that their answers to inevitable questions about the primary issue do not undercut the industry." 401033325-3328 (U.S. Ex. 24,099).

820. Similarly, John Rupp, Covington & Burling attorney, admitted in a letter to the Tobacco Advisory Council (the British equivalent to the Center for Tobacco Research) that Covington & Burling was working for Philip Morris "to identify scientists in a number of European countries who would be prepared to consult with – and make presentations on behalf of – the tobacco industry, focusing on the ETS issue." 401033613-3615 at 3613 (U.S. Ex. 85,596).

821. Rupp was quoted by Shook, Hardy & Bacon attorney Don Hoel at a 1988 London joint industry ETS meeting; his statements were a frank admission of the true purpose of Defendants and their lawyers actions in orchestrating and supporting scientific work "guided by public relations needs":

Rupp then engaged in a defense of existing scientific undertakings. He noted that epidemiological evidence is necessary if for no other

reason than to effectively respond to anti-smoking groups, which are still engaged in epidemiological research. Furthermore, the industry has not yet adequately dealt with Hirayama's study. Also, Rupp defended studies monitoring air quality because they allow the industry to counter anti-smoking advocates' outrageously exaggerated figures with real world data. Rupp concluded by expressing the view that the industry should continue to emphasize the lack of substantive proof of causation.

2021548222-8235 at 8233 (U.S. Ex. 20,349).

822. The myriad examples discussed above clearly establish that Defendants used the worldwide ETS Consultancy Program as a mechanism to distort and deny the health risks associated with passive smoking. Defendants accomplished this by funding and developing a network of seemingly "independent" and "objective" scientists to advance the goals of the companies themselves, protect public smoking, and secure the continued profitability of the Cigarette Company Defendants.

823. The following table contains the names of many of the ETS consultants who were part of the covert plan who received tobacco industry funding from Defendants in exchange for their industry-favorable opinions.

**PAID INDUSTRY IAQ/ETS CONSULTANTS
DEFENDANTS' ETS CONSULTANCY PROGRAMS**

Consultant's Name	Origin/Affiliation	Defendants' Consultancy Program
--------------------------	---------------------------	--

SECTION IV.C.

Abenheim, Lucien	Epidemiologist, IMSERM, Paris	ETS Consultancy

2503001504-1504 (U.S. Ex. 85,592); 2503001508-1519 (U.S. Ex. 85,595); 2023034933-4946

(U.S. Ex. 87,334); TLT015 0001-0390 (U.S. Ex. 65,706).

824. Defendants used the projects and programs discussed above to orchestrate a coordinated attack on mainstream science to further the commercial objectives of the Enterprise. Defendants denied and distorted the health risks associated with exposure to secondhand smoke in order to maintain the social acceptability of smoking, with the ultimate goal focused on the bottom line – Defendants’ profits from the sale of cigarettes. Another scheme undertaken by the Defendants toward this end involved the work of industry consultant Healthy Buildings International ("HBI"), another integral component of Defendants' ETS strategy.

825. A review of published ETS research has shown that a vast majority of studies finding no link between ETS and disease are funded by the tobacco industry. See Deborah E. Barnes & Lisa A. Bero, Why Review Articles on the Health Effects of Passive Smoking Reach Different Conclusions, 279 J. Am. Med. Ass'n 1566, 1566 (1998) (U.S. Ex. 43,478) ("In multiple logistic regression analyses controlling for article quality, peer review status, article topic, and year of publication, the only factor associated with concluding that passive smoking is not harmful was whether an author was affiliated with the tobacco industry."); see also id. at 1569 ("The odds that a review article with tobacco industry-affiliated authors would conclude that passive smoking is not harmful were 88.4 times higher than the odds for a review article with non-tobacco-affiliated authors"); Deborah E. Barnes & Lisa A. Bero, Industry-Funded Research and Conflict of Interest: An Analysis of Research Sponsored by the Tobacco Industry through the Center for Indoor Air Research, 21 J. Health Politics Policy & L. 515 (1996) (U.S. Ex. 52,010).

(d) ACVA/Healthy Buildings International

SECTION IV.C.

826. In June 1985, Defendants recruited John Graham "Gray" Robertson, President of ACVA Atlantic, Inc., a building ventilation inspection firm that was later renamed Healthy Buildings International ("HBI"), to conduct residential air sampling in Boston and Florida at the recommendation of Donald Hoel. TLT0270555-0555 (U.S. Ex. 85,619); 2050987576-7576 (U.S. Ex. 27,065); 521028861-8861 (U.S. Ex. 52,692); TIDN0011695-1695 (U.S. Ex. 62,594), TIDN0011696-1704 (U.S. Ex. 62,594). Defendants funded the work through CTR Special Projects. By January 1986, Robertson had joined the Indoor Air Pollution Advisory Group ("IAPAG"), a group of scientists organized by John Rupp, Covington and Burling attorney, to advise the Tobacco Institute on scientific issues related to ETS exposure and to provide favorable testimony at legislative hearings. 2021005103-5125 (U.S. Ex. 85,601); 80421577-1738 at 1716 (U.S. Ex. 85,602); TI07560609-0610 (U.S. Ex. 85,603).

827. Like other members of IAPAG, Defendants paid HBI to provide favorable testimony at legislative and regulatory hearings on indoor smoking bans and to initiate pilot projects or studies that criticized the scientific evidence that underlay the medical consensus on the adverse health effects of second hand smoke. TIDN0002692-2701 (U.S. Ex. 85,605); TIDN0007373-7378 (U.S. Ex. 77,020); TIDN0016039-6045 (U.S. Ex. 75,289) (U.S. Ex. 75,441); TIDN0021311-1311 (U.S. Ex. 85,604). In fact, Defendants identified Robertson and HBI as "our foremost resources in our indoor air quality strategy." TI01140124-0133 at 0128 (U.S. Ex. 62,100).

828. Defendants hired Robertson to pose as a "building doctor" who was expert in "sick building syndrome." This was part of Defendants' effort to convince the public that

SECTION IV.C.

banning indoor smoking was not important for eliminating the health consequences of exposure to secondhand smoke in indoor spaces. TI01262206-2209 (U.S. Ex. 62,105); Caution: An Ill-Wind May Be Blowing in Your Office, Warns Building Doctor Gray Robertson People Weekly (Feb. 20, 1989) (U.S. Ex. 87,335); TLT088 0001-0024 (U.S. Ex. 87,336); 92746289-6292 (U.S. Ex. 87,337).

829. Robertson publicly denied the health risks associated with passive exposure and instead pointed to the presence of other substances found in indoor air, citing alleged health risks associated with substances other than cigarette smoke. TIDN0011695-1695 (U.S. Ex. 62,594), TIDN0011696-1704 (U.S. Ex. 62,594); TLT0860134-0170 (U.S. Ex. 86,719) ("Designation of Smoking Areas in Federal Buildings," Hearings Before the Subcommittee on Health and Environment of the Committee on Energy and Commerce, H.R. Serial 99-135, 99th Cong., 2d Sess. at 357 (June 12 and 27, 1986)); TLT0860133-0133 (U.S. Ex. 87,338) (Gray Robertson, President of Healthy Buildings International, Inc., Concerning the Contribution of Environmental tobacco smoke to Indoor Air Pollution, Environmental Quality Commission, Phoenix Arizona, September 3, 1991).

830. Robertson continually advocated ventilation as a means of addressing all the potential health risks associated with indoor air quality, as opposed to indoor smoking bans. TIOK0023878-3878 (U.S. Ex. 77,107); TIDN0002692-2701 (U.S. Ex. 85,605).

831. The "key objective of the HBI concept [was] to broaden the debate on indoor air quality to deflect the ETS challenges and to gain acceptance of a systems approach to maintaining indoor air quality." TLT0860040-0045 at 42-0045 (U.S. Ex. 87,339).

SECTION IV.C.

832. Philip Morris and the Tobacco Institute assisted HBI in procuring private and public contracts for building inspections in the United States and overseas, including buildings owned by Defendants. 2071977528-7528 (U.S. Ex. 85,629); THLBC003774-3775 (U.S. Ex. 85,606); TIDN0022522-2522 (U.S. Ex. 85,607); TIDN0016673-6673 (U.S. Ex. 62,603); TLT0600046-0052 (U.S. Ex. 65,096). Indeed, Robertson suggested to the Tobacco Institute that it use its contacts to get HBI work inspecting "Government buildings [because they] have poor buying policies and lower quality maintenance. Thus, they are frequently in [indoor air quality] trouble due to bad filters, etc. Consequently they make a good target for us to focus on other problems rather than tobacco smoke." TIOK0023880-3883 at 3880 (U.S. Ex. 85,608). As a result, HBI grew from a mom and pop inspection firm to a multi-national business. Affidavit of Reginald Simmons, United States ex rel. Seckler v. Healthy Bldgs. Int'l., October 28, 1994, Civ. No. 93-0710 (WBB) (D.D.C.), TLT0860054-0064 (U.S. Ex. 85,639) (U.S. Ex. 87,340); Statement of Reginald B. Simmons to the Subcommittee on Health and the Environment, Dec. 9, 1994, TLT0600035-0039 (U.S. Ex. 65,093); see also TLT0860122-0129 (U.S. Ex. 87,341) (HBI profile downloaded from website, includes client list); 2501026750-6761 (U.S. Ex. 85,609); 94348745-8752 (U.S. Ex. 85,688); 2028404047-4049 (U.S. Ex. 85,610); 2503001929-1929 (U.S. Ex. 85,611); 2029370437-0437 (U.S. Ex. 26,896).

833. In addition, by 1987, HBI was on monthly retainer to the Tobacco Institute as well as receiving payments for expenses, including the costs incurred for services that were provided by Fleishman Hillard, the Tobacco Institute's public relations firm. TIDN0004200-4235 at 4202 (U.S. Ex. 77,018); TIDN0020081-0085 (U.S. Ex. 85,612); TIDN0023739-3740 (U.S. Ex.

SECTION IV.C.

85,613); TIDN0008801-8801 (U.S. Ex. 85,614); TIDN0025605-5612 (U.S. Ex. 85,615); TIDN0025627-9564 (U.S. Ex. 85,616); TI14140449-0451 at 0449 (U.S. Ex. 62,423); TI47600861-0862 (U.S. Ex. 87,342). In return, HBI provided testimony and made media appearances that downplayed the adverse health effects of secondhand smoke and promoted "sick building syndrome" and better ventilation. In this way, the Tobacco Institute's Public Affairs Division organized and underwrote legislative and regulatory appearances and media tours for Robertson and HBI to present the industry position on air quality issues: "HBI would go somewhere, say Louisville, KY, and talk to the media about what their firm did; what they found in their business practices with respect to indoor air quality; how they saw environmental tobacco smoke, if that subject came up; how often smoking was a problem in buildings; and how building owners and managers mitigated that program." Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 119:6-14.

834. In 1990, at Fleishman Hillard's suggestion, the Tobacco Institute paid for HBI to expand by opening regional offices. TIDN0010086-0093 (U.S. Ex. 85,617); TIMN362721-2761 at 2731 (U.S. Ex. 85,618).

835. The Tobacco Institute was only one source of the funds supporting Robertson and HBI. HBI received a CTR Special Project grant of \$13,800 in 1985. TLT0270555-0555 (U.S. Ex. 85,619); 504221588-1593 at 1591 (U.S. Ex. 85,620); 521028861-8866 (U.S. Ex. 52,692). Subsequently, in 1989, HBI received two grants totaling \$186,000 from the Center for Indoor Air Research ("CIAR"), another tobacco industry group. 2505442777-2935 at 2894-2895 (U.S. Ex. 75,388). As a result of one of the CIAR grants, HBI received \$550 to take readings each time it

SECTION IV.C.

performed a private or public building inspection of an office building, public building or commercial space. TLT0600046-0052 at 0046-0047 (U.S. Ex. 65,096). This data collection was made whether or not requested by HBI's client and formed the basis for the published study "The Measurement of Environmental Tobacco Smoke in 585 Office Environments." (U.S. Ex. 20,572).

836. In the 1990s, in addition to the Tobacco Institute retainer and its reimbursement of expenses, research grants and increased business, Defendants, through Covington & Burling, reimbursed costs incurred by HBI, including expenses associated with Healthy Buildings International Magazine. 2023590035-0036 (U.S. Ex. 85,621); TIDN0010768-0769 (U.S. Ex. 85,622); TIDN0011756-1756 (U.S. Ex. 85,623); 2029370155-0160 (U.S. Ex. 87,343). The full color, bi-monthly magazine presented Defendants' views to a wide range of recipients around the globe. HBI Magazine subscription database (Sept. 3, 1991), TLT0860028-0039 (U.S. Ex. 87,344); HBI Magazine subscription database (Aug. 5, 1991), TLT0860040-0050 (U.S. Ex. 87,345); seven color issues of HBI Magazine from Nov. 1990 to Dec. 1991, TLT0850001-0008 (U.S. Ex. 87,346); TLT0850009-0020 (U.S. Ex. 87,347); TLT0850021-0032 (U.S. Ex. 87,348); TLT0850033-0044 (U.S. Ex. 87,349); TLT0850045-0056 (U.S. Ex. 87,350); TLT0850057-0072 (U.S. Ex. 87,351); TLT0850073-0084 (U.S. Ex. 87,352).

837. Subsequently, Defendants also paid HBI's legal expenses of over \$100,000 that it incurred as a result of a lawsuit filed against HBI by a former employee. Invoicing and payments were made through Covington and Burling. 2041222785-2786 (U.S. Ex. 85,628).

838. Initially, Robertson did not reveal any relationship between HBI and Defendants

when he made legislative or other public appearances. TIDN0011695-1695 (U.S. Ex. 62,594), TIDN0011696-1704 (U.S. Ex. 62,594); TIDN0009947-9947 (U.S. Ex. 85,625); "Designation of Smoking Areas in Federal Buildings," Hearings Before the Subcommittee on Health and Environment of the Committee on Energy and Commerce, H.R. Serial 99-135, 99th Cong., 2d Sess. at 357 et seq. (June 12 and 27, 1986), TLT086 0134-0170 (U.S. Ex. 86,719). But even when Robertson and HBI became known to some legislators and regulators as Tobacco Institute consultants, in order for Defendants' secondhand smoke strategy to include the full and effective participation of Robertson and HBI, Defendants warned that HBI must "be perceived to be at arm's length from the industry, including in media briefings. Its role at most should seem as yet another third party expert amongst others." 2046754737-4740 at 4739 (U.S. Ex. 21,646).

839. For example, on June 12, 1987, the Tobacco Institute evaluated Robertson's appearance before the Pittsburgh City Council – "Gray's testimony was excellently received" – and compared extremely favorably to TI's evaluation of the reception for R.J. Reynolds' employee Guy Oldaker – "Guy and his 'briefcase magic' were not well received by the city council membership. Although Guy's experiments are state of the art . . . it is my feeling that his objective endeavor fell upon deaf ears simply because he is an employee of the R.J. Reynolds Tobacco Company." TI07560609-0610 (U.S. Ex. 85,603).

840. In order to shield the financial relationship between Defendants and HBI, some projects and payments were handled through Covington & Burling. 2063935035-5035 (U.S. Ex. 39,877); 2023542571-2573 (U.S. Ex. 85,531). For Defendants, HBI acted as "a third-party presenting a message through briefings and publications which is complementary to our position

SECTION IV.C.

on IAQ and thus worthy of [Philip Morris's] financial support vis-a-vis certain projects. Covington & Burling was charged with ensuring that the financial support is utilized in appropriate ways; monitoring the impact of HBI's activities on issues of interest to us, and administering our program of support." 2063935035-5035 (U.S. Ex. 39,877); TIDN0021382-1383 at 1382 (U.S. Ex. 85,626); 2070332077-2104 (U.S. Ex. 85,627); 2041222785-2786 (U.S. Ex. 85,628); 2043709159A-9159A (U.S. Ex. 46,241); 2071977528-7528 (U.S. Ex. 85,629); 2041222825-2825 (U.S. Ex. 85,630); TI10160667-0667 (U.S. Ex. 87,353); TI10160671-0671 (U.S. Ex. 65,486); 2029370113-0113 (U.S. Ex. 87,354); 2029370138-0139 (U.S. Ex. 87,355); 2029370153-0161 (U.S. Ex. 87,356); 2029372111-2112 (U.S. Ex. 87,357); 2029378142-8142 (U.S. Ex. 87,358); 25003001929-1929 (U.S. Ex. 87,359).

841. On August 11, 1987, Robertson wrote, "Many felt that the media would quickly identify a link between [HBI] and the tobacco industry that would jeopardize my future testimony on legislative issues. However, despite massive media attention, to date no one has identified such a link, which reflects well on the tact and diplomacy of our public relations firm of Fleishman Hillard." 2061692011-2012 at 2012 (U.S. Ex. 85,631).

842. Even after some details of the true relationship between HBI and Defendants began to become known in the United States, Defendants still attempted to prevent the general public and smokers from becoming aware of that relationship. On June 29, 1992, Sharon Boyse, BATCo scientist, wrote in connection with a proposed \$134,500 media tour of Argentina that would include HBI:

[T]his is an extremely sensitive document! HBI are currently

under a considerable amount of investigation in the US about their connections with the industry. All references to companies in the quote has therefore been removed. Please do not copy or circulate this in any way and please destroy this fax cover sheet after reading! I know this sounds a little like James Bond, but this is an extremely serious issue for HBI.

304058260-8263 at 8260 (U.S. Ex. 85,632).

843. At Defendants' expense, HBI became a member of the Business Council on Indoor Air ("BCIA"). TIDN0019909-9909 (U.S. Ex. 85,633). BCIA's members included DOW Chemical Company and Union Carbide Corporation as well as HBI. Jeffrey Seckler, Report on Business Council on Indoor Air ("BCIA") Meeting (March 15, 1989), TLT0860001-0001 (U.S. Ex. 87,360); Nancy G. Doerrler, Director of Scientific Affairs BCIA, to Technical Committee (May 2, 1989), TLT0860005-0005 (U.S. Ex. 87,361); Jeffrey Seckler, Report on BCIA Meeting (November 1, 1989), TLT0860006-0006 (U.S. Ex. 87,362); Minutes of Meeting, BCIA Board of Directors (November 1, 1989), TLT0860009-0009 (U.S. Ex. 87,363); Nancy G. Doerrler, Director of Scientific Affairs BCIA, to Technical Committee (November 22, 1989), TLT0860010-0010 (U.S. Ex. 87,364); TIDN0022874-2874 (U.S. Ex. 85,634); TIDN0011870-1870 (U.S. Ex. 85,635). BCIA took public positions on and lobbied the Environmental Protection Agency on indoor air quality. Paul A. Cammerer, President BCIA, to William K. Reilly, Administrator EPA (April 21, 1989), TLT0860002-0004 (U.S. Ex. 87,365); Nancy G. Doerrler, Director of Scientific Affairs BCIA, to Technical Committee (December 11, 1989), TLT0860011-0021 (U.S. Ex. 85,366); TIDN0011867-1867 (U.S. Ex. 85,636). HBI was one of Defendants' covert representatives in BCIA because "[t]obacco is not and must not be visible in

SECTION IV.C.

[BCIA]." TI01140124-0133 at 0129 (U.S. Ex. 62,100). Tobacco Institute consultants Sparber and Associates and Milton Meckler were also members. TIDN0022786-2788 (U.S. Ex. 88,598).

844. By 1994, Robertson and other HBI spokespersons had made over 125 legislative appearances. TLT0600106-0120 (U.S. Ex. 65,099); TLT0860022-0022 (U.S. Ex. 87,367); TLT0860023-0023 (U.S. Ex. 87,368). They had also given over 700 media interviews. TIDN0010792-0792 (U.S. Ex. 85,637); TIDN0012371-2373 at 2372 (U.S. Ex. 85,638).

845. Despite using Robertson and HBI, as "independent experts," internally Defendants admitted that Gray's "scientific" methodology did not withstand scrutiny and that his data was questionable. In a confidential note to employees of BATCo and Brown & Williamson, Boyse summarized a meeting between the ETS Advisory Group of the Tobacco Advisory Council and R.J. Reynolds on January 29, 1988. In this summary, Boyse stated that "RJR pointed out that although the abilities of Gray Robertson [a spokesperson and expert witness for the United States tobacco industry on ETS issues] as a presenter are undeniable, this is not the case for his scientific abilities. They felt, in particular, that his methodology could not stand up to scientific scrutiny, and that some of his data was questionable." BWBU242341-2343 at 2343 (U.S. Ex. 21,136); 80406377-6385 (U.S. Ex. 23,476); 87776358-6359 (U.S. Ex. 56,324); 87776361-6362 (U.S. Ex. 56,325).

846. Former HBI field technicians confirmed serious problems with Robertson's methodology and data. For example, Reginald Simmons, who was a senior technician from 1987 to 1989, stated that air samples for nicotine tests were taken in building lobbies and other places where ventilation was best or tobacco use was low; better ventilation was always recommended

SECTION IV.C.

as a solution to indoor air problems; and, banning cigarette smoking was never recommended as a solution. Final inspection reports were reviewed and edited by Robertson and his partner, Peter Binnie; it was a standard practice for field airborne particle counts and weighs of airborne particles to be changed during that process. Affidavit of Reginald Simmons, United States ex rel. Seckler v. Healthy Buildings International, Civ. No. 93-0710 (WBB) (D.D.C. October 28, 1994), TLT0860054-0064 (U.S. Ex. 85,639); Statement of Reginald B. Simmons to the Subcommittee on Health and the Environment (Dec. 9, 1994), TLT0600035-0039 (U.S. Ex. 65,093).

847. Gregory Wulchin, who was a field technician from 1988 to 1993, examined eight of his field reports and found that false, nonsensical entries had been made. In addition, the readings in two of his field reports demonstrated unacceptably high levels of particulates from cigarette smoking in rooms where there was good ventilation. Statement of Gregory A. Wulchin to the Subcommittee on Health and the Environment (Dec. 15, 1994), TLT0600139-0217 (U.S. Ex. 65,101).

848. In April 1991, Alexander Spears of Lorillard, Charles Green of R.J. Reynolds, and Bob Pages of Philip Morris (all board members at CIAR), discussed whether CIAR should fund a proposal by HBI to gather data on ETS and indoor air quality in 585 office buildings. Funding was provided to HBI for an "applied project." After the study "The Measurement of Environmental Tobacco Smoke in 585 Office Environments" was published by Simon Turner of HBI, the results and data were subject to a congressional examination. The Subcommittee on Health and the Environment obtained HBI's raw data and compared it to data submitted in an interim report to CIAR. The Subcommittee's analysis showed that measures of respirable

suspended particulates, which were used to estimate ETS levels, were substantially altered more than 25% of the time. Several other discrepancies were identified that would have tended to decrease the levels of ETS measured in rooms used for smoking. HBI employees confirmed that their data collection forms were routinely changed to minimize measurements of ETS. The Subcommittee requested an independent analysis of HBI's data, which concluded that "the data [are] so marred by unsubstantiated data entries, discrepancies, and misclassifications that it raises serious questions of scientific fraud." Deposition of Max Eisenberg, United States v. Philip Morris, June 20, 2002, 112:16-117:3; 87776361-6362 (U.S. Ex. 56,325); 87776358-6359 (U.S. Ex. 56,324); 2505528777-8786 (U.S. Ex. 20,572); 2047330959-0981 (U.S. Ex. 38,53); TLT0600053-0084 (U.S. Ex. 65,097); 2505528777-8786 (U.S. Ex. 20,572); 2505583630-3641 (U.S. Ex. 85,640); 2047330959-0981 (U.S. Ex. 38,593); TLT0600139-0217 (U.S. Ex. 65,101).

849. The Subcommittee also requested an independent analysis of HBI's data and that analysis concluded that "the data [are] so marred by unsubstantiated data entries, discrepancies, and misclassifications that it raises serious questions of scientific fraud." 2047330959-0981 at 0964 (U.S. Ex. 38,593). Indeed, subsequently on July 12, 1995, even Robertson reluctantly admitted to OSHA, where the previously published study had been submitted in connection with OSHA's proceedings on a workplace IAQ rule, that the authors of the study had "struck 10 out of 585 data sets used in the original paper." TLT0860092-0118 at 0093 (U.S. Ex. 86,720).

850. As late as April 1998, Robertson and HBI continued to act on behalf of Defendants in connection with secondhand smoke and indoor air quality issues. 2072439561-9564 (U.S. Ex. 41,540).

(e) CORESTA

851. In furtherance of the Enterprise's shared objectives to foil the notion that ETS was harmful, Defendants formed the Centre de Coopération pour les Recherches Scientifiques Relatives au Tabac translated as the Cooperation Centre for Scientific Research Relative to Tobacco (commonly known as "CORESTA"). CORESTA is discussed in detail at U.S. FPF § I.H (7), supra.

(f) Association for Research on Indoor Air

852. Another group Defendants created was the Association for Research on Indoor Air ("ARIA"). This organization was a public relations ploy camouflaged as a scientific group. In keeping with Defendants' modus operandi, attorneys were involved in this group as well, and served as a buffer to maintain the group's ostensible "independence" of the tobacco industry.

853. In February 1988, ARIA was created as "an organisational situation analogue to the 'Center for Indoor Air Quality Research' in the USA." 2028441207-1221 at 1217 (U.S. Ex. 22,326) (U.S. Ex. 75,244) (U.S. Ex. 75,245).

854. Although ARIA hired scientists as consultants, according to Brown & Williamson counsel J. Kendrick Wells, "the consultants group operation is essentially a public relations program, not a scientific research operation." 401033325-3328 at 3326 (U.S. Ex. 24,099).

855. An October 10, 1988 faxed memorandum from Wells to BATCo Senior Counsel Nicholas Cannar explained that:

[I]n the UK[,] the organization which sponsors the consultants is known as the Association for Research on Indoor Air ("ARIA"). A public relations firm has

been retained in London and has begun to generate material for distribution which is intended to "leverage" the statement made by the consultants.

401033325-3328 at 3325 (U.S. Ex. 24,099).

856. Although ARIA was ostensibly a U.K. Industry organization, the scientific consultants were to be developed by the United States law firm of Covington & Burling, because:

John [Rupp] said it is important to have a law firm play the role of organizing because the firm can, in the process of organization and horse-shedding individual scientists, avoid product liability problems. The law firm also can serve as a buffer between the companies and the consulting scientists, providing both distance and some opportunities for work product protection. Also, Covington is opening an office in London.

401033325-3328 at 3326 (U.S. Ex. 24,099).

857. Although ARIA was not explicitly run by Philip Morris, according to an October 31, 1988 memorandum from BATCo scientist Christopher Proctor (who shortly thereafter went to work for Covington & Burling), ARIA was a "Phillip Morris initiative of setting up a group of scientists in the U.K. that will comment on ETS issues." However, the individuals "operating for ARIA were totally independent and . . . there was to be no formal contact between the individuals (not to be termed consultants) and the industry." 400974548-4550 at 4548 (U.S. Ex. 47,525).

858. Christopher Proctor confirmed that the use of Covington & Burling as an intermediary between Philip Morris and ARIA was an attempt to allow "the members of each group to remain independent of the industry." 400974548-4550 at 4549 (U.S. Ex. 47,525).

859. Although it is unclear whether BATCo was a formal member of ARIA, BATCo smoking and health scientist Ray Thornton attended an ARIA meeting in October 1989.

300535886-5887 (U.S. Ex. 67,753); 300538971-8971 (U.S. Ex. 67,754).

(6) **Defendants Used Their Jointly Controlled Organizations to Promote Their Agenda Through Symposia, Publications and a Roster of Long-time Paid Scientists**

(a) Symposia

860. Defendants sponsored various symposia to manufacture evidence that they could later point to in order to falsely deny and distort the health risks of passive exposure. These symposia included, but were not limited to, the Geneva Workshop, the Vienna Symposium, and the McGill Symposium.

(i) The Geneva Workshop

861. The Tobacco Institute Executive Committee, the Tobacco Institute Committee of Counsel, and Shook, Hardy & Bacon explored, with industry consultant Ragnar Rylander's assistance, the need for and appropriateness of a symposium about secondhand smoke.

03554255 (U.S. Ex.85,641). In planning the conference with Hoel in 1982, Rylander acknowledged that he could not give environmental tobacco smoke a “clean bill of health” but believed that he could introduce “skepticism” to the claims about ETS’s health effects.

680542957-2962 (U.S. Ex. 85,718).

862. On March 18, 1982 the Tobacco Institute’s Committee of Counsel asked Don Hoel and Tim Finnegan, of Jacobs, Medinger & Finnegan (counsel to CTR and RJR) to present a specific proposal regarding a Rylander symposium to the Committee by April for possible further presentation to the Tobacco Institute’s Executive Committee on April 15. 01330613-01330613

SECTION IV.C.

(U.S. Ex. 26,461). On April 14, 1982, the Committee of Counsel approved the symposium, and the following day, the Executive Committee was informed of the plan to hold a symposium to review evidence with the goal of preparing articles for publication. 01330467-01330467 (U.S. Ex. 26,460); 013300468-0469 (U.S. Ex. 85,719). The symposium, a workshop addressing effects and exposure levels of ETS, was organized by Rylander and took place March 1983 in Geneva, Switzerland. 508750164-0314 (U.S. Ex. 85,642). Geneva was chosen as a “neutral” location to minimize attention to the involvement of the United States tobacco industry in the conference. 680542957-2962 (U.S. Ex. 85,718). The conference was estimated to cost the industry between \$65,000 and \$80,000. 502122726-2727 (U.S. Ex. 29,551).

863. After the Workshop, Rylander reported back to Donald Hoel of Shook, Hardy & Bacon that the event "went very well" because, *inter alia*, the consensus of the participants was that there was no evidence that environmental tobacco smoke causes lung cancer. TIMN269624-9624 (U.S. Ex. 85,643). This conclusion should have come as no surprise to Hoel, given that many of the participants were industry consultants prior to, and/or at the time of, the Workshop held in Geneva.

864. Rylander himself was a Special Account #4 (see U.S. FPF § I.D (3) (b), *supra*) recipient at the time of the Workshop, receiving per diem payments for "[c]ontinuing literature review re environmental tobacco smoke." 03746173-6182 (U.S. Ex. 46,500). Rylander presented a paper on "ETS and Lung Cancer" at the Workshop. In addition, Rylander was a covert consultant for Philip Morris from the early 1970s until at least 1999. Defendants did not, however, disclose this relationship publicly. 500894287-4343 (U.S. Ex. 85,676); 500642763-

2772 (U.S. Ex. 85,644).

865. A number of other Special Account #4 and CTR Special Project (see U.S. FPF § I.D (2), supra) fund recipients gave presentations at the symposium on work they had performed that was funded by the tobacco industry. The fact that the participants' work was funded by Defendants was not disclosed in the published report from the Workshop. 301153900-4051 (U.S. Ex. 85,645).

866. Melvin First was paid \$10,000 from Special Account #4 for work that he performed in early 1983 which involved "Methods for Environmental Tobacco Smoke Measurement," the subject of First's presentation at the Geneva ETS Workshop. 03746253-6262 (U.S. Ex. 85,646); 1005125153-5154 (U.S. Ex. 36,085).

867. Theodor Sterling spoke at the Geneva ETS Workshop on smoking, levels of indoor pollution, the perception of health and comfort of office workers, and regulation. Sterling had received over \$200,000 in CTR Special Project funding for work related to this topic that was largely completed by the time he presented at the Workshop. 03746173-6182 (U.S. Ex. 46,500); 92614155-4155 (U.S. Ex. 85,762). In addition, Sterling had been receiving CTR Special Project funding from the tobacco industry beginning as early as 1968, and this relationship continued into the 1990s. 2048925665-5704 (U.S. Ex. 38726); 2024699783-9808 (U.S. Ex. 85,647); 2024699781-9782 (U.S. Ex. 85,771). Sterling was also an Account #4 recipient and had received thousands of dollars from this fund prior to the Workshop to prepare a statement regarding public smoking. 1005045370-5383 (U.S. Ex. 85,648); 03638980-8982 (U.S. Ex. 85,649); 1005045322-5333 (U.S. Ex. 85,664).

SECTION IV.C.

868. Domingo Aviado gave a presentation at the Geneva ETS Workshop on carbon monoxide as an index of ETS exposure. Aviado was a long-time recipient of tobacco industry funds by this time. As early as 1977, Aviado had been a CTR Special Project fund recipient. 92613920-4198 at 4107 (U.S. Ex. 32,132); 1005045322-5333 (U.S. Ex. 85,664); 2048925665-5704 (U.S. Ex. 38,726). In 1977, Aviado received \$85,000 in CTR Special Project money to perform animal inhalation experiments on canines to study physical effects of constituents of tobacco smoke. 92614107 (U.S. Ex. 85,651). Moreover, Aviado received a significant sum of Special Account #4 money between 1974 and 1985. 2015029462-9463 (U.S. Ex. 85,652); 682070007-0008 (U.S. Ex. 87,369); 682070001-0002 (U.S. Ex. 36,081); 6820699976-9997 (U.S. Ex. 85,654); Jacob and Medinger Special Account #4 February 28, 1977, 1005122246-2249 (U.S. Ex. 20,216); 682069978-9979 (U.S. Ex. 85,656); 682069972-9973 (U.S. Ex. 85,657); 682069965-9967 (U.S. Ex. 85,658); 682069960-9961 (U.S. Ex. 85,659); 682069953-9954 (U.S. Ex. 85,660); 682069938-9940 (U.S. Ex. 85,661); 507875841-5843 (U.S. Ex. 85,662); 507875857-5859 (U.S. Ex. 20,795); 507876993-6994 (U.S. Ex. 20,799); 507875832-5834 (U.S. Ex. 20,794); 507876986-6987 (U.S. Ex. 20,798); 507875698-5700 (U.S. Ex. 22,953); 507875674-5674 (U.S. Ex. 20,793). He was on a retainer funded by Special Account #4 "for review of relevant smoking and health topics" at the time of the Workshop. 03746253-6262 (U.S. Ex. 85,646); 01347232-7243 (U.S. Ex. 75,293).

869. Anthony Cosentino presented a paper on ETS and pulmonary function testing. He had earlier received Special Account #4 funding for preparing a statement about public smoking. 1005045322-5333 (U.S. Ex. 85,664).

870. Defendants cited the conclusions from this workshop in advertisements, brochures, news releases, and submissions to Congress, OSHA, and EPA in support and furtherance of their fraudulent effort to deny and distort the health effects of secondhand smoke and seek to protect cigarette sales volumes. See. e.g., TINY0018174-8190 at 8177, 8179-8182 (U.S. Ex. 88,599); TINY0020573-0577 at 0575-0576 (U.S. Ex. 88,600); TIFL0055129-5139 at 5131-5132 (U.S. Ex. 88,601); TIMN0120782-0785 (U.S. Ex. 88,602); 517001328-1330 (U.S. Ex. 88,603); 2070140494-0630 at 0595-0596 (U.S. Ex. 88,604).

(ii) The Vienna Symposium

871. Defendants covertly supported another symposium addressing passive smoking and health in Vienna, Austria from April 9-12, 1984. TI12871546-1582 (U.S. Ex. 87,370). This symposium, "Medical Perspectives on Passive Smoking," was publicly portrayed as having been organized by the Austrian Society for Occupational Medicine, the German Society for Occupational Medicine, the American Health Foundation, and the Bavarian Academy for Occupational and Social Medicine in cooperation with the World Health Organization ("WHO") and the International Green Cross in Geneva. 04211608-1610 (U.S. Ex. 22,131). When WHO learned that the tobacco industry was promoting the organization as a participant of this symposium, WHO vehemently objected to this falsehood. Although WHO did send one observer to the symposium, that observer's impression was that the symposium was a "scholarly exercise in futility" and that WHO should "disassociate[] itself from this type of exercise." TI00681804-1804 (U.S. Ex. 88,605); see also TI00681800-1803 (U.S. Ex. 88,606). It was WHO's position that passive smoking was an indisputable health risk and ETS was one of the largest sources of

indoor air pollution that affected anyone "compelled to inhale smoky air." 2025989598-9598 (U.S. Ex. 85,665).

872. Ernst Wynder, founder of American Health Foundation ("AHF"), was one of the Vienna Symposium's organizers. Wynder had a long history with Philip Morris that was not disclosed to the symposium participants or the public at large. This relationship seemed to materialize around 1969, at which time Wynder described himself as one of the "best friends the cigaret [sic] industry has." 1000321438-1438 (U.S. Ex. 85,666). That year, Philip Morris offered Wynder use of a smoking machine for his work and further offered to "pursue within [Philip Morris] the consideration of additional support for the laboratory work." 1005070885-0885 (U.S. Ex. 85,667). Between 1976 and 1990, Philip Morris provided AHF with millions of dollars in research grants. 2021630793-0793 (U.S. Ex. 85,668); 1003710362-0363 (U.S. Ex. 85,669); 1003710347-0347 (U.S. Ex. 85,670); 2021636204-6204 (U.S. Ex. 85,671); 2021594926-4926 (U.S. Ex. 85,672). In 1991, Kraft General Foods, a subsidiary of Philip Morris Incorporated, continued support of AHF. That year, Kraft sent AHF \$657,500 toward its five year commitment of nearly \$2 million for a research and education program to be conducted from 1991 to 1995. This program studied the correlation between lifestyle and environmental exposures and major chronic illnesses, and the role of diet in cancers of the lung, oral cavity and bladder. 2046988683-8683 (U.S. Ex. 85,673); 2021630974-0975 (U.S. Ex. 87,371); 2046988682-8682 (U.S. Ex. 85,674).

873. The press release announcing the conclusion of the Vienna Conference stated that there was no proof that passive smoking presents a health hazard and "[s]hould lawmakers wish

SECTION IV.C.

to take legislative measures with regard to passive smoking, they will, for the present, not be able to base their efforts on a demonstrated health hazard from passive smoking." 04211608-1610 (U.S. Ex. 22,131); 2024967092-7093 (U.S. Ex.87,372). The industry publicly exploited this "conclusion" repeatedly. See e.g., 93766027-6027 (U.S. Ex. 85,675) (Tobacco Institute's memo to General Services Administration re opposition to Proposed rule 101-20.109-10 Smoking Regulations); 2070140494-0630 at 0596-0597 (U.S. Ex. 88,607) (Comments of Philip Morris, Inc. to EPA re EPA review draft: health effects of passive smoking: assessment of lung cancer in adults and respiratory disorders in children); TIFL0055129-5139 (U.S. Ex. 88,601) (Statement of the Tobacco Institute presented by R.J. Lewis, Sr. V.P. for Federal Relations before the U.S. House of Representatives); TIMN0120782-0785 (U.S. Ex. 88,602) (Tobacco Institute press release); TINY0018174-8190 at 8187-8190 (U.S. Ex. 88,599) (Tobacco Institute publication); TINY0020573-0577 at 0576 (U.S. Ex. 88,600) (Tobacco Institute press release); 500894287-4343 (U.S. Ex. 85,676); TOBAC00154331-4331 (U.S. Ex. 85,677); 300551794-1823 at 1799 (U.S. Ex. 88,608).

874. It was important to Defendants and their lawyers that the Vienna Symposium and its erroneous conclusion appear to be independent of the tobacco industry. John Rupp, Covington & Burling attorney, and Donald Hoel, Shook, Hardy & Bacon attorney, would later deny to Sorell Schwartz, a Georgetown University professor who received funding from the tobacco industry, that the Vienna symposium was a clandestine, tobacco-sponsored event. Mary Pottorff of Philip Morris eventually told Schwartz that Hoel had organized the symposium. Deposition of Sorell Schwartz, United States v. Philip Morris, et al., May 28, 2002, 168:10-

171:2. Further, after the symposium, the tobacco industry continued to hide the fact that Wynder and his foundation had a financial interest in the tobacco business, stressing that he was a physician and the president of AHF, but remaining silent on his connection with the industry. 500894287-4343 (U.S. Ex. 85,676); 500642763-2779 (U.S. Ex. 85,644).

(iii) The McGill Symposium

875. In 1989, Covington & Burling attorney John Rupp helped organize a private, invitation-only symposium on ETS and Health at McGill University in Montreal, Quebec, attended by number of scientists from both the United States and the international arena. Rupp hand-picked the invited scientists from the "scientific witness teams" that many Defendants had developed. The symposium was funded by Philip Morris and the Tobacco Institute, and the results of the symposium were made public and published. Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 193:2-199:7.

876. Defendants sought to generate publicity to advance their ETS strategy by choreographing the symposium at McGill. Before the symposium began, Philip Morris planned its format to ensure that conclusions reached by participants would favor Defendants' position on ETS exposure. Defendants used the McGill Symposium to, in Rupp's words, "neutralize" a risk assessment on ETS being conducted by the United States Environmental Protection Agency by producing what they would champion as an authoritative monograph. 2023034633-4637 (U.S. Ex. 22,932) (U.S. Ex.75,231); TIDN002130-1305 (U.S. Ex. 22,731); 2500048508-8515 (U.S. Ex. 20,549); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 193:5-9, 195:5-196:21, 218:3-219:13.

SECTION IV.C.

877. Although Defendants did disclose publicly that they provided a grant to the McGill Symposium, all of the other co-sponsors were portrayed as being independent of the industry. TIDN0010803-0803 (U.S. Ex. 85,678). All of the co-sponsors of the symposium, however, had ties to Defendants that were not apparent.

878. Donald Ecobichon, the co-chair of the ETS symposium, represented the Department of Pharmacology and Therapeutics, McGill University. Ecobichon also participated in the press activities related to the symposium. He was an ETS and indoor air quality consultant for the Tobacco Institute at the time of symposium. TIDN007059-7063 (U.S. Ex. 65,551); 2023034633-4637 (U.S. Ex. 22,932); (U.S. Ex. 75,231).

879. Healthy Buildings International, a McGill symposium sponsor, had a long financial relationship with Defendants, as described at U.S. FPF § IV.C. (5) (d), supra.

880. In furtherance of its goal of preventing smoking restrictions by generating research on ETS and mobilizing a team of scientists, Philip Morris had entered into contracts with co-sponsor Institut Fresenius, Neuhot. 2501474253-4259 (U.S. Ex. 22,017) (U.S. Ex. 75,270); 2026205322-5338 (U.S. Ex. 85,679); 2028364722-4722 (U.S. Ex. 23,804).

881. Representing co-sponsor Institut Universitaire de Technologie de Dijon, University de Burgonge was Guy Crepat, Ph.D., a professor at the institution. Crepat was also a tobacco industry consultant paid by Philip Morris through Covington & Burling. 2023591935-1938 (U.S. Ex. 22,855); 2023592986-2998 (U.S. Ex. 85,548); 2026127628-7632 (U.S. Ex. 85,680).

882. Co-sponsor Institute of Environmental and Industrial Medicine, Hanyang University sent Dr. Yoon Shin Kim, also an industry consultant, sponsored by Brown & Williamson, Philip Morris and R.J. Reynolds, with the assistance of John Rupp, Covington & Burling attorney, to "contribute to the debate on ETS issues." 300527928-9311 (U.S. Ex. 85,681); 2500048643-8654 (U.S. Ex. 22,857). At the time of the symposium, Kim was "desperate for funding," which Defendants supplied. 300527928-9311 (U.S. Ex. 85,681); 87595794-5805 (U.S. Ex. 85,682).

883. The National Energy Management Institute ("NEMI"), a non-profit organization sponsored by two sheet metal workers' unions, also co-sponsored the McGill Symposium. At the time of the symposium, Defendants were supporting NEMI as part of their comprehensive plan to combat the threat posed by the ETS issue. NEMI had an indoor air quality program that was used to raise the sheet metal industry's awareness of indoor air pollution as a problem and marketing opportunity. Defendants were closely involved with NEMI's indoor air program projects. For example, the Tobacco Institute contracted with NEMI to do indoor air quality work, assisted NEMI in producing its quarterly newsletter and other directives, and supported "an extensive 18 month program to train unionized sheet metal contractors and workers to diagnose and treat sick buildings." Defendants identified NEMI's spokespersons for the program. TIDN 0002692-2701 (U.S. Ex. 85,605); TIDN00117700-1784 (U.S. Ex. 85,683); 2024234164-4168 (U.S. Ex. 85,684); TIDN0025948-5957 (U.S. Ex. 62,612); TIMN0435220-5272 (U.S. Ex. 21,734).

884. The Tobacco Institute had partnered with its longtime ally and symposium co-

sponsor, The National Federation of Independent Business/Foundation, as early as 1981.

TCAL0413532-3534 (U.S. Ex. 65,457); 2046554299-4300 (U.S. Ex. 85,685).

885. Co-sponsor Research and Consulting Company was represented by a toxicologist hand-picked by Defendants to attend the symposium Pamela Allen. Allen was a member of ARIA (an industry developed "trade group" described at U.S. FPF § IV.C (5) (f), supra) and a consultant paid by Covington & Burling who had contributed a chapter to Defendants' book, "Other People's Tobacco Smoke," addressing ETS and pregnancy. In her paper, she falsely stated that "the data currently available on the effects of ETS exposure during pregnancy indicate either no adverse effect or only a weak association." 2023592989-2998 (U.S. Ex. 85,686); 2051809899-10096 at 10027 (U.S. Ex. 87,373).

886. D.F. (Max) Weetman represented co-sponsor Sunderland Polytechnic, School of Pharmacology. Weetman was an industry consultant who was paid by Covington & Burling through attorney John Rupp. 2023592793-2797 (U.S. Ex. 20,394); 2022850493-0506 (U.S. Ex. 36,883); 20638780058-0058 (U.S. Ex. 85,687); 2023856321-6328 (U.S. Ex. 22,037).

887. The McGill Symposium included as participants eighty of Defendants' consulting scientists from more than twenty countries. The participants, including Peter Lee, Gio Gori, and Gray Robertson, were carefully selected for the invitation only event, so that Defendants' consultants could present their views unopposed. Covington & Burling coordinated the accompanying publicity campaign, including determination of the best avenues for distributing the published proceedings within Asia, and distribution of the written proceedings by tobacco consultant symposium participants to public officials in their own countries. The editors of the

SECTION IV.C.

1989 McGill Symposium publication were paid industry consultants. 2500048976-8998 (U.S. Ex. 23,007); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 193:5-9; 195:5-198:7; 209:6-213:21; Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 51:3-17; T110161302-1305 (U.S. Ex. 21,250).

888. Several Tobacco Institute paid academic scientists participated in the McGill ETS Symposium, and several of them presented keynote papers that were published as part of the proceedings. TIDN0025948-5957 (U.S. Ex. 62,612); T101140124-0133 (U.S. Ex. 62,100).

889. All of the persons chosen to present papers at the symposium had well-established ties to Defendants. Co-chairman Donald Ecobichon of McGill University, delivered the opening remarks. TLT0150001-0390 (U.S. Ex. 65,706); Environmental Tobacco Smoke, Proceedings of the International Symposium at McGill University 1989 (Donald J. Ecobichon & Joseph M. Wu eds., 1990) (U.S. Ex. 65,706); 94348745-8752 (U.S. Ex. 85,688).

890. Delbert Eatough, a chemistry professor at Brigham Young University, presented the first paper entitled: "The Chemical Characterization of Environmental Tobacco Smoke." TLT0150001-0390 at 0023 (U.S. Ex. 65,706). This presentation would be cited by the Tobacco Institute in its "Comments of The Tobacco Institute on Health Effects of Passive Smoking: Assessment of Lung Cancer in Adults and Respiratory Disorders in Children Review Draft, October 1, 1990." 300542191-2253 at 2226 (U.S. Ex. 85,689); see also "Comments of the Tobacco Institute to the United States Department of Labor, Occupational Safety and Health Administration Occupational Exposure to Indoor Air Pollutants: Request for Information," Docket No. H-122, RIN 1218-AB37, March 20, 1992, 87715488-5558 at 5493 (U.S. Ex.

85,690).

891. Eatough's presentation at the McGill Symposium is no surprise, given his history with Defendants. Eatough had been a long-time recipient of tobacco industry funding, dating back to at least 1985, when he had a contract with R.J. Reynolds. In 1987, his work was funded through CIAR as an applied project, funded by CIAR's Board of Directors. 511282020-2022 (U.S. Ex. 85,691); 506527727-7732 (U.S. Ex. 85,692); 505625216-5217 (U.S. Ex. 85,693); 504971400-1401 (U.S. Ex. 85,694); 87823747-3750 (U.S. Ex. 85,695); 2015021830-1831 (U.S. Ex. 85,696); 2023555568-5568 (U.S. Ex. 85,697); 2505442777-2935 at 2813 (U.S. Ex. 75,388).

892. The remaining presenters at the Symposium were consultants to the Tobacco Institute, and included Joseph Wu, co-chairman of the symposium. TIDN0007059-7063 (U.S. Ex. 65,551) TIDN0007064-7110 (U.S. Ex. **88,795**); TLT0150001-0390 (U.S. Ex. 65,706); Environmental Tobacco Smoke, Proceedings of the International Symposium at McGill University 1989 (Donald J. Ecobichon & Joseph M. Wu eds.) (1990) (U.S. Ex. 65,706).

893. Upon conclusion of the McGill Symposium, consultant participants engaged in planned media interviews and other public relations exercises. The Tobacco Institute coordinated further public relations efforts, including having the consultants prepare opinion letters for publications. Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 131:13-133:16, 135:20-136:12; TIOK0017415-7416 (U.S. Ex. 85,698); TIOK0031615-1649 (U.S. Ex. 88,609).

894. The McGill ETS Symposium proceedings summary was published as planned. The publication contained no indication of Defendants' influence and control over the

SECTION IV.C.

proceedings. Environmental Tobacco Smoke, Proceedings of the International Symposium at McGill University 1989 (Donald J. Ecobichon & Joseph M. Wu eds., 1990) (U.S. Ex. 65,706); TLT015001-0390 (U.S. Ex. 65,706).

895. On February 5, 1990, the Tobacco Institute submitted to the United States Environmental Protection Agency ("EPA") its comments on the draft compendium regarding ETS being prepared by the EPA. As part of its official comment, the Tobacco Institute submitted a copy of the McGill proceedings, which it described as "a thorough, up-to-date discussion of the relevant literature." The Tobacco Institute urged the EPA to carefully consider the results of this symposium, "which concluded, overall, that ETS has not been shown to present a health hazard to nonsmokers" in its revisions of the draft. TII1951245-1685 (U.S. Ex. 85,699); TIMN0015305-5349 at 5311 (U.S. Ex. 88,610).

896. Likewise, in its own Comments to the EPA regarding the EPA Review Draft's classification of ETS as a Group A carcinogen, Philip Morris cited the McGill ETS Symposium to support its argument that ETS was not harmful:

In his "Summary and Concluding Remarks" from the Proceedings of the International Symposium on ETS at McGill University 1989, (Montreal, Canada), co-organizer Dr. Joseph Wu concluded that the published data on ETS, when critically examined and evaluated, do not provide a scientific justification for the claim that ETS is a cause of disease in nonsmokers.

2070140494-0630 at 0598 (U.S. Ex. 88,455).

897. Defendants further exploited its fabricated McGill ETS Symposium. For example, Tobacco Institute press releases relied on the symposium as support for the industry's

SECTION IV.C.

false representation that ETS exposure was not harmful. See, e.g., TIFL0523989-3992 (U.S. Ex. 88,456) ("Majority Favors Smoking Sections in Most Public Places, Anti-smoking activists recycle old claims to add new pressure"); TIMN0125426-5428 (U.S. Ex. 88,457) ("Draft 'Risk Assessment' Described as Speculation, Underlying scientific foundation inadequate").

Consultants hired by Defendants to present statements before Congress likewise cited the McGill ETS Symposium to support their position that the pending legislature concerning ETS was unwarranted. See, e.g., TIMN358365-8377 (U.S. Ex. 88,458) (Statement of Larry Holcomb before the Committee on Finance, United States Senate, May 24, 1990) (attaching copy of McGill Symposium proceeding); TLT0150001-0390 (U.S. Ex. 65,706) (Statement of W. Gary Flamm before the Committee on Energy and Commerce Subcommittee on Health and the Environment, United States House of Representatives).

898. In the summer of 1990, consultants were paid to prepare editorials comparing the results of the McGill Symposium to the public draft of the EPA ETS Risk Assessment. Many of these submitted editorials were published. Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 138:15-139:4; TI09911997-2033 (U.S. Ex. 22,367). At least one such editorial was published by a major newspaper without any indication that the author was a paid consultant to Defendants. Jack Peterson, 'Passive smoking' danger? Don't believe what you read (Editorial), Chicago Sun-Times, June 23, 1990, at 14 (U.S. Ex. 86,722); TIDN0007059-7063 (U.S. Ex. 65,551).

(iv) Essen Symposium

899. From October 23 to 25, 1986, the German Society of Occupational Medicine

SECTION IV.C.

hosted a scientific symposium in Essen, Germany run by Professor Karl Norpoth of the Institute of Hygiene and Occupational Medicine at the University of Essen (the "Essen symposium"). Researchers for Philip Morris sought approval to present research findings regarding environmental tobacco smoke at the Essen symposium, but ultimately lawyer review and opposition prevented their attempts to publicly present their findings. A leading board of German physicians, the German Society for Smoking and Health, ultimately concluded that the Essen symposium was so attached to the tobacco manufacturers that the proceedings were irretrievably tainted. In a formal statement, the German Society stated: "Apparently the symposium in Essen will once again serve as an organ for marketing manipulation by the tobacco industry. This conclusion is in no way minimized by the fact that a handful of eminent, independent scientists have also been invited to participate; In public they shall serve as an alibi." 2025989595-9596 at 9595 (U.S. Ex. 22,833).

900. Beginning in February, 1986, prior to the Essen symposium, scientists at INBIFO, Philip Morris's research facility in Cologne Germany, requested approval from Philip Morris to present three studies at the Essen symposium related to environmental tobacco smoke. 2501666835-6837 at 6835 (U.S. Ex. 87,027). Among other findings the studies found that "sidestream condensate is slightly (1.4-fold) more mutagenic than mainstream condensate" 2001225910 (U.S. Ex. 87,028); see also 2001225909-5909 (U.S. Ex. 87,029); 2001225911 (U.S. Ex. 87,030); 2501659066-9066 (U.S. Ex.87,031). On May 6, 1986, at least one of the studies was forwarded by Phillip Morris scientist Robert Pages to Donald Hoel, an industry lawyer at Shook, Hardy & Bacon for review and approval to present the paper. 2021654043-4045 at 4045

SECTION IV.C.

(U.S. Ex. 87,032). On May 20, 1986, Thomas Osdene, Director of Research for Philip Morris, sought approval from Philip Morris management to present the three studies at the Essen symposium. 2001225907-5908 at 5907 (U.S. Ex. 87,033). On May 28, 1986, Robert Pages reported back to the INBIFO scientists that, despite his efforts and the efforts of Osdene to gain approval, Philip Morris management would not allow the studies to be presented because a Philip Morris in-house lawyer, Frederic Newman, "said no." According to Pages, "that was the end of that." 2501459823-9823 (U.S. Ex. 87,034); see also, 2501459834-9834 (U.S. 87,035).

(b) Long-time Paid Scientists

(i) Ragnar Rylander

901. Ragnar Rylander, an environmental physician and researcher and lecturer at, variously, the University of Stockholm, University of Gothenburg, and University of Geneva, has had financial ties to the tobacco industry for at least thirty-five years, but endeavored to keep that relationship secret in order to preserve his public reputation as an "independent" researcher.

902. Rylander worked with Tore Dalhamn, Uppsala University, Institute of Hygiene, Stockholm, Sweden in the early 1960s when Dalhamn had an ongoing consultancy agreement with Lorillard. 91732351-2353 (U.S. Ex. 85,700). As early as 1967, Rylander's expenses and fees were being paid by Lorillard in connection with Dalhamn's and Rylander's research relating to phenol methyl oxadiazole ("PMO"). 00104885-4886 (U.S. Ex. 85,701); 03541871-1871 (U.S.

SECTION IV.C.

Ex. 85,702). Arthur Stevens, Lorillard General Counsel, prepared and forwarded to Dalhamn an agreement “by which you can obtain the agreement of Doctor Rylander (and any other consultant) to the very same secrecy, confidentiality and patent provisions of your agreement with us.” 01243432-3432 (U.S. Ex. 85,703).

903. Rylander became a paid consultant for Philip Morris in December of 1972. 2063590583-0584 (U.S. Ex. 88,459). Rylander and Philip Morris entered into a formal consulting agreement on December 7, 1972, pursuant to which Rylander became the “coordinator” of scientific activities between INBIFO (Philip Morris's European research facility) and Philip Morris’s Research Center in Richmond, Virginia, beginning in 1973. 2063590583-0584 (U.S. Ex. 88,459).

904. Rylander’s financial relationship with tobacco industry continued for thirty years, during which time he conducted several studies designed to downplay or obfuscate the effects of secondhand smoke on nonsmokers. He also sought to hide the fact of his substantial financial backing from Philip Morris in order to hold himself out as an “independent” scientist and avoid being disqualified from various university and public positions. In this “independent” capacity, he made presentations to public agencies in various countries. 2063590583-0584 (U.S. Ex. 85,704). The tobacco industry, in turn, promoted his work as “independent” in an effort to undermine other scientific studies linking secondhand smoke to disease. 503647216-7220 (U.S. Ex. 29,703); 2063590583-0594 (U.S. Ex. 85,704).

905. Rylander’s work with Philip Morris was coordinated by Helmut Gaisch. Gaisch, a scientist, held a variety of positions within Philip Morris, including: Director, Science &

SECTION IV.C.

Technology, Philip Morris International from 1984-1990; Philip Morris Europe Scientist, Head of Laboratories, FTR/PME, Philip Morris International; and Philip Morris Representative on ASFC. Gaisch managed defensive and extra mural projects including INBIFO, and maintained contacts with individual “independent” scientists (such as Professors Leuchienberger, Wahren, Battig, Grandjean, Roe, Brendel, and Malkki). 2501001600-1606 at 1603 (U.S. Ex. 85,706).

906. In his capacity as Philip Morris’s “representative” to INBIFO, Rylander proposed in 1973 to organize a conference on the effects of tobacco smoke on nonsmokers, which was held in Bermuda in 1974. 2063590583-0584 (U.S. Ex. 85,704); 1000053116-3116 (U.S. Ex. 85,707); 1000259865-9865 (U.S. Ex. 85,708); 1000259799-9803 (U.S. Ex. 85,709). The conference was sponsored by the University of Geneva but was financially supported by Philip Morris Europe, with participants chosen by tobacco industry counsel Donald Hoel of Shook, Hardy & Bacon. 1000259784-9784 (U.S. Ex. 85,717); 2015035615-5615 (U.S. Ex. 85,710). Correspondence among various Philip Morris scientists and lawyers both before and after the conference demonstrated that the purpose of the conference was to generate data purporting to show that secondhand smoke does not pose a threat to nonsmokers. 1000259794-9794 (U.S. Ex. 85,711); 2015035570-5570 (U.S. Ex. 87,374); 1000259789-9789 (U.S. Ex. 87,375); 1000259790-9790 (U.S. Ex. 87,036). Philip Morris hoped the data could be used to defeat proposed legislation restricting indoor smoking. 1000259794-9794 (U.S. Ex. 85,711); 2015035555-5556 (U.S. Ex. 87,376). A meeting summary submitted to, and ultimately published in, the journal *Science* under Rylander’s name was actually “ghost written” by Philip Morris USA scientist Nick Fina, in consultation with Helmut Wakeham and Ray Fagan, who were also Philip Morris scientists.

SECTION IV.C.

2015035520-5520 (U.S. Ex. 85,712). Rylander also submitted drafts of his summary of the conference proceedings to Philip Morris personnel for review and comment before submitting them for publication in the *Scandinavian Journal of Respiratory Disease*. 1000259693A-9693A (U.S. Ex. 86,613); 1000259703-9703 (U.S. Ex. 85,713); 1000260272-0272 (U.S. Ex. 85,714). Donald Hoel, Shook, Hardy & Bacon attorney, Helmut Wakeham, Philip Morris scientist, and Alexander Holtzman, Assistant General Counsel for Philip Morris, were involved in editing the proceedings. 1000260272-0272 (U.S. Ex. 85,714).

907. Wakeham later provided a copy of the meeting summary to CTR's Industry Technical Committee. He described the published proceedings as a "very convenient piece of paper." ATX040168210-8212 at 8212 (U.S. Ex. 85,715).

908. Defendants put the proceedings to use by paying consultants to prepare papers and testify. For instance, two Special Account #4 consultants provided testimony that was submitted on September 7, 1978, before the Subcommittee on Tobacco of the House Agriculture Committee. This committee was chaired by Walker Jones, who held a closed hearing, where only one side of the story was presented on the effects of smoking on nonsmokers. Domingo Aviado, a long time paid tobacco industry consultant, stated in his presentation to Congress: "In 1974, I was one of 21 scientists, from seven countries, invited to attend an environmental workshop entitled, "Tobacco Smoke Effects on the Nonsmoker." All of the participants had previously investigated various aspects of tobacco smoking. During this three-day conference, not one conclusive observation was made to the effect that exposure to the nonsmoker tobacco smoke causes disease." 03684330-4679 at 4519 (U.S. Ex. 87,443). Hiram Langstrom's paper

SECTION IV.C.

quoted Rylander's conclusions at the workshop regarding carbon monoxide: "It can thus be concluded that the CO in environmental tobacco smoke does not represent a health hazard." 03684330-4679 at 4496 (U.S. Ex. 87,443).

909. The "findings" of the 1974 Bermuda workshop were incorporated into the public smoking position paper by the International Committee on Smoking Issues "ICOSI" and distributed at a Joint Meeting of National Associations and ICOSI, attended by fifty-three persons representing fifteen National Associations and thirteen countries. 500876807-6812 (U.S. Ex. 87,378). ICOSI was formed by the international tobacco manufacturers to deal with and try to reverse the declining social acceptability of smoking, which posed a major threat to the tobacco industry. 1000221521-1558 (U.S. Ex. 88,460). The position paper was described as "a fine example how ICOSI operates in developing countermeasures to offset attacks on smoking." 513886735-6773 (U.S. Ex. 87,377); 500876807-6812 (U.S. Ex. 87,378). The workshop was cited to in the 1986 Tobacco Institute's ETS booklet entitled, "Tobacco Smoke & The Nonsmoker: Scientific Integrity at the Crossroads." TIMN0284404-4413 (U.S. Ex. 77,088).

910. From 1975 to 1989, Rylander also received funding from Special Account #4, which was supported by American Brands, Inc., Brown & Williamson, Liggett, Lorillard, Philip Morris, Inc., and R.J. Reynolds. 1005122219-2222 (U.S. Ex. 20,214); 507875674-5674 (U.S. Ex. 20,793); 2015041994-1997 (U.S. Ex. 36,654); 03746173-6182 at 6178 (U.S. Ex. 46,500); 86002393-2396 (U.S. Ex. 86,359); 507876993-6994 (U.S. Ex. 20,799); ATX140000938-0939 (U.S. Ex. 21,122); 86002410-2413 (U.S. Ex. 85,716); 507875857-5859 (U.S. Ex. 20,795).

911. Rylander also worked for Philip Morris's Robert Page to prepare and submit

SECTION IV.C.

materials to the EPA on the risk assessment. Page asked Rylander to encourage Dr. Linda Koo, a Covington & Burling ETS consultant, to write a letter to the EPA supporting the industry position. 2023533777-3777 (U.S. Ex. 85,720); 2023533779-3779 (U.S. Ex. 85,721).

912. Rylander received significant financial support from Philip Morris over the years, including annual fees and expenses ranging from \$2,500 to \$85,000 between 1972 and 1997, and grant allocations ranging from \$40,000 to \$80,000 between 1985 and 1997. 2063590583-0584 (U.S. Ex. 85,704). The focus of his grant work was to study confounding environmental factors that might be cited to explain away or diminish the role played by secondhand smoke in causing certain diseases in nonsmokers. 2063590583-0584 (U.S. Ex. 85,704); 2050754280-4280 (U.S. Ex. 85,723); 2073346074-6075 (U.S. Ex. 85,741). He was also budgeted to receive consulting fees of \$120,000 in 1986, \$125,000 in 1987, \$130,000 in 1988, and \$135,000 in 1989. 2001202325-2325 (U.S. Ex. 85,724). An internal 1991 Philip Morris Corporate Scientific Affairs memorandum stated that Rylander was on a “commitment” for \$90,000 and that the \$90,000 was to be paid “no matter what we asked him to do for us.” 2023223287-3290 (U.S. Ex. 85,725). According to internal Philip Morris documents, Rylander was projected to receive \$92,000 in 1999, 2073808584-8585 (U.S. Ex. 24,681), and submitted a “supplemental” budget for \$12,424 in additional expenses incurred in 1999. 2073808587-8589 (U.S. Ex. 24,682). He submitted a budget for \$92,500 in fees and expenses in 2000. 2073808584-8585 (U.S. Ex. 24,681). Philip Morris also funded a post-doctoral position in Rylander’s department at the University of Gothenburg beginning in 1999, at the cost of \$94,280 per year. 20738085762-5762 (U.S. Ex. 85,726); 2073808598 (U.S. Ex. 85,727); 2073808574 (U.S. Ex. 85,728); 2073808573

SECTION IV.C.

(U.S. Ex. 85,729); 2073808570-8570 (U.S. Ex. 85,730). Nevertheless, Rylander took care to limit his direct contact with Philip Morris-affiliated institutions and personnel in order “to retain as far as possible the image of an independent scientist.” 2063590609-0609 (U.S. Ex. 85,731).

913. In June 1994, Philip Morris Europe approached Rylander and requested that he perform a study on lifestyle factors, including diet habits, between nonsmoking persons married to smokers and non-smokers in Europe. 2028381515-1515 (U.S. Ex. 26,880); 2028381516-1522 (U.S. Ex. 26,881). Rylander agreed and indicated he would see if CIAR would extend a current project. 2028381513-1514 (U.S. Ex. 26,879). Philip Morris agreed to fund the study through CIAR. 2028381480-1480 (U.S. Ex. 26,873). CIAR provided Rylander with a new contract, number 97-07, at a project cost of \$333,031 for a questionnaire study in the Swedish and Swiss population. It was completed December 31, 1996. 2505442777-2960 at 2906 (U.S. Ex. 46,054) (U.S. Ex. 75,388).

914. In June 1997, Rylander wrote to Richard Carchman of Philip Morris Scientific Affairs: “Throughout the years I have always been very strict to report to Richmond only and particularly not get engaged in the activities of the Neuchatel group. Also regarding specific projects, I have also adhered uniquely to Richmond and to CIAR. Finally, I have never been involved with any Philip Morris executive in meetings or contacts with outside persons, to retain as far as possible the image of an independent scientist.” 2063590609-0609 (U.S. Ex. 85,731).

915. In February 1998, Rylander submitted for publication in the *European Journal of Public Health* an article entitled “Dietary habits for non-smoking females living with smokers or non-smokers,” which was published in 1999, with an acknowledgment of funding from CIAR

under contract number 94-07 and with appreciation to Linda Koo for her comments.

2067224066-4069 (U.S. Ex. 85,733). In his submission, Rylander affirmed that “no part of the research presented has been funded by sources that might lead to a conflict of interest.” When this assertion was questioned, Rylander stated in writing in 2001 that he was never a “formal” consultant to Philip Morris and never received a “regular” payment for consultancy other than travel and per diem costs. June 26, 2001 letter from Ragnar Rylander to Martin McKee (U.S. Ex. 88,032).

916. On December 15, 2003, the Court of Appeals, Criminal Division, Republic and Canton of Geneva issued a decision against Rylander in a libel action resulting from his exposure as a Philip Morris consultant. Deithelm et al. v. Public Prosecutor, et al., Decision of the Court of Appeal, Criminal Division, Republic and Canton of Geneva, Dec. 15, 2003. The Court made the following significant findings:

- a. Rylander was supported financially by Philip Morris for at least thirty years, beginning in 1973.
- b. Rylander was to be paid by FTR, a wholly-owned subsidiary of Philip Morris International, and asked that his relationship with Philip Morris be kept confidential.
- c. The main purpose of the 1974 and 1983 symposia organized by Rylander on Philip Morris’s behalf was to lead both independent researchers and the general public to believe that there were insufficient data to show that cigarette smoke has any harmful effect on nonsmokers.
- d. As late as 1999, Rylander’s links to the tobacco industry were still largely unknown.
- e. Rylander’s 2001 statement to the editors of the *European Journal of Public Health* that he had never had a “formal” contractual relationship with Philip Morris or received financial compensation other than per diem and travel

expenses was a lie.

(U.S. Ex. 87,379); (U.S. Ex. 88,632).

917. A number of articles written by Rylander on CIAR sponsored studies appeared in an industry journal set up by Indoor Air International:

- a. Rylander, R., Airway responsiveness and chest symptoms after inhalation of endotoxin of (1-3)- β -D-glucan., 5(2) Indoor and Built Environment. 106-111 (1996). (U.S. Ex. 86,725).
- b. Rylander, R., Hsieh, V., Courtehouse, C., The first case of sick building syndrome in Switzerland, 3(3) Indoor Environment 159-162 (1994). (U.S. Ex. 86,726).
- c. Rylander, R., Persson, K. Goto, H., Yuasa, K., Tanaka, S., Airborne β -1,3-glucan may be related to symptoms in sick buildings, 1(5) Indoor Environment 263-267 (1992). (U.S. Ex. 86,727).

Other CIAR sponsored work appeared elsewhere:

- d. Rylander, Ragnar, Axelsson, G., et al., Dietary habits for non-smoking females living with smokers and non-smokers, 9 European Journal of Public Health 142-145 (1999). (U.S. Ex. 86,728).
- e. Rylander, R., Indoor air-related effects and airborne(1->3)-beta-D-glucan, 107 Environmental Health Perspectives 501-503 (Supplement 3) (1999). (U.S. Ex. 86,729).
- f. Rylander, R., Airborne (1-3)- β -D-glucan and airway disease in a day-care center before and after renovation, 2(4) Archives of Environmental Health 281-285 (1997). (U.S. Ex. 86,730).
- g. Rylander, R., Investigations of the relationship between disease and airborne (1->3)-beta-D-glucan in buildings, 6(4) Mediators of Inflammation 6(4) 275-7 (1997). (U.S. Ex. 86,731).
- h. Rylander, R., Goto, H., Yuasa, K., (1->3)- β -D-Glucan in indoor air, its measurement and in vitro activity, 25(1)

American Journal of Industrial Medicine 81-83 (1994).
(U.S. Ex. 86,732).

- i. Rylander, R., Fogelmark, B., Inflammatory responses by inhalation of endotoxin and (1->3)- β -D-Glucan 25(1)
American Journal of Industrial Medicine 101-102 (1994).
(U.S. Ex. 86,733).

918. Rylander also co-authored an article with Geoffrey Kabat, Linda Koo, and others entitled: "Dietary and Lifestyle Correlates of Passive Smoking in Hong Kong, Japan, Sweden, and USA" that appeared in *Social Science Medicine* in 1997. 520595598-5608 (U.S. Ex. 85,734) (Rylander, Kabat, Koo, et al., Dietary and Lifestyle Correlates of Passive Smoking in Hong Kong, Japan, Sweden, and USA, 45:1 *Social Science Medicine* 159-169 (1997)). Rylander reported to Richard Carchman on meetings with Koo and the progress made on the study. 2028366233-6234 (U.S. Ex. 22,815). Koo was listed as a consultant to INBIFO at the time. 2029175611-5611 (U.S. Ex. 23,868). The pre-publication version of the final study was sent to Shook, Hardy & Bacon, by Joseph M. Wu, a Philip Morris consultant. 2073058357-8385 (U.S. Ex. 42,811); 2073058356 (U.S. Ex. 75,365).

919. Rylander, Kabat, Jenkins and Linda Koo were among the industry consultants who wrote papers for presentation at the International Symposium on Lifestyle Factors and Human Lung Cancer December 12-16, 1994, Guangzhou, People's Republic of China. The symposium was organized by industry consultant Wu. Shook, Hardy & Bacon and Wu edited the papers that were presented which were published in a special supplement to the *Journal of Lung Cancer*. Eighteen papers were published full-length and the remainder were published as abstracts. Kabat's paper was published in the regular issue of *Lung Cancer*. 2073058344-8348

SECTION IV.C.

(U.S. Ex. 85,735). The publications contained no attribution to Defendants. 700518532-8541 (U.S. Ex. 85,736); BAG064 2513-2522; 800143641-3730 (U.S. Ex. 85,737); BAG0471326-1415 (U.S. Ex. 85,737).

920. In 1998, CIAR funded a project: "Lung Cancer Among Nonsmoking Females in China - A Case Control Study to Evaluate the Role(s) of Indoor Air, Dietary Agents, and Personal Susceptibility Biomarkers." The principle investigator was Nan-Shan Zhong of Guangzhou Medical College in China. This was a one year pilot feasibility study. The Project duration was from January 1, 1998 to May 3, 1999 at a cost of \$84,288. 2505442777-2935 at 2935 (U.S. Ex. 75,388). Mingda Zhan of Philip Morris provided Carchman, Ellis, and Sanders, (among others) with an English translation of the abstract from the study. 2076950459A-0459A (U.S. Ex. 85,738); 2076950460-0460 (U.S. Ex. 27,577).

921. Rylander submitted budgets to Philip Morris in 1999 and 2000, which included amounts for a Chinese lung cancer study. 2073808584-8585 (U.S. Ex. 24681).

922. CIAR sponsored a workshop in China on July 15-17, 1997, which was hosted by Dr. Du of Guangzhou Medical College on "Good Epidemiologic Studies." 2063650515-0518 (U.S. Ex. 79,212). The workshop resulted in the publication of proceedings. 2063647953-8153 (U.S. Ex. 85,740). Rylander, Linda Koo, Joseph Wu, He Ling and K. Philips, all industry affiliated, were among the presenters.

923. A scientist by the name of Ling He (incorrectly identified in CIAR report as Heng Li) of Geneva University, received a post doctoral scholarship from CIAR in 1996 for \$25,500 to test the hypothesis that the intake of food items influences the expression of genes regulated by

SECTION IV.C.

antioxidants. 2505442936-2959 (U.S. Ex. 25,642). In fact, the proposal was written with or by Rylander. 2063590922-0931 (U.S. Ex. 85,739). Rylander wrote to Rich Solana, Vice President, Scientific Affairs, Philip Morris, on February 26, 2000 stating: “You may remember the antioxidant project that CIAR sponsored in terms of a scholarship for Heng Li from Gungzkhau. That manuscript is accepted in the journal *Cancer*, causes and control and I read the galleys a few days ago. The project as such was enlarged and we just received the news that it was accepted by the EU program Europe and Cancer! See how CIAR pioneered important research projects!” 2073346074-6075 (U.S. Ex. 85,741). No mention was made of Rylander’s involvement in this project on CIAR’s list of projects funded. 2505442779-2960 at 2946 (U.S. Ex. 46,054).

(ii) Theodor Sterling

924. One recipient of a significant amount of funding from Defendants was Theodor Sterling, a professor of statistics and computing science who formed a private consulting firm called Theodor D. Sterling and Associates. The purpose of this funding, which began in the 1960s, was to enable Sterling to research and write about smoking and health issues and to persuade scientists and regulators through publications and conferences that ETS was not harmful and should not be regulated.

925. In the early 1980s, the industry increased the percentage of money that it gave to Sterling to work on ETS related matters. 2024699783-9808 (U.S. Ex. 85,647). Sterling's work focused on investigating factors that could confuse the association of secondhand smoke and adverse health consequences, and other research to discredit scientific findings that secondhand smoke is harmful. His research supported Defendants' view that ETS was not harmful and

SECTION IV.C.

should not be regulated. 03758840-8841 (U.S. Ex. 85,742); 1005143671-3674 (U.S. Ex. 85,743); 01338515-8517 (U.S. Ex. 26,570); 503645406-5408 (U.S. Ex. 85,778); 01338460-8462 (U.S. Ex. 85,744); 1005125800-5802 (U.S. Ex. 85,745); 521032586-2588 (U.S. Ex. 85,746); 86003336-3338 (U.S. Ex. 85,747); 2024699783-6808 (U.S. Ex. 85,765).

926. Between 1968 and 1990, Sterling received over \$5.5 million from the tobacco industry in exchange for research and other work through the Center for Tobacco Research's ("CTR") Special Projects. 92613996-3997 (U.S. Ex. 85,748); 92614017-4017 (U.S. Ex. 85,749); 92614022-4023 (U.S. Ex. 85,750); 92614024-4025 (U.S. Ex. 85,751); 92614039-4039 (U.S. Ex. 85,752); 92614040-4042 (U.S. Ex. 85,753); 92614043-4043 (U.S. Ex. 85,754); 92614044-4045 (U.S. Ex. 85,755); 92614046-4047 (U.S. Ex. 85,756); 92614048-4072 (U.S. Ex. 85,757); 92614073-4073 (U.S. Ex. 85,758); 92614108-4111 (U.S. Ex. 85,759); 92614132-4132 (U.S. Ex. 85,760); 92614135-4135 (U.S. Ex. 85,761); 92614155-4155 (U.S. Ex. 85,762); 926141564156 (U.S. Ex. 85,763). Industry money funded Sterling's research that he then presented to state and federal legislative and regulatory bodies. 2015006938-6940 (U.S. Ex. 85,764). CTR Special Project money funded Sterling's preparation of articles that were published in scientific and trade journals, and his preparation and presentation of speeches at conferences. As a result of this CTR funded research, Sterling published over 200 articles and conference presentations. 2024966783-6808 (U.S. Ex. 85,765). In fact, Sterling boasted that he made "a major effort to disseminate our findings to scientists, engineers, architects and building managers at regularly scheduled and at specially convoked conferences and workshops" and that he shared these findings with agencies in the United States that were working toward establishing smoking

regulations for office buildings. CTRSP-FILES012593-2630 (U.S. Ex. 85,766). Sterling did not, however, disclose that his work was funded by the tobacco industry.

927. Sterling assisted Defendants in their effort to hide tobacco funding of conferences. In 1972, Sterling wrote to Shook, Hardy & Bacon attorney William Shinn, soliciting \$5,000 to fund a panel on the "Effects of Pollutants on Human Health at the International Meeting of the Society of Engineering Science" to be held in Tel Aviv, Israel. In the letter, Sterling advocated awarding the funds to the ALEPH Foundation to "enable us to manage the arrangement of support in a proper and desirable manner." In a memorandum to other industry lawyers, Shinn recommended that Sterling's request be approved and funded through a "special project (non-CTR)." In support of his recommendation, Shinn submitted that the conference would advance Defendants' position that ETS is not dangerous because Sterling had been effective this way in the past. The request for \$5,000 was granted through Special Account #4 (a lawyers' discretionary account used to fund certain types of special projects discussed in detail at U.S. PPF § I.D (3) (b)). The arrangement enabled Defendants to control information presented at conferences without disclosing their involvement. 1005143719-3719 (U.S. Ex. 85,767); 1005143717-3718 (U.S. Ex. 85,768); Lauterstein & Lauterstein Special Account #4 Statements for six months ending August 31, 1972 (U.S. Ex. 87,380).

928. When making statements to Congress, Sterling hid the fact that he received large sums of funding from the tobacco industry to do his research. He did, however, disclose other consultancies. In statements before the House Committee on Energy and Commerce, he disclosed that he "served as a consultant on data processing and environmental problems to

SECTION IV.C.

various U.S. agencies, including the Federal Trade Commission, Food and Drug Administration, National Academy of Sciences, National Research Council, National Science Foundation and a number of state agencies." Yet Sterling was silent on the consultancy work he did for the Defendants. 680908171-8188 (U.S. Ex. 85,769).

929. On March 2, 1990, Arthur Stevens, Senior Vice President and General Counsel of Lorillard, sent a letter to Patrick Sirridge of Shook, Hardy & Bacon, enclosing a check for \$46,461, which represented Lorillard's share of joint funding for Sterling. Stevens noted "that this is no longer a CTR project, but is now being funded directly by the Companies and administered as a Special Research Project through your firm." On March 19, 1990, Paul Randour, Vice President and General Counsel of American Tobacco, also sent a letter to Sirridge indicating approval of the joint funding of Sterling. Likewise, on July 23, 1990, Ernest Pepples, Senior Vice President and General Counsel of B&W, sent a letter to Sirridge enclosing a check for \$65,579, which represented Brown & Williamson's share of funding for Sterling. 87598486-8486 (U.S. Ex. 21,096); ATX300004011-4011 (U.S. Ex. 21,131); 521100040-0040 (U.S. Ex. 20,893).

930. In March 1992, Bernard O'Neill, an attorney with Shook, Hardy & Bacon, sent a letter to Wayne Juchatz of R.J. Reynolds, Ernest Pepples of Brown & Williamson, Paul Randour of American Tobacco, Arthur Stevens of Lorillard, and Charles Wall of Philip Morris, and copied to Steven Parrish of Philip Morris, recommending extension of joint industry funding of Theodor Sterling, longtime CTR Special Projects grantee, for Sterling's work analyzing the "methodical weaknesses in the epidemiological data in the area of smoking and health" and

SECTION IV.C.

"issues relating to indoor air quality and ETS exposure." According to O'Neill, Sterling's work would "provide a much needed perspective on the possible meanings of these scientific reports" on smoking and health issues. 2015002947-2955 at 2947-2948 (U.S. Ex. 20,308); (U.S. Ex. 75,121).

931. On May 18, 1992, Philip Morris Companies sent a letter through the United States mails from Charles R. Wall, its Vice President and Associate General Counsel, to O'Neill of Shook, Hardy & Bacon, which was accompanied by a check representing Philip Morris Companies' contribution to Sterling's research efforts. 2023230770-0770 (U.S. Ex. 20,384).

932. Sterling continued to receive funding from the tobacco companies until at least 1993. 86003340-3340 (U.S. Ex. 85,770); 2024699783-9808 (U.S. Ex. 85,647); 2024699781-9782 (U.S. Ex. 85,771).

933. In addition to receiving CTR Special Projects funding, Sterling received extensive funding through Special Account #4. Sterling began receiving Special Account #4 funding no later than 1969 and received thousands of dollars until at least 1989. Lauterstein & Lauterstein Special Account #4 Statement of Cash Receipts and Disbursements for the Six Months Ended August 31, 1969 (U.S. Ex. 87,444); 80680301-0303 (U.S. Ex. 21,066); Lauterstein & Lauterstein Special Account #4 Statement of Cash Receipts and Disbursements for the Six Months Ended August 31, 1970 (U.S. Ex. 21,065); 80680218-0218 (U.S. Ex. 85,772); Lauterstein & Lauterstein Special Account #4 Statement of Cash Receipts and Disbursements for the Six Months Ended August 31, 1972 (U.S. Ex. 87,381); 2015028333-8336 (U.S. Ex. 20,314); 682070005-0006 (U.S. Ex. 85,773); 68207001-7002 (U.S. Ex. 36,081); 682069996-9997 (U.S. Ex. 85,774); 682069965-

SECTION IV.C.

9967 (U.S. Ex. 85,658); 682069960-9961 (U.S. Ex. 87,382); 507875841-5843 (U.S. Ex. 85,662); 507876993-6994 (U.S. Ex. 20,799); 507875832-5834 (U.S. Ex. 20,794); 507876986-6987 (U.S. Ex. 20,798); 86002496-2499 (U.S. Ex. 85,775); 507875698-5787 (U.S. Ex. 22,953); 86002454-2457 (U.S. Ex. 85,776); ATX140000938-0939 (U.S. Ex. 21,122); Shook, Hardy & Bacon Special Account Statement of Cash Receipts and Disbursements for the Twelve Months Ended March 31, 1989 (U.S. Ex. 21,122).

934. Sterling received Special Account #4 funding in exchange for such projects as preparing public statements for the tobacco companies. 1005045370-5383 (U.S. Ex. 85,777).

935. Attorneys monitored Sterling's work. In reviewing and recommending Sterling's proposal seeking over \$200,000 to document the existence of "Office Building Syndrome" which could, in Sterling's words, "be useful with respect to the controversial issue of restriction of smoking in the workplace," Shook, Hardy & Bacon lawyer William Shinn chronicled Sterling's recent "accomplishments" *i.e.*, his publications, speeches, and Congressional testimony, all of which supported the Defendants' effort to deny and distort the health effects of exposure to secondhand smoke in order to maintain the social acceptability of smoking. 503645406-5408 (U.S. Ex. 85,778).

936. Further, Defendants monitored Sterling's public appearances:

At a meeting on occupational health held earlier this month, [Sterling] gave a presentation titled 'Job Discrimination Based on Exposure Consideration and Smoking.' This meeting was monitored by one of our research analysts; she felt that Dr. Sterling's manner of presentation put his potentially hostile audience in a receptive mood and that the audience paid close attention to what Dr. Sterling had to say. He reviewed published

evidence contrary to the idea that smoking heightens the risk of disease by interacting with certain substances to which workers are occupationally exposed. He also stated that the questions of whether other people's tobacco smoke is hazardous to nonsmoking workers, and whether smoking workers represent an additional cost to industry, are not settled and that the published reports in these areas are based on data which can be questioned on sound scientific grounds.

503645406-5408 (U.S. Ex. 85,778).

937. Another Sterling project addressed Defendants' desire to obtain "critical comments of the Repace and Lowrey papers into the published literature." 512309183-9189 (U.S. Ex. 24,751). Defendants paid Sterling to draft an evaluation of Repace and Lowrey's papers for publication. The members of the Tobacco Institute ETS Advisory Group reviewed the substance of Sterling's manuscript and determined the changes that needed to be made before his manuscript would be "publishable":

Dr. Spears [of Lorillard] feels that the Sterling review made some very good points and would be publishable if a statement were included to point out that the linear model is not appropriate for the risk assessment made by Repace and Lowrey. Mr. Hoel and Dr. Kastenbaum will have further discussions with Dr. Sterling.

505347180-7186 (U.S. Ex. 85,779).

938. Donald Hoel spoke to Sterling and discussed Defendants' interests with regard to the Sterling's evaluation of the Repace/Lowrey paper. Sterling made clear to Hoel his intent "to insert qualifying statements in the text after the paper has been accepted for publication," thereby conforming with the demands of Defendants' attorneys prior to publishing the results of his work. 512309183-9188 (U.S. Ex. 24,751).

(iii) James Enstrom

939. Defendants have spent hundreds of thousands of dollars sponsoring the research of long-time industry consultant James E. Enstrom, a research professor of the University of California at Los Angeles' School of Public Health. 515814425-4435 (U.S. Ex. 85,780); 40001947-1960 (U.S. Ex. 85,781); 40001775-1780 (U.S. Ex. 85,803); 40001787-1787 (U.S. Ex. 85,782); 40001901-1901 (U.S. Ex. 85,783); 40001940-1940 (U.S. Ex. 85,802); 40001973-1973 (U.S. Ex. 85,784); 40001923-1923 (U.S. Ex. 85,785); 40001769-1769 (U.S. Ex. 85,804); 566943549-3552 (U.S. Ex. 85,786); 2063610867-0867 (U.S. Ex. 85,787).

940. Enstrom's relationship with the tobacco industry dates as far back as 1975, when Enstrom first solicited funding from the Tobacco Institute and later the Center for Tobacco Research ("CTR") for proposed research on cancer mortality rates. 50207899-7899 (U.S. Ex. 85,788); 50207891-7892 (U.S. Ex. 85,789); HKQ2232075-2075 (U.S. Ex. 85,790); HKQ2232059-2059 (U.S. Ex. 85,791); HKQ2232055-2055 (U.S. Ex. 85,792); HKQ2232059-2066 (U.S. Ex. 85,793); 50265168-5168 (U.S. Ex. 85,794). Since then, Enstrom has become a key tobacco industry researcher and consultant. 2073736523-6523 (U.S. Ex. 85,795); 2073736520-6520 (U.S. Ex. 27,396); 2063610699-0699 (U.S. Ex. 27,128); 2065122068-2068 (U.S. Ex. 85,807); 2063610840-0841 (U.S. Ex. 85,796); 2063610840-0840 (U.S. Ex. 85,797).

941. Throughout the 1990s, the tobacco industry funded Enstrom's research, particularly in matters related to passive smoking, invited him to industry-sponsored conferences, and consulted with him during litigation. 2073736523-6523 (U.S. Ex. 85,795); 2073736520-6520 (U.S. Ex. 27,396); 2063610699-0699 (U.S. Ex. 27,128); 2065122068-2068 (U.S. Ex.

85,807); 2063610840-0841 (U.S. Ex. 85,796); 2063610840-0840 (U.S. Ex. 85,797).

Specifically, R.J. Reynolds and Philip Morris consulted with Enstrom "in the context of EPA litigation" and "in the context of attorney work product." 206310699-0699 (U.S. Ex. 27,128); 2063610840-0840 (U.S. Ex. 85,797).

942. In 1991, Enstrom requested funding from Philip Morris to support a study that he claimed would clarify the issue of smoking-related diseases among nonsmokers. In a letter dated May 23, 1991, from Enstrom to Thomas J. Borelli, Manager of Scientific Issues, Philip Morris USA, Enstrom requested a grant to update his work on lung cancer mortality trends among nonsmokers. Enstrom wrote: "I still feel strongly that the issue of smoking-related diseases among nonsmokers needs more attention, because the etiology of these diseases among nonsmokers is not clear." 2021162691-2691 (U.S. Ex. 85,798).

943. Shortly thereafter, in November 1991, Enstrom applied for a research grant from CTR to study mortality trends among smokers and nonsmokers. Enstrom's application noted that over the past sixty-five to seventy-four years there had been a "10-fold increase" in the lung cancer death rate among nonsmokers but asserted that the "mortality changes among nonsmokers must be due to factors other than cigarette smoking." 4001949-1949 (U.S. Ex. 85,799); 515814426-4426 (U.S. Ex. 85,800). Enstrom's application proposed, *inter alia*, to use the American Cancer Society's Cancer Prevention Study I (CPS I) to understand the mortality trends of nonsmokers. 40001947-1960 (U.S. Ex. 85,801). Industry documents show that CTR granted Enstrom at least \$94,500 from 1992 to 1997 to fund this research. 40001940-1940 (U.S. Ex. 85,802); 40001973-1973 (U.S. Ex. 85,784); 40001923-1923 (U.S. Ex. 85,785); 40001775-1780

SECTION IV.C.

(U.S. Ex. 85,803); 40001787-1787 (U.S. Ex. 85,782); 40001901-1901 (U.S. Ex. 85,783); 40001769-1769 (U.S. Ex. 85,804).

944. This close affiliation with the tobacco industry, however, led to questions regarding the adequacy of Enstrom's research and the scope of his independence. Documents produced from Philip Morris's files, which appear to be letters faxed to Philip Morris from Womble Carlyle, R.J. Reynolds's outside counsel, show that in 1996 Enstrom attempted to publish the article, "Environmental Tobacco Smoke and Lung Cancer in Nonsmoking Women: A Reanalysis," in the *Journal of the American Medical Association* ("*JAMA*"), a prestigious and peer reviewed academic journal. The article purported to expose "serious problems" with a recent study authored by Fontham and colleagues and published in *JAMA*, which found a significant increase in overall relative risk associated with exposure to secondhand smoke. See Fontham, E. et al., Environmental tobacco smoke and lung cancer in nonsmoking women: A Multicenter Study, 271(22) *JAMA* 752-59 (1994) (U.S. Ex. 86,734).

945. In an April 24, 1996 letter from Enstrom to Drummond Rennie, Deputy Editor of *JAMA*, Enstrom stated that his article demonstrated "a number of serious problems" with the Fontham study that "could alter its conclusions in a major way." The letter suggested, however, that Enstrom's connection to the tobacco industry was an issue of concern to Rennie, as it stated, "I understand that you would be receptive to a tobacco industry statement that delineates their current position on the risks of active smoking." 2065122068-2068 (U.S. Ex. 85,807).

946. In August 1996, *JAMA* refused to publish the article, stating that the "editors believe that [Enstrom's] opinion piece [wa]s full of speculative assumptions of doubtful scientific

SECTION IV.C.

value [and that they] could not judge the merits of [Enstrom's] criticisms because [his] own data and methods were so inadequately described." The editors added that Enstrom's article also contained "pejorative comments that should have no place in responsible scientific discourse." 2065122062-2062 (U.S. Ex. 85,808). An attached peer reviewer's comments questioned Enstrom's scientific independence, as well as the overall quality of his research. The reviewer wrote: "Is this paper supposed to be the independent confirmation, analysis and interpretation as is called for? If so it is woefully inadequate." The reviewer additionally stated that the "[g]ratuitously nasty comments" in Enstrom's article were "completely inappropriate in the peer review literature" and that Enstrom should not "be assessing the objectivity of the Fontham study in his highly rhetorical and insinuating article." 2065122063 (U.S. Ex. 85,805). Enstrom later provided responses to these comments and requested reconsideration, but *JAMA* still refused to publish the article. 2065122065-2066 (U.S. Ex. 85,806); 2065122068-2068 (U.S. Ex. 85,807); 2065122062-2062 (U.S. Ex. 85,808); 2065122063-2063 (U.S. Ex. 85,805); 2065122064-2064 (U.S. Ex. 85,809); 2065122065-2066 (U.S. Ex. 85,806).

947. Notwithstanding these criticisms, Enstrom solicited and obtained additional grants from Defendants. In a July 15, 1996 letter to Max Eisenberg of CIAR, Enstrom requested funding for proposed research on passive smoking. 2063610840-0841 (U.S. Ex. 85,796). Neglecting to explain the scope of the research or provide any information on the proposed research whatsoever, Enstrom advised Eisenberg that the proposed study would expand on the research he performed for Philip Morris and R.J. Reynolds pursuant to his consultations with those companies during litigation related to the EPA. Enstrom explained that this research has

SECTION IV.C.

led to "serious questions about several published findings on the relationship of passive smoking to lung cancer and other diseases" and would "yield important new findings on the health effects of passive smoking." 2063610840-0841 (U.S. Ex. 85,796).

948. In January 1997, Enstrom requested funding in the amount of \$150,000 from Philip Morris for research on the "Relationship of Low Levels of Active Smoking to Mortality." In a January 15, 1997 letter from Enstrom to Richard Carchman of Philip Morris, Enstrom advised: "A level of trust must be developed based on my past research on passive smoking and epidemiology in general in order to work out the best way for me to conduct this research. A substantial research commitment on [Philip Morris'] part is necessary in order for me to effectively compete against the large mountain of epidemiologic data and opinion that already exists regarding the health effects of ETS and active smoking." 2063654073 (U.S. Ex. 85,811). A Philip Morris scientist had doubts about Enstrom's proposed methodology but recognized that Enstrom "seems to have good connections/resources which might be useful in the future for other issues." 2505415042-5043 (U.S. Ex. 85,812). Philip Morris overlooked any such flaws in Enstrom's methodology and awarded Enstrom \$150,000 in support of the proposal. 2063610867-0867 (U.S. Ex. 85,787).

949. In October 1997, Enstrom again sought a substantial grant in the amount of \$425,000 from CIAR to conduct a follow-up study of the American Cancer Society's Cancer Prevention study I ("CPS I") data. 566943549-3579 (U.S. Ex. 85,813). The proposal explained that the "two largest cohort studies in the US that have examined passive smoking and lung cancer have been the ACS [American Cancer Society] Cancer Prevention Studies. The first

SECTION IV.C.

study (CPS I) analyzed 153 lung cancer deaths among 177,000 nonsmoking women grouped by spousal smoking and the second study (CPS II) analyzed 362 lung cancer deaths among 111,000 nonsmoking men and 282,000 nonsmoking women. . . . [N]o relationship was found in CPS I and a small association was found in CPS II." Enstrom proposed restricting the follow-up study to the CPS I study participants. 566943560 (U.S. Ex. 85,814). CIAR funded the proposal. By August 31, 1999 the cost of the project had run to \$525,000, with another twenty months before scheduled completion on May 31, 2001. 2505442777-2935 at 2815 (U.S. Ex. 75,388); 2505442936-2959 (U.S. Ex. 25,642); 250544260-2960 (U.S. Ex. 25,643). See also Deposition of Helmut Reif, United States v. Philip Morris, et al., March 30, 2004, 256:12-257:14, 261:11-22, 262:15-264:14; 2505789182-9183 (U.S. Ex. 88,754).

950. Industry documents show that Geoffrey C. Kabat participated in discussions with the tobacco industry on issues relating to secondhand smoke as early as 1992, when he appeared on a circulation list of industry researcher P.N. Lee. 2028375930-5934 (U.S. Ex. 85,815). Internal tobacco documents also show that CIAR Executive Director Max Eisenberg orchestrated Enstrom's collaboration with industry consultant Geoffrey C. Kabat in May 1997. 517578187-8188 (U.S. Ex. 85,816).

951. Enstrom and Kabat published the results of the CPS I follow-up study in the article, "Environmental tobacco smoke and tobacco related mortality in a prospective study of Californians, 1960-98," which appeared in the May 2003 issue of the *British Medical Journal* ("*BMJ*"). TKT0500029-0038 (U.S. Ex. 65,086).

952. As originally planned, the researchers conducted a follow-up study using only CPS I data to ascertain rates of reported cases of coronary heart disease, lung cancer, and chronic obstructive pulmonary disease for study participants identified as "never smokers married to smokers." The study yielded the following results: Never smokers married to smokers had a relative risk of 0.94 for developing coronary heart disease; 0.75 for developing lung cancer; and 1.27 for developing chronic obstructive pulmonary disease among men and 1.13 among women. Thus, according to the study, the relative risk of developing coronary heart disease and lung cancer *decreased* for never smokers married to smokers, and the relative risk of developing chronic obstructive pulmonary disease *increased* for male and female never smokers married to smokers. Based on these results, the researchers concluded that there is no significant association between passive smoking and tobacco-related diseases in never smokers married to smokers. 2851736-1745 (U.S. Ex. 65,086).

953. The results of this study have been widely criticized. Notably, the American Cancer Society issued a press statement on its website on May 15, 2003, shortly after the article appeared in *BMJ*, condemning the methodology of the study and the researchers' close affiliation with the tobacco industry. The statement questioned the reliability of the study, asserting that the researchers used "flawed methodology to falsely conclude environmental tobacco smoke (ETS) may not affect lung cancer risk." The statement further declared: "We are appalled that the tobacco industry has succeeded in giving visibility to a study with so many problems it literally failed to get a government grant. . . . The American Cancer Society welcomes thoughtful, independent peer review of our data. But this study is neither reliable nor independent."

(quotations omitted). When identifying scientific flaws associated with Enstrom and Kabat's study, the American Cancer Society stated: "During the course of the analysis, Society researchers repeatedly advised Enstrom that using CPS-I data to study the effects of secondhand smoke would lead to unreliable results." The American Cancer Society further stated that the CPS II data, the data that Enstrom and Kabat chose to exclude from the follow-up study, provided "far more reliable data" and was a far more comprehensive study showing that secondhand smoke exposure increases the risk for tobacco-related disease in nonsmokers. http://www.cancert.org/docroot/MED/Content/MED_2_1x_American_Cancer_Society_Condemns_Tobacco_Industry_Study_for_Inaccurate_Use_of_Date.asp(U.S. Ex. 86,735).

954. Additionally, *BMJ* received voluminous responses from public health authorities and scientists regarding the study and its scientific value. For example, Lisa A. Bero, with Michael Cummings and Stanton Glanz, Professors at the University of California San Francisco, declared that the study was "the latest in a long stride of studies supported by the tobacco industry to deny the evidence about secondhand smoke and confuse the public." The authors noted that the study had frequently been cited by the lay press and that, even though public health officials dismissed the reliability of the study, the public was not in a position to understand the "flaws" of the study based on media reports:

Using marriage to a smoker in 1959 as a measure for exposure to secondhand smoke over a 40 year period is invalid because virtually everyone during the follow-up period was exposed to secondhand smoke whether they were married to a smoker or not. The last of an unexposed control group assured a negative conclusion in this study and does not permit the authors to gauge the true effect of secondhand smoke exposure on cancer or heart

disease risk. Thus, the conclusions of Enstrom and Kabat's paper are unwarranted.

<http://bmj.bmjournals.com/cgi/eletters/326/7398/1057#32596> (U.S. Ex. 88,056).

955. Similar criticisms appeared in a response written by Michael Thun, Vice President, Epidemiology and Surveillance Research of the American Cancer Society:

Scientifically, the fatal flaw of the paper is that the information collected on environmental tobacco smoke (ETS) exposure is insufficient to distinguish person who were exposed from those who were not. . . . It is extraordinary that Dr. Enstrom persisted in his analysis of ETS exposure in the California subset of the Cancer Prevention Study I (CPS-I) despite repeated cautions from me . . . that his long-term follow-up of CPS-I would not be informative about the issue. Both he and Dr. Kabat are aware that CPS-I was not designed to study ETS.

<http://bmj.bmjournals.com/cgi/content/abridged/326/7398/1057> (U.S. Ex. 85,650).

956. Enstrom and Kabat's study has indeed been addressed at length in the popular media. Although the reports generally address that the study is controversial and was funded by the tobacco industry, the headlines of the reports often suggest that a question exists regarding the health effects of secondhand smoke or that the study settles that question. For instance, the following headlines were published in prominent media sources:

- *Chicago Tribune*, Friday, May 16, 2003: "Study questions harm from secondhand smoke" (U.S. Ex. 86,736)
- *The San Francisco Chronicle*, Friday, May 16, 2003: "Study disputes fears about secondhand smoke/ But critics say data is dated" (U.S. Ex. 86,737)
- *Birmingham Post*, Friday, May 16, 2003: "Passive smoking risks lower than generally believed" (U.S. Ex. 86,738)
- *The Wall Street Journal*, Monday, May 19, 2003: "Secondhand news: Passive smoke study prompts protests dangers are called overstated as spouses' rates of cancer show no significant difference" (U.S. Ex. 86,739)

- *BBC News, U.K Edition*, Friday, May 16, 2003: "Row over passive smoking effect, A study suggesting the damaging effect of passive smoking on health may have been overstated has sparked a furious row" (U.S. Ex. 86,740)
- *The Wall Street Journal Online*, Friday, May 16, 2003: "Does Passive Smoke Kill? Study Sparks Controversy" (U.S. Ex. 86,741)

Deposition of Helmut Reif, United States v. Philip Morris, et al., March 30, 2004, 374:16-376:23.

957. In addition, BATCo cites the report on its website in support of its position that "the claim that ETS exposure has been shown to be a cause of chronic disease is not supported by the science." BATCo states that a "very large study published in the *British Medical Journal* in May 2003 on environmental tobacco smoke in the home has found no increases in risk for the key smoking related diseases." The website provides a hyperlink to BAT's summary of the study and concludes as follows:

In our view, this is an important study which confirms that many of the estimates of the risks of public smoking are overstated in the extreme, and that considerable doubts remain as to whether ETS exposure is associated with any risk of chronic diseases such as lung cancer and heart disease. We believe the study illustrates that calls for bans on public smoking cannot be justified on the basis of the suggestion of chronic health risk for non-smokers, although of course we believe that the needs of non-smokers should be also catered for with solutions such as good ventilation.

http://www.bat.com.oneweb/sites/uk__3mnfen.nsf/0/4d55281a0a7e6f1e48256d27005c8cf7?OpenDocument (U.S. Ex. 88,461).

(7) Defendants Fraudulently Relied on the Research and Symposia They Had Sponsored as "Independent" to Advance Their Public Relations and Commercial Agenda

958. Defendants used the industry-sponsored research and symposia in their submissions to the Federal Government. Based on this faulty science, Defendants argued that regulation was unwarranted.

959. Philip Morris submitted comments regarding EPA's "Review Draft: Health Effects of Passive Smoking, Assessment of Lung Cancer in Adults and Respiratory Diseases in Children" in September 1990. The submission contained a section entitled, "Scientific Symposia on ETS in the 1980's." Philip Morris states: "Contrary to the conclusions of the EPA Review Draft on ETS, the conclusion common to many of the various conference organizers is that the claim that ETS causes disease in nonsmokers is not scientifically justified." The submission cited conclusions of the industry sponsored conferences at Geneva, Vienna, Essen, Argentina, McGill, and Tokyo. 87654175-4289 at 4276 (U.S. Ex. 87,384). All of these conferences were also cited extensively in R.J. Reynolds's comments to EPA, as were the many works of its paid consultants: Franz Adlkofer, JR Carson, Theodor Sterling, W. Allan Crawford; Salvatore R DiNardi; Gio Gori; E.L. Wynder; Roger Perry; Linda Koo; Maxwell Layard, Peter N. Lee, H. Letzel, KK Uberla; Frank Lunau, and G.L. Reynolds. 87654420-4485 (U.S. Ex. 87,385).

960. Rylander submitted comments to EPA on the Redraft stating: "I am sorry to see our own workshops from 1974 [Bermuda] and 1984 [Geneva] are not cited, particularly as the former was the first to apply the terms environmental tobacco smoke (ETS)." 87656303-6309 (U.S. Ex. 87,387); see also 690019211-9302 (U.S. Ex. 88,462). Rylander also cited to his publication, "Assessing low risk agents from lung cancer: methodological aspects." This was, in

fact, the Proceedings of An International Workshop Held in Clearwater, Florida orchestrated by CIAR. 2023537229-7491 (U.S. Ex. 87,388).

961. During the late summer and early fall of 1990, some 3,300 pages of comments were submitted on behalf of Defendants to the EPA regarding two EPA documents: “A Guide to Workplace Smoking Policies,” and “Health Effects of Passive Smoking: Assessment of Lung Cancer in Adults and Respiratory Disorders in Children.” 87653565-6821 (U.S. Ex. 87,389). Among those pages were The Tobacco Institute's comments on EPA’s Review Draft supporting the industry position that ETS was not hazardous. Also submitted were comments from forty-seven “Independent Scientists.” All of these scientists had previous industry connections: Domingo Aviado; R.C. Brown; William J. Butler; Angelo Cerioli; Anthony V. Colucci; Guy Crepat; Salvatore R. DiNardi; John M. Faccini; George Feuer; Joseph L. Fleiss; Alan J. Gross; Arthur Furst; Howard D. Goodfellow; Gio Batta Gori; Alan J. Gross; Larry C. Holcomb; Ronald D. Hood; Raphael J. Witorsch; Philip Witorsch; Gary L. Huber; Alan W. Katzenstein; S. James Kilpatrick, Jr.; Peter N. Lee; George B. Leslie; Maurice E. LeVois; Maxwell W. Layard; Torbjorn Malmfors; Nathan Mantel; Dennis Paustenbach; Joe Pedelty; Mark J. Reasor; James A. Will; Francis J.C. Roe; Ragnar Rylander; B. Schneider; Jarnail Singh; Petr Skrabanek; Theodor Sterling; Paul Switzer; John A. Todhunter; Lawrence M. Wexler; and Joseph M. Wu. These scientist were all part of the Defendants' ETS Consultancy Program, Tobacco Institute consultants, and/or Special 4 Fund Recipients. Thomas J. Bucci, John Wesley Clayton, J.W. Daniel, Jean D. Gibbons, Richard Tweedie, Karl Jonas, and A. Springall, were paid consultants working with Shook, Hardy & Bacon and were paid for their submissions by Philip Morris, R.J.

SECTION IV.C.

Reynolds and Brown & Williamson. 2023590213-0299 (U.S. Ex. 87,390). E. Lee Husting had previously received funding from the Tobacco Institute ETS Advisory Group and continued to receive funding from CIAR. 2015018564-8568 (U.S. Ex. 87,391); 506813083-3088 (U.S. Ex. 87,392). Edward J. Faeder had previously been identified by R.J. Reynolds's outside counsel as a potential witness development scientist to use at hearings. 506254908-4921 (U.S. Ex. 87,393). J.W. Gorrod was working with Sorell Schwartz and Nancy Balter, both of CEHHT, on a project for Philip Morris for \$526,559. 2023856259-6287 (U.S. Ex. 87,394); 2501151940-1955 (U.S. Ex. 85,557).

962. These forty-seven scientists submitted detailed comments, all voicing Defendants' views regarding the lack of necessity to regulate ETS, that there was still a debate regarding the risks of ETS or that ETS was not a proven carcinogen. As evidence in support of their comments, these “independent scientists” cited to various industry orchestrated symposia as well as to works of the other “independent scientists.” Tobacco industry consultant Ecobichon submitted “Environmental Tobacco Smoke, Proceedings of the International Symposium at McGill University, 1989, Donald J. Ecobichon & Joseph M. Wu, Eds” directly to the U.S. Environmental Protection Agency, and urged that the EPA take full account of the proceedings. 2026134978-4978 (U.S. Ex. 87,395).

963. The following “independent scientists” cited to McGill as authority in support of their comments to the EPA: Salvatore DiNardi, J.L. Fleiss, A.J.Gross, Larry Holcomb, Ronald D. Hood, Raphael J. Witorsch, Philip Witorsch, Alan Katzenstein, James L. Kilpatrick, Peter N. Lee, Maurice E. LeVois, Maxwell W. Layard, Dennis Paustenbach, Mark J. Reasor, and James

SECTION IV.C.

A. Will, Francis Roe, John A. Todhunter, and Lawrence Wexler. All were part of the industry ETS consultants program with the exception of John Todhunter, who was a paid Tobacco Institute consultant.

964. In their comments to the EPA, the following tobacco industry consultants relied on "Indoor and Ambient Air Quality" (Perry and Kirk eds. Selper, Ltd., London, 1988): Elia Sterling, Dominic Aviado, George Feuer, Howard Goodfellow, Gio Gori, Larry Holcomb, Ronald D. Hood, Raphael J. Witorsch, James L. Kilpatrick, Peter N. Lee, John Todhunter, R.L. Tweedie, John Wesley Clayton, Jr., Gary Huber, and Lee Hustings. (U.S. Ex. 87,396). All were either members of the ETS Consultancy program, paid Tobacco Institute consultants, or paid through Shook, Hardy & Bacon on behalf of Philip Morris and Brown & Williamson.

965. The following tobacco industry consultants relied on "Present and Future of Indoor Air Quality, Proceedings of the Brussels Conference, 14-16 February 1989" in their EPA comments: Elia Sterling, Thomas Bucci, John Wesley Clayton, Jr. Gary Huber, Lee Hustings, Alan Katzenstein, James L. Kilpatrick, Peter N. Lee, Maurice E. LeVois, Maxwell W. Layard, Nathan Mantel, Mark J. Reasor, James A. Will, Ragland Rylander, and John A. Todhunter. (U.S. Ex. 87,397).

966. The following tobacco industry consultants relied on "Indoor Air Quality" by H. Kasuga from 1987 in their EPA comments: Dominic Aviado, Larry Holcomb, Gary Huber, James L. Kirkpatrick, Peter N. Lee, Maurice E. LeVois, Maxwell W. Layard, Nathan Mantel, R.L. Tweedie, George B. Leslie, F.J.C. Roe, and Theodor Sterling. (U.S. Ex. 87,398)

SECTION IV.C.

967. Tobacco industry consultants Larry Holcomb and Elia Sterling relied on "Indoor Air Quality and Ventilation" by Lunau, F. and Reynolds, published in 1990, in their comments to the EPA. (U.S. Ex. 87,399).

968. James L. Kilpatrick, Ragland Rylander, and R.L. Tweedie relied on "Medical Perspectives on Passive Smoking, a roundtable discussion," April 9-12, 1984 (Vienna Conference) in their EPA comments. T112871546-1582 (U.S. Ex. 87,370).

969. In his comments to the EPA, Tobacco industry consultant R.L. Tweedie relied on "The Proceedings of the International Experimental Toxicology Symposium on Passive Smoking" published in Toxicology Letters, Vol. 35, No. 1, January 1987. (U.S. Ex. 87,401). This was the publication of the proceedings of a conference held in Essen, Germany, that was sponsored by the German cigarette industry group in cooperation with its American counterpart, the Tobacco Institute.

970. Maurice E. LeVois, Maxwell W. Layard, and Ragland Rylander relied on "Proceedings of An International Workshop Held in Clearwater, Florida," which was discussed at, and made part of the proceedings of, the 1990 Toxicology Forum. 509860001-0091 (U.S. Ex. 87,402).

971. The Tobacco Institute submitted comments, including the proceedings of the McGill Symposium, to the United States Department of Labor Occupational Safety and Health Administration in response to the "Occupational Exposure to Indoor Air Pollutants: Request for Information, Docket No. H-122, Rin 1218-Ab37, on March 20, 1992. (U.S. Ex. 87,403). The

SECTION IV.C.

Tobacco Institute's submission also cited to various papers generated through various industry-sponsored symposia. The Tobacco Institute cited to the works of their own paid consultants, including: Gio Gori, Nathan Mantel, D. J. Eatough, Mark Reasor, James Will, Roger Jenkins, Michael Geurin, Simon Turner, Peter Binnie, J. Carson, Theodor Sterling, J. Fleiss, Alan Gross, Peter N. Lee, E.L. Wynder, Nancy Balter, Michael Lebowitz, S. James Kilpatrick, Linda Koo, Ragland Rylander, Maxwell W. Layard, Sorell Schwartz, Franz Adlkofer, Alan Armitage, Max Weetman, Lawrence Wexler, Philip Witorsch, Sara. Liao, John Bacon-Shone, Yoon Shin Kim, and Gray. Robertson. MNAT00758595-8681 (U.S. Ex. 87,404).

972. On August 12, 1994, the Tobacco Institute, through Covington & Burling, submitted comments concerning "A Proposal to Regulate Occupational Exposure to Indoor Air Pollutants Made by the Occupational Safety and Health Administration, Docket No. H-122." The comments stated that the Tobacco Institute had submitted two volumes of comments from a number of "independent scientists." These named "independent scientists" included George Feurer, Milton E. Meckler, Gary Flamm, Healthy Buildings International, Mark Reasor, Gio Gori, Larry Holcomb, Peter N. Lee, Maurice Levois, Maxwell Layard, John Todhunter, Alan Gross, Joseph M. Wu, Philip Witorsch, Ralph Witorsch, and Paul Switzer. Also cited was the industry-sponsored symposium held in Lisbon in April 1990. 500872392-2472 (U.S. Ex. 87,406); (U.S. Ex. 87,405).

973. In addition to EPA and OSHA, these symposia and consultants were offered in R. J. Reynolds's submissions to the Federal Aviation Administration regarding a "Petition to Initiate Rulemaking to Amend Federal Aviation Regulations: Certification and Operation" (Subpart K -

SECTION IV.C.

Instrument and Equipment Requirements). R.J. Reynolds filed comments on "Petitioners' Request to Prohibit Tobacco Smoking on All U.S. Carriers Petition Docket No. 26566" on September 16, 1991. (U.S. Ex. 87,407). R.J. Reynolds cited to the following paid tobacco industry consultants: William Butler, W. Alan Crawford, Larry Holcomb, George Feuer, Donald Ecobichon, Joseph Fleiss, Alan Gross, Gio Gori, Nathan Mantel, Alan Katzenstein, Linda Koo, Maxwell Layard, Peter N. Lee, Torbjorn Malmfors, Daniel Thorburn, Arne Westlin, Dennis Paustenbach, Ragland Rylander, K.K. Uberla, James A. Wills, Lawrence Wexler, and E.L. Wynder. Also cited were the industry-sponsored symposia held in Lisbon in April 1990 and the McGill University symposium held in 1989. 2023216588-6626 (U.S. Ex. 87,407).

974. Sorell Schwartz received money from the Tobacco Institute in exchange for favorable public testimony about ETS matters before at least one United States Senate subcommittee, but the payment was not publicly disclosed. Deposition of Sorell Schwartz, United States v. Philip Morris, et al., May 28, 2002, 145:6-147:8; TI10590506-0514 (U.S. Ex. 21,252).

975. Defendants transformed their industry-funded and managed ETS conferences into published books. While these books contained the papers prepared by the industry consultants, the authors omitted any connection to or funding by cigarette manufacturers, trade groups, and their industry attorneys. Indoor and Ambient Air Quality (U.S. Ex. 88,745); Indoor Air Quality and Ventilation (U.S. Ex. 88,746); Present and Future of Indoor Air Quality, Proceedings of the Brussels Conference, February 14-16, 1989 (U.S. Ex. 88,747); Indoor Air Quality, International Conference on Indoor Air Quality, Tokyo, November 4-6, 1987 (U.S. Ex. 88,748).

(8) **Defendants Made – and Continue to Make – Numerous False Public Statements as Part of Their Effort to Deny and Distort Fraudulently the Health Effects of Exposure to Secondhand Smoke.**

976. As detailed above, the combined activities of such groups as CTR, the ETS Advisory Group (and its incarnations), the Center for Indoor Air Research, the Tobacco Institute, Healthy Buildings International, ICOSI and INFOTAB, and CORESTA enabled Defendants to undertake and coordinate a massive fraudulent campaign regarding ETS exposure issues. This campaign produced numerous public statements and publications, each of which was issued with knowledge of its falsity or with reckless disregard for the truth of its substance. This section discusses some of the groups created by Defendants that they used to develop and disseminate their deceptive messages concerning ETS.

977. For instance, on March 14, 1973, Anne Duffin, Vice President of the Tobacco Institute, transmitted an "updated version of our 1971 pregnancy 'backgrounder' for use in government contact work" to David Hardy of Shook, Hardy & Bacon. Duffin observed that "it becomes increasingly clear that the questions of smoking and pregnancy and 'passive' smoking are and will be for some time the biggest problem we face in all aspects of our work." The pregnancy backgrounder stressed the position that controversy surrounded the issue of the effects of neonatal exposure by maternal smoking. TIMN254538-4538 (U.S. Ex. 21,488).

SECTION IV.C.

978. In 1976, the Tobacco Institute published: "Smoker or Non-Smoker? A few words for you from the Tobacco Institute." In its publication, the Tobacco Institute asserted: "Growing scientific research provides strong evidence that tobacco smoke does not affect nonsmokers' health." At that point in time, there was no such growing scientific research. To the contrary, the steadily growing body of smoking and health research indicated otherwise. TIMN0122133-2136 at 2135 (U.S. Ex. 21,883).

979. In September 1977, the Tobacco Institute created and caused to be published an advertisement focused on ETS exposure: "Some people are saying America needs a lot of new laws restricting smoking. Before you decide, you should know this: Other people's smoke has never been shown to cause disease in nonsmokers." This statement, like Defendants' myriad of near-identical statements about active smoking, was false. At the time it was issued, the ever-developing body of scientific study supporting the conclusion that ETS exposure caused lung cancer and other diseases was substantial. TI06430696-0696 (U.S. Ex. 21,247).

980. Having internationally consistent positions required each of the Defendants to ensure continuity in positions taken within their own companies. For instance, R.J. Reynolds held an executive meeting in 1977 where the company determined that a worldwide smoking and health strategy was necessary. Samuel Witt, Vice President, Secretary and General Counsel of R.J. Reynolds, was given the responsibility for R.J. Reynolds's world wide smoking and health communications. The plans for the formation of ICOSI were also discussed. As a member of ICOSI, Witt developed lines of communications within "Reynolds to the Tobacco Company and to RJR Industries." Ed Jacobs, R.J. Reynolds outside counsel, drafted the position papers for

SECTION IV.C.

ICOSI, and these papers were circulated to the R.J. Reynolds companies. 500298408-8410 (U.S. Ex. 87,409); 500297534-7541 (U.S. Ex. 29,457).

981. In furtherance of the Enterprise's effort to make sure that public statements on ETS exposure were uniform, ICOSI's Social Acceptability Working Party (SAWP) had the law firm of Jacobs & Medinger draft a "Public Smoking Position Paper," which was to be used by members and trade associations in their policy statements, in ad campaigns, and various other types of countermeasures. 1000208742-8828 at 8752 (U.S. Ex. 87,410).

982. On July 26, 1978, ICOSI members ratified a revised version of the public smoking position paper. The paper was not suitable to be used "publicly." If a member wished to use a shortened version of the lengthy position paper, "he was free to do so, providing that, in so doing, he did not say anything which was not covered by the basic paper and that he made no reference to any other sources other than those contained in the paper." The ICOSI members recognized that it was necessary to keep the paper updated from time to time. 301079919-7998 (U.S. Ex. 87,411).

983. The Public Smoking Position Paper was distributed at a Joint Meeting of National Associations and ICOSI where fifty-three people representing fifteen national associations and thirteen countries were present. The position paper was described as "a fine example how ICOSI operates in developing countermeasures to offset attacks on smoking." Prior to distribution of the report, Ed Jacob, the attorney who drafted the paper, "emphasized that on the basis of the report it can be asserted unequivocally that smoking does not adversely affect non-smokers. It is planned to update the document periodically as new reports on public smoking are published."

SECTION IV.C.

The Public Smoking Position Paper was revised numerous times through at least 1991.

500876807-6812 (U.S. Ex. 24,168) (U.S. Ex. 75,398); 1005130966-1012 (U.S. Ex. 87,412); 500648688-8779 (U.S. Ex. 24,149) (U.S. Ex. 24,150); 2023238001-8172 (U.S. Ex. 87,413). In each iteration, the Public Smoking Position Paper falsely denied and distorted the disease risks of exposure to secondhand smoke or ETS.

984. An advertisement offered a free booklet, "TI SPECIAL REPORT-Smoking and the Public," which was described as "a collection of detailed medical evidence from around the world that should fully convince you that it's never been shown that smoke causes disease in the nonsmoker." Much of the cited material consisted of conferences and studies funded by Defendants, but the booklet did not disclose Defendants' connection to the meetings and research offered it as "evidence" of the absence of harm from ETS exposure. A 1977 Munich conference was one such meeting, as was a 1974 conference, which featured Domingo M. Aviado and Walter M. Brooker as participants, both of whom received Special Account #4 funds from Jacob & Medinger. TI06430696-0696 (U.S. Ex. 21,247).

985. In 1979, the Tobacco Institute published a pamphlet entitled "Two-Way Street." It argued: "First of all it is important to understand that there is no convincing evidence that tobacco smoke causes disease in nonsmokers." The statement disregarded the strong evidence linking ETS exposure and disease – evidence that scientists at the Cigarette Company Defendants privately acknowledged was legitimate. 2024299572-9575 (U.S. Ex. 20,401).

986. Evidence shows that long time industry consultant Peter N. Lee intentionally misrepresented evidence about the link between ETS and disease. Specifically, Defendants

SECTION IV.C.

developed and funded a plan to undermine the landmark 1981 study by Takeshi Hirayama, which found that nonsmoking wives of heavy smokers in Japan experienced a higher risk of lung cancer. Takeshi Hirayama, Non-smoking wives of heavy smokers have a higher risk of lung cancer: A study from Japan, British Medical Journal 183 (1981) 1000116287-6288 (U.S. Ex. 22,319). Recognizing the obvious threat that the Hirayama study presented, Defendants sponsored a paper by Lee that concluded that high rates of smoker misclassification undermined the results of epidemiological studies showing a link between ETS and disease in Japan. 900006054-6061 (U.S. Ex. 57,902).

987. While the paper acknowledged "financial support from several companies of the tobacco industry," it failed to reveal the fact that the industry was integrally involved in the project from start to finish. For example, R.J. Reynolds conducted the analysis for the study. 2501003237-3242 (U.S. Ex. 22,320). Although the industry used three Japanese scientists to work on the study, it was monitored by Covington & Burling, and senior scientist Chris Proctor, then with Covington & Burling and currently Head of Science and Regulation for BATCo, assessed the study's progress. 2023544546-4546 (U.S. Ex. 22,925); 2501003235-3235 (U.S. Ex. 22,322); 300512244-2245 (U.S. Ex. 67,752). In addition, Philip Morris scientist Robert Pages reviewed and commented on the draft report. 2025488374-8375 (U.S. Ex. 22,323).

988. Furthermore, the Hirayama study was funded by contributions by the following companies: Brown & Williamson (\$36,000), Philip Morris (\$36,000), R.J. Reynolds (\$36,000), BATCo (\$36,000), and Imperial (\$20,000). 300512244-2245 (U.S. Ex. 67,752).

989. The Japanese scientists involved in the project eventually decided to distance themselves from the study and did not want it published because Lee changed their calculations to increase the misclassification rate from 10% to nearly 30%. 2028372914-2915 (U.S. Ex. 22,324); 2028372583-2596 (U.S. Ex. 22,926); 2501003237-3242 (U.S. Ex. 22,320). Despite these known misrepresentations, however, Lee published the paper and even cited to his faulty work in submissions to OSHA as part of the tobacco industry's concerted opposition to a proposed workplace smoke rule. TIBR0000567-0590 (U.S. Ex. 85,817); TIBR0006738A-6754 at 6750 (U.S. Ex. 62,553).

990. The Tobacco Institute also attacked the Hirayama study directly. In 1981, the Tobacco Institute published an advertisement that proclaimed: "Here's what's now being said about tobacco smoke in the air. . . . Scientist disputes findings of cancer risk to nonsmokers." In it, the Tobacco Institute declared that several eminent biostatisticians found an apparent statistical error in Hirayama's calculations which raised serious questions about the study. The Tobacco Institute knew, however, that the Hirayama data was correct – the statistical errors cited did not exist. TIMN0019293-9293 (U.S. Ex. 21,575).

991. Also in 1981, in response to Hirayama's landmark study, the Tobacco Institute issued a press release claiming that a George Washington University professor Nathan Mantel had found a mathematical error in the study which invalidated its conclusions. 03739919-9920 (U.S. Ex. 22,958). Prior to making the press release public, however, Peter Lee concluded that the suspicion of error in the study was "unfounded." 501622432-2433 (U.S. Ex. 88,150). Lee and Mantel further made it clear that the error, even if it did exist, did not invalidate the study's

SECTION IV.C.

results. 500631319-1320 (U.S. Ex. 22,825); 03029460-9461 (U.S. Ex. 22,830). Nevertheless, despite this information, the Tobacco Institute knowingly published its press release with its false claim of mathematical error and conducted an aggressive campaign to publicize this falsity, reaching an estimated 56.7 million people during the summer of 1981 alone. TITX0027702-7826 (U.S. Ex. 22,332).

992. Mantel later stated, "I didn't say that – the Tobacco Institute did." 2015029221 (U.S. Ex. 22,923).

993. Industry scientist Franz Adlkofer expressed internally his opinion that the Japanese study was accurate and that the Tobacco Institute issued its press release despite knowing that the study was accurate. 2050987570-7571 (U.S. Ex. 25,742). Yet, despite the opinion of such tobacco industry researchers of the validity of the Japanese study, the Tobacco Institute continued to insist falsely to the public that the study was flawed. TIMN0241999-1999 (U.S. Ex. 85,818).

994. In November 1984, Philip Morris executive William O'Connor, writing on behalf of the Tobacco Institute, published an article in *Business and Health* magazine titled, "In defense of smokers." He falsely declared: "Advocates who claim environmental tobacco smoke is a proven health hazard seem to ignore the scientific literature in this area." 2025365133-5133 (U.S. Ex. 20,415); 2025851895-1895 (U.S. Ex. 20,419).

995. In 1986, the Tobacco Institute published an ETS booklet entitled, "Tobacco Smoke & The Nonsmoker: Scientific Integrity at the Crossroads." In the booklet, the Tobacco

SECTION IV.C.

Institute claimed that scientific integrity and academic freedom faced a serious threat from political pressures being applied by government health officials such as the Surgeon General and otherwise principled scientists and further asserted that ETS science was at the "mercy of politics." This attack on the Surgeon General, followed Defendants' pattern and practice of organizing public relations campaigns designed to undermine the public health efforts of the Surgeon General, was part of a practice that began with the 1964 Report. As with previous and future Reports, the public relations campaign directed at the ETS work done by the authors of the 1986 Report was designed to further the goals of the Enterprise by fraudulently denying the health effects of smoking. TIMN284404-4413 (U.S. Ex. 77,088).

996. In that 1986 ETS booklet, the Tobacco Institute falsely stated that the "tobacco industry is therefore devoting substantial resources to the investigation of indoor air quality generally and to the ways in which particular constituents of indoor air - including tobacco smoke - may affect human health." TI10422481-2540 at 2486 (U.S. Ex. 88,463).

997. One year later, continuing its fraudulent assault on the conclusions of the Surgeon General and scientific researchers, the Tobacco Institute published a booklet titled "Smoking Restrictions: The Hidden Threat to Public Health." It declared that the evidence did not support conclusions that ETS is harmful to nonsmokers and that more research is needed. Further, it questioned, "What's government's role in regulating behavior in the workplace?" The booklet quoted statements made by researchers at a March 1983 conference in Geneva, Switzerland, and at an April 1984 symposium in Vienna, Austria. Both of these conferences were conducted by

SECTION IV.C.

the tobacco industry but no such attribution was made in this booklet. TI05540699-0705 (U.S. Ex. 21,246).

998. Defendants also claimed publicly, through publications released by the Tobacco Institute as well as individual companies, that there was no proof that ETS or sidestream smoke contained any toxic constituents or could be hazardous to a nonsmoker's health. See, e.g., TI00410250-0264 at 0254 (U.S. Ex. 22,957); TIMN0245720-5722 (U.S. Ex. 23,026); 2024332622-2627 (U.S. Ex. 22,823); 2021183621-3621 (U.S. Ex. 22,115); 04211608-1610 (U.S. Ex. 22,131); 92349802-9802 (U.S. Ex. 22,922).

999. Among the advertisements used to advance this strategy, an August 1987 Philip Morris advertisement stated: "I know there's no proof my smoke can hurt you. But if it bothers you, please tell me. I think we can live with each other." 2500146093-6096 (U.S. Ex. 20,554).

1000. In 1989, R.J. Reynolds created a position paper which disputed not only the Surgeon General's Reports that cigarettes, including ETS exposure, cause cancer, but also disputed all evidence that ETS presents any health hazard to nonsmokers. The position paper attacked the science linking both smoking and ETS to disease. There was, of course, no basis for the attacks in the legitimate scientific research. 507605620-6239 (U.S. Ex. 20,781).

1001. An April 1990 INFOTAB publication titled "Children & Smoking-The Balanced View" states that "exposure to ETS has not been scientifically proven to adversely affect the health of children." 2501342105-2110 at 2109 (U.S. Ex. 20,565).

1002. In 1998, Martin Broughton, Chairman of BAT, stated that he stood by the company's assertion that passive smoking is not a health risk, and that "there is virtually no evidence at all to the contrary." BAT says: maintains 'no evidence' of health risks from passive smoking, AFX News, March 11, 1998 (U.S. Ex. 86,878).

1003. In 1998, Chris Proctor, BATCo Head of Science, stated that "while smoking in public may be annoying to some non-smokers, the science does not show that being around the smoker is a lung cancer risk." Passive Smoking Doesn't Cause Cancer - Official, Electronic Telegraph, March 8, 1998 (U.S. Ex. 39,764).

1004. Today, through the website of its parent company British American Tobacco, BATCo publicly disputes the scientific evidence establishing a link between ETS and disease:

We believe, however, the claim that ETS exposure has been shown to be a cause of chronic disease is not supported by the science that has developed over the past 20 years or so. In our view, it has not been established that ETS exposure genuinely increases the risk of non smokers developing lung cancer, heart disease or chronic obstructive pulmonary disease.

ARU6432584-2586 (U.S. Ex. 78,269).

1005. Representatives of members of the Enterprise companies, including BATCo, Philip Morris USA and R.J. Reynolds, crafted public statements relating to ETS, particularly when ETS reports were forthcoming that were expected to have major international impact (e.g., the Environmental Protection Agency's Risk Assessment, the World Health Organization's IARC study). The members of the Enterprise wanted to convey consistent messages and "help each other out with scientific analysis of the reports." To this end, Defendants created a worldwide

SECTION IV.C.

network of scientific witnesses to perform research related to ETS. In the course of developing this global ETS scientific witness development effort known as the ETS Consultancy Program or Project White Coat, Philip Morris communicated directly with BATCo and other members of the Enterprise to "carry out work on ETS to keep the controversy alive." Deposition of Sharon Blackie (Boyse), United States v. Philip Morris, et al., April 29, 2002, 31:6-17, 132:17-134:18, 145:8-146:147:7; 2060563936-3941 at 3936, 3941 (U.S. Ex. 79,164); 401247331-7336 at 7336 (U.S. Ex. 29,377) (U.S. Ex. 79,190) (U.S. Ex. 86,890); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 136:6-21; 321651582-1589 at 1583 (U.S. Ex. 22,838); 300515335-5340 (U.S. Ex. 46,568).

1006. In March 1991, Defendants formed a group, called the International ETS Management Committee ("IEMC"), to "undertake better planning to deal with ETS related public policy. . . ." The purpose of the IEMC is not to execute public affairs programs but rather to ensure that:

1. Common position statements and policies are developed and adopted worldwide;
2. Major potential threats of smoking restrictions and bans are identified;
3. Strategies are developed to deal with them;
4. The necessary resources are made available to the staff in the markets and regions; and,
5. Finally, that optimal coordination and cooperation across the companies is promoted to ensure the best application of those resources.

2500061112-1113 (U.S. Ex. 22,821).

SECTION IV.C.

1007. Members of the IEMC included: BATCo, R.J. Reynolds, Philip Morris USA, American Brands/Gallahers, Imperial Tobacco, Reemstma, and Rothmans. Members contributed funds to finance IEMC projects. 500844318-4319 (U.S. Ex. 48,464); 2500061112-1113 (U.S. Ex. 22,821); 300512244-2245 (U.S. Ex. 67,752); 507782317-2318 (U.S. Ex. 20,788).

1008. In furtherance of the Enterprise's effort to ensure that public statements concerning ETS exposure were uniform, Covington & Burling prepared a position paper, the ETS White Paper, for the International ETS Management Committee ("IEMC"), yet another of Defendants' ETS committees. IEMC furthered the Enterprise and conspiracy by (a) maintaining and fostering the open question and myth of independent research with respect to ETS and (b) coordinating the industry position on ETS.

1009. Cigarette Company Defendants used IEMC to coordinate the industry position on ETS. For example, IEMC members galvanized to combat the threat they perceived by the impending IARC report regarding ETS.

1010. In a December 1, 1993 memorandum, Sharon Boyse, BATCo scientist, explained that the IEMC is developing a scientific and media strategy to "cope" with the IARC study. Boyse identified the International Agency for Research on Cancer ("IARC") as "an autonomous agency within the World Health Organization ("WHO") that is responsible for scientific research in the field of cancer causation and prevention and, in particular, classification of claimed carcinogens." Boyse further noted that the IARC is slated to publish, in 1994 or 1995, the largest epidemiological study of ETS carried out in eleven centres in North America and Europe and that it is likely that IARC will classify ETS as carcinogenic, "which would lead to a situation not

dissimilar to that with the EPA in the USA. It would certainly influence the EC and regulators within Europe and elsewhere." 500844318-4319 at 4318 (U.S. Ex. 48,464).

1011. The industry recognized that WHO's impact and influence was indisputable and called for countermeasures designed to contain, neutralize, and reorient the WHO. 2501045114-5115 (U.S. Ex. 88,472); 2501045143-5147 (U.S. Ex. 45,886).

1012. One of the industry efforts to "neutralize" the WHO was a multi-million dollar campaign to undermine a large-scale epidemiological study on the relationship between environmental tobacco smoke and lung cancer. The ETS study was conducted by the International Agency for Research on Cancer ("IARC"), an agency established under the auspices of WHO. The study was initiated in 1988 as an international, collaborative case control study to assess the relationship between exposure to ETS and other environmental risk factors and the risk of lung cancer in subjects who had never smoked tobacco. The industry became alarmed that if the study found that ETS causes cancer it could result in new smoking restrictions around the world. 2501117793-7797 (U.S. Ex. 27,932); 2500156109-6110 (U.S. Ex. 88,473) (Notes found in the file of Ann Daw, Director, Product and Marketing Services-Rye Brook, Philip Morris International read: "can we kill the credibility of the research up-front before publication?").

1013. There was great concern because "IARC is credible, the study is a REAL one and its results will have major impact and there needs to be a serious multi-country strategy that encompasses all 16 IARC member nations" In particular, Defendants were concerned because the United States was one of the countries in which the IARC study would have a major impact. 2025493295A-3296 (U.S. Ex. 26,839).

SECTION IV.C.

1014. The tobacco industry, with the help of its lawyers, mobilized the global ETS infrastructure it had designed. Philip Morris's IARC plan was to form the basis of the intra-industry plan that was to be implemented through Defendants' International ETS Management Committee ("IEMC"). 2024104596-4596 (U.S. Ex. 88,735). The IEMC agreed the industry would coordinate the scientific, regulatory and communications fronts regarding its response to the looming IARC threat. 2023693108-3108, PW02127520-7520 (U.S. Ex. 88,477). Shook, Hardy & Bacon and Covington & Burling were responsible for mobilizing the scientific resources. 2065565122-5138 (U.S. Ex. 88,755). An IEMC meeting to address the IARC plan met in conjunction with the CECCM/ETS meeting because the "same people will be involved with IARC. . . so it is a good fit." 2023693108-3108 (U.S. Ex. 88,477).

1015. Matthew Winokur chaired Philip Morris' IARC task force. Winokur also chaired a second inter-company IARC task force of the IEMC which was composed of: Wilfred Dembach and Rich Marcotullio of R.J. Reynolds, Chris Proctor of BAT, Christoff Walther of Reemtsma, David Rowland of Rothmans, and Paul Sadler of Imperial. 2028361781-1781 (U.S. Ex. 88,478); 2025495788-5788 (U.S. Ex. 22,856); 500805919-5919 (U.S. Ex. 88,479); 900006185-6185 (U.S. Ex. 88,480). In addition, all but Marcotullio served with Winokur on the CECCM's Working Group on Freedom to Smoke and the CECCM's IARC Working Group. 900006185-6185 (U.S. Ex. 88,480); 2065240327-0328 (U.S. Ex. 88,481).

1016. In January 1994, IEMC members considered a revised IARC Communications Plan for IEMC members and a set of the Tobacco Institute's talking points on an expected release

by the IARC regarding ETS and children. 2024210623-0629 at 0628-0629 (U.S. Ex. 37,094) (U.S. Ex. 37,095).

1017. IEMC worked closely with the Confederation of European Community Cigarette Manufacturers ("CECCM") on ETS issues. 2500061112-1113 (U.S. Ex. 22,821).

1018. CECCM is the industry association of European cigarette manufacturers. Its members are BAT, Philip Morris, Rothmans, Reynolds, Reemtsma, Gallahers and Imperial. 502601564-1567 at 1565 (U.S. Ex. 29,570).

1019. As stated above, IEMC and CECCM worked in concert. IEMC developed ETS messages globally and the CECCM IARC Working Group promulgated ETS messages developed by IEMC.. 900006204-6204 (U.S. Ex. 88,482); 900006205-6209 (U.S. Ex. 88,483); 900004185-4187 (U.S. Ex. 88,484). An ETS Communications Manual was compiled through the CECCM's IARC Communications's Working Group and contributed to by all of its members. 900006078-6080 (U.S. Ex. 88,485).

1020. Each CECCM member tobacco company had to provide "legal clearance" before any statement could be issued by the organization. On July 30, 1992, John Lepere of CECCM sent a telefax to representatives of several tobacco companies, including R.J. Reynolds, Philip Morris, and BAT. This telefax stated:

Herewith are copies of the draft summaries of the three I.E.M.C. position papers on E.T.S. which have been approved for use by C.E.C.C.M. and its members. They have been drafted by Sharon Boyse as our Working Group on Smoking at the Workplace and in Public Places had requested. . . . Sharon has reduced the emphasis on science but, wherever possible, she has used wording extracted

from the full papers. Each of the summaries is of course subject to legal clearance by each corporate member, but Sharon's approach should greatly facilitate this since the full papers have already been cleared by the corporate lawyers.

2501349357-9358 (U.S. Ex. 45,953).

1021. CECCM approved the IEMC position papers for use by all of its tobacco company members. 300545701-5705 (U.S. Ex. 88,464); 300543440-3445 (U.S. Ex. 88,465); 300545818-5819 (U.S. Ex. 88,466).

1022. On March 2, 1992, IEMC members adopted the White Paper, entitled "Environmental Tobacco Smoke: A Summary of the Scientific Literature." 2023581801-1801 (U.S. Ex. 20,392); 2023581802-1841 (U.S. Ex. 88,467).

1023. BATCo scientist Sharon Boyse, was designated as the primary contact by the various ETS groups regarding this White Paper, and at least two other position papers related to ETS. As such, she was tasked with distributing the papers to such groups as the CECCM, the Tobacco Document Center, and other company's representatives. 300543969-3970 (U.S. Ex. 88,468); 300543940-3942 (U.S. Ex. 88,469).

1024. Boyse received revised versions of the position papers from Covington & Burling, which she then "undertook to progress, in conjunction with the I.E.M.C., an up-dating of the CECCM position papers entitled 'ETS - A Summary of the Scientific Literature' and 'ETS- Science or Politics?' and of the summaries of those papers." 500874371-4371 (U.S. Ex. 88,470); 300544202-4208 (U.S. Ex. 88,471).

1025. A redacted April 13, 1992 facsimile from Sharon Boyse of BATCo to representatives of Philip Morris International, R.J. Reynolds, Rothmans and Imperial demonstrated the way in which BATCo used the IEMC, CECCM, and TAC (the United Kingdom's counterpart to the Center for Tobacco Research in the United States) to coordinate the industry position on EPA documents:

Attached are the versions of the EPA/politicisation and ventilation documents that, according to John [Rupp, attorney with Covington & Burling], incorporate all of your comments. I am still, unfortunately, waiting for final BAT Clearance. We are also awaiting clearance from Gallaher/Chadbourne, which is necessary as you know for CECCM. . . . I think it is important, however, that we agree that the issue is resolved. However, this means in theory that CECCM no longer has any excuse for not accepting the IEMC version and that TAC also should be able to use it as a basis should it require. . . .

300543968-3968 (U.S. Ex. 67,755).

1026. In June 1992, Covington & Burling helped Defendants attempt to shift public discussion of the health effects of ETS exposure from an examination of the deadly diseases caused by ETS to the issue of indoor air ventilation by writing a briefing paper for the Confederation of European Community Cigarette Manufactures ("CECCM") in conjunction with the IEMC titled, "Environmental Tobacco Smoke; Indoor Air Quality and the Need for Adequate Ventilation." 2504088209-8210 (U.S. Ex.20,571).

1027. In addition to its activities as a member of IEMC, Philip Morris mounted a multi-million dollar campaign to attempt to undermine a study on the dangers of ETS that had been undertaken by the International Agency for Research on Cancer ("IARC"), an affiliate of the

SECTION IV.C.

World Health Organization, beginning in the early 1990s. The campaign targeted researchers, the media, and government decision-makers. Its goals were to: "Delay the progress and/or release of the study. Affect the wording of its conclusions and official statement of results. Neutralize possible negative results of the study, particularly as a regulatory tool. Counteract the potential impact of the study on governmental policy, public opinion, and actions by private employers and proprietors." 2501341817-1823 at 1818 (U.S. Ex. 20,564).

1028. Philip-Morris launched its campaign to influence or contain the negative impact of the IARC study. To this end, a single "global strategy" was essential. 2501348679-8683 (U.S. Ex. 88,474). The plan was presented by David Greenberg, Philip Morris Services Inc., Brussels, to R.W. Murray, President and Chief Operating Officer, Philip Morris Companies, Inc. Objectives included: delaying the progress and or release of the study; affecting the wording or its conclusions; neutralizing possible negative results, and counteracting the potential impact of the study on governmental policy, public opinions and actions by private employers and proprietors. In addition to Philip Morris employees in Brussels, team members included Matthew Winokur of Philip Morris' Worldwide Regulatory Affairs; Anthony Andrade, an attorney with Shook, Hardy & Bacon; Chuck Lister, an attorney with Covington & Burling; and Helmut Reif, Richard Carchman, and Robert Pages of Philip Morris, Science & Technology Division. 2021184116-4116 (U.S. Ex. 26,730); 2021184117-4121 at 4118 (U.S. Ex. 36,718). Helmut Reif was to take the lead in organizing and coordinating all of the inter-industry scientific efforts. These efforts included preemptive assessment of the questionnaire to expose weaknesses; organizing with the law firms a team to identify and mobilize consultants, and

offering IARC industry funded study results and protocols through Max Eisenberg of CIAR.

2029174855-4855 (U.S. Ex. 88,475); 2024104538-4538 (U.S. Ex. 88,476); 2028381587-1588 (U.S. Ex. 26,883) (U.S. Ex. 26,884).

1029. The existence of a series of slides from a 1995 R.J. Reynolds Tobacco International Inc. presentation entitled "ETS: a global offensive and defensive strategy" in BATCo's files, reveals that the two companies coordinated in regard to using CIAR to pre-empt the upcoming IARC report, which was to be the largest epidemiological study of ETS. These slides state, in part:

ETS Objectives: Pre-empt IARC with CIAR exposure studies . . .
Counter directly with misclassification & confounder data . . .
Build positive approach on IAQ – ventilation/ accommodation.

ETS key messages: Threats related to ETS exposure grossly exaggerated . . . Adults have the right to be properly informed about smoking . . . Consumers favor separation and accommodation, not total bans . . . Tobacco industry will take lead on encouraging 'equal' accommodation.

502558482-8497 at 8489, 8491, 8493, 8496 (U.S. Ex. 29,562).

1030. Matthew Winokur's Philip Morris and IEMC Task Forces developed a set of strategies to achieve their objectives: influence IARC budgets or officials to cancel or delay the study; establish contacts with scientists carrying out the studies; conduct and promote counter research; promote scientific standards that would limit the use of epidemiology as a basis for public policy and create an "independent" coalition of scientists to criticize damaging studies; manipulate the public and regulatory response to the study results; cancel or influence the expected IARC monograph on ETS. 2025493459-3460 (U.S. Ex. 26,843); 2025493461-3466

SECTION IV.C.

(U.S. Ex. 88,486); 2025493309-3309 (U.S. Ex. 88,487); 2501344214-4214 (U.S. Ex. 88,488); 2501344215-4216 (U.S. Ex. 88,097); 2501344217-4221 (U.S. Ex. 88,098); 2501344222-4222 (U.S. Ex. 88,099).

1031. As part of Defendants' preparation for the expected IARC Report regarding ETS, they agreed to commission studies that were expected to yield results favorable to the industry and that would yield results prior to the IARC report's release. These industry proposed studies were to "be organized by and funded through" the ostensibly "independent CIAR," and one of them was an "exposure study" that would be an assessment of ETS exposure in sixteen cities. 2505443991-4000 (U.S. Ex. 22,202); 2028381588-1588 (U.S. Ex. 26,884); 2050751946-1950 (U.S. Ex. 88,100). The sixteen city study was funded through CIAR for \$1,770,503 and resulted in at least four publications by Roger A. Jenkins, of Oak Ridge National Laboratory. 2505442777-2935 at 2836 (U.S. Ex. 75,388); 25054422936-2960 (U.S. Ex. 25,643).

1032. The IEMC arranged for the funding of ETS studies through the CIAR which were conducted at Hazelton or Covance Laboratories. These industry funded ETS studies cost \$7.28 million. The research resulted in numerous publications, some of which appeared in the tobacco industry's journal *Indoor and Built Environment*. 2505442777-2935 at 2880-2885 (U.S. Ex. 75,388); 25054422936-2960 (U.S. Ex. 25,643). Covington & Burling was charged with developing a plan to get specific consultants in specific countries to disseminate the new scientific information from the studies and to market specific mechanizing (through consultants) aimed at interest groups like unions with the message that ETS is a non-issue for scientists, only an issue for politicians. Through the CECCM's IARC Communications Working Group, the

SECTION IV.C.

industry hired Spring O'Brien, an advertising and public relations firm, to publicize the results of these CIAR studies conducted by Hazelton. "It was stressed that it is important to tell the truth about the funding of the Hazelton Studies - if asked." 2046546263-6265 (U.S. Ex. 88,101); 2023522351-2352B at 2352B (U.S. Ex. 75,127); 2501003237-3242 at 3237, 3240-3242 (U.S. Ex. 22,320); 2501003235-3235 (U.S. Ex. 22,322).

1033. An internal electronic transmission within Philip Morris International, dated February 5, 1992, acknowledged that the Japanese Study came out of the IEMC and further indicated: "We agreed to sponsor the Japanese study first [before Hazelton] in the hopes that we could use results to undermine Hirayama conclusions in time for the EPA." 2023522351-2352C at 2352B (U.S. Ex. 22,851).

1034. At a July 21, 1992 IEMC meeting at Covington & Burling's London office, participants were scheduled to discuss "authorship/attribution" with respect to the "Japanese study" and to receive an "Update on EPA/OSHA." 2028454705-4705 (U.S. Ex. 22,852).

1035. In January 1993, a United Kingdom ETS study was funded by IEMC members through CIAR in the United States. 2021520165-0180 at 0167-0168 (U.S. Ex. 26,738) (U.S. Ex. 75,230).

1036. Handwritten notes of a May 18, 1993 IEMC meeting indicate that participants addressed "Key Findings" of the "Japanese Spousal Study" and that:

[the] IEMC has commissioned two ETS studies but is unsure how to apply this information:

1. goal is to get this information out to NMA's, people in the field for the companies, etc.

2. Project APE (EPA backwards) will deal with the use of the information being developed; possible media use.

2501003237-3242 at 3237 (U.S. Ex. 22,320).

1037. Defendants established contacts with IARC investigators, through its law firms' ETS consultants and Philip Morris scientists to gather intelligence about the study, and influence the interpretation of the study results. The tobacco companies commissioned and promoted numerous studies (including the sixteen city study, Peter Lee's Japanese spousal study, the Hazelton/Covance CIAR Study and Genevieve Matanowski CIAR applied study on confounding factors) and conferences designed to cast doubt on ETS's toxicity and on the methods used in the IARC study. In many instances the tobacco companies appear to have successfully concealed their role in contacting IARC investigators and in their funding and marketing of counter research; tobacco companies worked for adoption of epidemiological standards (called General Epidemiological Practices, or "GEP") that would prevent governments from relying on the IARC study, and to form an ostensibly independent sound science coalition that would assist tobacco companies' legislative agenda by challenging the use of certain types of studies as the basis for policy making; tobacco companies developed and carried out an elaborate media and government strategy in which they managed to distort the study results spawning widespread inaccurate media reports that the study showed no risk of cancer from ETS; industry representatives worked to gain invitations for tobacco company consultants to participate in the expected monograph working group and to produce studies that would influence the monograph results. 2029231774-1774 (U.S. Ex. 88,102); 2501355931-5931 (U.S. Ex. 88,103); 2501355932-5944 (U.S. Ex.

SECTION IV.C.

88,104); 2501341817-1823 (U.S. Ex. 20,564); 2501347168-7173 (U.S. Ex. 27,944);
2025470123-0123 (U.S. Ex. 88,105); 2025470672-0725 (U.S. Ex. 26,829); 2060577609-7708
(U.S. Ex. 39,022); 2028363615-3616 (U.S. Ex. 37,366); 2026219003-9010 (U.S. Ex. 88,106);
2501347174-7176 (U.S. Ex. 45,951); 2025477955-7955 (U.S. Ex. 26,834); 2029260524-0539
(U.S. Ex. 26,895); 2063604594-4600 (U.S. Ex. 39,782); 2060566164-6165 (U.S. Ex. 20,505);
2025493019-3019 (U.S. Ex. 88,107); 2025493020-3030 (U.S. Ex. 88,108); 2025493201-3201
(U.S. Ex. 79,815); 2025493265-3278 (U.S. Ex. 26,837); 2025493202-3207 (U.S. Ex. 79,815);
2025493264-3264 (U.S. Ex. 88,109); 2024766404-6404 (U.S. Ex. 88,110); 2025493279-3283
(U.S. Ex. 88,111); 2501362541-2546 (U.S. Ex. 27,947); 2023299819-9819 (U.S. Ex. 26,785);
2023299820-9823 (U.S. Ex. 88,112); 2502251076-1076 (U.S. Ex. 88,113); 2502251045-1045
(U.S. Ex. 88,114); 2502250837-0838 (U.S. Ex. 88,115); 2502251309-1310 (U.S. Ex. 88,116);
2025493287-3287 (U.S. Ex. 37,265); 2500015757-5757 (U.S. Ex. 45,831); 2029041838-1839
(U.S. Ex. 37,435); 2501356071-6071 (U.S. Ex. 88,117); 2501356073-6076 (U.S. Ex. 45,959);
2501011400-1400 (U.S. Ex. 88,118); 2023693111-3111 (U.S. Ex. 88,119); 2029173981-3981
(U.S. Ex. 88,120); 2045930493-0504 (U.S. Ex. 26,961); 2024233677-3682 (U.S. Ex. 26,811);
2501355932-5944 (U.S. Ex. 45,954); 2025492898-2905 (U.S. Ex. 88,121); 2063600683-00688
(U.S. Ex. 27,119); 2063600689-0689 (U.S. Ex. 27,120); 2063600690-0695 (U.S. Ex. 27,121);
2063608546-8546 (U.S. Ex. 27,123); 2063608547-8547 (U.S. Ex. 27,124); 2028381627-1627
(U.S. Ex. 26,885); 2060566164-6165 (U.S. Ex. 20,505); 2028381444-1444 (U.S. Ex. 26,871);
2028446632-6632 (U.S. Ex. 26,890); 2072417030-7034 (U.S. Ex. 88,122); 2063594010-4240
(U.S. Ex. 88, 123); 2063594009 (U.S. Ex. 39,763); 2025494653-4671 (U.S. Ex. 26,845) (U.S.

SECTION IV.C.

Ex. 26,846); 2502188231-8253 (U.S. Ex. 88,124); 2060564893-4893 (U.S. Ex. 88,125); 2063838042-8044 (U.S. Ex. 88,126); 2074587672-7683 (U.S. Ex. 88,127); 2072267831-7837 (U.S. Ex. 88,128); 2025535488-5489 (U.S. Ex. 88,129); 2505442777-2960 at 2862 (U.S. Ex. 46,053) (U.S. Ex. 46,054).

1038. Covington & Burling reported to Matthew Winokur of Philip Morris that at least one of “our consultants will be invited to be a member of the [IARC] expert working group which will carry out the evaluation and sign off on the published Monograph” on ETS. 2025493844-3844 (U.S. Ex. 88,756). The law firm recommended that in anticipation of IARC's ETS report that it would be:

prudent to encourage useful additions to the ETS literature in peer reviewed journals. Those additions should be designed to show the problems created by confounders, the importance of other possible causes, and generally to provide materials of which IARC's working group will be obliged to take account. Absent such additions, there will be considerable pressure upon the monograph working group simply to endorse the conclusions already announced by Dr. Boffetta and others at IARC.

2028376562-6562 (U.S. Ex. 88,130).

1039. The IARC Release Plan involved all of the players: John Rupp of Covington & Burling was tasked with writing various white papers that would be included in the National Manufacturer's Association manual; Shook, Hardy & Bacon would provide legal clearance; Peter Lee would review IARC's ETS position and past practices to allow corporate affairs to identify weaknesses in the IARC methodology; the industry release plan would be shared with R.J. Reynolds and BAT prior to the February 14, 1996 IEMC meeting and presented to the CECCM

SECTION IV.C.

at the next IARC Communications Group meeting that was scheduled for February 16, 1996.

Manuel Bourlas of Philip Morris was to liaise with CORESTA Board members to ensure participation of the monopolies. The plan identified the industry coordination teams. For example, the following employees of Cigarette Company Defendants would serve as spokespersons: D. Greenberg and R. Dempsey of Philip Morris, Chris Proctor of BAT, S. Sears of R.J. Reynolds. More than a dozen others would serve as members of Communications Support, Government Affairs, Science and Legal representing Philip Morris, BAT, R.J. Reynolds, Brown & Williamson, Imperial, and Rothmans. 2048381563-1574 (U.S. Ex. 88,131).

1040. A 1999 internal report to the Director General of the World Health Organization suggested that there was evidence in formerly confidential tobacco company documents that the tobacco companies had made “efforts to prevent implementation of healthy public policy and efforts to reduce funding of tobacco control within UN organizations.” A committee of experts were assembled to research the documents and the committee issued a report finding that companies fought WHO’s tobacco control agenda by, among other things, staging events to divert attention from the public health issues raised by tobacco use, attempting to reduce budgets for the scientific and policy activities carried out by WHO, pitting other United Nations agencies against WHO, seeking to convince developing countries that WHO’s tobacco control program was a “First World” agenda carried out at the expense of the developing worlds, distorting the results of important scientific studies on tobacco, and discrediting WHO as an institution. 770007956-8214 (U.S. Ex. 88,132).

SECTION IV.C.

1041. According to the WHO report, the tobacco companies' communications strategy was the most successful element of its attempt to undermine the IARC study. By distorting the statistical underpinnings of the study results, tobacco industry officials managed to convince journalists around the world to write news stories that the study showed no increased risk of lung cancer from ETS exposure in non-smokers. According to the WHO report, tobacco companies' distortion of the study results continue to be repeated in media accounts and in tobacco company presentations to regulatory authorities and recommended that WHO assist member states in determining whether they have a legal or factual basis to seek restitution from tobacco companies for past misconduct. 770007956-8214 (U.S. Ex. 88,132).

1042. According to the WHO report, Industry officials have also distorted the IARC study results when addressing regulatory authorities. Philip Morris' intended testimony before the National Toxicology Program (NTP) sought to use its misrepresentation of the IARC ETS study as the basis for its argument that NTP lacked sufficient evidence to classify ETS as a carcinogen. 770007956-8214 (U.S. Ex. 88,132) (citing 2063594507-4508 (U.S. Ex. 27,115)). Deposition of Helmut Reif, United States v. Philip Morris, et al., March 30, 2004, 296:10-299:22.

1043. Defendants and their consultants published journal articles and letters to the editors disputing IARC findings, while the industry responded to the press that the study showed no increased risk of lung cancer. 2505445804-5804 (U.S. Ex. 88,133); 321926036-321926037 (U.S. Ex. 88,134); 321557020-7021 (U.S. Ex. 88, 135); 321560599-0599 (U.S. Ex. 88,136); 321560600-0616 (U.S. Ex. 88,137); 770002199-2215 (U.S. Ex. 88,138); 321958075-8075 (U.S.

SECTION IV.C.

Ex. 88,139); 321958123-8125 (U.S. Ex. 88,140); 321958126 (U.S. Ex. 88,141). BAT's ETS position paper was circulated to all of its companies stating that the study reported "no overall statistically significant increase in lung cancer risk for exposure to ETS at home, . . .at work, . . . and at home and at work combined. . . . 770002199-2215 (U.S. Ex. 88,138).

1044. Industry consultant P.N. Lee performed a review of the report for the ETS Working Group of the Tobacco Manufacturers' Association ("TMA"). The TMA was a trade association that represented the tobacco companies participating in the British market in dealings with the United Kingdom's government and other authorities on issues of concern to its members. Lee's review included S. B. Sears of R.J. Reynolds, R. Dempsey of Philip Morris, as well as employees of Imperial and Rothmans. 321556167-6167 (U.S. Ex. 88,142); 321556168-6168 (U.S. Ex. 88,143); 321556169-6182 (U.S. Ex. 88,144). Lee would write a letter to *Journal of the National Cancer Institute* criticizing the IARC report, but claiming that he was not paid by the industry to do so. 321557020-7021 (U.S. Ex. 88,135). Lee was however on retainer with the TMA at a cost of 36,000 pounds. 321556233-6234 (U.S. Ex. 88,145); 321556235-6235 (U.S. Ex. 88,146).

1045. Philip Morris also worked to "keep the controversy alive" when attacking the EPA's 1993 Risk Assessment. That year, Philip Morris unveiled its plan to discredit the EPA generally and the Risk Assessment in particular. First, Philip Morris planned to, and did, attack the EPA with litigation. Second, Philip Morris planned to, and did, go to the media with charges of "EPA corruption," excesses, and mistakes (even if unrelated to the substantive issue). Third, Philip Morris sought to get risk assessments banned from regulatory activities by approaching the

SECTION IV.C.

executive branch. Finally, in conjunction with Shook, Hardy & Bacon and the public relations firm Burson-Marsteller, Philip Morris planned an all out effort to prevent the Occupational Safety and Health Administration ("OSHA") from regulating smoking in the workplace. Notably, none of these efforts were backed by legitimate scientific evidence; the public positions of Philip Morris and other Defendants were taken with knowledge of their falsity or reckless disregard for the accuracy of their content. Deposition of Denise Keane, United States v. Philip Morris, et al., October 1, 2002, 32:25-33:17, 147:12-151:21; 2073778581-8596 (U.S. Ex. 20,530).

1046. In a July 22, 1993 document, BATCo argues that a united industry approach on environmental tobacco smoke issues was necessary to combat proposed legislation in a given country that would ban or severely restrict ETS. 502633959-3973 (U.S. Ex. 49,166) (U.S. Ex. 79,195); Deposition of Sharon Blackie (Boyse), United States v. Philip Morris, et al., April 29, 2002, 105:17-106:8.

1047. In 1993, the Tobacco Institute published an advertisement attacking the EPA's 1993 ETS Risk Assessment: "Announcing a revolutionary new solution to the secondary smoke controversy. Common courtesy. The endless debate in Washington over how to 'classify' secondary smoke seems to us just the tiniest bit pointless. The science doesn't support a classification, but the EPA does." 2024186165-6165 (U.S. Ex. 20,400).

1048. In July 1994, Philip Morris launched an advertising campaign against the EPA, referring to an article written by Jacob Sullum, "Passive Reporting on Passive Smoking," that appeared in the Summer edition of *Forbes Media Critic*. (U.S. Ex. 87,415); 2070422475-2478

SECTION IV.C.

(U.S. Ex. 87,416). Sullum had been asked by the Tobacco Institute to write an article on ETS in 1990. TI10260488-0489 (U.S. Ex. 87,417). In 1990, Fred Panzer, of Tobacco Institute Advertising, had contacted Sullum as a potential witness. TIMN0194351-4398 (U.S. Ex. 87,418). PM's plan for the advertisements indicated that the ads would create more skepticism of EPA and science. 2023919236-9240 (U.S. Ex. 87,419). The ads were comprised of a four part series based on Sullum's article. The first ad was a "teaser" and asked, "Were you misled?" and talked about the EPA and "dangers" of secondhand smoke. 2022837132-7133 (U.S. Ex. 87,420). This was followed up with four consecutive days of ads:

- 1) SECONDHAND SMOKE: FACTS FINALLY EMERGE HOW SCIENCE LOST OUT TO POLITICS ON SECONDHAND SMOKE (part 1 of 4). 2047894746-4747 (U.S. Ex. 87,421).
- 2) SECONDHAND SMOKE: FACTS FINALLY EMERGE HOW THE EPA MANIPULATED SCIENCE TO SERVE A POLITICAL CAUSE (part 2 of 4). 2054400544 (U.S. Ex. 87,422).
- 3) SECONDHAND SMOKE: FACTS FINALLY EMERGE HOW SCIENCE AND POLITICS COLLIDED AND BALANCED REPORTING WAS THE CASUALTY (part 3 of 4) 2047894748-4749 (U.S. Ex. 87,423).
- 4) SECOND HAND SMOKE: FACTS FINALLY EMERGE HOW TO SPOT FLAWS IN SECONDHAND SMOKE STORIES (last of 4 part series). 2057248428 (U.S. Ex. 87,424).

1049. The Tobacco Institute also organized and funded the "Truth Squad," a group of scientific witnesses who made media appearances and provided legislative testimony on ETS exposure issues throughout the United States. The Truth Squad's activities were determined by the ETS strategy developed by Defendants to further the goals of the Enterprise, and focused on the work of the EPA. During the media tours, members of the Truth Squad would talk about

their purported areas of ETS expertise. Some of the interviews, or excerpts, were televised and some broadcast on the radio. Members of the Truth Squad also wrote editorials and opinions pieces on indoor air quality issues. Deposition of Brennan Dawson, United States v. Philip Morris, et al., July 1, 2002, 61:8-66:11.

1050. The Tobacco Institute paid numerous scientific witnesses for written submissions falsely attacking legitimate scientific research identifying ETS as a cause of disease, including lung cancer. For example, on January 6, 1993, the Tobacco Institute paid scientific consultant Gio Gori \$3,555 to write a letter to the editor of the *Journal of the National Cancer Institute* captioned: "Environmental Tobacco Smoke: The Price of Scientific Uncertainty." The Tobacco Institute paid Gori another \$4,137.50 five days later to write an Op-Ed page submission on the Risk Assessment for the *Wall Street Journal* (which *the Wall Street Journal* declined to publish). On April 10, 1993, the Tobacco Institute paid Gori \$4,000 to write a letter to *Lancet*, disputing an editorial that had found the EPA Risk Assessment provided a firm regulatory basis for increased social action to minimize the public's exposure to ETS. The Tobacco Institute paid BATCo consultant Peter Lee \$4,000 on January 29, 1993, to write a response to letters to the editor of *Environment International*, disputing the conclusion that ETS exposure caused lung cancer and mortality. In June 1993, the Tobacco Institute paid Lee \$5,000 to write a letter to the editor of *Journal of the National Cancer Institute* disputing results of an ETS study by Stockwell that post-dated the Risk Assessment and found a link between ETS exposure and lung cancer in nonsmoking women. The letter was published along with two other letters from Tobacco Institute consultants, Paul Switzer and Max Layard. All were critical of the Stockwell study.

SECTION IV.C.

None disclosed the source of funding for the words submitted. TIMN0435220-5272 (U.S. Ex. 21,734); 2046591055-1056 (U.S. Ex. 20,473); 2046342683-2686 (U.S. Ex. 20,469).

1051. Defendants further advanced the goals of the Enterprise by attempting to change the way that scientific evidence of the health effects of ETS exposure could be analyzed. In July 1997, CIAR organized and sponsored a workshop in China called, "International Workshop on Risk Assessment and Good Epidemiological Practices," with the goal of imposing a tobacco friendly methods and standards for evaluating epidemiological data for scientists. With this standard, Defendants hoped, from a technical standpoint as opposed to a scientific one, to make it nearly impossible to link ETS with disease. 566946147-6175 (U.S. Ex. 88,757); 2029059645-9652 (U.S. Ex. 26,893); TLT0300761, 2063604594-4600 (U.S. Ex. 39,782); 2028446631-6631C (U.S. Ex. 26,889); 2028446632 (U.S. Ex. 26,890); 2025493118A-3119 (U.S. Ex. 88,760).

1052. In April 1998, a Philip Morris assessment of the Good Epidemiological Practices ("GEP") project characterized it as an attempt by Covington & Burling's to encourage a "grass roots" movement among epidemiologists to reform their science to ignore any study with a relative risk of less than 2.0 (the standard sought by Defendants). But "no epidemiological organization would agree to this [reform]." 2060566164-6165 (U.S. Ex. 20,505).

1053. In 1984, the Tobacco Institute published a document entitled "Environmental Tobacco Smoke Workshops 1983-1984." It focused on two industry-sponsored "workshops," noting that each one concluded that there were no demonstrated health effects of ETS exposure. 2025417473-7489 (U.S. Ex. 20,416).

1054. In 1990, the Tobacco Institute revised and republished its publication "In the Public Interest . . . Three Decades of Initiatives by a Responsible Cigarette Industry." In this document (which had originally been created and published in 1986), the Tobacco Institute touted its promises to conduct "independent" research on ETS exposure: "In 1988 pursuing its effort to advance scientific knowledge, tobacco industry support led to establishment of the Center for Indoor Air Research (CIAR) to award funds to independent investigators in the field of air quality in enclosed spaces." TIMN0194781-4787 at 4784 (U.S. Ex. 21,397).

1055. In 1998, Philip Morris funded an ETS study entitled, "Parental Smoking and Sudden Infant Death Syndrome: A Review of the Evidence," written by Alison J. Thornton and Peter N. Lee. The study concluded that the existence of various study weaknesses and the likelihood of residual confounding meant that one could not infer with confidence that parental smoking increased the risk of SIDS. The paper was rejected for publication in *Public Health Reviews* "considering it not sufficiently unbiased." Bias was not a concern for Philip Morris, and the paper was published in *Indoor and Built Environment*, a journal put out by another organization funded by Defendants, the International Society of the Built Environment. 2502140306-0316 (U.S. Ex. 20,566); 2502159515-9516 (U.S. Ex. 20,567); 2505934225-4235 (U.S. Ex. 23,267).

1056. *Indoor and Built Environment* was used frequently to wage Defendants' fraudulent campaign regarding the health risks of ETS exposure. Another paper by Lee and Thornton titled "A Critical Commentary on Views Expressed by IARC in Relation to Environmental Tobacco

Smoke and Lung Cancer," was published in 1998. The study attacked IARC's work on ETS. 2063594510-4526 (U.S. Ex.20,513).

1057. In a proxy statement filed by Philip Morris with the Securities and Exchange Commission in 1995, Philip Morris stated that "[t]he Company strongly believes that the scientific evidence does not support claims that ETS is harmful to non-smokers." Definitive Proxy Statement, Annual Meeting of Stockholders, April 27, 1995 (U.S. Ex. 88,147).

(9) Defendants' Fraudulent Activity Continues to the Present Day

1058. In late 1998, Covington & Burling assisted CIAR (which was required to dissolve under the provisions of the Master Settlement Agreement ("MSA")) to complete its funding of ETS-related projects in 1998 and determine how a new organization would take over CIAR's duties and continue the funding in 1999. 86205377-5377 (U.S. Ex.21,092); 86205378-5378 (U.S. Ex. 56,150); 86205422-5422 (U.S. Ex. 21,093).

1059. To this day, Philip Morris, BATCo, Brown & Williamson, Lorillard, and R.J. Reynolds deny that ETS causes disease in nonsmokers. These assertions continue to be made in order to advance the goals of the Enterprise, despite the contrary conclusions of countless medical and scientific organizations, including the United States Surgeon General, the World Health Organization, and the American Medical Association. Defendant Philip Morris Incorporated's Responses to Plaintiff's Specific Interrogatories to Defendants Philip Morris, Inc. and Philip Morris Companies, Inc., United States v. Philip Morris, et al., (March 15, 2002) (U.S. Ex. 77,408) (U.S. Ex. 77,466); Defendant Philip Morris Incorporated's Responses to Plaintiff's

SECTION IV.C.

First Requests for Admission to All Defendants, United States v. Philip Morris, et al., (April 19, 2002) (U.S. Ex. 86,709); Response of Brown & Williamson Tobacco Corporation to the United States' First Set of Requests for Admission to All Defendants, United States v. Philip Morris, et al., (April 19, 2002) (U.S. Ex. 87,425); Response of Brown & Williamson to Plaintiff's Specific Interrogatories to Defendants Brown & Williamson Tobacco Corporation, The American Tobacco Company, and British American Tobacco (Investments) Limited, United States v. Philip Morris (March 15, 2002) (U.S. Ex. 87,426); Responses and Objections of British American Tobacco (Investments) Limited to Plaintiff's First Requests for Admission to All Defendants, Amended Pursuant to Order #119, United States v. Philip Morris, et al., (April 19, 2002) (U.S. Ex. 77,409); Defendant Lorillard Tobacco Company's Responses to the United States' First Set of Requests for Admission to All Defendants, Amended Pursuant to Order #119, United States v. Philip Morris, et al., (April 19, 2002) (U.S. Ex. 86,742); Defendant R.J. Reynolds Tobacco Company's Responses to Plaintiff's First Set of Requests for Admission to All Defendants, United States v. Philip Morris, et al., (April 19, 2002) (U.S. Ex. 77,413).

1060. R.J. Reynolds publicly disputes that smoking causes serious diseases in nonsmokers despite the contrary conclusions of countless medical and scientific organizations, including the United States Surgeon General; the National Cancer Institute; the Environmental Protection Agency; the Department of Health & Human Services' National Toxicology Program; the National Heart, Lung and Blood Institute of the National Institutes of Health; the World Health Organization; the American Cancer Society; the American Medical Association; the American Heart Association; the American Lung Association; and the American Academy of

Pediatrics. R.J. Reynolds's position on its website is that it believes "that there are still legitimate scientific questions concerning the reported risks of secondhand smoke." R.J. Reynolds's website further states:

While most scientific studies looking at disease rates in adult nonsmokers who live or work with smokers have reported small elevations in the risk of lung cancer and heart disease, the great majority of these elevations are not statistically significant. Also, very few studies have made an attempt to correct for a number of factors (such as serious biases and confounding variables) that make data interpretation extremely difficult. . . . In addition, being in the room with a smoker is not the same as smoking a cigarette. Secondhand smoke is hundreds to thousands of times more diluted than the smoke that a smoker inhales. . . . Considering all of the evidence, in our opinion, it seems unlikely that secondhand smoke presents any significant harm to otherwise health nonsmoking adults at the very low concentrations commonly encountered in their homes, offices and other places where smoking is allowed. We recognize that exposure to high concentrations of secondhand smoke may cause temporary irritation, such as teary eyes, and even coughs and wheezing in some adults. In addition, there is evidence that secondhand smoke, like other airborne irritants, or allergens such as pollen and dust may trigger attacks in asthmatics.

(U.S. Ex. 78,285). Evidence shows that R.J. Reynolds's denial is consistent with its longstanding effort to deny and distort the health risks of ETS exposure in order to maximize the number of smokers and the number of cigarettes they smoke, an effort undertaken in coordination with other Defendants as part of Defendants' scheme to defraud.

1061. Brown & Williamson continues to deny that ETS causes disease in nonsmokers. Notwithstanding the consensus in the medical community that ETS causes disease in nonsmokers, Brown & Williamson uses its website to try to convince the public that ETS is not harmful. TLT0390003-0003 (U.S. Ex. 76,761).

1062. BATCo continues its deception by denying the harms of ETS to nonsmokers. On its website, BATCo states that ETS can be "annoying," but disputes that it presents any sort of danger to nonsmokers:

[W]e believe the claim that ETS exposure has been shown to be a cause of chronic disease is not supported by the considerable body of research that has been conducted. In our view, there is no convincing evidence that ETS exposure genuinely increases the risk of non-smokers developing lung cancer or heart disease.

(U.S. Ex. 86,743).

1063. BATCo's website contains many other statements designed to mislead or misinform the consumer. For example, BATCo proclaims that a federal district court "rejected" the EPA's 1992 risk assessment which classified ETS and a Class A carcinogen, but BATCo's webpage fails to inform the reader that a federal appellate court vacated the district court's opinion with directions to dismiss the case. Flue-Cured Tobacco Coop. Stab. Corp. v. United States Environ. Prot. Agency, 313 F.3d 852 (4th Cir. 2002) (U.S. Ex. 86,744).

1064. Both the BATCo and R.J. Reynolds websites misleadingly claim that an ETS study of the International Agency for Research on Cancer ("IARC") of the World Health Organization, published in 1998, reported statistically non-significant results. Yet, in reality, the IARC study was considered to be evidence leading to "the inescapable scientific conclusion . . . that ETS is a low-level lung carcinogen." William J. Blot & Joseph K. McLaughlin, Passive Smoking and Lung Cancer Risk: What Is the Story Now? 90 J. Nat'l Cancer Inst. 1416, 1417 (1998) (U.S. Ex. 86,745). Furthermore, IARC has declared ETS to be carcinogenic. *IARC*

SECTION IV.C.

Monographs (Vol. 83) Tobacco Smoke and Involuntary Smoking (June 2002) (U.S. Ex. 86,746) (summary of IARC's findings); (U.S. Ex. 88,141) (IARC's published findings); Mortality in Relation to Smoking: 50 Years' Observations on Mail British Doctors, BMJ, doi:10.1136/bmj.38142.554479.AE (published 22 June 2004).

1065. BATCo's website also prominently features a recent study by James Enstrom and Geoffrey Kabat suggesting that there is no link between ETS and disease, but it fails to inform the reader that this study was funded largely by the tobacco industry. (U.S. Ex. 86,747); see also 519424878-5054, at 4926 (U.S. Ex. 22,942) (indicating that CIAR provided over \$500,000 to fund this study).

1066. Philip Morris established an operation nearly identical to CIAR, called the Philip Morris External Research Program ("PMERP"). PMERP essentially reincarnated CIAR: the program operates out of the very same CIAR suite in Linthicum, Maryland, uses the CIAR phone numbers, employs former CIAR Executive Director Max Eisenberg to run the day to day operations (through a newly-created entity called Research Management Group LLC), funds the same types of research, uses a Scientific Advisory Board with members of the former CIAR SAB, and vests final approval authority of all research with the SAB. 2085317779-7809 (U.S. Ex. 22,200).

1067. According to Helmut Reif, director of Science and Technology at Philip Morris's Fabriques du Tabac Runies in Switzerland, the change in the research funding source from CIAR to PMERP was immaterial from his perspective. Deposition of Helmut Reif, United States v. Philip Morris, et al., July 30, 2003, 190:11-15, 193:10-19, 194:8-195:6.

SECTION IV.C.

1068. Moreover, after entering into the MSA, Philip Morris continued its efforts to jointly fund industry research through structures that existed prior to the MSA, undertaking joint funding of external research efforts with BATCo through Philip Morris's Scientific Research Review Committee. Deposition of Helmut Reif, United States v. Philip Morris, et al., July 30, 2003, at 70:13-71:15.

1069. The jointly funded research undertaken by Philip Morris and BATCo was part of a project called the DIANIDS 2000 project. DIANIDS 2000 researched the human papilloma virus (HPV) as a potential cause of cancers. The focus by DIANIDS 2000 on alternative causes to diseases caused by cigarette smoking is similar to the work performed by TIRC and CTR which, contrary to Defendants' public assertion that they would "aid and assistance to the research effort into all phases of tobacco use and health," constituted research that focused on mechanisms in cancers that are distant if not completely irrelevant to evaluating the risks and harms associated with smoking. 86017454-7454 (U.S. Ex.21,418).

1070. Other research that has been jointly funded by Defendants continues to yield results in published literature, which is then used by Defendants to support their fraudulent public positions on ETS and overall effort to perpetuate the notion that an open question exists regarding the health effects of secondhand smoke exposure to nonsmokers.

SECTION IV.C.

D. The Myth of Independent Research

1071. In the 1954 Frank Statement, and repeatedly since then, Defendants have promised the American public to conduct and disclose the results of disinterested and independent research on the health risks of cigarette smoking, touting that they were concerned about the claims of the adverse health effects of smoking and that they would do whatever was necessary to get to the truth on behalf of their consumers. This promise was false when made and has never been fulfilled.

1072. At the time that the promise was first made, and all times thereafter, the Cigarette Company Defendants have been part of a Gentlemen's Agreement: (a) that any company discovering an innovation permitting the manufacture of an essentially "safe" cigarette would share the discovery with others in the industry; and (b) that no company would perform or commission in-house biomedical research on animals investigating the relationship between smoking and health. By its very terms, this agreement prevented the promised independent and disinterested research. The first component of this agreement quashed the incentive to perform such research, and the second component of the agreement quashed the research itself.

1073. For years, Defendants propounded a myth – that the Tobacco Industry Research Committee ("TIRC") and its successor, the Council for Tobacco Research ("CTR"), functioned as independent bodies pursuing independent research – as proof that they were meeting their promise to the American people. In reality: (a) TIRC/CTR was biased from its inception; (b) the Cigarette Company Defendants acted to influence TIRC/CTR's activities and its Scientific Advisory Board ("SAB"); (c) the lawyers, both in-house and outside, for the Cigarette Company

Defendants controlled numerous TIRC/CTR Special Projects and then attempted to clothe them with TIRC/CTR's alleged independence; and (d) TIRC/CTR's true purpose was to create positive public relations for the Cigarette Company Defendants.

1074. Despite their promises, the Cigarette Company Defendants did not routinely employ or support scientists to conduct research into smoking and health. Lawyers working for the Cigarette Company Defendants watched and internally policed and restricted company research – all based on liability concerns. In the rare instances when they did conduct internal research into smoking and health, the Cigarette Company Defendants did so in secret and suppressed the results, in some cases by destroying documents and in other cases by taking steps to shield documents and materials from discovery in litigation and from disclosure to the American public.

(1) The Promise: We, the Cigarette Company Defendants, Will Conduct Independent Research to Find the Truth About Smoking and Disease

(a) The Gentlemen's Agreement and the Frank Statement

1075. In December 1953, the Presidents of American Tobacco, R.J. Reynolds, Lorillard, Brown & Williamson, and Philip Morris, among others, met in the Plaza Hotel in New York. This was the first step toward the formation and implementation of the Gentlemen's Agreement. HT0072119-2125 (U.S. Ex. 21,175) (U.S. Ex. 54,357); CTRBYL000001-0014 (U.S. Ex. 21,138).

1076. Consistent with the agreements reached at the December 1953 meeting at the Plaza Hotel, on January 4, 1954, a full-page statement called "A Frank Statement to Cigarette Smokers" was disseminated by Defendants to the American public through publication in 448

newspapers in the United States. 11309817-9817 (U.S. Ex. 20,277); TIMN0029907-9907 (U.S. Ex. 21,267); 505542772-2772 (U.S. Ex. 20,742).

1077. The Frank Statement promised, in part, that the Defendants would conduct a search for the truth through independent outside and in-house research:

Regardless of the record of the past, the fact that cigarette smoking today should even be suspected as a cause of serious disease is a matter of deep concern to us. Many people have asked us what we are doing to meet the public's concern aroused by the recent reports. Here is the answer: **We are pledging aid and assistance to the research effort** into all phases of tobacco and health. This joint financial aid will of course be **in addition to what is already being contributed by individual companies**. For this purpose we are establishing a joint industry group consisting initially of the undersigned. This group will be known as TOBACCO INDUSTRY RESEARCH COMMITTEE. In charge of the research activities of the Committee will be a scientist of unimpeachable integrity and national repute. In addition there will be an Advisory Board of scientists **disinterested in the cigarette industry**. A group of distinguished men from medicine, science, and education will be invited to serve on this Board. These scientists will advise the Committee on its research activities.

11309817-9817 (U.S. Ex. 20,277); TIMN0029907-9907 (U.S. Ex. 21,267); 505542772-2772 (U.S. Ex. 20,742) (emphasis added).

1078. In a December 1958 press release, Timothy Hartnett, TIRC Chairman, repeated promises made in the Frank Statement by assuring the public: "At its formation in 1954, the Tobacco Industry Research Committee stated its fundamental position: 'We believe the products we make are not injurious to health. We are pledging aid and assistance to the research effort into all phases of tobacco use and health.' That statement and pledge are reaffirmed today by the members of the Tobacco Industry Research Committee." 500518759-8761 at 8761 (U.S. Ex.

20,636).

(b) Continuing Parallel False Promises from Members of the Enterprise, Including the Tobacco Institute

1079. The Cigarette Company Defendants went so far as to claim that they would stop selling tobacco if they determined that smoking was harmful or would change the product in order to make certain that it was no longer harmful. For example, George Weissman, Vice President of Philip Morris, issued a statement that was printed in the *St. Paul Dispatch-Pioneer Press* on March 31, 1954, that the cigarette industry would "stop business tomorrow" if it believed smoking was harmful. 2022239339-9343 at 9341 (U.S. Ex. 21,766).

1080. The Tobacco Institute, created by the Cigarette Company Defendants (except BATCo and Philip Morris Companies) and others as a joint trade association, made similar statements on behalf of the Cigarette Company Defendants and in furtherance of the Enterprise. Such statements were released to convince the public that the tobacco industry was making efforts to conduct its own research as well as to fund independent scientists.

1081. On June 7, 1962, the Tobacco Institute issued a press release welcoming an "impartial study" by the Surgeon General on smoking and health. George Allen, President of the Tobacco Institute, stated: "No one has a greater interest than the tobacco industry in helping medical science find solutions to the health problems of our country." Allen went on to cite the "extensive scientific research program" of TIRC, established to "provide grants to independent scientists." TIMN0123772-3772 (U.S. Ex. 85,928).

1082. In a December 27, 1962 press release, the Tobacco Institute publicly recognized the Defendants' "special responsibility to help science determine facts" regarding smoking and

SECTION IV.D.

health. The release went on to credit the Enterprise with taking the lead in "seeking the answers by setting up TIRC and turning full control of its research program to a group of outstanding, independent scientists." TIOK0000517-0521 at 0519-0520 (U.S. Ex. 85,929); 1005136953-6980 at 6955-6956 (U.S. Ex. 20,224); TIMN023775-3779 at 3777-3778 (U.S. Ex. 85,930).

1083. A November 3, 1963 Tobacco Institute press release stated that the industry was on a "crusade" to find answers to the "questions about smoking and health" and that it "should be a crusade neither for nor against tobacco. It is a crusade for research." TIMN0118245-8246 at 8245 (U.S. Ex. 62,882) (U.S. Ex. 77,055).

1084. On March 6, 1964, the Tobacco Institute sent a press release announcing the reorganization of TIRC and its new name, CTR. This press release represented that CTR's research policy would be set by doctors and scientists independent of the tobacco industry. 508775085-5088 at 5085 (U.S. Ex. 20,815).

1085. On January 12, 1965, the Tobacco Institute issued a press release stating, "[t]he industry will continue forcefully its support of responsible research efforts to establish the true facts." The statement continued, "[t]his research, which is supported by contributions from members of the tobacco industry, is being conducted by numerous independent, competent doctors and scientists associated with many institutions throughout the country." TIOK0034195-4195 (U.S. Ex. 85,931).

1086. On December 29, 1965, the Tobacco Institute stated in a press release that it was Defendants' belief that current research had not established whether smoking causes disease and that the matter is still an "open question." The press release stated: "If there is something in

tobacco that is causally related to cancer or any other disease, the tobacco industry wants to find out what it is, and the sooner the better." TIMN0123848-3851 at 3848 (U.S. Ex. 21,332).

1087. On June 7, 1966, in a speech regarding Philip Morris's efforts to sponsor independent research, Joseph F. Cullman III, President of Philip Morris, stated that "we feel a deep sense of responsibility to our cigarette smokers. All of us who work in this industry feel a deep concern over questions raised about cigarettes and health. We will not rest until we learn the scientific facts that will provide solutions to the medical problems in question. We intend to leave no research question unanswered in our quest for the truth. What have we done to help find the truth? This industry has allocated nearly twenty million dollars for the support of research projects by independent scientists, through The Council for Tobacco Research - U.S.A., and through the American Medical Association Education and Research Foundation. If more funds are needed for this research, I am sure the industry will provide them." 1000235218-5230 at 5227 (U.S. Ex. 20,083).

1088. On December 24, 1968, Shook, Hardy & Bacon, a tobacco industry law firm, authored the following statement for Joseph Cullman, Chairman of the Board of Philip Morris: "The cigarette industry recognizes its responsibility to the American people. It is anxious to seek the answer to the question of whether cigarettes are in fact the cause of any human disease. It is unfortunate that emotional propaganda against cigarettes has been permitted to suppress scientific inquiry and proof." 1000313777-3779 at 3777 (U.S. Ex. 20,093).

1089. A 1969 Tobacco Institute brochure stated that "[f]rom the beginning, the industry's policy has been to work – as dispassionately as possible – toward a conclusive,

scientific understanding of the actual facts, **whatever these facts turn out to be.**" 620047929-7972 at 7963 (U.S. Ex. 20,945) (emphasis in original).

1090. In 1970, the Tobacco Institute issued a public statement, published as an advertisement in major American newspapers, publicizing the research efforts of the cigarette industry. The statement, titled "The Question About Smoking and Health is Still a Question," read in pertinent part:

[A] major portion of this scientific inquiry has been financed by the people who know the most about cigarettes and have a great desire to learn the truth . . . the tobacco industry. And the industry has committed itself to this task in the most objective and scientific way possible. . . . 1115 reports in all. Through this work much valuable data have been produced about lung cancer, heart disease, chronic respiratory ailments and other diseases. However, there's still a lot more to be learned. . . . There are eminent scientists who believe that the question of smoking and health is an open one and that research in this area must go forward. From the beginning, the tobacco industry has believed that the American people deserve objective, scientific answers. With this same credo in mind, the tobacco industry stands ready today to make new commitments for additional valid scientific research that offers to shed light on new facets of smoking and health.

TIMN0081352-1352 (U.S. Ex. 21,305) (U.S. Ex. 21,367).

1091. A March 17, 1970 text from a television spot labeled "TI approved ad hoc" stated: "Today we in this industry support more impartial research on the vital question of tobacco and health than any agency of the Federal Government and more than all the voluntary agencies combined. We have great confidence that the findings of this research will lead the way in providing fair and accurate information regarding cigarette smoking . . ." 2010008819-8822 at 8820 (U.S. Ex. 20,300).

1092. On November 30, 1970, in a statement to the Executive Committee of CTR, Henry H. Ramm, General Counsel of R.J. Reynolds, stated that the purpose of the organization was:

To aid and assist research into tobacco use and health, and particularly into the alleged relationship between the use of tobacco and lung cancer and to make available to the public factual information on this subject. . . . When the products of an industry are accused of causing harm to users, certainly it is the obligation of that industry to endeavor to determine whether such accusations are true or false. Money spent for such purpose should not be regarded as a charitable contribution but as a business expense--an expense necessary to keep that industry alive. In view of the billions of dollars of annual sales of our industry our expenditures for health research have been of a minimal order.

1003057214-7220 at 7214, 7218 (U.S. Ex. 20,147).

1093. On December 1, 1970, Philip Morris, R.J. Reynolds, Brown & Williamson, Lorillard, and American Tobacco placed an ad through the Tobacco Institute in *The Washington Post* entitled "The question about smoking and health is still a question." The ad stated that "in the interest of absolute objectivity," Defendants have "supported totally independent research efforts with completely non-restrictive funding." The ad further created the false impression that all research results had been published. TIMN0081352-1352 (U.S. Ex. 21,305) (U.S. Ex. 21,367).

1094. In 1971, the Tobacco Institute issued a press release describing the "locked door" along the "statistical path" that linked smoking to ill health. In this press release, Tobacco Institute President Horace Kornegay noted that the tobacco companies would provide more than \$4 million that year "for support of independent scientific research," and declared: "Any

organization in a position to apply resources in the search for those keys – and which fails to do so – will continue to be guilty of cruel neglect of those whom it pretends to serve."

TIMN0121003-1007 at 1007 (U.S. Ex. 21,721); TIMN0123735-3739 at 3736, 3739 (U.S. Ex. 21,329).

1095. In a Tobacco Institute press release dated February 1, 1972, Kornegay stated that "[t]he cigarette industry is as vitally concerned or more so than any other group in determining whether cigarette smoking causes human disease . . ." and added that "despite this effort the answers to the critical questions about smoking and health are still unknown." TIMN0120596-0597 (U.S. Ex. 21,321).

1096. The Tobacco Institute continued to report to the public on the Defendants' alleged efforts to conduct research, fund independent science, and search for answers to the questions about smoking and health; although by 1975, every member of the Enterprise, in furtherance of its common objectives, would not admit that smoking could be the cause of some human illness. The Enterprise continued to communicate to the public its purported feeling of responsibility to consumers and its monetary contributions to scientific research. A January 14, 1975 Tobacco Institute press release reported that the Cigarette Company Defendants "have committed some \$50 million to help support researchers who are seeking the truth." TIMN0120638-0639 at 0639 (U.S. Ex. 21,698).

1097. On August 16, 1976, James C. Bowling, Vice President of Philip Morris, explained in an interview in London that "it's up to us morally to find the answers. And that's why we're spending more on cigarette health research than the Federal government." He further

stated: "They [CTR] decide where the research needs to be done. They allocate the money, we read the results when it's printed in the literature. . . . We have no influence on them whatsoever." 1002410318-0351 at 0333, 0340 (U.S. Ex. 20,137).

1098. A 1977 R.J. Reynolds document stated: "**Objective:** What we want to convey can almost be summarized in one sentence: **The smoking and health controversy is just that – it is a controversy,**" and that "[t]he smoking and health controversy is a very important question; our industry has been - and is, of course, trying to provide the answer. If there ever should be any component or components, as found in smoke, that can be proven to be, or contribute to be, a cause of any disease in man, we will of course, take them out." 500021655-1710 at 1658 (U.S. Ex. 20,614) (emphasis in original)

1099. In 1977, Addison Yeaman, General Counsel of Brown & Williamson, stated in a speech:

My assignment today is to inform you of the measures the tobacco industry has taken to discharge its obligation to investigate the question of whether the use of tobacco in cigarettes is causative of, or materially contributes to a number of diseases that constitute major health problems throughout the world. . . . The companies fully recognized that the industry has an absolute duty and a heavy obligation to seek to determine what if any part its products play in disease. . . .

I am utterly secure in saying to you that the tobacco industry recognizes its responsibility and its duty and that it will continue its every effort and at whatever cost to finding the answer to the question "what part, if any, does tobacco play in human diseases."

680212399-2407 at 2399, 2400, 2407 (U.S. Ex. 20,991).

1100. In 1978, the Tobacco Institute publication "ON SMOKING" addressed twenty-one questions. In response to the question "Do the tobacco companies control the research they

sponsor[,]" it claimed, "Absolutely not! The commitment of the tobacco manufacturers to resolve the smoking and health controversy has never been fully appreciated." TIMN0121442-1448 at 1447 (U.S. Ex. 21,278).

1101. On December 31, 1981, the Tobacco Institute published "Tobacco Industry Research on Smoking and Health: A \$104 Million Commitment," which noted:

Since the first questions were raised about smoking as a possible health factor, the tobacco industry has believed that the American people deserve objective scientific answers. The industry has committed itself to this task. . . . In the interest of strict objectivity, the tobacco industry has supported independent research efforts with completely nonrestrictive funding, mainly through the Council for Tobacco Research. . . . However, there is still a lot more to be learned . . . questions of smoking and health are unresolved . . . the tobacco industry stands ready today to make new commitments for additional scientific research that may shed light on the question of smoking and health.

The same promise was repeated the next year in the Tobacco Institute's publication "Tobacco Industry Research on Smoking and Health: A \$111 Million Commitment;" and in 1984, the Tobacco Institute published its annual report entitled "Tobacco Industry Research on Smoking and Health; a \$120 Million Commitment." 2046754709-4710 at 4710 (U.S. Ex. 20,474); 670500617-0620 (U.S. Ex. 20,968); 2045377870-7876 (U.S. Ex. 20,460); 60113387-3388 (U.S. Ex. 85,932).

1102. A January 22, 1997 BATCo document stated:

[S]cience has yet to identify a genetic mechanism by which any substance in tobacco smoke causes lung cancer in humans. Enormous amounts of research continue in this area, including work funded by British-American Tobacco. . . . We continue to support academic research, particularly in the biological sciences, in the pursuit of an explanation of the relationship between

smoking and lung cancer, and in the expectation that such an explanation could lead to changes in our product.

700805002-5011 at 5004, 5008 (U.S. Ex. 21,051).

1103. Defendants' representations concerning their public commitments continue to this day. Philip Morris's internet website, www.philipmorrisusa.com, states, in part, as follows: "Our goal is to be the most responsible, effective, and respected developer, manufacturer and marketer of consumer products, especially products intended for adults." The same Philip Morris web site also states: "We will be successful in achieving our goal when we: . . . Communicate Health Effects of Our Products – Communicate openly, honestly and effectively about the health effects of our products." <http://www.philipmorrisusa.com/DisplayPageWithTopicd59b.asp> at 1 (U.S. Ex. 80,795); ARU6411453-1455 (U.S. Ex. 80,795).

1104. BATCo recently prepared a "Social Report" and published the report on its internet website, www.bat.com. The "British American Tobacco Social Report 2001/2002" noted:

The Scientific Research Group, comprising scientific experts from our Group companies' worldwide Research & Development facilities, meets regularly to review, with input from independent scientific experts, developments in the science of smoking and health and to consider external research proposals for funding in this field. External requests for Scientific Research Group funding are granted when the research proposed is relevant, of sufficiently high quality and where the area of investigations has not previously been comprehensively explored. We give independent researchers freedom to publish their findings with no editorial constraints.

British American Tobacco Social Report 2001/2002 at 35, www.bat.com; TLT0231830-1910 (U.S. Ex. 76,316).

SECTION IV.D.

1105. Defendants claimed that they would, in part, fulfill their promise to research and publish their findings about smoking and health by funding independent research through the TIRC/CTR. In the Frank Statement of January 1954, and repeatedly over the years since then, the Defendants told the public, Congress, federal agencies, and the courts that TIRC/CTR's purpose was to fund and to perform independent scientific research on the issue of smoking and health. 11309817-9817 (U.S. Ex. 20,277); TIMN0029907-9907 (U.S. Ex. 21,267); 505542772-2772 (U.S. Ex. 20,742).

1106. A 1954 TIRC statement published in *The Courier-Journal* of Louisville, Kentucky announcing the appointment of Timothy Hartnett as full-time Chairman of TIRC contained a statement from Hartnett that "[t]he tobacco industry is determined to find answers to the public's questions about smoking and health. The appointment of a full-time chairman completes an organization dedicated to carrying on comprehensive and objective scientific and statistical research to establish the facts and report them to the public. . . . The millions of people who derive pleasure and satisfaction from smoking can be reassured that every scientific means will be used to get all the facts as soon as possible." 01138996-8997 at 8997 (U.S. Ex. 20,037); TLT0901831-1832 (U.S. Ex. 88,043).

1107. A document entitled "Statement Concerning the Origin and Purpose of the Tobacco Industry Research Committee and Its Proposed Functions" stated that the Defendants formed TIRC "in the interest of the public as well as the industry to meet the challenge raised by widely publicized reports in the press, purporting to link tobacco smoking with the cause of lung cancer." TIRC was created to address "the appearance of certain publications claiming an

established relationship between cigarette smoking and lung cancer." The document further stated:

In the light of the foregoing agitation and in the absence of authoritative findings, there is a responsibility on the part of the management of the tobacco manufacturers and others engaged in the tobacco industry to aid in the final determination of this controversy. It is the earnest wish of the industry to encourage competent scientific authority to find ultimate facts which will dispel the present confusion and to communicate authoritative factual information on the subject to the public.

TIMN0116378-6384 at 6378, 6380 (U.S. Ex. 21,277).

1108. On June 15, 1954, at a TIRC press conference discussing the organization's goals, Dr. Clarence Cook Little, Scientific Director of TIRC, stated:

We want to learn all we can. . . . We haven't any axe to grind. . . . We respect differences of opinion. . . . This is not a partisan effort. We are not trying to prove anything. We are trying to find out the facts. . . . I don't have any personal preconceived notions at all. I am just anxious to find out everything we possibly can. . . We would not pick any man to be supported in whom we didn't have confidence enough to let him be a scientist. He will be left free. He will not be bossed. He will not be directed.

508775263-5299 at 5265, 5266, 5278 (U.S. Ex. 20,816).

1109. In a TIRC press release dated July 28, 1954, Dr. Little stated:

In order to find conclusive facts concerning questions that have been raised about tobacco use and health . . . the Scientific Advisory Board of the Tobacco Industry Research Committee has adopted a three-fold policy which will direct research on: 1) Study of the physical and chemical composition of tobacco and accompanying products. 2) Study of tissue changes in humans and animals under various conditions. 3) Study of smoking and other tobacco habits and of the emotional and physical make-up of smokers.

SECTION IV.D.

The press release concluded by stating that the purpose of the TIRC was "to finance objective research on tobacco and health." CTRPUBLICSTMT000093-0095 at 0093 (U.S. Ex. 21,163).

1110. An October 9, 1956 Hill & Knowlton document entitled "Public Relations Report to the Tobacco Industry Research Committee" stated:

Conforming with these principles, the public relations objectives of the TIRC are:

1. To moderate public alarm and fears resulting from sensational publication of inconclusive statistics and research findings.
2. To gain the broadest possible public understanding of these facts: that charges attempting to link cigarette smoking and lung cancer incidence are neither proved nor generally accepted by the medical and scientific world; and that the cause or causes of lung cancer are not yet known and may involve many factors of the individual and of modern-day living.
3. To impress upon the lay and scientific public – by reaching broad segments of doctors and scientists, the press, magazine and radio-TV writers and editors and the public in general – that the tobacco industry through the TIRC sincerely assumes a public responsibility for assisting in the scientific search for facts about lung cancer and for developing sound scientific knowledge concerning tobacco use and human health.

82106893-6906 at 6895 (U.S. Ex. 55,426); CTRMN039206-9218 at 9207 (U.S. Ex. 88,039).

The "Statement by the Chairman" also stated:

In our own situation, the past several months have shown the value of the cooperative and coordinated efforts of the TIRC organization for dealing with the problem of public attacks as well as with developments in scientific research.

As you all know, it is imperative that each decision be based on the soundest judgment. I would like to emphasize that our activities are the result of mutual planning and consideration by the TIRC

administrative staff, scientific advisors, public relations counsel and, frequently, members of the Executive Committee.

82106885-6892 at 6889 (U.S. Ex. 55,425).

1111. On February 1, 1964, the by-laws of TIRC were amended to provide that the name of the organization be changed to "The Council for Tobacco Research-U.S.A." The purposes and objectives remained the same as in the 1954 by-laws, namely, to aid and assist research into tobacco and health, and particularly into the alleged relationship between the use of tobacco and lung cancer. 682631364-1368 (U.S. Ex. 21,024).

(2) The Reality: CTR Was a Front That Failed to Deliver on the Industry's Promise to Conduct Independent Disinterested Research

(a) Throughout TIRC/CTR's Existence, It Did Not Seek to Fulfill the Defendants' Promise to Conduct and Disclose Independent Research

1112. CTR provided a mechanism for the Defendants to say that they were conducting independent research. CTR was used, however, as a public relations tool to conduct self-serving research to support Defendants' litigation position and to provide witnesses in lawsuits, before Congress, and in other regulatory actions. CTR did not conduct research designed to answer the central question of great interest to the public, namely, whether there was a link between smoking cigarettes and adverse health effects such as cancer and other diseases.

1113. Cigarette company executives and counsel (both in-house and outside) exercised substantial control over the operating decisions, not only over their respective companies, but also of CTR, and frequently intervened in their business decisions. 01346193-6196 (U.S. Ex. 20,046).

1114. CTR funded research grants through its Scientific Advisory Board ("SAB"). CTR

also funded certain projects outside of the approval of its SAB – these projects, CTR Special Projects, were chosen because of their usefulness to the tobacco industry. These CTR Special Projects were not independent at all, but rather, targeted to reach findings favorable to the tobacco industry.

1115. Even before the formation of the CTR's SAB, TIRC issued a press release stating that "[m]any noted doctors and cancer research authorities deny that there is any proof establishing a link between smoking and lung cancer." CTRMN004924-4927 at 4924 (U.S. Ex. 21,152).

1116. Moreover, on October 19, 1954, Clarence Cook Little, TIRC's Scientific Director, advised TIRC's membership concerning the SAB's "viewpoint": "He declared that both he and the members of the Board were aware of the attacks which had been made on tobacco for over 200 years, and wished to build a foundation of research sufficiently strong to arrest continuing or future attacks." HT0145314-5316 at 5314 (U.S. Ex. 21,770) (U.S. Ex. 21,771).

1117. On April 14, 1954, TIRC published "A Scientific Perspective on the Cigarette Controversy," which reaffirmed the Frank Statement and set forth a number of brief statements from various scientists in an attempt to show that there was no consensus on the link between smoking and cancer. 1005039987-40008 (U.S. Ex. 20,192).

1118. On June 7, 1955, Little appeared on Edward R. Murrow's "See It Now" television show and was asked: "[H]ave any cancer-causing agents been identified in cigarettes?" He replied: "No. None whatever, either in cigarettes or in any product of smoking, as such." CTRMN005534-5541 at 5534 (U.S. Ex. 21,156).

SECTION IV.D.

1119. TIRC continually attacked the mounting evidence of the effect of smoking on disease. For instance, an undated TIRC press release denounced Alton Ochsner's book (Ochsner was one of the first scientists to investigate the relationship between cigarette smoking and lung cancer) as "[j]ust another propaganda device in the anti-tobacco crusade which the author has been carrying on for years." CTRMN004949-4952 at 4952 (U.S. Ex. 21,153).

1120. On June 13, 1955, TIRC Chairman Timothy Hartnett claimed in a Tobacco Institute press release that "[n]obody has produced evidence proving that cigarette smoking causes human lung cancer." CTRMN004981-4982 at 4981 (U.S. Ex. 21,154).

1121. On July 31, 1958, Hartnett reemphasized in a Tobacco Institute press release that: "The position of this country's cigarette industry is unchanged because the facts have not changed. Scientific evidence simply does not support the theory that there is anything in cigarette smoke known to cause human lung cancer." CTRMN004985-4986 at 4985 (U.S. Ex. 21,155).

1122. The SAB acknowledged in November 1957 that the "French have done a number of statistical inquiries that show a correlation between tobacco consumption in definite relation to the increase of lung cancer, to an increase of cancer of all sites and to other ailments. They see no alternative to giving these a causative interpretation." Despite this, TIRC did not make public these conclusions. CTRMN004324-4330 at 4329 (U.S. Ex. 21,149).

1123. TIRC never developed an approach to carcinogenesis and tobacco that could resolve the question of whether harms were induced by cigarette smoking. Although some researchers explored alternative hypotheses, the TIRC did not pursue direct research on cigarettes

and disease. Rather than directly addressing the constituents in tobacco smoke and their demonstrated effect on the human body, the TIRC directed most of its resources to either: (a) alternative theories of the origins of cancer centering on genetic factors and environmental risks, or (b) the basic mechanisms of disease. Most research projects funded through its SAB were irrelevant to the immediate questions of the harms of tobacco. At the same time, Little and the TIRC used truisms such as the "need for more research" and "how much more there is to learn" to deflect attention away from what was known. Expert Report of Allan Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002) at 39; 501773418-3466 (U.S. Ex. 20,686).

1124. The industry research plans to address health and smoking were largely driven by legal practicalities, including the risk of performing research that showed smoking caused cancer and then having to admit that in lawsuits. Deposition of Alexander Spears, State of Minnesota v. Philip Morris Inc., September 24, 1997, 413:2-414:3; 1003119099-9135 (U.S. Ex. 20,152).

1125. A 1968 CTR memorandum stated that "two points of view apply to all the work of [CTR]. . . . The problem therefore is to keep these two general factors – complexity of the diseases and the importance of the Host Factor – continually in mind, and to conduct the various specific pieces of research which we support in such a way as to add to the increasing body of experimental evidence which justifies this attitude [i.e., that causes other than smoking are to blame]." HT70135161-5164 at 5164 (U.S. Ex. 21,629).

1126. In January 1968, Addison Yeaman, General Counsel of Brown & Williamson, wrote a memo about whether to alter the "long established policy of CTR, carried out through SAB, to 'research the disease' as opposed to researching questions more directly related to

tobacco." LG2023842-3843 at 3842 (U.S. Ex. 21,211).

1127. The joint industry research conducted through CTR was admittedly not intended to get to the truth about smoking and health. As explained by Alexander Spears, Research Director of Lorillard, in a 1974 memorandum to Curtis Judge, Chief Executive Officer of Lorillard:

Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for purposes such as public relations, political relations, position for litigation, etc. . . . In general, these programs have provided some buffer to public and political attack of the industry, as well as background for litigious strategy.

01421596-1600 at 1598 (U.S. Ex. 20,049); 01253619-3623 (U.S. Ex. 88,768).

1128. In a June 13, 1974 letter, Janet Brown, industry counsel, responded to a request for comment on industry-funded scientific research from David Hardy of Shook, Hardy & Bacon. Brown expressly acknowledged that "the industry has repeatedly reiterated its research commitments" to the public, dating back to the 1954 Frank Statement. Brown then cautioned that the "failure to meet this commitment,- which must be viewed as a pledge not simply to the public but to the SAB, CTR's scientific staff, and the entire scientific community - would involve grave risks, as I hardly need emphasize." Brown concluded her letter with two candid observations on the lack of truly independent tobacco industry-funded research. First, she stated that, "Where the industry is itself the arbiter of the amount and nature of research to be done, however, arguments that the research is self-serving . . . gain in force and acceptance." Second, Brown concluded her letter with the following:

A juror, congressman, scientist, or anyone else may feel free to substitute his scientific judgment for that of manufacturers or of a manufacturer's scientific staff, since, whatever may be the capabilities and expertise of company employees, they are employees and arguably cannot command either the independence, depth, nor breadth of the great research institutions and career research personnel concerned with the objective elucidation of the nature and causes of chronic disease.

LWODJ9055578-5580 at 5579-5580 (U.S. Ex. 87,176); 03659023-9025 at 9024-9025 (U.S. Ex. 87,177).

1129. On November 30, 1977, Robert Seligman, Vice President of Research and Development for Philip Morris, sent a memorandum to Clifford Goldsmith, Executive Vice President of Operations for Philip Morris, concerning a memorandum he had received from Thomas Osdene, Director of Research for Philip Morris, on November 29, 1977. The subject of that memorandum was a CTR program review session Osdene had attended on November 22. Osdene claimed:

I was amazed at the trend that the CTR work is taking. For starters, Dr. Donald H. Ford, a new staff member, makes the following quote[]: "We accept the fact that nicotine is habituating." It is my strong feeling that with the progress that has been claimed, we are in the process of digging our own grave. . . . I am very much afraid that the direction of the work being taken by CTR is totally detrimental to our position and undermines the public posture we have taken to outsiders.

2022246952-6952 (U.S. Ex. 36,865).

1130. A November 6, 1978 memorandum marked "Confidential - For Counsel Only" from Donald Hoel regarding "Industry Research Committee Meeting, October 26, 1978,

SECTION IV.D.

Lexington, Kentucky” stated: “After some further discussion, Janet [Brown] and Arnie Henson expressed American Tobacco Company’s view that CTR must be maintained but needed new people. It must be more politically oriented. They felt that CTR must look at what is happening and what others are doing to see what questions can be raised, etc. The approach must be steady, slow and conservative. They must find skeptical scientists.” 01347203-7209 at 7203, 7208 (U.S. Ex. 85,933); 2023918174-8180 at 8174, 8179 (U.S. Ex. 37,063).

1131. A memorandum written in November 1978 by Robert Seligman, Vice President of Research and Development at Philip Morris, contained the following historical account: "Bill Shinn [attorney at Shook, Hardy & Bacon] described the history, particularly in relation to CTR. . . . It was set up as an industry 'shield' in 1954. . . . CTR has helped our legal counsel by giving advice and technical information, which was needed at court trials. CTR has provided spokesmen for the industry at Congressional hearings. The monies spent on CTR provides a base for introduction of witnesses." 2045752106-2110 at 2107 (U.S. Ex. 20,467).

1132. James F. Glenn, Chairman of the Board and Chief Executive Officer of CTR, wrote a letter on February 15, 1995 responding to a prior letter from James Todd, Executive Vice President of the American Medical Association. In it, Glenn insisted:

Your letter of November 8, 1994, addressed to the deans of a number of medical schools, has been brought to my attention. I feel that a response is required in view of the serious inaccuracies in your letter and, in particular, your misleading portrayal of the Council for Tobacco Research-U.S.A., Inc, as a public relations pawn of the tobacco industry . . . Did you mean to imply that CTR is not "really" a research institute? . . . You state that "tobacco research institutions such as the . . . Center [sic] for Tobacco Research . . . all funded fully by tobacco companies are used by the

tobacco industry as part of its overall public relations strategy"

The tobacco industry, to the best of my knowledge, has not used CTR in this manner during my tenure. Indeed, the tobacco industry does not review the grant applications to CTR or select the research sponsored by CTR, nor does the industry seek to influence CTR grantees in any fashion. On the contrary, CTR encourages these independent investigators to publish their research findings, whatever they may be.

88024854-4857 (U.S. Ex. 56,357) (emphasis in original).

1133. In that November 8, 1994 letter, James Todd, Executive Vice President of the American Medical Association, wrote,

Between 1954 and 1991, the Council for Tobacco Research spent over \$185 million for 1,246 original articles by more than 850 scientists. While this seems to be a considerable sum, it should be compared with the advertising budget of the tobacco industry, about \$5.2 billion in 1993 alone. . . . A survey of industry-funded scientists revealed that nearly 80% of them indicated that none of their research had ever examined the health effects of tobacco use . . . US District Court Judge H. Lee Sarokin, after reviewing tobacco industry "research" data in two tobacco product liability cases in the early 1990's, wrote that ". . . the creation of [the tobacco industry research institutes] and the work performed was nothing but a hoax created for public relations purposes with no intention of seeking the truth or publishing it."

88024858-4859 (U.S. Ex. 56,358).

(b) CTR Used Its Scientific Advisory Board as a Smokescreen

1134. By directing attention to the CTR's SAB, Defendants were able to appear to be furthering independent research efforts while their true aim was to preserve and foster false doubt about the adverse health effects of smoking in order to dissuade existing smokers from quitting

and encourage non-smokers to start. TIMN0077551-7554 (U.S. Ex. 21,269).

1135. Members of the SAB were initially screened and selected by representatives of Hill & Knowlton, a public relations firm (retained by TIRC), Defendants' attorneys, and Cigarette Company Defendants' research directors. 689103383-3437 (U.S. Ex. 54,275); State of Washington v. American Tobacco Co., 96-2-15056, Exhibit No. 52 (U.S. Ex. 86,772).

1136. Defendants and their agents represented in public and in court that the SAB grant process functioned independently from industry influence and was the mechanism by which they were fulfilling the obligations they had undertaken in the Frank Statement and elsewhere. In fact, Defendants "deliberately isolated" the SAB from the activities ongoing in other parts of CTR so that the SAB could be held out as a group of independent scientists, while the rest of CTR operated under Defendants' control. 670307892-7894 at 7893 (U.S. Ex. 20,967); 680262162-2162 (U.S. Ex. 20,996); 512678701-8710 at 8709-8710 (U.S. Ex. 20,847).

1137. Contrary to the public claim that the companies were seeking to get to the bottom of the smoking and health controversy, SAB-funded research steered far away from smoking and health issues toward other questions, including examinations of other potential causes of cancer. Defendants were aware that CTR's research did not fulfill their commitment to the public. As one industry document maintained, "[m]ost of the TIRC research has been diffuse and of a broad basic nature not designed to specifically test the anti-cigarette theory." <http://energycommerce.house.gov/tobacco/docs/bw/0012695326.tif> at 13 (U.S. Ex. 87,221); BWX0011174-1187 (U.S. Ex. 21,773); ATX110005290-5303 (U.S. Ex. 21,774).

1138. Consequently, the research that was funded through the SAB addressed general

SECTION IV.D.

issues of cancer causation and incidence – without a focus on smoking or its role in causing disease, or on the relationship between smoking and disease or on other science that might result in findings that were harmful to Cigarette Company Defendants. Other parts of TIRC/CTR funds also were not used for objective research on the link between smoking and disease.

<http://energycommerce.house.gov/tobacco/docs/bw/0012685353.tif> at 6, BWX0005283-5288 (U.S. Ex. 76,025).

1139. Addison Yeaman, General Counsel of Brown & Williamson, wrote on January 12, 1968, about the need to reorient CTR from more basic research to that with specific application to tobacco. He admitted: "Review of SAB's current grants indicates that a very sizable number of them are for projects in what might be called 'basic research' without specific orientation to the problem of the relationship of the use of tobacco to human health." 00552837-2839 at 2837 (U.S. Ex. 22,968).

1140. A Lorillard memorandum dated June 22, 1970, written by Arthur J. Stevens, Vice President and General Counsel of Lorillard, to Curtis Judge, President of Lorillard, described a "B&W Proposal for CTR Reorganization" and recommended Lorillard's support. Stevens noted:

In summary, B&W's proposal, which concerns itself with a number of the same questions raised by Henry Ramm at the May 15th meeting of the Tobacco Institute, suggests the following:

1. CTR's results thus far, while productive of some "good science," have not been of the type useful in defending the industry against smoking and health critics, nor in waging any offensive program.

00552952-2953 at 2952 (U.S. Ex. 87,222).

1141. On March 16, 1978, Arthur J. Stevens, Vice President and General Counsel of Lorillard, prepared a conference summary of Defendants' concerns about whether the CTR should be an independent organization. Stevens wrote:

Does Industry still want/need independent, objective SAB and Staff. . . . American and other companies dismayed at direction of CTR research. (Heimann letter) opposed to contract research. American (and apparently others) convinced that Gardner and Kreisher are committed to attempting to demonstrate **how** tobacco smoke causes disease, rather than **whether** it causes disease. (Yeaman disputes this impression). Question whether CTR can be said to be independent when it is conducting its own proposed research, through contracts, rather than through grants.

80410972-0976 at 0972, 0974 (U.S. Ex. 21,058) (emphasis in original).

1142. Contract research was undertaken at the specific request of the CTR staff. An undated document with a handwritten notation at the top "CTR" discussed the CTR contract work. The document stated: "We made the assumption that work should be self-serving to the industry, therefore, it should be **contract** work so that the disposition of the results will be under **complete control** of the industry. Divided into three categories: 1) Knowledge would benefit the tobacco industry. 2) Knowledge would be more broadly beneficial. 3) Work which should be avoided." 1003718457-8457 (U.S. Ex. 85,934) (emphasis in original).

1143. On December 6, 1977, Robert Heimann, CEO of American Tobacco, sent a letter to Addison Yeaman, President of CTR, expressing his discontent with the direction of CTR. According to Heimann, CTR no longer upheld its promise to the American people, as pronounced in the Frank Statement. He wrote:

This we can no longer say since what is called "directed" or "contract" research has been brought into the picture. As I remarked at the September 1976 meeting, the original concept of TIRC did not embrace the idea of contract research but envisioned industry support of research on a **pro bono publico**, arms length basis. I believe the current movement toward contract research is a violation of our advertised pledges to the public and I also believe industry support of objective and independent scientific research is of cardinal importance in maintaining a statesmanlike stance. I do not think it would be an exaggeration to say that the current shift to contract research bastardizes a fine concept of objectivity which many good people in past years worked long and hard to establish.

1000255934-5936 (U.S. Ex. 20,084) (emphasis in original).

1144. An internal Brown & Williamson letter from Ernest Pepples to J.E. Edens, C.I. McCarty, I.W. Hughes and DeBaun Bryant dated April 4, 1978 also discussed CTR's contract research. Pepples reported:

American, RJR and PM continue to harbor doubts concerning the operation and direction of CTR. . . . [Heimann's] letter took strong exception to the program of directed, contract work under which the staff of CTR plans and directs the research. Heimann says CTR should be a grantor organization and nothing more. In Heimann's view, CTR should make grants to reputable scientists who are exploring areas of interest in the smoking and health controversy and the grantees, as opposed to CTR, should be responsible for the plan of research. It is a distinction without much difference but American embraces it warmly nonetheless.

680212421-2423 (U.S. Ex. 54,024); 682338651-8653 (U.S. Ex. 22,899).

1145. Contract research at CTR began as early as the late 1960s. In 1968, researcher Fred Homburger sent a letter to Robert Hockett, Associate Scientific Director of CTR, discussing CTR research undertaken by Homburger's company, Bio-Research Consultants, Inc. Homburger

stated in his letter:

We discussed certain administrative aspects of this contract. You pointed out that within CTR, this contract was actually being handled as a grant. It appears to me that this may confuse your scientific advisors, as well as your administrative personnel. They may not realize that under this contract, we are conducting work planned specifically at the request of CTR, and closely monitored by CTR.

50071067-1069 (U.S. Ex. 88,836).

By 1970, there were indeed signed contracts between CTR and Bio-Research Consultants, Inc. related to experiments concerning smoke inhalation in Syrian golden hamsters.

CTRCONTRACTS005617-5624 (U.S. Ex. 25,876).

1146. In 1973, CTR decided not to renew its contract with Bio-Research Consultants, Inc., which greatly upset Fred Homburger. Homburger alleged that members of the tobacco industry attempted to censure his work, which he contended produced results of pre-invasive carcinoma in the larynx and two malignant tumors of the nasopharynx. MB000253-0253 (U.S. Ex. 76,114); CTRCONTRACTS005712-5713 (U.S. Ex. 25,880); 11225453-5454 (U.S. Ex. 25,880); CTRCONTRACTS005716-5717 (U.S. Ex. 25,881); CTRCONTRACTS006038-6038 (U.S. Ex. 25,888); CTRMIN-SAB000399-0407 (U.S. Ex. 25,891); CTRCONTRACTS006059-6059 (U.S. Ex. 85,936); CTRCONTRACTS005962-5962 (U.S. Ex. 25,886); CTRMIN-SAB000419-0420 (U.S. Ex. 25,892); MB000255-0255 (U.S. Ex. 26,031); CTRCONTRACTS005639-5642 (U.S. Ex. 25,878) CTRCONTRACTS005643-5646 (U.S. Ex. 25,879); 01195572-5573 (U.S. Ex. 26,443); MB000256-0256 (U.S. Ex. 26,032); MB000257-0257 (U.S. Ex. 26,033); 1000283966-3966 (U.S. Ex. 26,081); CTRCONTRACTS005628-5629

SECTION IV.D.

(U.S. Ex. 25,877); 503654905-4906 (U.S. Ex. 85,938); ZN23135-3135 (U.S. Ex. 66,274); CTRCONTRACTS005769-5769 (U.S. Ex. 25,884); CTRCONTRACTS005463-5463 (U.S. Ex. 25,875); CTRCONTRACTS005815-5815 (U.S. Ex. 25,885); ZN6241-6244 (U.S. Ex. 85,939); ZN19604-9605 (U.S. Ex. 64,797); 682631395-1398 (U.S. Ex. 30982); ZN23133-3133 (U.S. Ex. 85,940); CTRCONTRACTS005740-5741 (U.S. Ex. 25,882); CTRCONTRACTS005742-5742 (U.S. Ex. 25,883); 682631398-1405 (U.S. Ex. 30,983); ZN19604-9605 (U.S. Ex. 64,797); 1005075456-5456 (U.S. Ex. 26,188); 2025498564-8597 (U.S. Ex. 26,851); 2025498577-8586 (U.S. Ex. 66,671); HHS0681984-1986 (U.S. Ex. 85,941).

1147. CTR continued, however, to do contract research. For many years, CTR entered into long-term contracts with Microbiological Associates ("MA") to perform inhalation experiments on mice, expending "some 12 million dollars into the contracts with MA." The first proposal submitted by MA was in 1969. CTR staff routinely went on site visits to monitor the contract work performed at MA, which received millions of cigarettes from CTR to use in connection with the contract research it performed on CTR's behalf. CTRCONTRACTS026327-6363 (U.S. Ex. 85,942), CTR98CONG00077-0114 (U.S. Ex. 32,521); CTRCONTRACTS001667-1667 (U.S. Ex. 32,554), 11221384-1384 (U.S. Ex. 85,943); CTRCONTRACTS001654-1654 (U.S. Ex. 32,553), 11221371-1371 (U.S. Ex. 86,616); CTRCONTRACTS003278-3278 (U.S. Ex. 32,556), 11223018-3018 (U.S. Ex. 86,617); CTRCONTRACTS003211-3212 (U.S. Ex. 32,555), 11222951-2952 (U.S. Ex. 85,944); CTRCONTRACTS003858-3858 (U.S. Ex. 32,558), 11223598-3598 (U.S. Ex. 85,945); SF0370024-0024 (U.S. Ex. 65,434), 10012558-2558 (U.S. Ex. 85,946);

SECTION IV.D.

CTRCONTRACTS003491-3491 (U.S. Ex. 32,557), 11223231-3231 (U.S. Ex. 85,947);
SF0370027-0027 (U.S. Ex. 65,435), 10012561-2561 (U.S. Ex. 85,948);
CTRCONTRACTS028836-8838 (U.S. Ex. 32,561), 11248586-8588 (U.S. Ex. 85,949);
HK1118020-8021 (U.S. Ex. 33,047), 10115448-5449 (U.S. Ex. 85,950); SF0040004-0006 (U.S.
Ex. 65,430), 10006317-6319 (U.S. Ex. 86,618); SF0826731-6731 (U.S. Ex. 65,441), 10215369-
5369 (U.S. Ex. 86,619); HT0124049-4053 (U.S. Ex. 33,056), 10036226-6230 (U.S. Ex. 86,620);
CTRCONTRACTS026364-6364 (U.S. Ex. 32,559), 11246113-6113 (U.S. Ex. 86,621).

1148. By the late 1970s, there was growing concern about the contract work performed for CTR at MA. A November 30, 1976 memorandum from Janet Brown, attorney at Chadbourne & Parke, to Arnold Henson, counsel for American Tobacco, detailed then current concerns with the contract research being performed at MA. BWX0003940-3948 (U.S. Ex. 36,215).

1149. A November 29, 1977 Philip Morris Inter-Office Correspondence from Thomas Osdene to R.B. Seligman offered his comments on the CTR research program. Osdene observed:

It is my strong feeling that with the progress that has been claimed, we are in the process of digging our own grave. I believe that the program as set up has the potential of great damage to the industry and I strongly urge that the whole relationship of our Company to CTR be carefully reviewed. I am very much afraid that the direction of the work being taken by CTR is totally detrimental to our position and undermines the public posture we have taken to outsiders.

1000036635-6635 (U.S. Ex. 85,951).

1150. A December 12, 1977 "Confidential" Brown & Williamson memorandum from Ernest Pepples to J.E. Edens and C.I. McCarty also described the nature of the growing concern.

SECTION IV.D.

Pepples advised that there were individuals who took "exception to the program of directed, contract work under which the staff of the CTR has laid out a plan of research" and explained that the concern stemmed from a request by a CTR staff member to conduct "certain short term tests on smoke fractions." Pepples explained that these were:

[R]ed light tests. They have been developed for use by FDA and other agencies in possibly identifying harmful ingredients and substances in products which are available to the consuming public. **They show only a probability of trouble but are used as a signal in determining whether products should be yanked off the market.** . . . American evidently is concerned, and I share the concern to some extent, that a finding under a CTR contract of red lights in one of these tests as it applies to cigarette smoke fractions would be very difficult to explain away . . . **the fact of the red light in our own hands would be a serious burden to the tobacco industry if it came out in legislative hearings or in litigation.**

282002087-2088 (U.S. Ex. 28,074) (emphasis added).

1151. In a memorandum to the file dated January 10, 1978, Thomas Osdene of Philip Morris reported that "[a]t Mr. Goldsmith's request, Dr. Seligman, Mr. Holtzman, and I met with Dr. Gardner, Dr. Hockett and Mr. Hoyt at the CTR offices in New York. The objective was to review the contracts carried out by Microbiological Associates[.]" With respect to the contract involving human studies involving aryl hydrocarbon hydroxylase ("AHH"), Osdene stated: "I believe that even if a standardized test is perfected for the determination of AHH in humans, its use could well be manipulated to obtain simplistic deductions on cause and effect relationships. It is my recommendation that CTR cease work in this specific area of human studies."

1000041904-1905 (U.S. Ex. 35,103).

1152. The issue of contract research at CTR was discussed at a Meeting of Counsel on February 1, 1978. In attendance at the meeting were: Stevens (Lorillard); Ahrensfield and Holtzman (Philip Morris); Shinn and Sirridge (Shook, Hardy & Bacon); Roemer, Crohn, and Jacob (R.J. Reynolds); Pepples (Brown & Williamson); and Janet Brown (Chadbourne & Parke). Yeaman, Chairman and President of CTR, was also present. Brown argued that CTR contract research was problematic because:

Contract research results and their publication, by contrast, would be argued by the industry's opponents to be industry findings. Outright disavowal, particularly on the issue of "relevance," is going to be utterly unconvincing. On what basis would the industry underwrite contracts for "saccharin-type" (or any other) research if it did not believe the research to be material to problems of "smoking carcinogenicity"? Publication of contract research exacerbates the problem, since CTR's contracts give it control over publication.

At the meeting, Jacob also acknowledged that:

CTR independence is arguably belied by several of its functions. CTR Special Projects, though perfectly sound research, are frankly designed to support industry argument. The Information Storage and Retrieval System, a part of the CTR Library, is designed and maintained as a legal, rather than as a "scientific" literature research tool.

Shinn opined that:

[T]he whole current force of the industry's [TI's] appeal to its supporters – as well as its answers to its critics – is assertion of industry dedication to research. The research effort is now the vital element in Kornegay's position with Congress, the Executive, HEW, NIH, and in TI's response on the "public smoking issues" and to the various governmental and voluntary agency anti-smoking drives.

It was also apparent that there were serious disagreements with Kreisher's viewpoints at CTR.

Brown reported that:

Yeaman felt that much of the members' current dissatisfaction really reflected dissatisfaction with Kreisher and his attitudes. Kreisher is also a cause of internal staff dissatisfaction and Yeaman would have no difficulty in recommending to Gardner that Kreisher be separated. Gardner himself complains that Kreisher goes off on "junkets" without telling Gardner where or when he is going, and that Kreisher never files reports on time. Kreisher has been openly critical to outside scientists of Gardner – whom he has called incompetent – of Yeaman – whom he has called "absolutely controlled by the industry" – and of CTR, which he has said is run by the lawyers. Yeaman feels that this conduct constitutes ample reason to fire Kreisher for cause. . . . The real dispute was whether Kreisher should be given a "generous termination" [e.g., a years' salary] together with a consulting contract (for a year or more). . . . Roemer would want a clause providing that Kreisher would not do anything against the interests of CTR and the industry.

12698560001-0032 (U.S. Ex. 36,250).

1153. Another internal Brown & Williamson letter from Ernest Pepples to J.E. Edens, C.I. McCarty, I.W. Hughes and DeBaun Bryant dated April 4, 1978 also discussed concern over CTR contract research. Pepples reported that:

Dr. Charlie Sommers believes that some of the contract work [at CTR] has gone too far afield – "It seems to have a life of its own." He recently found that the massive, expensive inhalation program being conducted at Microbiological Associates was not going forward in areas which he understood it would be by this time and that it was doing some things that surprised him. Dr. Sommers is the Chairman of the Scientific Advisory Board. He will lead the SAB later this month in a review of the contract work[.]

680212421-2423 (U.S. Ex. 54,024); 682338651-8653 (U.S. Ex. 22,899).

SECTION IV.D.

1154. John Kreisher was abruptly terminated from CTR without notice to anyone at MA in May 1978. 70000249-0253 (U.S. Ex. 31,074); 70000256-0259 (U.S. Ex. 31,076).

1155. A November 13, 1978 inter-office correspondence memorandum, drafted by Thomas Osdene of Philip Morris, recommended restructuring CTR because "CTR as originally structured may have outlived its usefulness, especially in the area of P.R." Osdene proposed that "CTR should be controlled both legally and scientifically by representatives of the industry. . . . CTR should fund work largely by means of contracts, thus reserving the right to control publications which might be detrimental to the industry. . . . The long-term scientific program should be carefully planned such that the results obtained should not be able to harm the industry. . . . There should be greater participation by industry scientists in contracts and/or grants given by CTR." Osdene included a list of "Potential Long-Term Scientific Studies" and under the heading, "Subjects To Be Avoided," Osdene listed: "1. Developing new tests for carcinogenicity. 2. Attempt to relate human disease to smoking. 3. Conduct experiments which require large doses of carcinogen to show additive effect of smoking." The list of potential long-term scientific studies and list of subjects to be avoided were shared with Alexander Spears of Lorillard. 2021016008-6010 (U.S. Ex. 85,952); 1003718406-8408 (U.S. Ex. 35,899).

1156. A January 8, 1979 inter-office memorandum, drafted by Thomas Osdene of Philip Morris, also commented about the MA contract work: "I am forced of the opinion that the program seems to be misdirected since its main mission seems to be to prove that smoking causes cancer." 2075573037-3038 (U.S. Ex. 24,708).

1157. A letter dated June 23, 1980, from Ernest Pepples, Vice President and General

SECTION IV.D.

Counsel of Brown & Williamson, to Bowling, Holtzman, Spears, Shinn, Jacob, Tucker, Henson, and Brown stated that "Add Yeaman advises that the Executive Committee of the SAB has decided to terminate the massive inhalation program at Microbiological Associates."

Completion of research begun under contract between CTR and MA continued through approximately 1982. 01347166-7166 (U.S. Ex. 85,953); SF0220081-0082 (U.S. Ex. 65,431), 10010345-0346 (U.S. Ex. 85,954); SF0280056-0109 (U.S. Ex. 65,432), 10011127-1170 (U.S. Ex. 85,955); CTRCONTRACTS026409-6409 (U.S. Ex. 32,560), 11246158-6158 (U.S. Ex. 86,622); CTRCONTRACTS026364-6364 (U.S. Ex. 32,559), 11246113-6113 (U.S. Ex. 86,621).

1158. In 1983, CTR requested a final manuscript concerning the work performed at MA. After manipulating the text of the manuscript and adding a forward drafted by Sheldon C. Sommers, CTR Scientific Director, CTR published the manuscript as a book entitled "Chronic Exposure of Mice to Cigarette Smoke." CTRCONTRACTS026364-6364 (U.S. Ex. 32,559), 11246113-6113 (U.S. Ex. 86,621); SF0280114-0114 (U.S. Ex. 65433), 10011185-1185 (U.S. Ex. 86,623); CTRCONTRACTS025100-5100 (U.S. Ex. 85,956), CTR98CONG00067-0067 (U.S. Ex. 32,517); CTRCONTRACTS025186-5186 (U.S. Ex. 85,957), CTR98CONG00071-0071 (U.S. Ex. 32,519); CTRCONTRACTS025188-5188 (U.S. Ex. 85,958), CTR98CONG00073-0073 (U.S. Ex. 32,520); CTRMIN-BD 000147-0152 (U.S. Ex. 32,590); TI05120118-0120 (U.S. Ex. 85,959); TI0512-0131-0149 (U.S. Ex. 85,960).

1159. Richard Kouri, former Director of Research of MA, and Carol Henry, researcher with MA, were the primary researchers involved with the contracts between CTR and MA. They have both alleged that the contracts were terminated prematurely, that their work on the final

report was overseen on a regular basis by William Gardner of CTR and attorney Timothy Finnegan of Jacob, Medinger & Finnegan, and that CTR manipulated the final manuscript when it published the book, "Chronic Exposure of Mice to Cigarette Smoke." 70000256-0259 (U.S. Ex. 31,076); 70000249-0253 (U.S. Ex. 31,074); 2023253139-3140 (U.S. 36,990).

1160. Carol Henry, former Director of Inhalation Toxicology at MA, stated in a sworn affidavit dated June 6, 1997:

It was and is my conclusion that the results of this inhalation experiment were strongly supportive of the biological effects of cigarette smoke and the hypothesis that cigarette smoking causes lung cancer although the results were not conclusive. . . . It is my opinion that termination of the CTR contract, initiated to improve understanding of the biological effects of cigarette smoke and its relationship to lung cancer, was premature and scientifically ill-advised.

In addition, Henry stated:

It is my opinion that CTR and its attorneys were able to control the interpretations of our research at MAI through release of the book and press release (all without our knowledge). Further, through these public relations efforts they shifted the focus to only one endpoint – bronchogenic squamous cell carcinoma – which was not observed in our study. With such a shifted focus, it is my opinion that CTR and its attorneys were able to dismiss our study as not important, even while it demonstrated significant and diverse biological activity for cigarette smoke, including increases in other types of lung cancer. CTR and its attorneys were then able to dismiss the results and implications for cigarette smoke related diseases in human smokers.

70000249-0253 (U.S. Ex. 31,074).

1161. Richard Kouri stated in a sworn affidavit dated June 6, 1977: "While Dr. Henry

and myself were primarily responsible for the drafting of the report, Mr. Finnegan influenced how it was phrased. In my opinion he was faced with data that said cigarette smoke was a weak carcinogen and he tried to figure out a way of saying that without saying it." In discussing Sommers' introduction to the book, Kouri stated: "I have reviewed the Introduction to the book and do not agree with the statements made in the introduction by Dr. Charles Sommers. While his statements may be technically true, as far as they go, they are seriously misleading because of the conclusions that are drawn and the failure to include the context in which the research was carried out." He further stated: "I understand that the CTR and members of the tobacco industry have cited the Microbiological Associates Inhalation research as support for the proposition that cigarette smoking does not cause lung cancer. As one of the primary researchers involved in the inhalation projects, I disagree with this representation." 70000256-0259 (U.S. Ex. 31,076).

(c) In Reality, CTR Was Controlled by Industry Executives and Lawyers for Their Own Purposes

(i) General Control of CTR

1162. Cigarette Company Defendants, through their attorneys and other agents, took an active role in controlling TIRC/CTR's research and other priorities. 686052385-2387 at 2386 (U.S. Ex. 21,035).

1163. Despite all of their efforts to channel research away from anything that might be damaging to the industry, some of CTR's research efforts, however, did generate results showing that smoking causes disease. In those instances, the evidence shows that Defendants actively sought to restrict, and did restrict, the dissemination or publication of adverse research.

2048924986-5018 at 5001 (U.S. Ex. 21,694).

1164. As a cable sent on July 3, 1963 from Addison Yeaman, Vice President and General Counsel of Brown & Williamson, indicated, William Hoyt, Executive Secretary of CTR, had:

agreed to **withhold disclosure** [of] Battelle report to [CTR] members **or SAB until further notice from me**. Finch [CEO of Brown & Williamson] agrees submission Battelle or Griffith developments to Surgeon General undesirable and we agree continuance of Battelle work useful but disturbed at its implications re cardiovascular disorders. We believe combination Battelle work and Griffith's developments have implications which increase desirability [of] reevaluation [of CTR] and reassessment fundamental policy re health.

689033421-3421 (U.S. Ex. 31,045); 689033422-3422 (U.S. Ex. 22,734) (emphasis added).

1165. On November 18, 1965, Liggett counsel Frederick Haas wrote a memo titled "CTR - U.S.A.," discussing the proposed budget for 1966 for studies in "Whole smoke," "Oral Cavity," and "Epidemiology. " Haas noted:

[a]s a result of a conference held by the General Counsel, we broached another subject with the Council staff. In view of the present posture of the industry with Congress, FTC, etc., it was suggested that the organization of the Council be further implemented by creating an Industry Projects Advisory Board, which could feed suggestions for research to the staff. [The Board] would consist of General Counsel with the aid and advice of the Ad Hoc Committee and . . . the staff of the Council . . . would evaluate whether the project would be likely to obtain SAB approval.

LG2002635-2638 at 2637 (U.S. Ex. 21,201).

1166. A 1966 Brown & Williamson document attaching the minutes of a meeting of

SECTION IV.D.

General Counsel from December 17, 1965, described how CTR research proposals were reviewed and approved by lawyers: "The Ad Hoc Committee submitted its 'priorities' selected from the recommendations for specific research presented to General Counsel at an earlier meeting. . . . The Ad Hoc Committee divided the proposals referred to into three categories: Category A: Projects essentially of an 'adversary' value. These are considered to have a relatively high priority. Category B: Research having a generally defensive character. Category C: Basic research." CTRMN041346-1350 at 1349 (U.S. Ex. 21,944).

1167. During the 1970s, CTR's Industry Research Committee – comprised of attorneys and public relations employees of the cigarette manufacturers – considered what research CTR should conduct and developed research projects accordingly. A memorandum dated November 4, 1978, from Janet C. Brown, an attorney for American Tobacco, explained that the industry had "moved closer to becoming the arbiter of the amount of CTR research done (by reason of its control of CTR's budget) and the type of research done (by reason of the changes in scope and direction of research, as dictated by [Addison] Yeaman)." <http://energy.commerce.house.gov/tobacco/docs/bw/0012690844.tif> at 15 (U.S. Ex. 36,238).

1168. A March 23, 1973 handwritten note from Helmut Wakeham, Director of Research and Development for Philip Morris, to Robert C. Hockett, CTR Scientific Director, rated forty-four scientists as to "which ones might be the greatest benefit to the [tobacco] industry." The note ended, "[u]se [the ratings] for what you think they might be worth and throw the paper away." 87657627-7629 at 7627 (U.S. Ex. 21,097).

1169. On August 23, 1973, Edwin J. Jacob wrote: "CTR has determined that it does not

SECTION IV.D.

wish to participate in Homburger's sub-committee effort at establishing smoking machine standards for biological smoking . . . we might be in an unfortunate posture if CTR did not participate and the committee formulated standards at substantial variance with CTR's ultimate results. After some discussion of the details, it was agreed that Hockett would talk to Homburger with the objective of getting Homburger to postpone his effort." 680252584-2584 (U.S. Ex. 20,994).

1170. There were instances when Defendants encouraged scientists to change the wording of their proposed publications to downplay the significance of the research findings. For example, in the summer of 1973, CTR Research Director Robert Hockett and CTR lawyer Edwin Jacob traveled to Fred Homburger's summer home in Maine. There they requested that Homburger modify and moderate wording in the proposed publication of his research results from "invasive cancer" to "pseudo-epitheliomatous hyperplasia, a euphemism of lesions preceding cancer." At that same meeting, Jacob threatened to cease all further funding if Homburger published his findings of cancer of the larynx without the changes. In 1974, Homburger compromised on the language and published his results using the term "micro invasive cancer" instead of "invasive cancer." Trial Testimony of Fred Homburger, Cipollone v. Liggett, Civil Action No. 83-2864(SA) (D.N.J.), February 23, 1988 at 2718-2729.

1171. There were also instances when Defendants attempted to stifle the dissemination of a scientist's opinions. In April 1974, Leonard Zahn, CTR's public relations advisor, "got [Homburger's] press conference killed without his knowing why or how." In a confidential memorandum from Zahn to CTR President Henry Ramm and CTR employee W. Thomas Hoyt,

SECTION IV.D.

Zahn described how he found out that a press conference had been scheduled for Homburger during the American Society of Experimental Pathology ("ASEP") meeting in Atlantic City at which Homburger was going "to tell the press that the tobacco industry was attempting to suppress important scientific information about the harmful effects of smoking" and "was going to point specifically at CTR." Zahn spoke unfavorably about Homburger with his "long-time friend" Judy Graves, the ASEP public information officer, and a few hours later, Graves called Zahn at his hotel; gave Zahn permission to arrange to cancel the press conference (which he did); and called Homburger and told him the press conference had been canceled because of "scheduling difficulties in the press room." Zahn also spoke with the head of the press room so that when Homburger came to the press room the day after presenting his paper at the meeting, he was given a cordial welcome and was "nicely hastened out the door." Zahn ended his memo with the following post script: "P.S. I doubt if you or Tom will want to retain this note." CTRMNZN475-477 at 477 (U.S. Ex. 21,160); ZN19604-9605 at 9605 (U.S. Ex. 64,797); 2022886197-6198 at 6198 (U.S. Ex. 20,367).

1172. In 1978, Sheldon Sommers, Chairman of the CTR Scientific Advisory Board, complained to William Gardner, CTR Scientific Director, that he (Sommers) was unable to understand the legal counsel he was being given. The clear import of Sommers' letter was that the CTR lawyers were controlling tobacco research by CTR based upon legal considerations. Sommers also stated, "I think CTR should be renamed Council for Legally Permitted Tobacco Research, CLIPT for short." 11319256-9256 (U.S. Ex. 20,281).

1173. On April 4, 1978, Ernest Pepples, Senior Vice President and General Counsel of

SECTION IV.D.

Brown & Williamson, wrote a letter to Joseph Edens, President of Brown & Williamson; Charles McCarty, Chairman and CEO of Brown & Williamson; I. W. Hughes, Senior Vice President of Research & Development of Brown & Williamson; and DeBaun Bryant, Vice President and General Counsel of Brown & Williamson, regarding American Tobacco's conclusion "that part of the central nervous system/nicotine work poses a question with respect to the assurances which the companies gave to the Justice Department to the effect that none of the scientific work at CTR would have commercial application. Philip Morris and Lorillard concur in the view that some of the central nervous system (CNS) work has commercial overtones, specifically work which would lead to blocking agents or substitutes for nicotine." The Committee of Counsel worked out a compromise: the ongoing CNS work under contract would continue, but before CTR embarked on any new work, research applications in the CNS/nicotine area would be pre-screened before being submitted to the CTRSAB82338651-8653 at 8651 (U.S. Ex. 22,899).

1174. At a special meeting on April 21, 1978, CTR's Board of Directors adopted the following resolution: "RESOLVED, that funds may be committed to any research project only when, in the opinion of the Corporation's legal counsel, that commitment is within the scope of the Corporation's legally permissible activities." CTR-MIN-BD-000130-0134 at 0132 (U.S. Ex. 21,463); Third Amended Response of Defendant CTR to United States' Second Set of Individual Interrogatories, Interrogatory Nos. 3 and 4 (March 29, 2004) (U.S. Ex 86,773).

1175. Beginning in April 1978, W. Thomas Hoyt, CTR's Executive Vice President and then President after October 1980, determined which grant applications should be reviewed by CTR's legal counsel, Jacob & Medinger. At least eight CNS research proposals were reviewed

SECTION IV.D.

by CTR lawyers and not sent on to the CTR SAB. At least fifteen additional CNS research proposals were reviewed by lawyers without being sent to, or before copies were sent to, the full SAB for their review, or even after review of those same proposals by the SAB Executive Committee. Some SAB members reacted angrily to being told that a lawyer would review certain grant applications. Third Amended Response of Defendant CTR to United States' Second Set of Individual Interrogatories, Interrogatory Nos. 3 and 4 (**March 29, 2004**) (U.S. Ex. 86,773).

1176. An October 25, 1978 Philip Morris inter-office correspondence from Robert B. Seligman to the CTR File regarding the October 18-20, 1978 CTR meeting began: "I discussed the recent CTR meeting with Preston Leake. As Chairman of the Industry Technical Committee, he was present at the grant approval meeting of CTR. As a matter of background, Preston indicated that at the mid-1978 meeting Ed Jacobs appeared to warn the SAB against approving work in the area of CNS stimulation. The SAB reacted vehemently claiming it was a legal problem and leave the science to them. They also indicated that they were not being paid adequately. At the most recent meeting, Ed Jacobs was not present but Ad Yeaman said that certain grants would be 'reviewed' by counsel after receiving SAB approval. The CNS study grant would certainly fall in that category." 95522152-2153 at 2153 (U.S. Ex. 56,818); 1003718500-8500 (U.S. Ex. 35,904); 2075573034-3034 (U.S. Ex. 43,681).

1177. Lorraine Pollice, Assistant Treasurer and Secretary of CTR, stated that CTR maintained a "cases and inquiries log" which indicated whether a preliminary application related to CNS/nicotine research had been sent to CTR's lawyers for review. For several years, beginning in the late-1970s, CNS/nicotine grant applications were screened by lawyers.

Deposition of Lorraine Pollice, United States v. Philip Morris, et al., July 27, 2002, 109:20-119:21.

1178. There are also numerous industry documents demonstrating correspondence among Defendants concerning what research CTR should and should not conduct. For example, a November 13, 1978 Philip Morris "confidential" interoffice correspondence recommended long term plans for CTR, stating that "CTR should be controlled both legally and scientifically by representatives of the industry. . . . CTR should fund work largely by means of contracts, thus reserving the right to control publications which might be detrimental to the industry . . . [t]he long-term scientific program should be carefully planned such that the results obtained should not be able to harm the industry . . ." The memorandum further specified "Subjects to be Avoided – 1. Developing new tests for carcinogenicity. 2. Attempt to relate human disease to smoking. 3. Conduct experiments which require large doses of carcinogen to show additive effect of smoking." 1000036500-6502 at 6500, 6502 (U.S. Ex. 35,094) (U.S. Ex. 35,095).

1179. An undated slide presentation outlined five "Funding Sources of Tobacco Industry Research" and focused on the 1980 to 1982 expenditures, but mentioned research programs covering dates from 1971 to 1986. The five funding sources were: (1) Council for Tobacco Research-U.S.A., Inc.; (2) CTR Special Projects; (3) Special Research-Multiple Companies; (4) Individual Companies; and (5) Special Account No. 4 (litigation/legislation oriented). Recommendation 3 stated: "Be prepared to increase industry funding of special projects to address scientific problems and develop witnesses." 01334642-4655 at 4642, 4655 (U.S. Ex. 34,528).

SECTION IV.D.

1180. On April 23, 1990, Charles Wall, a Shook, Hardy & Bacon lawyer, sent a letter to Arthur J. Stevens, Senior Vice President and General Counsel of Lorillard, advising on a possible name change for CTR, the appointment of non-tobacco industry scientific board members, and the use of a public relations firm so that CTR would have a more favorable perception in litigation. He hoped "it will be more difficult for plaintiffs to mischaracterize the true independence and objectivity of the scientific research effort." TIMN0015297-5299 at 5298-5299 (U.S. Ex. 21,287) (U.S. Ex. 62,692).

1181. On October 15, 1991, Shook, Hardy & Bacon attorney Bill Allinder wrote to transmit the proposed CTR Defensive Statement "to be used in the event further inquiries are made about the articles appearing in the American Journal of Public Health." Allinder went on to comment about the draft and stated that he and Robert Northrip (a colleague at Shook, Hardy & Bacon) "do not object to [the] changes except for the sentence [] added to the second paragraph: 'CTR's grantees publish the results of their research in peer reviewed scientific journals.' Taken at face value, this statement is not entirely accurate." 86000272-0278 at 0272 (U.S. Ex. 22,205).

(ii) CTR Special Projects

1182. While Defendants promoted the SAB as an "independent" board, they funneled funds through TIRC/CTR to conduct non-SAB approved research projects that were not objective or independent as the Defendants had promised, but instead were designed to conclude that there was no link between smoking and disease and to develop favorable research and expert witnesses to defend the industry in court. These research projects, known as TIRC/CTR Special

SECTION IV.D.

Projects, were initiated and developed by Defendants through their agents, including outside counsel, who used them to provide research funding for scientists and doctors who might be willing to provide testimony favorable to the cigarette companies on smoking and health matters. The funding of Special Projects was handled by Defendants' agents, including the law firms of Jacob, Medinger & Finnegan and Shook, Hardy & Bacon. 92456261-6268 at 6262 (U.S. Ex. 21,658) (U.S. Ex. 75,420); 2045752086-2093 (U.S. Ex. 20,466); Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 56:9-57:18.

1183. CTR Special Projects were often funded when the SAB would not approve grant funding for a proposed research project or when the cigarette companies needed favorable research performed for litigation purposes, and wanted it done quickly. Special Projects were sponsored and approved by Defendants' attorneys and used to defend health litigation. LG2002635-2638 at 2637 (U.S. Ex. 21,201); 504480626-0629 at 0628 (U.S. Ex. 20,730); 512678702-8710 at 8703, 8706 (U.S. Ex. 20,847); <http://energycommerce.house.gov/tobacco/docs/bw/0012685353.tif> at 4, BWX0005283-5288 (U.S. Ex. 76,025).

1184. CTR Special Projects came into being in the mid-1960s when "it was decided to undertake various special projects in the form of contract research, pilot and exploratory studies, short-term research projects and other projects – such as preparation of bibliographic reviews and analytical monographs – whose character would render them narrower in scope than broader objectives of the Advisory Board's grants-in-aid program." CTRMN007485-7490 at 7486 (U.S. Ex. 21,157).

SECTION IV.D.

1185. A February 22, 1980 letter from Arthur J. Stevens, Senior Vice President and General Counsel of Lorillard, to Timothy M. Finnegan, Jacob & Medinger attorney, responded to Finnegan's earlier memorandum seeking approval for a project to be funded from Special Account #4. Stevens agreed to participate in the funding of the project, and noted:

I am mindful of the continuing mandate with which your office, Shook, Hardy and others have been charged by your respective clients on behalf of the Industry; that is, to find witnesses and researchers – and, if necessary in order to determine the feasibility of developing a relationship with them, engage them as consultants, or as researchers on initially modest projects . . . There resides within the Company a good deal of tobacco chemistry expertise. Perhaps some effort should be made by us, as lawyers, to the extent consistent with our concerns about legal privilege and related protections, to more frequently tap that knowledge, by using our own scientists as consultants to our litigation counsel regarding the research methodologies and proposals suggested by those scientists we engage to conducting independent research.

TI1710-1942-1944 (U.S. Ex. 62,476); LG2006048-6050 (U.S. Ex. 85,961).

1186. Defendants knew that CTR Special Projects work was not independent science. Internal company documents expressed concern about the "degree to which [Special Projects] make advocacy primary and science becomes secondary," and that, to aid in litigation, the companies, through Special Projects, were funding science that was "not worth a damn." 2045752086-2093 at 2086, 2090 (U.S. Ex. 20,466).

1187. The General Counsel of Philip Morris, R.J. Reynolds, Lorillard, Liggett, Brown & Williamson, and American Tobacco began using research funds to pay for CTR Special Projects in large numbers. From at least 1965 to 1993, there were hundreds of mail and wire

SECTION IV.D.

communications among the members of the Committee of Counsel, Jacob, Medinger & Finnegan, and Shook, Hardy & Bacon regarding information and funding approval for individual CTR Special Projects. 92456261-6268 (U.S. Ex. 21,658) (U.S. Ex. 75,420); 01335358-5358 (U.S. Ex. 26,485).

1188. Attorneys approved Defendants' funding of CTR Special Projects and CTR President Thomas Hoyt assigned each project a number. 11330520-0520 (U.S. Ex. 20,282).

1189. CTR Special Projects were funded based on contributions received from interested CTR member tobacco companies and these company contributions were specifically earmarked for Special Projects. Shook, Hardy & Bacon attorney Donald Hoel found that the CTR Special Projects were much more useful in supporting tobacco liability positions than the projects funded through the SAB. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 65:9-19; 67:3-7.

1190. Starting in the mid-1960s, Shook, Hardy & Bacon developed smoking and health literature databases within its law firm to help the lawyers pick scientists friendly to the tobacco industry liability positions so that these scientists could receive industry funding through the CTR Special Projects method. Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 61:16-62:24.

1191. As early as June 15, 1966, General Counsel were approving CTR Special Projects. 2015059798-9798 (U.S. Ex. 20,333).

1192. An April 14, 1967 memorandum to Addison Yeaman, General Counsel of Brown & Williamson, revealed: "We have deliberately isolated the SAB from those areas of research

which they might consider were of a controversial or adversary nature and I see no reason why that isolation cannot and should not be maintained to the fullest preservation of the scientific integrity and dignity of the SAB, but with the release of funds from the SAB portion of CTR's budget to both research directly related to tobacco and to the so-called Special Projects."

321668053-8055 at 8054 (U.S. Ex. 20,591).

1193. On October 3, 1968, Alexander Holtzman, Assistant General Counsel of Philip Morris, sent a letter to David Hardy of Shook, Hardy & Bacon proposing that CTR Special Projects funding be approved for a scientist, Richard Hickey, whose application to CTR for funding was previously turned down but who was likely to produce data useful to Defendants. The letter stated: "Dr. Hickey is willing to prepare a statement for Congress provided that he is put in a position to complete the analysis of data which he has in-hand and he would, in my opinion, make an excellent witness." 1005084784-4786 at 4784 (U.S. Ex. 22,988).

1194. The evidence shows that control by the Defendants' attorneys increased over time. The Research Liaison Committee formed in 1974, approved, recommended, and monitored CTR Special Projects. 686052385-2387 at 2386 (U.S. Ex. 21,035).

1195. A November 17, 1978 memo written by Robert B. Seligman, Vice President of Research and Development for Philip Morris, noted that William Shinn, a Shook, Hardy & Bacon attorney, believed "that 'special projects' are the best way that monies are spent. On these projects, CTR has acted as a 'front'. . . ." 2045752106-2110 at 2107 (U.S. Ex. 20,467).

1196. Industry lawyers categorized research depending on whether the outcome was adverse to the industry, allowing the industry to avoid publication as well as production in

litigation. For example, one document discussed the difference between CTR Special Projects and Lawyers Special Projects. This document described the notes from a September 10, 1981 discussion at a meeting of the Committee of Counsel between Arthur Stevens, General Counsel for Lorillard, and Edwin Jacob, outside counsel for the industry:

STEVENS: I need to know what the historical reasons were for the difference between the criteria for lawyers' special projects and CTR special projects. . . . JACOB: When we started the CTR Special Projects, the idea was that the scientific director of CTR would review a project. If he liked it, it was a CTR special project. If he did not like it, then it became a lawyers' special project. STEVENS: He took offense re scientific embarrassment to us, but not to CTR. JACOB: With Spielberg, we were afraid of discovery for FTC and Aviado, we wanted to protect it under the lawyers. We did not want it out in the open.

LG2000741-0750 at 0745-0746 (U.S. Ex. 36,269).

1197. A September 10, 1981 memorandum from Arthur J. Stevens was titled "CTR and Non-CTR Special Projects - General Information." Under the topic of "Special Projects," Stevens stated: "We mean those projects which are initiated by lawyers, for advocacy purposes." He further noted: "CTR's Scientific Director reviews any project which the lawyers propose for funding through CTR to be certain it will not be a scientific embarrassment to CTR – but which, for a variety of reasons, may not be suitable for grant by CTR." 03746184-6185 (U.S. Ex. 20,600).

1198. As explained by one of Defendants' lawyers in a July 13, 1984 memorandum, CTR Special Projects were:

Initiated and developed through outside counsel. A major purpose

SECTION IV.D.

is to provide research funding for scientists who might be willing to act as consultants or provide testimony on smoking and health related areas. Sometimes the research subject is outside the scope of the CTR grants-in-aid program. Also, some scientists may have published findings not supportive of the causal theory or have views along these lines and may have problems of receiving support from NIH or other funding organizations. . . . In practice, outside counsel and the scientists develop the protocol and the budget for the project. This is sent to the CTR Scientific Director (currently Dr. Sommers) for review. If he has no objection, the proposal is then sent to the General Counsel of the companies for their approval. Once the General Counsel have approved the project, the scientist is advised to submit application to CTR for funding. Other than providing the funding, CTR is not further involved in the project. Monitoring of the research and contact with the scientist is done through outside counsel. Funding ranges from \$20,000 to as much as \$400,000 for one year of Dr. Sterling's project.

92456261-6268 at 6262 (U.S. 21,658) (U.S. Ex. 75,420).

1199. When Special Projects came under scrutiny in the 1990s, Defendants ceased to fund them. In fact, counsel for Lorillard suggested in an internal document that using CTR Special Projects to "purchase favorable judicial or legislative testimony . . . [was] perpetrating a fraud on the public." 87715637-5638 (U.S. Ex. 21,102); 87715635-5636 at 5636 (U.S. Ex. 21,101); 521100040-0040 (U.S. Ex. 20,893); 521100027-0027 (U.S. 22,969); 521100176-0176 (U.S. Ex. 20,894); 2015002730-2730 (U.S. Ex. 20,305); 2501190758-0759 (U.S. Ex. 20,562); 2015002731-2732 (U.S. Ex. 20,306).

1200. When CTR Special Projects became the focus of a grand jury investigation in the Eastern District of New York in the 1990s, a memorandum disclosed that Special Projects were no longer administered under the auspices of the CTR "pursuant to legal advice." 87715637-

5638 (U.S. Ex. 21,102).

1201. Defendants continued to fund such projects by placing them directly under the auspices of their agents and attorneys, who had long been involved in control of CTR Special Projects. Defendants continued to pay for the same projects through their outside law firms on a market share basis. 2015002730-2730 (U.S. Ex. 20,305); 2501190758-0759 (U.S. Ex. 20,562); 2015002794-2794 (U.S. Ex. 20,307); 521100040-0040 (U.S. Ex. 20,893); 521100027-0027 (U.S. Ex. 22,969); 521100176-0176 (U.S. Ex. 20,894); 680713140-3140 (U.S. Ex. 21,011).

1202. A February 25, 1992 R.J. Reynolds memorandum from Daniel W. Donahue to Wayne W. Juchatz, both R.J. Reynolds in-house counsel, contained a detailed history of the CTR and the use of Special Projects. The memorandum provided a number of important reasons for the existence of Special Projects, and indicated that it was Defendants' belief that it could protect the projects through the attorney-client privilege and work product doctrine. CTR Special Projects were sponsored and approved by the Cigarette Company Defendants' attorneys and used to defend health litigation. The memorandum stated: "The role of lawyers in CTR Special Projects appears to have continued to grow as time progressed." The memorandum further stated: "Lawyer involvement cannot be denied or minimized, it was simply too pervasive." 512678701-8710 at 8707, 8709 (U.S. Ex. 20,847).

1203. On April 28, 1992, David M. Murphy of Wachtell, Lipton, Rosen & Katz, counsel to Lorillard, drafted an internal memorandum to partners requesting guidance on a question raised by Arthur Stevens of Lorillard and Bill Allinder of Shook, Hardy & Bacon regarding Lorillard's participation in CTR Special Project funding of Bennett Jensen despite legal advice to

discontinue Special Project contributions. Murphy explained that Jensen "faces funding problems at Georgetown that . . . have something to do with his ties to the industry . . . and could use some funds to tide him over until he can find a new home." Murphy stated "the Jensen issue raises a larger question -- whether 'CTR Special Projects' funds . . . were used to purchase favorable judicial or legislative testimony, thereby perpetrating a fraud on the public."

87715635-5636 (U.S. Ex. 21,101).

1204. On May 11, 1993, Kendrick Wells (B&W) sent a memo to S.P. Chaflen (an in house lawyer for B.A.T. Industries), Peter L. Clarke (General Counsel of BATCo), Andrew Foyle (Lovell White Durrant law firm), and Mick McGraw (B&W) providing a brief description of CTR Special Projects. In this memo, Wells described that in the early 1960s, the accounting work of collecting money from the companies and paying researchers was moved inside CTR, where it was called CTR special projects. The special projects continued to be directed by the litigators, with only the grant money moving through CTR. The document stated to BAT that details of the CTR "story" " . . . should not be talked to the public during the pendency of litigation in the U.S. involving assertions of fraud in connection with CTR's operations."

536300013-0014 (U.S. Ex. 53,132); Deposition of Michael McGraw, United States v. Philip Morris, et al., October 24, 2002, 223:3-223:21; 229:19-230:4.

1205. A Brown & Williamson memorandum dated June 16, 1993 stated that, when litigating cases in the United States asserting fraud in connection with CTR, attorneys should not disclose the existence of Special Projects. 680900035-0045 at 0039 (U.S. Ex. 21,013).

1206. Harmon McAllister, former Vice President of Research at CTR, admitted that

industry consultant Dr. Theodore Sterling received approximately \$4,760,878 in CTR Special Project funds over 17 years (on a number of ETS-related matters), which was quite large in comparison to other CTR funding. According to McAllister, "for whatever reason, the industry felt that that was worth a special consideration over and above any other consideration that had been given." Deposition of Harmon McAllister, United States v. Philip Morris, et al., May 24, 2002, 122:9-125:15.

1207. Lorraine Pollice, Assistant Treasurer and Secretary of CTR, admitted that CTR did not include information about CTR Special Project research in its Annual Reports, which were widely distributed and contained information about current and terminated grants-in-aid, grantees, and their institutions. Pollice admitted that CTR administered Special Project funding through a separate checking account and received direction and funding from the sponsor companies or their attorneys, specifically Shook, Hardy & Bacon. Deposition of Lorraine Pollice, United States v. Philip Morris, et al., June 27, 2002, 24:11-27:2, 43:10-54:18, 69:21-70:2.

(iii) CTR Was More Concerned About Public Relations Than Science

1208. Internal documents show that CTR was intended to operate as a public relations "front" and a "shield" for the Defendants, despite the Defendants' contrary public statements. 680260940-0941 (U.S. Ex. 20,995).

1209. In fact, certain recipients of CTR funds may have been "kept on the payroll," to maintain favorable relations, either for their testimony or the testimony of their colleagues. 01335922-5922 (U.S. Ex. 20,045).

SECTION IV.D.

1210. In an attempt to create a public relations plan to distract smokers from smoking and health related concerns, Hill & Knowlton, a public relations firm retained by TIRC, stated the following in an undated document: "There is only one problem – confidence, and how to establish it; public assurance, and how to create it – in a perhaps long interim when scientific doubts must remain. And, most important, how to free millions of Americans from the guilty fear that is going to arise deep in their biological depths – regardless of any pooh-poohing logic – every time they light a cigarette." The document also set forth various problems confronting the industry regarding public relations issues on smoking and health. "Problem 4" displayed a number of tactics to respond to the findings of noted scientists like Wynder, Rhoads, and Ochsner. According to this document, "we have a choice, as previously indicated, of: (a) Smearing and belittling them; (b) Trying to overwhelm them with mass publication of the opposed viewpoints of other specialists; (c) Debating them in the public arena; or (d) We can determine to raise the issue far above them, so that they are hardly even mentioned; and then we can make our real case." JH000493-00501 at 0495, 0498 (U.S. Ex. 21,179); TLT0901532-1540 at 1534, 1537 (U.S. Ex. 87,224).

1211. Timothy Hartnett, President of Brown & Williamson, summarized the crisis of the industry in December 1953 in the following terms: "But cancer research, while certainly getting our support, can be only half an answer. . . . The other side of the coin is public relations . . . [which] is basically a selling tool and the most astute selling may well be needed to get the industry out of this hole. . . . It isn't exaggeration that no public relations expert has ever been handed so real and yet so delicate a multi-million dollar problem. . . . Finally, one of the

roughest hurdles which must be anticipated is how to handle significantly negative research results, if, as, and when they develop." 501773418-3466 (U.S. Ex. 20,686); 1005039779-9783 (U.S. Ex. 20,190); Expert Report of Allan Brandt, United States v. Philip Morris, et al. (R. 1147; filed May 10, 2002) at 20; VXA0050045-0134 (U.S. Ex. 77,117).

1212. A December 15, 1953 Hill & Knowlton memorandum entitled "Background Material on the Cigarette Industry Client" described how Defendants' representatives "have agreed to go along with a public relations program on the health issue." In the section entitled "The Industry's Position," it stated: "They feel that they should sponsor a public relations campaign which is positive in nature and is entirely 'pro-cigarettes.' They are confident they can supply us with comprehensive and authoritative scientific material which completely refutes the health charges." JH000502-0506 at 0502, 0503 (U.S. Ex. 21,411); TLT0901541-1545 at 1541, 1542 (U.S. Ex. 87,225).

1213. Hill & Knowlton's June 21, 1954 "Public Relations Report and Recommendations for the TIRC" stated that TIRC "now has the basis needed for carrying on a long-range plan of public relations activities aimed at establishing the TIRC in the public mind as a constructive force in scientific research. These activities will endeavor to keep the following facts before the Public: 1. That there is no proof that smoking is a cause of lung cancer." 514806129-6131 at 6130 (U.S. Ex. 20,860).

1214. Members of TIRC recognized its public relations function. Timothy Hoyt, Executive Secretary of TIRC, stated on April 28, 1955, that "[e]ssentially, the major purposes of TIRC are Research and Public Relations. Our job is to maintain a balance between the two, and

to continue to build soundly so that at all times Research and Public Relations complement each other. In that way we intend to assume the mantle of leadership and, ultimately, to create a condition where the public will look to the TIRC for the answers rather than to others." CTRMN003816-3835 at 3826 (U.S. Ex. 21,147).

1215. Statements from TIRC meeting minutes and letters attest to Defendants' satisfaction at having successfully influenced the public to believe that there was a legitimate scientific controversy regarding smoking and health and that Defendants openly and honestly participated in that debate. An April 28, 1955 Confidential Hill & Knowlton Public Relations Report to TIRC stated that "an increasing number of scientists and researchers are anxious to report on their works involving cigarettes. Of late, most of these have been anticipated and when necessary, steps are taken to deal with the findings. These reports include studies on the relation of tobacco and heart as well as tobacco and lung cancer." CTRMN039137-9143 at 9138 (U.S. Ex. 21,158).

1216. A letter dated July 30, 1957 from Edward A. Darr, President of R.J. Reynolds, to Paul Hahn, President of American Tobacco, praised Hahn for having the foresight to argue in favor of the creation of the TIRC in December 1953. The letter also stated:

It now appears, however, that the tobacco industry should go on the offensive in bringing the truth about cigarette smoking to the public. . . . I am convinced that an organization of tobacco manufacturers formed for the narrow and well-defined specific purpose of presenting facts and information helpful to the industry can and should be formed and that such an organization be entirely separate from the TIRC, which would continue its activities in connection with the Scientific Advisory Board grants but would discontinue the major part of the public relations activity, leaving

this to be handled by the new organization, whatever name might be given to it. Certainly, no one can question the necessity of our going on the offensive without delay.

BBAT030581-0582 (U.S. Ex. 22,058).

1217. In addition to the false statements made by Defendants individually and in furtherance of their scheme to defraud, in 1958, Defendants created the Tobacco Institute, a public relations organization whose function was to make certain that Defendants' false and misleading positions on issues related to, among other things, the connection between smoking and disease, were kept constantly before the public, doctors, community leaders, the press, and the government. At all times, Defendants controlled the Tobacco Institute, including its public statements made on behalf of Defendants.

1218. During the February 14-15, 1958 meeting of the CTR SAB, Timothy Hartnett informed the SAB that Hill & Knowlton "is acting as public relations counsel for both organizations [TIRC and the Tobacco Institute]. He pointed out the desirability of this from both organizations' standpoints." CTRMN004331-4335 at 4332 (U.S. Ex. 21,150).

1219. Further, Bowman Gray, Chairman of the Tobacco Institute, announced "a tentative decision to let the matter of the respective functions of the two organizations [the Tobacco Institute and TIRC] be decided upon a case by case basis under the guidance of public relations counsel." 04209323-9326 at 9323 (U.S. Ex. 47,370).

1220. One section of a report dated February 19, 1963 described a meeting of industry representatives from TIRC, R.J. Reynolds, and Philip Morris at which a debate took place about the accuracy and the legal and public relations implications of whether TIRC should disseminate

the statement that "the causes of lung cancer are not known to science." XBW0010811-0826

(U.S. Ex. 26,458).

1221. Leonard S. Zahn, one of Hill & Knowlton's former employees, was appointed Public Relations Consultant to CTR at the SAB meeting in September 1969. CTRMN004539-4544 (U.S. Ex. 21,151).

1222. A June 1, 1970 letter to Henry Ramm, Vice President and General Counsel of R.J. Reynolds, acknowledged:

01188151-8153 (U.S. Ex. 34,493) (Confidential).

1223. On June 1, 1970, a private conference was held in CTR's offices to discuss with several CTR grantees the "Effects of Nicotine and/or Smoking on the Central Nervous System." On June 17, 1970, Philip Morris researchers Helmut Wakeham and William Dunn called CTR offices to suggest planning a scientific conference on the benefits of smoking. CTR Associate Scientific Director Robert Hockett and others at CTR "reacted quite favorably to this suggestion"

SECTION IV.D.

since the private June 1st conference "had brought out several effects in this area that can be regarded as beneficial." On July 1, 1970, Hockett sent a letter to Henry H. Ramm, Vice President and General Counsel of R.J. Reynolds, suggesting and requesting financing for such a conference to be held in the West Indies. 503654893-4894 at 4893 (U.S. Ex. 20,719).

1224. A CTR memorandum in 1970 confirmed that CTR's "primary purpose" was for public relations and stated that "the nature of the projects [CTR] supports make it unlikely that there will be drastic anti-tobacco developments."

<http://energycommerce.house.gov/tobacco/docs/bw/0012685353.tif> at 2, 6 (U.S. Ex. 76,025);
BWX0005283-5288 (U.S. Ex. 76,025).

1225. In a letter dated April 4, 1978 from Ernest Pepples, Senior Vice President and General Counsel of Brown & Williamson, to C. I. McCarty, Chief Operating Officer of Brown & Williamson, I. W. Hughes, Chairman of Brown & Williamson, and DeBaun Bryant, CTR Director, Pepples admitted:

Originally, CTR was organized as a public relations effort. The industry told the world CTR would look at the diseases which were being associated with smoking. There was even a suggestion by our political spokesmen that if a harmful element turned up the industry would try to root it out. The research of CTR also discharged a legal responsibility. The manufacturer has a duty to know its product. The Scientific Advisory Board composed of highly reputable independent scientists constitute a place where the present state of the art is constantly being updated. Theoretically SAB is showing us the way in a highly complex field. There is another political need for research. Recently it has been suggested that CTR or industry research should enable us to give quick responses to new developments in the propaganda of the avid anti-smoking groups. For example, CTR or someone should be able to rebut the suggestion that smokers suffer from a peculiar disease, as

widely alleged in the press some few months ago. A properly designed research effort should encompass the need for instant response on subjects of public interest in the smoking and health controversy. Finally the industry research effort has included special projects designed to find scientists and medical doctors who might serve as industry witnesses in lawsuits or in a legislative forum. All of these matters and more should be considered in asking what kind of research the industry should do.

686052362-2364 at 2363 (U.S. Ex. 21,034).

1226. On October 11, 1985, R.J. Reynolds attorneys received a memorandum regarding a meeting held August 8, 1985 to discuss the history of industry Research & Development, especially the history of CTR, and also the issue of (CTR) document production. The document made clear that CTR, the Tobacco Institute, Special Projects, and Special Account #4 Projects were initiated to protect industry interests in litigation and public relations. 512678484-8499 (U.S. Ex. 51,653).

(iv) The Recognition: SAB Members, CTR Employees, and Defendants' Representatives All Recognized that CTR's True Purpose Was Public Relations, Not Science

1227. By as early as 1958, Defendants recognized that TIRC was doing research that would add little in the way of constructive conclusions regarding smoking and health issues. In May 1958, a BATCo scientist (and others from the British tobacco industry) visited representatives of the United States tobacco industry and found that:

Liggett & Meyers stayed out of the T.I.R.C. originally because they doubted the sincerity of T.I.R.C. motives and believed that the organization was too unwieldy to work efficiently. They remain convinced that their misgivings were justified. In their opinion T.I.R.C. has done little if anything constructive, the constantly

SECTION IV.D.

reiterated "not proven" statements in the face of mounting contrary evidence has thoroughly discredited T.I.R.C., and the S.A.B. of T.I.R.C. is supporting almost without exception projects that are not related directly to smoking and lung cancer.

105408490-8499 at 8495 (U.S. Ex. 21,135) (U.S. Ex. 76,169).

1228. As early as 1962, TIRC employees were aware that TIRC had been created as a public relations tool to help preserve the tobacco industry. In an April 9, 1962 TIRC memorandum from Associate Scientific Director J.M. Brady to Little, Brady indicated: "Historically, it would seem that the 1954 emergency was handled effectively. From this experience there arose a realization by the tobacco industry of a public relations problem that must be solved for the self-preservation of the industry." The memorandum suggested that in the future the industry would need to revise and expand the efforts of the TIRC. Brady made a number of suggestions, including increasing the budget of the TIRC to \$5 million per year and making an educational television film. HK0039151-9152 at 9151 (U.S. Ex. 21,784).

1229. By 1964, members of the worldwide tobacco industry recognized that CTR research was less scientifically valid than that of other research organizations. In a trip report written in October 1964 by British scientists, it was stated "both L&M and Lorillard scientists told us quite bluntly that they considered TRC [the British trade group] research was on the correct basis and CTR largely without value." 1003119099-9135 at 9115 (U.S. Ex. 20,152).

1230. In 1967, W.W. Bates, Director of Research at Liggett, wrote to the President of the Tobacco Institute, claiming the smoking and health problem "is basically a scientific one." Bates further stated that "so far, however, the major efforts of the industry to cope with this

problem have been other than scientific." Bates also stated that: "The CTR and AMA programs suffer from almost the same fault. Most of their projects have only a peripheral connection to tobacco use." LG0208295-8299 at 8295, 8296 (U.S. Ex. 36,261).

1231. A November 14, 1967 CTR memorandum acknowledged the lack of scientific validity in the industry's so-called research: "This work may be characterized as 'glorified testing' rather than basic scientific research. Such work, however, has a necessary place in our program. . . ." 1001609300-9300 (U.S. Ex. 20,113).

1232. Each year CTR issued a report summarizing the results of its research. These summaries were written by one CTR employee from 1969 until 1989. When interviewed later by *The Wall Street Journal*, the author stated that "[w]hen CTR researchers found out that cigarettes were bad and it was better not to smoke, we didn't publicize that. . . . The CTR is just a lobbying thing. We were lobbying for cigarettes." T116601796-1799 at 1796 (U.S. Ex. 21,238).

1233. A March 11, 1970 industry document disclosed that Thomas Osdene, a Philip Morris scientist, questioned the worth of the CTR research: "Osdene's view (Philip Morris's view?) was that the C.T.R. did virtually no useful work and cost a vast amount of money." 110316203-6205 at 6204 (U.S. Ex. 20,274).

1234. In a memorandum dated December 8, 1970, Helmut Wakeham, Vice President of Research and Development for Philip Morris, admitted that the industry's interest in smoking and health research was to find evidence to deny allegations of a link between cigarettes and disease, and argued, "[i]t has been stated that CTR is a program to find out 'the truth about smoking and health.' What is truth to one is false to another. CTR and the Industry have publicly and

frequently denied what others find as 'truth.' Let's face it. We are interested in evidence which we believe denies the allegation that cigaret smoking causes disease." 1000255938-5940 at 5938 (U.S. Ex. 20,085).

1235. A letter written by a high-level CTR employee who had retired from Brown & Williamson in 1972 was addressed to "Gentlemen" regarding "The Present State of CTR." The letter stated, in part: "It is my sober judgment that CTR, as it now operates, is the greatest public relations **asset** you have in the problem of tobacco and health. But the moment CTR becomes, or the attempt is made to use it, as a public relations instrumentality, your asset will lose its value because it will have lost its scientific integrity." 682631405-1421 at 1407 (U.S. Ex. 21,025) (emphasis in original).

1236. A September 29, 1978 memorandum from Ernest Pepples, Senior Vice President and General Counsel of Brown & Williamson, to C. I. McCarty, Chief Operating Officer of Brown & Williamson, discussed a memorandum written by William Shinn, Shook, Hardy & Bacon attorney, concerning the value of CTR to the industry. According to Pepples, "CTR is our window on the world of smoking and health research. This avoids the research dilemma presented to a responsible manufacturer of cigarettes, which on the one hand needs to know the state of the art and on the other hand cannot afford the risk of having in-house work turn sour." Pepples further stated: "The point here is the value of having CTR doing work in a nondirected and independent fashion as contrasted with work either in-house or under B&W contract which, if it goes wrong, can become the smoking pistol in a lawsuit." 680260940-0941 at 0940 (U.S. Ex. 20,995).

1237. A draft opening statement prepared by Shook, Hardy & Bacon in 1990 admitted that the TIRC "was a public relations gimmick because the industry controlled the research from 1954 right up until today." The document further stated: "This so-called independent research corporation has been led for 36 years by nothing but industry executives and lawyers carrying out the orders of the tobacco companies." TIMN0015300-5301 (U.S. Ex. 21,293).

1238. Undated handwritten notes stated that "CTR is the best & cheapest insurance the tobacco industry can buy and without it, the industry would have to invent CTR or would be dead." MNAT00770694-0695 (U.S. Ex. 21,395).

(3) The Reality: Defendants Closely Controlled Research on Environmental Tobacco Smoke to Reach Findings Favorable to Their Litigation Strategies

1239. Defendants' response to the emerging scientific evidence on environmental tobacco smoke ("ETS") was closely controlled by their attorneys, who were involved in nearly every step of the process of Defendants' concerted actions. Attorneys were involved in the selection and management of "research" projects through front organizations like CTR and various ETS committees; attorneys were involved in the management of misinformation campaigns through the Tobacco Institute and international organizations like the International Tobacco Information Center/Centre International d'Informatin Du Tabac ("INFOTAB"). Donald Hoel of Shook, Hardy & Bacon and John Rupp of Covington & Burling were predominant among the lawyers involved with the Enterprise's efforts regarding ETS. Hoel worked in a number of Defendants' ETS committees from the 1970s until 1993. In an internal Shook, Hardy & Bacon memorandum, Hoel admitted that his law firm was "instrumental in organizing the

tobacco industry's response to the ETS issue." Deposition of Donald Hoel, United States v. Philip Morris, et al., June 27, 2002, 122:1-123:8, 144:13-146:8; 2015007199-7207 at 7206 (U.S. Ex. 20,311); 2023590167-0174 (U.S. Ex. 20,393).

1240. The stated mission of the Center for Indoor Air Research ("CIAR") was to be a focal point organization to sponsor and foster quality, objective research in indoor air issues with emphasis on ETS and to communicate effectively pertinent research findings to the broad scientific community. While Philip Morris, Lorillard, and R.J. Reynolds represented that CIAR was independent, its by-laws revealed otherwise. The by-laws required that charter members be tobacco companies; they dictated that only charter members have the power to choose CIAR's officers; and, significantly, gave charter members the exclusive power to decide what research the organization would fund.

1241. CIAR's by-laws were not the only source that belied the stated purpose of the organization. On April 25, 1988, Thomas Osdene, at that time the Director of Science at Philip Morris, explained to the Tobacco Institute's president that the purpose of CIAR was to provide Defendants with ammunition for legal and legislative fora where ETS exposure was at issue. CIAR was intended to allow Defendants to perpetuate a "scientific controversy" surrounding the health effects of ETS exposure. As Rupp explained in March 1993: "In sum, while one might wish it otherwise, the value of CIAR depends on the industry's playing an active role (1) in identifying research projects likely to be of value and (2) working to make sure that the findings of funded research are brought to the attention of decision makers in an appropriate and timely manner." According to a former CIAR board member, "ETS was a litigation issue and a PR

issue." TIBU30949-0968 (U.S. Ex. 21,396); 86205444-5452 (U.S. Ex. 21,827); 506662315-2316 (U.S. Ex. 20,762) (U.S. Ex. 75,277); 2021012384-2388 (U.S. Ex. 20,340) (U.S. Ex. 75,227) (U.S. Ex. 75,331); 2023053717-3720 at 3719 (U.S. Ex. 20,373); Deposition of Robert L. Suber, United States v. Philip Morris, et al., June 18, 2002, 76:8-77:6.

1242. Starting in the late 1980s, Defendants, led by Hoel, Rupp, and Philip Morris, intensified their efforts to identify and fund industry-friendly scientists around the world to attack the science linking ETS exposure to disease. This ambitious undertaking was referred to as, among other things, the ETS Consultant Program or the "White Coat Project." The project description revealed its scale and focus:

In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they [Philip Morris] are proposing, in key countries, to set up a team of scientists organized by one national co-ordinating scientist and American lawyers, to review scientific literature or carry out work on ETS to keep the controversy alive. They are spending vast sums of money to do so. . . . Because of the heavy financial burden, Philip Morris are inviting other companies to join them in these activities.

321140944-0949 at 0944 (U.S. Ex. 20,586); 2021001643-1645 (U.S. Ex. 20,338) (U.S. Ex. 75,223); 2500017054-7063 (U.S. Ex. 20,543) (U.S. Ex. 75,093); Deposition of John Rupp, United States v. Philip Morris, et al., June 28, 2002, 136:6-13; Deposition of Steven Parrish, United States v. Philip Morris, et al., June 25, 2002, 48:24-50:8, 51:25-52:7, 189:9-19.

1243. A document entitled "Note on a special meeting of the UK Industry on Environmental Tobacco Smoke, London, February 17th, 1988," written by Dr. Sharon Boyse (now Sharon Blackie), a senior scientist who has worked for both BATCo and Brown &

Williamson, contained the following summary:

Philip Morris presented to the UK industry their global strategy on environmental tobacco smoke. In every major international area (USA, Europe, Australia, Far East, South America, Central America & Spain) they are proposing, in key countries, to set up a team of scientists organised by one national coordinating scientist and American lawyers, to review scientific literature or carry out work on ETS **to keep the controversy alive**. They are spending vast sums of money to do so, and on the European front Covington & Burling, lawyers for the Tobacco Institute in the USA, are proposing to set up a London office from March 1988 to coordinate these activities.

2060563936-3941 at 3936 (U.S. Ex. 79,164); 401247331-7336 at 7331 (U.S. Ex. 29,377) (U.S. Ex. 79,190) (emphasis added).

1244. On September 18, 1991, Sharon Boyse, a senior scientist at BATCo, wrote to G. Symmes of W.D. & H.O. Wills in Australia instructing him that until he made changes to the scientific content of a document prepared by the Tobacco Institute of Australia ("TIA") the document was "NOT acceptable to BAT until those changes are made!" The letter demonstrates BATCo's control over public statements and document production by its sister companies, and that it obstructed knowledge related to the true health effects of cigarette smoke from being made available to the public. In the letter, Boyse instructed scientists at W.D. & H.O. Wills, to remove any suggestion from a document that scientific articles had "claimed a statistical association between ETS exposure and the development of lung cancer." The letter went on to require removal of any suggestion that tobacco smoke contained carcinogens because the studies that suggested that tobacco smoked contained carcinogens "are animal studies . . ." Deposition of Ulrich Herter, United States v. Philip Morris, et al., May 28, 2002, 195:4-196:14 and

197:1-197:6; 304002839-2840 at 2839 (U.S. Ex. 46,611) (U.S. Ex. 79,027).

(4) The Reality: The Cigarette Company Defendants Actively Concealed Adverse Scientific Findings, Entered into Agreements Not to Conduct Research, and Used Lawyers to Control Research so that it Would Serve the Purposes of Litigation and Public Relations

1245. Despite their promises to the contrary, and as they had foreseen and intended, Defendants failed to conduct independent research, sequestered adverse scientific findings, and, as a result, failed to warn the public about the true results of scientific research. Because of this, many Americans, including millions of children, became addicted to cigarettes, and many people who were already smoking continued to smoke or had difficulty quitting, with resulting profits for the Cigarette Company Defendants and damage to the health of smokers, former smokers, their spouses and dependents.

1246. Defendants' promise to conduct independent research, when coupled with their suppression of truthful information about the adverse health effects of smoking and tobacco's addictiveness, had a natural result of influencing the decisions of people to begin or continue smoking.

1247. The pervasive and consistent involvement in and control of science by the Cigarette Company Defendants and their lawyers demonstrates that, contrary to their continuing promise to the American public, the Cigarette Company Defendants were not engaged in independent disinterested research into the health impact of smoking.

1248. Defendants' in-house and outside counsel acted to control scientific research in order to further the interests of the Enterprise, including:

SECTION IV.D.

- creating the impression that an "open question" existed regarding whether smoking caused disease;
- preventing and hiding adverse scientific findings to avoid or limit the Cigarette Company Defendants' exposure in smoking and health related products liability lawsuits; and
- creating a positive public relations position for the Cigarette Company Defendants despite the harmful effects of smoking cigarettes.

(a) Defendants Concealed Scientific Documents, Opinions, and Findings Adverse to Their Interest

1249. The biological research that the cigarette companies did perform was closely controlled to ensure that, if it resulted in additional evidence that smoking causes disease or that nicotine is addictive, it would not become public or subject to discovery in court proceedings. This control included (a) performing research outside the United States in order to keep documents and witnesses hidden and out of the reach of state and federal courts, and (b) taking other steps to shield documents and materials from discovery, including attempts to cloak scientific documents in the attorney-client privilege.

1250. In 1969, the R.J. Reynolds Research Department confirmed to the Legal Department that it would destroy documents to protect the company's position in smoking and health litigation. The Research Department indicated that it did "not foresee any difficulty in the event a decision is reached to remove certain reports from research files. Once it becomes clear that such action is necessary for the successful defense of our present and future suits, we will promptly remove all such reports from our files As an alternative to invalidation, we can have the authors rewrite those sections of the reports which appear objectionable." 500284499-4499 (U.S. Ex. 21,677).

SECTION IV.D.

1251. A February 19, 1969 letter from W.L. Dunn, Jr., to Helmut Wakeham noted, "[a]nother sign that the winds are shifting. R & D is coming into its own right in the industry, being finally differentiated from the public relations activities!" Dunn further stated,

Our position should obviously be supportive of Jet's for the primitive reason of, "Who ain't for more money?" and the more impelling urgency of generating substantive research, the results of which can be increasingly valuable as the current hysteria subsides. I predict public recoil and a readiness for a more objective look at the issue before the mid-70's. We've got 3-5 years to put Philip Morris in the saddle with good data.

I would be more cautious in using the pharmonic-medical model – do we really want to tout cigarette smoke as a drug? It is, of course, but there are dangerous F.D.A. implications to having such conceptualization go beyond these walls.

The letter concluded, "[p]erhaps this is the key phrase: the reinforcing mechanism of cigarette smoking. If we understand it, we are potentially more able to upgrade our product." 83826859-6861 (U.S. Ex. 55,889).

1252. Philip Morris conducted in-house research in Europe in order to avoid disclosure of unfavorable results to the public. 501543061-3096 at 3077 (U.S. Ex. 21,462); 1000119925-9933 at 9933 (U.S. Ex. 87,226).

1253. On February 24, 1970, Joseph Cullman III, Chairman and Chief Executive Officer of Philip Morris, sent an internal memorandum to Helmut Wakeham, Vice President of Research and Development for Philip Morris, concerning Philip Morris's research activities at INBIFO, a research facility in Cologne, Germany. He noted that "[t]he possibility of getting answers to certain problems on a contractual basis in Europe appeals to me and I feel presents an

opportunity that is relatively lacking in risk and unattractive repercussions in this country."

1000216742-6742 (U.S. Ex. 20,081).

1254. On April 7, 1970, Wakeham sent a memorandum to Clifford Goldsmith, President of Philip Morris, regarding the acquisition of INBIFO. He stated: "Since we have a major program at INBIFO, and since this is a locale where we might do some of the things which we are reluctant to do in this country, I recommend that we acquire INBIFO either in toto or to the extent of controlling interest." 2022244451-4453 at 4451 (U.S. Ex. 20,361).

1255. In 1970, Philip Morris purchased INBIFO, a research facility in Cologne, Germany. Philip Morris determined that through INBIFO, it could control the research conducted there and that overseas experiments could be terminated at will. Philip Morris took steps to conceal this arrangement. Company scientists shipped documents from locations in the United States to Cologne for storage in order to remove unfavorable or embarrassing research results from Philip Morris's files in the United States during and in advance of litigation and thereby to avoid discovery of adverse documents. Discussing how to handle records relating to the INBIFO arrangement, Thomas Osdene, a senior Philip Morris scientist, characterized the arrangement as follows: "Ship all documents to Cologne Keep in Cologne If important letters have to be sent please send to home & I will act on them and destroy." 1000130803-0803 (U.S. Ex. 34,424) (U. S. Ex. 35,160).

1256. A 1970 legal memorandum from David Hardy of Shook, Hardy & Bacon to Brown & Williamson contained a thinly veiled instruction that employees be told that they could not make statements suggesting that smoking caused health problems, regardless of their

personal beliefs. Hardy wrote that:

It is our opinion that statements such as the above constitute a real threat to the continued success in the defense of smoking and health litigation. Of course we would make every effort to "explain" such statements if we were confronted with them during trial.

As you know, with the testimony of independent and well-informed doctors and scientists, it has been repeatedly demonstrated in court to the satisfaction of impartial jurors that cigarette smoking has not been scientifically proved to cause disease We have been able to show this to be the case when such suspicion has been claimed by our known enemies to be established fact. Obviously our problem becomes entirely different and far more serious when agents or employees of the defendant cigarette company or its parent become the spokesmen against us.

In conclusion, I would like to emphasize that, in our opinion, the effect of testimony by employees or documentary evidence from the files of either BAT or B&W which seems to acknowledge or tacitly admit that cigarettes cause cancer or other disease would likely be fatal to the defense of either or both companies in a smoking and health case.

We, of course, know that the position of BAT as well as B&W is that disease causation by smoking is still very much an open question. Cigarettes have not been proven to cause any human disease. Thus, any statement by responsible and informed employees subject to a contrary interpretation could only result from carelessness. Therefore, employees in both companies should be informed of the possible consequences of careless statements on this subject.

322078971-8978 at 8973, 8978 (U.S. Ex. 21,671).

1257. Similar guidance was presented to BATCo by Hardy in 1974. He advised BATCo against admitting to the public what its scientists knew internally – namely, that smoking causes

disease. At the time, BATCo was considering placing a warning on cigarette packages sold in England – with no government attribution – that stated smoking "causes lung cancer, bronchitis, heart disease." In a letter addressed to BATCo, Hardy advised that this admission of fact would impede the defense of litigation in the United States. He wrote:

The proposed new warning removes the attribution of the warning to "H.M. Government," and instead appears to be a voluntary and direct admission by the cigarette manufacturer that the cigarettes contained in the package cause "lung cancer, bronchitis, heart disease." A wholly owned subsidiary of the manufacturer would, in our opinion, be adversely and prejudicially effected by such a voluntary warning even though it is a separate entity.

.....

Once the fact and content of the warning got before a jury in the United States in a case involving the subsidiary, the defense of "no proof of causation" would be lost for all practical purposes. Such a result would indeed be unfortunate in view of the fact that in every instance where the matter has been explored in our Court through expert testimony and otherwise, the cigarette manufacturer has prevailed.

110318156-8157 (U.S. Ex. 34,974).

1258. A February 25, 1974 letter from Edwin J. Jacob, outside counsel, to H.C. Roemer, Vice President and General Counsel of R.J. Reynolds, noted that Jacob had modified a scientific research report previously provided to him by Roemer to make it suitable for publication, and set forth Jacob's thoughts on why three other scientific research reports should not be published. He explained:

There are several reasons, however, why the other three reports should not be published. Each deals with a specific bioassay from which it is concluded, more or less explicitly, that cigarettes made with tobacco expanded by the G-13 process are in one way or

another less hazardous to smokers than those made with conventional tobacco. The problem this presents appears clearly from the Introduction to report II. There, the purpose of all three experiments is said to be to compare results with and without residual fluorotrichloromethane. But the aim of the G-13 process is suggested to be development of a "safer" cigarette in that less tobacco per rod is used – and therefore less "tar" is delivered.

The myriad problems raised by the concept of a "safer" cigarette do not require elaboration here. It is sufficient to observe that, since it has not been scientifically established that cigarette smoking is "unsafe", the suggestion that certain cigarettes are "safer" than other is unwarranted. And, moreover, even those who claim that cigarette smoking is "unsafe" have been unable to demonstrate either criteria or methodology by which the comparative "safety" of cigarettes can be determined. In these circumstances, claims for a "safer" cigarette are unsound.

It would be possible, of course, to edit these reports of biological research so that no explicit reference to "safer" cigarettes is made. And, further, explicit disclaimers of any such implications could be made. Even then, I believe publication would be unwise. . . .

503652147-2150 at 2147-2148 (U.S. Ex. 29,706).

1259. On March 31, 1977, Robert Seligman, Vice President of Research and Development of Philip Morris, wrote a letter to Max Hausermann, Vice President of Research and Development of Philip Morris International, concerning procedures for sending samples to INBIFO. He specifically noted, "you know that Helmut [Wakeham] was requesting that we send samples directly to INBIFO. This suggested procedure is in direct conflict with our communications from the New York Office. We have gone to great pains to eliminate any written contact with INBIFO, and I would like to maintain this structure . . . perhaps we should consider a 'dummy mailing address' . . . for the receipt of samples." 2000512794-2795 at 2794 (U.S. Ex. 20,295) (U.S. Ex. 20,296).

1260. In a memorandum dated July 29, 1977, Alexander Spears of Lorillard advised C.I. Lewis, Supervisor of the Analytical Development Section of Lorillard's Research Department,

516967038-7038 (U.S. Ex. 22,232) (Confidential).

1261. A Philip Morris inter-office correspondence stamped "Personal & Confidential" dated November 3, 1977 from W.L. Dunn to Thomas S. Osdene on the subject of a "Proposed Study by Levy" stated: "I have given Carolyn [Levy] approval to proceed with this study. If she is able to demonstrate, as she anticipates, no withdrawal effects of nicotine, we will want to pursue this avenue with some vigor. If, however, the results with nicotine are similar to those gotten with morphine and caffeine, we will want to bury it. Accordingly, there are only two copies of this memo, the one attached and the original which I have." 100128680-8680 (U.S. Ex. 22,285).

1262. A February 16, 1978 memorandum from Thomas Osdene, Director of Research at Philip Morris, to Robert Seligman, Vice President of Research and Development at Philip Morris, stated: "The Roper Proposal to the Tobacco Institute sounds good and I believe the thesis is probably valid. However, there are several implications inherent in such a study which lead me to conclude that the study should not be done." Osdene noted, "[a]n admission by the industry

that excessive smoking is bad for you is tantamount to an admission of guilt with regard to the lung cancer problem." 1000764700-4701 at 4700 (U.S. Ex. 21,459).

1263. A November 9, 1979 Brown & Williamson memorandum from Kendrick Wells, in-house Brown & Williamson attorney, to Ernest Pepples, General Counsel of Brown & Williamson, discussed "various alternatives for handling BAT scientific reports which come to B&W in a way that would afford some degree of protection against discovery." Wells recommended routing all scientific documents from BATCo through a Brown & Williamson scientist designated as an agent of the General Counsel. The scientist would "separate reports which were relevant to smoking and health, or otherwise sensitive, for special handling" and the documents "designated as sensitive" would be "sequestered." 521016231-6232 (U.S. Ex. 20,886).

1264. In the 1980s, BATCo lawyers rewrote research reports prepared by the British equivalent of CTR, the Tobacco Advisory Council ("TAC"), to remove what were perceived as damaging statements. Attaching a heavily edited version of the TAC annual research review, BATCo attorney Anne Johnson wrote: "There are serious concerns in the USA with regard to this document as it stands at the moment for reasons I mentioned in my note, especially as all the tobacco manufacturers in the States are now involved in litigation on the primary issue of causation of disease." 107317952-7953 at 7953 (U.S. Ex. 20,249).

1265. In late-1982 and early-1983, R.J. Reynolds's lawyers undertook to influence the positions on smoking and health taken by G. Robert DiMarco, Vice President of Research and Development at R.J. Reynolds.

SECTION IV.D.

1266. A series of documents from R.J. Reynolds's files discussed concerns that some managers and lawyers had over the efforts of DiMarco to research a "safer" cigarette and his willingness to concede that a dose response relationship existed between cigarette exposure and lung cancer. Ultimately, the company lawyers recommended that DiMarco be retained because "[h]e is beginning to understand the tobacco business," "[h]e is beginning to cooperate with the lawyers," and "[h]e is saying the right things now to us and others." Within a four month period, R.J. Reynolds came to the conclusion that it had resolved its "problems" with DiMarco and that he had become willing to subscribe to the company and industry position on causation of cancer, and smoking and health more generally. 505741150-1153 (U.S. Ex. 23,009); 505741143-1147 at 1144 (U.S. Ex. 20,747); 505741141-1142 (U.S. Ex. 20,746); 505745988-5992 (U.S. Ex. 20,748).

1267. A 1982 R.J. Reynolds memorandum describes DiMarco's initial refusal to remove ammonia from a list of ingredients R.J. Reynolds was preparing to submit to the United States Department of Health and Human Services ("HHS") under the statutory mandate to disclose cigarette ingredients. Initially, DiMarco "stated that he would 'quit' before he let us take it off the list because, in his view, it was just what HHS was looking for and to exclude it on some technical (word smithing) grounds would be 'misleading' and 'dishonest.'" Ultimately, DiMarco "somewhat reluctantly" acquiesced to removal of ammonia from the list because, as R.J. Reynolds's in-house lawyer Wayne W. Juchatz put it, "[h]is response was 'does it matter' (implying that we would do it anyway)." 505741150-1153 at 1152-1153 (U.S. Ex. 23,009).

1268. In 1982, DiMarco indicated that R.J. Reynolds's "medical/scientific witnesses will say whatever [the lawyers] want them to say – clearly implying (if not stating) that they lacked

credibility and integrity." 505741150-1153 at 1151 (U.S. Ex. 23,009).

1269. On March 29, 1983, attorney Timothy M. Finnegan of Jacob, Medinger & Finnegan revised a draft summary of a meeting, attended by Finnegan and attorneys Edwin Jacob and Sam B. Witt, to discuss Finnegan's prior "all-day" meeting with DiMarco. Meeting participants identified "two major risks" concerning DiMarco: "The risk that if he is called upon to testify in litigation or legislative hearings as the Company's chief scientist, he could not support the Company's/Industry's position, (i.e. smoking has not been scientifically established to be the cause of any disease in man). We agreed this could be devastating . . . [and] [t]he risk that, as the person responsible for establishing scientific policy and directing our R&D efforts, he would commission scientific work (i.e. establish a record) that if subpoenaed would jeopardize our legal defense or at a minimum prove embarrassing or hard to handle." 505741143-1147 at 1143 (U.S. Ex. 20,747).

1270. A 1984 letter from Ernest Pepples, General Counsel of Brown & Williamson, to BATCo's Deputy Chairman, expressed concern about a BATCo scientific report on addiction and requested that BATCo lawyers work "more closely" with the BATCo scientists involved:

In developing and carrying forward the position that a "simple" addiction model cannot explain smoking behavior, the report seems to concede that many potential criteria for addiction identification are met by smoking behavior.

. . . .

Throughout the report unfortunate concessions appear regarding "tolerance and withdrawal." The report frequently expresses the view that smoking has certain "therapeutic properties" and nicotine is compared to the action of tranquilizers, alcohol, etc. In addition, smoking is referred to as one form of "drug usage", "psychoactive substance usage", or "psychoactive drug usage".

SECTION IV.D.

As you know in the current legislative and litigation environment in the U.S., claims of addiction have been and will be used against Brown & Williamson by our adversaries. Such claims have been vigorously opposed in order not to give a claimant an unjustified weapon to use against the company or the industry.

In addition, the possibility for involvement by the U.S. Food and Drug Administration would be heightened by company or industry promotion of the theme of this report, as it will be generally perceived.

If such matters as the "Functional Significance" document and the Conference binders, enclosed herewith, are not already routinely vetted with BATCo lawyers, you may want to consider involving them more closely in both the conceptual and the drafting stages of these projects. Thank you very much for your help in this area of great concern for us.

521016787-6788 (U.S. Ex. 22,129).

1271. In 1985, J. Kendrick Wells, Associate General Counsel of Brown & Williamson, directed members of the Brown & Williamson Research & Development Center to collect certain documents he had identified on an attached list relating to the behavioral and biological studies area for shipment to BATCo once all such documents had been gathered. Wells directed Earl Kohnhorst, Vice President for Research, Development and Engineering at Brown & Williamson, to tell the research personnel that the removal of the documents "was part of an effort to **remove deadwood from the files** and that **neither he nor anyone else in the department should make notes, memos, or lists.**" 680530888-0890 at 0888, 0889 (U.S. Ex. 21,772) (U.S. Ex. 76,193) (emphasis added).

SECTION IV.D.

1272. The documents included the Janus studies, a secret program of biological research on the effects of smoking which showed tumor growth in animals. 680530888-0890 (U.S. Ex. 21,772) (U.S. Ex. 76,193).

1273. On January 9, 1985, Mike Hardwick, BATCo Research Manager, wrote a memorandum about a call the same day from Ray Pritchard, Chairman and Chief Executive Officer of Brown & Williamson, who had received a letter from I.W. Hughes, former Chief Executive Officer of Brown & Williamson, "indicating a mechanism for our sending scientific information to B&W." He noted, "[i]n principle it will mean our mailing contentious information to a legal man called Maddox [of the law firm of Wyatt, Tarrant & Combs] . . . with a covering letter from us saying that Millbank [BATCo research facility] has asked that he (Maddox) receive it." He went on to say that Pritchard "is aware of our present control procedure, i.e. that material is vetted by Research Managers and, where **non-contentious**, sent; where **contentious**, referred to Millbank." Hardwick concluded, saying: "I believe that he [Pritchard] will agree with this procedure continuing for **non-contentious** material in the future." 107444869-4869 (U.S. Ex. 34,840) (emphasis in original).

1274. On September 10, 1985, Nick Cannar and Anne Johnson, BATCo in-house lawyers, sent a restricted memo to E.A.A. Bruell and D.G. Heywood, Executive Director of Finance for BATCo, advising that the United States litigation involving Brown & Williamson would inevitably result in discovery of research documents held at BATCo's research and development facility "because of the past funding arrangements . . . and the financial contribution made by B&W over the years." In-house counsel added they were concerned about the "recent

SECTION IV.D.

minutes of the biological conference in Canada" and that "elements of the draft 1986 programme . . . cause us further concern e.g. research into biological activity and the selective filtration of certain constituents of cigarette smoke." 107333990-3991 (U.S. Ex. 34,833).

1275. On February 17, 1986, J. Kendrick Wells, Associate General Counsel of Brown & Williamson, sent a memorandum to Ernest Pepples, General Counsel of Brown & Williamson, on BATCo Science, discussing the policy on Brown & Williamson's receipt of reports of ongoing research from certain projects being conducted at laboratories of affiliated companies, and balancing the benefits of information against the dangers posed in light of ongoing litigation. He noted: "While the brevity of the reports will reduce the potential for receipt by B&W of information useful to a plaintiff, disadvantageous information could be included and the reports could serve as road maps for a plaintiff's lawyer." 282002796-2797 at 2796 (U.S. Ex. 28,079).

1276. A June 14, 1991 memorandum to BATCo scientist Sharon Boyse on the 8th World Conference on Smoking and Health indicated that Defendants hoped to generate "controversy" among the participants and then broadcast these disputes to the public to create controversy on issues where none existed. The industry planned to be careful not to appear to sponsor any of the participants by using "independent institutions" to fund them. 321651598-1599 at 1598 (U.S. Ex. 20,590).

1277. In October 1991, Bob Pages, a Philip Morris scientist, forwarded a note to Chuck Wall, Vice President and Associate General Counsel of Philip Morris Companies, and Steven Parrish, Senior Vice President and General Counsel of Philip Morris. The note related to Philip Morris-sponsored research on nicotine's role in *in vivo* nitrosamine formation (and whether

SECTION IV.D.

presence of nitrosamines in urine supports the theory), and the decision to disallow publication of the research results at a conference. After an initial agreement was made to allow publication of the results (because no smokers were found to have nitrosamine tracer in urine), the tracer for nitrosamine was found in one out of ten smokers. After Philip Morris confirmed that the scientist would not include data about the one smoker in the abstract, the sponsoring group of cigarette companies (WPA) approved funds. Then, the nitrosamine tracer was found in three additional smokers. "As this [sic] sensitive results were generated within the industry and not available to others, WPA decided that poster presentation based on Abstract submitted should be given [without disclosure of the conflicting subsequent results] and **project work terminated.**" 2023222878-2880 at 2879 (U.S. Ex. 20,382) (emphasis added).

1278. On September 21, 1994, H.A. Morini, BATCo in-house counsel, sent a note to L.C.F. Blackman, Director of Research at BATCo, regarding a conversation with Ernest Pepples about the procedure for communications between Brown & Williamson and the BATCo research department. Morini instructed Blackman that "'[c]ontentious' items emanating from GR&DC [BAT Group Research & Development Centre], particularly in regard to biological activity should be given legal clearance before dissemination" and that "transmission to B&W should be through me to Pepples thus maintaining the legal privilege - 'attorney work product.'" Morini also advised that "'[n]on contentious' issues can be sent direct from GR&DC to B&W care of Gil Esterle." Esterle was a Brown & Williamson scientist. 503114322-4322 (U.S. Ex. 21,695).

1279. During the 1990s, Liggett scientists were directed to label their work as privileged and confidential in order to prevent its discovery in civil litigation. Deposition of Dennis Dietz,

United States v. Philip Morris, et al., July 1, 2002,150:1-155:12.

(b) Defendants Entered into Agreements That Limited Scientific Research and Actively Policed Those Agreements

1280. Defendants entered into agreements (1) not to conduct in-house research, including basic biological research; (2) not to compete on health issues; and (3) to share any discoveries related to reducing the harmful effects of cigarettes. In many cases, these agreements precluded research; in others, they destroyed the incentive to conduct research.

1281. Defendants actively enforced the agreements that stifled and precluded research efforts of the Cigarette Company Defendants.

1282. In the 1960s, R.J. Reynolds established a facility in Winston-Salem, North Carolina, to research the health effects of smoking using mice. In the facility that R.J. Reynolds nicknamed the "Mouse House," R.J. Reynolds scientists researched a number of specific areas, including studies of the actual mechanism whereby smoking causes emphysema. Internally, an R.J. Reynolds-commissioned report favorably described the Mouse House work as the most important of the smoking and health research efforts because it had come close to determining the underlying mechanism of emphysema. 515744448-4451 (U.S. Ex. 23,011); 507928501-8691 at 8517 (U.S. Ex. 20,804).

1283. Philip Morris scientist R.D. Carpenter sent an internal memorandum to Helmut Wakeham, Vice President of Research & Development at Philip Morris, describing the R.J. Reynolds biological facilities, which were shown to him on October 1, 1969. He noted, "[i]n summary, R.J. Reynolds has animal experimentation facilities, a staff of 10 - 12 people doing

animal experimentation work, and is doing smoke inhalation studies." 1000220888-0891 at 0889 (U.S. Ex. 21,435).

1284. In 1970, Joseph Cullman III, President of Philip Morris, complained to R.J. Reynolds about the work going on in the Mouse House. Despite the progress made there, R.J. Reynolds responded to the complaint by closing the Mouse House – disbanding in one day, without notice to the staff and the entire research division, firing all twenty-six scientists working there, and destroying years of smoking and health research. 503950745-0750 (U.S. Ex. 21,672).

1285. Although they recognized that research and testing were essential to evaluating the health risk posed by their products, Defendants, pursuant to the Gentlemen's Agreement, generally did **not** perform biological research on smoking and health. In a secret internal communication in 1964, Helmut Wakeham, Vice President of Research and Development for Philip Morris, acknowledged the legal jeopardy inherent in Defendants' joint agreement, when he (unsuccessfully) recommended that "[t]he industry should abandon its past reticence with respect to medical research. Indeed, the failure to do such research could give rise to negligence charges." Despite Wakeham's warning, Defendants persisted in their agreement. 1000335612-5623 at 5622 (U.S. Ex. 22,986) (U.S. Ex. 63,579).

1286. Defendant American Tobacco long adhered to this shared policy not to conduct in-house biological research. In 1965, William Harlan, Director of Research and Development for American Tobacco, and Edward Harlow, Assistant Director of Research and Development for American Tobacco, proposed initiation of a Biological Research Program for Defendant American Tobacco. Since the 1930s, American Tobacco had performed no biological research

on animals in its own laboratories.

<http://energycommerce.house.gov/tobacco/docs/bw/0012699136.tif> (U.S. Ex. 21,478) (U.S. Ex. 76,201).

1287. In response to Harlan and Harlow's proposal, an August 25, 1965 American document explained the "fundamental problems a program of the nature indicated . . . would pose for the Company in its public, medical and legal positions in the health controversy." The author claimed that any undertaking by American Tobacco of a biological research program would be an assertion of competence to conduct such research and "[s]uch a position is fundamentally in conflict with the Company's past policy and position respecting its proper function in scientific research regarding tobacco products . . . the most serious consequences appear to [be] the degree to which the Company thereby undermines and perhaps even negates its legal position respecting the 'reasonableness' of its past conduct of scientific research (including not doing such 'biological' research)." <http://energycommerce.house.gov/tobacco/docs/bw/0012699136.tif> (U.S. Ex. 21,478) (U.S. Ex. 76,201).

1288. According to an August 25, 1965 memorandum written by Janet Brown, outside counsel for American Tobacco, American's past position and policy was one of "supporting work by independent men in independent institutions while itself pursuing the study of smoke and tobacco, its own field of special competence," essentially the same "policy hitherto enunciated in the law suits by other members of the industry [and] no jury has yet found any member of the industry negligent in pursuing such a policy with respect to biological research." The author noted that American's sponsorship of independent investigators and institutions who chose to

conduct animal experiments "carries no necessary admission in and of itself that the Company considers such research significant in terms of human health."

<http://energycommerce.house.gov/tobacco/docs/bw/0012699136.tif> (U.S. Ex. 21,478) (U.S. Ex. 76,201).

1289. The author of this August 25, 1965 memorandum also contended that "[w]hen the Company asserts competence to conduct its own biological research into certain aspects of human health it opens for jury evaluation the question whether it acted reasonably in not instituting biological research long before." If a "reasonably prudent manufacturer capable of conducting biological research would not have instituted biological testing programs in the 1920's, or 1930's or 1940's . . . it should at least have been begun in 1950-1953, with publication of the four retrospective studies showing association with lung and other cancers; or in 1953, with publication of the Wynder mouse-painting experiments, or in 1954, with publication of the first Hammond-Horn report, or in 1957, with publication of the Study Group report on Smoking and Health . . . or in 1958, with publication of the final Hammond-Horn report, or in 1959, with the publication by the Surgeon General of an official statement pronouncing a causal link between smoking and certain diseases, or in 1962, with publication of the report of the Royal College of Physicians, or [in 1964], with publication of the Report of the Surgeon General's Advisory Committee." <http://energycommerce.house.gov/tobacco/docs/bw/0012699136.tif> (U.S. Ex. 21,478) (U.S. Ex. 76,201).

1290. The August 25, 1965 memorandum concluded that in-house animal research could not be initiated by American because it "would make the Company's past and current

position in the health field 'untenable'" and "while the program was important and [Harlow] wanted very much to do it, he would certainly not want to do anything that 'has an impact on the Company's position or if it makes that position any less sound than it now is.'" <http://energycommerce.house.gov/tobacco/docs/bw/0012699136.tif> (U.S. Ex. 21,478) (U.S. Ex. 76,201).

1291. In November 1968, Helmut Wakeham, Director of Research for Philip Morris, wrote to Clifford Goldsmith, President of Philip Morris, in at least three memoranda, that he believed that Defendants American, R.J. Reynolds, Liggett, Lorillard, and Brown & Williamson were performing in-house biological research in violation of the "gentlemen's agreement." On November 12, 1968, Wakeham wrote that "in spite of previous arrangements within the tobacco industry at least some of the major companies have been increasing biological studies within their own facilities." In a November 15, 1968 memorandum, Wakeham wrote that "[w]e have reason to believe that while this proposal to carry out biological research and testing may seem a radical departure from previous policy and practice, we are in fact only advocating that which our competitors are also doing." An undated Philip Morris memorandum stated: "We have reason to believe that in spite of the gentlemen's agreement from the tobacco industry in previous years that at least some of the major companies have been increasing biological studies within their own facilities." Examples given were American, R.J. Reynolds, and B&W. 1000217064-7067 (U.S. Ex. 86,606); 85868118-8121 (U.S. Ex. 86,607); 1000126979-6984 (U.S. Ex. 21,631); 1001607055-7061 (U.S. Ex. 76,155).

1292. A September 1970 memorandum by David G. Felton, a BATCo scientist,

concerning a meeting between BATCo personnel and Wakeham, reported that

One result of the greater influence which Wakeham has with Mr. J[oseph] Cullman [President of Philip Morris] has been the agreement, albeit reluctant, to permit Philip Morris to do 'in-house' biological work. When this was first mooted, Wakeham was told that there was a tacit agreement between the heads of the US Companies that this would not be done. Wakeham had countered by saying he knew that Reynolds, Lorillard and American were all undertaking some and that Liggett and Myers had never been party to the agreement. Cullman had been incredulous and had phoned Galloway, the President of R.J. Reynolds, who had denied Reynolds were doing any bioassay. When Cullman had told Wakeham this, Wakeham's response had been to quote the work on the Senkus smoking machine and to claim that he had floor plans showing outline area allocations. This too had been relayed to Galloway by Cullman, incredible though it may seem, and Galloway had visited the Reynolds Research Dept. to find it was substantially true. There had been a sudden reorganization at Reynolds, resulting in the closure of the biological section, the severance of product development (which remained with the tobacco division) from the research department.

110315968-5971 (U.S. Ex.26,378) (U.S. Ex. 26,379).

1293. On August 13, 1971, R.J. Reynolds scientist Frank Colby informed H.C. Roemer, General Counsel of R.J. Reynolds, that Philip Morris was conducting in-house animal research.

503955904-5904 (U.S. Ex. 20,724).

1294. On December 3, 1976, Hugh Cullman, Executive Vice President of Philip Morris, memorialized a suggestion for a discreet meeting of the heads of certain tobacco companies, including BATCo, R.J. Reynolds, and Philip Morris International, "to develop a defensive smoking and health strategy." The initial objective of this group was to develop a smoking and health agreement which would include a voluntary agreement, that no concessions beyond a

certain point would be voluntarily made by the members and if further concessions were required by respective governments, that these not be agreed to, and that governments be forced to legislate. These leaders met in 1977, and the meeting was called "Operation Berkshire." The group formed what was called the International Committee on Smoking Issues ("ICOSI"). 2025025286-5286 (U.S. Ex. 20,407) (U.S. Ex. 75,142) (U.S. Ex. 78,987); 2501020298-0303 (U.S. Ex. 21,903) (U.S. 75,180); 2025025288-5289 (U.S. Ex. 20,408); 2025025347-5348 (U.S. Ex. 20,410) (U.S. Ex. 75,149); 2025025369-5369 (U.S. Ex. 20,411); 2501024571-4575 (U.S. Ex. 21,904); 500269225-9228 (U.S. Ex. 20,622) (U.S. Ex. 75,188); 2025024797-4803 (U.S. Ex. 20,406).

1295. Herschel H. Cudd, Jr., member of the Board of Directors of R.J. Reynolds, gave voice to the notion of the Gentleman's Agreement in 1978. He noted: "A wholly-owned subsidiary in Cologne, Germany engages in carcinogenic biological research, such as mouse painting, in violation of the verbal agreement among domestic companies not to perform animal testing in-house." 503940653-0688 at 0669 (U.S. Ex. 21,436).

1296. According to a 1980 Philip Morris memorandum on the nicotine receptor program, Philip Morris continued to **claim** adherence to the gentlemen's agreement – "the original carte blanche avoidance of all biological research" – because the legal strategy successfully employed by the tobacco industry over the years in defending deceased smoker lawsuits had been that "[w]e within the industry are ignorant of any relationship between smoking and disease. Within our laboratories no work is being conducted on biological systems." 1003724290-4291 (U.S. Ex. 20,178) (U.S. Ex. 35,912).

SECTION IV.D.

1297. R.J. Reynolds scientist Frank Colby wrote in 1981: "There is a clear-cut agreement among all U.S. cigarette manufacturers that any scientific discovery made within the companies, or otherwise sponsored by a single company, which might have a positive impact on the smoking and health controversy, would have to be freely shared, without any costs to the other manufacturers. There would, therefore, be no incentive for RJR to sponsor the Cohen project . . . At this time, RJR does not fund directly in the U.S., any directly smoking and health related research. All such requests are answered by referring the applicants to CTR." 500534388-4389 (U.S. Ex. 29,467).

1298. A December 9, 1981 memorandum from Colby listed the research-related highlights of the week. In it, he flatly stated: "Information was obtained that Philip-Morris-U.S.A. does not live up to the alleged 'gentlemen's agreement' of not having animal laboratory facilities on their premises in this country. PM indeed has had such facilities for at least 3 - 4 years and continues to operate them. This information was communicated to all concerned." 501626469-6469 (U.S. Ex. 21,576).

1299. On September 20, 1983, E.A.A. Bruell, Chairman of BATCo, wrote a "Letter to All No. 1s of Operating Companies" titled "Relations with INFOTAB, National Manufacturers Associations ("NMA"s) and Competitors." Related to a September 1983 ad placed by a Philip Morris affiliate in Holland regarding Barclay, Bruell noted that the ad "is the first occasion of which we are aware when a competitor has: 1. Raised the health issue to gain competitive advantage. 2. Quoted and thereby endorsed a report of an anti-smoking lobby . . . to attack another company in the industry." As a result and in protest of Philip Morris's violation of the

Gentlemen's Agreement, BATCo pulled out of INFOTAB and affiliates were instructed to limit contacts with Philip Morris via National Manufacturing Associations in their countries of operation. 104576617-6620 at 6617 (U.S. Ex. 78,985).

1300. On October 26, 1983, Bruell and Hugh Cullman, Chairman and Chief Executive Officer of Philip Morris, had a telephone conversation in which the participants agreed to continue the cigarette companies' internal agreement not to compete with one another on issues relating to smoking and health. 301030943-0944 (U.S. Ex. 46,577).

1301. For many years, despite Defendants' promise that TIRC/CTR research would be "in addition to" in-house research, Defendants failed to perform in-house smoking and health research relevant to the issue of the link between smoking and disease, including biological research. Helmut Wakeham defined the type of research prohibited at the tobacco companies as "[s]tudying a relationship which might exist between smoking and diseases such as were tabulated in the Surgeon General's report." Deposition of Helmut Wakeham, State of Minnesota v. Philip Morris, May 29, 1997, 91:8-10.

- (c) To Prevent Adverse Scientific Findings and to Ensure That Research Focused on Litigation and Public Relations, Lawyers and Business Executives Controlled the Minimal Research Conducted by the Cigarette Company Defendants

1302. In many instances, attorneys for the Defendants, not scientists, directed the limited scientific research and other scientific matters of the Cigarette Company Defendants. Industry lawyers were the driving force behind both the direction and suppression of scientific research. Lawyer control was used in large part in an improper attempt to "create" attorney-client privilege

or work product protection for scientific documents and information where none existed.

1303. For example, a 1964 trip report prepared by British scientists visiting the United States described how a powerful committee of United States lawyers were dominant in the smoking and health arena, including scientific research:

[T]he Policy Committee of lawyers exercises close control over all aspects of the problems.

This Committee is extremely powerful; it determines the high policy of the industry on all smoking and health matters – research and public relations matters, for example, as well as legal matters – and it reports directly to the presidents.

The lawyers are thus the most powerful group in the smoking and health situation.

1003119099-9135 at 9101, 9105, 9106 (U.S. Ex. 20,152) (emphasis in original).

1304. A December 17, 1965 memo entitled "Meeting of General Counsel on 12/17/1965" made clear that the General Counsel were attempting to influence what research should be done with regard to smoking and health. 01124441-2444 (U.S. Ex. 20,034).

(i) Lawyer Control of Science within the Cigarette Company Defendants

a. Brown & Williamson and BATCo

1305. Lawyers exerted great influence over smoking and health research at Brown & Williamson and BATCo. In a letter written by David Hardy, a Shook, Hardy & Bacon lawyer, to the General Counsel of Brown & Williamson, Hardy instructed Brown & Williamson on what

should not be in the company's files or testified to by company scientists:

Fundamental to my concern is the advantage which would accrue to a plaintiff able to offer damaging statements or admissions by persons employed by or whose work was done in whole or in part on behalf of the company defending the action. A plaintiff would be greatly benefitted by evidence which tended to establish actual knowledge on the part of the defendant that smoking is generally dangerous to health, that certain ingredients are dangerous and should be removed, or that smoking causes a particular disease. This would not only be evidence that would substantially prove a case against the defendant company for compensatory damages, but could be considered as evidence of willfulness or recklessness sufficient to support a claim for punitive damages.

In conclusion, I would like to emphasize that, in our opinion, the effect of testimony by employees or documentary evidence from the files of either BAT or B&W which seems to acknowledge or tacitly admit that cigarettes cause cancer or other diseases would likely be fatal to the defense of either or both companies in a smoking and health case. I am afraid that any attempted explanation to a jury that such statements were made only in the context of a "working hypothesis" for the further development of our products would fall on deaf ears. . . . Certainly such evidence would make B&W the most vulnerable cigarette manufacturer in the United States to smoking and health suits.

301097079-7085 at 7081-7082, 7085 (U.S. Ex. 46,580).

1306. A June 4, 1963 letter from BATCo consultant Charles Ellis to multiple attorney recipients stated that the results of research conducted at Battelle Memorial Institute in Geneva on the physiological effects of nicotine were being forwarded to the attorneys before any critical review by scientific experts. 110313093-3096 at 3093 (U.S. Ex. 20,272).

1307. A 1976 internal memorandum by a scientist at BATCo, S.J. Green, discussed the extent to which "legal considerations" dominated scientific research:

SECTION IV.D.

The public position of tobacco companies with respect to causal explanations of the association of cigarette smoking and diseases is dominated by legal consideration By repudiation of a causal role for cigarette smoking in general they [the companies] hope to avoid liability in particular cases. This domination by legal consideration thus leads the industry into a public rejection in total of any causal relationship between smoking and disease and puts the industry in a peculiar position with respect to product safety discussions, safety evaluations, collaborative research etc.

109938433-8436 at 8433 (U.S. Ex. 34,938) (U.S. Ex. 79,024).

1308. The BAT "Group Research and Development Centre" ("GR&DC") was a cooperative research effort of all operating tobacco companies within the BAT Group, and the companies controlling and funding GR&DC include BATCo and Brown & Williamson. During a visit to Brown & Williamson in 1979, GR&DC scientists were informed that GR&DC "will be supported positively in the future" by Brown & Williamson only if "[w]e become more 'politically sensitive' in the areas of smoking and health, e.g., reporting of 'nasties' and biological studies generally." To reinforce the point, the Brown & Williamson hosts were directly quoted as having reminded the visiting scientists: "Remember what pays all our salaries." 107469003-9005 at 9003 (U.S. Ex. 34,849).

1309. Despite repeated public statements and promises to conduct independent research on the health effects of smoking and to provide the results to the American public, in an August 5, 1980, memorandum, J. Kendrick Wells suggested revisions to a BAT position paper to avoid an invitation of "public scrutiny of all BAT research contributions" because "[t]he effect of statements against interest found in in-house research could be disastrous because it is difficult to escape them. Contrast this with the United States industry research through CTR, which was

planned with the intention of publicity and designed for maximum positive public reaction. . . ."

Deposition of J. Kendrick Wells, United States v. Philip Morris, et al., July 1, 2002, 142:11;

680050983-1001 at 0993-0994 (U.S. Ex. 20,981).

1310. At a meeting in May 1984, Brown & Williamson in-house counsel and outside litigation counsel convinced the BATCo Legal Department that lawyer involvement in Project Rio, a scientific project, was necessary to "control the risk of generating adverse evidence admissible in U.S. lawsuits." Indeed, Brown & Williamson lawyers suggested that "[d]irect lawyer involvement [was] needed in all BAT activities pertaining to smoking and health from conception through every step of activity." 521015673-5675 at 5674 (U.S. Ex. 52,687).

1311. In 1984, J. Kendrick Wells wrote to H.A. Morini, BATCo's corporate counsel, regarding an article proposed by BATCo scientist Lionel Blackman. Wells's letter instructed that all references or citations to scientists who had concluded that smoking caused disease, including lung cancer and heart disease, or articles that referred to cigarettes as a drug be removed from the article. The references to be removed included references to a publication by Doll and Peto, who Wells admits were "two of the most highly respected and widely published and widely regarded researchers on the cause of smoking and health. . . ." Deposition of J. Kendrick Wells, United States v. Philip Morris, et al., July 1, 2002, 260-263 and 264:3-16; 68052499-2507 (U.S. Ex. 86,881).

1312. In 1985, BATCo instituted a policy of having lawyers clear all scientific documents that were released outside the production group. 516003171-3171 (U.S. Ex. 20,872); 516003172-3172 (U.S. Ex. 21,732); 516003173-3174 (U.S. Ex. 22,076).

SECTION IV.D.

1313. The handwritten notes of Richard Binns, the former Manager of BATCo's Group Research & Development Centre at Southampton, reveals the expansive role lawyers have taken in BATCo's science, writing that:

I am being asked to make significant and sometimes swingeing [sic] changes in documents produced recently by R&D staff. It is suggested that this must be done by finding a 'managerial explanation' for the changes, without reference to the involvement of Legal Department. I will find this impossible to do. Senior R&D staff will not be so easily deceived. Personally, I am not prepared to lie to staff for very doubtful reasons. Therefore, the current lack of clarity about the relationship between R&D and Legal Dept. has raised questions which for me are ethically disturbing, particularly if extended beyond the present localized situation.

109878083-8089 at 8089 (U.S. Ex. 21,767).

1314. In 1986, Brown & Williamson – through its Chairman and Chief Executive Officer Ray Pritchard and General Counsel Ernest Pepples – requested that BATCo discontinue research on smoking and health because "discovery of such research could prejudice B&W's chances of defending litigation." Moreover, document distribution was to be kept "to a minimum to avoid documents becoming available to plaintiffs in litigation." 109870594-0596 at 0594 (U.S. Ex. 34,873) .

1315. In 1990, the BAT Group announced a policy whereby to improve the quality of "scientific documents," they would be subject to "[r]egular lawyer reviews and audits." 202347085-7086 at 7086 (U.S. Ex. 20,391) (U.S. Ex. 22,032).

1316. A May 2, 1991 "file note" drafted by J. Kendrick Wells, Associate General Counsel of Brown & Williamson, and copied to M.J. McGraw, in-house counsel for Brown &

SECTION IV.D.

Williamson, stated: “I told Jeff [Wigand] that hiring a certified toxicologist (Scott) [Appleton] had implications for our management of him. Because of his credentials, any unfortunate statements he makes on key issues have the potential to be particularly troublesome in the hands of an adversary. This means that Scott should work especially closely with me for some time and that Jeff should be wary in how he manages Scott in terms of areas and types of assignments and authority given to Scott.” 680901663-1665 at 1663 (U.S. Ex. 79,219); BWX0037432-7434 at 7432 (U.S. Ex. 79,219).

1317. In a November 23, 1993 letter, J. Kendrick Wells asked Robert E. Northrip, a Shook, Hardy & Bacon lawyer, and Gordon A. Smith, a King & Spalding lawyer, about the proper role for Scott Appleton:

To further our conversation in Louisville on the subject, please put your two wise heads together and advise us on the following issues:

Is Scott Appleton’s current practice regarding information about scientific developments adequate? Among other considerations, should he attend some of the scientific conferences normally attended by a toxicologist? Would it be helpful if he talked with scientists outside the companies?

What answer do you recommend for Mr. Sandefur when asked how he knows causation has not been proven? Among other considerations, should the Vice President of R&d be included in Mr. Sandefur’s circle of advisors in addition to Dr. Appleton? Should Mr. Sandefur talk with some independent scientists on the question of causation? What routine communications should be occurring between Mr. Sandefur and his advisors?

293002121-2121 (U.S. Ex. 28,116); BWX0017237-7237 (U.S. Ex. 28,116).

SECTION IV.D.

1318. Jeffrey Wigand, former Vice President of Research and Development for Brown & Williamson, testified that J. Kendrick Wells, Associate General Counsel of Brown & Williamson, with the support of Thomas Sandefur, President of Brown & Williamson, altered, on several occasions, scientific research to prevent it from being discoverable, and “pre-screened” scientific reports received from BATCo’s Southampton research facility prior to disseminating the information to the “R&D folks” at Brown & Williamson. Deposition of Jeffrey Wigand, In re Mike Moore, Attorney General ex rel. State of Mississippi Tobacco Litigation, November 29, 1995, 67:6-68:4; 69:18-71:4.

b. Lorillard

1319. In 1977, Lorillard leadership advised a scientist who was to deliver a research paper that he must delete data from a study related to human smoking habits or he was not permitted to deliver the paper. 01416267-6267 (U.S. Ex. 20,287) (U.S. Ex. 34,560).

c. Liggett

1320. As early as 1968, Liggett was concerned about, and acted to prevent, public statements about the effects of smoking on humans. In a 1968 draft statement from Liggett's Chairman to its shareholders, a proposed quote from *Fortune* magazine regarding smoking and health and relating to "irritant gases in cigarette smoke" was deleted by the editor of the statement. LG2008516-8528 at 8518 (U.S. Ex. 21,630).

1321. In 1978, the Legal Department at Liggett took control of an important less hazardous cigarette research project known as Project XA. Joseph H. Greer, General Counsel of Liggett, sent a memorandum to several high ranking members of Liggett management, including

SECTION IV.D.

Robert L. Kersey, Jr., the head of tobacco research at Liggett, advising them of the creation of a "Legal Project team" to take control of Project XA and that the "[t]he Legal Project team will report directly to the Law Department." LG2001536-1536 (U.S. Ex. 21,481).

1322. In 1978, the creators of Liggett's experimental XA cigarette (A.D. Little, scientist, Dr. Charles Kensler, and James Mold, Director of Research) sought to present a paper relating to the XA at a public International Cancer Congress and to publish the paper in the scientific journal *Science*. Biological research on the XA had convinced Liggett that the cigarette was less carcinogenic than traditional cigarettes. Company management agreed to allow the presentations. However, Liggett's attorneys did not give approval for the paper to be presented or published, and it was not allowed to go forward. LG2013608-3608 (U.S. Ex. 21,438); Deposition of James Mold, Cippollone v. Liggett Group, Inc., No. 83-2864 (D.N.J.), 21-24.

d. Philip Morris

1323. In 1980, William Dunn, a Philip Morris Principal Scientist, wrote to Robert Seligman, Vice President for Research & Development at Philip Morris. In the letter, Dunn attempted to explain to Seligman why the lawyers had previously limited and would continue to limit the research that could be conducted by industry scientists. He stated that psychopharmacology of nicotine "is where our attorneys least want us to be, for two reasons." As Dunn warned, despite the fact that "[w]e are now being allowed to conduct research on the immediate effects of nicotine . . . we must not be visible about it." Dunn was quite blunt about the secret nature of research in this area when he stated: "Our attorneys, however, will likely continue to insist upon a clandestine effort in order to keep nicotine the drug in low profile."

2046754714-4715 at 4714, 4715 (U.S. Ex. 20,475).

1324. In December 1989, Steven Parrish, former partner at Shook, Hardy & Bacon and Vice President of Philip Morris Corporate Scientific Affairs, received a letter about a funding proposal for research which stated: "Dr. Syrjanen has deleted all references to cigarette smoking and no longer plans to pursue the possible role of smoking in the development of cervical cancer." The letter also stated that "[f]uture considerations suggest that we may wish to be in a position of being able to say the company scientists, not lawyers, reviewed and approved the proposal based on scientific content and merit" and raised the issue of whether Philip Morris should require access to "pre-publication manuscripts" and regular visits to be sure research was proceeding consistent with the proposal (as modified to exclude study of smoking's role in cervical cancer). Deposition of Steven C. Parrish, United States v. Philip Morris, et al., June 25, 2002, 81:4-20; 2024961742-1744 at 1742-1743 (U.S. Ex. 22,046).

1325. In March 1990, Covington & Burling wrote to Philip Morris about a possible recommendation that Philip Morris's Science & Technology research plan "should be developed with input from legal, corporate affairs, etc., to ensure that the program of sponsored research is consistent with product liability, regulatory and public relations considerations." Deposition of Steven C. Parrish, United States v. Philip Morris, et al., June 25, 2002, 195:14-196:3; 2023856321-6328 at 6322-6323 (U.S. Ex. 22,037).

1326. In September 1992, when Steven Parrish was General Counsel for Philip Morris, he retained control (for a period of time) over "approval for all new S&T [Science & Technology] projects." Parrish included Philip Morris's Richard Carchman, Vice President of

SECTION IV.D.

Research and Development and Engineering, and James L. Charles, Vice President of Research, in the review process to get scientific recommendations, but made the ultimate decisions himself. Deposition of Steven C. Parrish, United States v. Philip Morris, et al., June 25, 2002, 97:2-98:25; 2026227112-7112 (U.S. Ex. 20,422).

e. R.J. Reynolds

1327. In 1982, G. Robert DiMarco, Vice President of Research and Development at R.J. Reynolds, expressed his belief that lawyers were improperly controlling the course of scientific research at Reynolds. As summarized by an in-house R.J. Reynolds lawyer: DiMarco "believes that this [research regarding safer cigarettes] is the prudent/responsible thing to do but has been told by the 'lawyers' (Ed Jacob) that he can't do this work." DiMarco also made comments to the in-house lawyer to the effect that "rigid legal positions . . . had restricted the proper functioning of the R&D Department." DiMarco's comments reflected the reality as set forth in a document prepared by R.J. Reynolds in-house lawyers in which they indicated that DiMarco would have to accept that "the Law Department will be an important part of the R&D 'team' on all projects of this nature. No work in these areas will be commenced until a protocol (setting forth the purpose, steps and procedure to be followed) is drafted and **approved by the Law Department**. Thereafter all first drafts of written work will also be reviewed by the Law Department." The document further stated: "It should be made very clear to Dr. DiMarco that, while he will have an input, the 'medical research program' will not be directed or controlled by him." 505741150-1153 at 1150 (U.S. Ex. 23,009); 505741143-1147 at 1145 (U.S. Ex. 20,747) (emphasis added).

1328. On December 31, 1985, industry counsel issued Volume III of "RJR Research and

Development Activities Fact Team Memorandum," which included Section IX on "Monitoring Smoking and Health Literature," and Section X on "Management and Legal Supervision and Control of R&D Activities." Lawyers summarized all pertinent documents, depositions, and attorney interviews with key R.J. Reynolds employees from 1950 through 1985. Section IX detailed "the function of the R&D library," the roles of R.J. Reynolds scientists Alan Rodgman and Frank Colby, and "the procedures by which management was kept aware" of health issues. Section X detailed management and attorney oversight of Research and Development and "publication controls imposed on . . . researchers." 515873805-3929 at 3807, 3841 (U.S. Ex. 21,922).

(ii) "Independent" Scientists and Suppression of Nicotine Research

1329. The lawyers on the Committee of Counsel also controlled research conducted by allegedly "independent" scientists. In the 1970s, the tobacco manufacturers sponsored research at Harvard University. The funding of this research was controlled by the Committee of Counsel and executives of the companies. A 1976 letter from senior industry counsel, David Hardy, stated:

In Bill Shinn's letter to you of May 21, he solicited at my request, any observations or comments that you may have with regard to the renewal of the Harvard University project. This project has been handled in the past by the Committee of Counsel and the executives of the companies, but I wanted to find out if any member of the Research Liaison Committee had any observations.

03748208-8208 (U.S. Ex. 20,601).

1330. A "confidential" memorandum dated February 1, 1974 from Janet C. Brown to

SECTION IV.D.

Cyril Hetsko regarding the “Harvard Project Report of Dr. Gary L. Huber at the Tobacco Institute Meeting of January 31, 1974, the Regency Hotel, New York City” summarized the status of Dr. Huber’s industry-sponsored research. It stated: “I asked Shinn if it had not been one of the agreed conditions of the industry grant that Channing would consult only Hardy in the event Huber needed help from the industry, that Hardy would take the matter up with the counsel for the companies involved, and that counsel would then decide what assistance would be given and by whom. Shinn’s reply was ‘Fifth Amendment.’” 968003194-3198 at 3196 (U.S. Ex. 58,194).

1331. Gary Huber was the principal investigator in charge of the research program at Harvard University relating to smoking and health. The program was funded in part by a five-year grant, and a three-year extension of that grant, from the Defendants. Huber has stated that, in approximately 1980, he met with Defendants' lawyers in a hotel in Boston who told him that his research was "getting too close to some things." Huber identified these attorneys as lawyers from Shook, Hardy & Bacon, as well as lawyers from Lorillard and Brown & Williamson. Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5503:6-5504:4.

1332. In confirming that industry lawyers controlled the funding for his research, Huber testified as follows:

- Q. Were the [Harvard] studies important information, in your opinion, when you reported those findings to scientists?
- A. Yes.
- Q. And did you stress their importance to industry officials?
- A. Very much so.
- Q. And did you want to go forward and do further studies with

animals?

A. Absolutely.

Q. Why?

A. Well, we found - - we found very important results and we felt that they should be pursued and they had impact on a number of very serious and important considerations that deserved answers.

Q. Was money forthcoming from the cigarette company sponsors later for you to complete your animal studies after Harvard?

A. It was promised, but it never came.

Q. Were you, in fact, ever able to finish your experiments?

A. No.

...

Q. Did you ever have a meeting in a hotel in Boston with industry officials who expressed concern that your research was, quote, "getting too close to some things," end of quote?

A. Yes.

Q. And who was that, sir?

A. It was with the industry attorneys.

Trial Testimony of Gary Huber (via deposition), Dunn & Wiley v. RJR Nabisco Holding Corp., No. 18D01-9305-CT-06 (Ind.), March 3, 1998, 5498:4-5499:1, 5503:6-13.

1333. Defendants' lawyers have attempted to prevent research on nicotine addiction and nicotine manipulation issues. Given that the issue of nicotine addiction was potentially explosive in smoking and health litigation, lawyers began their attempts to curtail or direct the research. As a 1980 Tobacco Institute document stated: "Shook, Hardy reminds us, I'm told, that the entire matter of addiction is the most potent weapon a prosecuting attorney can have in a lung cancer/cigarette case. We can't defend continued smoking as 'free choice' if a person was

'addicted.'" TIMN0107822-7823 at 7823 (U.S. Ex. 77,053).

1334. Edwin Jacob, long-time tobacco industry counsel, "advised a total embargo on all work associated with the pharmacology of nicotine" in a meeting with the European tobacco industry. Jacob's advice was based in part on "[t]he pending California lawsuit which indicted nicotine as an addictive substance." 110083647-3650 at 3649-3650 (U.S. Ex. 22,993) (U.S. Ex. 76,174).

1335. A Philip Morris memorandum conceded that Defendants' concerns about research into the pharmacological action of nicotine arose from fear of regulation, i.e., "the increasingly favorable prospects for the success of a legislative effort to transfer authority for the regulation of tobacco manufacture to a Federal agency (FDA) known to have interests and powers antithetical to the interests of the industry." While this legislative effort was unfolding, any action on the part of the tobacco industry, such as "research on the psycho-pharmacology of nicotine, which implicitly or explicitly treats nicotine as a drug, could well be viewed as a tacit acknowledgment that nicotine is a drug." 1003724290-4291 at 4290 (U.S. Ex. 20,178) (U.S. Ex. 35,912).

(iii) Admissions and Internal Complaints Regarding Lawyer Control and Manipulation of Science

1336. A 1976 internal memorandum written by S.J. Green, a scientist at BATCo, discussed the extent to which "legal considerations" dominated scientific research:

The public position of tobacco companies with respect to causal explanations of the association of cigarette smoking and diseases is dominated by legal considerations. . . . By repudiation of a causal role for cigarette smoking in general they [the companies] hope to avoid liability in particular cases. This domination by legal consideration thus leads the industry into a public rejection in total

of any causal relationship between smoking and disease and puts the industry in a peculiar position with respect to product safety discussions, safety evaluations, collaborative research etc.

109938433-8436 at 8433 (U.S. Ex. 34,938) (U.S. Ex. 79,024).

1337. The tobacco industry's own characterization of a 1977 Brown & Williamson document describes Brown & Williamson's General Counsel as attempting to prevent or curtail CTR funded research which he believed was "putting the industry at risk." The danger he foresaw was that "if such tests are conducted, and the results were negative for the industry, it would be a major liability in legislative hearings or in litigation." 682764441-4461 at 4443 (U.S. Ex. 21,030).

1338. Handwritten notes from a Lorillard document dated April 21, 1978, contained the heading "Scientific Research Liason [sic] Committee" and stated:

Should re-convene because: 1) We have again "abdicated" scientific research directional management of the Industry to the "Lawyers" with virtually no involvement on the part of scientific or business management side of the business. 2) Lorillard's management is opposed to the total Industry future being in the hands of the Committee of Counsel - - it's reminiscent of late 1960's when Ramm's group ran the TI, CTR and everything else involved with Industry's public posture.

01346204-6205 at 6204 (U.S. Ex. 34,532) (emphasis in original).

1339. In an undated memorandum written by lawyers regarding "Considerations Concerning Ingredients" for R.J. Reynolds, the authors noted, "[a] recent memo by a Lorillard employee (Alex Spears) to Dr. Hayes at RJRT suggests that in 1984 the Committee of Counsel thwarted the industry scientists' desires to assure the safety of the product by testing ingredients

adequately." LG2008121-8141 at 8127 (U.S. Ex. 21,204).

(iv) Decisions Regarding Research and Publication Were Based upon Litigation Concerns and Desires to Enhance Public Relations, Not Scientific Judgment

1340. A letter dated May 2, 1963 from a White & Case attorney to Addison Yeaman of Brown & Williamson acknowledges Yeaman's letter of April 29, 1963 and its enclosure. The White & Case letter noted: "I have carefully considered the draft of a proposed report prepared by you in cooperation with Dr. Robert B. Griffith [Director of Research at Brown & Williamson], and I am of the opinion that, with the exception explained below, it contains no material which would prove detrimental to the defense of a lung cancer case." The White & Case attorney urged Yeaman to avoid any "implied admission" because "with the passing of time, the defenses of assumption of risk and contributory negligence will loom increasingly important; yet the validity of these defenses is being whittled down by tobacco company utterances – to the effect that there is no risk, or that it is remote." 680249787-9788 at 9787 (U.S. Ex. 23,012).

1341. On April 20, 1971, Ralph Rowland, R.J. Reynolds scientist, sent an interoffice memorandum to managers and section heads concerning rewards and recognition procedures discussed at a management meeting held March 22, 1971, and forbidding publication of certain types of papers due to the "intangible legal situation." 500910506-0507 at 0506 (U.S. Ex. 20,657).

1342. On May 12, 1972, Helmut Wakeham prepared a draft memorandum to Joseph Cullman III, Chairman of the Board of Philip Morris, on an "Industry-Sponsored Smoke Inhalation Program" which was being considered for several different types of animals and would

cost \$1,500,000 per year for five years in order to provide the industry "with a **defensive position** in the field of smoke inhalation." 1005109006-9007 at 9006 (U.S. Ex. 20,210) (emphasis added).

1343. On October 17, 1973, in debating whether or not to give a grant for a proposed research program at the University of California, Frank Colby, R.J. Reynolds scientist, suggested to Murray Senkus, Director of Research for R.J. Reynolds, that "[a] decision whether or not to recommend a substantial Tobacco Industry grant for the above program should be based more on public relations than on purely scientific grounds." 500529893-9893 (U.S. Ex. 20,637).

1344. On June 24, 1974, Alexander Spears of Lorillard, in a confidential memorandum, acknowledged Defendants' joint industry effort to fund smoking and health research for public relations purposes: "Historically, the joint industry funded smoking and health research programs have not been selected against specific scientific goals, but rather for various purposes such as public relations, political relations, position for litigation, etc. Thus, it seems obvious that reviews of such programs for scientific relevance and merit in the smoking and health field are not likely to produce high ratings. In general, these programs have provided some buffer to the public and political attack of the industry, as well as background for litigious strategy." 01421596-1600 at 1598 (U.S. Ex. 20,049).

1345. Charles W. Nystrom, assistant to Frank Colby, R.J. Reynolds scientist, prepared a job description dated May 1, 1978. The description was for a "Research Section Head Scientific-Legal Information Section" which stated in part: "Primary areas of responsibility are to search, interpret, and evaluate information and ideas to protect the Company in the area of the

smoking-health controversy." 500885570-5573 at 5571 (U.S. Ex. 20,655).

1346. A July 21, 1978 document contains the typewritten "confidential" notes of Charles L. Waite of the Tobacco Institute, in which he stated:

Finally, Morgan reiterates the obvious fact that we must continue to rebutt (sic) every **major critical** study (government funded or otherwise) in a **timely manner** using the biggest 'scientific guns' available to us.

To meet this requirement, the following conditions must prevail:

a. Advanced copy of paper, speech, article, etc. must be available to comment on. This is basically an information gathering function, not scientific.

b. Availability of quality credible scientific rebuttal. This requires a stable of consultants in various fields of scientific endeavor who are willing to provide such assistance. Additionally, the utmost in cooperation between all segments of the industry is required in developing and sharing such assets.

TI04280175-0176 at 0176 (U.S. Ex. 62,174) (emphasis in original).

1347. A September 28, 1978 document contained notes of an R.J. Reynolds representative's meeting with German industry representatives near London Heathrow Airport on September 11, 1978 for talks "devoted mainly to those aspects of the German nicotine research . . . [affecting] the legal position of RJR in the United States." The document noted that R.J. Reynolds "forcibly and deliberately . . . [extracted] from them an 'unequivocal promise' that before any effort which was made to commence or in any other way start a specific research project RJR . . . would have a minimu[m] of three months to evaluate such proposals."

503240503-0514 at 0503, 0504 (U.S. Ex. 20,713).

1348. On July 27, 1983, Patrick Sirridge, a Shook, Hardy & Bacon attorney, sent a memorandum to Fredric S. Newman, a Philip Morris International attorney, regarding several reports from the Philip Morris Research Center. He noted:

Research engaged in, as well as some possibly under consideration, by Philip Morris has undesirable and dangerous implications for litigation positions the industry takes in regard to smoking behavior. The pharmacological nature of the research implies strongly a view of the importance of nicotine. What is worse, research reports under Philip Morris's sponsorship contains claims of physiological tolerance to nicotine, as well as claims of unequivocal demonstrations of reinforcement by nicotine in animals. This kind of research is a major tool of our adversaries on the addiction issue; the irony is that industry-sponsored research is honing that tool. In the final analysis, the performing and publishing of nicotine related research clearly seems ill-advised from a litigation point of view.

2046754720-4731 at 4731 (U.S. Ex. 20,476).

1349. On March 3, 1988, R.J. Reynolds prepared the "Independent Scientists Program" to identify non-R.J. Reynolds scientists who would cooperate with its litigation and public relations strategies. 506254908-4921 (U.S. Ex. 20,754).

1350. On November 15, 1988, Defendants considered the dangers of issuing a new proposed Frank Statement with their law firms, such as Arnold & Porter and Shook, Hardy & Bacon. It was noted that while the new Frank Statement made it appear that Defendants' position on smoking and health had changed over the years, this had not happened. Further, they argued the new statement could hurt the industry in its litigation strategies. David R. Kentoff, an Arnold

SECTION IV.D.

& Porter attorney, noted "the basic problem with the new Frank Statement is that it sets forth a revisionist and internally inconsistent view of history. . . . If it is still the industry's 'belief' that smoking is not injurious, how can it now contend that it is not a member of the Flat Earth Society? . . . [T]he client should be advised to share its plans for the new Frank Statement with National Coordinating Counsel. Certainly, the statement has potential litigation implications which are of legitimate interest to all members of the industry." 2021156932-6936 at 6932-6933, 6935-6936 (U.S. Ex. 20,341).

1351. Liability litigation concerns drove Liggett's research program throughout the 1990s and controlled the type of research that would be done and whether or not research would be done. Dennis Dietz, Manager of Scientific Issues for Liggett, from 1991 to 1999, testified that "instead of doing independent research into the question of smoking and health, the Company focused on insuring its products were no less harmful than those of its competitors." Dietz had regular product liability meetings with Liggett's outside counsel. When Dietz began working for Liggett, he had an "orientation" meeting with outside counsel wherein they "open [ed] his eyes up to the fact that we were involved with research that wasn't just pure, really, academic, that we need to be focused on all these issues." Dietz explained that the issues he was referring to were "health related issues . . . that potentially could – could impact on – on product litigation." Deposition of Dennis Dietz, United States v. Philip Morris, et al., July 1, 2002, 51:16-18, 169:21-177:10.

E. The Addictive Properties of Nicotine**(1). Nicotine and Addiction**

1352. Cigarette smoking is an addictive behavior, a dependency characterized by drug craving, compulsive use, tolerance, withdrawal symptoms, and relapse after withdrawal.

Underlying the smoking behavior and its remarkable intractability to cessation is the drug nicotine. Nicotine is the primary component of cigarettes that creates and sustains addiction to cigarettes. While Defendants now seek to hide behind self-serving interpretations of scientific definitions of addiction over time, the underlying known facts about the addictive quality of smoking and the importance of nicotine to the addiction have not changed.

1353. Defendants have long researched and recognized, decades before the scientific community, that nicotine is an addictive drug, that cigarette manufacturers are in the drug business, and that cigarettes are drug delivery devices. Nicotine largely explains why people use tobacco products. Moreover, Defendants have sought to exploit the addictive quality of smoking and nicotine for decades in order to develop new products and increase sales.

1354. Notwithstanding the understanding and acceptance of each Defendant that smoking and nicotine were addictive, Defendants have publicly denied and distorted the truth as to the addictive nature of their products. Defendants' public fraud has included externally relying on a self-serving definition of addiction, suppressing research showing the addictiveness of nicotine, and parroting misleading statistics as to the number of smokers who have quit.

1355. Defendants have intentionally maintained and coordinated their fraudulent position on addiction and nicotine as an important part of their overall efforts to influence public

opinion and persuade people that smoking was not dangerous; in this way, the companies could keep more smokers smoking, recruit more new smokers, and maintain or increase their profits. Additionally, defendants have sought to discredit proof of addiction in order to preserve their "smoking is a free choice" arguments in smoking and health litigation.

1356. Defendants continue to publicly deny and distort the truth as to the addictiveness of cigarette smoking and nicotine's role in the addiction. Defendants refuse to acknowledge their internal statements acknowledging and exploiting nicotine addiction. While nicotine shares many attributes of heroin, cocaine, and other drugs, Defendants continue to assert that smoking is only addictive to the same extent as coffee, chocolate, and the like, and (with the limited exception of Philip Morris) continue to deny that nicotine is addictive at all.

(a) Cigarette Smoking is Addictive and Nicotine is the Primary Component of the Addiction

1357. There is an overwhelming consensus in the scientific and medical community that cigarette smoking is an addictive behavior and that nicotine is the component in cigarettes that causes and sustains the addiction. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 8; Expert Report of David Burns, United States v. Philip Morris, et al. (R. 664; filed November 15, 2001) at 18.

1358. The Surgeon General, the National Institute on Drug Abuse ("NIDA"), the World Health Organization ("WHO"), the American Psychiatric Association ("APA"), the Food and Drug Administration ("FDA"), the Harvard School of Public Health, and others have declared that tobacco use is a form of addiction that shares many similarities with the use of cocaine or heroin. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682, filed

November 15, 2001) at 7-10.

1359. "Drug addiction" is a common language term for what many researchers clinically refer to as "drug dependence." The term "dependence" was never intended to imply a lesser or watered-down condition than "addiction." Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 25-27.

1360. In fact, organizations such as NIDA, the American Association of Addiction Medicine, and the College on Problems of Drug Dependence use the terms "drug addiction" and "drug dependence" interchangeably. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 25.

1361. Scientific and medical literature support the conclusion that nicotine ingested via cigarette smoking has significant pharmacological effects on the structure and function of the human body - pharmacological effects that create dependence in the smoker. Industry documents show that these effects have been known to the industry since the early 1960s. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 27, 39.

1362. In commonly understood terms of addiction, smokers become dependent on the significant pharmacological and psychoactive effects of the nicotine in cigarettes, resulting in craving, compulsive use, difficulty in quitting, and relapse after withdrawal.

1363. There is compelling evidence that smoking behavior is motivated by a need to maintain a preferred "fix" or level of nicotine intake, leading to the phenomenon of nicotine compensation, or titration, in response to the use of cigarettes with lower nicotine yields.

1364. Contrary to Defendants' view as expressed in numerous public statements, uncertainties concerning the addictiveness of tobacco products that existed in the 1960s and 1970s were not resolved by changing definitions of "addiction" to fit nicotine. Rather, the scientific and medical understanding of drug addiction and assembly of data has advanced considerably since the release of the 1964 Surgeon General's Report, which relied upon World Health Organization ("WHO") criteria that emphasized intoxication and essentially construed drug addiction as a personality disorder. In fact, the prominence given to personality disorder and the intoxicating effects of the drug as essential determinants of addiction were abandoned by the WHO itself in 1964, but too late to serve the authors of the 1964 Surgeon General's Report. This concept and others were replaced by criteria and diagnostic techniques to measure addictive effects including physiological dependence, withdrawal, reinforcement, and psychoactive effects. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 25, 27-36.

1365. In the 1964 Report, the Surgeon General, using the criteria established for "addiction" and "habituation" by the WHO, concluded that smoking, nicotine, and cocaine were not "addictions." Smoking in particular was termed a "habituation" rather than an "addiction" because it did not induce a state of intoxication, there was no evidence of "overpowering" need to ingest nicotine, and there was no evidence of significant physical dependence. The 1964 report concluded, based on the WHO definition and the limited data available at the time, that smoking produced only a "psychiatric but not physical dependence." VXA1601844-2232 (U.S. Ex. 64,057); Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681;

filed November 15, 2001) at 29-31.

1366. As described below, Defendants knew better. In-house tobacco industry research, research kept hidden from the writers of the Surgeon General's report, showed drug addiction-like effects, including tolerance, withdrawal, compulsive use, and craving. The actions of BATCo and Brown & Williamson, described below, are particularly illuminating on the issue of the Cigarette Company Defendants' far superior knowledge of nicotine and its behavioral effects in 1964, as well as the uninformed conclusion of the advisory committee to the Surgeon General who acted without that research.

1367. The subsequent WHO expert committee published a report in 1964 abandoning its prior definitions of habituation and addiction, definitions that had been largely adopted in the 1964 Surgeon General's Report. Instead, the committee recommended the adoption of the term "dependence." 682639369-9385 (U.S. Ex. 31,011).

1368. Since 1964, notwithstanding Defendants' attempts to deny or distort the evidence, data has unequivocally demonstrated that nicotine in cigarettes is addictive by the same criteria that heroin and morphine were concluded to be addictive. Moreover importantly, and regardless of the conclusion of the 1964 Report, Defendants have continued to generate internal research results confirming their pre-1964 knowledge and acceptance that smoking and nicotine are in fact addictive. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 39-46.

1369. While Defendants well understood the primary role of nicotine in sustaining smoking addictiveness by the 1960s, and designed their products to deliver sufficient nicotine for

this purpose, the understanding of the preeminence of nicotine developed more slowly outside the tobacco industry. For example, it was not until 1980 that clinical psychiatrists determined that there was sufficient evidence of dependence and withdrawal from smoking to include these in the APA's Diagnostic and Statistical Manual ("DSM-III"). Even then, the syndromes were called "tobacco dependence" and "tobacco withdrawal" rather than "nicotine dependence" and "nicotine withdrawal," because of psychiatrists' insufficient knowledge and understanding of the specific role of nicotine. It was clear to the developers of the DSM-III that nicotine played a role in making smoking addictive, but there were unresolved questions as to the importance of nicotine, as opposed to the numerous other constituents of tobacco smoke and behavioral components of smoking. It was not until 1982 that NIDA concluded that scientific evidence demonstrated that nicotine is addictive. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 31-33.

1370. Therefore, by the early to mid 1980s, leading scientists and organizations with expertise in tobacco and drug addiction had come to the conclusion that nicotine was an addictive drug and that cigarette smoking was maintained by nicotine addiction. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681, filed November 15, 2001) at 31-36.

1371. In 1987, the APA published the Diagnostic and Statistical Manual of Mental Disorders III-R ("DSM-III-R"), which changed its terminology to refer to "nicotine dependence" and "nicotine withdrawal." The DSM-III-R stated that at least three of the following nine symptoms had to have persisted for at least one month (or repeatedly over a longer period of

time) for the diagnosis of psychoactive substance dependence:

- the substance is often taken in larger amounts or over a longer period than the person intended;
- persistent desire or one or more unsuccessful efforts to cut down or control substance use;
- a great deal of time spent in activities necessary to obtain the substance, taking the substance (e.g. chain-smoking), or recover from its effects;
- frequent intoxication or withdrawal symptoms when expected to fulfill major role obligations at work, school or home. . . .
- important social, occupational, or recreational activities are given up or reduced because of substance use;
- continued substance use despite knowledge of having a persistent or recurrent social, psychological, or physical problem that is caused or exacerbated by the use of the substance. . . .
- marked tolerance
- characteristic withdrawal symptoms; and
- substance often taken to relieve or avoid withdrawal symptoms.

American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders III-R* (1987) at 167-168, 2501196125-6132 (U.S. Ex. 27,935).

1372. Importantly, nicotine was now specifically identified in the DSM-III-R as a drug of dependence, with degrees of severity: mild, moderate and severe. American Psychiatric Association. *Diagnostic and Statistical Manual of Mental Disorders III-R* (1987) at 168, 2501196125-6132 (U.S. Ex. 27,935).

1373. The 1988 Surgeon General's Report, titled "The Health Consequences of Smoking - Nicotine Addiction," concluded that smokers smoke because they are addicted to nicotine. Upon an exhaustive review of the literature on nicotine and smoking behavior, the report found that cigarettes and other forms of tobacco are addicting, and that nicotine is the substance in tobacco that causes the addiction. "The Health Consequences of Smoking: Nicotine Addiction:

A Report of the Surgeon General" (1988), VXA0300208-0848 (U.S. Ex. 64,591).

1374. The 1988 Surgeon General's Report set forth three primary criteria to determine whether a drug, in this case nicotine, is addicting: (1) use is highly controlled or compulsive; (2) the use of the drug produces mood altering (psychoactive) effects; and (3) the drug reinforces behavior, resulting in continued intake or drug-reinforced behavior. "The Health Consequences of Smoking: Nicotine Addiction: A Report of the Surgeon General" (1988) at 7, (U.S. Ex. 64,591); Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 8.

1375. The first criterion, highly controlled or compulsive use, refers to drug-seeking and drug-taking behavior that is driven by strong, often irresistible urges. Such use persists despite a desire to quit or even repeated attempts to do so. This type of behavior has also been described as "habitual." Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 8.

1376. Drug addiction, however, is distinguished from habitual behaviors not involving drugs -- such as habitual exercising or overeating -- by the second criterion, the presence in the blood stream of a drug with psychoactive or mood-altering effects on the brain. Food, for example, which is necessary to sustain life, is not a drug and does not satisfy the second criterion. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 8.

1377. Finally, the mood-altering drug must be capable of functioning as a reinforcer that can directly strengthen behavior leading to further drug ingestion. Such reinforcement exists

where, for instance, the drug produces pleasant or rewarding sensations like stimulation, relaxation, or euphoria, or mitigates unpleasant withdrawal sensations experienced when a person stops using the drug. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 8.

1378. Defendants claim that the Surgeon General discounted tolerance and withdrawal in concluding that nicotine was addictive; however, the 1988 report documented both tolerance and withdrawal and determined that nicotine met these additional criteria. However, neither is primary criterion of drug dependence/addiction as defined by the Surgeon General, WHO, APA, or FDA.

1379. Defendants also cling to the long outdated and abandoned idea that significant intoxication or impairment is required to sustain addiction. Intoxication was abandoned by the WHO, the APA, and the Surgeon General because many intoxicating substances are not addicting and because many addictive drugs are used and abused at doses that do not cause intoxication. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 34-35.

1380. In 1994, the APA published its Diagnostic And Statistical Manual of Mental Disorders-IV ("DSM-IV"). DSM IV defined "substance dependence" as "a pattern of repeated self-administration that usually results in tolerance, withdrawal, and compulsive drug-taking behavior." DSM IV continued to recognize the diagnoses of both "nicotine dependence" and "nicotine withdrawal." American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders IV* (1994) at 176-181; 2072201185-1198 (U.S. Ex. 41,374); 2057062419-2429

(U.S. Ex. 38,861).

1381. In the DSM IV section titled "Nicotine-Related Disorders," the APA concluded that nicotine can produce dependence in people who use all forms of tobacco, including cigarettes, because the following criteria are present: tolerance, withdrawal, a desire to quit, a great deal of time spent using nicotine, and the continued use despite medical problems.

American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders IV* (1994) at 176-181, 242-247 (U.S. Ex. 38,861); 2072201185-1198 (U.S. Ex. 41,374); 2057062419-2429 (U.S. Ex. 38,861).

1382. Defendants long claimed publicly that nicotine and smoking were not addictive or dependence-producing because smoking did not result in tolerance. However, in describing the diagnosis of "Nicotine Dependence," the DSM IV authors stated that, "Tolerance to nicotine is manifested by the absence of nausea, dizziness, and other characteristic symptoms despite using substantial amounts of nicotine or a diminished effect observed with continued use of the same amount of nicotine-containing products." American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders IV* (1994) at 243; 2072201185-1198 (U.S. Ex. 41,374); 2057062419-2429 (U.S. Ex. 38,861).

1383. The DSM IV authors also met head on Defendants' oft-repeated public claim that smoking cigarettes does not produce withdrawal: "Cessation of nicotine use produces a well-defined withdrawal syndrome that is described below. Many individuals who use nicotine take nicotine to relieve or avoid withdrawal symptoms when they wake up in the morning or after being in a situation where use is restricted." In addition, withdrawal symptoms "are typically

more intense among individuals who smoke cigarettes than among individuals who use other nicotine-containing products." American Psychiatric Association, *Diagnostic and Statistical Manual of Mental Disorders IV* (1994) at 243-244; 2072201185-1198 (U.S. Ex. 41,374); 2057062419-2429 (U.S. Ex. 38,861).

1384. Further reflecting the consensus judgment that nicotine is addictive, the investigation by the FDA leading to its Final Tobacco Rule issued in August 1996 confirmed that even by the most stringent criteria employed by the FDA, nicotine in cigarettes is an addictive drug. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 35-36.

1385. The FDA concluded in its August 1996 Final Rule that, "All major public health organizations in the United States and abroad with expertise in tobacco or drug addiction now recognize that the nicotine delivered by cigarettes and smokeless tobacco is addictive." See Executive Summary to August 28, 1996 FDA Jurisdictional Determination, 61 Fed. Reg. 44619 (August 1996) at xv, (U.S. Ex. 64,323).

1386. The scientific community further recognizes that nicotine is addictive under the outdated 1964 Surgeon General's Report / WHO definition as well as the 1988 Surgeon General's Report's definition. August 28, 1996 FDA Jurisdictional Determination, 61 Fed. Reg. 44619 (August 1996) at 96-102, (U.S. Ex. 64,323).

1387. Today, most daily cigarette smokers satisfy the Surgeon General's primary criteria for addiction. The first criterion, highly controlled or compulsive use, is demonstrated by the fact that addicted smokers smoke numerous cigarettes throughout the day. Second, the nicotine in the

cigarette tobacco stimulates the nicotinic receptors in the smoker's brain, a psychoactive effect that affects the smoker's mood. Third, the smoking behavior is reinforced by the pleasurable effects of nicotine and/or by the mitigation of unpleasant withdrawal sensations triggered by the need for nicotine. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 8-9.

1388. Published research indicates that 77 to 92% of smokers are addicted to nicotine in cigarettes. The FDA proposed rule and jurisdiction determination annex, i.e., "Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco to Protect Children and Adolescents," 61 Fed. Reg. 44396 (August 1996) (final rule), (U.S. Ex. 64,323); "Nicotine in Cigarettes and Smokeless Tobacco Products Is a Drug and These Products Are Nicotine Delivery Devices Under the Federal Food, Drug, and Cosmetic Act: Jurisdictional Determination," 61 Fed. Reg. 44619 (August 1996) (jurisdictional determination annex) at 44635 (U.S. Ex. 64,323).

1389. In addition, persons who have smoked at least one cigarette are about twice as likely to develop dependence on nicotine as are persons who have ever tried cocaine or alcohol to develop a dependence on those drugs. The FDA proposed rule and jurisdiction determination annex, i.e., "Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco to Protect Children and Adolescents," 61 Fed. Reg. 44396 (August 1996) (final rule) (U.S. Ex. 64,323); "Nicotine in Cigarettes and Smokeless Tobacco Products Is a Drug and These Products Are Nicotine Delivery Devices Under the Federal Food, Drug, and Cosmetic Act: Jurisdictional Determination," 61 Fed. Reg. 44619 (August 1996) (jurisdictional determination annex) at 44703, (U.S. Ex. 64,323).

1390. Many smokers and potential smokers are unaware of or do not fully appreciate the addictive nature of nicotine and the addictiveness of cigarette smoking, and the extent to which nicotine delivery and dosage is highly controlled and engineered. Expert Report of Neil Weinstein, United States v. Philip Morris, et al. (R. 675; filed November 15, 2001) at 20-22.

1391. Every year, nearly 20 million people in the United States attempt to quit smoking, but only 3% have long-term success. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 6.

1392. Most smokers smoke cigarettes regularly in order to experience nicotine's effects on the brain and the body, and therefore become addicted to nicotine. People who try to quit smoking often experience withdrawal symptoms that can be extremely disruptive. Accordingly, it is usually very difficult for the smoker to stop smoking cigarettes. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 6.

1393. Most smokers who desire to quit require several quit attempts before they are successfully able to give up cigarettes, and many smokers die of smoking-related diseases before they are able to quit. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 6.

1394. The fact that cigarette smoking is addictive is particularly troublesome in light of the fact that most smokers become addicted to smoking as teenagers. 88% of daily smokers tried their first cigarette before reaching age 18, and 70% of people who have ever smoked daily began smoking daily before they were 18 years old. Thus, because nicotine addiction develops in the first few years of cigarette smoking, most smokers become addicted to nicotine during

adolescence or early adulthood. Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682; filed November 15, 2001) at 6-7.

1395. Underage smokers and potential smokers are particularly vulnerable to nicotine addiction because they are not capable of making a fully informed decision whether to start or continue smoking for a variety of reasons, including the fact that they underestimate personal risks and lack judgment which is developed through experience. Youth also fail to appreciate the risks and consequences of addictions. "The Health Consequences of Smoking: Nicotine Addiction: A Report of the Surgeon General" (1988), VXA0300208-0848 (U.S. Ex. 64,591); Expert Report of Neal Benowitz, United States v. Philip Morris, et al. (R. 682, filed November 15, 2001) at 23-25; Expert Report of Neil Weinstein, United States v. Philip Morris, et al. (R. 675; filed November 15, 2001) at 20-22; "SGR 4 Kids: The Surgeon General's Report for Kids About Smoking" (1994) (U.S. Ex. 86,689).

(b) Within the Tobacco Industry and Among These Defendants, Internal Documents and Statements by Defendants Establish That Each Defendant Well Knew That Smoking and Nicotine Are Addictive

1396. The chronicle of documentary evidence in this section reveals that for decades Defendants knew and internally acknowledged that nicotine is an addictive drug, cigarettes are a nicotine delivery device, and that addiction can be enhanced and perpetuated through manipulating both nicotine and nicotine delivery. Much of Defendants' wealth of nicotine knowledge was procured via in-house and industry-funded research into the pharmacological effects of the drug. This knowledge rendered their public statements over this same period of time on the subjects of addiction and nicotine false, deceptive, and fraudulent when made.

SECTION IV.E.

1397. For example, internal documents reveal that Philip Morris researchers knew that nicotine was "a powerful pharmacological agent" and that the company operated on the "premise that the primary motivation for smoking is to obtain the pharmacological effect of nicotine." 1003033413-3417 at 3413 (U.S. Ex. 20,143); 1003287836-7848 at 7837 (U.S. Ex. 22,848). R.J. Reynolds's lead nicotine researcher stated that nicotine is the "sine qua non of smoking" and that the industry was based on the sale of "attractive dosage forms of nicotine." 500915683-5691 at 5684-5685 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216). BATCo's sophisticated research from the early 1960s demonstrated that "smokers are nicotine addicts." 301083862-3865 at 3863 (U.S. Ex. 20,577). Brown & Williamson, BATCo's subsidiary, had the BATCo data, and marketed cigarettes with the understanding that they "must provide the appropriate levels of nicotine." 501011512-1515 at 1513 (U.S. Ex. 85,309). Lorillard researchers accepted the scientific consensus in the 1970s that "the most probable reason for the addictive properties of the smoke is the nicotine." 82396938-6939 (U.S. Ex. 22,012). Liggett, like its larger cigarette manufacturer counterparts, was actively seeking ways to manipulate the nicotine delivery to smokers. LG0262125-2126 (U.S. Ex. 59,994).

1398. Defendants claim that they defrauded no one because the federal government never officially said nicotine was "addictive" until the 1988 Surgeon General's Report. This is not relevant. Defendant's own knowledge and acceptance is what made their public statements fraudulent. Moreover, had Defendants come forward and disclosed their physiological and behavioral research on nicotine, the Government and other medical authorities would likely have placed nicotine in the addiction/dependence category decades earlier. Expert Report of Jack E.

Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 68-73.

1399. Defendants have studied nicotine and its effects since the 1950s, and the documents describing their examination and knowledge of nicotine's pharmacological effects on smokers – whether they characterized that effect as "addictive," "dependence" producing or "habituating," –demonstrate unequivocally that defendants understood the central role nicotine plays in keeping smokers smoking, and thus its critical importance to the success of their industry.

1400. Additional internal records demonstrate that Defendants knew that cigarette smoking and tobacco generally was the vehicle for delivering nicotine, which was the critical component in maintaining the addiction (sometimes referred to as "satisfaction") necessary to sustain and enhance their profits. Indeed, Defendants purposefully designed and sold products that delivered a pharmacologically effective dose of nicotine in order to create and sustain nicotine addiction in smokers. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681, filed November 15, 2001) at 8-24.

1401. Other documents demonstrate Defendants' understanding and acceptance of nicotine's role in maintaining cigarette smoking by showing their recognition that smokers adjust their smoking behavior in order to obtain their necessary nicotine intake. This behavioral adaptation of smokers is known as "compensation," or "titration," a concept Defendants have been well aware of for many years. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 46-51.

1402. As evidenced by these documents, Defendants understood that their cigarettes did

produce powerful pharmacological effects on the user, that nicotine was the principal agent responsible for these effects, and that to have a chance at success in the marketplace, a cigarette had to be able to deliver enough nicotine to trigger the desired physiological effects.

1403. These industry documents also support the conclusion that Defendants knew early on in their research that if a cigarette did not deliver a certain amount of nicotine, new smokers would not become addicted, and "confirmed" smokers would quit.

1404. Defendants recognized that while genuinely low-yield cigarettes could lead smokers away from smoking altogether because they would lack sufficient levels of nicotine to keep smokers addicted to cigarettes, smokers were nonetheless concerned about their exposure to tar and nicotine. Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 53.

1405. To address smokers' concerns and to avoid losing consumers from the marketplace, Defendants took advantage of the Federal Trade Commission ("FTC") testing system by designing purportedly low-yielding cigarettes to register low FTC tar and nicotine yield values that would be acceptable to cigarette smokers while at the same time facilitating the efforts of smokers to get their desired levels of nicotine. That is, the cigarettes were designed to make it easy for consumers to obtain higher tar and nicotine yields than those obtained using the FTC testing method. See Section IV D; Expert Report of Jack E. Henningfield, United States v. Philip Morris, et al. (R. 681; filed November 15, 2001) at 46-54.

1406. Defendants also collectively concealed their knowledge and understanding of nicotine because they wished to avoid liability for diseases caused by their products and to avoid

FDA regulation of their products.

1407. The following statements demonstrate Defendants' vast scope of knowledge regarding nicotine's addictive effects on smokers since the 1950s, their use of that information to maintain and increase the sale of cigarettes, and their decades-long efforts both to deny the truth and to conceal internal research.

(i) Philip Morris

1408. Internal documents show Philip Morris's extensive history of conducting nicotine research, acknowledging addiction, and exploiting nicotine for commercial advantage.

1409. In a November 15, 1961 presentation, Philip Morris's Vice President for Research and Development Helmut Wakeham addressed the company's ability to control the nicotine content of its cigarettes. He stated that "low nicotine does stimulate, but high doses depress functions, and "continued usage develops tolerance." Wakeham further stated that, "Even though nicotine is believed essential to cigarette acceptability, a reduction in level may be desirable for medical reasons." 1000277423-7447 at 7438, 7441 (U.S. Ex. 20,088).

1410. On March 5, 1964, William L. Dunn, a Philip Morris scientist/psychologist who later became the Principal Scientist for the company, commented at length on the possibility of developing a "surrogate" for cigarettes based on the importance of nicotine. He wrote:

The pharmacological need [for cigarettes] is readily definable. The smoker seeks the subjective state that results from the introduction of nicotine into the bloodstream. There are some specifiable, some not specifiable changes in the physiological state accruing from the presence of nicotine. . . . There are undoubtedly other physiological reactions which are responsible for the sense of euphoria, or well-being, that the novice smoker experiences in the exaggerated form of dizziness. Without belaboring a most

complex and little understood set of phenomena, suffice it to say that it is this subjective state which is sought by the smoker as he lights up.

1003700128-0133 at 0129 (U.S. Ex. 20,177).

1411. In the same document, Dunn also stated that any less hazardous cigarette product developed by Philip Morris "must induce the psychopharmacological state now induced by nicotine absorption into the bloodstream." 1003700128-0133 at 0132 (U.S. Ex. 20,177).

1412. A handwritten summary by Philip Morris researcher Ronald Tamol of a February 1, 1965 brand development meeting/presentation recorded the conclusion that the cigarette manufacturer who could come up with a "flavorful" low tar cigarette with "enough nicotine to keep smokers hooked . . . will reap huge benefits." 0002862-2867 at 2867 (U.S. Ex. 88,761).

1413. In a June 1966 report titled "Market Potential of a Health Cigarette," Philip Morris researchers Dunn and Myron Johnston stated that without nicotine, a health cigarette would not sell: "[A]ny health cigarette must compromise between health implications on the one hand and flavor and nicotine on the other. . . . Flavor and nicotine are both necessary to sell a cigarette. A cigarette that does not deliver nicotine cannot satisfy the habituated smoker and cannot lead to habituation, and therefore would almost certainly fail." 1001913853-3878 at 3860 (U.S. Ex. 20,123).

1414. With this understanding in the mid-1960s and armed with the knowledge of nicotine's addictiveness, Philip Morris was already manipulating the pH of tobacco to enhance the psychoactive effects of nicotine on the brain. In fact, R.J. Reynolds was able to verify that Philip Morris had been increasing the nicotine "strength" of its Marlboro brand by increasing its

pH since 1964. 500606138-6153 (U.S. Ex. 48,334); 509314122-4154 (U.S. Ex. 51,456).

1415. In a May 7, 1968 Philip Morris memorandum titled "TPN Intake by Smokers," Dunn wrote that "since there is evidence that the smoker adapts his puff, it is reasonable to anticipate that he adapts to maintain a fairly constant daily dosage." This document demonstrates that Philip Morris has known for over 35 years that smokers would "compensate" in order to maintain a constant intake, or dosage, of nicotine. 1003293548-3555 (U.S. Ex. 35,743).

1416. Philip Morris was well aware that nicotine shared many attributes of an addictive drug. In a February 19, 1969 memorandum from Dunn to Wakeham, Dunn cautioned that nicotine was a drug with FDA implications. He also discussed the "dual action" of nicotine as a drug with pharmacological "stimulant-tranquilizer" effects that caused a "pleasant state of dizziness so clearly experienced by the beginning smoker and by the habituated smoker following abstention." 1003289921-9922 at 9921 (U.S. Ex. 20,167).

1417. In a Fall 1969 draft of the annual report titled "Why One Smokes," and presented to the Philip Morris Board, Wakeham emphasized the role of nicotine in smoking. He flatly stated:

We share the conviction with others that it is the pharmacological effect of inhaled smoke which mediates the smoking habit. . . .

We have then as our first premise, that **the primary motivation for smoking is to obtain the pharmacological effect of nicotine.**

In the past we at R & D have said that we're not in the cigarette business, we're in the smoke business. It might be more pointed to observe that the cigarette is the vehicle of smoke, smoke is the vehicle of nicotine, and nicotine is the agent of a pleasurable body response.

This primary incentive to smoking gets obscured by the overlay secondary incentives, which have been superimposed upon the habit. Psychoanalysts have speculated about the importance of the sucking behavior, describing it as oral regression. Psychologists have proposed that the smoker is projecting an ego-image with puffing and his halo of smoke. One frequently hears "I have to have something to do with my hands" as a reason. **All are perhaps operative motives, but we hold that none are adequate to sustain the habit in the absence of nicotine.**

We are not suggesting that the effect of nicotine is responsible for the initiation of the habit. To the contrary. The first cigarette is a noxious experience to the novice. To account for the fact that the beginning smoker will tolerate the unpleasantness, we must invoke a psychosocial motive. Smoking for the beginner is a symbolic act. The smoker is telling the world, "This is the kind of person I am. . . ."

As the force from the psychosocial symbolism subsides, the pharmacological effect takes over to sustain the habit

1003287836-7848 at 7837-7839 (U.S. Ex. 22,848) (emphasis added).

1418. Wakeham stated further in the same report that the purpose of Philip Morris smoking psychology research was to "discover ways to exploit the benefits of smoking to the advantage and profitability of our major company business." 1003287836-7848 (U.S. Ex. 22,848).

1419. In the final version of Wakeham's presentation, dated November 26, 1969, he largely restated material from the draft quoted above. In summarizing nicotine's dual effect as stimulant and depressant, Wakeham stated that smoking maintenance depended solely on the pharmacological effects on smokers:

We are of the conviction, in view of the foregoing, that the ultimate explanation for the perpetuated cigaret habit resides in the pharmacological effect of smoke upon the body of the smoker, the

effect being most rewarding to the individual under stress.

1000273741-3771 at 3752 (U.S. Ex. 26,080).

1420. Philip Morris also produced a February 16, 1970 Research and Development report titled "Some Methods Notes on the Past Research on Cigarette Smoker Motivation" in which the author acknowledged that the smoking "pattern is strongly resistant to extinction." Later in the report, the author referred to the "puffing act" as an "injection of nicotine."

1003287849-7856 at 7849, 7853-7854 (U.S. Ex. 85,246).

1421. Philip Morris's awareness of nicotine as the crucial ingredient in cigarettes was also made plain in a November 1, 1971 research report authored by Thomas Schori and approved by Dunn. It accepted a 1943 scientific study's results which suggested that a habitual smoker continues to smoke because of the pharmacological effects of nicotine in the cigarettes.

1000350158-0188 (U.S. Ex. 20,176).

1422. Notwithstanding its longtime public denials that smoking cessation induces withdrawal – one of the classic hallmarks of addiction – Philip Morris knew the extreme difficulty of quitting and the physical and mental effects of cessation attempts on the smoker. Scientists Dunn and Frank Ryan described some of the withdrawal effects of nicotine in a 1971 study on cessation in the following colorful terms:

Even after eight months quitters were apt to report having

neurotic symptoms, such as feeling depressed, being restless and tense, being ill-tempered, having a loss of energy, being apt to doze off. They were further troubled by constipation and weight gains which averaged about five pounds per quitter . . . This is not the happy picture painted by the Cancer Society's anti-smoking commercial which shows an exuberant couple leaping into the air

and kicking their heels with joy because they have kicked the habit. A more appropriate commercial would show a restless, nervous, constipated husband bickering viciously with his bitchy wife who is nagging him about his slothful behavior and growing waistline.

1000348671-8751 at 8676, 8708 (U.S. Ex. 20,097).

1423. With respect to the phenomenon of nicotine "compensation," Schori and Dunn wrote in a January 1972 Report titled "Tar, Nicotine, and Cigarette Consumption" that their research:

supports the notion that smokers develop a daily nicotine intake quota and that when smoking cigarettes differing in nicotine delivery from that to which they are accustomed they tend to modify their consumption rate in order to maintain their normal quota. No support was found for the analogous notion of a daily tar intake quota, however.

1003285403-5416 at 5403 (U.S. Ex. 20,159).

1424. In a 1972 "Confidential" research report titled "Motives and Incentives in Cigarette Smoking," Dunn asserted that people smoke in order "to obtain nicotine," and that nicotine "is the industry's product," adding that "without nicotine, the argument goes, there would be no smoking." In the "Confidential" report, Dunn summarized a 1972 CTR-sponsored conference held on the Caribbean island of St. Martin. He wrote:

The majority of the conferees would go even further and accept the proposition that nicotine is the active constituent of cigarette smoke.

Without nicotine, the argument goes, there would be no smoking. Some strong evidence marshaled to support this argument:

- 1) No one has ever become a cigarette smoker by smoking cigarettes without nicotine.
- 2) Most of the physiological responses to inhaled smoke have

been shown to be nicotine-related.

2023193286-3304 at 3289 (U.S. Ex. 22,967); 503654881-4885 (U.S. Ex. 88,413); 105394371-4388 (U.S. Ex. 88,414).

1425. Most graphically, Dunn urged the industry to view the cigarette pack as the "storage container for a day's supply of nicotine," the cigarette as the "dispenser for a dose unit of nicotine," and the puff of smoke as the "vehicle of nicotine":

The cigarette should be conceived not as a product but as a package. The product is nicotine. The cigarette is but one of many package layers. There is the carton, which contains the pack, which contains the cigarette, which contains the smoke. The smoker must strip off all these package layers to get to that which he seeks. . . .

Think of the cigarette pack as a storage container for a day's supply of nicotine. . . .

Think of the cigarette as a dispenser for a dose unit of nicotine: it is readily prepped for dispensing nicotine. . . .

Think of a puff of smoke as the vehicle of nicotine

Smoke is beyond question the most optimized vehicle of nicotine and the cigarette the most optimized dispenser of smoke.

2023193286-3304 at 3290-3291 (U.S. Ex. 22,967); 2501200383-0401 at 0387-0388 (U.S. Ex. 85,247).

1426. During a presentation of his paper delivered at St. Martin and at the 1972 CORESTA/TCRC Joint Conference, Dunn summarized his conclusions from current research on why people smoke. Dunn wrote that, "It is contended in this paper that nicotine, specially packed, is the cigarette industry's product." Dunn added that, "The smoker takes nicotine into his

system in order to obtain the salutary effects of nicotine upon body function." 1001820498-0500 at 0498 (U.S. Ex. 26,121); 2021423403-3497 at 3484 (U.S. Ex. 36,743); 89285181-5188 at 5181 (U.S. Ex. 23,583).

1427. In another version of his paper, Dunn replaces "nicotine" with "cigarette smoke" when describing the "salutary effects" sought by smokers. 2024273959-3975 at 3961 (U.S. Ex. 21,461) (U.S. Ex. 76,198).

1428. A March 1973 Philip Morris Research Report titled "Smoking Behavior: Real World Observations," written by Philip Morris scientists Dunn, Thomas Schori and Janet Duggins, reported that a Philip Morris in-house study had shown that, "the smokers in this study are now smoking cigarettes delivering less tar and nicotine than those they smoked in 1968 and that they are smoking both more rod per cigarette and more cigarettes." This demonstrates that Philip Morris's research continues to confirm the existence of nicotine compensation in the early 1970s. 1000353355-3410 at 3361 (U.S. Ex. 35,242).

1429. In a presentation to Philip Morris USA President Clifford Goldsmith dated May 8, 1974, Dunn explained how in-house research suggested that smokers titrate or regulate their smoke intake to get what they want out of the smoke. In recommending additional research, Dunn also attributed titration and the hold of cigarettes to more than a mere habit:

I'm sure you are aware of our belief that people smoke for rewards they get from smoke at the pharmacological level. . . . It's simply not an adequate explanation to say that smoking is a habit, or that it is social behavior. A smoker is introducing something into his system that he wants. Certain components of smoke, most likely nicotine, act upon his system in some undetermined way to give him some undetermined pleasure. If this is true, then we expect the smoker to seek to take in that amount of smoke that does the job

best for him. He is going to regulate his intake to suit his need. . .
We are hypothesizing that the smoker titrates (regulates) his smoke
intake to suit his dosage needs.

100324972-4976 at 4972-4973 (U.S. Ex. 85,248).

1430. Research conducted at the Philip Morris Research Laboratory in June 1974 using high nicotine and low nicotine cigarettes "showed the existence of a definite compensation mechanism" among smokers. According to the report, titled "Human Smoking Habits," these findings were consistent with:

evidence in literature that the nicotine of cigarette smoke exerts a distinct pharmacological effect on the smoker which reinforces the smoking behavior. **The smoker doses himself with nicotine according to his personal needs** which depend on the level of arousal, external stress, his personality and, possibly, a number of other factors.

1001812883-2903 (U.S. Ex. 85,249) (emphasis added).

1431. In an undated handwritten memo, probably penned in the 1970s, Dunn voices his surprise that the industry could not fully separate nicotine from tar, given what the company knew of nicotine at that time:

It is also remarkable that nicotine delivery has not been liberated from tar delivery, particularly in view of the importance of nicotine as the significant, if not the primary gratification component of the smoke. This is not to say that the task is simple: it is not simple. Consider the ways currently available for altering the nicotine delivery level, with accompanying reasons why these ways do not readily permit independent nicotine variation.

1003285420-5424 at 5420 (U.S. Ex. 85,250); 2021423403-3497 at 3464 (U.S. Ex. 36,743).

1432. Dunn then listed the methods at Philip Morris's disposal to manipulate nicotine

delivery in its products, including air dilution, filtration, nicotine extraction/addition, leaf selection, and base additives to increase pH. 1003285420-5424 at 5421-5422 (U.S. Ex. 85,250).

1433. R.J. Reynolds studied Philip Morris's efforts to deliver nicotine to smokers and concluded that "Philip Morris has been closely controlling the pH level of its products for several years, and appears to place emphasis on maintaining a high level of 'free nicotine,' the nicotine actually available to the smoker." 503940669-0672 at 0669 (U.S. Ex. 50,541).

1434. In March 1975, Helmut Wakeham proposed an industry scientific conference on "The Regulatory Influence of Smoking Upon Human Behavior" to discuss research ideas into the effects of stimulant and calming effects of smoking on the smoker. LWODJ9056332-6332 (U.S. Ex. 87,072); LWODJ9056318-6323 (U.S. Ex. 87,071).

1435. Philip Morris knew that nicotine delivery translated not only into addiction among "seasoned" smokers, but into bottom line sales. In a May 14, 1975 report evaluating the relationship between a steep short-term decline in sales of Marlboro to a concurrent decline in nicotine, Dunn wrote:

Nicotine has been singled out for attention because many investigators of smoking behavior, including some P.M. R&D people, have contended that the seasoned cigarette smoker smokes for the nicotine in the smoke. In view of that contention, the question has been raised as to whether the declining nicotine delivery values reported for Marlboro Red could be responsible for the declining sales increment.

1003391322-1328 (U.S. Ex. 87,073).

1436. In a September 8, 1975 letter to Philip Morris-funded researcher Stanley Schachter, a psychology professor at Columbia University, Dunn discussed a reduction in

nicotine in Marlboro cigarettes and acknowledged the existence of smoker's compensation to obtain more nicotine, which he referred to as "the goodies":

Thus to accommodate to the 15% reduction in available Marlboro nicotine, the smoker who was getting 50% of the available nicotine into his blood from the Marlboro delivering 1.3 mg of nicotine into a smoking machine and now must get 59% of what the current Marlboro offers him. He can take bigger puffs, or inhale more from the supply drawn into the mouth (we have varying quantities of residual smoke in the mouth at the end of an inhalation) or for more efficient extraction of the goodies, he can draw it in deeper or hold it in longer.

1000738509-8510 at 8510 (U.S. Ex. 85,251).

1437. Schachter was a Philip Morris-funded researcher for many years. However, his studies of nicotine and human behavior led him to conclude eventually that smoking was indeed addictive. He reported to Philip Morris in 1977 that, "We propose instead that virtually all long-time smokers, heavy or light, are addicted and suggest that many, perhaps all, exceptions to the addiction model can be understood in terms of such notions as self-control, concern with health, restraints, etc." 1003291155-1191 at 1189 (U.S. Ex. 87,074); 1003291151-1153 (U.S. Ex. 87,075).

1438. An October 1, 1975 Philip Morris research memorandum titled "Smoke Impact, Part I: Cigarette Smoking and Heart Rate" stated that, "Nicotine is the main determinant for sustaining the smoking habit" and "there is an optimal dose of nicotine, too little or too much is rejected by tobacco smokers." 1003294245-4261 at 4246 (U.S. Ex. 20,170).

1439. In approximately 1976, Philip Morris researcher Frank Ryan explained why people smoke in terms of habit versus need. In Ryan's view, the habit of smoking was very

SECTION IV.E.

distinct from a smoker's need for nicotine. In a November 11, 1977 memorandum titled "Smoker Psychology," Ryan described nicotine intake as the "critical mainstay of tobacco consumption," and provided the following background for research to be carried out at Virginia Commonwealth University:

Many of [a smoker's] cigarettes will be smoked out of habit (i.e., will be conditioned responses triggered by external cues) rather than out of any nicotine need (i.e., will be conditioned responses triggered by internal cues). All these cigarettes contribute to the total nicotine in the system, so that **a cigarette smoked out of habit will delay the time until a cigarette is smoked out of need.**

1003287995-7995 (U.S. Ex. 35,702) (emphasis added).

1440. In a March 1, 1977 memorandum, Philip Morris-funded researcher Stanley Schachter described a smoker as an "addict" who smokes to maintain his nicotine levels:

To the extent that [he is] an addict, he is probably smoking to keep nicotine or one of its active metabolites at some optimal level. If, then, the heavy smoker does switch to low nicotine brands, he may very well end up smoking more cigarettes and taking more puffs of each.

1003724353-4387 at 4353 (U.S. Ex. 21,887).

1441. In a November 29, 1977 memorandum, Philip Morris Director of Science and Technology Thomas Osdene discussed his concerns about statements made by a CTR staff member who had acknowledged that "Opiates and nicotine may be similar in action," "We accept the fact that nicotine is habituating," and "There is a relationship between nicotine and the opiates." 1005045000-5000 (U.S. Ex. 20,194).

1442. In a December 19, 1977 interoffice memorandum titled "Behavioral Research

SECTION IV.E.

Accomplishments - 1977," and sent to Osdene, Dunn acknowledged the importance of nicotine for the smoker, when he listed as one of Philip Morris's 1977 successes the fact that the company had "shown that [it] can distinguish between regulator and nonregulator smokers and that after being deprived, the regulators do indeed try to make up for lost intake." "Regulators" were defined as smokers who "smoke for nicotine." 1003293322-3330 at 3322, 3324-3325 (U.S. Ex. 35,741).

1443. From approximately 1977 to 1981, Philip Morris carried out internal nicotine behavioral research establishing that nicotine functioned as a positive reinforcer of smoking. This research, conducted by Dr. Victor DeNoble and others, demonstrated that both nicotine and acetaldehyde in cigarette smoke were positive reinforcers and that animals self-administered nicotine to obtain its effects. 1003293284-3293 (U.S. Ex. 85,252); 1002973585-3614 (U.S. Ex. 35,632).

1444. Aware of nicotine's importance to the company and the industry, Osdene voiced concerns at a meeting with the scientific director of CTR in New York on January 5, 1978. Philip Morris had sent Osdene and Seligman to CTR to discuss several contract research programs, one of which concerned nicotine antagonists (as opposed to nicotine analogs). Seligman's comments revealed the importance of nicotine to the future of cigarette manufacturing. According to Osdene's memorandum of the meeting:

Dr. Seligman brought up the grant by Dr. Abood in which one of the stated aims was to make a clinically acceptable antagonist to nicotine. This goal would have the potential of putting the tobacco manufacturers out of business.

1000286213-6214 at 6213 (U.S. Ex. 35,204).

SECTION IV.E.

1445. A December 1, 1978 Philip Morris report by researcher James L. Charles titled "The Nicotine Program" stated that "[n]icotine, a powerful pharmacological agent with multiple sites of action, is the most important component of cigarette smoke" and that "[n]icotine and an understanding of its properties are important to the continued well-being of our cigarette business" 1003033413-3417 at 3413 (U.S. Ex. 20,143); 2022954925-4929 at 4925 (U.S. Ex. 85,253).

1446. The ongoing "Nicotine Program" described in the 1978 report was carried out by Philip Morris well into the 1980s. This major research initiative studied nicotine's effects on the central and peripheral nervous systems, nicotine analogs, and "behavioral effects" of nicotine. 1003033413-3417 (U.S. Ex. 20,143); 1003289974-9975 (U.S. Ex. 21,553); 1000125871-5872 (U.S. Ex. 35,146); 1000127789-7790 (U.S. Ex. 34,422) (U.S. Ex. 35,151); 2022150943-0951 (U.S. Ex. 85,254).

1447. In a March 1978 report titled "Exit-Brand Cigarettes: A Study of Ex-Smokers," scientist Frank J. Ryan of the Philip Morris Research Center in Richmond again flatly admitted Philip Morris's substantial understanding of the role of nicotine in tobacco use at that time: "We think that most smokers can be considered nicotine seekers, for the pharmacological effect of nicotine is one of the rewards that come from smoking. When the smoker quits, he foregoes his accustomed nicotine. The change is very noticeable, he misses the reward, and so he returns to smoking." 1000368057-8080 at 8060 (U.S. Ex. 20,098).

1448. In the same March 1978 report, Ryan stated that, "If the industry's introduction of acceptable low-nicotine products does make it easier for dedicated smokers to quit, then the wisdom of the introduction is open to debate." 1000368057-8080 at 8060 (U.S. Ex. 20,098)

(emphasis in original).

1449. Wakeham, having apparently read a review of the Philip Morris Nicotine Program by Dunn, wrote a memorandum of concern to Seligman dated February 22, 1979. While Wakeham disagreed with the primary focus of the program on nicotine, he admitted that, "I do not deny that many smokers maintain the habit for psychopharmacological reasons."

1003293238-3239 at 3238 (U.S. Ex. 26,150).

1450. In a February 3, 1979 letter to Philip Morris President and CEO Hugh Cullman titled "The Slow Motion Self-Suicide of the Tobacco Industry," D. Todorovic, a retired Philip Morris International researcher, stressed the negative impact of "cigarette substitutes" on conventional cigarette sales and recommended against their development:

It is obvious that such a tremendous sales gain of 'cigarette substitutes' is done at the expense of normal, conventional cigarettes, and there lies all the danger in the near future for the very survival of [the] Tobacco Industry, because these 'cigarette substitutes' are unable to make smokers addicts to tobacco. The present smokers of 'cigarette substitutes' are the future smoker quitters.

2010064696-4699 at 4697 (U.S. Ex. 20,303).

1451. Given the company's understanding of the importance of nicotine in maintaining smoking addiction, and thus its profits from cigarette sales, this anti-"cigarette substitute" sentiment was prevalent at Philip Morris. Ian Uydess, a Philip Morris scientist from 1977 until 1989, commented that Philip Morris knew that a cause and effect relationship existed between market performance and nicotine delivery levels. The document also makes clear that nicotine was distinct from taste:

This belief . . . was reflected in many of the comments made at a number of internal meetings at which zero and "ultra low" delivery products were being discussed. Some scientists even predicted that products made with "no" or "too low" a level of nicotine would probably fail in test markets, "no matter what they tasted like."

2058335137-5176 at 5147 (U.S. Ex. 20,500).

1452. Clearly nicotine was not a necessary component of cigarettes for its taste. Indeed, Philip Morris scientists understood very well that as far as "taste" was concerned, nicotine had an "acrid burning taste" standing alone. 2060537042-7045 (U.S. Ex. 87,077).

1453. In a March 21, 1980 memorandum to Seligman, Dunn described in detail the Philip Morris-directed "Nicotine Receptor Program," a research initiative whose aim was the "understanding [of] the specific action of nicotine which causes the smoker to repeatedly introduce nicotine into his body." However, Dunn stated cautiously that, "Any action on our part, such as research on the psychopharmacology of nicotine, which implicitly or explicitly treats nicotine as a drug, could well be viewed as a tacit acknowledgment that nicotine is a drug." 0000127789-7790 at 7789 (U.S. Ex. 21,794); 2022249518-9518 at 9518 (U.S. Ex. 36,870); 1000127789-7790 (U.S. Ex. 34,422) (U.S. Ex. 35,151).

1454. Dunn also thought it was important to point out to Seligman that "the acute, transient, short-lived effects of nicotine upon a physiological system" were the "effect sought by the smoker." In the attachment to his memo, Dunn summed up the relationship between his company and nicotine as follows: "PM sells cigarettes. Cigarettes deliver nicotine." 0000127789-7790 at 7789 (U.S. Ex. 21,794); 1000127791-7792 (U.S. Ex. 35,152); 2022249518-9518 at 9518 (U.S. Ex. 36,870).

SECTION IV.E.

1455. Dunn's memorandum to Seligman was preceded by that of another Philip Morris scientist, James L. Charles, who also provided Seligman an assessment of the "Nicotine Receptor Program" on March 18, 1980. Charles opened his memorandum with the following observations:

Nicotine is a powerful pharmacological agent with multiple sites of action and may be the most important component of cigarette smoke. Nicotine and an understanding of its properties are important to the continued well-being of our cigarette business since this alkaloid has been cited often as "the reason for smoking" and theories have been advanced for "nicotine titration" by the smoker.

100328974-8975 at 8974 (U.S. Ex. 87,078).

1456. Charles had made similar observations about nicotine in an earlier memorandum outlining the Philip Morris Nicotine Program dated December 1, 1978. He stated that his views had not changed in the intervening years. 1003289991-9995 (U.S. Ex. 26,147); 2500126721-6794 at 6732 (U.S. Ex. 85,257).

1457. Dunn wrote another memorandum dated March 24, 1980 to Seligman relating to a parallel effort at Philip Morris to create cigarettes with even higher nicotine to tar ratios, given his belief that smokers smoked only for nicotine. He wrote:

If even only some smokers smoke for the nicotine effect (I personally believe most regular smokers do) then in today's climate we would do well to have a low TPM [total particulate matter, or tar] and CO [carbon monoxide] delivering cigarette than can supply adequate nicotine.

1003285586-5586 (U.S. Ex. 22,029).

1458. Dunn wrote a memorandum to Osdene dated June 2, 1980, in which he stated that

the Behavioral Research Lab was conducting "particularly exciting and promising" tests demonstrating "self-administration of nicotine by rats." 1000017375-7375 (U.S. Ex. 85,258).

1459. In an August 12, 1980 memorandum to the Vice President of Research and company directors, company Director of Science and Technology Thomas Osdene ranked nicotine research - and specifically the Philip Morris Nicotine Program - as one of the company's top Research and Development priorities because "the thing we sell most is nicotine":

Nicotine Program. This program includes both behavioral effects as well as chemical investigation. My reason for this high priority is that I believe the thing we sell most is nicotine.

1003030124-0125 at 0124 (U.S. Ex. 26,132).

1460. Philip Morris's nicotine research included studies beginning before 1980 and continuing until 1984 to develop nicotine analogs as part of a purposeful effort to find a nicotine-equivalent drug that would retain nicotine's effects on the brain without nicotine's known adverse cardiovascular effects. Expert Report of Jeffrey Harris, United States v. Philip Morris, et al. (R. 690; filed November 15, 2001) at 6, 33-36. This was the same goal of nicotine analog research by BATCo that began in the early 1960s, described infra.

1461. The Nicotine Program was able to demonstrate "tolerance" to nicotine, or diminished effects of nicotine after repeated exposure to the drug. A quarterly report by Dunn and a progress report by DeNoble, both from 1980, illustrate tolerance in rats given intraventricular injections of nicotine in the Philip Morris labs. 1003293104-3106 (U.S. Ex. 85,259); 1000128587-8596 (U.S. Ex. 85,260).

1462. Philip Morris shared its extensive nicotine and smoking behavior knowledge with

BATCo. According to an October 12, 1979 "RESTRICTED" report from BATCo scientist L.C.F. Blackman, he accepted Philip Morris's invitation to visit the Philip Morris Research Center, and was briefed by scientists Osdene, Seligman, and Levy on the company's work, including the development of nicotine alternatives, nicotine discrimination studies, and EEG research. 109877493-7499 (U.S. Ex. 87,079).

1463. With respect to tolerance, a March 16, 1983 memorandum from Dr. Charles to Dr. Osdene stated that, "We can successfully defend the absence of withdrawal under controlled experiments, but we cannot defend tolerance. Tolerance to nicotine is a well-established fact." 1005061346-1346 (U.S. Ex. 20,199); 2022252680-2680 (U.S. Ex. 36,873).

1464. Philip Morris's sales director in the United Kingdom, George Mackin, wrote an article for a British tobacconist magazine dated December 4, 1981, where he admitted that cigarettes were addictive and that smokers developed tolerance. Mackin wrote that cigarettes were important to overall sales British convenience stores because:

Cigarettes are not just habit forming - the body builds up a requirement for them. Twenty million smokers cannot do without their weed. Take the example of a man going to work in the morning. It's pouring with rain. There are six cars already parked outside the shop. So, there are at least 90 yards to walk back. Would he stop for a newspaper? Would he get out for a Kit Kat?

The answer is probably No, but he would stop for his fags, **because he is addicted to cigarettes.** And while he is buying a pack, he takes a morning paper and a Kit Kat. (emphasis added)

2501013567-3568 (U.S. Ex. 27,920); 504336658-6658 (U.S. Ex. 85,261).

1465. The Mackin article caused a stir among several cigarette manufacturers, as well as

Shook, Hardy & Bacon, when news of his statements became known. However, none of the lawyers who commented on the article disagreed with it. For example, one Philip Morris attorney in Switzerland noted that the Mackin's admissions were only "very unfortunate" and "could cause a lot of problems for us." Another attorney wrote more to the point that "**in the product liability context these concepts are important, particularly as regards issues of risk assumption.**" (emphasis added) 2024950721-0721 (U.S. Ex. 20,404); 2501013567-3568 (U.S. Ex. 27,920); 2046754761-4761 (U.S. Ex. 85,263); 501626662-6662 (U.S. Ex. 85,264).

1466. In 1982 and 1983, Philip Morris conducted a study on high school students that not only showed an "encouraging upward trend in smoking" but also a link between cigarette smoking and the use of amphetamines. In his report dated February 18, 1983, Philip Morris's Byron Johnston tied cigarette smoking to drug use :

The third chart shows the percent who used stimulants (amphetamines) or smoked marijuana or cigarettes during the past month. What I find intriguing is that marijuana and stimulant use increased as cigarette smoking declined, and that as marijuana use began to decline, the rate of decline in cigarette smoking slowed, and that stimulant use is virtually a mirror image of cigarette usage. **It almost looks as though stimulants and cigarettes are interchangeable to these kids (a notion that has some intuitive validity).** If so, and if stimulant use continues to decline, we should be able to expect smoking prevalence to continue to increase. (emphasis added)

1003285174-5178 at 5174 (U.S. Ex. 20,157).

1467. Philip Morris knew a significant portion of its customers wanted to quit but could not do so. A March 29, 1985 presentation at a "meeting of top management" was titled "The Perspective of PM International on Smoking and Health Issues." In this presentation,

SECTION IV.E.

management was told that only 5% of smokers would likely vote to assist the industry. This was because: "There are some 50 million smokers today in the U.S. I realize that research tells us that **the majority of smokers wished they did not smoke** and are, therefore, unlikely to be of much help to the industry." (emphasis added) 2023268329-8337 at 8331 (U.S. Ex. 26,784).

1468. Philip Morris's intensive internal research on nicotine continued into the 1990s. For example, a May 22, 1990 report stamped "PERSONAL AND CONFIDENTIAL" to scientific director Richard Carchman from company chemists/scientists Frank Gullotta, C.S. Hayes, and B.R. Martin reported on the "Stereospecific Effects of Nicotine and Electrophysiological and Subjective Responses." This research contrasted the physiological effects of two forms of nicotine, "d-nicotine" and "l-nicotine" using human smokers. 2025986606-6612 (U.S. Ex. 20,421).

1469. Many other Philip Morris documents reveal the company's in-depth knowledge of nicotine and a desire to exploit nicotine's effects on the human body. 2025986350-6401 (U.S. Ex. 87,080); 1000385483-5522 (U.S. Ex. 87,311); 1000221722-1726 (U.S. Ex. 87,081); 1003290519-0531 (U.S. Ex. 87,082); 1003287880-7890 (U.S. Ex. 20,163); 2023069596-9604 (U.S. Ex. 87,083); 1003294165-4180 (U.S. Ex. 87,084); 2062951465-1477 (U.S. Ex. 87,312); 1003292806-2811 (U.S. Ex. 87,086); 1003295309-5310 (U.S. Ex. 87,087); 1000128672-8672 (U.S. Ex. 87,088); 2022163557-3560 (U.S. Ex. 87,089); 1003293244-3245 (U.S. Ex. 35,738).

1470. A November 8, 1990 Philip Morris memorandum to Research and Development Vice President Cathy Ellis from Frank Gullotta titled "Raison d'etre" stated: "We have shown that **there are optimal cigarette nicotine deliveries for producing the most favorable**

physiological and behavioral responses. Our laboratory has demonstrated that all forms of nicotine are not behaviorally or physiologically equal. This observation is important for evaluating research cigarettes where the addition of nicotine is necessary." 2028813366-3368 at 3366 (U.S. Ex. 20,430) (U.S. Ex. 76,179) (emphasis added).

1471. The Philip Morris Nicotine Program was described in detail in a lengthy 1992 review prepared by outside counsel Shook, Hardy & Bacon titled "Philip Morris Behavioral Research Program." In this review, counsel summarized many aspects of the company program, directed by Dunn, and cited specific documents showing a major internal research initiative that began in 1969 only to end abruptly in 1984. The Shook, Hardy & Bacon report: provided the following chronology:

<u>Date</u>	<u>Event</u>
1969	Hutchinson funded
1972	Berntson funded Hutchinson funding ceased
1974	Waldbillig funded
1975	Levy hired
1977	Berntson hired as consultant Gullotta hired Electrophysiology and comparative psychology programs initiated Waldbillig funding terminated
1979	Abood funded
1980	DeNoble hired
1981	Egle funded Berntson research terminated
1984	Egle funding terminated Berntson consultancy lapses Abood funding terminated

2021423403-3461 at 3408-3409 (U.S. Ex. 36,743).

1472. The Shook, Hardy & Bacon document described how Philip Morris Nicotine

SECTION IV.E.

Program scientists demonstrated tolerance to nicotine, behavioral effects, nervous system effects, and other results consistent with dependence and addiction. 2021423403-3461 at 3440-3443 (U.S. Ex. 36,743).

1473. The 1992 report also made clear that the program generated results and was still generating data in 1984 related to nicotine receptors, analogs, peripheral nervous system effects, central nervous system effects, effects on animal behavior, and differences between high nicotine delivery and low nicotine delivery cigarettes. With respect to the reasons why the Nicotine Program was ended in 1984, the report states ominously the following: "For reasons never stated in any internal documents, Philip Morris cancelled the Nicotine Program in spring 1984. The decision to cancel the program may have been the result of outside counsel's legal advice. 2021423403-3461 at 3408 (U.S. Ex. 36,743).

1474. A similar 1994 Shook, Hardy & Bacon report titled "Philip Morris Research on Nicotine Pharmacology and Human Smoking Behavior" also reviewed and detailed much the Philip Morris nicotine research described above. The report, while at times attempting to place favorable "spin" on company actions, acknowledged many Philip Morris documents and statements consistent with the company's awareness of nicotine addiction. 2046819241-9265 (U.S. Ex. 85,265).

1475. For example, the 1994 report summarized DeNoble's research showing that nicotine and acetaldehyde were synergistically reinforcing: "It was DeNoble's experience with acetaldehyde that it condensed in the brain to form Dopamine-like compounds and made the animal somewhat 'euphoric.'" Philip Morris was able to link this noted "euphoric" effect to

cigarette sales. In fact, DeNoble and fellow researcher Frank Ryan generated research indicating "that acetaldehyde and nicotine data could be used to predict cigarette sales at a 96% accuracy." 2046819241-9265 at 9249 (U.S. Ex. 85,265).

1476. The 1994 report also described how DeNoble was able to demonstrate both "behavioral tolerance" and "metabolic tolerance" to nicotine, other important aspects of addiction. 2046819241-9265 at 9250-9251 (U.S. Ex. 85,265).

1477. The report later noted that "additional research on nicotine/acetaldehyde synergism may have shown that cigarettes were in fact addictive." Unfortunately, Philip Morris terminated DeNoble and ended his research, effectively ending the likelihood of such "additional research." The Shook, Hardy & Bacon lawyers who prepared this report after reviewing their client's documents wrote: "Laboratory Shutdown [CAVEAT: Significance is self-evident.]" 2046819241-9265 at 9254, 9256-9258 (U.S. Ex. 85,265).

1478. The planning, findings, and significance of the Philip Morris Behavioral Research Program in the 1970s and 1980s and Dr. DeNoble's research in particular are described in numerous Philip Morris documents. 1002973585-3615 (U.S. Ex. 35,632); 2056145924-5927 (U.S. Ex. 87,090); 1003293284-3293 (U.S. Ex. 85,252); 2500126721-6787 (U.S. Ex. 85,257); 1003060443-0503 (U.S. Ex. 87,091); 1003582081-2082 (U.S. Ex. 35,826); 1002973179-3180 (U.S. Ex. 87,092); 1001894698-4705 (U.S. Ex. 87,093); 1000052405-2413 (U.S. Ex. 87,094); 1000017985-8021 (U.S. Ex. 87,095); 1003293138-3144 (U.S. Ex. 87,096); 1000017375 (U.S. Ex. 85,258); 1003060646-0655 (U.S. Ex. 87,097); 10030606-0606 (U.S. Ex. 87,098); 1003060638-0643 (U.S. Ex. 87,099); 1002972788-2796 (U.S. Ex. 87,100); 1003186849-6854

SECTION IV.E.

(U.S. Ex. 87,101); 1000128665-8667 (U.S. Ex. 87,102); 1000128662-8663 (U.S. Ex. 87,103); 1000128664-8664 (U.S. Ex. 87,104); 1000128668-8671 (U.S. Ex. 87,105); 1003293241-3243 (U.S. Ex. 87,106); 1003293216-3217 (U.S. Ex. 87,107); 1000413881-3964 (U.S. Ex. 20,100); 1003198459-8461 (U.S. Ex. 20,156); 1003720350-0352 (U.S. Ex. 87,108); 2047340075-0079 (U.S. Ex. 87,109); 2022955358-5361 (U.S. Ex. 87,110); 2022955501-5502 (U.S. Ex. 87,111); 2057069742-9769 (U.S. Ex. 88,762).

1479. Philip Morris was conducting secret nicotine and smoking behavior research in Europe during this time frame as well. 1000012310-2346 (U.S. Ex. 35,065); 1000301691-1720 (U.S. Ex. 87,112).

1480. Philip Morris Planning Director Barbara Reuter prepared an analysis of the company's plans to market an alternative nicotine delivery product under the code name "TABLE" in 1993. The 20-page plan, dated October 1992 and stamped "CONFIDENTIAL," stated the following in the "Background" section:

Different people smoke cigarettes for different reasons. But, **the primary reason is to deliver nicotine into their bodies.** Nicotine is an alkaloid derived from the tobacco plant. It is a physiologically active nitrogen containing substance. **Similar organic chemicals include nicotine, quinine, cocaine, atropine, and morphine.** While each of these substances can be used to affect human physiology, nicotine has a particularly broad range of influence.

During the smoking act, nicotine is inhaled into the lungs in smoke, enters the bloodstream and travels to the brain in about eight to ten seconds. The nicotine alters the state of the smoker by becoming a neurotransmitter and a stimulant. Nicotine mimics the body's most important neurotransmitter, acetylcholine (ACH), which controls heart rate and message sending within the brain. The nicotine is used to change psychological states leading to

enhanced mental performance and relaxation. A little nicotine seems to stimulate, while a lot sedates a person. A smoker learns to control the delivery of nicotine through the smoking technique to create the desired mood state. In general, the smoker uses nicotine's control to moderate a mood, arousing attention in boring situations and calming anxiety in tense situations. Smoking enhances the smoker's mental performance and reduces anxiety in a sensorially pleasurable form. (emphasis added)

2020154466-4486 at 4467 (U.S. Ex. 26,722); 2020154437-4437 (U.S. Ex. 85,266).

1481. Altria General Counsel Murray Bring acknowledged the addictiveness of smoking in a July 31, 1992 internal memo on PMC letterhead to William Campbell and Bill Murray which discussed recent research on cocaine, and posed these questions from then-PM CEO Michael Miles: "First, how do we stay up to date on the state of smoking cessation technology; second, what effect would a reliable, readily available "habit breaker" have on our business; and third, what – if any – contingency plans should we be making now?" 2074091232-1232 (U.S. Ex. 27,480).

1482. An October 2, 1992 memorandum from Carolyn Levy to William Campbell reviewed the efficacy of nicotine patches coupled with behavioral therapy to achieve smoking cessation success. Levy stated that the company was almost ready with an alternative nicotine delivery device. She concluded that, "This suggests that at the very least we should have contingency plans for a change in the predominant form of nicotine usage. . . . If these circuits do mediate nicotine intake and they could be blocked, then it is possible that cigarettes' appeal would decline." 2023012974-2975 (U.S. Ex 36, 943).

1483. The Altria Board held a seminar on addiction issues, among other things, on September 28, 1994. 2047096909 (U.S. Ex. 86,915).

SECTION IV.E.

1484. Other documents show that during the 1970s and 1980s, researchers at Philip Morris attempted to find an analogue of nicotine, i.e. a substance of similar chemical structure, that had the same effect on the brain but no side effects on the cardiovascular or cerebral systems. 1000403178–3604 at 3237–3238 (U.S. Ex. 20,099); 2020154437-4437 (U.S. Ex. 85,266).

1485. Philip Morris filed its first nicotine-analogue patent application in June 1976, stating only that the patented compounds had "utility as intermediates for the production of ultimate compounds of known utility." 2026403670-3673 (U.S. Ex. 20,426).

1486. In June 1977, the company applied for a second patent on the synthesis of 2-alkyl nicotinoids, stating only that ". . . the synthesis of ortho-alkylated nicotinoids and their evaluation as insecticides is of considerable interest." There followed a number of additional patents on the synthesis of other nicotine analogues. 2060489246-9255 (U.S. Ex. 21,918).

1487. Some of these later patents, including the last two patents filed in 1989 (No. 5,015,741) and 1990 (No. 5,138,062), noted the pharmacologic effects of nicotine in experimental animals, specifically the tranquilizing and sedating effects of the drug when it was instilled directly into the rat brain. 89283587-3614 at 3598 (U.S. Ex. 85,267).

1488. During the late 1970s, Philip Morris International established a clandestine screening program to determine whether particular chemical variants of nicotine affected the brain differently than the rest of the body. 0000127789-7790 (U.S. Ex. 21,794).

1489. Among the screening tests used were tests that could also be used to evaluate a drug's addictive potential: torpedo fish membrane binding (a test developed in the 1960s); the guinea pig ileum model (developed in the 1950s); prostration test (developed in 1977-1978, in

SECTION IV.E.

which nicotine was directly injected into a test animal's brain); discrimination testing (in which a test animal already trained to press a lever after receiving nicotine was then given an intramuscular injection of a test compound); and finally self-administration, in which rats were observed to see if they would repeatedly give themselves injections of the test drug. Expert Report of Jeffrey E. Harris, United States v. Philip Morris, et al., (R.660; November 15, 2001) at 42.

1490. Many of the above Philip Morris documents are acknowledged by Philip Morris attorneys in several Bliley documents recently disclosed during the State of Minnesota litigation. 2021423403-3497 (U.S. Ex. 36,743); 2500126796-6862 (U.S. Ex. 86,611); 2504078678-8744 (U.S. Ex. 86,612).

1491. Even lawyers for Philip Morris recognized that the scientific consensus was that nicotine and smoking were addictive. One Philip Morris document apparently prepared by a law firm is titled "REJECTED WITNESSES (ADDICTION)." This table lists approximately 120 addiction experts recommended by industry lawyers and scientists, then probed by industry lawyers as possible witnesses. The vast majority of the witnesses were "rejected" on the basis of their conclusions that nicotine and smoking were addictive or dependence-producing, or on the basis of other "anti-industry" views. The remainder were rejected on the basis of lack of experience. 2025005260-5275 (U.S. Ex. 88,763).

(ii) R.J. Reynolds

1492. In a November 16, 1967 response to an inquiry on a nicotine inhibitor patent, R.J. Reynolds scientist Eldon D. Nielson wrote that the tobacco companies would not want such an

SECTION IV.E.

item, as they were "selling a nicotine effect, not fighting it." 502001177-1177 (U.S. Ex. 29,547).

1493. Because it understood the importance of retaining sufficient nicotine to maintain dependence on its so-called "low tar/low nicotine" cigarettes,

504210018-0018 (U.S. Ex. 50,577); 522598277-8277 (U.S. Ex. 80,744) (Confidential).

1494. In a March 28, 1972 memorandum regarding the development of new products, Reynolds scientist Claude Teague stated that for the typical smoker, "nicotine satisfaction is the dominant desire" and that "[i]n designing any cigarette product, the dominant specification should be nicotine delivery." 5002504536-4544 at 4538 (U.S. Ex. 85,268).

1495. Claude Teague was the R.J. Reynolds equivalent/counterpart to William Dunn at Philip Morris. In an April 14, 1972 report titled "Research Planning Memorandum on the Nature of the Tobacco Business and the Crucial Role of Nicotine Therein," Teague stated:

(emphasis added)

500915683-5691 at 5684-5685 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216);
521896443-6450 (U.S. Ex. 80,686) (Confidential).

1496. Teague later stated in his report that:

If nicotine is the sine qua non of tobacco products and tobacco products are recognized as being attractive dosage forms of nicotine, then it is logical to design our products – and where possible, our advertising – around nicotine delivery rather than 'tar' delivery or flavor. To do this we need to develop new data on such things as the physiological effects of nicotine, the rate of absorption and elimination of nicotine delivered in different doses at different frequencies and by different routes, and ways of enhancing or diminishing nicotine effects and "satisfactions."
(emphasis in original)

500915683-5691 at 5685-5686 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216).

1497. Teague also refuted the industry's often-heard "nicotine is for taste" argument by stating that, "I believe that for the typical smoker nicotine satisfaction is the dominant desire, as opposed to flavor and other satisfactions." 500915683-5691 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216).

1498. Later in the same report, Teague noted the vital role of nicotine to the fundamental existence of the cigarette industry:

If, as proposed above, nicotine is the sine qua non of smoking, and if we meekly accept the allegations of our critics and move toward reduction or elimination of nicotine from our products, then we shall eventually liquidate our business. If we intend to remain in business and our business is the manufacture and sale of dosage forms of nicotine, then at some point we must make a stand.

(emphasis in original)

500915683-5691 at 5688 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216).

1499. At the close of his April 14, 1972 memorandum on nicotine, Teague recommended the following courses of action for R.J. Reynolds:

1. Recognize the key role of nicotine in consumer satisfaction, and design and promote our products with this in mind.
2. More precisely define the minimum amount of nicotine required for 'satisfaction' in terms of dose levels, dose frequency, dosage form, and the like. This would involve biological and other experiments.
3. Sponsor in-depth studies of the physiological, psychological and other effects of nicotine, aimed at demonstrating the beneficial effects of nicotine and at disproving allegations that nicotine produces major adverse effects.
4. Study, design and evaluate new or improved systems for delivery of nicotine which will provide the minimum satisfying amount of nicotine in attractive form, free of allegedly harmful combustion products.
5. Study means for enhancing nicotine satisfaction via synergists, alteration of pH, or other means, to minimize dose level and maximize desired effects.
6. Monitor developments in materials and products which may compete with nicotine products or which might be combined with nicotine products to provide added advantages or satisfactions.
7. Monitor work by others which might be aimed at improved nicotine delivery systems of the type proposed here.
8. Search for and evaluate other physiologically active components of tobacco or its smoke which may provide desired effects to the smoker.

500915683-5691 at 5690-5691 (U.S. Ex. 20,659) (U.S. Ex. 76,185) (U.S. Ex. 77,216).

1500. In a 1973 "SECRET" report entitled "Implications and Activities Arising From Correlation of Smoke pH with Nicotine Impact, Other Smoke Qualities, and Cigarette Sales," Teague reiterated to company executives R.J. Reynolds's knowledge of the importance of effective nicotine delivery in its competition with Marlboro and Kool:

In essence, a cigarette is a system for delivery of nicotine to the smoker in attractive, useful form. At "normal" smoke pH, or at below about 6.0, essentially all of the smoke nicotine is chemically combined with acidic substances, hence is non-volatile and relatively slowly absorbed by the smoker. As the smoke pH increases above about 6.0, an increasing proportion of the total smoke nicotine occurs in "free" form, which is volatile, rapidly absorbed by the smoker, and believed to be instantly perceived as nicotine "kick". . . .

As a result of its higher smoke pH, the current Marlboro, despite a two-thirds reduction in smoke "tar" and nicotine over the years, calculates to have essentially the same amount of "free" nicotine in its smoke as did the early WINSTON. . . .

In addition to enhancing nicotine "kick," increasing the pH (increasing alkalinity) of smoke above about 6.0 causes other changes, particularly when the increase in smoke pH is achieved by adding ammonia to the blend.

509314122-4148 at 4125 (U.S. Ex. 20,828).

1501. Teague also described the different "current and planned" methods R.J. Reynolds was utilizing to increase the nicotine delivery and nicotine "kick" to smokers. His description revealed that the nicotine work was directed by and reported to company management:

As its part in this collaborative effort, Research has: (1) collected, correlated, interpreted, and described to Management data on smoke pH of various brands, (2) developed and put into routine use improved methods for measurements of smoke pH [and] (4) evaluat[ed] various methods whereby smoke pH may be increased, with emphasis on ammonia treatments of stem materials.

Methods which may be used to increase smoke pH and/or nicotine "kick" include: (1) increasing the amount of (strong) burley in the blend, (2) reduction of casing sugar used on the burley and/or blend, (3) use of alkaline additives, usually ammonia compounds, to the blend, (4) addition of nicotine to the blend, (5) removal of acids from the blend, (6) special filter systems . . . and (7) use of high air dilution systems.

509314122-4148 at 4127 (U.S. Ex. 20,828); 511223463-3484 at 3468 (U.S. Ex. 20,840).

1502. Teague's nicotine research was important to the long-term success of the company. In fact, his 1973 secret report was written at the request of R.J. Reynolds President William D. Hobbs. Teague provided Hobbs the report under cover memo dated October 2, 1973, stating, "I hope the attached report is about what you had in mind." 501136993-6993 (U.S. Ex. 85,269).

1503. Other R.J. Reynolds memoranda, dated July 3 and December 26, 1973, reported the results of an internal "Correlation Study" confirming the "correlation between free nicotine to sales previously reported by Research." 501011401-1401 (U.S. Ex. 20,668); 501327013-7013 (U.S. Ex. 21,434).

1504. Teague's observations and conclusions were accepted at R.J. Reynolds thereafter. Some ten years later, Teague sent the very same report to company Vice President of Research and Development Bob DiMarco with a short note: "Bob - This is where we were in '73. You may want to skim/scan the first 4 pages. Claude." DiMarco returned the report to Teague with the following response printed under Teague's words: "Thank you Claude. **Looks like we're still there in 1983.** Bob" 511223460- 3462 at 3461 (U.S. Ex. 85,270) (emphasis added); 511223463-3484 (U.S. Ex. 20,840).

1505. Teague turned his 1973 paper on smoke pH and nicotine into a presentation he apparently delivered to the company. In a 14-page document titled "Outline for Smoke pH Presentation," Teague covered many of the same points in his paper. Teague, whose own handwriting is on several of the outline pages, stated that his work was directed by company president William Hobbs. While much of the content of Teague's presentation is described above, he also explained in more detail his conclusion that Reynolds needed to create a nicotine-enhanced cigarette to compete in the beginning smoker market:

What has emerged then, or may still be emerging, is a new and distinguishably different type of cigarette -- **perhaps a type with 1955 nicotine impact and 1973 tar and nicotine numbers.** . . . We need to worry about the many beginning smokers, learning to like a different type of cigarette. . . . Therefore, if indeed a new and relatively distinct type of cigarette is emerging and selling well --particularly to large numbers of beginning smokers -- I would think that we would want to develop new brands or brand variants of our own to compete in that market. (emphasis added)

500917535-7548 at 7544-7545 (U.S. Ex. 48,662).

1506. A "CONFIDENTIAL" May 10, 1973 report from Reynolds chemists John Woods and Gloria Harllee studied pH of tobacco and the success of competitor brands Kool and Marlboro. The report, consistent with other Reynolds documents, showed the critical importance of "free" or "unbound" nicotine actually delivered to and absorbed by the smoker to both the "physiological strength" and growing market share of the brands. The researchers concluded the following:

1. A historical review of smoke pH of competitive brand cigarettes has shown that the Marlboro and Kool cigarettes have had higher smoke pH than the other competitive brands since 1964.

2. The smoke pH for Kool has been high due to the use of relatively low levels of sugar in the casing. The Marlboro has maintained a high pH by using a relatively low sugar and ammonium phosphate additive on the reconstituted tobacco.
3. Over the years studied there was a very strong positive correlation between smoke pH and sales. An even better correlation was observed between free nicotine in the smoke and sales.
4. The physiological strength of a cigarette, which may be controlled to some degree with smoke pH, is extremely important.

500606138-6153 at 6142 (U.S. Ex. 48,334).

1507. Other undated documents produced by R.J. Reynolds flatly stated that the company eventually used ammonia to vary both the nicotine and smoke pH of its tobaccos. The documents acknowledged that the company added ammonia to reconstituted tobacco, and that historic sales of Marlboro climbed "rapidly after the introduction of added ammonium" by Philip Morris. 500990999-1004 (U.S. Ex. 20,666); 509018864-8865A (U.S. Ex. 20,820).

1508. With respect to R.J. Reynolds's success with ammoniation, one document disclosed that ammonia produced a "cleaner taste with more free nicotine" and a "stronger physiological impact." As for the widespread utilization and success of adding ammonia at R.J. Reynolds, the document stated:

RJR introduced ammoniated sheet material in the CAMEL filter product in 1974. Better market performance was indicated in the subsequent years. Low "tar" products at RJR were designed with ammoniated sheet material beginning in 1974. RSM studies showed that ammoniation was one of the major consumer recognized product attributes tested. Ammoniated sheet was introduced into the WINSTON KS product in 1979. Market tests indicated significant product improvement.

500990999-1004 (U.S. Ex. 20,666); 509018864-8865A (U.S. Ex. 20,820).

1509. Defendants have claimed that nicotine is only necessary for taste or flavor. However, R.J. Reynolds has distinguished between nicotine and flavor in its internal documents for decades. One example is a December 4, 1973 memorandum from Frank Colby to marketing director R.A. Blevins titled "Cigarette Concept to Assure RJR a Larger Segment of the Youth Market." Colby recommended in his memorandum that R.J. Reynolds begin manufacturing a new cigarette with "more flavor (tar)" and "more 'enjoyment' or 'kicks'" to appeal to youth. Colby also added that "any desired additional nicotine 'kick' could be easily obtained through pH regulation" in the manufacturing of these new "youth-appeal cigarettes." 501166152-6153 (U.S. Ex. 23,051).

1510. Defendants have stated or implied that they did not employ any methods to increase nicotine delivery or "kick." However, these methods (some described above by Teague) were not only studied and summarized by the companies, they were employed. For example, an April 12, 1994 list of "Ingredients Added to Tobacco in the Manufacture of Cigarettes" by the six largest United States manufacturers (including R.J. Reynolds) disclosed that the companies added ammonia and other ammonium compounds to their cigarettes during the manufacturing process. 606000841-0889 at 0842 (U.S. Ex. 53,325).

1511. Teague wrote another "Confidential" memorandum dated February 2, 1973, titled "Some Thoughts About New Brands of Cigarettes for the Youth Market." In this memorandum, Teague contrasted novice smokers with "confirmed" or addicted smokers. He stated that while "pre-smokers" and "learners" start smoking for psychological reasons (fitting in with the crowd,

self-image, boredom relief), "once the 'learning' period is over, the physical effects become of overriding importance and desirability to the confirmed smoker, and the psychological effects, except the tension-relieving effect, largely wane in importance or disappear." 502987357-7368 at 7359 (U.S. Ex. 21,475).

1512. In an August 4, 1976 speech to R.J. Reynolds's international division, Director of Research Murray Senkus affirmed the indispensable role of nicotine, stating, "In smoking the effect produced on the human body is ascribable to nicotine" and "Without any question, the desire to smoke is based on the effect of nicotine on the body." Many of Teague's prior documents on nicotine had been sent to Senkus. 501525355-5366 at 5356, 5358 (U.S. Ex. 29,531).

1513. In a R.J. Reynolds August 1976 "Three-Year Action Plan for New Products," nicotine was described as a "traditional need," and "very basic to the cigarette industry's existence." 500672011-2172 at 2078-2105, 2107 (U.S. Ex. 20,645).

1514. In a September 21, 1976 internal memorandum from John L. McKenzie to A.P. Ritchy titled "Product Characterization Definitions and Implications," nicotine was defined as "the psychopharmacological agent in tobacco which is one of the key factors in satisfaction" 500380562-0564 at 0563 (U.S. Ex. 20,630) (U.S. Ex. 76,184).

1515. A November 9, 1976 memorandum on nicotine circulated among R.J. Reynolds scientists reviewed the known physiological effects of nicotine on the body and admitted the company's ongoing desire to increase or hold steady the nicotine content of its cigarettes while reducing tar. The memo, titled "Nicotine Research," also acknowledged tolerance to nicotine:

SECTION IV.E.

"Habituated smokers, both male and female, metabolize nicotine more rapidly than non-smokers, indicating the bodily metabolic acclimation to nicotine." Finally, the memo contradicted industry claims that smokers seek nicotine only as a matter of "taste": in-house studies concluded that detectable nicotine produced the taste described as "foul, rotten rubber" and that "Nicotine is definitely an irritant in smoke and its taste must be blended out or modified by other constituents in the TPM to make smoke acceptable." 509078812-8820 at 8814-8815 (U.S. Ex. 85,271).

1516. Reynolds' detailed knowledge of the physiological and pharmacological effects of nicotine is contained in an undated document that appears to be a scientific presentation on nicotine. 502824762-4800 (U.S. Ex. 50,257).

1517. In a February 7, 1978, memorandum titled "Nicotine Satisfaction – Consumer Test," R.J. Reynolds researchers C.L. Neumann and J.P. Dickerson stated that the focus of the consumer satisfaction program would be on nicotine, as it was "probably the most important satisfaction variable," and because nicotine had "known physiological activity." 504479948-9954 at 9549 (U.S. Ex. 20,729).

1518. In another example, a February 5, 1980 interoffice memorandum from H.E. Guess stated the concern that the reduced level of nicotine in R.J. Reynolds's Winston B Cigarettes would make them less attractive to Winston smokers. 504675307-5307 (U.S. Ex. 21,549).

1519. R.J. Reynolds scientist D.H. Piehl reviewed the scientific literature on nicotine and maintenance of the smoking habit in a "Confidential" internal paper for the company entitled "Smoking Behavior - A Review." In his paper, Piehl summarized with approval many studies finding the preeminent importance of nicotine to smokers, the various "need" levels of nicotine,

nicotine dependence, and addiction. At the close of the paper, he sarcastically wrote:

It continues to be reported in the popular press that 4 out of 5 smokers have tried to quit smoking and failed. Perhaps they should listen to Mark Twain who said, "It's the easiest thing in the world to stop smoking. I should know because I've stopped over 1000 times.

504972347-2362 at 2362 (U.S. Ex. 50,710).

1520. In fact, scientists at R.J. Reynolds had known for years that most smokers get "hooked" and are unable to quit. Teague wrote a memorandum dated December 1, 1982, to Research and Development Vice President Robert DiMarco where he stated that R.J. Reynolds needed to tailor its marketing to the reality that "most of those who have smoked for any significant time would like to stop," and most smokers "would stop using **if they could.**" Teague also stated that R.J. Reynolds needed to contemplate the future scenario where smokers who want to stop can stop; if this happened, R.J. Reynolds would "go out of business." Therefore, R.J. Reynolds "cannot be comfortable marketing a product which most of our consumers would do without **if they could.**" 500898255-8257 at 8256 (U.S. Ex. 48,652) (emphasis added).

1521. An April 15, 1983 R.J. Reynolds draft document titled "Smoker Compensation Review" reiterated the company's knowledge that smokers of low tar/nicotine products compensated to obtain more nicotine, and that the FTC method of measuring nicotine was flawed. The document included the following in a section titled "Impact of Known Compensatory Behavior On Cigarette Rankings":

Based on the results of studies similar to those summarized above, it has been stated that low –'tar' smokers use their cigarettes differently than smokers of higher – 'tar' products. Different 'usage' includes propensity to block vents or otherwise manipulate the

cigarette, increasing the number of puffs and the number of cigarettes smoked, puffing more frequently or with larger volumes and inhaling more deeply or holding smoke in the lungs longer. These usage patterns are consistent with the theory that low – 'tar' smokers seek to maintain a given nicotine level in the body, regardless of the cigarette. The patterns cited are instances which would tend to increase the 'dosage' of nicotine to the smoker.

This statement revealed R.J. Reynolds's continuing view of smokers as "nicotine seekers," in this case seekers who alter their smoking method to obtain the necessary "dosage" of nicotine.

501524500-4514 at 4506 (U.S. Ex. 85,272).

1522. An undated R.J. Reynolds document titled "R&D Outline" listed "Nicotine as a drug" as a topic for departmental discussion. The outline provided for a "discussion of a string of industry memos and reports, dating back to at least the early 1970's, in which industry scientists and execs seem to admit to nicotine's qualities as a drug." The document described several examples, including a 1971 Brown & Williamson letter, a 1972 R.J. Reynolds report and a 1972 Philip Morris summary of a meeting of industry scientists. This document demonstrated that despite their public denials, the industry had in fact internally admitted nicotine's addictiveness and its importance for cigarette smoking. 522606315-6317 at 6316 (U.S. Ex. 85,273).

1523. Another undated Reynolds document is a Biobehavioral Department presentation titled "Biobehavioral Aspects of Smoking." In this presentation, the speaker discussed how "maintenance" of the smoking habit for 80% of smokers was related to the "tranquilizing effects" of nicotine. The speaker emphasized at various points that "nicotine is the substance people desire in their use of tobacco," "animals will self-administer nicotine in a laboratory setting,"

evidence that "smokers smoke to maintain a constant level of nicotine in the body," and that "the fact remains that smokers do not continue to smoke unless their cigarettes contain nicotine."

502835327-5337 (U.S. Ex. 87,314); 517214547-4557 (U.S. Ex. 87,113).

1524. After Benowitz published his 1983 paper on compensation by smokers of low nicotine yield products, R.J. Reynolds scientist John Robinson wrote a critique of the paper to Dr. Alan Rodgman in which he stated:

The paper itself expresses what we in Biobehavioral have felt for quite some time. That is, smokers smoke differently than the FTC machine and may very well smoke to obtain a certain level of nicotine in their bloodstream. If a given level of nicotine in the blood is the final goal of a smoker, one would predict that he would smoke an FFT [full flavor tar] and ULT [ultra low tar] cigarette differently.

510994429-4429 (U.S. Ex. 85,274).

1525. Robinson wrote that the Benowitz paper brought to mind a past industry study comparing German Camel cigarettes with Marlboro cigarettes, where "smokers apparently obtained almost exactly the same amount of nicotine no matter which of the four cigarettes they smoked." Robinson recalled that the study "was one of the first indications that smokers may in fact smoke to obtain a certain level of nicotine in their bloodstream." 510994429-4429 (U.S. Ex. 85,274).

1526. In preparation for a R.J. Reynolds "brainstorming session" at the company's Flavor and Biobehavior Divisions, Donald L. Roberts told employees in an October 13, 1983 memorandum that, "The functions a cigarette serves are many fold involving social, psychological and physiological. A short definition is that a cigarette supplies nicotine to the consumer in a palatable and convenient form." Roberts clearly distinguished nicotine from taste,

stating that, "The cigarette's taste is a relatively unimportant benefit of smoking. Its taste is primarily a delivery vehicle. . . ." 503602711-2714 at 2712 (U.S. Ex. 85,275).

1527. A June 3, 1985 R.J. Reynolds document was titled "Report on Medical and Scientific Issues - Addiction." In this review, the scientist authors attempted to examine current scientific literature to assist the industry with respect to the scientific consensus on nicotine addiction. As part of their review, the scientists reviewed literature compiled by the tobacco law firms of Jacob, Medinger & Finnegan, Shook, Hardy & Bacon and Jones Day. The scientists wrote in their report that, "Both Mr. Wrobleski [Jacob, Medinger & Finnegan] and Mr. Sirridge [Shook, Hardy & Bacon] warned, however, that there is very little literature favorable to the industry's position on addiction." 515878492-8522 at 8494. (U.S. Ex. 30,251).

1528. R.J. Reynolds's R&D department embarked on a large-scale nicotine research program in 1988, as described in a lengthy October 7, 1988 project report titled "An Integrated Research Program for the Study of Nicotine and Its Analogs," to continue looking into the "pharmacological potency," "biological activity," and central nervous system effects of nicotine and nicotine analogs. The researchers posited that:

What is known about nicotine is that it elicits the typical consequences of sympathoadrenal activation when administered in doses that produce plasma concentrations similar to those achieved during smoking. Among these are tachycardia, increases in blood pressure, cardiac output, and stroke volume In addition, there is a fair amount of tolerance induced with regard to sympathetic activation by smoking or chronic nicotine administration.

514894567-4676 at 4586-4587 (U.S. Ex. 20,862) (U.S. Ex. 76,199).

1529. Summing up R.J. Reynolds's knowledge of the importance and addictive quality

of nicotine was one line from a May 3, 1991 R.J. Reynolds Research and Development report on a tobacco modification and nicotine manipulation project code-named the "REST Program."

One key objective of the program was to "Independently control nicotine delivery, from very low to elevated levels, to address consumer wants and as a research tool." The basis for the Controlled Nicotine Process component of "REST" was that

We are basically in the nicotine business. It is in the best long term interest for RJR to be able to control and effectively utilize every pound of nicotine we purchase. Effective control of nicotine in our products should equate to a significant product performance and cost advantage. (emphasis added)

509479574-9587 at 9577, 9584 (U.S. Ex. 20,829).

1530. According to the Wall Street Journal, former RJR Nabisco CEO F. Ross Johnson stated during a 1994 interview that, "Of course it's addictive. That's why you smoke the stuff." *Wall Street Journal*, "Big Spender Finds a New Place to Spend," October 6, 1994. (U.S. Ex. 61,440).

1531. In a 1998 memorandum titled "ECLIPSE Taste and Satisfaction Improvements," D.E. Townsend stated with regard to the Eclipse product that R&D staffs were "encouraged to pursue diligently Eclipse designs with increased nicotine yield in an effort, in part, to increase consumer acceptance of the product." He later added: "If increased nicotine yield helps give improved consumer acceptance in the market, then possible benefits of this potentially reduced risk product would be greater." 526013569-3569 (U.S. Ex. 85,276); 700245849-5849 (U.S. Ex. 85,277).

1532. In a June 4, 1999 email communication (Subject: Tobacco Beer) to Mickey Smith,

Don deBethizy discussed the creation of nicotine-laden beer. This communication demonstrated R.J. Reynolds's continuing understanding that nicotine is (in Claude Teague's words) the "sine qua non" of any tobacco product:

Crazy idea: Researchers at Duke University have found that nicotine added to beer provided nicotine in a palatable form which was enjoyable to subjects. I wonder if tobacco could be added to beer in a palatable way? Since beer is only used in adult venues, it might be a way for people to use tobacco and beer together. The toxicity of nicotine may be a problem, but these researchers thought that it was worth exploring nicotine in beverages.

700007868-7868 (U.S. Ex. 54,412).

1533. R.J. Reynolds' lawyers at Jones Day knew that addiction was the Achilles heel of smoking and health litigation, and that their client has long since acknowledged the addictiveness of nicotine and smoking. The lawyers' concern that addiction would undermine their and their client's attempts to portray smoking as a free choice, and therefore a smoker's smoking-caused injuries were the result of voluntary assumption of a known risk, were reflected in several "trial strategy" documents produced by Defendants. For example, in an August 10, 1985 Jones Day memorandum titled "Smoking and Health Litigation, Tactical Proposals," the authors wrote that, "If a jury were likely to conclude that addiction overcame the plaintiff's ability to make a free choice, it would obviously be necessary to address this point directly." 680712261-2337 at 2308 (U.S. Ex. 87,114).

1534. The lawyers were aware, however, that R.J. Reynolds and the industry knew that "free choice" took a back seat to the driving force of nicotine addiction. In another illuminating Jones Day litigation memorandum, the authors described the threat of addiction to the core trial

strategy of "trying the plaintiff," and conceded the following:

"Addiction" has received little industry research attention. Nevertheless, many industry documents support the contention that there are types of persons whose psychological profile and smoking behavior is such that they have great difficulty in quitting. For example, documents describe a British American Tobacco Company sponsored conference in 1978, attended by PM and B&W representatives. One of the findings of the conference was: "Serious smokers smoke to prevent withdrawal symptoms. Another study which Dr. Piehl (RJRT) cites recognizes "addictive" smokers: "People who find it unbearable to run out of cigarettes are described as using addictive-type smoking." The industry has also recognized that some smokers, especially smokers of high nicotine cigarettes "compensate" or regulate nicotine intake if it is lowered in individual cigarettes.

681879254-9715 at 9302-9303 (U.S. Ex. 21,020).

1535. Later in the same Jones Day memorandum, the authors provide examples from Defendants' files where the companies (with emphasis on R.J. Reynolds) and their employees admit the primacy of nicotine to cigarettes and the addictiveness or dependence-producing quality of their products. Additionally, the authors conclude that "internal documents describing the effects of nicotine are also problematic" and "the Industry may be faulted for not monitoring the addiction literature, for not conducting addiction research, and for not warning of addiction."

681879254-9715 at 9601-9643 (U.S. Ex. 21,020).

(iii) BATCo

1536. Many documents disclose that BATCo had an intimate understanding of nicotine's role in smoking and its effects on smokers long before the outside medical community.

Moreover, many BATCo documents disclose how BATCo and the United States cigarette industry, in particular Brown & Williamson, used BATCo's knowledge of and secret code-named

research into nicotine for commercial gain.

1537. BATCo knew nicotine was an essential component of cigarettes as early as the 1950s. A June 1959 BATCo internal document pointed out that the company must consider "the question of nicotine and its effect on the smoker." The author stated that the company had to choose between maintaining current nicotine content "in order to maintain the firmly entrenched nicotine habit developed by the majority of smokers," or reducing the nicotine content to meet consumer demand for lower nicotine products. However, the writer cautioned that, "[T]o lower nicotine too much might end up destroying the nicotine habit in a large number of consumers and prevent it from ever being acquired by new smokers." 100099115-9117 at 9117 (U.S. Ex. 20,112).

1538. In a November 15, 1961 memorandum reviewing secret nicotine research and development projects under code names "MAD HATTER" and HIPPO," Sir Charles Ellis, scientific advisor to the BAT Board of Directors, acknowledged BATCo's understanding that nicotine is addictive:

Experiments of Hippo have led to a great increase in our knowledge of the effects of nicotine. . . . Smoking demonstrably is a habit based on a combination of psychological and physiological pleasure, and it also has strong indications of being an addiction. It differs in important features from addiction to other alkaloid drugs, but yet **there are sufficient similarities to justify stating that smokers are nicotine addicts.** (emphasis added)

301083862-3865 at 3863 (U.S. Ex. 20,577).

1539. In the same 1961 internal document reviewing BATCo's secret nicotine research, Ellis emphasized the company's need to determine what made smoking and nicotine addictive:

If the competition is to be met successfully, it must be important to know how the tranquilizing and stimulating effects of nicotine are produced and the relation of addiction to the daily nicotine intake. These are the reasons for proposing that Project Hippo be continued with the particular object of finding the causes of the pleasurable physiological effects and the causes of addiction.

301083862-3865 at 3863 (U.S. Ex. 20,577).

1540. The comprehensive research conducted by and funded by BATCo in the early 1960s placed the company at the forefront of nicotine knowledge and exploitation, long before nicotine was well understood in the medical community. In perhaps the most telling document on the question of the industry's early knowledge and acceptance of addiction, Sir Charles Ellis provided an overview of the company's massive nicotine research program in a February 13, 1962 "Private and Confidential" memorandum titled "The Effects of Smoking." Ellis recited in his memorandum that BATCo research into the "physiological and psychological effects of smoking" via Batelle actually began in 1959, and was carried out in the intervening years under various project "code names" including "MAD HATTER I," "MAD HATTER II," "MAD HATTER III," "HIPPO I," "HIPPO II," and "ARIEL." 301083820-3835 at 3820-3823 (U.S. Ex. 46,579).

1541. In the February 13, 1962 memorandum, Ellis devoted a lengthy section to the commercial importance of the company's nicotine research objectives. He explained that the reason BATCo commissioned the "MAD HATTER" and "HIPPO" research projects was "to understand addiction . . . [and to] appreciate the strength and vulnerability of our position." Ellis wrote further in detail:

However, the force of the habit or the strength of addiction is not

such as to give any grounds for complacency in the face of alternative methods of stimulating the body to meet stress, and that is just where the danger lies since alternatives are becoming available. In the last few years there has been a quite remarkable increase in the production of tranquilliser drugs, and while most of these need a doctor's prescription there is already one on free sale in Switzerland (Librium made by Hoffman LaRoche). If such drugs become more freely available they will compete with nicotine, which is a natural tranquilliser, and will leave smoking primarily dependent on its psychological effects for the maintenance of the habit.

What we need to know above all things is what constitutes the hold of smoking, that is, to understand addiction. . . .

These are the reasons for the study of the physiological effects of nicotine carried out under the MAD HATTER and HIPPO contracts, and they have sufficient force alone to justify this expenditure . . . (emphasis added)

301083820-3835 at 3826-3827 (U.S. Ex. 46,579).

1542. Ellis described in another section of his memorandum the outcome of BATCo's drive to learn about nicotine and its role in smoking. He further delineated some of the concrete conclusions of the BATCo research to date, reiterating unequivocally that BATCo believed nicotine was addictive and explaining graphically the relationship of the research to addiction:

As a result of these various researches **we now possess a knowledge of the effects of nicotine far more extensive than exists in published scientific literature. It is indeed so extensive and represents so much new thought that it is not easy to condense the material** of these several reports and working papers without over-simplification.

Nicotine, however administered, rapidly gets into the blood stream and the lymph system, and once there has a number of varied effects. . . . By far the most important effect is that of mobilising the resources of the body to resist stress. That this occurs has been known from the earliest days of smoking but no explanation exists

in the published literature. Battelle have now carried out experiments which are beginning to show how nicotine enters into the mechanism of this vital reaction. . . .

The stimulation to resist stress occurs almost immediately on absorption of nicotine, and the effect - that is, the extra supply of cortico steroids in the blood - falls off markedly within a matter of thirty minutes. Addiction is something quite different from this since it is well known that the craving for nicotine in a confirmed smoker who stops smoking persists for ten, twenty or thirty days.

We believe that we have found possible reasons for addiction in two other phenomena that accompany steady absorption of nicotine. (emphasis added)

301083820-3835 at 3828-3829 (U.S. Ex. 46,579).

1543. The two additional "phenomena" that Ellis stated in his February 1962 memorandum were responsible for nicotine addiction were tolerance and withdrawal:

Experiments have so far only been carried out with rats, but with these it is found that certain rats become tolerant to repeated doses and after a while show the usual nicotine reactions but only on a very diminished scale. The interesting point is that these tolerant or nicotine-conditioned rats are found to have a greatly enhanced power of detoxification of nicotine in their liver. Crudely put, they can stand up to high continuous doses of nicotine just because their liver has developed the ability to dispose of it more rapidly and efficiently. . . . As long as the smoker keeps to his normal regime and the nicotine level in his blood remains high there is a steady job for these [liver] enzymes, and the whole situation is normal and under control. But if now the smoker stops smoking and there is no longer nicotine in his blood then in the liver there is this supply of enzymes with nothing to work on. In fact, they proceed to work on other material passing through the liver, with consequent disturbance of the body's working and with all sorts of alarm signals sent back to the brain. The effects of unbalanced enzymes is not unlike unbalanced nicotine, and the abstaining smoker experiences physiological reactions as acute as a novice who starts smoking. When to this one adds the longing for that immediate stimulation to resist stress that comes from smoking a cigarette it

would appear that we are making progress towards understanding addiction. . . .

Thus we have already greatly increased our knowledge of the manifold ways in which nicotine affects the body and, in particular, have identified and studied separately the stress resisting mechanism and the other effect on the liver which we believe is responsible for addiction. (emphasis added)

301083820-3835 at 3829-3830 (U.S. Ex. 46,579).

1544. In the final section of his paper, Ellis discussed some particulars of the nicotine projects code named "PROJECT HIPPO II" and "PROJECT ARIEL." He stated that the secret "physiological and biochemical" PROJECT HIPPO research "should lead to an understanding of the mechanism which creates addiction" and confirm that "addiction depended on the enzymes involved in the metabolism of nicotine in the liver." 301083820-3835 at 3832 (U.S. Ex. 46,579).

1545. "PROJECT ARIEL," on the other hand, was a secret project to develop an alternative nicotine delivery device to compete with work that Ellis claimed was being carried out at the American Tobacco Company and R.J. Reynolds. Ellis also justified the project with his concern that the "drug industry" could "at any time attempt to invade the cigarette smoke field by alternative drugs." He stated that the final product "must have within it the ultimate possibilities of meeting the psychological demands of smokers as well as the physiological ones. 301083820-3835 at 3833-3835 (U.S. Ex. 46,579).

1546. The concluding section of Ellis' memorandum revealed the high level of secrecy accorded the company's nicotine research:

FUTURE POLICY.

For good reasons the results of Battelle's work have been kept at a high level of secrecy, but they are now building up to such a

comprehensive picture of the action of nicotine that I suggest they should soon be made available in detail to a few of our top scientists.

301083820-3835 at 3835 (U.S. Ex. 46,579).

1547. Therefore, as early as 1962, BAT had established its internal corporate position of smoking as a straight "addiction" produced by nicotine, a drug addiction in terms of cravings, compulsive use, physiological effects on the body, tolerance, and withdrawal. Sir Charles Ellis stated further in a paper presented to a 1962 BAT conference in Southampton, England, attended by Brown & Williamson representatives that "smoking is a habit of addiction." Ellis's presentation was preceded by an introduction from the chairman of BAT himself, A.D. McCormick. The substance of the conference was included in a BAT conference report titled, "Smoking and Health - Policy on Research." The conference report has been produced in this litigation with a stamp indicating that it was found in the Brown & Williamson Research Department. 650344433-4493 (U.S. Ex. 53,468); 100427861-7883 (U.S. Ex. 21,793).

1548. McCormick told attendees at the 1962 conference that the "best way to deal with the [smoking and health] matter was on an industry rather than an individual company level." He then introduced Ellis. In his presentation, Ellis stated:

Smoking is a habit of addiction that is pleasurable; many people, therefore, find themselves sub-consciously prepared to believe it must be wrong. (emphasis added)

650344433-4493 at 4439 (U.S. Ex. 53,468); 100427861-7883 at 7862 (U.S. Ex. 21,793).

Ellis later added:

One result of the recent public discussions on smoking and health must have been to make each of us examine whether smoking is

just a habit of addiction or has any positive benefits. It is my conviction that nicotine is a very remarkable beneficent drug that both helps the body to resist external stress and also can as a result show a pronounced tranquillising effect. . . . Nicotine is not only a very fine drug, but the techniques of administration by smoking has considerable psychological advantages and a built-in control against excessive absorption.

110070785-0842 (U.S. Ex. 20,270); 650344433-4493 at 4450-51 (U.S. Ex. 53,468); 100427861-7883 at 7873-74 (U.S. Ex. 21,793).

1549. Ellis later added in a May 1962 note to S.J. Green that "a problem that is therefore worth considering is how to provide the smoker with his customary amount of nicotine."

100159216-9217 at 9216. (U.S. Ex. 88,764).

1550. BATCo's early interest in understanding why and how nicotine affected smokers' bodies was immense. In January 1962, Batelle scientists working for BATCo submitted their "Final Report on Project HIPPO I." The purposes of the project were to study: (1) the action of nicotine in the diuresis mechanism; (2) the possible interference of nicotine in the "stress" mechanism; (3) the inhibiting effect of nicotine on body weight; and (4) the possible activity of nicotine on other hypothalamic functions. The report stated in the introduction the working question: "It is an everyday experience to each smoker that smoking a cigarette helps mastering the numerous stressful stimuli of modern life. This effect is probably one of the most powerful reasons which make one smoke. How does nicotine exert this action?" 105620620-0683 at 0622-0625 (U.S. Ex. 20,247).

1551. The "HIPPO I" researchers concluded that:

From all our data it seems that the effect of nicotine in the "stress reaction" is a very prominent and very complicated one. The understanding and thorough investigation of this effect seems of

the greatest importance: it is by this very effect that nicotine acts as a "tranquilliser."

105620620-0683 at 0683 (U.S. Ex. 20,247).

1552. Near this same time, Battelle drafted a January 3, 1962 research proposal regarding "Project Ariel" for BATCo in London. The proposed new smoking device would administer nicotine while "avoiding the well-known disadvantages inherent in actual cigarette smoking," but it needed to resemble a tobacco smoking product "to avoid interference with the legislation in force about drugs," and "it should also create addiction in the same relative amounts." 100335808-5816 at 5811, 5814 (U.S. Ex. 20,173).

1553. Throughout the 1960s, BATCo continued to discuss and research the "ARIEL" product that was known simply as a nicotine delivery device that would allow the smoker to "obtain a satisfying dose of nicotine" without any of the harmful effects from smoke. 100335894-5918 at 5897 (U.S. Ex. 20,174).

1554. By 1964, BATCo had developed the prototype of "ARIEL" which allowed for "a reasonably even release of nicotine" for the smoker. 100175613-5617 at 5616 (U.S. Ex. 20,115).

1555. BATCo continued its Project HIPPO for several years. In a March 1963 study titled "Final Report on Project HIPPO II," scientists C.H. Kaselbach and O. Libert reported the results of their sophisticated comparison of nicotine to tranquilizers, a comparison that built on the earlier findings of HIPPO I. Their report to BATCo stated at the outset that:

The aim of the whole research "HIPPO" was to understand some of the activities of nicotine - those activities that could explain why cigarette smokers are so fond of their habit. It was also our purpose to compare these effects with those of the new drugs called "tranquillizers," which might supercede tobacco in the near

future. . . . The reasons for the "pleasure of smoking" must be found partly in the relief of anxiety that cigarette smoking brings so constantly, and in such a very short time.

105620569-0605 at 0572 (U.S. Ex. 20,246).

1556. Later in the "Final Report on Project HIPPO II," the researchers revealed their conclusion that while nicotine differs in some respects from tranquilizers, nicotine causes both tolerance and addiction, and is in fact addictive:

A quantitative investigation of the relationship with time of nicotine - and of some possible brain mediators - on adreno-corticotropic activity could give us the key to the explanation of both phenomena of tolerance and of addiction, in showing the symptoms of withdrawal.

105620569-0605 at 0575 (U.S. Ex. 20,246).

1557. Nicotine addiction was thus known and accepted; therefore, BATCo research targeted and sought to understand the mechanism of addiction. In a May 30, 1963 report titled "A Tentative Hypothesis on Nicotine Addiction," Dr. G. Haselbach and Dr. O. Libert, scientists performing work for BATCo, discussed nicotine's ability to produce tolerance and postulated a sophisticated explanation for nicotine addiction:

The hypothalamo-pituitary stimulation of nicotine is the beneficial mechanism which makes people smoke; in other words, nicotine helps people cope with stress. In the beginning of nicotine consumption, relatively small doses can perform the desired action. Chronic intake of nicotine tends to restore the normal physiological functioning of the endocrine system, so that ever-increasing dose levels of nicotine are necessary to maintain the desired action. Unlike other dopings, such as morphine, the demand for increasing levels is relatively slow for nicotine.

In a chronic smoker the normal equilibrium in the corticotropin releasing system can be maintained only by continuous nicotine

intake. . . . If nicotine intake, however, is prohibited to the chronic smokers, the corticotropin-releasing ability of the hypothalamus is greatly reduced, so that these individuals are left with an unbalanced endocrine system. **A body left in this unbalanced status craves for renewed drug intake in order to restore the physiological equilibrium. This unconscious desire explains the addiction of the individual to nicotine. . . .**

In conclusion, a tentative hypothesis for the explanation of nicotine addiction would be that of an unconscious desire to restore the normal physiological equilibrium of the corticotropin-releasing system in a body in which the normal functioning of the system has been weakened by chronic intake of nicotine. (emphasis added)

536480912-0914 at 0912, 0914 (U.S. Ex. 20,928).

1558. In a 1963 research report titled "The Fate of Nicotine in the Body," BATCo researchers reported their conclusions as to nicotine pharmacology and mechanisms of tolerance and addiction. The scientists emphasized that nicotine was a key part of "tobacco habituation and/or addiction" and that the tobacco industry should focus its future research on the effects of nicotine in the bodies of smokers:

There is increasing evidence that nicotine is the key factor in controlling, through the central nervous system, a number of beneficial effects of tobacco smoke, including its action in the presence of stress situations. In addition, the alkaloid appears to be intimately connected with the phenomenon of tobacco habituation (tolerance) and/or addiction. Detailed knowledge of these effects of nicotine in the body of smokers is therefore of vital importance to the tobacco industry, not only in connection with their present standard products, but also with regard to future potential uses of tobacco alkaloids.

501012199-2255 at 2202.(U.S. Ex. 21,562).

1559. On the specific issue of nicotine tolerance, the researchers stated, "We believe that both tolerance and addiction are intimately connected, and that it would be most useful to

investigate the two phenomena with regard to cellular adaptation, especially in target organs of the central nervous system." 501012199-2255 at 2228 (U.S. Ex. 21,562).

1560. BATCo also played a part in the nicotine research carried out at the Huntington Research Centre in Huntington, England. An undated BATCo or Imperial-commissioned scientific study from Huntington is described in an undated report from the late 1960s titled "Effects of Nicotine on Electro cortical Activity and Acetylcholine Release from the Cerebral Cortex of the Squirrel Monkey." In this report, researchers stated at the outset that, "The habitual use of tobacco may be related to numerous factors amongst which the pharmacological effects of nicotine on the central nervous system figure dominantly." The report then went on to describe the complex and significant effects of nicotine on acetylcholine release in animal brains. Importantly, the scientists stated that "The doses of nicotine used in these experiments are based on the reported 'smoking dose.'" 680050472-0485 (U.S. Ex. 53,985).

1561. Another "Confidential" Huntington in-depth study focusing on nicotine's drug-like effects on the primate brain was titled "Effects of Nicotine on the Central Nervous System." Although this study was addressed to Imperial Tobacco, a copy of the report was forwarded to BATCo. The authors of this study explained the tests they planned to conduct to understand how nicotine affects "physiological processes and behavioural functions of the central nervous system of the primate" and described some preliminary results 680050504-0521 (U.S. Ex. 53,986).

1562. BATCo was also provided nicotine research funded by its Australian affiliate, BATAS. For example, BATCo had knowledge of a 1970 University of Melbourne study titled "The Absorption and Effects of Nicotine from Inhaled Tobacco Smoke." The Australian study

program assessed nicotine blood levels and physiological effects, the transfer of nicotine to the blood, and the absorption of nicotine in the mouth. 680050575-0589 (U.S. Ex. 53,987).

1563. The addictive impact and potential of any drug, in this case nicotine, is enhanced by the speed at which and form in which it reaches the brain. BATCo scientists understood and appreciated this concept. An August 7, 1964 memorandum from H.D. Anderson, Vice President of Research and Development, to BATCo President Sir Richard P. Dobson discussed the enhancement of nicotine "kick" through the addition of potassium carbonate to tobacco:

There seems no doubt that the "kick" of a cigarette is due to the concentration of nicotine in the blood-stream which it achieves and this is a product of the quantity of nicotine in the smoke and the speed of transfer of that nicotine from the smoke to the blood-stream.

Nicotine is in the smoke in two forms as free nicotine base (think of ammonia) and as a nicotine salt (think of ammonium chloride) and it is almost certain that the free nicotine base is absorbed faster into the blood-stream. Thus the effect of this potassium carbonate treatment, even though it does reduce the total quantity of nicotine in the smoke, may be to enhance the effect of what is left until it is equal or maybe greater in physiological effect than in the original smoke.

100059066-9067 at 9067 (U.S. Ex. 20,102).

1564. A 1966 internal tobacco industry report issued by BATCo scientist I.W. Hughes also emphasized that the effects of nicotine on the human body were a function of speed in reaching the brain and the form of the nicotine itself:

It would appear that increased smoker response is associated with nicotine reaching the brain more quickly On this basis, it appears reasonable to assume that the increased response of a smoker to the smoke with a higher amount of extractable nicotine may be either because the nicotine reaches the brain in a different

chemical form or because it reaches the brain more quickly.

00039304-9490 at 9306, 9310 (U.S. Ex. 34,187).

1565. BATCo understood that it was in essence a drug company for its customers who depended on nicotine. In a March 2, 1967 memorandum from BATCo Chief Scientist S.J. Green to Deputy Chairman Desmond Hobson, Green broadly evaluated BATCo scientific research.

With respect to nicotine, he bluntly reported the following:

Work on the psychopharmacology and pharmacology of nicotine is accelerating. There is now no doubt that nicotine plays a large part in the action of smoking for many smokers. It may be useful, therefore, to look at the tobacco industry as if for a large part of its business is the administration of nicotine (in the clinical sense). . . . The main objective of our research is to make the administration of nicotine better by . . . making the administration pleasanter or more convenient.

<http://tobaccodocuments.org/ness/1191.html> (U.S. Ex. 86,690).

1566. In a March 20, 1967 document titled "First Meeting with U.S. Company Lawyers," R.M. Macrae, Tobacco Research Council assistant director and BATCo employee, recalled that at the March 8, 1967 meeting, representatives from the United Kingdom made the point that "the major section in the U.K. industry believes that nicotine content of cigarettes should not be greatly lowered if consumer acceptance is to be maintained." This once again illustrates that the importance of nicotine for cigarette sales has been known by BATCo for decades. 301080659-0662 at 0661 (U.S. Ex. 22,896).

1567. In fact, "consumer acceptance" was tied to addiction, a word that company executives and directors continued to use internally to describe the necessity of nicotine to smokers. According to the report of the October 1967 BATCo (Group) Research and

SECTION IV.E.

Development Conference in Montreal, one of the company's research "assumptions" was that, "[t]here is a minimum necessary level of nicotine. Smoking is a habit attributable to nicotine. The form of nicotine affects the rate of absorption by the smoker." And later in the conference report, the BATCo R&D department stated the following as research objectives, revealing the company's intent and ability to manipulate nicotine:

The development of low T.P.M. [total particulate matter, or tar], normal nicotine cigarettes should continue. In this connection, the use of filter additives . . . might be helpful since it might render the nicotine more available to the smoker.

The development of a low T.P.M., low nicotine cigarette should be expanded. This raises the question of the level of nicotine required
.....

100051950-1963 at 1952, 1957 (U.S. Ex. 85,279).

1568. An earlier version of the BATCo Montreal Research and Development Conference report even stated that, "There is a minimum level of nicotine. **Smoking is an addictive habit attributable to nicotine** and the form of nicotine affects the rate of absorption by the smoker." (emphasis added) 500014079-4085 at 4080 (U.S. Ex. 47,776).

1569. The BATCo R&D conference acknowledged that the department's general objectives included "insur[ing] the continuation of the industry and the prosperity of the company within the industry," and "sustaining and increasing the profits of the company." Thus, even the scientists realized and accepted the link between nicotine and the future of both the industry and the company. 100051950-1963 at 1955 (U.S. Ex. 85,279).

1570. The minutes of a BAT Group Research Conference held at Hilton Head, South Carolina, from September 24-30, 1968, recorded similar statements. The conference group,

which included representatives of Brown & Williamson as well, noted that:

In view of its pre-eminent importance, the pharmacology of nicotine should continue to be kept under review and attention should be paid to the possible discovery of other substances possessing the desired features of brain stimulation and stress-relief without direct effects on the circulatory system. The possibility that nicotine and other substances together may exert effects larger than either separately (synergism) should be studied and if necessary the attention of the Marketing Departments should be drawn to these possibilities.

682633150-3156 at 3152 (U.S. Ex. 54,206).

1571. Thus, the critical role in addiction played by nicotine was never in doubt at BATCo. The recognition of nicotine's singular importance in smoking was the basis for an October 1969 BATCo report titled "Future Work on Nicotine and Compounds With Related Pharmacology," in which J.G. Underwood detailed company efforts to search for compounds that would mimic the pharmacological effects sought by smokers with fewer toxic properties. The introduction states:

At the physiological level the major part of the satisfaction of smoking is derived from nicotine and the first section of this note is concerned with optimising nicotine usage, increasing the delivery of smoking mixtures deficient in nicotine, and attempting to anticipate some "health" problems that may arise with changes in current practices.

At present the cigarette industry depends on nicotine as the principal pharmacological agent in confirming the smoking habit. This could be dangerous commercially, since it may well be that legal restrictions are imposed on the nicotine delivery of cigarettes if the medical evidence shows beyond reasonable doubt that the long-term effects of nicotine are harmful. The industry is far more vulnerable to restrictions on the use of nicotine, than attempts at restricting, say, carcinogens or "tar." Consequently, the second sections considers some possibilities of finding alternatives to

nicotine that could supplement or replace nicotine in a cigarette.

680050592-0608 at 0593 (U.S. Ex. 85,280).

1572. BATCo's recognition of nicotine's psychoactive effects is reflected in Underwood's report as well, where the following "work area" was emphasized: "Elucidation and exploitation of the desirable pharmacological response, i.e., the biphasic action of brain stimulation and relief of stress (tranquillisation) and its relation to the subjective response (acetylcholine excitation of sympathetic ganglia cells)." 680050592-0608 at 0601 (U.S. Ex. 85,280).

1573. In 1969, BATCo researcher D.J. Wood gave a presentation for company executives in which he detailed the company's pursuits in pharmacological research focusing on nicotine. He stated that BATCo researchers believed nicotine was responsible for the "satisfaction of smoking," and that future research was aimed at finding out more about how the human body absorbed nicotine. 322043204-3207 at 3207 (U.S. Ex. 20,592).

1574. BATCo's acknowledgment of nicotine and addiction continued into the 1970s. In a June 30, 1971 memorandum entitled "Comments on Nicotine," BATCo scientist R.R. Johnson reported on a Research & Development meeting held to discuss the results of nicotine research code named "Project MAD HATTER" and "Project HIPPO." BATCo director Sir Charles Ellis led the meeting; according to Johnson:

The purpose of the meeting was to discuss the results from Projects MAD HATTER and HIPPO, and to stimulate further discussion of the importance of nicotine to the industry. Sir Charles started the meeting by saying that he had first brought out the concept that **we are in a nicotine rather than a tobacco industry** and then set up the above projects to sell this concept to management. (emphasis

added)

2065128907-8909 at 8908 (U.S. Ex. 85,281); 2083458825-8826 at 8825 (U.S. Ex. 85,282).

1575. BATCo's research into nicotine substitutes is telling as well. In a November 9, 1972 report titled "Preparation and Properties of Nicotine Analogues," BAT Group scientists K.D. Kilburn and J.G. Underwood recommended for commercial reasons that work continue into finding nicotine analogs, or substitutes. The basis for this recommendation, the researchers stated, was that, "Should nicotine become less attractive to smokers, the future of the tobacco industry would become less secure." Specifically:

It has been suggested that a considerable proportion of smokers depend on the pharmacological action of nicotine for their motivation to continue smoking. If this view is correct, the present scale of the tobacco industry is largely dependent on the intensity and nature of the pharmacological action of nicotine. A commercial threat would arise if either an alternative product became acceptable or the effect of nicotine was changed.

750009046-9098 at 9049 (U.S. Ex. 88,066).

1576. An undated BATCo document most likely from the 1970s from scientist D.G. Felton titled "Smoking and Health Research in the U.S.A." summarized some internal industry positions on scientific research and nicotine. The report recalled that American Tobacco Company's Scientific Director, Dr. Hanmer, stated that it was "important to keep up the nicotine content of the smoke, while reducing anything that ought to be reduced," that Reynolds' scientific director Dr. Galloway stated that "a reasonable amount of nicotine was necessary in a cigarette," and that Liggett's representative's (Mr. Blount) position was that "people smoked because of the

nicotine." 105407187-7190 (U.S. Ex. 34,738).

1577. In an undated document, S.J. Green, one of BATCo's top scientists in its Research & Development Department, provided advice to the corporate leadership as to the future direction the company should take with respect to smoking and disease, research, and even addiction. The presentation was delivered at the October 1972 BAT Group R&D Conference where Brown & Williamson representatives were also in attendance. 680048899-8903 at 8903 (U.S. Ex. 85,284).

1578. In his presentation, Dr. Green stated that BATCo was aware that smokers compensated for lower nicotine products "by increasing the number of cigarettes smoked" and by "changing the way they smoked." He then discussed the "health conscious smokers who chose the low delivery cigarettes, frankly telling the BAT Group executives (including Brown & Williamson) that:

A suggestion is made both for the health conscious smoker and the smoker whose prime smoking requirement is physiological satisfaction. Surely many nicotine-dependent smokers are health conscious. . . .

Smoking is fairly irrational like other drug dependencies. If there is a positive side to smoking, and I think there is, it is not easy for the smoker to articulate. He "votes with his feet" and continues with this irrational act.

110069983-9987 at 9985 (U.S. Ex. 20,269).

1579. In an earlier version of Dr. Green's paper, dated July 26, 1972, he included as one of his assumptions: "The tobacco smoking habit is reinforced or dependent upon the psychopharmacological effects mainly of nicotine." 401024232-4236 at 4234 (U.S. Ex. 47,530).

1580. In 1974-1975 the Research and Development Division at BATCo embarked on a project code-named "Project WHEAT" to classify smokers in terms of their "Inner Need" for nicotine and to study smokers' needs for varying levels of nicotine. The "Project WHEAT" researchers sought to determine if a relationship existed between a smoker's "Inner Need" and his "preferred nicotine delivery." To test this hypothesis, smokers were classified in Part I of "Project WHEAT" into low, medium, and high "Inner Need" categories. Researchers concluded in their July 10, 1975 Part I report that the greater a smoker's "Inner Need," the greater the smoker's "cigarette consumption, depth of inhalation, and the anticipated difficulty in giving up smoking." 757001395-1487 at 1396, 1432 (U.S. Ex. 85,285).

1581. The "Inner Need" concept was based on BATCo's understanding that smokers smoked for pharmacological and psychological reasons. A November 6, 1974 report from BATCo scientists based "Inner Need" on many factors, including ones under the heading "Automatic/Addictive." The report stated that some smokers smoke because they find it "almost unbearable" to run out of cigarettes, and because of a "gnawing hunger" to smoke. 670593721-3739 (U.S. Ex. 53,864).

1582. In Part II of the BATCo research code-named "Project WHEAT," smokers were again grouped according to their "Inner Need." According to their January 30, 1976 "Restricted" Part II report, researchers demonstrated that smokers in the higher "Inner Need" categories required cigarettes with higher nicotine levels: "[A]s predicted by the hypothesis, High Need clusters tend to prefer relatively high nicotine cigarettes, their optimum nicotine delivery being higher than that of Low Need clusters." Through their research, the authors postulated a "model

of the market . . . in which the two major determinants of the type of cigarette which best suits a smoker's requirements are Inner Need and concern for health." 650016374-6466 at 6376-6377 (U.S. Ex. 85,286); 650008311-8364 at 8313-8314 (U.S. Ex. 85,287).

1583. BAT scientists published the results of a study titled "The Effect of Smoking Deprivation on Smoking Behaviour" in a report dated September 11, 1975, and written by D.E. Creighton. The report was produced in this litigation both from BATCo and Brown & Williamson, the latter copy bearing the stamp of the Brown & Williamson Research Library. In assessing the behavior of the subjects, the research assumed that smokers need nicotine, that smokers experience withdrawal symptoms without it, and that smokers compensate to obtain the nicotine they need:

It is probable that interference with an established behavioural pattern would cause different effects on different subjects according to their need for the stimulation of nicotine or suppression of the withdrawal symptoms that accompany a lack of nicotine. . . . If the subject is smoking for the pharmacological effects of nicotine he would be expected to take more smoke in a shorter time. He may do this by taking larger puffs, taking more puffs, reducing the interval between them or smoking more of the butt where the nicotine delivery is higher. He might also draw harder on the cigarette or for longer.

650014873-4901 at 4881 (U.S. Ex. 53,405).

In the discussion section of the report, the authors stated:

These results may be interpreted on the basis that some subjects have a greater demand for nicotine than others. It is also clear that the dose of nicotine required per unit of time is very variable. Some subjects require a small intake of nicotine taken frequently. . . . others require a large amount but infrequently These differences in nicotine demand and the pattern of nicotine intake may reflect metabolic differences between smokers.

650014873-4901 at 4885-86 (U.S. Ex. 53,405).

1584. BATCo, like the other Cigarette Company Defendants in the 1970s and 1980s, undertook research to manipulate or maintain nicotine delivery while reducing the tar in its cigarettes. This research was based on the corporate knowledge that nicotine delivery above some minimum level was an essential part of cigarette smoking for smokers. For example, the basis for studies carried out in 1973 to assess the use of additives to reduce tar but actually increase nicotine to smokers was stated as follows: "The increased importance being placed on the lowering of TPM [total particulate matter, or tar] and the controlling of nicotine delivery has made it necessary to investigate the different methods available for producing these changes in smoke." 402390265-0282 at 0268 (U.S. Ex. 85,288).

1585. The 1973 study also utilized "ADDITIVES FOR NICOTINE CONTROL," including nicotine tartrate, sodium bicarbonate, and diammonium hydrogen phosphate to increase the "extractable nicotine" in the smoke. The researchers found that certain combinations of additives successfully reduced tar while "maintaining the impact and physiological strength levels" of nicotine. 402390265-0282 at 0280 (U.S. Ex. 85,288).

1586. As another example, BATCo's W.B. Fordyce circulated a report called "The Addition of Nicotine to Tobacco Products" written by company scientist Terry Mitchell to BATCo directors under cover memo dated May 2, 1980. In his paper, Mitchell discusses three means of intentionally increasing the nicotine content of cigarettes, including the use of specialized high nicotine tobaccos (such as *N. rustica*), direct addition of nicotine and nicotine extracts, and the chemical "augmentation of smoke nicotine." Mitchell noted that smoke nicotine

could be augmented via improving the nicotine transfer to smoke and by increasing the alkalinity/pH of smoke. 110088143-8155 (U.S. Ex. 34,965).

1587. In 1975, BATCo scientist A. Kay Comer acknowledged that only those within the industry disputed the label addiction as applied to smoking and nicotine, and that the evidence showed the industry's denials were wrong. Comer stated that:

In summary, it appears that most workers who are not directly concerned with the tobacco industry use the terms addiction or dependence rather than habituation and can be considered quite correct in doing so. If cigarette smoking is as addictive as the evidence suggests, it is not surprising that antismoking campaigns are so ineffective. . . ."

105392361-2368 at 2366 (U.S. Ex. 22,038).

1588. BATCo's D.E. Creighton performed a "Restricted" written review of BAT's own "Group" research in January 1976, in order to evaluate the concept of compensation. The review found that compensation occurred - for example, via taking larger puffs or inhaling the smoke deeper into the lungs - when smokers of high-nicotine cigarettes smoked low-nicotine products and vice versa. Creighton found that, "On balance, it is concluded that many established smokers do compensate for changed delivery in an attempt to equalise nicotine delivery, when this is possible." 650008449-8480 at 8451 (U.S. Ex. 76,192).

1589. Creighton stated that compensation for reduced nicotine delivery was evidence that smokers smoked for nicotine, and evidence that regular smokers are "nicotine dependent":

[T]he majority of smokers who actually buy cigarettes and smoke them regularly are directly or indirectly seeking the effects of the nicotine content of the smoke The majority of smokers who are smoking for the nicotine content of smoke may still be smoking for different effects of nicotine. They may seek the

pharmacological stimulation of nicotine which has both peripheral and central stimulating effects or to allay the uncomfortable effects of not having nicotine in the system, which Russell describes as relief from or avoidance of withdrawal effects. Most smokers when deprived of nicotine for a period of time during the day feel and increase in stress, tension, restlessness and irritability. A cigarette quickly restores the equilibrium.

A subject who does not suffer the mild withdrawal symptoms, when unable to smoke and only seeks the occasional stimulation of nicotine, or some other attribute of smoking, is less likely to compensate for changed nicotine delivery than a subject who is more nicotine dependent.

650008449-8480 at 8462-8464 (U.S. Ex. 76,192).

1590. Other sections of Creighton's 1976 report discussed an "estimation of self dosing with nicotine" and various factors that influence "the daily dose of nicotine taken by a nicotine dependent smoker." 650008449-8480 at 8465, 8468 (U.S. Ex. 76,192).

1591. In a memorandum dated March 29, 1976, BATCo scientist S.J. Green detailed his forecast for "The Product in the Early 1980s." In this document, Green addressed "the main threats to the smoking habit." One major threat to smoking was that lower nicotine products would lead to more smokers being able to quit: "Taking a long-term view, there is a danger in the current trend of lower and lower cigarette deliveries - i.e. the smoker will be weaned away from the habit. . . . [W]e should be aware of the long-term dangers of following the crowd into ultra-low nicotine deliveries." 110069974-9982 at 9975 (U.S. Ex. 20,268) (U.S. Ex. 76,173).

1592. Green then evaluated "potential rivals," that is, "cigarettes in which nicotine has been replaced by an alternative pharmacological agent." In this context, he referred to smokers as "members of the nicotine-dependent majority." 110069974-9982 at 9975, 9977 (U.S. Ex.

20,268) (U.S. Ex. 76,173).

1593. In 1976, BATCo held a conference on smoking behavior whose central theme was the pharmacological importance of nicotine on the central nervous system as the basis for smoking. In a conference report, Kay Comer wrote that tobacco is only used in ways that delivered unmetabolized nicotine to the brain:

[C]igarette smokers who are forbidden to smoke, for instance in a lumber mill or down in a mine, will resort to chewing tobacco instead of smoking.

The common factor in all the types of tobacco usage mentioned is nicotine, either absorbed through the lungs or the lining of the nose or mouth. Taken in these ways nicotine will quickly enter a direct route, in the blood, to the brain. Tobacco has never been used as a substance of ingestion. The probable reason for this is that when it is absorbed in the stomach or intestines, nicotine travels in the blood to the liver, where it is metabolised to cotinine before passing to the brain. It would therefore be surprising if nicotine, which is known to be pharmacologically active in the brain (unlike cotinine), and which is obtained in the ways most likely to enable it to reach the brain unchanged, were not involved in the reasons why people smoke.

650376684-6703 at 6694 (U.S. Ex. 85,289); 100430004-0005 (U.S. Ex. 87,115).

1594. A cover letter from BATCo dated December 31, 1976, showed that the conference report containing the Comer presentation was sent to Brown & Williamson. 650376684-6684 (U.S. Ex. 85,289).

1595. In another BATCo document titled "Smoking Enjoyment," scientist Dr. J.A. Jagger wrote to B. Fordyce that smokers were persons who "carry out a practice which they are unable to stop (by and large) and which they would basically prefer to stop (if they could)." 105657941-7944 (U.S. Ex. 34,812).

SECTION IV.E.

1596. BATCo also produced a November 24, 1977 report titled "A Note on Smoker Motivation and Dependency." In the introductory section of the report, the author stated that smoking can be characterized by "a dependency factor which is, in a restricted sense, independent of other motivational influences" that would keep a smoker smoking who desires to quit. The motivation to smoke even when one desires to quit "more closely resembles an urge or drive and **might be described as an addictive behaviour beyond cognitive control and likely to be associated with pharmacological dependency.**" 102698343-8361 at 8343 (U.S. Ex. 85,290) (emphasis added).

1597. BATCo held an "International Smoking Behaviour Conference" from November 27-30, 1977 at Chelwood, England. The company invited its own scientists and executives, along with representatives of its affiliate companies (Brown & Williamson, Imperial Tobacco, Gallaher Limited, Souza Cruz, Rothmans, BAT-Germany and others), industry trade groups, and industry-funded researchers to exchange information. BATCo's own Dr. Green delivered the introduction, followed by presentations to the conference over the next several days into the central nervous system effects of nicotine, nicotine impact on human attention span, the role of nicotine in maintaining smoking, and many other topics directly related to the central importance of nicotine to the smoking behavior. 103505372-5399 (U.S. Ex. 87,116); 103505453-5513 (U.S. Ex. 87,117); 103518290-8401 (U.S. Ex. 87,118).

1598. Brown & Williamson produced from its company research library a BAT scientific report titled "Dependence on Cigarette Smoking" dated December 15, 1977. The report was written by A. Kay Comer and distributed to BAT executives. In the introductory

section of the paper, the author summarized, "It is concluded that the majority of smokers are to some extent dependent on smoking but that behavioural, social and psychological factors may be as important as those of a pharmacological nature." 650015112-5304 at 5114 (U.S. Ex. 53,406).

1599. A document by BATCo's P.L. Short dated February 22, 1978 and titled "Product and Process Innovation" recognized that "the problem of addiction via nicotine [is] increasing." Two days later, his meeting notes recorded that, "Those seeking nicotine gratification where smoking is banned and the subsequent risk of purchasing tobacco by prescription or registration of addicts in the future, will lead to greater use of smokeless tobaccos" He also wrote that there was a segment of smokers "wanting to quit but unable to, hooked onto cigarettes at present but seeking a cigarette/nicotine substitute." 100566925-6926 at 6926 (U.S. Ex. 88,765); 100566919-6924 (U.S. Ex. 88,766); referred to in 536501866-1867 at 1866 (U.S. Ex. 75,986).

1600. In a June 27, 1978 document titled "Compensation for Changed Delivery," BATCo scientist D.E. Creighton stated that:

Numerous experiments have been carried out in Hamburg, Montreal, and Southampton within the company as well as many other experiments by research workers in independent organizations, that show that generally smokers do change their smoking patterns in response to changes in the machine smoked deliveries of cigarettes. . . . In general, a majority of habitual smokers compensate for changed delivery, if they change to a lower delivery brand than their usual brand. If they choose lower delivery brand which has a higher tar to nicotine ratio than their usual brand (which is often the case with lower delivery products) the smokers will in fact increase the amounts of tar and gas phase that they take in, in order to take in the same amount of nicotine.

10553905-3915 at 3906, 3913 (U.S. Ex. 76,170).

1601. The connection between addiction and profitability continued to guide BATCo

research and marketing. In an August 28, 1979 memorandum entitled "Key Areas – Product Innovation Over Next 10 Years for Long-term Development," BATCo scientific director L.C.F. Blackman stated that nicotine dependence was the key to company's future viability and profitability. In coming to this conclusion, Dr. Blackman charted the stages of smoking from "starting the habit" (Stage 1) to "acknowledgment of pleasure"(Stage 2) to "dependence on the smoking habit" (Stage 3). He flatly stated that nicotine "initiates a dependence in the confirmed smoker" and that **"the high profits additionally associated with the tobacco industry are directly related to the fact that the customer is dependent upon the product."** 109872505-2508 at 2508 (U.S. Ex. 21,530) (emphasis added).

1602. BATCo continued its search for nicotine substitutes into the 1970s. A November 30, 1978 BATCo report titled "Alkaloids That Have a Pharmacology Like Nicotine" reviewed all relevant research in depth and concluded that, "For smoking products, nicotine is the alkaloid of choice." The BATCO scientists reached this conclusion by comparing the known physiological qualities of nicotine to other alkaloids, including nicotine's effect on the central nervous system, respiration, blood pressure, and heart rate. 680009683-9700 at 9684 (U.S. Ex. 53,979).

1603. The Appendix to the 1978 BATCo report was titled "The Effects of Nicotine" and described nicotine as "the most abundant and potent of the several alkaloids present in tobacco."

The Appendix also contained the following section:

The Pharmacological Mechanisms of Nicotine

The mode of action through which nicotine achieves its effects on the body is very complex. The complexity arises from nicotine's simultaneous and varying degree of activity on the different nerve centers, organs and muscles of the body. Nicotine causes its

effects not only by central and peripheral stimulation (i.e., at the brain and spinal cord, and nerve organ or nerve muscle junctions, respectively), but also by the stimulation of intermediate nerve ganglia. . . .

While smokers describe the effects of nicotine as calming and relaxing, all the accumulated evidence indicates that it cause physiological excitation and stimulation. One theory that attempts to explain this paradox suggests that the smoker becomes accustomed to the stimulated condition that nicotine produces; he then uses this condition as the norm from which to judge his well being. If the condition is not maintained, discomfort and anxiety are felt.

680009683-9700 at 9697-9698 (U.S. Ex. 53,979).

1604. In light of the addictiveness of nicotine and noted differences between smoking and other habits such as alcohol, coffee, and candy, BATCo's long-term goals and interests included the following: "We are searching explicitly for a socially acceptable addictive product involving . . . the essential constituent most likely to be nicotine or a 'direct' substitute for it."

109872505-2508 at 2507 (U.S. Ex. 21,530).

1605. In an undated BATCo document most likely created in the 1970s, an executive summarized the "usable data" on smoking and nicotine addiction, and related addiction to BATCO's and the industry's marketing plans. The memorandum did not disagree with any of the studies cited, and concluded that smokers are dependent on the pharmacological effects of nicotine, smokers develop tolerance to and dependency on nicotine, and that smokers deprived of nicotine experience withdrawal symptoms:

SUMMARY and IMPLICATIONS to the INDUSTRY

The rush of nicotine into the blood stream and nervous system is short-lived; therefore, reducing consumption would cause

withdrawal and all of its unpleasant side effects so long as the smoker is restricted from smoking. Nicotine vacates the system in 30 minutes or so and at that time withdrawal starts. . . .

The sensorimotor manipulation aspect of smoking is important to people but perhaps not as important as nicotine. . . . Cigarettes allow people to self-administer nicotine at a self-determined rate.

680096095-6110 at 6096 (U.S. Ex. 53,993).

Later in the paper, when describing children and adults who were "regular smokers," the author wrote:

Only an exceptional 2% smoke occasionally and intermittently. **Nearly all regular smokers are nicotine dependent.** . . . As the novice acquires tolerance to the irritation of the smoke over a period of two or three years, he becomes conditioned to a high and regular intake of nicotine. (emphasis added)

680096095-6110 at 6099, 6101 (U.S. Ex. 53,993).

1606. One section of the BATCo memorandum was subtitled "Physical Dependence," in which the author detailed the process by which a smoker becomes addicted:

Physical dependence involves changes which are physiological. Firstly, this is shown by the smoker's tolerance to the effects of nicotine. This is due to changes at the synapses. The smoker also has an increased capacity to metabolise and excrete the drug, mainly in the liver. . .

Secondly, when the intake of nicotine is reduced or discontinued, the smoker may experience withdrawal symptoms, resulting from the lessening of overactivity at the synapses. . . Thus, withdrawal of cigarettes from heavy smokers may reduce them to a subjectively distressed state, with symptoms of anxiety, depression, irritability, restlessness, intense craving as well as difficulty in concentration. More will be discussed about the addictive quality of nicotine in the following section. . . .

Research has shown that stimulation of the medial forebrain bundle of the hypothalamus can pleurably occupy an animal to the

exclusion of all other basic activities, e.g., eating, drinking, sexual activities. It seems likely that nicotine and other dependence-producing drugs owe part of their effectiveness to influencing this centre.

The blood-brain barrier is no barrier to nicotine which reaches the brain within a minute of a person lighting up. Its effect is short lived. In twenty to thirty minutes after the smoker has finished his cigarette, most of the nicotine has left his brain for other organs - stomach, liver and kidneys - and this is just about the time that the heavily dependent smoker needs his next cigarette.

680096095-6110 at 6103-6104 (U.S. Ex. 53,993).

1607. The BAT memorandum once again documented the company's knowledge and acceptance of "compensation," that is, the means employed by smokers of lower nicotine cigarettes to obtain higher doses of nicotine:

If the nicotine level of cigarettes fails to completely achieve the desired mood change, that cigarette will be drawn on deeper, the smoke held longer, and consumption will rise. . . . Reductions in nicotine are therefore compensated for by consumers but the limit to which they can compensate for the diminished nicotine / diminished therapeutic efficacy is unknown. R&D is studying this subject at the present time.

680096095-6110 at 6095 (U.S. Ex. 53,993).

1608. BATCo knew from scientific studies using its own employees that smokers smoked for nicotine and compensated, or changed their smoking behavior, when smoking lower nicotine cigarettes. Compensation was again demonstrated by two such studies carried out by BATCo in 1974 and 1978 using reduced nicotine cigarettes. D.E. Creighton's report of these studies stated that smokers compensated for reductions in nicotine yield by smoking more intensely:

Comparison of the two data sets shows that the lower delivery

cigarette has been smoked more intensively It can be reasonably inferred that the smokers in this panel received similar amounts of nicotine from both cigarettes

The fact that smokers have changed their smoking patterns to take more smoke from a cigarette with lower nicotine delivery but similar TPM [total particulate matter, or tar] delivery adds support to the contention that nicotine is a major determinant of smoking behaviour

650008946-8960 at 8948, 8954 (U.S. Ex. 85,318).

1609. A March 1, 1979 "Restricted" BAT report written by Creighton summarized a collaborative scientific study between BATCo and British scientist M.A.H. Russell at the "Addiction Research Unit." The research project studied smoker compensation to obtain more nicotine, and utilized a standard low tar/low nicotine cigarette and a modified low tar/high nicotine cigarette. BATCo and Russell determined that smokers compensate less when given low tar/high nicotine cigarettes, and compensate more when given low tar/low nicotine cigarettes. According to the report, while Dr. Russell's interest in the study was "from the health point of view," BATCo participated in the work "from a commercial point of view." 650010157-0193 at 0174, 0183 (U.S. Ex. 85,292).

1610. The BAT/Russell study also reported that the high nicotine cigarettes produced "giddiness," a reflection of the intoxicating properties of nicotine:

Some smokers, in fact, felt giddy while smoking the [low tar, high nicotine] cigarette, presumably because they used the mouth sensations as cues to estimate their smoke intake. As a result of taking sufficient smoke to cause acceptable mouth sensations, they would receive nearly twice as much nicotine as usual, resulting in the feeling of giddiness.

650010157-0193 at 0179 (U.S. Ex. 85,292).

1611. BATCo also produced a January 1980 document in this litigation titled "B.A.T. Board Strategies," a document that, at the Board of Directors level, reviewed future influences and possible innovations for the industry. One of the "Assumptions" behind the "Strategies" was that, "Throughout the next 10 years smoking will continue to produce a dependency on the habit and hence there will still be a significant, albeit reducing, number of smokers who choose to smoke 'full-flavour' non-health reassurance products." 109883023-3026 at 3024 (U.S. Ex. 85,293).

1612. In an April 11, 1980 BATCo document entitled "What Three Radical Changes Might, Through the Agency of R & D, Take Place in this Industry by the End of the Century," a team of BATCo scientists (Crellin, Ferris, Greig, and Milner) provided a forecast of what the industry would have to cope with in the near future. The scientists stated that:

B.A.T. should learn to look at itself as a drug company rather than as a tobacco company. The mood affecting drug requirements of the population will in the future increase but the range of requirements will encompass tranquillisers e.g. valium, endorphin/enkephalin (brain opiates), marijuana, nicotine analogues, etc. At present, the taking of many of these drugs is either medically prescribed or regarded as deviant behaviour, but could be "socialized" like alcoholic drinking and tobacco smoking. (emphasis added)

109884190-4191 at 4190 (U.S. Ex. 21,557).

1613. In a January 3, 1980 report by Creighton titled "TN 80-01-008 Project Gypsy," the company acknowledged Dr. Russell's observation that "Smokers smoke for nicotine and die for tar." 1022166881-6893 at 6882 (U.S. Ex. 88,767); 536501866-1867 at 1866 (U.S. Ex. 75,986).

1614. According to the April 1980 typed notes of BATCo scientist Dr. Lionel Blackman, he stated that the company needed to address the anticipated issue that, "Although

nicotine will be considered by some doctors to be less harmful than tar, there will be increasing recognition by some medical authorities that smoking is a nicotine dependent activity."

301140125-0128 at 0126 (U.S. Ex. 85,294).

1615. In a "Strictly Private and Confidential" document authored by T.W. Kidd, whom BATCo identifies on its privilege log glossaries as "BATCo - Employee, Public Affairs" from 1948-1983, Kidd provided the following information to assist the company in formulating a new company position on smoking and health:

Addiction/Habituation

This is another aspect of the smoking and health issue which cannot be overlooked. Unlike dangerous sports and other high risk activities (except the drinking of alcohol) smoking is addictive/habituated in addition to being an additional risk and many smokers would like to give up the habit if they could. This does not mean that we must contribute to health education or to "quitting clinics" but it does mean we have to act even more responsibly than if the consumption of our products were purely involving a minority of consumers in an additional risk.

109881332-1335 at 1335 (U.S. Ex. 34,929) (U.S. Ex. 34,930). Despite Mr. Kidd's recommendations for a corporate position that reflected the addictiveness of cigarettes, no new company position was ever announced.

1616. A March 31, 1981 "Restricted" research report titled "Nicotine Studies: A Second Report, Estimation of Whole Body Nicotine Dose by Urinary Nicotine and Cotinine Measurement" documented BATCo's research into accurately measuring nicotine intake by rats forced to inhale cigarette smoke. The authors, BATCo scientists G. Read, I.G.M. Anderson, and R.E. Chapman, wrote that the studies were "particularly relevant to the development of an

understanding of an individual smoker's daily nicotine requirement and the relationship between nicotine dose and smoking behaviour under conditions of brand switching/delivery modification." 650030769-0802 at 0779-0780 (U.S. Ex. 53,428).

1617. The March 31, 1981 report built on an earlier BATCo scientific study into "nicotine dose" dated May 21, 1980, and titled "Method for Nicotine and Cotinine in Blood and Urine" written by the same scientists. In this earlier study into methods to measure nicotine in humans, the authors accepted that "the pharmacological response of smokers to nicotine is believed to be responsible for an individual's smoking behaviour, providing the motivation for and the degree of satisfaction required by the smoker." 650032386-2428 at 2389 (U.S. Ex. 87,119); 750023453-3494 at 3456 (U.S. Ex. 87,119).
